SEGMENT 2 PLATES - SEQUENCED to Narrative – Transitions on First Word

The first mathematically transcendent concept we are exposed to in school is the pythagorean theorem. It is a

mustard seed from which many fountains spout.

There are
five platonic solids which form the basis of our
understanding of

space and ultimately

time.

By number of vertices they are

The Tetra-hedron,

ARGOS.VU PROMO VIDEO

the Octahedron,

the Hexahedron or Cube,

the Icosahedron.

And the Dodecahedron

Interestingly,
Buckminster Fuller worked extensively with the

Cube Octahedron or Vector Equilibrium.

The equilibrium between positive and negative is zero.

The vector equilibrium is the true zero reference of energetic mathematics and physics.
