The first

mathmatically trancendant concept we are exposed to in
school is the

pythagoean theorm.

It is a

mustard seed from which many fountains spout.
There are

five platonic solids which form the basis of our
undestanding of

space and ultimately

time.

By number of vertices they are

The Tetra-hedron,

the Octahedron,

the Hexahedron or Cube,

the Icosahedron.

And the Dodecahedron

Interestingly,

Buckmeister Fuller worked extensively with the

Vector Equilibrium or Cube Octahedron.

The equilibrium between positive and negative is zero.

The vector equilibrium is the true zero reference of
energetic mathematics and physics.
