No. 1.

GAME-FISHES OF THE FLORIDA REEF.

NETS FOR MULLET.

IN northern waters, where streams are whipped with fantastic and artificial flies, the bait-catcher is comparatively an unimportant personage. The possession of certain grim secrets regarding the haunts of live bait is his sole claim upon the angler, and the most fervent votary of the rod and line would scarcely clothe him with professional dignity, or view him in the light of a picturesque feature of the general surroundings.

Such, however, are the attributes of our bait-catcher of the outer reef. Tall, blithe, prolific of speech, wit, and humor, Paublo strides along—the ideal fisherman of the Keys. He nods recognition to the passing pelican; the laughing gulls utter their shrill ha-ha at his call; and all the secrets of the reef are his. The feeding-grounds of the mullet and the hardhead, the lurking-places of the tarpon, the great coral heads about which the gray snapper loves to hide, the deep lairs of the barracuda and the kingfish—all are familiar to this dark confidant of nature.

Over one arm is slung a cast-net, while in the other hand he bears a long two-pronged pair of grains. As he moves along the white coral sands, which send out a metallic ring, his keen eye scans the reef in search of the rippling mullet, while from his ample lips rise melodious strains, the music of intuition.

Following the jovial bait-catcher are two patrons of the rod and line, one a disciple of the rod and reel in all contingencies, the other a claimant for the recognition of the experts of the hand-line and grains—at least as exempli-

fied among the Florida Keys. Each is provided with the tackle of his choice—hand-lines with long copper wire leaders, and a heavy bass rod with massive reel. Evidently a test of merit is to be the outcome of the day's sport.

The fishermen were wending their way along the shores of Long Key, a narrow strip of coralline sand about a mile in length and one hundred feet in width, which formed with Garden Key the center of the Dry Tortugas group, the key of the Gulf, one hundred and twenty miles from the mainland of Florida. The sun was well up, and as far as the eye could reach the blue waters of the Gulf stretched away like a sea of glass. The divide between water and sky was lost in the perfect stillness, and even the Physaliae were becalmed, and floated listlessly, their fairy sails raised to their utmost tension. Far to the north Sand, Middle, and East keys rested on the glassy surface like white gulls, their tops capped with green vestures of live oak and mangrove. To the right Bush Key, with its ragged trees and pelican nests, seemed to hang in mid-air, and here began the great sea-wall, or half-submerged reef, that swept away for miles to the south, surrounding coral groves and deeply cut channels of vivid blue—the paradise of the fisherman.

A motion of the bait-catcher caused a halt, and in the direction of his pointed finger, about thirty feet from shore, were seen a few ripples and a dark shadow-like spot on the white reef.

"Dey 's too sizable fo' castin'," he said. Dropping the net, he seized the spear and cautiously waded towards the school until waist deep; then placing the butt of the long grains in his palm, he hurled it not at the fish but high into the air. The pole rose like an arrow until it reached an altitude of thirty feet, then, hovering for a second over the spot, it turned

and fell prongs downward into the school, the waving handle telling of the execution done.

"Disher 's de only way to cotch ole fool mullets," said Paublo, as he waded inshore with one of the large fish impaled on the grains. "Ef yo' throw de grains at 'em, dey kinder casts dere eyes up and scoots off; but dey can't see nuthin' comin' down."

More bait having thus been secured, the fishing-ground was soon reached—a spot where the channel approached so closely that a diver could dash headlong from the beach into blue water, and so clear that for fifty feet the smallest objects were discernible. Here a school of sardines hugged the shore, and in the greater depths a large black sting-ray was seen moving gracefully along with the birdlike motion of its kind.

"Yo' ain't gwine to fish fo' tarpon wif disher machine, is yo'?" asked Paublo, picking up

FISHING FOR TARPON.

the colonel's heavy bass rod and looking at it with an expression of disgust.

"I 'm going to try," replied the latter.

"Yo' 'd better shake hands, sah, wif dat pole den; it 's good-by, shore 's yo' born, ef dat ole tarpon dat I see yere las' evenin' makes up his mind to take hol'," said Paublo.

"The rod has already been tested," rejoined the colonel with a laugh. "At Indian River, up the coast, I killed a six-foot tarpon with it, though it took me over two hours, and during most of the time the fish was towing the boat about."

"Dat ain't from de shore," argued Paublo, who looked upon the rod and reel as mere impediments to a display of skill, which to him was in capturing large fish with small lines, in making a barracuda take a bait against its will, in urging it on by a dexterous manipulation of the line that aroused its ire and cupidity, and in making a dead mullet simulate a living one, though on the end of a leader a hundred feet away.

"Tarpon set dat wheel afire," he continued, as the colonel reeled up the line. "Dere ain't no slackin' off; it 's jes let go, haul when yo' git de chance, let go, an' haul. No, sah! Yo'

can't wind eight-foot tarpon on no wheel; 'deed yo' can't."

Notwithstanding this discouragement the colonel prepared his line, which was of extra length, a heavy copper wire twenty inches long connecting the hook with it; and having baited with a mullet by passing the hook through the mouth, out at the gills, and then into the tail, made his cast of eighty feet or more into the channel.

Meanwhile Paublo had unwound a grayish blue line, with a long, slender wire attached, and, whirling it about his head, dropped his bait one hundred feet out; then making the end of the line fast to an oar driven into the sand, he complacently fell upon his back, raised one bare foot over his knee, took a single turn with the line about his big toe, as a tell-tale, and apparently fell asleep. For a time the fates seemed unpropitious, and the soldier-crabs, whose domain had been invaded, had recovered from their alarm and were crawling over the prostrate fisherman, when he suddenly ejaculated, "Tarpon 's nosin' round yo' bait, sah," and forthwith the colonel's line was seen trembling violently; then a yard or more was unreeled with a jerk, followed by a lull. Again it started into activity, rushing out with incredible speed. The rod was raised firmly; the line came taut with a singing sound, hurling the crystal drops into the air; and the fish was hooked.

Then came a response that would be a revelation to the uninitiated. The rod was almost wrenched from the colonel's hands, and seventy feet from the key rose the king of fishes, a magnificent tarpon fully six feet in length. For a second it blazed in the sun, a dazzling flash of silvery light, then fell with a thundering crash.

Imagine a fish of this size, resembling a gigantic shad, with the life and activity of a blue-fish, its enormous scales below the median line a solid mass of silver, as if the molten metal had been poured upon them—this was the game the bass rod had to deal with. "He 's makin' dat wheel buzz," said Paublo. Both he and the judge had hauled in their lines, and stood by to watch the trial of skill and strength.

The line was rapidly being exhausted, the fish making a straight dash of two hundred feet, carrying the fisherman down to the water's edge and almost into the channel. The colonel now firmly passed the point of the rod to the right, a move that resulted in turning the direction of the fish upshore.

"Dat 's good, sah; dat 's it," shouted Paublo, quick to acknowledge the skill and coolness of the fisherman. "Ef yo' kin keep him up an' down de beach, yo' kin do it."

The two were now running up the key, the

TARPON-ANGLING.

colonel gaining on the line, reeling it in slowly, and anon slacking out to save the rod. In theory the fish was to be brought gradually inshore, perhaps half a mile above, where it could be reached with the grains, and in pursuance of this plan a running fight was kept up for a quarter of a mile along the key, the strain becoming momentarily greater, until suddenly the great fish rose again high above the surface. For a second the line slackened as the fish turned inshore, but before it could be reeled in the gamy tarpon again turned, and with a great burst of speed rushed directly from the beach. No rod could withstand this manœuver. The rod was lowered until it was in effect a mere hand-line; the reel was singing an ominous strain; and a moment later the line ran out, taking the fisherman deep into the water, where a stand had to be made that snapped

the line, the great fish dashing away towards the distant channel.

To guard against a repetition of this the dinghy was brought to the fishing-ground, and while the colonel renewed his tackle the others cast their lines again, Paublo reclining as before upon the sand with the line between his toes. A slight twitching soon brought him to his feet. Glancing to see that everything was clear behind, he checked the running line. It quickly became taut, and with a steady strain he sounded the fish. For a single second there was a lull; then a rush of line, a flurry of sand about the coil, and one hundred feet away rose a flashing tarpon at least six feet long.

Now followed a display of hand-line fishing worthy of the name. The line was fairly hissing through the bait catcher's hands. Dexter-

ously coiling the slack, he stepped from side to side, now taking advantage of a lull and hauling in with marvelous rapidity, slacking again, running up the beach or in the water, adding his weight cautiously to tire the fish, all the motions being conducted with a swiftness and skill that fully matched the efforts of the great game.

The method of working up the key was tried, but so furious were the rushes of the fish that it was found impracticable. The dinghy was launched, and the fishermen leaped in, and a moment later were speeding up the channel behind the gamy steed. The line was now placed in a notch in the bow and gradually taken in, until finally, after a long struggle, during which the boat was towed over near a neighboring key, the great fish was brought within reach of the grains and despatched. Beaching the dinghy, a wisp of rope was passed through the tarpon's gills, and, raising it as far as its great length would allow, the herculean bait-catcher moved away up through the line of palm-trees, fairly covered by the noble fish.

The tarpon is the *Megalops atlanticus* of naturalists, a member of the family *Elopidæ*, and may be considered a gigantic herring. They have a wide geographical range from the extremity of the Florida reef to Cape Cod, two specimens having been captured in the latter locality in 1874. From May to September they are extremely common in the northern streams of Florida, seeking the warmer waters of the reef and the more southern inlets during the winter. Large ones are the rule, averaging one hundred and fifty pounds in weight and from five to seven and a half feet in length, while their maximum length is said to be over eight feet, and their weight three hundred pounds. The smallest specimen observed in the St. John's River, according to a careful observer, weighed sixty-eight pounds, and its capture was effected in a manner that illustrates the agility of the species. It leaped aboard the steamer *Water Lily*, clearing the guards, and landing fairly in the captain's lap, who was sitting in a chair in the middle of the forward deck.

"You anglers," said the judge that evening, "who can cast a fly delicately upon the surface eighty or ninety feet with a five-ounce rod, or one hundred feet with a two-pound salmon rod, are apt to think that in this you have all attainable skill, and are not inclined to listen to the hand-liner. In point of fact, the fishes of

the reef possess game qualities that are not surpassed in any waters, and I will match a thirty-pound barracuda against a salmon of equal weight on any point. While your salmon is sulking in a hole, the barracuda will fight until you have him in the boat; and to present a rod to such a fish is an insult to its intelligence," added the hand-line advocate, warming up to his subject.

The colonel was in the minority. He had been discovered by Paublo endeavoring vainly to lure a gray-snapper with a silver doctor that he considered very killing, and was disposed to admit that rod-fishing, with either fly or bait, was not exactly adapted for the fishes of the reef.

"It's my impression," he said, "that the gray-snapper will not take bait on any tackle."

"Big gray-snappers offshore take craw-fish," said Paublo, who had brought up the measurement of the tarpon's large scales, which was three and a fourth by three and a half inches. "But disher quality snapper roun' de Keys dey's got heap o' sense."

"But," said the colonel, "I saw one rise to a live fly this morning that fell on the surface."

"Dat's only play, sah," replied Paublo. "Dey ain't gwine to eat fedders, dat's shore."

Disher inshore quality snappers knows jes as much as folks—long as dey see de line dey ain't gwine to git cotched; but dey's kinder out-o'-sight out-o'-mind fish, an' ef yo' kin hide de line dere yo' is."

To illustrate this theory the next day Paublo took a saber made out of an iron barrel-hoop, and during a few moments' execution along shore secured forty or fifty small fishes that he termed hardheads, resembling sar-

dines. He then brought out a line of a faded blue tint, about the size of a mackerel-line, to which he attached the hook by a delicate copper wire three feet in length, no sinker being used. The hardheads were then strung upon the hook through their eyes,—as many as could go on,—and tossed over, sinking in water perhaps eight fathoms deep, and distinctly visible when on the bottom.

The snappers were passing and repassing in great numbers from an old wreck a short distance away, and if the term dignity may be applied to a fish it was applicable to them. Every motion was one of grace, and as they swept along in groups, many ranging in length from two to three and a half feet, they presented an imposing spectacle. For some time the bait remained unnoticed, but the fisherman

TAKING HOME THE TARPON.

gave a tremulous movement to the line that in turn was imparted to the bait, and a passing snapper stopped, turned its tail gracefully, and moved half around the shining bait.

"He's lookin' fo' deline," whispered Paublo;

ing in on the line and then darting swiftly out, trying manœuver and trick in rapid succession, only to be met by the bait-catcher at every move, and finally drawn exhausted upon the sands.

SPEARING A BARRACUDA.

"but dere ain't no line dere," he added, as if talking to the fish.

"But he 's gone," said the colonel, as the fish turned away.

"Jes gwine to see ef anybody 's lookin'," was the reply.

A moment later the fish was back again. It hovered over the tempting bait, bending its body in graceful curves, now nosing it as it quivered under the skilful hands of the fisherman, and finally, after another brief disappearance, it returned, quickly seized the bait, and moved away. A moment later the shining hard-heads had vanished; a side jerk, and the line was flying through the negro's hands, cutting the water with the sound so intoxicating to the enthusiast. Careful treatment was now necessary to prevent a broken line, the great fish seeking cover, rushing from side to side, com-

"I have caught the red-snapper with rod, trolling," said the colonel, as the judge pronounced the fish the *Lutjanus caxis*, the finest table-fish on the reef.

"Dat 's up de coast," interrupted Paublo, with a grin. "Dey ain't got no call to come yere. I cotch red-snapper wif pork an' lead sinker ten miles off de banks at Fernandiny. Come up like a heap o' coral. Dey ain't game, sah; dey ain't got no sense, jes like grouper an' jew-fish. But de gray-snapper," he continued, laying the graceful creature with its mild, beautiful eyes before the fishermen, "dey 's got sense jes like folks, dey is."

"If you wish to see some of our native talent with the grains," said the judge one morning, "go out with Chief and watch him take a barracuda."

Chief was the only professional fisherman,

TOWED BY A BARRACUDA.

with the exception of Paublo, on the Keys—a full-blooded Indian, a Seminole, one of the last of his tribe. A man of few words, his simple invitation to the judge to tumble in was accepted without comment. The craft was a small, light twelve-foot boat of wide beam, known as a dinghy, the Indian propelling her with a single oar, sculling with great dexterity.

Across her beam lay a pole thirteen feet in length, upon which was fitted a two-pronged iron spear, or grains, with automatic barbs, a stout line being attached, and coiled at the sculler's feet.

Reaching the head of a channel that extended east and west of the key, the dinghy was put about and headed against the sun, the tall figure of the fisherman standing upright, slowly managing the oar with his left hand, anon glancing astern and on each side. When half-way up the channel the long right arm picked up the grains, and, silently turning the pole parallel with the boat, the fisherman looked around and nodded significantly to his passenger, who rose and observed a large black eye, a sharp muzzle, and then the entire form of a narrow, shapely fish about five feet long following them some thirty feet astern. Now swerving to one side, then to the other, the gliding oar seemed to offer an irresistible attraction to the fish. A quickened motion on the part of the Indian, and the barracuda shot ahead, apparently oblivious of the presence of the boat; then as if alarmed, it turned

upon its side in the glare of the sunlight full upon the surface. Releasing the oar, the sculler quickly grasped the grains with both hands, and, leaning far back, with a swaying motion hurled it with unerring accuracy at the victim. The shock released the pole from the iron; a sounding splash, and the line was rushing out with the welcome hiss, the imperturbable fisherman standing erect, motionless, and silent as before. One hundred feet of line out, the pole was picked up, and the running line that was attached to the bow tossed over.

In a moment the light craft was dashing away after the gamy barracuda, with bow under, and hurling the water from her sides. Up the channel the fish rushed, and only after a quarter of a mile of frantic endeavor did it show signs of exhaustion. Then the line was taken in hand and slowly brought in. Great bursts of speed, rushes from side to side, and frantic leaps from the water, displayed the gamy characteristics of the noble fish; but by slacking when too taut, taking the slack in quickly, and closely watching every advantage, the barracuda was soon rendered helpless. Once alongside, the tall fisherman stooped and, seizing it deftly by the gills, drew it struggling into the boat. Again headed for the sun, the dinghy was sculled along, to repeat the tragedy twice again. In one of these strikes the grains was hurled thirty feet.

"The shadow," said the judge, as his friend

was relating his experience upon his return, "that you would keep behind you in trout-fishing is no obstacle here, the secret being to arouse the curiosity of the fish by a dexterous handling of the oar while keeping the sun in its eyes. This method, which you see is successful, is peculiar to the Florida reef. The barracuda, though not strictly a surface fish, lies generally three or four feet from it, in wait for the schools of small fry that frequent a similar depth, and to the expert hand-line fisherman it affords rare sport."

From the upper end of Long Key this was demonstrated on another occasion. The reef extended off with clear white sandy bottom in water about four feet deep, and, in walking along, barracudas two or three feet in length were often seen darting seaward.

The judge carried his line, which was similar in color and size to the one used for snapper-fishing, in a large coil over his arm, explaining that it could not tangle, as it had been stretched forty-eight hours at severe tension, and was always stretched moderately after using. The hook was fastened to a slender copper wire two feet in length, and a mullet five inches long being impaled, it was thrown out ahead of the first barracuda sighted.

The splash attracted the notice of the fish, which moved forward; but seeing that the bait was dead, it instantly regained its former motionless position between surface and bottom. Now a quivering motion was imparted to the bait, which seemed struggling to escape, waving to and fro under the adroit manipulation of the fisherman, movements that were not lost upon the watchful barracuda. Dropping its muzzle, it sank slowly and gently to the bottom, and moved imperceptibly upon the bait, creeping upon it as a cat would upon a bird, then backing off as if suspicious. The slightest overdoing of the motion aroused its incredulity, and the clever simulation of life urged it on, until finally it seized the mullet, rose quickly from the bottom, and with quick gulps swallowed it. It was then that the hook struck home, and like a shot the blue-hued fish was high in air, bending and shaking its savage jaws in agony and surprise, and for some moments giving the fisherman ample scope for an exposition of dexterity and skill.

As he brought the fish in the judge remarked, "I myself see no sport in the heavy-sinker, deep-water hand-line fishing, but thus outwitting a gamy fish, where you can watch his every move in the clear water and feel every thrill through the medium of the line, is to me pleasure that I do not obtain from the rod."

"But," urged the colonel, "I could use a rod in a similar way after short practice."

"You forget," replied the judge, laughing

at his friend's persistence, "that the rod that would land an eighty-pound striped bass would not, unless I am greatly mistaken, be a match for a barracuda of equal weight; the action and activity of the fish are entirely different."

It must be admitted, however, in defense of the champion of the rod, that he succeeded later in killing a thirty-pound barracuda, although his season of triumph was of short duration. An early riser, he was often on the reef at sunrise, taking advantage of the dead calms that are so characteristic of the locality, frequently for days not a ripple save that occasioned by the breakers on the barrier reef disturbing the glassy surface. One morning he returned and aroused the judge and Paublo with a magnificent jack nearly two feet long that he had taken with his favorite silver doctor.

"It rose like a salmon," he said exultantly, "and I was thirty minutes in landing it."

"Did you see any others?" asked the judge, with a twinkle of merriment in his gray eye.

"No," replied the jubilant angler; "I was satisfied with this, and it fully demonstrates that the rod has no restrictions."

"Scuse me, sah," said Paublo, who was gang-ing hooks hard by, "but w'en de jacks come, sah, yo' better leave disher pole in de bag."

But the colonel was not to be deterred, and later in the day was standing at the place of his morning's exploit, gracefully whipping the warm waters for a companion jack, his book of flies on the sand. At the stand he had taken the channel was forty feet away, so that the fly was dropped delicately upon its borders at every cast.

The judge and Paublo were a thousand yards up the narrow key endeavoring to secure some live bait with a cast-net, the crash of which, as it fell when hurled by the bait-catcher, being the only sound that broke the stillness of the calm. The fly-fisherman had been casting half an hour with creditable patience, when the others heard a hail, and, turning and hurrying towards him, became laughing witnesses to a most extraordinary spectacle. The colonel was waist-deep in the water, wielding his rod in a manner that would have attracted the attention of the ghost of Walton himself. He held it over his head, now pushing it backward, now down and up, the tip undergoing a tremendous strain, and the rod and caster seemingly involved in indescribable confusion. The water about him appeared to be boiling, as if under the influence of some sudden irruption, while fish from a foot to two and a half feet in length were leaping into the air by thousands, striking his body, dashing over his head and between his legs, and one, which had originally seized the killing fly, had completely

entangled the fisherman in his own line. The confusion grew momentarily greater, the patter of fins and falling fish forming a babel of sounds that could have been heard a mile distant. Millions of small fry packed the water so closely that it was with difficulty the colonel forced his way through them as he struggled towards the shore; the great jacks dashing

fish. As the gulls rose, the watchful man-of-war birds gave chase; and so this curious phase of life continued, finally ceasing as suddenly as it began.

"That," said the judge to the astonished colonel, "is a 'jack-beat.' I knew this morning when you brought one in that they had come. They appear by thousands, I might say millions, rushing out of the channel without warning, chasing large schools of sardines inshore, hemming them in against the beach, and devouring them by the score, and, as you have seen, completely oblivious of danger. From now," continued the judge, "for a month or more, these beats will be of daily occurrence. You can hear a heavy one two miles away."

The minor fishes of the reef that afford fine sport and are excellent food for the table are legion. In the deep waters off the great fringing reef, among the waving lilac, the yellow-tail is found, attaining the size of the weak-fish of the North; for them crawfish bait is used, and in deeper waters the white meat of the great *Strombus gigas*. The lines for all these fishes of deep water are rigged with the hook a foot or more above the sinker, according to the bottom—a method necessary to prevent fouling with the great heads of coral and other forms that cover the areas of this ocean garden.

Various species of the genus *Hæmulon*, or grunts, afford fair sport in shallow water, while the cod of northern waters is here replaced by the wide-mouthed grouper, which forms an important article with the Havana trade. The angel and parrot-fishes, with many-hued garb, the somber-colored porgy, the grotesque hogfish, and many more, lend variety and excitement to even the generally doubtful pleasures of deep-water fishing.

The hogfish, usually found in comparatively deep water, was caught by the sportsmen off the great reef at low tide. The dead coral heads, which had been beaten into a wall and formed the hiding-places of innumerable living forms, were partly bare, the water deepening suddenly to the blue depths of the Gulf. Standing on this vantage-ground, bearing the crawfish bait and extra tackle, with the dinghy hauled up in smooth water on the inner side, the fishermen easily threw beyond the gentle breakers into deep water, tenanted with a score of eager fishes whose savage attacks upon the luscious bait only served to draw the greater game. The bite of the hogfish was a steady strain; but the moment the hook was felt it

A JACK-BEAT.

into the school with increasing fury, wild with excitement and seemingly unconscious of their human enemies.

Near the beach for several feet there was a solid mass of small fish, and as the demoralized fisherman neared the shore the jacks had preceded him, and were leaping upon the sands, the pattering of their silvery bodies and the laughter of his companions adding to his amazement and discomfiture.

The turmoil, which at first had been confined to his immediate vicinity, spread rapidly up the beach, until for a quarter of a mile the shore was lined with a jumping mass of frenzied fishes that seemed possessed with an uncontrollable desire to hurl themselves upon the sands. The noise from the strange performance soon attracted other observers: gulls came flying from all quarters of the key, dashing into the throng with wild cries; lumbering pelicans fell heavily, and filled their capacious pouches with the smaller fry, and in turn were nipped and then jerked below by the larger

CATCHING A HOGFISH.

became a game-fish worthy of the best efforts of the fisherman. Often were our sportsmen forced amid the breakers in their attempts to drag the highly colored and harlequin-like creature from its home into the still waters of the inner reef. With its enormous mouth the fish has a peculiarly swine-like appearance, fully redeemed, however, by its rich coloring and the long and richly cut dorsal fins and tail. It ranks next to the snapper as a table-fish.

Besides these legitimate features of the reef, there are others whose appearance is not always a cause of congratulation. An enormous fish, locally called the Jew, resembling the *lophius*, is often brought up, threatening to engulf the boat in its capacious maw. A gamy fish seizes the line, and the expectant fisherman finally jerks aboard a veritable porcupine, which rapidly increases in size, assuming gigantic proportions in its inflation. This hedgehog

of the sea is the *Paradiodon hystrix*, and when a specimen two feet in length has assumed rotund and aldermanic proportions, rolling about the deck like a ball, the victim is often at a loss as to the proper method of removing the encumbrance. Again, the great spotted moray essays the line, fights gamely, is taken for a snapper, and, finally, when hauled into the boat, with open jaws rushes at its captor, who, in one instance, demoralized by the suddenness of the attack, took to the mast, leaving the boat in the possession of the belligerent seaserpent, which ultimately wriggled its way back to its native element.

Withal, the keys of southern Florida offer many inducements and a comparatively new field to the fishermen who care to match their skill with the hand-liners and grainsmen of the outer reef.

C. F. Holder.

ILLUSIONS.

GO stand at night upon an ocean craft
And watch the folds of its imperial train
Catching in fleecy foam a thousand glows—
A miracle of fire unquenched by sea.
There in bewildering turbulence of change
Whirls the whole firmament, till as you gaze,
All else unseen, it is as heaven itself
Had lost its poise, and each unanchored star
In phantom haste flees to the horizon line.

What dupes we are of the deceiving eye!
How many a light men wonderingly acclaim
Is but the phosphor of the path Life makes
With its own motion, while above, forgot,
Sweep on serene the old unenvious stars!

Robert Underwood Johnson.

SALONS OF THE EMPIRE AND RESTORATION.

IN its best sense, society is born, not made. A crowd of well-dressed people is not necessarily a society. They may meet and disperse with no other bond of union than a fine house and lavish hospitality can give. It may be an assembly without unity, flavor, or influence. In the social chaos that followed the Revolution, this truth found a practical illustration. The old circles were scattered. The old distinctions were virtually

destroyed, so far as edicts can destroy that which lies in the essence of things. A few who held honored names were left, or had returned from a long exile, to find themselves bereft of rank, fortune, and friends, but these had small disposition to form new associations, and few points of contact with the *parvenus* who had mounted upon the ruins of their order. The new society was composed largely of these *parvenus*, who were ambitious for a position and a life of which they had neither the spirit, the taste, the habits, nor the mellowing traditions. Naturally they mistook the gilded frame for the picture. Unfamiliar with the gentle manners, the delicate sense of honor, and the chivalrous instincts, which underlie the best social life, though not always illustrated by its individual members, they were absorbed in matters of etiquette of which they were uncertain, and exacting of non-essentials. They regarded society upon its commercial side, contended over questions of precedence, and, as one of the most observing of their contemporaries has expressed it, "bargained for a courtesy and counted visits." "I have seen quarrels in the imperial court," she adds, "over a visit more or less long, more or less deferred." Perhaps it is to be considered that in a new order which has many aggressive

elements, this balancing of courtesies is not without a certain *raison d'être* as a protection against serious inroads upon time and hospitality; but the fault lies behind all this, in the lack of that subtle social sense which makes the discussion of these things superfluous, not to say impossible.

It was the wish of Napoleon to reconstruct a society that should rival in brilliancy the old courts. With this view he called to his aid a few women whose name, position, education, and reputation for *esprit* and fine manners he thought a sufficient guarantee of success. But he soon learned that it could not be commanded at will. The reply of the Duchesse d'Abrantes, who has left us so many pleasant reminiscences of this period, in which she was an actor as well as an observer, was very apt.

"You can do all that I wish," he said to her; "you are all young and almost all pretty; ah, well! a young and pretty woman can do anything she likes."

"Sire, what your Majesty says may be true," she replied, "but only to a certain point. . . . If the Emperor, instead of his guard and his good soldiers, had only conscripts who would recoil under fire, he could not win great battles like that of Austerlitz. Nevertheless, he is the first general in the world."

But this social life had a personal end. It was to furnish an added instrument of power to the autocrat who ruled. It was to reflect always and everywhere the glory of Napoleon. The period which saw its cleverest woman in hopeless exile, and its most beautiful one under a similar ban for the crime of being her friend, was not one which favored intellectual supremacy. The empire did not encourage literature, it silenced philosophy, and oppressed the talent that did not glorify itself. Its blighting touch rested upon the whole social fabric. The finer elements which, to some extent, entered into it, were lost in the glare of display and pretension. The true spirit of conversation was limited to private coteries that

kept themselves in the shade and were too small to be noted.

The salon which represented the best side of the new régime was that of Madame de Montesson, wife of the Duc d'Orleans, a

There were people of all parties and all conditions, a few of the nobles and returned *émigrés*, the numerous members of the Bonaparte family, the new military circle, together with many people of influence "not to the manner

MARQUISE DE MONTESSON. (FROM A LITHOGRAPH BY BELLIARD.)

woman of brilliant talents, finished manners, great knowledge of the world, fine gifts of conversation, and, what was equally essential, great discrimination and perfect tact. Napoleon was quick to see the value of such a woman in reorganizing a court, and treated her with the greatest consideration, even asking her to instruct Josephine in the old customs and usages. Her salon, however, united many elements which it was impossible to fuse.

born." Madame de Montesson revived the old amusements, wrote plays for the entertainment of her guests, gave grand dinners and brilliant fêtes. But the accustomed links were wanting. Her salon simply illustrates a social life in a state of transition.

Madame de Genlis, who was a niece of Madame de Montesson, had lived much in the world before the Revolution, and her position in the family of the Duc d'Orleans, to-

gether with her great versatility of talent, had given her a certain vogue. After ten years of exile she returned to Paris, and her salon at the Arsenal was a center for a few celebrities. Many of these names have small significance to-day. A few men like Talleyrand, La Harpe, Fontanes, and Cardinal Maury were among her friends, and she was neutral enough, or diplomatic enough, not to give offense to the new government. But she was a woman of many

As the social elements readjusted themselves on a more natural basis, there were a few salons out of the main drift of the time in which the literary spirit flourished once more, blended with the refined tastes, the elegant manners, and the amiable courtesy that had distinguished the old régime. But the interval in which history was made so rapidly, and the startling events of a century were condensed into a decade, had wrought many vital changes. It

MME. DE GENLIS. (FROM A PRINT AFTER A DRAWING BY DEVERIA.)

affectations, and, in spite of her numerous accomplishments, her cleverness, and her literary fame, her social influence was never great. As a historic figure, she is more remarkable for the variety of her voluminous work and her educational theories than personally interesting.

There is little to attract in the ruling social life of this period. It had neither the dignity of past traditions, nor freedom of intellectual expression. Its finer shades were drowned in loud and glaring colors. The luxury that could be commanded counted for more than the wit and intelligence that could not.

was no longer the spirit of the eighteenth century that reappeared under its revived and attractive forms. We note a tone of seriousness that had no permanent place in that world of *esprit* and skepticism, of fine manners and lax morals, which divided its allegiance between fashion and philosophy. The survivors of so many heart-breaking tragedies, with their weary weight of dead hopes and sad memories, found no healing balm in the cold speculation and scathing wit of Diderot or Voltaire. Even the devotees of philosophy gave it but a half-hearted reverence. It was at this moment that Chateaubriand, saturated with the sorrows of

his age, and penetrated with the hopelessness of its philosophy, offered anew the truths that had sustained the suffering and broken-hearted for eighteen centuries, in a form so sympathetic, so fascinating, that it thrilled the sensitive spirits of his time, and passed like an inspiration into the literature of the next fifty years. The melancholy of "René" found its divine consolation in the "Genius of Christianity." It was this spirit that lent a new and softer coloring to the intimate social life that blended in some degree the tastes and manners of the old *noblesse* with a refined and tempered form of modern thought. It recalls, in many points, the best spirit of the seventeenth century. There is a flavor of the same seriousness, the same sentiment. It is the sentiment that sent so many beautiful women to the solitude of the cloister, when youth had faded, and the air of approaching age began to grow chilly. But it is not to the cloister that these women turn. They weave romantic tales out of the texture of their own lives, they repeat their experiences, their illusions, their triumphs, and their disenchantments. As the days grow more somber, and the evening shadows begin to fall, they meditate, they moralize, they substitute prayers for dreams. But they think also. The drama of the late years had left no thoughtful soul without earnest convictions. There were numerous shades of opinion, many finely drawn issues. In a few salons these elements were delicately blended, and if they did not repeat the brilliant triumphs of the past, if they focused with less power the intellectual light which was dispersed in many new channels, they have left behind them many fragrant memories. One is tempted to linger in these temples of a goddess half-dethroned. One would like to study these women who added to the social gifts of their race a character that had risen superior to many storms, hearts that were mellowed and purified by premature sorrow, and intellects that had taken a deeper and more serious tone from long brooding over the great problems of their time. But only a glance is permitted us here. Most of them have been drawn in living colors by Sainte-Beuve, from whom I gather here and there a salient trait.

Who that is familiar with the fine and exquisite thought of Joubert can fail to be interested in the delicate and fragile woman whom he met in her supreme hour of suffering, to find in her a rare and permanent friend, a literary *confidante*, and an inspiration. Madame de Beaumont—the daughter of Montmorin, who had been a colleague of Necker in the Ministry—had been forsaken by a worthless husband, had seen father, mother, brother, perish by the guillotine, and her sister escape it only by losing her reason, and then her life, before the

fatal day. She, too, had been arrested with the others, but was so ill and weak that she was left to die by the roadside *en route* to Paris—a fate from which she was saved by the kindness of a peasant. It was at this moment that Joubert befriended her. These numerous and crushing sorrows had shattered her health, which was never strong, but during the few brief years that remained to her she was the center of a coterie more distinguished for quality than numbers. Joubert and Chateaubriand were its leading

MME. DE BEAUMONT.
(FROM A PRINT AFTER THE PAINTING BY DE LA TOUR.)

spirits, but it included also Fontanes, Pasquier, Madame de Vintimille, Madame de Pastoret, and other friends who had survived the days in which she presided with such youthful dignity over her father's salon. The fascination of her fine and elevated intellect, her gentle sympathy, her keen appreciation of talent, and her graces of manner, lent a singular charm to her presence. Her character was aptly expressed by this device which Rulhière had suggested for her seal: "Un souffle m'agite et rien ne m'ébranle." Chateaubriand was enchanted with a nature so pure, so poetic, and so ardent. He visited her daily, read to her "Atala" and "René," and finished the "Genius of Christianity" under her influence. He was young then, and that she loved him is hardly doubtful, though the friendship of Joubert was far truer and more loyal than the passing devotion of this capricious man of genius, who seems to have cared only for his own reflection in another soul. But this sheltered nook of thoughtful repose, this conversational oasis in a chaotic period, had a short duration. Madame de Beaumont died at Rome, where she had gone in the faint hope of reviving her drooping

MME. DE RÉMUSAT. (FROM A PRINT.)

health in 1803. Chateaubriand was there, watched over her last hours with Bertin, and wrote eloquently of her death. Joubert mourned deeply and silently over the light that had gone out of his life.

We have pleasant reminiscences of the amiable, thoughtful, and spirituelle Madame de Rémusat, who has left us such vivid records of the social and intimate life of the imperial court. A studious and secluded childhood, prematurely saddened by the untimely fate of her father in the terrible days of 1794, an early and congenial marriage, together with her own wise penetration and clear intellect, enabled her to traverse this period without losing her delicate tone or her serious tastes. She had her quiet retreat into which the noise and glare did not intrude, where a few men of letters and thoughtful men of the world revived the old conversational spirit. She amused her idle hours by writing graceful tales, and after the close of her court life and the weakening of her health she turned her thoughts towards the education and improvement of her sex. Blended with her wide knowledge of the world, there is always a note of earnestness, a tender coloring of sentiment, which culminates towards the end in a lofty Christian resignation.

We meet again, at this time, Madame de Flahaut, who had shone as one of the lesser lights of an earlier generation, had seen her husband fall by the guillotine, and after wandering over Europe for years as an exile, returned to Paris as Madame de Souza and took her place in a quiet corner of the unfamiliar world, writing softly colored romances after the manner of Madame de La Fayette, wearing

with grace the honors her literary fame brought her, and preserving the tastes, the fine courtesies, the gentle manners, the social charms, and the delicate vivacity of the old *régime*.

One recalls, too, Madame de Duras, whose father, the noble and fearless Kersaint, was the companion of Madame Roland at the scaffold; who drifted to our own shores until the storms had passed, and, after saving her large fortune in Martinique, returned matured and saddened to France. As the wife of the Duc de Duras, she gathered around her a circle of rank, talent, and distinction. In her salon one finds nobles, diplomats, statesmen, and *littérateurs*. Chateaubriand, Humboldt, Cuvier, de Montmorency were among her friends. What treasures of thought and conversation do these names suggest! What memories of the past, what prophecies for the future! Madame de Duras, too, wore gracefully the mantle of authorship with which she united pleasant household cares. She, too, put something of the sad experiences of her own life into romances which are vividly and tenderly colored. She, too, like many of the women of her time whose youth had been blighted by suffering, passed into an exalted Christian strain. The friend of Madame de Staël, the literary *confidante* of Chateaubriand, the woman of many talents, many virtues, and many sorrows, died with words of faith and hope and divine consolation on her lips.

The devotion of Madame de Chantal, the mysticism of Madame Guyon, find a nineteenth century counterpart in the spiritual illumination of Madame de Krüdener. Passing from a life of luxury and pleasure to a life of penitence and asceticism, singularly blending

MME. DE SOUZA. (FROM A PRINT DRAWN BY CHRÉTIN.)

worldliness and piety, opening her salon with prayer, and adding a new sensation to the gay life of Paris, this adviser of Alexander I. and friend of Benjamin Constant, who put her best life into the charming romances which ranked next to "Corinne" and "Delphine" in their time; this beautiful woman, novelist, prophetess, mystic, *illuminée*, fanatic, with the passion of the South and the superstitious vein of the far north, disappeared from the world she had graced, and gave up her life in an ecstasy of sacrifice in the wilderness of the Crimea.

It is only to indicate the altered drift of the social life that flowed in quiet undercurrents during the Empire and came to the surface again after the Restoration; to trace lightly the slow reaction towards the finer shades of modern thought and modern morality, that I touch so briefly and so inadequately upon these women who represent the best side of their age, leaving altogether untouched many of equal gifts and equal note.

There is one, however, whose salon gathered into itself the last rays of the old glory, and whose fame as a social leader has eclipsed that of all her contemporaries. Madame Récamier, "the last flower of the salons," is the woman of the century who has been, perhaps, most admired, most loved, and most written about. It has been so much the fashion to dwell upon her marvelous beauty, her kindness, and her irresistible fascination that she has become, to some extent, an ideal figure, invested with a subtle and poetic grace that folds itself about her like the invisible mantle of an enchantress. Her actual relations to the world in which she lived extended over a long period, terminating only on the threshold of our own generation. Without strong opinions or pronounced color, loyal to her friends rather than to her convictions, of a calm and happy temperament, gentle in character, keenly appreciative of all that was intellectually fine and rare but without exceptional gifts herself, fascinating in manner, perfect in tact, with the beauty of an angel and the heart of a woman—she presents a fitting close to the long reign of her salon.

We hear of her first in the bizarre circles of the Consulate, as the wife of a man who was rather father than husband, young, fresh, lovely, accomplished, surrounded by the luxuries of wealth, and captivating all hearts by that indefinable charm of manner which she carried with her to the end of her life. Both at Paris and at her country house at Clichy she was the center of a company in which the old was discreetly mingled with the new, in which enemies were tempered, antagonisms softened, and the most discordant elements brought into harmonious *rapprochement*, for the moment, at least, by her gracious word or her winning smile.

VOL. XLII.—3.

Here we find Adrien and Mathieu de Montmorency, who already testified the rare friendship that was to outlive years and misfortunes; Madame de Staël before her exile; Narbonne, Barère, Bernadotte, Moreau, and many distinguished foreigners. Lucien Bonaparte was at her feet; La Harpe was her devoted friend; Napoleon was trying in vain to draw her into his court, and treasuring up his failure for another day. The salon of Madame Récamier was not, in any sense, philosophical or political, but after the cruel persecution of La Harpe, the banishment of Madame de Staël, and the similar misfortunes of other friends, her sym-

MME. DE DURAS.
(FROM A PRINT AFTER THE PAINTING BY MME. ROUCHIER.)

pathies were too strong for her diplomacy, and it gradually fell into the ranks of the opposition. It was well known that the emperor regarded all who went there as his enemies, and this young and innocent woman was destined to feel the full bitterness of his petty displeasure. We cannot trace here the incidents of her varied career, the misfortunes of the father to whom she was a ministering angel, the loss of her husband's fortune and her own, the years of wandering and exile, the second period of brief and illusive prosperity, and the swift reverses which led to her final retreat. She was at the height of her beauty and her fame in the early days of the Restoration, when her salon revived its old brilliancy, and was a center in which all parties met on neutral ground. Her intimate relations with those in power gave it a strong political influence, but this was never a marked feature, as it was mainly personal.

But the position in which one is most inclined to recall Madame Récamier is in the

letters were few, and she has left no written records by which she can be measured. She read much, and was familiar with current literature, also with religious works. But the world is slow to accord a twofold superiority, and it is quite possible that the fame of her beauty has prevented full justice to her mental abilities. It is certain that no woman could have held her place as the center of a distinguished literary circle and the confidante and adviser of the first literary men of her time without a fine intellectual appreciation. "To love what is great," said Madame Necker, "is almost to be great one's self." Ballanche advised her to translate "Petrarch," and she even began the work, but it was never finished. "Believe me," he writes, "you have at your command the genius of music, flowers, imagination, and elegance. . . . Do not fear to try your hand on the golden lyre of the poets." He may have been too much blinded by a friendship that verged closely upon a more passionate sentiment to be an altogether impartial critic, but it was a high tribute to her gifts that a man of such conspicuous talents thought her capable of work so exacting. Her qualities were those of taste and a delicate imagination rather than of reason. Her musical accomplishments were always a resource. She sang, played the harp and piano, and we hear of her during a summer at Albano playing the organ at vespers and high mass. She danced exquisitely, and it was her ravishing grace that suggested the shawl dance of "Corinne" to Madame de Staël and of "Valérie" to Madame de Krüdener. One can fancy her, too, at Coppet, playing the rôle of the angel to Madame de Staël's Hagar — a spirit of love and consolation to the stormy and despairing soul of her friend.

But her real power lay in the wonderful harmony of her nature, in the subtle penetration that divined the chagrins and weaknesses of others only to administer a healing balm, in the delicate tact that put people always on the best terms with themselves, and gave the finest play to whatever talents they possessed. Add to this a quality of beauty which cannot be caught by pen or pencil, and one can understand the singular sway she held over men and women alike. Madame de Krüdener, whose salon so curiously united fashion and piety, worldliness and mysticism, was troubled by the distraction which her entrance was sure to cause, and begged Benjamin Constant to write and entreat her to make herself as little charming as possible. His note is certainly unique, though it loses much of its piquancy in translation:

I acquit myself with a little embarrassment of a commission which Madame de Krüdener has

just given me. She begs you to come as little beautiful as you can. She says that you dazzle all the world, and that consequently every soul is troubled and attention is impossible. You cannot lay aside your charms, but do not add to them.

In her youth she dressed with great simplicity and was fond of wearing white with pearls, which accorded well with the dazzling purity of her complexion.

Madame Récamier was not without vanity, and this is the reverse side of her peculiar gifts. She would have been more than mortal if she had been quite unconscious of attractions so rare that even the children in the street paid tribute to them. But one finds small trace of the petty jealousies and exactions that are so apt to accompany them. She liked to please, she wished to be loved, and this inevitably implies a shade of coquetry in a young and beautiful woman. There was an element of fascination in this very coquetry, with its delicate subtleties and its shifting tints of sentiment. That she carried it too far was no doubt true; that she did so wittingly is not so certain. Her victims were many, and if they quietly subsided into friends, as they usually did, it was after many struggles and heartburnings. But if she did not exercise her power with invariable discretion, it seems to have been less the result of vanity than a lack of decision, and an amiable unwillingness to give immediate pain, or to lose the friend in the lover. With all her fine qualities of heart and soul, she had a temperament that saved her from much of the suffering she thoughtlessly inflicted upon others. She roused many violent passions without at all disturbing her own serenity. The delicate and chivalrous nature of Mathieu de Montmorency, added to his years, gave his relations to her a half-paternal character, but that he loved her always with the profound tenderness of a loyal and steadfast soul is apparent through all the singularly disinterested phases of a friendship that ended only with his life.

Prince Augustus, whom she met at Coppet, called up a passing ripple on the surface of her heart, sufficiently strong to lead her to suggest a divorce to her husband, whose relations to her, though always friendly, were only nominal. But he appealed to her generosity, and she thought of it no more. Why she permitted her princely suitor to cherish so long the illusions that time and distance do not readily destroy, is one of the mysteries that are not easy to solve. Perhaps she thought it more kind to let absence wear out a passion than to break it too rudely. At all events, he cherished no permanent bitterness and never forgot her. At his death, nearly forty years later, he or-

MME. RÉCAMIER. (FROM THE PAINTING BY DAVID.)

dered her portrait by Gérard to be returned, but her ring was buried with him.

The various phases of the well-known infatuation of Benjamin Constant, which led him to violate his political principles and belie his own words rather than take a course that must result in separation from her, suggests a page of highly colored romance. The letters of Mlle. de Lespinasse scarcely furnish us with a more ardent episode in the literature of hopeless passion. The worshipful devotion of Ampère and Ballanche would form a chapter no less interesting, though less intense and stormy.

But the name most inseparably connected with Madame Récamier is that of Chateaubriand. This friendship, of an unquestioned sort that seems to have gone quite out of the world, had all the phases of a more tender sentiment, and goes far towards disproving the charge of coldness that has often been brought against her. It was begun by the deathbed of Madame de Staël after she had reached the dreaded forties, and lasted more than thirty years. It seems to have been the single sentiment that mastered her. One can trace the restless undercurrents of this life that was outwardly so serene in the letters of Chateaubriand. He writes to her from Berlin, from England, from Rome. He confides to her his ambitions, tells her his anxieties, asks her counsel as to his plans, chides her little jealousies, and com-

mends his wife to her care and attention. This recalls a remarkable side of her relations with the world. Women are not apt to love formidable rivals, but the wives of her friends apparently shared the admiration with which their husbands regarded her. If they did not love her, they exchanged friendly notes, and courtesies that were often more than cordial. She consoles Madame de Montmorency in her sorrow, and Madame de Chateaubriand asks her to cheer her husband's gloomy moods. Indeed, she roused little of that bitter jealousy which is usually the penalty of exceptional beauty or exceptional gifts of any sort. The sharp tongue of Madame de Genlis lost its sting in writing of her. She idealized her as *Athénaïs*, in the novel of that name which has for its background the beauties of Coppet, and vaguely reproduces much of its life. The pious and austere Madame Swetchine, whose prejudices against her were so strong that for a long time she did not wish to meet her, confessed herself at once a captive to her "penetrating and indefinable charm." Though she did not always escape the shafts of malice, no better tribute could be offered to the graces of her character than the indulgence with which she was regarded by the most severely judging of her own sex.

But she has her days of depression. Chateaubriand is absorbed in his ambitions and

sometimes indifferent ; his antagonistic attitude towards Montmorency, who is far the nobler character of the two, is a source of grief to her. She tries in vain to reconcile her rival friends. Once she feels compelled to tear herself from an influence which is destroying her happiness, and goes to Italy. But she carries within her own heart the seeds of unrest. She still follows the movements of the man who occupies so large a space in her horizon, sympathizes from afar with his disappointments, and cares

the woman who flattered his restless vanity, anticipated his wishes, studied his tastes, and watched every shadow that flitted across his face. He was in the habit of writing her a few lines in the morning ; at three o'clock he visited her, and they chatted over their tea until four, when favored visitors began to arrive. In the evening it was a little world that met there. The names of Ampère, Tocqueville, Montalembert, Merimée, Thierry, and Sainte-Beuve suggest the literary quality of this circle, in

MME. SWETCHINE. (FROM A PRINT.)

for his literary interest, ordering from Tenerani a bas-relief of a scene from "The Martyrs."

After her return her life settles into more quiet channels. Chateaubriand, embittered by the chagrins of political life, welcomed her with the old enthusiasm. From this time he devoted himself exclusively to letters, and sought his diversion in the convent-salon which has left so wide a fame, and of which he was always the central figure. The petted man of genius was moody and capricious. His colossal egotism found its best solace in the gentle presence of

which were seen from time to time such foreign celebrities as Sir Humphry and Lady Davy, Maria Edgeworth, Humboldt, the Duke of Hamilton, the gifted Duchess of Devonshire, and Miss Berry. Lamartine read his "Méditations" and Delphine Gay her first poems there. Rachel recited, and Pauline Viardot, Garcia, Rubini, and Lablache sang there. Delacroix, David, and Gérard represented the world of art, and the visitors from the *grand monde* were too numerous to mention. In this brilliant and cosmopolitan company, what re-

sources of wit and knowledge, what charms of beauty and elegance, what splendors of rank and distinction were laid upon the altar of this lovely and adored woman, who recognized all values, and never forgot the kindly word or the delicate courtesy that put the most modest guests at ease and brought out the best there was in them!

One day in 1847 there was a vacant place, and the faithful Ballanche came no more from his rooms across the street. A year later Chateaubriand died. After the death of his wife he had wished to marry Madame Récamier, but she thought it best to change nothing, believing that age and blindness had given her the right to devote herself to his last days. To her friends she said that if she married him, he would miss the pleasure and variety of his daily visits.

Old, blind, broken in health and spirit, but retaining always the charm which had given her the empire over so many hearts, she followed him in a few months.

Madame Récamier represented better than any woman of her time the peculiar talents that distinguished the leaders of some of the most famous salons. She had tact, grace, intelligence, appreciation, and the gift of inspiring others. The cleverest men and women of the age were to be met in her drawing-room. One found there genius, beauty, *esprit*, elegance, courtesy, and the brilliant conversation which is the Gallic heritage. But not even her surpassing fascination added to all these attractions could revive the old power of the salon. Her coterie was charming as a choice circle gathered about a beautiful, refined, accomplished woman, and illuminated by the wit and intelligence of thoughtful men, will always be, but its influence was limited and largely personal, and it has left no perceptible traces. Nor has it had any noted successor. It is no longer coterie presided over by clever women that guide the age and mold

its tastes or its political destinies. The old conditions have ceased to exist and the prestige of the salon is gone.

The causes that led to its decline have been already more or less indicated. Among them, the decay of aristocratic institutions played only a small part. The salons were *au fond* democratic in the sense that all forms of distinction were recognized so far as they were amenable to the laws of taste, which form the ultimate tribunal of social fitness in France. But it cannot be denied that the code of etiquette which ruled them had its foundation in the traditions of the *noblesse*. The gentle manners, the absence of egotism and self-assertion, as of disturbing passions, the fine and uniform courtesy which is the poetry of life, are the product of ease and assured conditions. It is struggle that destroys harmony and repose, whatever stronger qualities it may develop, and the greater mingling of classes which inevitably resulted in this took something from the exquisite flavor of the old society. The increase of wealth, too, created new standards which were fatal to a life in which the resources of wit, learning, and education in its highest sense were the chief attractions. The greater perfection of all forms of public amusement was not without its influence. Men drifted, also, more and more into the one-sided life of the club. Considered as a social phase, no single thing has been more disastrous to the unity of modern society than this. But the most formidable enemy of the salon was the press. Intelligence has become too universal to be focused in a few drawing-rooms. Genius and ambition have found a broader arena. When interest no longer led men to seek the stimulus and approval of a powerful coterie, it ceased to be more than an elegant form of recreation, a theater of small talents, the diversion of an idle hour. When the press assumed the sovereignty, the salon was dethroned.

Amelia Gere Mason.

NOTE.—The frontispiece portrait, in the September CENTURY, of the Princesse de Conti, was offered in illustration of Mrs. Mason's article on the "Women of the French Salons"; but we have since learned that the portrait represents the sister, not the wife, of the Prince de Conti, and that consequently it was out of place with the allusion to the social gatherings at the Temple.—EDITOR.

THE SQUIRREL INN.

BY FRANK R. STOCKTON.

THE SQUIRREL INN.

I.

THE STEAMBOAT PIER.

HE steamboat *Manasquan* was advertised to leave her pier on the east side of the city at half-past nine on a July morning. At nine o'clock Walter Lodloe was on the forward upper deck, watching the early passengers come on board, and occasionally smiling as his glance fell upon a tall man in a blue flannel shirt, who, with a number of other deck-hands, was hard at work transferring from the pier to the steamer the boxes, barrels, and bales of merchandise the discouraging mass of which was on the point of being increased by the unloading of a newly arrived two-horse truck.

Lodloe had good reason to allow himself his smiles of satisfaction, for he had just achieved a victory over the man in the blue shirt, and a victory over a busy deck-hand on a hot day is rare enough to be valuable. As soon as he

had stepped on board, he had deposited his hand-baggage in a place of safety, and walked forward to see the men run on the freight. It was a lively scene, and being a student of incident, character, and all that sort of thing, it greatly interested him. Standing by a strangely marked cask which had excited his curiosity, he found himself in the way of the deck-hand in the blue shirt, who, with red face and sparkling forehead, had just wheeled two heavy boxes up the incline of the gang-plank, and was about to roll them with easy rapidity to the other side of the deck; but Lodloe, with his back turned and directly in front of him, made it necessary for him to make a violent swerve to the right or to break the legs of a passenger. He made the swerve, missed Lodloe, and then, dumping his load, turned and swore at the young man with the promptness and accuracy of a cow-boy's revolver.

It was quite natural that a high-spirited young fellow should object to being sworn at, no matter what provocation he had given, and Lodloe not only objected but grew very angry. The thing which instantly suggested itself to him, and which to most people would seem

the proper thing to do, was to knock down the man. But this knocking-down business is a matter which should be approached with great caution. Walter was a strong young fellow and had had some practice in boxing, but it was not impossible that, even with the backing of justifiable indignation, the conventional blow straight from the shoulder might have failed to fell the tall deck-hand.

But even had Lodloe succeeded in stretching the insulting man upon the dirty deck, it is not at all probable that he would have staid there. In five seconds there would have been

in his infallibility. The directness, force, and comprehensiveness of the expressions used in this composition made a deep impression upon Lodloe, and as it was not very long he had committed it to memory, thinking that he might some time care to use it in quotation. Now it flashed upon him that the time had come to quote this *anathema maranatha*, and without hesitation he delivered the whole of it, fair and square, straight into the face of the petrified deck-hand.

Petrified immediately he was not. At first he flushed furiously, but after a few phrases he be-

ON DECK.

a great fight, and it would not have been long before the young gentleman would have found himself in a police station.

Lodloe's common sense was capable of considerable tension without giving way, even under a strain like this, and, although pale with anger, he would not engage in a personal contest with a deck-hand on a crowded steamboat; but to bear the insult was almost impossible. Never before had he been subjected to such violent abuse.

But in a flash he remembered something, and the man had scarcely turned his empty truck to go back to the pier, when Lodloe stepped in front of him, and with a wave of the hand stopped him.

Two nights before Lodloe had been sitting up late reading some papers on modern Italian history, and in the course of said reading had met with the text of the *anathema maranatha* pronounced by Pius IX. against disbelievers

gan to pale, and to turn to living stone; enough mobility, however, remained to allow him presently to raise his hand imploringly, but Lodloe had now nearly finished his discourse, and with a few words more he turned and walked away. The deck-hand wiped his brow, took in a long breath, and went to work. If another passenger had got in his way, he would not have sworn at him.

Therefore it was that, gently pleased by the sensations of victory, Walter Lodloe sat on the upper deck and watched the busy scene. He soon noted that passengers were beginning to come down the pier in considerable numbers, and among these his eye was caught by a young woman wheeling a baby-carriage.

When this little equipage had been pushed down nearly to the end of that side of the pier from which the passengers were going on board, it stopped, and its motive power looked behind her. Presently she turned her head towards the

steamer and eagerly scanned every part of it on which she could see human beings. In doing this she exhibited to Lodloe a very attractive face. It was young enough, it was round enough, and the brown eyes were large enough, to suit almost any one whose taste was not restricted to the lines of the old sculptors.

When she completed her survey of the steamboat, the young woman turned the carriage around and wheeled it up the pier. Very soon, however, she returned, walking rapidly, and ran the little vehicle over the broad gang-plank on to the steamboat. Now Lodloe lost sight of her, but in about five minutes she appeared on the forward upper deck without the baby-carriage, and looking eagerly here and there. Not finding what she sought, she hastily descended.

The next act in this performance was the appearance of the baby-carriage, borne by the blue-shirted deck-hand, and followed by the young woman carrying the baby. The carriage was humbly set down by its bearer, who departed without looking to the right or the left, and the baby was quickly deposited in it. Then the young woman stepped to the rail and looked anxiously upon the pier. As Lodloe gazed upon her it was easy to see that she was greatly troubled. She was expecting some one who did not come. Now she went to the head of the stairway and went down a few steps, then she came up again and stood undecided. Her eyes now fell upon Lodloe, who was looking at her, and she immediately approached him.

"Can you tell me, sir," she said, "exactly how long it will be before this boat starts?"

Lodloe drew out his watch.

"In eight minutes," he answered.

If Lodloe had allowed himself to suppose that because the young woman who addressed him was in sole charge of a baby-carriage she was a nurse or superior maid-servant, that notion would have instantly vanished when he heard her speak.

The lady turned a quick glance towards the pier, and then moved to the head of the stairway, but stopped before reaching it. It was plain that she was in much perplexity. Lodloe stepped quickly towards her.

"Madam," said he, "you are looking for some one. Can I help you?"

"I am," she said; "I am looking for my nurse-maid. She promised to meet me on the pier. I cannot imagine what has become of her."

"Let me go and find her," said Lodloe. "What sort of person is she?"

"She is n't any sort of person in particular," answered the lady. "I could n't describe her. I will run down and look for her myself,

and if you will kindly see that nobody knocks over my baby I shall be much obliged to you."

Lodloe instantly undertook the charge, and the lady disappeared below.

11.

THE BABY, THE MAN, AND THE MASTERY.

THE young man drew the baby-carriage to the bench by the rail and, seating himself, gazed with interest upon its youthful occupant. This individual appeared to be about two years of age, with its mother's eyes and a combative disposition. The latter was indicated by the manner in which it banged its own legs and the sides of its carriage with a wicker bludgeon that had once been a rattle. It looked earnestly at the young man, and gave the edges of its carriage a whack which knocked the bludgeon out of its hand. Lodloe picked up the weapon, and, restoring it to its owner, began to commune with himself.

"It is the same old story," he thought. "The mother desires to be rid of the infant; she leaves it for a moment in the charge of a stranger; she is never seen again. However, I accept the situation. If she does n't come back this baby is mine. It seems like a good sort of baby, and I think I shall like it. Yes, youngster, if your mother does n't come back you are mine. I shall not pass you over to the police or to any one else; I shall run you myself."

It was now half-past nine. Lodloe arose and looked out over the pier. He could see nothing of the young mother. The freight was all on board, and they were hauling up the forward gang-plank. One or two belated passengers were hurrying along the pier; the bell was ringing; now the passengers were on board, the aft gang-plank was hauled in, the hawsers were cast off from the posts, the pilot's bell jingled, the wheels began to revolve, and the great steamboat slowly moved from its pier.

"I knew it," said Lodloe, unconsciously speaking aloud; "she had n't the slightest idea of coming back. Now, then," said he, "I own a baby, and I must consider what I am to do with it. One thing is certain, I intend to keep it. I believe I can get more solid comfort and fun out of a baby than I could possibly get out of a dog or even a horse."

Walter Lodloe was a young man who had adopted literature as a profession. Earlier in life he had worked at journalism, but for the last two years he had devoted himself almost entirely to literature pure and simple. His rewards, so far, had been slight, but he was not in the least discouraged, and hoped bravely for better things. He was now on his way to spend some months at a quiet country place of which

he had heard, not for a summer holiday, but to work where he could live cheaply and enjoy outdoor life. His profession made him more independent than an artist—all he needed were writing materials, and a post-office within a reasonable distance.

Lodloe gazed with much satisfaction at his new acquisition. He was no stickler for conventionalities, and did not in the least object to appear at his destination—where he knew no one—with a baby and a carriage.

"I'll get some country girl to take care of it when I am busy," he said, "and the rest of the time I'll attend to it myself. I'll teach it a lot of things, and from what I have seen of youngster-culture I should n't wonder if I should beat the record."

At this moment the baby gave a great wave with its empty rattle, and, losing its hold upon it, the wicker weapon went overboard. Then after feeling about in its lap, and peering over the side of the carriage, the baby began to whimper.

"Now then," thought the young man, "here's my chance. I must begin instantly to teach it that I am its master."

Leaning forward, he looked sternly into the child's face, and in a sharp, quick tone said: "Whoa!"

The baby stopped instantly, and stared at its new guardian.

"There," thought Lodloe, "it is just the same with a baby as with a horse. Be firm, be decided; it knows what you want, and it will do it."

At this instant the baby opened its mouth, uttered a wild wail, and continued wailing.

Lodloe laughed. "That did n't seem to work," said he; and to quiet the little creature he agitated the vehicle, shook before the child his keys, and showed it his watch, but the wails went on with persistent violence. The baby's face became red, its eyes dropped tears.

The young man looked around him for assistance. The forward upper deck was without an awning, and was occupied only by a few men, the majority of the passengers preferring the spacious and shaded after deck. Two of the men were laughing at Lodloe.

"That's a new way," one of them called out to him, "to shut up a young one. Did it ever work?"

"It did n't this time," answered Lodloe. "Have you any young ones?"

"Five," answered the man.

"And how do you stop them when they howl like that?"

"I leave that to the old woman," was the answer, "and when she's heard enough of it she spansks 'em."

Lodloe shook his head. That method did not suit him.

"If you'd run its wagon round the deck," said another man, "perhaps that would stop it. I guess you was never left alone with it before."

Lodloe made no reply to this supposition, but began to wheel the carriage around the deck. Still the baby yelled and kicked. An elderly gentleman who had been reading a book went below.

"If you could feed it," said one of the men who had spoken before, "that might stop it, but the best thing you can do is to take it down to its mother."

Lodloe was annoyed. He had not yet arranged in his mind how he should account for his possession of the baby, and he did not want an explanation forced upon him before he was ready to make it. These men had come on board after the departure of the young woman, and could know nothing of the facts, and therefore Lodloe, speaking from a high, figurative standpoint, settled the matter by shaking his head and saying:

"That can't be done. The little thing has lost its mother."

The man who had last spoken looked compassionately at Lodloe.

"That's a hard case," he said; "I know all about it, for I've been in that boat myself. My wife died just as I was going to sail for this country, and I had to bring over the two babies. I was as seasick as blazes, and had to take care of 'em night and day. I tell you, sir, you've got a hard time ahead of you; but feedin' 's the only thing. I'll get you something. Is it on milk yet, or can it eat biscuit?"

Lodloe looked at the open mouth of the vociferous infant and saw teeth.

"Biscuit will do," he said, "or perhaps a banana. If you can get me something of the sort I shall be much obliged"; and he gave the man some money.

The messenger soon returned with an assortment of refreshments, among which, happily, was not a banana, and the baby soon stopped wailing to suck an enormous stick of striped candy. Quiet having been restored to this part of the vessel, Lodloe sat down to reconsider the situation.

"It may be," he said to himself, "that I shall have to take it to an asylum, but I shall let it stay there only during the period of unintelligent howling. When it is old enough to understand that I am its master, then I shall take it in hand again. It is ridiculous to suppose that a human being cannot be as easily trained as a horse."

The more he considered the situation the better he liked it. The possession of a healthy

and vigorous youngster without encumbrances was to him a novel and delightful sensation.

"I hope," he said to himself, "that when the country girl dresses it she will find no label on its clothes, nor any sign which might enable one to discover the original owners. I don't want anybody coming up to claim it after we've got to be regular chums."

When the boat made its first landing the two men who had given advice and assistance to Lodloe got off, and as the sun rose higher the forward deck became so unpleasantly warm that nearly everybody left it; but Lodloe concluded to remain. The little carriage had a top, which sufficiently shaded the baby, and as for himself he was used to the sun. If he went among the other passengers they might ask him questions, and he was not prepared for these. What he wanted was to be let alone until he reached his landing-place, and then he would run his baby-carriage ashore, and when the steamboat had passed on he would be master of the situation, and could assume what position he chose towards his new possession.

"When I get the little bouncer to Squirrel Inn I shall be all right, but I must have the relationship defined before I arrive there." And to the planning and determination of that he now gave his mind.

He had not decided whether he should create an imaginary mother who had died young, consider himself the uncle of the child, whose parents had been lost at sea, or adopt the little creature as a brother or a sister, as the case might be, when the subject of his reflections laid down its stick of candy and began a violent outcry against circumstances in general.

Lodloe's first impulse was to throw it overboard. Repressing this natural instinct, he endeavored to quiet the infantile turbulence with offers of biscuit, fresh candy, gingercakes, and apples, but without effect. The young bawler would have nothing to do with any of these enticements.

Lodloe was puzzled. "I have got to keep the thing quiet until we land," he thought; "then I will immediately hire some one to go with me and take charge of it, but I can't stand this uproar for two hours longer." The crying attracted the attention of other people, and presently a country woman appeared from below.

"What is the matter with it?" she asked. "I thought it was some child left here all by itself."

"What would you do with it?" asked Lodloe, helplessly.

"You ought to take it up and walk it about until its mother comes," said the woman; and having given this advice she returned below

to quiet one of her own offspring who had been started off by the sounds of woe.

Lodloe smiled at the idea of carrying the baby about until its mother came; but he was willing to do the thing in moderation, and taking up the child resolutely, if not skillfully, he began to stride up and down the deck with it.

This suited the youngster perfectly, and it ceased crying and began to look about with great interest. It actually smiled into the young man's face, and taking hold of his mustache began to use it as a door-bell.

"This is capital," said Lodloe; "we are chums already." And as he strode he whistled, talked baby-talk, and snapped his fingers in the face of the admiring youngster, who slapped at him, and laughed, and did its best to kick off the bosom of his shirt.

III.

MATTHEW VASSAR.

In the course of this sociable promenade the steamboat stopped at a small town, and it had scarcely started again when the baby gave a squirm which nearly threw it out of its bearer's arms. At the same instant he heard quick steps behind him, and, turning, he beheld the mother of the child. At the sight his heart fell. Gone were his plans, his hopes, his little chum.

The young woman was flushed and panting. "Upon my word!" was all she could say as she clasped the child, whose little arms stretched out towards her. She seated herself upon the nearest bench. In a few moments she looked from her baby to Lodloe; she had not quite recovered her breath, and her face was flushed, but in her eyes and on her mouth and dimpled cheeks there was an expression of intense delight mingled with amusement.

"Will you tell me, sir," she said, "how long you have been carrying this baby about? And did you have to take care of it?"

Lodloe did not feel in a very good humor. By not imposing upon him, as he thought she had done, she had deceived and disappointed him.

"Of course I took care of it," he said, "as you left it in my charge; and it gave me a lot of trouble, I assure you. For a time it kicked up a dreadful row. I had the advice of professionals, but I did all the work myself."

"I am very sorry," she said, "but it does seem extremely funny that it should have happened so. What did you think had become of me?"

"I supposed you had gone off to whatever place you wanted to go to," said Lodloe.

She looked at him in amazement.

"Do you mean to say," she exclaimed, "that

you thought I wanted to get rid of my baby, and to palm him off on you—an utter stranger?"

"That is exactly what I thought," he answered. "Of course, people who want to get rid of babies don't palm them off on friends and acquaintances. I am very sorry if I misjudged you, but I think you will admit that, under the circumstances, my supposition was a very natural one."

"Tell me one more thing," she said; "what did you intend to do with this child?"

"I intended to bring it up as my own," said Lodloe; "I had already formed plans for its education."

The lady looked at him in speechless amazement. If she had known him she would have burst out laughing.

"The way of it was this," she said presently. "I ran off the steamboat to look for my nursemaid, and if I had n't thought of first searching through the other parts of the boat to see if she was on board I should have had plenty of time. I found her waiting for me at the entrance of the pier, and when I ran towards her all she had to say was that she had made up her mind not to go into the country. I was so excited, and so angry at her for playing such a trick on me at the last moment, that I forgot how time was passing, and that is the way I was left. But it never entered my mind that any one would think that I intended to desert my baby, and I did n't feel afraid either that he would n't be taken care of. I had seen ever so many women on board, and some with babies of their own, and I did not doubt that some of these would take charge of him."

"As soon as I saw that the steamboat had gone, I jumped into a cab, and went to the West Bank Railroad, and took the first train for Scurry, where I knew the steamboat stopped. The ticket agent told me he thought the train would get there about forty minutes before the boat; but it did n't, and I had to run every inch of the way from the station to the wharf, and then barely got there in time."

"You managed matters very well," said Lodloe.

"I should have managed better," said she, "if I had taken my baby ashore with me. In that case, I should have remained in the city until I secured another maid. But why did you trouble yourself with the child, especially when he cried?"

"Madam," said Lodloe, "you left that little creature in my charge, and it never entered my mind to hand it over to anybody else. I took advice, as I told you, but that was all I wanted of any one until I went ashore, and then I intended to hire a country girl to act as its nurse."

"And you really and positively intended to keep it for your own?" she asked.

At this the lady could not help laughing. "In all my life," she said, "I never heard of anything like that. But I am just as much obliged to you, sir, as if I were acquainted with you; in fact, more so."

Lodloe took out his card and handed it to her. She read it, and then said:

"I am Mrs. Robert Cristie of Philadelphia. And now I will take my baby to the other end of the boat, where it is more sheltered, but not without thanking you most earnestly and heartily for your very great kindness."

"If you are going aft," said Lodloe, "let me help you. If you will take the baby, I will bring its carriage."

In a few minutes the mother and child were ensconced in a shady spot on the lower deck, and then Lodloe, lifting his hat, remarked:

"As I suppose two people cannot become conventionally acquainted without the intervention of a third person, no matter how little each may know of said third party, I must take my leave; but allow me to say, that if you require any further assistance, I shall be most happy to give it. I shall be on the boat until we reach Romney."

"That is where I get off," she said.

"Indeed," said he; "then perhaps you will engage the country girl whom I intended to hire."

"Do you know any one living there," she asked, "who would come to me as nursemaid?"

"I don't know a soul in Romney," said Lodloe; "I never was in the place in my life. I merely supposed that in a little town like that there were girls to be hired. I don't intend to remain in Romney, to be sure, but I thought it would be much safer to engage a girl there than to trust to getting one in the country place to which I am going."

"And you thought out all that, and about my baby?" said Mrs. Cristie.

"Yes, I did," said Lodloe, laughing.

"Very well," said she; "I shall avail myself of your forethought, and shall try to get a girl in Romney. Where do you go when you leave there?"

"Oh, I am going some five or six miles from the town, to a place called the 'Squirrel Inn.'"

"The Squirrel Inn!" exclaimed Mrs. Cristie, dropping her hands into her lap and leaning forward.

"Yes," said Lodloe; "are you going there?"

"I am," she answered.

Now in his heart Walter Lodloe blessed his guardian angel that she had prompted him to make the announcement of his destination before he knew where this lady was going.

"I am very glad to hear that," he said. "It seems odd that we should happen to be going

to the same place, and yet it is not so very odd, after all, for people going to the Squirrel Inn must take this boat and land at Romney, which is not on the railroad."

"The odd part of it is that so few people go to the Squirrel Inn," said the lady.

"I did not know that," remarked Lodloe; "in fact I know very little about the place. I have heard it spoken of, and it seems to be just the quiet, restful place in which I can work. I am a literary man, and like to work in the country."

"Do you know the Rockmores of Germantown?" asked Mrs. Cristie.

"I never heard of them," he answered.

"Well, then, you may as well stay on board this steamboat and go back home in her," said Mrs. Cristie; "if you do not know the Rockmores of Germantown Stephen Petter will not take you into his inn. I know all about the place. I was there with my husband three years ago. Mr. Petter is very particular about the guests he entertains. Several years ago, when he opened the inn, the Rockmores of Germantown spent the summer with him, and he was so impressed with them that he will not take anybody unless they know the Rockmores of Germantown."

"He must be a ridiculous old crank," said Lodloe, drawing a camp-chair near to the lady, and seating himself thereon.

"In one way he is not a crank," said Mrs. Cristie; "you can't turn him. When he has made up his mind about anything, that matter is settled and fixed just as if it were screwed down to the floor."

"From what I had been told," said the young man, "I supposed the Squirrel Inn to be a free and easy place."

"It is, after you get there," said Mrs. Cristie, "and the situation and the surroundings are beautiful, and the air is very healthful. My husband was Captain Cristie of the navy. He was in bad health when he went to the Squirrel Inn, but the air did him good, and if we had staid all winter, as Stephen Petter wanted us to, it would have been a great advantage to him. But when the weather grew cool we went to New York, where my husband died early in the following December."

"I will take my chances with Stephen Petter," said Lodloe, after a suitable pause. "I am going to the Squirrel Inn, and I am bound to stay there. There must be some road not through Germantown by which a fellow can get into the favor of Mr. Petter. Perhaps you will say a good word for me, madam?"

"I don't know any good word to say," she answered, "except that you take excellent care of babies, and I am not at all sure that that would have any weight with Stephen Petter. Since

you are going to the inn, and since we have already talked together so much, I wish I did properly know you. Did you ever have a sister at Vassar?"

"I am sorry to say," said Lodloe, "that I never had a sister at that college, though I have one who wanted very much to go there; but instead of that she went with an aunt to Europe, where she married."

"An American?" asked Mrs. Cristie.

"Yes," said Lodloe.

"What was his name?"

"Tredwell."

"I never heard of him," said the lady. "There don't seem to be any threads to take hold of."

"Perhaps you had a brother at Princeton," remarked Lodloe.

"I have no brother," said she.

There was now a pause in the dialogue. The young man was well pleased that this very interesting young woman wished to know him properly, as she put it, and if there could be found the least bit of foundation on which might be built a conventional acquaintance he was determined to find it.

"Were you a Vassar girl?" he asked.

"Oh, yes," said Mrs. Cristie; "I was there four years."

"Perhaps you know something of old Matthew Vassar, the founder?"

Mrs. Cristie laughed. "I've heard enough about him, you may be sure; but what has he to do with anything?"

"I once slept in his room," said Lodloe; "in the Founder's Room, with all his stiff old furniture, and his books, and his portrait."

"You!" cried Mrs. Cristie. "When did you do that?"

"It was two years ago this spring," said Lodloe. "I was up there getting material for an article on the college which I wrote for the 'Bayside Magazine.'"

"Did you write that?" said Mrs. Cristie. "I read it, and it was just as full of mistakes as it could be."

"That may be, and I don't wonder at it," said the young man. "I kept on taking in material until I had a good deal more than I could properly stow away in my mind, and it got to be too late for me to go back to the town, and they had to put me into the Founder's Room, because the house was a good deal crowded. Before I went to bed I examined all the things in the room. I did n't sleep well at all, for during the night the old gentleman got down out of his frame, and sat on the side of my bed, and told me a lot of things about that college which nobody else ever knew, I am sure."

"And I suppose you mixed up all that in-

formation with what the college people gave you," she said.

"That may be the case," answered Lodloe, laughing, "for some of the old gentleman's points were very interesting and made a deep impression upon me."

"Well," said Mrs. Cristie, speaking very emphatically, "when I had finished reading that article I very much wished to meet the person who had written it, so that I might tell him what I thought of it; but of course I had no idea that the founder had anything to do with its inaccuracies."

"Madam," said Lodloe, "if it had not been for the mistakes in it you never would have thought of the man who wrote the paper, but you did think of him, and wanted to meet him. Now it seems to me that we have been quite properly introduced to each other, and it was old Matthew Vassar who did it. I am sure I am very much obliged to him."

Mrs. Cristie laughed. "I don't know what the social authorities would say to such an introduction," she answered, "but as baby is asleep I shall take him into the saloon."

IV.

LODLOE UNDERTAKES TO NOMINATE HIS SUCCESSOR.

IT was late in the afternoon when the Romney passengers were landed, and Mrs. Cristie and Lodloe, with a few other persons, repaired to the village hotel.

"There is a sort of stage-wagon," said the lady, "which takes people from this house to the Squirrel Inn, and it starts when the driver is ready; but before I leave Romney I must try to find some one who will go with me as nurse-maid."

"Madam," said Lodloe, "don't think of it. I have made inquiries of the landlord, and he says the roads are rough, and that it will take more than an hour to reach the Squirrel Inn, so that if you do not start now I fear you and the baby will not get there before dark. I prefer to stay here to-night, and it will be no trouble at all for me to look up a suitable person for you, and to take her with me to-morrow. It will be a good plan to take four or five of them, and when you have selected the one you like best the others can come back here in the wagon. It will be a lark for them."

Mrs. Cristie drew a long breath. "Truly," she said, "your proposition is phenomenal. Half a dozen nurse-maids in a wagon, from whom I am to pick and choose! The thing is so startling and novel that I am inclined to accept. I should very much dislike to be on the road after dark, and if you have planned

to stay here to-night, and if it will not be much trouble—"

"Say not another word," cried Lodloe; "project your mind into to-morrow morning, and behold a wagon-load of willing maidens at the door of the inn."

When Mrs. Cristie and the baby and an elderly woman who lived in Lethbury, a village two miles beyond the Squirrel Inn, had started on their journey, Walter Lodloe set about the task he had undertaken. It was still hot, and the Romney streets were dusty, and after an hour or two of inquiry, walking, and waiting for people who had been sent for, Lodloe found that in the whole village there was not a female from thirteen to seventy-three who would think of such a thing as leaving her home to become nurse-maid to a city lady. He went to bed that night a good deal chagrined, and not in the least knowing what he was going to do about it.

In the morning, however, the thing to do rose clear and plain before him.

"I can't go to her and tell her I've failed," he said to himself. "A maid must be got, and I have undertaken to get one. As there is nobody to be had here, I must go back to the city for one. There are plenty of them there."

So when the early morning boat came along he took passage for the nearest railroad station on the river, for he wished to lose no time on that trip.

The elderly lady who was going to Lethbury took a great interest in Mrs. Cristie, who was to be her only fellow-passenger. She was at the hotel with her carpet-bag and her paper bundle some time before the big spring-wagon was ready to start, and she gave earnest attention to the loading thereon of Mrs. Cristie's trunk and the baby-carriage. When they were on their way the elderly woman promptly began the conversation:

"I think," said she to Mrs. Cristie, "that I've seed you before."

"Perhaps so," said the other; "I was in this region three years ago."

"Yes, yes," said the elder woman; "I thought I was right. Then you had a husband and no child. It now looks as if you had a child and no husband."

Mrs. Cristie informed her that her surmise was correct.

"Well, well," said the elderly woman; "I've had 'em both, and it's hard to say which can be spared best, but as we've got nothin' to do with the sparin' of 'em, we've got ter rest satisfied. After all, they're a good deal like lilock bushes, both of 'em. They may be cut down, and grubbed up, and a parsley bed made on the spot, but some day they sprout up ag'in, and before you know it you've got just as big a bush

as ever. Does Stephen Petter know you 're comin'?"

"Oh, yes," said Mrs. Cristie, quite willing to change the subject; "all that is arranged. I was so pleased with the place when I was here before, and Mrs. Petter was so good to me, that I quite long to spend a summer there with my child."

"Well, I 'm glad he knows you are comin', but if he did n't, I was goin' ter say to you that you 'd better go on to Lethbury, and then see what you could do with Stephen to-morrow. It 's no use stoppin' at his house without givin' notice, and like as not it ain't no use then."

"Is Mr. Petter's house filled?" asked Mrs. Cristie.

"Filled!" said the elderly woman. "There's nobody on the place but his own family and the Greek."

"Greek!" exclaimed Mrs. Cristie.

"Yes," said the other; "he keeps a Greek in an outhouse, but what for nobody knows. I think Stephen Petter is gettin' more oncommon than he was. If he wants to get custom for his house the best thing he can do is to die. There ain't no other way, for Stephen 's not goin' to do no changin' of himself. My niece, Calthea Rose, the daughter of Daniel Rose, who used to keep the store,—she keeps it now herself,—goes over there a good deal, for she 's wonderful partial to Susan Petter, and there 's a good reason for it too, for a better woman never lived, and the walk over there is mostly shady, or through the fields, to both of which Calthea is partial, and so knows most things that 's goin' on at the Squirrel Inn, which latterly has not been much, except the comin' of the Greek; an' as nobody has been able to get at the bottom of that business, that is n't much, neither."

"I think I remember Miss Calthea Rose," said Mrs. Cristie. "She was tall, was n't she, with a very fair complexion?"

"Yes," said the elderly woman; "and it 's just as fair now as it was then. Some of it 's owin' to sun-bonnet, and some of it to cold cream. Calthea is n't as young as she was, but she 's wonderful lively on her feet yit, and there ain't many that could get ahead of her walkin' or bargainin'."

"And she keeps the store?" asked Mrs. Cristie.

"Yes," said the other; "she keeps it, and in more ways than one. You see when Dan'el died,—and that was two years ago last March,—he left everything to Calthea, and the store with the rest. Before he died he told her what he had done, and advised her to sell out the stock and put the money into somethin' that would pay good interest, and this she agreed to do, and this she is doing now. She would n't

consent to no auction, for she knew well enough the things would n't bring more 'n half they cost, so she undertook herself to sell 'em all out at retail, just as her father intended they should be sold when he bought 'em. Well, it 's took her a long while, and, in the opinion of most folks, it 'll take her a long while yit. You see she don't lay in no new goods, but just keeps on sellin' or tryin' to sell what she 's got on hand.

"It was purty easy to get rid of the groceries, and the iron and wooden things got themselves sold some way or other; but old dry-goods, with never any new ones to lighten 'em up, is about as humdrum as old people without youngsters in the family. Now it stands to reason that when a person goes into a store and sees nothin' but old calicoes, and some other odds and ends, gettin' mustier and dustier and a little more fly-specked every time, and never a new thing, even so much as a spool of cotton thread, then persons is n't likely to go often into that store, specially when there 's a new one in the village that keeps up to the times.

"Now that 's Calthea Rose's way of doin' business. She undertook to sell out them goods, and she 's goin' to keep on till she does it. She is willin' to sell some of the worst-lookin' things at cost, but not a cent below that, for if she does, she loses money, and that is n't Calthea Rose. I guess, all put together, she has n't sold more 'n ten dollars' worth of goods this year, and most of them was took by the Greek, though what he wants with 'em is more 'n I know."

"I am sorry to hear that there are no guests at the Squirrel Inn," was Mrs. Cristie's only reply to this information.

"Oh, you need n't give yourself no trouble about loneliness and that sort of thing," said the elderly woman; "before to-morrow night the whole house may be crowded from cockloft to potato-cellar. It never has been yit, but there 's no tellin' what Stephen Petter has a-brewin' in his mind."

V.

THE LANDLORD AND HIS INN.

STEPHEN PETTER was a man of middle age, who had been born on a farm, and who, apparently, had been destined to farm a farm. But at the age of thirty, having come into a moderate inheritance, he devoted himself more to the business of cultivating himself and less to that of cultivating his fields.

He was a man who had built himself up out of books. His regular education had been limited, but he was an industrious reader, and from the characters of this and that author he had conceived an idea of a sort of man which

pleased his fancy, and to make himself this sort of man he had given a great deal of study and a great deal of hard labor. The result was that he had shaped himself into something like an old-fashioned country clergyman, without his education, his manners, his religion, or his clothes. Imperfect similitudes of these Stephen Petter had acquired, but this was as far as he had gone. A well-read man who happened also to be a good judge of human nature could have traced back every obvious point of Stephen Petter's character to some English author of the last century or the first half of this one.

It was rather odd that a man like this should be the landlord of an inn. But everything about Stephen Petter was odd, so ten years before he had conceived the notion that such a man as he would like to be would be entirely unwilling to live in the little village of Lethbury, where he had no opportunity of exercising an influence upon his fellow-beings. Such an influence he thought it fit to exercise, and as he was not qualified to be a clergyman, or a physician, or a lawyer, he resolved to keep a tavern. This vocation would bring him into contact with fellow-beings; it would give him opportunities to control, impel, and retard.

Stephen Petter did not for a moment think of buying the Lethbury "Hotel," nor of establishing such a house as was demanded by the village. What he had read about houses of entertainment gave him no such motives as these. Fortunately he had an opportunity of carrying out his plan according to the notions he had imbibed from his books.

Some years before Stephen Petter had decided upon his vocation a rich gentleman had built himself a country-seat about two miles out of Lethbury. This house and its handsome grounds were the talk and the admiration of the neighborhood. But the owner had not occupied his country-home a whole summer before he determined to make a still more attractive home of it by lighting it with a new-fashioned gas of domestic manufacture. He succeeded in lighting not only his house but the whole country-side, for one moonless night his mansion was burned to the ground. Nothing was left of the house but the foundations, and on these the owner felt no desire to build again. He departed from the Lethbury neighborhood, and never came back.

When Mr. Petter became impressed with the belief that it would be a good thing for him to be an innkeeper, he also became impressed with the belief that the situation which the rich man had chosen for his country-home would be an admirable one for his purposes. He accordingly bought the property at a very reasonable price, and on the stone foundations

of the house which had been burned he built his inn.

This edifice was constructed very much as he had endeavored to construct himself. His plans for one part of it were made up from the descriptions in one of his books, and those of another part from the descriptions or pictures in some other book. Portions of the structure were colonial, others were old English, and others again suggested the Swiss chalet or a château in Normandy. There were a tall tower and some little towers. There were peaks here and there, and different kinds of slopes to the various roofs, some of which were thatched, some shingled in fanciful ways, and some covered with long strips or slabs. There were a good many doors and a good many windows, and these were of different forms, sizes, and periods, some of them jutting boldly outward, and some appearing anxious to shrink out of sight.

It took a great deal of thought and a good deal of labor to build this house; which was also true of Mr. Petter's character. But the first-named work was the more difficult of the two, for in building up himself he consulted with no one, while in planning his inn he met with all sorts of opposition from the village workmen and builders.

But at the cost of all the time that was needed and all the money he could spare, he had his house built as he wanted it; and when it was finished it seemed to exhibit a trace of nearly everything a house should possess excepting chronology and paint. Mr. Petter had selected with a great deal of care the various woods of which his house was built, and he decidedly objected to conceal their hues and texture by monotonous paint. The descriptions that he had read of houses seldom mentioned paint.

The interior was not in the least monotonous. The floors of the rooms, even in the same story, were seldom upon the same level; sometimes one entered a room from a hallway by an ascent of two or three steps, while access to others was obtained by going down some steps. The inside was subordinated in a great degree to the outside: if there happened to be a pretty window like something Mr. Petter had seen in an engraving, a room of suitable shape and size was constructed behind the window. Stairways were placed where they were needed, but they were not allowed to interfere with the shapes of rooms or hallways; if there happened to be no other good place for them they were put on the outside of the house. Some of these stairways were wide, some narrow, and some winding; and as those on the outside were generally covered, they increased the opportunities for queer windows and perplexing projections. The upper room

STEPHEN PETTER.

of the tower was reached by a staircase from the outside, which opened into a little garden fenced off from the rest of the grounds, so that a person might occupy this room without having any communication with the other people in the house.

In one of the back wings of the building there was a room which was more peculiar than any other, from the fact that there was no entrance to it whatever, unless one climbed into it by means of a ladder placed at one of its windows. This room, which was of fair size and well lighted, was in the second story, but it appeared to be of greater height on account of the descent of the ground at the back of the inn. It had been constructed because the shape of that part of the building called for a room, and a stairway to it had been omitted for the reason that if one had been built in the inside of the house it would have spoiled the shape of the room below, and there seemed no good way of putting one on the outside. So when the room was finished and floored the workmen came out of it through one of the windows, and Stephen Petter reserved his decision in regard to a door and stairway until the apartment should be needed. The grounds around the Squirrel Inn were interesting and attractive, and with them Stephen Petter had interfered very little. The rich man had planned beautiful surroundings for his country-home, and during many years nature had labored steadily to carry out his plans. There were grassy stretches and slopes, great trees, and terraces covered with tangled masses of vines and flowers. The house stood on a bluff, and on one side could be seen a wide view of a lovely valley, with the two steeples of Lethbury showing above the treetops.

Back of the house, and sweeping around be-
VOL. XLII.—5.

tween it and the public road, was a far-reaching extent of woodland; and through this, for the distance of half a mile, wound the shaded lane which led from the highway to the Squirrel Inn.

At the point at which this lane was entered from the highroad was the sign of the inn. This was a tall post with a small square frame hanging from a transverse beam, and seated on the lower strip of the frame was a large stuffed gray squirrel. Every spring Stephen Petter took down this squirrel and put up a new one. The old squirrels were fastened up side by side on a ledge in the taproom, and by counting them one could find out how many years the inn had been kept.

Directly below the bluff on which the house stood were Stephen Petter's grassy meadows and his fields of grain and corn, and in the rich pastures, or in the shade of the trees standing by the bank of the rapid little stream that ran down from the woodlands, might be seen his flocks and his herds. By nature he was a very good farmer, and his agricultural method he had not derived from his books. There were people who said — and among these Calthea Rose expressed herself rather better than the others — that Mr. Petter's farm kept him, while he kept the Squirrel Inn.

When it had become known that the Squirrel Inn was ready to receive guests, people came from here and there; not very many of them, but among them were the Rockmores

THE SIGN.

of Germantown. This large family, so it appeared to Stephen Petter, was composed of the kind of fellow-beings with whom he wished to associate. Their manners and ways seemed to him the manners and ways of the people he liked to read about, and he regarded them with admiration and respect. He soon discovered from their conversation that they were connected or acquainted with leading families in our principal Eastern cities, and it became his hope that he and his Squirrel Inn might become connected with these leading families by means of the Rockmores of Germantown.

As this high-classed family liked variety in their summer outings, they did not come again to the Squirrel Inn, but the effect of their influence remained strong upon its landlord. He

to them a widow their sentiments towards her were warmer than ever.

Mrs. Petter wondered very much why she had come without a maid, but fearing that perhaps the poor lady's circumstances were not what they had been she forbore to ask any immediate questions. But in her heart she resolved that, if she kept her health and strength, Mrs. Cristie should not be worn out by that child.

The young widow was charmed to find herself once more at the Squirrel Inn, for it had been more like a home to her than any place in which she had lived since her marriage, but when she went to her room that night there was a certain depression on her spirits. This was caused by the expected advent on the next

A WAGON-LOAD OF NURSE-MAIDS.

made up his mind that those persons who did not know the Rockmores of Germantown did not move in those circles of society from which he wished to obtain his guests, and therefore he drew a line which excluded all persons who did not possess this acquaintanceship.

This rule was very effectual in preventing the crowding of his house, and, indeed, there were summers when he had no guests at all; but this did not move Stephen Petter. Better an empty house than people outside the pale of good society.

VI.

THE GREEK SCHOLAR.

MRS. CRISTIE and her baby were warmly welcomed by Stephen Petter and his wife. They had learned during her former visit to like this lady for herself, and now that she came

day of Mr. Lodloe and a wagon-load of candidates for the nurse-maidship.

The whole affair annoyed her. In the first place it was very awkward to have this young man engaged in this service for her; and now that he was engaged in it, it would be, in a manner, under her auspices that he would arrive at the Squirrel Inn. The more she thought of the matter the more it annoyed her. She now saw that she must announce the coming of this gentleman. It would not do for him to make a totally unexpected appearance as her agent in the nurse-maid business.

But no worry of this sort could keep her awake very long, and after a night of sound and healthful sleep she told her host and hostess, the next morning at breakfast, of the Mr. Lodloe who had kindly undertaken to bring her a nurse-maid.

"Lodloe," repeated Mr. Petter. "It strikes me that I have heard the Rockmores mention that name. Is it a Germantown family?"

"I really do not know," answered Mrs. Cristie; "he is from New York."

Here she stopped. She was of a frank and truthful nature, and very much wished to say that she knew nothing whatever of Mr. Lodloe, but she was also of a kindly and grateful disposition, and she very well knew that such a remark would be an extremely detrimental one to the young man; so, being in doubt, she resolved to play trumps, and in cases like this silence is generally trumps.

Mrs. Petter had a mind which could project itself with the rapidity of light into the regions of possibilities, and if the possibilities appeared to her desirable her mind moved at even greater velocity. It was plain to her that there must be something between this young widow and the young man who was going to bring her a nurse-maid; and if this were the case, nothing must be allowed to interfere with the admission of said young man as a guest at the Squirrel Inn.

Mrs. Cristie did not want to talk any more on this subject. Nothing would have pleased her better at that moment than to hear that Mr. Lodloe had been unable to find her a suitable girl and that business had called him to New York.

"Mr. Petter," she exclaimed, "I was told yesterday that you kept a Greek in an outhouse. What on earth does that mean?"

Here Mrs. Petter laughed abruptly, and Mr. Petter slightly lifted his brow.

"Who could have told you such nonsense?" he said. "There is no Greek here. It is true that a Greek scholar lives in my summer-house, but that is very different from keeping a Greek in an outhouse."

"And he 's always late to breakfast," said Mrs. Petter; "I believe if we sat down at the table at nine o'clock he would come in just as we were finishing."

"How does it happen," said Mrs. Cristie, "that he lives in the summer-house?"

"He does not know the Rockmores of Germantown," said Mrs. Petter.

A GREEK IN AN OUTHOUSE.

"He is a man of learning," remarked Stephen Petter, "with a fine mind; and although I have made a rule which is intended to keep up the reputation of this house to a desirable level, I do not intend, if I can help it, that my rules shall press pinchingly, oppressively, or irritatively upon estimable persons. Such a person is Mr. Tippengray, our Greek scholar; and although his social relations are not exactly up to the mark, he is not a man who should be denied the privileges of this house, so far as they can be conscientiously given him. So you see, Mrs. Cristie, that, although I could not take him into the inn, there was no reason why I should not fit up the summer-house for him, which I did, and I believe he likes it better than living in the house with us."

"Like it!" exclaimed Mrs. Petter; "I should say he did like it. I believe it would drive him crazy if he had to keep regular hours like other people; but here he is now. Hester, bring in some hot cakes. Mrs. Cristie, allow me to introduce Mr. Tippengray."

The appearance of the Greek scholar surprised Mrs. Cristie. She had expected to see a man in threadbare black, with a reserved and bowed demeanor. Instead of this, she saw a

bright little gentleman in neat summer clothes, with a large blue cravat tied sailor fashion. He was not a young man, although his hair being light the few portions of it which had turned gray were not conspicuous. He was a man who was inclined to listen and to observe rather than to talk, but when he had anything to say he popped it out very briskly.

MR. TIPPENGRAY.

Mr. Petter, having finished his breakfast, excused himself and retired, and Mrs. Petter remarked to Mr. Tippetgray that she was sorry he had not taken his evening meal with them the day before.

"I took such a long walk," said the Greek scholar, "that I concluded to sup in Lethbury."

"Those Lethbury people usually take tea at five," said his hostess.

"But I'm not a Lethbury person," said he, "and I took my tea at seven."

Mrs. Petter looked at him with twinkles in her eyes.

"Of course you went to the hotel," she said.

Mr. Tippetgray looked at her with twinkles in his eyes.

"Madam," said he, "have you noticed that those large blue-jays that were here in the spring have almost entirely disappeared. I remember you used to object to their shrill pipes."

"Which is as much as to say," said Mrs. Petter, "you don't care to mention where you took tea yesterday."

"Madam," said Mr. Tippetgray, "the pleasure of taking breakfast here to-day effaces the memory of all former meals."

"The truth of it is," said Mrs. Petter to Mrs. Cristie, when they had left the table, "Calthea Rose gave him his tea, and he don't want to say so. She's mightily taken with him, for he is a fine-minded man, and it is n't often she gets a chance of keeping company with that kind of a man. I don't know whether he likes her liking or not, but he don't care to talk about it."

Her first day at the Squirrel Inn was not altogether a pleasant one for Bertha Cristie. In spite of the much-proffered service of Mrs. Petter the care of her baby hampered her a good deal; and notwithstanding the delights of her surroundings her mind was entirely too much occupied with wondering when Mr. Lodloe would arrive with his wagon-load of girls, and what she would have to say to him and about him when he did arrive.

POETRY.

A TENDER sky of summer, warmly dashed
With idle fire, breathing serenity;
And then tumultuous darkness, scored and gashed
With wild bright lightning — this is poetry!

O. C. Auringer.

SEAWEED OR LANDSCAPE FORM.

VISIBLE SOUND.

I. VOICE-FIGURES.

THE EIDOPHONE.

THE peculiar forms shown in the illustrations of this article, and which I call Voice-Figures, have excited much interest since their recent discovery, when exhibited in London, England, at the rooms of the Musical Association, the Royal Institution, The Royal Society, and elsewhere.

In 1885, while seeking means to indicate readily the intensities of vocal sounds, I first met with these figures, and, owing to their variety both in form and production, they have since absorbed much of my attention. The ap-

paratus I have employed I call the eidophone. This is very simple. It consists merely of an elastic membrane, such as thoroughly flexible soft sheet-rubber, tightly stretched over the mouth of a receiver of any form, into which receiver the voice is introduced by a wide-mouthed tube of convenient shape. In some cases the receiver may be dispensed with, and

the membrane be stretched across the open end of the tube itself.

The accompanying sketch shows different forms of this instrument that I have found convenient for various classes of voice-figures. In all forms of the eidophone here shown the disks are circular, but of course other forms may be used.

My first experiments were made with sand, lycopodium powder, or the two substances mixed. I then tried for the production of voice-figures, flooding the disk of the eidophone with a thin layer of liquid; *e. g.* water or milk. Upon singing notes of suitable pitch through the tube, not too forcibly, beautiful crispations appear upon the surface of the liquid, which vary with every change of tone. A note sung too forcibly causes the liquid to rise in a shower of spray, the movements of which are too rapid to be readily followed by the eye. To facilitate observation denser liquids may be used. By using such liquids as colored glycerin particularly beautiful effects may be obtained. Subsequently I found that by employing moistened powder of different consistencies yet another description of figures appears. The earliest result of my experiments in this material shows centers of motion from which radiations diverge. But while en-

DAISY FORM.

gaged one day in producing this class of figures I observed that exactly in the middle of each of the motion-centers there was a tiny shape like a forget-me-not flower.

In the course of various attempts to isolate these diminutive forms I discovered that by placing upon the disk only a very small quantity of the wet color-paste, and then singing different sustained notes, a number of little figures made their appearance in turn.

My next efforts were to see how the voice would deal with such moist color-paste in larger quantity, and these resulted in the production of the larger-sized floral forms shown in the [daisy form] illustration.

At this stage I was first able to observe clearly the remarkable behavior of these voice-flowers at the instant when they spring into shape, and it seems to me quite as worthy of notice as the forms themselves. Let me endeavor to describe it briefly. With the wet mass lying in the center of the disk, a sustained note must be sung very steadily, having been begun with a moderated intensity. The first effect is that the color-paste gathers itself more

PANSY FORM.

and more closely into a heap in the very center of the disk. Singing on, and carefully maintaining an unvaried pitch, I find the next effect to be that the little heap begins to agitate itself about its edges. Now is the moment to increase the intensity of the note, still steady in pitch; suddenly all around the heap petals shoot out like those of a daisy from the raised center, also very like that of the real flower.

Perhaps it may happen—possibly from the condition of the color-paste—that the first display of petals comes out imperfect. If so, then all that is needed is just to sing the same note again, but diminuendo, and straightway all the petals will retreat into the central heap, as at first. Then the singer may try once more, and another crescendo will probably achieve the production of a perfect floral form.

This description of voice-figure I have called

FERN FORM.

the daisy class, but it includes varieties that resemble rather the marigold, the chrysanthemum, and the sunflower.

The special feature of this daisy class is a ring or rings of petals, generally pretty even in size, surrounding a raised center. The number of petals may be from six to thirty or more, for the number increases with every rise in the pitch of the note sung. They usually appear as a single layer around the center, but I have at times noticed two, three, or four layers of petals partly overlapping each other, showing the same difference we see between our double and treble garden-flowers and their simple wild progenitors.

The centers of these daisy forms will also be found worth examination. I have often observed them rising in two, three, or more tiers either of circular or starlike shape, with sometimes the topmost tier crowned with a cross. Round the base of the center I have frequently noticed, too, a complete ring of raised dots, equidistant from one another, and each of which is itself probably a tiny center of motion.

SERPENT FORM.

I regret particularly that I have not found it possible to preserve perfectly the most delicate of these floral forms, as they in part collapse when the moist paste dries.

Further, I may mention that I have also obtained another description of voice-flowers, distinct from the above-mentioned daisy class both in form and in the manner of its production, which may be called a pansy class, with varieties more like the violet, primrose, or geranium.

To obtain these pansy forms about the same quantity of color-paste as for daisy forms must be placed upon the disk, but with considerably more water, sufficient water being required to allow the paste to move freely on it when disturbed by the vibrations of the elastic disk, the petals seeming to shoot out from the centers of motion and then to spread themselves in the water. This class of flower forms usually has its petals in threes, whether one, two, or more sets.

In leaving the floral forms I may mention that great care and delicacy in singing are demanded for their production, which will afford ample training for any vocalist in regard to the steady sustaining of notes in intensities from the softest pianissimo to a very loud forte, as every grade of intensity is required in its turn in order to evoke these forms in their various sizes, ranging from that of a pinhead to that of a large-sized daisy.

Here, too, I may say that when notes have been sung with special force, I have sometimes observed, along with the figures usually appertaining to those notes, certain additional curves and forms presenting themselves, and I am convinced that these latter belong to *overtones* actually produced at the same time, but inaudible even to a well-trained ear. If correct, this illustrates the extreme sensitiveness of the eido-

phone as a test for musical sounds, detecting and revealing to the eye, as in these cases, what the ear fails to perceive.

We now pass to a large class of voice-figures quite distinct from all that we have so far noticed; viz. figures obtained upon plates of glass or other smooth surfaces brought into contact with the vibrating disk, both plate and disk having been coated with liquid color.

In this class of figures I have been much gratified by obtaining very delicate yet perfectly clear wave-line impressions that constitute an actual and permanent record of every individual vibration caused by the voice, each tiny undulation of the surface of the disk standing registered with strict accuracy and with a beautiful minuteness that rivals the lines of a well-executed engraving.

The figures would be circular if they were taken directly from the disk. The spiral or serpent form in which most of these impressions have been taken is chosen mainly for the purpose of bringing within the boundaries of the plate a greater length of figure than an impression taken in any straight direction would have included. The remarkable perspective effects shown in most of these spiral figures are, however, deserving of notice.

It may perhaps be worth pointing out, too, that in the case of these spiral forms the rule that the higher the pitch the greater the number of vibrations indicated is modified by the direction in which the plate, or disk, or both, may be moving during their contact, and the rapidity of the motion.

These mere wave-line impressions are, I think, the simplest of all voice-figures, and next in simplicity come what I may call cross-vibration figures, which speak for themselves in the illustration.

CROSS-VIBRATION FIGURE.

TREE FORM.

Both the comparatively simple kinds of figures just mentioned are obtained by using only a very slight coating of color, and that so wet as to occasion little or no adhesion between the plate, the color, and the disk. We may, however, alter the conditions by employing a larger quantity of color-paste. This at once complicates the matter by introducing adhesion of considerable force between the coated disk and the coated plate, which, when laid upon it, adheres firmly, and, accordingly, adhesive attraction combines with the vocal impulses in forming such figures. Shall we call this a fern form? To produce this it is essential to sing a peculiar and powerful note at the precise moment that the plate and the disk, which had adhered together, are separated.

The last class of voice-figures to be mentioned here are also plate-impressions, and some of them are shown in all the specimens of this class, along with a somewhat curious resemblance to miniature landscape pictures. I think an observer cannot fail to notice one or more figures that will justify their designation as tree forms.

Closing now my brief sketch of these voice-figures as I have observed them, I would add that my experiments have been made as a vocalist, using my own voice as the instrument of investigation, and I must leave it for others more acquainted with natural science to adjust the accordance of these appearances with facts and laws already known. Yet, passing from one stage to another of these inquiries, question after question has presented itself to me, until I have continually felt myself standing before mystery, in great part hidden, although some glimpses seem revealed. And I must say, besides, that as day by day I have gone on singing into shape these peculiar forms, and, stepping out of doors, have seen their parallels living in the flowers, ferns, and trees around me; and, again, as I have watched the little heaps in the formation of the floral figures gather themselves up and then shoot out their petals, just as a flower springs from the swollen bud—the hope has come to me that these humble experiments may afford some suggestions in regard to nature's production of her own beautiful forms, and may thereby aid, in some slight degree, the revelation of yet another link in the great chain of the organized universe that, we are told in Holy Writ, took *its* shape at the voice of God.

Margaret Watts Hughes.

II. COMMENT.

THE article on "Voice-Figures" by Mrs. Watts Hughes gives some very remarkable experiments made by singing into a resonator over which an elastic membrane is stretched. On this membrane some substance (sand, paste, or glycerin) is spread; and when the membrane is set into vibration by the musical note sounding beneath it, the substance above gathers itself together into many wonderful forms. Some slight explanation of the nature of sound, and of certain of its phenomena, may be necessary to make clear to the general reader these experiments of Mrs. Hughes.

A simple conception of a sound-wave may be gained by the use of a device of Professor Tyndall. A small collodion balloon filled with

explosive gases is ignited. The report seems to reach the ear as the flash is seen, but there is a fraction of a second between them. The sound has been traveling from the point of explosion to the ear of the observer. It has not been conveyed bodily, as matter shot out from that center, nor borne to it by the movement of the air. If such had been the case, the listener would have been struck by a hurricane progressing at the rate of about seventy-five miles an hour. The wave-motion constituting sound advances, while the medium in which the wave is formed—the air—only oscillates. This is true of wave-motion generally. A cord fastened at one end, and held taut by the hand at the other, may be jerked, and a wave will run along it to the fixed end: the wave progressed, while each particle of the cord only made a short excursion, and returned to its

old position. A puff of wind, striking a field of standing grain, causes a wave to sweep across the field. Each stalk bends forward, delivers up the impulse it has received to the stalks before it, and returns to its own place.

FIG. 1.

In the old days when messages were carried by relays of couriers, each courier took his message to a certain point, delivered it up to another messenger, and then returned to his former post; the second courier, carrying forward the message, in turn delivered it to a third; and so on. The message went on, but each messenger made only a comparatively short excursion. This is a homely, almost a puerile, illustration, but it serves to show how wave-motion is propagated.

When our little collodion balloon was ignited the gases inside suddenly needed more room, and this they got by bursting the inclosing membrane of the balloon and pressing back the surrounding air in every direction. By this pressure the particles of air were violently crowded together in a spherical shell surrounding the center of explosion. The rebound of the crowded particles threw them farther apart than they were normally, thus crowding back another shell of air-particles outside the first shell, and leaving the first rarefied; and so the wave-motion advanced. Sound-waves are really only alternate condensations and rarefactions of the air, as water-waves, owing to the slight compressibility and elasticity of the water, show themselves as alternate heaps and hollows.

When a single sonorous impulse or a succession of irregular impulses is imparted to the air, noise is the result. The puff of wind across the wheatfield or the jerk at the taut cord corresponds with what we call noise. When, however, a succession of regular impulses sets the air into sonorous vibration, and these impulses succeed each other with sufficient rapidity to link themselves together in the ear, we have a musical note. Noise is disorder; music is order. Noise jolts the nerves and the brain; music lulls them by its rhythmic swing.

The pitch of a musical note is determined by the rapidity with which these impulses follow each other. The lowest musical note which the ear can hear, as music, is caused by 16 vibrations per second; the highest, by 38,000 vibrations per second. The middle C of the piano gives, when struck, 264 vibrations a

second. An ordinary seven-octave piano ranges from 33 vibrations per second, three octaves below the middle C, to 4224, four octaves above the middle C.

The simplest form of musical vibration is that

generated by a stretched string. It swings to and fro rhythmically when plucked or set in motion by a violin bow, and sets the air into corresponding rhythmic vibrations. It sets such a narrow slice of air in motion, however, that to produce any effect the string has to be reinforced by a body of air in a resonator, as in the violin and the guitar, or by a sounding-board, as in the harp and the piano.

A stretched string like a pendulum makes only a given number of vibrations in a fixed time. It may seem to move more and more slowly, but it is only because the excursions to and fro become shorter and shorter; the number of vibrations for the same string or other sonorous body are always the same. It must be borne in mind that the length of a string is the distance between its points of support or "rest," musically speaking. Touching the frets of a guitar, for instance, is virtually shortening the string, and the frets are there not merely to serve as points of support, but also to secure that the string may be shortened by exactly the correct amount by means of the pressure of the player's fingers. In the piano—which is for that reason called a fixed

FIG. 2.

instrument — a string of definite length, density, and tension is made to correspond to each note, and to give out the right number of vibrations when its key is struck.

It is possible to bring about a visual expression of musical vibrations, under certain conditions. Take a common piece of board about forty-two inches long, a piece of fine brass wire, or, better still, a violin or guitar string about sixty inches long, a tape-measure, and two triangular bits of wood an inch and a half long on the vertical side and with an inch base. Tack the tape-measure on the board, beginning the yard three inches from the end of the board, or mark off thirty-six inches on it. Place a screw-eye at each end of the board at its middle point, and you are ready for a very simple experiment which will illustrate the point better than many words and elaborate figures. Set up the two bridges, the vertical sides towards each other (Fig. 1), at the ends of the measured yard. Fasten the wire to one screw-eye, and, letting it pass over the two bridges and through the second screw-eye, weight it by fastening a flat-iron on the overhanging end. Having put some bits of paper cut in a Y shape astride the string, set the string into musical vibration by gently plucking it at its middle point. It will swing back and forth past the dotted line which indicates its position when at rest, taking positions *A a A* and *A a' A* (Fig. 2) in rapid succession. The paper riders are thrown by the vibration. Now touch lightly with the finger the point over the number 18 and pluck the string at 27. The light touch of your finger, or even of a feather, will serve as the fret does on the guitar — there are now two strings practically half the former length. Instead of vibrating as a whole, like *A*, it first takes the position 1B, and then 2B, and back and forth, going from one to the other with lightning-like rapidity. It is easy to see that the middle point of the string is comparatively motionless; such a point of rest in musical vibration is called a node. The riders remain on the node, but are thrown from the vibrating segments. *A* gave out a certain note; *B*, being half as long, gives out a note an octave above *A*. Again put the riders on the wire, touch with a feather the point 27, and pluck the string half-way between 27 and 36 (Fig. 1); the touch at 27 makes of that point a node, but besides that it makes a node at 18 and at 9. The string *C* (Fig. 2) is practically one-fourth as long as it was at first; it has four vibrating or ventral segments and three nodes, and is equal to four nine-inch strings vibrating together. Putting the riders along the string you will see that they settle at the nodes *c c' c''* and are thrown violently off from the vibrating segments. The apparatus is so rough that the nodes are not really points

of rest, and the riders may not stay on, but the agitation is manifestly very much less at the nodes than on the ventral segments of the string. With the apparatus described I have succeeded a number of times in agitating the string so that the riders on the nodal points remained while those on the ventral segments were all dismounted.

A string is a very simple vibrating body and moves only in one vertical plane, but it serves, for that very reason, as the best illustration of vibrating segments and nodes.

In the movement of *B* and *C* from position 1 to 2 there is not the violent reversal that there appears to be — the wave generated by the pull at *a* (1 *B* and 1 *C*) runs along the string to the end, and from that point it is reflected back in the direction 2 *B* and 2 *C*. If the attempt is made to touch the string, or dampen it, as it is technically called, at any point not an exact divisor of 36, the result would have been a joggle, not a vibration; the wave would not have reached the far end of the wire in the right phase to be reflected back regularly.

So far we have only been considering the simplest vibrations, a single wave running back and forth on a string; but in sound-waves, as in water-waves, motion is superposed upon motion, ripples upon waves, in an inconceivable complexity. If we could produce by the sonorous body only such simple vibrations as these we have been examining, all musical instruments, including the human voice, would sound exactly alike, so far as quality is concerned. The only possible difference would be in range and intensity. We could not distinguish the notes of a French horn from those of a guitar. Simple vibrations constitute only the fundamental tone, which is the same for the identical note on all musical instruments.

Tyndall in his book on sound says: "It has been shown by the most varied experiments that a stretched string can either vibrate as a whole, or divide itself into a number of equal parts, each of which vibrates as an independent string. Now it is not possible to sound the string as a whole without at the same time causing, to a greater or less extent, its subdivision; that is to say, superposed upon the vibrations of the whole string we have always, in a greater or less degree, the vibrations of its aliquot parts. The higher notes produced by these latter vibrations are called the harmonics of the string. And so it is with other sounding bodies; we have in all cases a coexistence of vibrations. Higher tones mingle with the fundamental one, and it is their intermixture which determines what, for want of a better term, we call the quality of the sound." And again, later on, he says: "Pure sounds without overtones would be like pure water, flat and

FIG. 3. CHLADNI PLATE.

dull. The tones, for example, of wide-stopped organ-pipes are almost perfectly pure. . . . But the tones of such pipes, though mellow, would soon weary us; they are without force or character, and would not satisfy the demand of the ear for brightness and energy. In fact, a good musical clang requires the presence of several of the first overtones. So much are these felt to be a necessity that it is usual to associate with the deeper pipes of the organ shorter pipes which yield the harmonic tones of the deeper one. In this way, where the vibrating body itself is incapable of furnishing the overtones, they are supplied from external sources." In fact, the ear demands that each note shall be a harmonic chord, powerfully dominated by the fundamental tone though it may be.

The determining value in the overtones of an instrument was felt, practically, long before their existence was known in theory. Makers of musical instruments learned long ago how to quench certain objectionable overtones, even before they knew just what they were doing.

Imagine what the air would look like if it could be made visible when an orchestra is setting it into vibration, with thousands of tones and their attendant overtones crossing and recrossing with infinite complexities of form. The different notes are not each making its separate mark, but all have combined, helping or hindering one another, and coming as a single full harmony to the ear, where there is a resolution of the composite movement; and this marvelous "lute of three thousand strings" takes up the tangled skein of sound, separates it into its constituent tones, and conveys them separately to the brain.

The idea of getting a visual expression for musical vibrations occurred to Chladni, a physicist of the last century. He fastened a plate of glass by its center, and then, having scattered some sand over the surface, threw it into sonorous vibrations by means of a violin bow. Imagine the delight with which he saw the sand stir and form into line on the plate, forming a star of twelve rays. Square plates of glass or metal screwed or even glued to a central support can be made by the merest tyro with tools, and give wonderful results (Fig. 3). A plate, like a string, has one rate of vibration which belongs to it, but again, like a string, by "dampening" it with a touch of the finger or fingers in different points along the edge the note changes and with it the figure made by the sand. The lines on the plate where the sand settles are the nodes, the lines of comparative rest. The violent agitation in the parts left bare

can be shown by mixing a little lycopodium powder with the sand; this is excessively light, and is caught in the little whirlwinds of air generated about the vibrating segments.

The marvelous intricacy of the vibrations of these plates may be seen from a few figures given below, which indicate the lines taken by the sand when certain notes were sounded on the plate (Fig. 4).

A little instrument invented by Professor Sedley Taylor, and called the phoneidoscope, gives a most exquisite illustration of music made visible. It consists of a tube which terminates in a hollow cup or funnel-shaped enlargement; over the mouth of this funnel a thin sheet of metal or pasteboard with a smooth-edged and symmetrical opening is made. Across the opening a film of soap-suds is drawn and left to stand till colors begin to form. These soap-bubble colors, as is very well known, are due to the thickness of the film. In an ordinary soap-bubble they flit over the surface irregularly. This is because from the exposed outer surface of the bubble, and the irregular force which is expanding it from within, the film is always varying in thickness. The colors tell inexorably just how much this variation is at every point of the surface. A special fluid, made very carefully, is necessary for experiments with the phoneidoscope, because the soap-film must thin sufficiently to show bright colors and yet be strong enough to stand the vibrations into which it is thrown by the voice.

When the colors are well established in the film a sustained musical note should be sung

FIG. 4.

into the open end or mouthpiece of the tube, using care not to breathe or blow into it. The colors begin to move, and, if the note is sustained, whirl into the most beautiful gyrating figures. Mr. Behnke, in a discussion before the Musical Association of England, says: "I have for many years tried to get what help I could from science in the treatment of the human voice, and when Professor Sedley Taylor some years ago brought this phoneidoscope under my notice I was very highly delighted. He told me it would be possible by means of a soap-film to get different figures for different pitches, for different

intensities, and for different qualities of tone. . . . I did not find the phoneidoscope answer in practice. In the first place there was great difficulty about these films, which would continually burst. In the second place there was no doubt I did get a variety of figures, and not only that, but a variety of exceedingly beautiful colors. The experiments were most fascinating; but I did not get the same figures regularly for the same changes in either pitch or intensity or quality, and therefore, so far as practical results were concerned, the instrument was of no use. . . . Of course it does not follow because we have not yet succeeded in these matters we never shall."

We are now upon the very threshold of Mrs. Hughes's voice-figures, and have reached it by the same path which brought her to them in the first instance. Her eidophone is constructed on the same principle as the phoneidoscope: instead of the frail lamina of soap-suds she has a stretched membrane of india-rubber to receive the vibrations, and on this is spread a thin layer of some pasty substance which will retain the record made by the vibrations of the membrane. These voice-flowers are not the simple visual forms corresponding with the vibrations of the air set in motion by the voice. The waves generated in the closed bowl of the eidophone are reflected again and again from the sides of the vessel. The volume of air inclosed has its own rate of vibration; the stretched membrane has also its own rate, which in turn is modified by the character and thickness of the paste spread upon it. Added to these are molecular forces of cohesion and adhesion between the particles of paste, and again between the paste and the membrane. The form which grows into shape is the resultant of all these complicated forces, and, in some instances,

new elements of change have been added. A glass plate is placed on top of the vibrating membrane and moved over it. We have a new body introduced with its proper rate of vibration, besides a mechanical motion further to complicate the problem.

The results are very wonderful and beautiful, and open up a field for investigation which is most interesting, but so far we have the resultant of many forces, not one of which has been weighed and measured. In a letter from Mrs. Hughes, replying to some questions asked in the hope of greater accuracy, she says: "The notes producing the figures vary necessarily with the weight of material used and the tension of the membrane, so that any one note may, under different circumstances, produce different figures, and, conversely, different notes may, under different circumstances, produce similar figures."

The daisy forms were sung into shape, she says, by extremely low notes very softly sounded, some of them by A in the first space of the bass clef—a wonderful note to be reached by a woman's voice, whose highest note is the B-flat above the treble clef, a compass of over three octaves. Sometimes geometrical forms not given in the illustrations were produced by the highest notes of her voice, while the serpent, fern, and tree forms were made by singing her middle notes with great intensity.

Mrs. Hughes is first of all a singer, and to further her voice culture she entered upon the series of experiments in which she has shown infinite patience and skill. That her experiments are amateurish rather than scientific is no discredit, for she has opened up a new field into which the scientist may enter and reach results of great interest and value.

Sophie B. Herrick.

OF ONE WE LOVE OR HATE.

IN old Assisi, Francis loved so well
 His Lady Poverty, that to his heart
 He pressed her heart, nor felt the deadly smart
 From lips of frost, nor saw the fire of hell
 From lurid eyes that fevered Dante's cell,
 And parches souls who, hating, feel her dart.
 He chose her, and he dwelt with her apart.
 The two were one, illumined through Love's spell:
 He loved her, and she glowed, a lambent star;
 He loved her, and the birds came at his call —
 Her frosts were pearls, her face was fair to see.
 He sang his lady's praises near and far;
 He saw our world as Adam ere the Fall —
 So Love transfigures even Poverty.

PHILIP.

PHILIPGOVERNEUR, passing the Graydon on his return from a dinner-party, thought to make a farewell call on Millard. He encountered Charley in the elevator, just coming home from an evening

with Phillida, his face aglow with pleasure.

"Fancied I should find you packing," Philip said. "I thought as you would cross the Alps for the first time I'd come and give you a few points. If I were not so lazy and inefficient I believe I should go with you and 'personally conduct' you."

"That would be jolly. Come over in three or four weeks and I'll be quits with London. We'll engage a traveled English valet together, and journey in comfort. I will follow your lead and go anywhere."

"No; I shall not get over this year."

They entered Millard's rooms, where things were in a state of upheaval, but orderly even in their upheaval. Seating themselves by the open windows they talked of things to be seen in Europe, for half an hour. Then Philip, remembering that his friend had much to do, rose to go, and Millard said with an effort:

"Well, Phil, I'm going to be kin to you. Congratulate me."

The color fled from Philip's face as he said:

"How's that?"

"Phillida Callender and I are engaged."

"You and Phillida?" said Philip, struggling to collect his wits. "I expected it." He spoke low and as though some calamity had befallen him. A moment he stood trying to muster his forces to utter some phrase proper to the occasion, and then he abruptly said:

"Good-night; don't come out"; and walked away toward the elevator like a somnambulist doing what he is compelled to by preconception without making note of his environment. And Millard wondered as he looked after him.

The next morning Philip came to breakfast so late that even his indulgent mother had forsaken the table after leaving directions to "have

things kept hot for Mr. Philip, and some fresh coffee made for him."

When Philip had eaten a rather slender meal he sought his mother's sitting-room.

"Aunt Callender called last night, I hear. She must have had something to say, or she would hardly have persuaded herself to leave her sewing so long."

"She came to tell me of Phillida's engagement," said Mrs. Gouverneur, looking at Philip furtively as she spoke.

"I supposed that was it."

"Did you know of it, then?"

"Oh, Charley Millard told me last night. These lucky fellows always take it for granted that you'll rejoice in all their good fortune; they air their luck before you as though it were your own." He was looking out of the window at the limited landscape of Washington Square.

"I'm sorry you feel bad about it," said his mother.

Philip was silent.

"I never dreamed that you had any special attachment to Phillida," said Mrs. Gouverneur.

"What did you think I was made of?" said Philip, turning toward his mother. "Since she came from Siam I have seen her about every week. Now consider what a woman she is, and do you wonder that I like her?"

"Why did n't you tell her so?"

"I might if I'd Charley's brass. But what is there about a critical, inefficient young man like me, chiefly celebrated for piquant talk and sarcasm—what is there to recommend me to such a woman as Phillida? If I'd had Charley's physique—I suppose even Phillida is n't insensible to his appearance—but look at me. It might have recommended me to her, though, that in one respect I do resemble St. Paul—my bodily presence is weak." And he smiled at his joke. "No, mother, I am jealous of Charley, but I am not disappointed. I never had any hopes. I'd about as soon have thought of making love to any beatified saint in glory as to Phillida. But Charley's refined audacity is equal to anything."

The mother said nothing. She felt her son's bitterness too deeply to try to comfort him.

"I hate it most of all for Phillida's sake," Philip went on. "It cannot be a happy marriage. Here they've gone and engaged themselves without reflection, and a catastrophe is sure to follow."

"Oh, maybe not," said Mrs. Gouverneur, who could not help feeling that Philip partly blamed her for the engagement.

"Why, just look at it. They have n't really kept company. He has been going to dinner and dancing parties this spring, and she to Mackerelville Mission and Mrs. Frankland's Bible Readings. If they should discover their incompatibility before marriage it would n't be so bad; but he's off to Europe for the summer, and then they'll be married in the autumn, probably, and then what? Phillida will never spend her time dancing Germans with Charley; and he would make a pretty fist running a class of urchins in Mackerelville. I tell you it only means misery for both of them." And with this prediction Philip mounted to his own room.

Millard was too busy with the packing of trunks, the arrangement of business, and good-by visits to Phillida, to give much thought to Philip's curious behavior; but it troubled him nevertheless. And when, on the deck of the steamer *Arcadia*, he bade good-by to a large circle of friends, including Mr. Hilbrough, who brought a farewell bouquet from his wife, and Mrs. Callender and her daughters, he looked about in vain for Philip. He could no longer doubt that for some reason Philip disliked his engagement. But when the last adieus had been waved to diminishing and no longer distinguishable friends on the pier, and the great city had shrunk into the background and passed from view as the vessel glided steadily forward into the Narrows, Millard entered his cabin and found a package of guide-books and a note from Philip excusing his absence on the ground of a headache, but hoping that his friend would have a pleasant voyage and expressing hearty good wishes for his future with Phillida. It was all very curious and unlike Philip. But the truth below dawned upon Charley, and it gave him sorrow that his great joy might be Philip's disappointment.

When September had come Philip sat one day in a wide wicker chair on the piazza of the old-fashioned cottage of the Gouverneurs at Newport. This plain but ample cottage had once held up its head stoutly as one of the best. But now that the age of the Newport cliff-dwellers had come, in which great architects are employed to expend unsparingly all the ideas they have ever borrowed, on cottages costlier than kings' palaces, the Gouverneur house had been overshadowed, and, after the manner of age outstripped by youth, had taken refuge in the inexpugnable advan-

tage of priority. Like the family that dwelt within, it maintained a certain dignity of repose that could well afford to despise decoration and garniture, and look with contempt on newness. The very althæas, and lilacs, and clambering jasmines in the dooryard and the large trees that lent shade to a lawn alongside, bespoke the chronological superiority of the place. There was no spruceness of biweekly mowing about the lawn, no ambitious spick-and-spanness about the old, white, wooden, green-blinded cottage itself, but rather a restful mossiness of ancient respectability.

Here Philip watched out the lazy September days, as he had watched them since he was a lad. This was a Newport afternoon, not cloudy, but touched by a certain marine mistiness which took the edge off the hard outlines of things and put the world into tone with sweet do-nothingness. Half-sitting, half-lying, in the wide piazza chair, clearly not made to measure for him, Philip had remained for two hours, reading a little at intervals, sometimes smoking, but mostly with head drawn down between his shoulders while he gazed off at the familiar trees and houses, noted the white-capped maids with their infant convoys, and the infrequent carriages that rolled by. His mother, with her fingers busy at something of no consequence, sat near him. Each was fond of the other's presence, neither cared much for conversation. Gouverneur, the father, was enjoying a fine day in his fashion, asleep on a lounge in the library.

"It's just as I expected, mother," said Philip, coming out of a prolonged reverie. "Charley and Phillida will marry without ever getting acquainted, and then will come the blow-out."

"What do you mean by the blow-out?" said Mrs. Gouverneur. "They are neither of them quarrelsome."

"No; but they are both sensitive. Aunt Callender's sickness took Phillida to the Cat-skills before he got home, and she's been there ever since. I suppose he has gone up once or twice on a Saturday. But what chance has either of them to know the other's tastes? What do you suppose they talk about? Does Phillida explain her high ideals, or tell him the shabby epics of lame beggars and blind old German women in Mackerelville? Or does he explain to her how to adjust a cravat, or tell her the amusing incidents of a private ball. They can't go on always billing and cooing, and what will they talk about on rainy Sundays after they are married? I'd like to see him persuade Phillida to wear an ultra-fashionable evening dress and spend six evenings a week at entertainments and the opera. Maybe it'll be the other way; she may coax him to teach a work-

ingmen's class in the Mission. By George! It would be a comedy to see Charley try it once." And Philip indulged in a gentle laugh.

"You don't know how much they have seen of each other, Philip. Phillida is a friend of the Hilbroughs, and Mr. Millard once brought her to our house, on Sunday afternoon from the Mission or somewhere over there."

"That's so?" said Philip. "They may be better acquainted than I think. But they'll never get on."

Perceiving that this line of talk was making his mother uncomfortable, he said:

"Nature has got the soft pedal down to-day. Come, mother, it's a good day for a drive. Will you go?"

And he went himself to call the coachman.

XIII.

MRS. FRANKLAND.

MRS. FRANKLAND, the Bible reader, was a natural orator — a person with plenty of blood for her brain, ample breathing space in her chest, a rich-toned voice responsive to her feelings, and a mind not exactly intellectual, but felicitous in vocabulation and ingenious in the construction of sentences. Her emotions were mettlesome horses well-bitted — quick and powerful, but firmly held. Though her exegesis was second-hand and commonplace, yet upon the familiar chords of traditional and superficial interpretation of the Bible she knew how to play many emotional variations, and her hearers, who were all women, were caught up into a state of religious exaltation under her instruction. A buoyant and joyous spirit and a genial good-fellowship of manner added greatly to her personal charms.

She was the wife of a lawyer of moderate abilities and great trustworthiness, whose modesty, rather than his mediocrity, had confined him to a small practice in the quieter walks of the profession. Mrs. Frankland had been bred a Friend, but there was a taste for magnificence in her that argued an un-Quaker strain in her pedigree. On her marriage she had with alacrity transferred her allegiance from no-ceremony Quakerism to liturgical Episcopalianism, the religion of her husband. She gave herself credit for having in this made some sacrifice to wifely duty, though her husband would have been willing to join the orthodox Friends with her, for the simplicity and stillness of the Quakers consorted well with his constitution. Mrs. Frankland did not relinquish certain notions derived from the Friends concerning the liberty of women to speak when moved thereto. No doubt her tenacity in this particular was due to her own consciousness of possessing a

gift for swaying human sympathies. Such a gift the Anglican communion, from time immemorial, has delighted to bury in a napkin — in a tablecloth, if a napkin should prove insufficient. But Mrs. Frankland was not a person to allow her talent to be buried even in the most richly dight altar-cloth. In her, as in most of the world's shining lights, zeal for a cause was indistinguishably blended with personal aspirations — honest desire to be serviceable with an unconscious desire to be known. It is only healthy and normal that any human being possessed of native power should wish to show his credentials by turning possibility into fact accomplished.

Mrs. Frankland's temperament inclined her to live like a city set on a hill, but the earlier years of her married life had been too constantly engrossed by domestic cares for her to undertake public duties. It had often been out of the question for the Franklands to keep a servant, and they had never kept more than one in a family of four children. At first this ambitious wife sought to spur her timid and precise husband to achievements that were quite impossible to him. But when the children grew larger, so that the elder ones could be of assistance in the care of the house, Mrs. Frankland's opportunity came. The fame of such women as Mrs. Livermore, Miss Willard, and Mrs. Bottome had long been a spur to her aspiration. She did not set up as a reformer. Denunciation and contention were not proper to her temperament. She was, above all, pathetic and sympathetic. She took charge of a Bible class of young ladies in the Sunday-school, and these were soon deeply moved by her talks to them as a class, and profoundly attracted to her by a way she had of gathering each one of them under the hen-mother wings of her sympathies. That she and they exaggerated the degree of her personal feeling for her individual listeners is probable; the oratorical temperament enlarges the image of a sentiment as naturally as a magic lantern magnifies a picture. In later years beloved Maggies and Matildas of the class, who had believed themselves special favorites of Mrs. Frankland, — their images graven on her heart of hearts, — were amazed to find that they had been quite forgotten when they had been out of sight a year or two.

The Bible-class room in the Church of St. James the Less soon became uncomfortably crowded. This was what Mrs. Frankland had long desired. She thereupon availed herself of the hospitality of a disciple of hers who had a rather large parlor, and in this she opened a Bible reading on Friday afternoons. Eloquent talk, and especially pathetic talk and vivid illustrations by means of incidents and similes,

were as natural to her as melodious whistling is to a brown thrush, and the parlors were easily filled, though out of deference to church authorities men were excluded.

The success of this first course of so-called Bible readings was marked, and it determined Mrs. Frankland's career. She was enough of a woman to be particularly pleased that some of the wealthiest parishioners of St. James the Less were among her hearers, and that, having neglected her in all her years of baby-tending and dish-washing obscurity, these people now invited her to their houses and made her the confidante of their sorrows. This sort of success was as agreeable to her as merely social climbing was to Mrs. Hilbrough. For even in people of a higher type than Mrs. Frankland the unmixed heroic is not to be looked for: if one finds zeal or heroism in the crude ore it ought to be enough; the refined articles have hardly been offered in the market since the lives of the saints were written and the old romances went out of fashion.

Two results of Mrs. Frankland's first winter's readings, or preachings, had not entered into her calculations, but they were potent in deciding her to continue her career. One was that her husband's law practice was somewhat increased by her conspicuousness and popularity. He was not intrusted with great cases, but there was a very decided increase in his collection business. At the close of the season Mrs. Frankland, in making her farewell to her class, had, like a true orator, coined even her private life into effect. She touched feelingly on the sacrifice she and her family had had to make in order that she might maintain the readings, and alluded to her confidence that if Providence intended her to go forward, provision would be made for her and her children, whom she solemnly committed by an act of faith, like that of the mother of Moses, to the care of the Almighty. She said this with deep solemnity, holding up her hands towards heaven as though to lay an infant in the arms of the Good Shepherd. The vision of a house-mother trusting the Lord even for the darning of stockings was an example of faith that touched the hearers. Under the lead of a few active women in the company a purse of two hundred dollars was collected and presented to her. It was done delicately; the givers stated that their purpose was simply to enable her to relieve herself of care that the good work might not suffer. The money was thus handed not to her but to the Lord, and Mrs. Frankland could not refuse it. Do you blame her? She had earned it as fairly as the rector of St. James the Less earned his. Perhaps even more fairly, for her service was spontaneous and enthusiastic; he had grown old and weary,

and his service had long since come to be mainly professional and perfunctory.

There are cynics who imagine a woman with a mission saying, "Well, I've increased my husband's business, and I have made two hundred very necessary dollars this winter; and I will try it again." If the matter had presented itself to her mind in that way Mrs. Frankland probably would have felt a repulsion from the work she was doing. It is a very bungling mind, or a more than usually clear and candid mind, that would view a delicate personal concern in so blunt a fashion. Mrs. Frankland's mind was too clever to be bungling, and too emotional and imaginative to be critical. What she saw, with a rush of grateful emotion, was that the Divine approval of her sacrifices was manifested by this sustaining increase of temporal prosperity. The ravens of Elijah had replenished her purse because she trusted. Thus commended from above and lifted into the circle of those who like the prophets and apostles have a special vocation, she felt herself ready, as she put it, "to go forward through fire and flood if need be." It would not have been like her to remember that the fire and flood to be encountered in her career could be only rhetorical at best—painted fire and a stage flood.

Among those who chanced to be drawn to Mrs. Frankland's first course of Bible readings, and who had listened with zest, was Phillida Callender. Phillida's was a temperament different from Mrs. Frankland's. The common point at which they touched was religious enthusiasm. Mrs. Frankland's enthusiasms translated themselves instantly into eloquent expression; she was an instrument richly toned that gave forth melody of joy or sorrow when smitten by emotion. Phillida was very susceptible to her congenial eloquence, but hers was essentially the higher nature, and Mrs. Frankland's religious passion, when once it reached Phillida, was transformed into practical endeavor. Mrs. Frankland was quite content to embody her ideals in felicitous speech, and cease; Phillida Callender labored day and night to make her ideals actual. Mrs. Frankland had no inclination or qualification for grappling with such thorny problems as the Mackerelville Mission afforded. It was enough for her to play the martial music which nerved others for the strife.

It often happens that the superior nature is dominated by one not its equal. Phillida did not question the superlative excellence of Mrs. Frankland, from whom she drew so many inspirations. That eloquent lady in turn admired and loved Phillida as a model disciple. Phillida drew Mrs. Hilbrough to the readings, and Mrs. Frankland bestowed on that lady all the affec-

tionate attention her immortal soul and worldly position entitled her to, and under Mrs. Frankland's influence Mrs. Hilbrough became more religious without becoming less worldly. For nothing could have seemed more proper and laudable to Mrs. Hilbrough than the steady pursuit of great connections appropriate to her husband's wealth.

Mrs. Frankland's imagination had been moved by her success. It was not only a religious but a social triumph. Some of the rich had come, and it was in the nature of an orator of Mrs. Frankland's type to love any association with magnificence. Her figures of speech were richly draped; her imagination delighted in the grandiose. The same impulse which carried her easily from drab Quakerism to stained-glass Episcopalianism now moved her to desire that her ministry might lead her to the great, for such an association seemed to glorify the cause she had at heart. She did not think of her purpose nakedly; she was an artist in drapery, and her ideas never presented themselves in the nude; she was indeed quite incapable of seeing the bare truth; truth itself became visible to her only when it had on a wedding garment. As she stated her aspiration to herself, she longed to carry the everlasting gospel to the weary rich. "The weary rich" was the phrase she outfitted them with when considered as objects of pity and missionary zeal. To her mind they seemed, in advance, shining trophies which she hoped to win, and in her reveries she saw herself presenting them before the Almighty, somewhat as a Roman general might lead captive barbarian princes to the throne of his imperial master.

Mrs. Frankland could not be oblivious to the fact that a Bible reading among the rich would be likely to bring her better pecuniary returns than one among the poor. But she did not let this consideration appear on the surface of her thoughts, nor was it at all a primary or essential one.

She knew but little of the intricacies of social complications, and her mind now turned to Mrs. Hilbrough as the wealthiest of all her occasional hearers, and one having an ample parlor in a fashionable quarter of the town.

Her first thought had been to get Phillida to accompany her when she should go to suggest the matter to Mrs. Hilbrough. But on second thought she gave up this intermediation, for reasons which it would have been impossible for her to define. If she exerted a powerful influence over Phillida in the direction of emotion, she could not escape in turn the influence of Phillida's view of life when in her presence. Although personal ambitions mixed themselves to a certain extent with Mrs. Frankland's religious zeal, disguising

themselves in rhetorical costumes of a semi-ecclesiastical sort, they did not venture to masquerade too freely before Phillida. Mrs. Frankland, though less skillful in affairs than in speech, felt that it would be better in the present instance to go to Mrs. Hilbrough alone.

It was with a glow of pleasure not wholly unworldly that she found herself one afternoon in Mrs. Hilbrough's reception-room, and noted all about her marks of taste and unstinted expenditure. To a critical spectator the encounter between the two ladies would have afforded material for a curious comparison. The ample figure of Mrs. Frankland, her mellifluous voice, her large, sweeping, cheerily affectionate, influential mode of address, brought her into striking contrast with the rather slender, quietly self-reliant Mrs. Hilbrough, whose genial cordiality covered, while it hardly concealed, the thoroughly business-like carriage of her mind.

Mrs. Frankland opened her plan with the greatest fullness of explanation as to what her motives were, but she did not feel obliged to wholly conceal the element of personal aspiration, as she would have done in talking to Phillida. Her intuitions made her feel that Mrs. Hilbrough would accept religious zeal all the more readily for its being a little diluted. Mrs. Hilbrough responded with genial cordiality and even with some show of enthusiasm. But if she had less address in speech than the other she had more in affairs. While theoretically supporting this plan she did not commit herself to it. She knew how slender as yet was her hold upon the society she courted, and she would not risk an eccentric move. Her boat was still in shallow water, with hardly buoyancy enough to float a solitary occupant; if she should undertake to carry Mrs. Frankland, it would probably go fast aground. What she said to Mrs. Frankland with superficial fervor was:

"You ought to have a person that has been longer in New York, and is better acquainted than I am, to carry out your plan, Mrs. Frankland. It would be a pity to have so excellent a scheme fail; that would probably prevent your ever succeeding—would shut you out as long as you lived. It would be a great honor to me to have your readings, but you must begin under better auspices. I regret to say this. Your readings, rightly started, will be a great success, and I should like to have them here."

This last was in a sense sincere. Mrs. Hilbrough was sure of Mrs. Frankland's success if once the thing were patronized by the right people. Here Mrs. Frankland looked disappointed, but in a moment broke forth again in adroit and fervid statement of the good that

might be done, mingled with a flattering protest against Mrs. Hilbrough's too humble estimate of her influence in society. While she proceeded, Mrs. Hilbrough was revolving a plan for giving Mrs. Frankland more than she asked, while avoiding personal responsibility.

"I think I can do something," she said, with a manner less cordial but more sincere than that she had previously assumed. "Leave the matter with me, and I may be able to open to you a grand house, not a plain, middling place like mine"—and she waved her hand deprecatingly towards the furnishings which seemed to Mrs. Frankland inconceivably rich—"a grand house with all the prestige of a great family. I don't know that I shall succeed with my friend, but for the sake of the cause I am willing to try. I won't tell you anything about it till I try. If I fail, I fail, but for the present leave all to me."

Mrs. Frankland was not the sort of person to relish being guided by another, but in Mrs. Hilbrough she had met her superior in leadership. Reluctantly she felt herself obliged to hand over the helm of her own craft, holding herself ready to disembark at length wherever Mrs. Hilbrough might reach the land.

Of all that Mrs. Hilbrough had won in her first winter's social campaign, the achievement that gave her most pleasure was the making acquaintance and entering into fast ripening friendship with Mrs. Van Horne. Little Mrs. Van Horne was not in herself a "great catch" in the way of a friend, but she was one of those whose fortune it is to have the toil of thousands at their disposal. Her magnificence was fed by an army: innumerable laborers with spades and shovels, picks and blasting-drills, working in smoke and dripping darkness to bore railway paths through mountain chains; grimy stokers and clear-sighted engineers; brakemen dripping in the chilly rain; switchmen watching out the weary night by dim lanterns or flickering torches; desk-worn clerks and methodical ticket-sellers; civil engineers using brains and long training over their profiles and cross-sectionings; and scores of able "captains of industry," such as superintendents, passenger agents, and traffic managers—all these, and others, by their steady toil kept an unfailing cataract of wealth pouring into the Van Horne coffers. In herself Mrs. Van Horne had not half the force of Mrs. Hilbrough, but as the queen bee of this widespread toil and traffic, fed and clad and decked as she was by the fruits of the labor of a hundred thousand men, Mrs. Van Horne had an enormous factitious value in the world. How to bear her dignity as the wife of a man who used the million as a unit she did not know, for though she affected a reserved stateliness of manner, it did not set well on such a round-

facéd, impressionable little woman quite incapable of charting a course for herself. No show of leadership had been hers, but she had taken her cue from this and that stronger nature, until by chance she came in hailing distance of Mrs. Hilbrough. The two were perfect counterparts. Mrs. Hilbrough was clairvoyant and of prompt decision, but she lacked the commanding position for personal leadership. She was superficially deferential to Mrs. Van Horne's older standing and vastly greater wealth, but she swiftly gained the real ascendancy. Her apparent submission of everything to Mrs. Van Horne's wisdom, while adroitly making up a judgment for the undecided little lady, was just what Mrs. Van Horne liked, and in three months' acquaintance that lady had come to lean more and more on Mrs. Hilbrough. The intimacy with so close a friend rendered life much more comfortable for Mrs. Van Horne, in that it relieved her from taking advice of her sisters-in-law, who always gave counsel with a consciousness of superiority. Now she could appear in her family with opinions and purposes apparently home-made. To a woman of Mrs. Hilbrough's cleverness the friendship with one whose brooks ran gold rendered social success certain.

Mrs. Hilbrough was a natural promoter. Her energy inclined her to take hold of a new enterprise for the mere pleasure of pushing it. She felt a real delight in the religious passions awakened by Mrs. Frankland's addresses; she foresaw an interesting career opening up before that gifted woman, and to help her would give Mrs. Hilbrough a complex pleasure. That Mrs. Frankland's addresses given in Mrs. Van Horne's parlors would excite attention and make a great stir she foresaw, and for many reasons she would like to bring this about. Mrs. Hilbrough did not analyze her motives; that would have been tiresome. She entered them all up in a sort of lump sum to the credit of her religious zeal, and was just a little pleased to find so much of her early devotion to religion left over. Let the entry stand as she made it. Let us not be of the class unbearable who are ever trying to dissipate those lovely illusions that keep alive human complacency and make life endurable.

Mrs. Hilbrough contrived to bring Mrs. Frankland with her abounding enthusiasm and her wide-sweeping curves of inflection and gesture into acquaintance with the great but rather pulpy Mrs. Van Horne. The natural inequality of forces in the two did the rest. Mrs. Van Horne, weary of the inevitable limitations of abnormal wealth, and fatigued in the vain endeavor to procure any satisfaction which bore the slightest proportion to the vast family accretion, found a repose she had longed for when

she was caught up in the fiery chariot of Mrs. Frankland's eloquent talk. All that vast mass of things that had confronted and bullied her so long was swept into a rhetorical dustpan, and she could feel herself at length as a human soul without having to remember her possessions. Mrs. Frankland's phrase of "the weary rich" exactly fitted her, and to her Mrs. Frankland's eloquent pulverizing of the glory of this world brought a sort of emancipation.

Mrs. Frankland unfolded to her a desire to reach those who would not attend her readings at any but a very fashionable house. Mrs. Van Horne, encouraged thereto by Mrs. Hilbrough, was delighted at finding a novel and congenial use for some of the luxurious and pompous upholstery of her life of which she was so tired. Her parlors were opened, and "persons of the highest fashion" were pleased to find a private and suitably decorated wicker-gate leading into a straight and narrow vestibule train, limited, fitted up with all the consolations and relieved of most of the discomforts of an old-fashioned religious pilgrimage.

XIV.

MRS. FRANKLAND AND PHILLIDA.

MRS. CALLENDER would have told you that mountain air had quite restored her, but enforced rest from scissors and sewing-machine, the two demons that beset the dear industrious, had more to do with it than mountain air. The first of October brought her and Phillida again to their house, where Agatha had preceded them by two days, to help Sarah in putting things to rights for their advent. Millard met the mother and daughter at the station with a carriage and left them at their own door.

"Did Mr. Millard say that he would come again this evening?" Agatha asked of Phillida when she rose from the dinner-table.

"No."

"Well, I should think he would. I would n't have a young man that would take things so coolly. He's hardly seen you at all since his return, and—that's the expressman with the trunks. I'll go and see about them"; and she bounded away, not "like an antelope," but like a young girl bubbling to the brim with youth and animal spirits.

An hour later, when Phillida and Agatha had just got to a stage in unpacking in which all that one owns is lying in twenty heaps about the room, each several heap seeming larger than the trunk in which it came, there was a ring at the door, and Mr. Millard was announced.

"Oh, dear! I think he might have waited until to-morrow," grumbled Agatha to her mother, after Phillida had gone to the parlor. "He'll stay for hours, I suppose, and I never

can get these things put away alone, and we won't get you to bed before midnight. He ought to remember that you're not strong. But it's just like a man in love to come when you're in a mess, and never to go away."

Millard was more thoughtful than another might have been, and in half an hour Phillida returned to the back room, with a softly radiant expression of countenance, bearing a bouquet of flowers which Millard had brought for Mrs. Callender. Phillida at once helped Agatha attack chaos. The floor, the chairs, the table, the bed, and the top of the dressing-case were at length cleared, and preparations were making for getting the tired mother to her rest before ten o'clock.

"Seems to me," said Agatha, "that if I were in Philly's place I'd want something more than a brief call on the first evening, after so long a separation."

"Seems to me," said the mother, mimicking Agatha's tone and turning upon the girl with an amused smile, "if you ever have a lover and are as hard to please with him as you are with Mr. Millard, he might as well give it up before he begins."

In the morning early came Mrs. Frankland. She kissed Phillida on this cheek and on that, embraced her and called her "Dear, dear child," held her off with both hands and looked with admiration at her well-modeled face, freshened with wind and sun. She declared that the mountain air had done Phillida a great deal of good, and inquired how her dear, good mother was.

"Mother is wonderfully better," said Phillida; "I may say, well again."

"What a mercy that is! Now you'll be able to go on with the blessed work you are doing. You have a gift for mission work; that's your vocation. I should make a poor one in your place. It's a talent. As for me, I have a new call."

"A new call—what is that?" said Phillida, rolling up an easy chair for Mrs. Frankland to sit on.

"It's all through you, I suppose. You brought Mrs. Hilbrough to hear me, and Mrs. Hilbrough made me acquainted with Mrs. Van Horne, and she has invited me to give readings in her parlor. I gave the first last Thursday, with great success. The great parlor was full, and many wept like little children."

The words here written are poor beside what Mrs. Frankland said. Her inflection, the outward sweep of her hand when she said "great parlor," brought the rich scene vaguely to Phillida's imagination, and the mellow falling cadence with which she spoke of those who had wept like little children, letting her hands drop limp the while upon her lap, made it all

very picturesque and touching. But Phillida twisted the fingers of her left hand with her right, feeling a little wrench in trying to put herself into sympathy with this movement. It was the philanthropic side of religion rather than the propagandist that appealed to her, and she could hardly feel pity for people whose most imaginary wants were supplied.

The quick instinct for detecting and following the sympathy of an audience is half the outfit for an orator; and Mrs. Frankland felt the need of additional statement to carry the matter rightly to Phillida. She was ever feeling about for the electrical button that would reach a hearer's sympathies, and never content until she had touched it.

"I find the burdens of these wealthy women are as great — even greater than those of others. Many of them are tired of the worldliness, and weary of the utter frivolity, of their pursuits." She put a long, rich, vibrant emphasis on the words "utter frivolity." "Don't you think it a good plan to bring them to the rest of the gospel?"

"Certainly," said Phillida, who could not logically gainsay such a statement; but she was convinced rather than touched by any living sympathy with Mrs. Frankland's impulse, and she still twisted the tips of the fingers of her left hand with her right.

"I hope, dear child," Mrs. Frankland went on, in a meditative tone, looking out of the window and steering now upon a home tack — "I hope that I can serve in some way the cause of the poor you have so much at heart. Missions like yours languish for funds. If I could be the means of bringing people of great fortune to consecrate their wealth, it might fill many a thirsty channel of benevolence with refreshing streams." Ah, that one could produce here the tone of her voice as of a brook brimming over barriers, and running melodious to the meadows below!

"That is true," said Phillida, remembering how many betterments might be made in the coffee-room and the reading-room if only one had the money, and remembering how her own beloved Charley had helped the Mission and made the lot of the unhappy Wilhelmina Schulenberg less grievous. "I do think it may prove to be a great work," she added thoughtfully, folding her hands upon her lap in unconscious sign that she had reached a conclusion — a logical equilibrium.

"And I want you to go with me to the readings on Thursday. Mrs. Van Horne knows your aunt, Mrs. Gouverneur, and she will be glad to see you."

Phillida looked down and began to pinch the tips of her fingers again. She shrunk a little from Mrs. Van Horne's set; she thought

her dress probably beneath their standard, but with an effort she put away such fears as frivolous, and promised to go.

Thursday afternoon found Phillida sitting by Mrs. Hilbrough in the Van Horne parlor, which was draped with the costly products of distant looms, wrought by the dusky fingers of Orientals inheriting the slowly perfected special skill of generations, and with the fabrics produced by medieval workmen whose artistic products had gathered value as all their fellows had perished; for other races and other ages have contributed their toil to the magnificence of a New York palace. The room was spanned by a ceiling on which the creative imaginations of great artists had lavished rare fancies in gold and ivory, while the costliest, if not the noblest, paintings and sculptures of our modern time were all about a room whose very chairs and ottomans had been designed by men of genius.

Once the words of Mrs. Frankland were heard with these surroundings, one felt that it would be wrong to attribute to ambitious motives her desire for such an environment. She might rather be said to have been drawn here by an aspiration for artistic harmony. The resonant periods of Bossuet would hardly have echoed through the modern centuries if he had not had the magnificent court of Louis the Great for a sounding-board. When Mrs. Frankland spoke in the Van Horne parlor her auditors felt that the mellifluous voice and stately sentences could not have had a more appropriate setting, and that the splendid parlor could not have been put to a more fitting use. Even the simple religious songs used at the beginning and close of the meetings were accompanied upon a grand piano of finest tone, whose richly inlaid case represented the expenditure of a moderate fortune. Mrs. Van Horne could command the best amateur musical talent, so that the little emotional Moody-and-Sankeys that Mrs. Frankland selected were so overlaid and glorified in the performance as to be almost transformed into works of art.

Phillida looked upon these evidences of lavish expenditure with less bedazzlement than one might have expected in a person of her age. For she had grown up under shelter from the world. While she remained in the antipodes her contact with life outside her own family had been small. In Brooklyn her mother's ill health had kept her much at home, and the dominant influence of her father had therefore every chance to make itself felt upon her character, and that influence was all in favor of a self-denying philanthropy. To the last her father was altruistic, finding nothing worth living for but the doing for others. Abiding secluded as Phillida had, the father's stamp remained un-

effaced. She saw in all this magnificence a wanton waste of resources. She put it side by side with her sense of a thousand needs of others, and she felt for it more condemnation than admiration. Mrs. Frankland's vocation to the rich was justified in her mind; it was, after all, a sort of mission to the heathen.

And who shall say that Mrs. Frankland's missionary impulse was not a true one? Phillida's people were exteriorly more miserable; but who knows whether the woes of a Mulberry street tenement are greater than those of a Fifth Avenue palace? Certainly Mrs. Frankland found wounded hearts enough. The woman with an unfaithful husband, the mother of a reckless son who has been obliged to flee the country, the wife of a runaway cashier, disgraced and dependent upon rich relatives—these and a score besides poured into her ear their sorrows, and were comforted by her sympathy cordially expressed, and by her confidence in a consoling divine love and her visions of a future of everlasting rest. Mrs. Frankland had found her proper field—a true mission field indeed, for in this world-out-of-joint there is little danger of going astray in looking for misery of one sort or another. If the sorrows of the poor are greater, they have, if not consolation, at least a fortunate numbness produced by the never-ending battle for bread; but the canker has time to gnaw the very heart out of the rich woman.

Even on the mind of Phillida, as she now listened to Mrs. Frankland, the accessories made a difference. How many dogmas have lived for centuries, not by their reasonableness but by the impressiveness of trappings! Creeds recited under lofty arches, liturgies chanted by generation following generation, traditions of law, however absurd, uttered by one big-wigged judge following a reverend line of ghostly big-wigs gone before that have said the same foolish things for ages—these all take considerable advantage from the power of accessories to impose upon the human imagination. The divinity that hedges kings is the result of a set of stage-fixings which make the little great, and half the horror inspired by the priest's curse is derived from bell and book and candle. The mystery of print gives weight to small men by the same witchcraft; you would not take the personal advice of so stupid a man as Criticus about the crossing of a *t*, but when he prints a tirade anonymously in the Philadelphia "*Tempus*" the condemnation becomes serious.

Just in this way the imagination of Phillida was affected by the new surroundings in the midst of which Mrs. Frankland spoke. The old addresses in a Bible-class room with four plastered walls, or a modest parlor, did not seem

to have half so much force as these. The weight of a brilliant success was now thrown into the scale, and Mrs. Frankland could speak with an apostolic authority hitherto unknown. The speaker's own imagination felt the influence of her new-found altitude, and she expressed herself with assurance and deliberation, and with more dignity and pathos than ever before.

With all this background, Mrs. Frankland spoke to-day from the twelfth chapter of Romans on personal consecration. But she did not treat the theme as a person of reformatory temperament might have done, by denouncing the frivolity of rich and fashionable lives. It was not in her nature to antagonize an audience. She drew a charming picture of the beauty of a consecrated life, and she embellished it with wonderful instances of devotion, interspersed with touching anecdotes of heroism and self-sacrifice. The impression upon her audience was as remarkable as it was certain to be transient. Women wept at the ravishing vision of a life wholly given to noble ends, and then went their ways to live as before, after the predispositions of their natures, the habits of their lives and the conventional standards of their class.

But in the heart of Phillida the words of the speaker fell upon fertile soil, and germinated, where there was never a stone or a thorn. The insularity of her life had left her very susceptible to Mrs. Frankland's discourses. Old stagers who have been impressed now by this, now by that, speech, writing, or personal persuasion, have suffered a certain wholesome induration. Phillida was a virginal enthusiast.

XV.

TWO WAYS.

It seemed to Millard that Phillida would be the better for seeing more of life. He would not have admitted to himself that he could wish her any whit different from what she was. But he was nevertheless disposed to mold her tastes into some likeness to his own—it is the impulse of all advanced lovers and new husbands. It was unlucky that he should have chosen for the time of beginning his experiment the very evening of the day on which she had heard Mrs. Frankland. Phillida's mind was all aglow with the feelings excited by the address when Millard called with the intention of inviting her to attend the theater with him.

He found a far-awayness in her mood which made him keep back his proposal for a while. He did not admire her the less in her periods of exaltation, but he felt less secure of her when she soared into a region whither he could not follow. He hesitated, and discussed the weather of the whole week past, smiting his knee gently

with his gloves in the endeavor to obtain cheerfulness by affecting it. She, on her part, was equally eager to draw Millard into the paths of feeling and action she loved so well, and while he was yet trifling with his gloves and the weather topic she began:

"Charley, I do wish you could have heard Mrs. Frankland's talk to-day." Phillida's hands were turned palms downward on her lap as she spoke; Millard fancied that their lines expressed the refinement of her organization.

"Why does n't she admit men?" he said, smiling. "Here you, who don't need any betterment, will become so good by and by that you'll leave me entirely behind. We men need evangelizing more than women do. Why does Mrs. Frankland shut us out from her good influences?"

"Oh! you know she's an Episcopalian, and Episcopalians don't think it right for women to set up to teach men."

"I'm Episcopalian enough, but if a woman sets up as a preacher at all, I don't see why she should n't preach to those who need it most. It's only called a 'Bible reading'"—here Charley carefully spread his gloves across his right knee—"there's no law against reading the Bible to men?" he added, looking up with a quick winning smile. "Now you see she turns the scripture topsy-turvy. Instead of women having to inquire of their husbands at home, men are obliged to inquire of their wives and sweethearts. I don't mind that, though. I'd rather hear it from you than from Mrs. Frankland any day." And he gathered up his gloves, and leaned back in his chair.

Phillida smiled, and took this for an invitation to repeat to him part of what Mrs. Frankland had said. She related the story of Elizabeth Fry's work in Newgate, as Mrs. Frankland had told it, she retold Mrs. Frankland's version of Florence Nightingale in the hospital, and then she paused.

"There, Charley," she said deprecatingly, "I can't tell these things with half the splendour effect that Mrs. Frankland did. But it made a great impression on me. I mean to try to be more useful."

"You? I don't see how you can be any better than you are, my dear. That kind of talk is good for other people, but it is n't meant for you."

"Don't say that; please don't. But Mrs. Frankland made a deep impression on all the people at Mrs. Van Horne's."

"At Mrs. Van Horne's?" he asked, with curiosity mingled with surprise.

"Yes; I went with Mrs. Hilbrough."

"Whew! Has Mrs. Frankland got in there?" he said, twirling his cane reflectively. "I had n't heard it."

"It is n't quite fair for you to say 'got in there,' is it, Charley? Mrs. Frankland was invited by Mrs. Van Horne to give her readings at her house, and she thought it might do good," said Phillida, unwilling to believe that anybody she liked could be more worldly than she was herself.

"I did not mean to speak slightly of Mrs. Frankland," he said; "I suppose she is a very good woman. But I know she asked Mrs. Hilbrough to let her read in her house. I only guessed that she must have managed Mrs. Van Horne in some way. It is no disgrace for her to seek to give her readings where she thinks they will do good."

"Did she ask Mrs. Hilbrough?" said Phillida.

"Mrs. Hilbrough told me so, and the Van Horne opening may have been one of Mrs. Hilbrough's clever contrivances. *That* woman is a perfect general. This reading at Mrs. Van Horne's must be a piece of her fine work."

Just why this view of the case should have pained Phillida she could hardly have told. She liked to dwell in a region of high ideals, and she hated the practical necessities that oblige high ideals to humble themselves before they can be incarnated into facts. There could be no harm in Mrs. Frankland's seeking to reach the people she wished to address, but the notion of contrivance and management for the promotion of a mission so lofty made that mission seem a little shop-worn and offended Phillida's love of congruity. Then, too, she felt that to Millard Mrs. Frankland was not so worshipful a figure as to herself, and a painful lack of concord in thought and purpose between her lover and herself was disclosed. The topic was changed, but the two did not get into the same groove of thought during the evening.

Even though a lover, Millard did not lose his characteristic thoughtfulness. Knowing that early rest was important for the mother, and conjecturing that she slept just behind the sliding-doors, Charley did not allow himself to outstay his time. It was only when he had taken his hat to leave that he got courage to ask Phillida if she were engaged for the next afternoon. When she said no, he proposed the theater. Phillida would have refused the invitation an hour before, but in the tenderness of parting she had a remorseful sense of pain regarding the whole interview. With a scrupulousness quite characteristic she had begun to blame herself. To refuse the invitation to the Irving matinee would be to add to an undefined estrangement which both felt but refused to admit, and so, with her mind all in a jumble, she said: "Yes; certainly. I'll go if you would like me to, Charley."

But she lay awake long that night in dissatisfaction with herself. She had gained noth-

ing with Charley, her ideals had been bruised and broken, her visions of future personal excellence were now confused, and she was committed to give valuable time to what seemed to her a sort of dissipation. Should she never be able to emulate Mrs. Fry? Would the lofty aspiration she had cherished prove beyond her reach? And then, once, just once, there intruded the unwelcome thought that her engagement with Millard was possibly a mistake, and that it might defeat the great ends she had in view. The thought was too painful for her; she banished it instantly, upbraiding herself for her disloyalty, and replacing the image of her lover on its pedestal again. Was not Charley the best of men? Had he not been liberal to the Mission and generous to Mina Schulenberg? Then she planned again the work they would be able to accomplish together, she diligent, and he liberal, until thoughts of this sort mingled with her dreams.

She went to see Irving's *Shylock*. The spectacular street scenes interested her; the boat that sailed so gracefully on the dry land of the stage excited her curiosity; and she felt the beauty and artistic delicacy of the *Portia*. But she was ill at ease through it all. She was too much in the mood of a moralist to see the play merely as a work of art. The players were to her human beings leading rather frivolous lives. And she could not but feel that in so far as the play diverted her, it did so at the expense of that strenuousness of endeavor for extraordinary usefulness which her mind had taken under the spell of Mrs. Frankland's speech.

"Did n't you like it?" said Millard, when they had reached the fresh air of the street and disentangled themselves from the debouching crowd—a noble pair to look upon as they walked thus in the late afternoon.

"Yes," said Phillida, spreading her parasol against the slant beams of the setting sun, which illuminated the red brick walls and touched the lofty cornices and the worn stones of the driveway with high lights, while now this and now that distant window seemed to burn with ruddy fire—"yes; I could n't help enjoying Miss Terry's *Portia*. I am no judge, but as a play I think it must have been good."

"Why do you say 'as a play'?" he asked. "What could it be but a play?" He punctuated his question by tapping the pavement with his cane.

Phillida laughed a little at herself, but added with great seriousness: "Would you think worse of me, Charley, if I should tell you that I don't quite like plays?" And she looked up at him in a manner at once affectionate and protesting.

Millard could not help giving her credit for

the delicacy she showed in her manner of differing from him.

"No," he said; "I could n't but think the best of you in any case, Phillida, but you might make me think worse of myself, you know, for I do like plays. And more than that," he said, turning full upon her, "you might succeed in making me think that you thought the worse of me, and that would be the very worst of all."

This was said in a half-playful tone, but to Phillida it opened again the painful vision of a possible drawing apart through a contrariety of tastes. She therefore said no more in that direction, but contented herself with some general criticisms on Irving's *Shylock*, the incongruities in which she pointed out, and her criticisms, which were tolerably acute, excited Millard's admiration; and it is not to be expected that a lover's admiration should maintain any just proportion to that which calls it forth.

Again the Thursday sermon at Mrs. Van Horne's came around, and again Phillida was restored to a white heat of zeal mingled with a rueful distrust of her own power to hold herself to the continuous pursuit of her ideal. Millard, perceiving that she dreaded to be invited again, refrained from offering to take her to the theater. He waited several weeks, and then ventured, with some hesitation, to ask her to go with him to see one of the Wagner operas. He was frightened at his own boldness in asking, and he kept his eyes upon the ferule of his cane with which he was tapping the toe of his boot, afraid to look up while she answered. She saw how timidly he asked, and her heart was cruelly wounded by the necessity she felt to refuse; but she had fortified herself to resist just such a temptation.

"I'd rather not go, Charley," she said slowly, in accents so pleading and so full of pain that Millard felt remorse that he should have suggested such a thing.

But this traveling on divergent lines could not but have its effect upon them. He was too well-mannered, she was too good, both were too affectionate, for them to quarrel easily. But there took place something that could hardly be called estrangement; it was rather what a Frenchman might, with a refinement not possible in our idiom, call an *éloignement*. In spite of their exertions to come together, they drew apart. This process was interrupted by seasons of renewed tenderness. But Phillida's zeal, favored by Mrs. Frankland's meetings, held her back from those pursuits into which Millard would have drawn her, and only a general interest in her altruistic aims was possible to him. Again and again he made some exertion to enter into her pursuits, but he could never get any farther than he could go by the

aid of his check-book. Once or twice she went with him to some public entertainment, but those social pursuits to which he was habituated she avoided as dissipations. Thus they loved each other, but it is pitiful to love as they did, while unable to conceal from themselves that a gulf lay between the main tastes and pursuits of the one and the other.

XVI.

A SÉANCE AT MRS. VAN HORNE'S.

THE Bible reader was no polemic. People of every sect were gathered under the wings of her sympathies. In vain dogmatic advisers warned her against Unitarians who believe too little, and Swedenborgians who believe too much. Mrs. Frankland's organ of judgment lay in her affections and emotions, and those who felt as she felt were accepted without contradiction, or, as she put it, mostly in Scripture phrase, which she delivered in a rich orotund voice: "Let us receive him that is weak in the faith, but not to doubtful disputation."

A certain sort of combativeness she had, but it was combativeness with the edge taken off. It served to direct her choice of topics, but not to give asperity or polemical form to her discourses. Suddenly introduced to the very heart of Vanity Fair, she had caught her first inspiration by opposition, and this led her to hold forth on such themes as consecration. But as her acquaintance with people of wealth extended she found that even they, conservative by very force of abundance, were affected by the unbelieving spirit of a critical age. The very prosperous are partly under shelter from the prevailing intellectual currents of their time. Those whose attention is engrossed by things are in so far shut out from the appeal of ideas. But thought is very penetrating; it will reach by conduction what it cannot attain by radiation. An intellectual movement touches the highest and the lowest with difficulty, but it does at length affect in a measure even those whose minds are narcotized by abundance as well as those whose brains are fagged by too much toil and care. When Mrs. Frankland became aware that there was unbelief, latent and developed, among her hearers, the prow of her oratory veered around, and faith became now, as consecration had been before, the pole-star toward which this earnest and clever woman aimed. With such a mind as hers the topic under consideration becomes for the time supreme. Solemnly insisting on a renunciation of all possibility of merit as a condition precedent to faith, she proceeded to exalt belief itself into the most meritorious of acts. This sort of paradox is common to all popular religious teachers.

Mrs. Frankland's new line of talk about the

glories of faith had a disadvantage for Phillida in that it also fell in with a tendency of her nature and with the habits nourished in her by her father. Millard thought he had reached the depths of her life in coming to know about her work among the poor, but a woman's motives are apt to be more involved than a man imagines or than she can herself quite understand. Below the philanthropic Phillida lay the devout Phillida, who believed profoundly that in her devotions she was able to touch hands with the ever-living God himself. Under the stimulus of Mrs. Frankland's words this belief became so absorbing that the common interests of life became to her remote and almost unreal. Her work in the Mission was more and more her life, and perhaps the necessity for accommodating herself a little to the habits and tastes of a lover was her main preservative from a tendency to degenerate into a devotee.

While Mrs. Frankland aroused others, her eloquence also influenced the orator herself. Advocacy increased the force of conviction, and the growing intensity of conviction in turn reinforced the earnestness of advocacy. Irreverent people applied an old joke and called her "the apostle to the genteels," and in the region to which she seemed commissioned the warmth of her zeal was not likely to work harm. What effect it had was in the main good. But the material in her hands was only combustible in a slow way; the plutocratic conscience is rarely inflammable—for the most part it smolders like punk. Nor was Mrs. Frankland herself in any danger of being carried by her enthusiasms into fanaticism of action. However her utterances might savor of ultraism, she was conservative enough in practical matters to keep a sort of "Truce of God" with the world as she found it.

But to Phillida, susceptible as a saint on the road to beatification, the gradually augmented fervor of Mrs. Frankland's declamation worked evil. It was especially painful to Agatha that her sister was propelled by this influence farther and farther out of the safe lines of commonplace feeling and action, and that every wind from Mrs. Frankland's quarter of the heavens tended to drift her farther and farther away from her lover. Agatha's indignation broke out into all sorts of talk against Mrs. Frankland, whom she did not scruple to denounce for a Pharisee, binding heavy burdens on the back of poor Phillida, but never touching them with her own little finger.

Mrs. Frankland's discourses on faith reached their zenith on a January day, when the carriage wheels that rolled in front of Mrs. Van Horne's made a ringing almost like the break-

ing of glass in the hard frozen snow of the streets, and when the luxurious comfort within the house was the more deliciously appreciable from the deadly frostiness of the bone-piercing wind without. Only Phillida of all the throng found her comfort disturbed by remembering the coachmen who returned for their mistresses before the end of the discourse. It cost those poor fellows a pang to do despite to their wonted dignity of demeanor by smiting their arms against their bodies to keep from perishing. But even a coachman accustomed to regard himself as the main representative of the unbending perpendicularity of a ten-million family must give way a little before a January north wind in the middle of a cold wave, when his little fur cape becomes a mockery and his hard high hat a misery. However admirable Mrs. Frankland's prolonged sessions may have seemed to the ladies with tear-stained cheeks within the house, it appeared far from laudable as seen from the angle of a coachman's box.

The address on this day followed a reading of the eleventh chapter of Hebrews, which is itself the rhapsody of an eloquent man upon faith. If this were written, as some suppose, by Apollos, the orator of the early Church, one may almost fancy that he reads here a bit of one of those addresses wherein speaker and hearer are lifted up together above the meanness and exigencies of mere realism. Mrs. Frankland accompanied the reading of this summary of faith's victory by a comment consisting largely of modern instances carefully selected and told with the tact of a *raconteur*, so as to leave the maximum impression of each incident unimpaired by needless details. Some of these stories were little short of miraculous; but they were dignified by the manner of telling, which never for an instant degenerated into the babble of a mere wonder-monger.

As usual, Mrs. Frankland, or the oratorical part of her, which was quite the majority of her mind, was carried away by the force of her own speech, and in lauding the success of faith it seemed to her most praiseworthy to push her eulogies unfalteringly to the extreme. You are not to understand that by doing this she vociferated or indulged in vehement gesture. He is only a bastard orator who fancies that loudness and shrillness of tone can enforce conviction. When Mrs. Frankland felt herself about to say extravagant things she intuitively set off her transcendent utterances by assuming a calm demeanor and the air of one who expresses with deliberation the most assured and long-meditated conclusions. So to-day she closed her little Oxford Bible and laid it on the richly inlaid table before her, deliberately depositing her handkerchief upon it and looking

about before she made her peroration, which was in something like the following words, delivered with impressive solemnity in a deep, rich voice:

"Why should we always praise faith for what it *has* done? Has God changed? Faith is as powerful to-day as ever it was since this old world began. If the sick are not healed, if the dead are not raised to-day, be sure it is not God's fault. I am asked if I believe in faith-cure. There is the Bible. It abounds in the divine healing. Nowhere are we told that faith shall some day cease to work wonders. The arm of the Lord is not shortened. O ye of little faith! the victory is within your reach, if you will but rise and seize upon it. I see a vision of a new Church yet to come that shall believe, and, believing as those of old believed, shall see wonders such as the faithful of old saw. The sick shall be healed; women shall receive their dead raised to life again. Why not now? Rise up, O believing heart, and take the Lord at his word!"

Perhaps Mrs. Frankland did not intend that declamation should be taken at its face value; certainly she did not expect it. After a hymn, beautifully and touchingly sung, and a brief prayer, ladies put on their sealskin sacques, thrust their jeweled hands into their muffs, and went out to beckon their impatient coachmen, and to carry home with them the solemn impressions made by the discourse, which were in most cases too vague to produce other than a sentimental result. Yet one may not scatter fire with safety unless he can be sure there are no dangerous combustibles within reach. The harm of credulity is that it is liable to set a great flame a-going whenever it reaches that which will burn. A belief in witches is comparatively innocuous until it finds favorable conditions, as at Salem a couple of centuries ago, but, in favorable conditions, the idle speculations of a pedant, or the chimney-corner chatter of old women, may suddenly become as destructive as a pestilence.

It was in the sincere and susceptible soul of Phillida that Mrs. Frankland's words had their full effect. The lust after perfection—the realest peril of great souls—was hers, and she was stung and humiliated by Mrs. Frankland's rebuke to her lack of faith, for the words so impressively spoken seemed to her like a divine message. The whole catalogue of worthies in the eleventh of Hebrews rose up to reprove her.

"I suppose Mrs. Frankland's been talking some more of her stuff," said Agatha at the dinner that evening. "I declare, Phillida, you're a victim of that woman. She is n't so bad. She does n't mean what she says to be taken as she says it. People always make allowances

for mere preaching, you know. But you just swallow it all, and then you get to be so poky a body has no comfort in life. There, now, I did n't mean to hurt your feelings," she added, as she saw the effort her sister was making at self-control.

Phillida lay awake that night long after the normal Agatha, with never an aspiration of the lofty sort, slept the blessed sleep of the heedless. And while the feeble glow of the banked-

down fire in the grate draped the objects in the room with grotesque shadows, she went over again the bead-roll of faith in the eleventh of Hebrews and heard again the response of her conscience to the solemn appeal of Mrs. Frankland, and prayed for an increase of faith, and went to sleep at last reflecting on the faith like a germinant mustard grain that should upheave the very mountains and cast them into the midst of the sea.

(To be continued.)

Edward Eggleston.

BALLAD OF AN OLD PINE.

OH for the old days, when along
My boughs a lively color sped,
While spring-time birds returned with song—
Blue birds and red.

Bright are the blossom-tinted hills
In violet and cerulean lights;
Into the vale a luster spills
From fervent heights.

Marvels of crystal from the sky
Have plashed on greenening fields and broke
To daisies, and from out them fly
A fairy folk—

Pale butterflies of gold that seem
At revel on the lilting wing
To music fancied in the dream
Of waking spring.

Ho, stripling, tasseled out in green
And bending in your gallant pride
To budding beauties all in sheen
On yonder side,

You yet shall stand gray and alone,
Hushed all your rapturous vernal lays.
O nature, nature, heart of stone,
Give back my days—

Give back my glory and life's charms;
Give back the majesty of form;
Give back the strength of lusty arms
To play with storm.

Vain, vain my cry. Then be it so.
I yield—(but oh, the sweet spring's breath!)
Come quickly—strike and lay me low,
Triumphant Death.

John H. Boner.

LOUISA MAY ALCOTT.

OUR age has grown almost *blasé* of fiction; biographies interest us more than romance, and the record of the unseen inner life more than the most ingenious network of invention. In proportion as the individuality that reveals itself is marked and potent and the hidden springs of action are decisive and direct; the study is a fruitful one; and judged by these standards, the biography of Miss Alcott is a notable book, well worthy of careful and sympathetic consideration. Louisa Alcott's figure stands out clear-cut in the keen New England air, and firmly set upon the soil—native and typical in every line. "Her fame," says her biographer, "rests upon her works; her American publishers compute the sale of a million copies, from which she realized more than \$200,000." And how charming a fame! The happy, guileless world of children claims her as its own. She comes freely among them—a child herself in her simplicity and *camaraderie*, with that undefinable "something" which means sympathy, comprehension, and, above all, appreciation. We have all been under the spell, whether we can fairly conjure it up anew or not. But now that the story of her life has been told, with its unswerving purpose and will, its gentle and absolutely disinterested affections, her works seem to fade into insignificance, while her fame lifts itself upon a broader basis, and takes ampler scope and proportions. It is the woman who rises before us,—single-minded and single-hearted, with no distractions, no bewilderment, no vagaries, and always a master-voice in her life to be obeyed,—and who comes freely among us, children no more, but struggling men and women less well trained and equipped than she, but all the more grateful to be helped, to be sustained, and even to be rebuked by so valiant an example as hers.

It is difficult to realize that Louisa Alcott, the capable, practical bread-winner who resolutely set aside every idea that could not become an active working principle, should have been the daughter of Bronson Alcott, the visionary and mystic philosopher, the transcendentalist *par excellence*, whose whole life was spent in the clouds. Her journal begins, September 1, 1843, at Fruitlands, the little settlement near Concord established by Mr. Alcott and his friends to carry out their views of social reform. Louisa is ten years old. The child rises

at five o'clock and takes her cold bath. After breakfast she washes the dishes and does housework and ironing. Then a run on the hills, when she has "some thoughts—it was so beautiful up there." Lessons and problems such as these: "Father asked us what was God's noblest work. Anna said, 'Men,' but I said 'Babies.' Men are often bad; babies never are." And again: "What is man? A human being; an animal with a mind; a creature; a body; a soul and a mind." Bread and fruit for dinner, for no meat is allowed. A run in the wind again, playing horse, "and had a lovely time in the woods with Anna and Lizzie [her sisters]. We were fairies, and made gowns and paper wings. I 'fled' the highest of all." Songs in the evening, and to bed, where she cries because she has been naughty; makes good resolutions and puts herself to sleep reciting poetry—Mrs. Sigourney's lines, "I must not tease my mother!" At eleven she writes: "Life is pleasanter than it used to be, and I don't care about dying any more. Had a splendid run, and got a box of cones to burn. Sat and heard the pines sing a long time. Read Miss Bremer's 'Home' in the eve. Had good dreams, and woke now and then to think, and watch the moon. I had a pleasant time with my mind, for it was happy." She reads "dear" "Pilgrim's Progress," Martin Luther, Plutarch, Scott, Bettine's "Correspondence" with Goethe, and much poetry, which she also takes to writing. She begins now to realize the family cares and straits. Mr. Alcott's schemes do not prosper; the children are taken into the counsels, and go crying to bed. "More people coming to live with us," says Louisa; "I wish we could be together, and no one else. I don't see who is to clothe and feed us all when we are so poor now." She is very dismal and writes a poem, "Despondency." But her courage revives, and the light bursts upon her path again. "I had an early run in the woods before the dew was off the grass," she writes. "The moss was like velvet, and as I ran under the arches of yellow and red leaves I sang for joy, my heart was so bright and the world so beautiful. I stopped at the end of the walk and saw the sun shine out over the wide 'Virginia meadows.' It seemed like going through a dark life or grave into heaven beyond. A very strange and solemn feeling came over me as I stood there, with no sound but the rustle of the pines, no one near me, and the sun so glorious, as for

me alone. It seemed as if I *felt* God as I never did before, and I prayed in my heart that I might keep that happy sense of nearness all my life." The pages of the journal are thus saturated with the child's moral experience. She gives samples of her father's teaching—Socratic dialogues on the elements of hope and faith, the virtues and vices. Among the vices to be eradicated she names "love of cats." But of greatest influence in her life were the confidential little notes exchanged between mother and daughter—tender words of sympathy and love, but of wise and gentle guidance as well; the constant presentation of life as a task, a discipline, and a conquest, and, on the child's part, no less a sense of conscience and of duty; of struggle and temptation in her own little world, and of heights to be attained. The mother's code was, Rule yourself, love your neighbor, do the duty which lies nearest you. At thirteen she sums up her plan of life. She is going *to work really to be good*. No use making good resolutions, or writing sad notes and crying over her sins, if it has no result. But now she feels a "true desire to improve, and be a help and comfort, not a care and sorrow, to my dear mother." To offset all these rather austere conditions and practice, we have just at the same time a delightful glimpse of merry, romping children—Louisa as the ringleader bursting in unexpectedly upon Mr. Emerson and Margaret Fuller, who were gravely discoursing upon education, and had asked to see Mr. Alcott's "model children."

Fruitlands collapsed, and with it Mr. Alcott's "resources of mind, body, and estate." In "Transcendental Wild Oats" Miss Alcott has given a humorous and yet touching account of the catastrophe, showing up with gentle irony the extravagances and aberrations of an idealism not mated with common sense. Mr. Alcott roused himself after a time and sought manual labor, which naturally proved inadequate for their support, and they found themselves obliged to accept shelter and assistance from friends in Concord. Later on it was decided that they should remove to Boston, where Mrs. Alcott found employment in benevolent societies as a visitor among the poor, and afterward opened an intelligence office. Mr. Alcott began his "Conversations," which furnished mental if not pecuniary resource, and were a means of escape from the sordid cares of life into the intellectual and speculative regions which he loved.

For the children the free, happy life of childhood had come to an end. Pent up in their small city quarters, they missed the range of the fields and woods, and, moreover, found themselves called upon to take part in the actual struggle for existence. Louisa resumed

her diary in Boston, May, 1850. "Seventeen years have I lived, and yet so little do I know, and so much remains to be done before I begin to be what I desire—a truly good and useful woman." She bewails her shortcomings and temptations. "If I look in my glass, I try to keep down vanity about my long hair, my well-shaped head, and my good nose. In the street I try not to covet fine things. My quick tongue is always getting me into trouble, and my moodiness makes it hard to be cheerful when I think how poor we are, how much worry it is to live, and how many things I long to do I never can. So every day is a battle, and I'm so tired I don't want to live; only it's cowardly to die till you have done something." Strangely enough she heads this, "The Sentimental Period," and confides to us her romance, which dated from the reading of a book she found in Mr. Emerson's library,—none other than "The Correspondence of Goethe with a Child,"—which fired her with the desire to be a Bettine to her father's friend. "So I wrote letters to him, but never sent them; sat in a tall cherry tree at midnight, singing to the moon till the owls scared me to bed; left wild flowers on the doorstep of my 'Master,' and sung Mignon's song under his window in very bad German. Not till many years later," she says, "did I tell *my* Goethe of this early romance and the part he played in it. He was much amused, and begged for his letters, kindly saying he felt honored to be so worshiped. The letters were burnt long ago, but Emerson remained my 'Master' while he lived, doing more for me—as for many another—than he knew, by the simple beauty of his life, the truth and wisdom of his books, the example of a great, good man, untempted and unspoiled by the world which he made better while in it, and left richer and nobler when he went." But a still wilder vein of romance was her passion for the stage. From her childhood she had composed and acted plays; apparently she was not without dramatic talent, and she was seized now with the fever to become an actress—a great tragic actress. I "shall be a Siddons, if I can," writes the demure Puritan maiden, shrewdly saying, "I could make plenty of money perhaps, and it is a very gay life." But it is her prudent and sensible mother who dissuades her from it, knowing the other side of this "gay life," and realizing that her daughter's gifts were not sufficient to make her a really great actress. One of her plays, however, "The Rival Prima Donnas," was accepted by a leading manager. Owing to some difficulty, it was not brought out, but it procured for her a free pass to the theater, which was a source of never-failing delight.

In the mean while the hard realities of life,

the hand-to-hand struggle with poverty, had every day to be faced. The girls each did their part. "Anna and I taught," says Louisa; "Lizzie was our little housekeeper—our angel in a cellar-kitchen; May went to school; father wrote and talked when he could get classes and conversations." Poor as they were, their home was rich in love and happiness and in a practical charity which made it a refuge for those poorer than themselves—the friendless and the lost, whom Mr. and Mrs. Alcott took into their home without fear, satisfied that the children could not better learn the misery of sin and the habit of sympathy and help. Many a meal was shared—the comforts, and even the necessities of life, sacrificed for those whose need was greater than their own. In a footnote to the journal, at this time, Louisa says: "We had smallpox in the family this summer, caught from some poor immigrants whom mother took into our garden and fed one day. We girls had it lightly, but father and mother were very ill, and we had a curious time of exile, danger, and trouble. No doctors, and all got well." After the smallpox, Louisa started a little school, which kept her busy through the winter. In the evening, when her day's work was over, she sewed in order to add to her earnings. The school closed in the spring, and she engaged herself to go out to service with a relative "as second girl. I needed the change," she says; "could do the wash, and was glad to earn my \$2 a week. Home in October with \$34 for my wages." Then school again, month after month. Mrs. Alcott was occupied with boarders and sewing. Mr. Alcott went "West to try his luck—so poor, so hopeful, so serene," says Louisa. "In February father came home. . . . A dramatic scene when he arrived in the night. We were waked by hearing the bell. Mother flew down, crying 'My husband!' We rushed after, and five white figures embraced the half-frozen wanderer who came in hungry, tired, cold, and disappointed, but smiling bravely and as serene as ever. We fed and warmed and brooded over him, longing to ask if he had made any money, but not one did till little May said, after he had told all the pleasant things, 'Well, did people pay you?' Then with a queer look he opened his pocket-book and showed one dollar, saying with a smile that made our eyes fill, 'Only that! My overcoat was stolen, and I had to buy a shawl. Many promises were not kept, and traveling is costly; but I have opened the way, and another year shall do better.' I shall never forget how beautifully mother answered him, though the dear, hopeful soul had built much on his success; but with a beaming face she kissed him, saying, 'I call that doing *very well*. Since you are safely home, dear, we don't ask

anything more.' Anna and I choked down our tears and took a little lesson in real love which we never forgot, nor the look that the tired man and the tender woman gave one another. It was half tragic and comic, for father was very dirty and sleepy, and mother in a big nightcap and funny old jacket." So the brave girl looks on and learns the best that life can teach, plucking up spirit and hope where many another would despond, and shouldering the burden more courageously than ever. "I am grubbing away as usual," she says, "trying to get money enough to buy mother a nice warm shawl." She counts up her earnings—eleven dollars in all, five for a story, and four for a pile of sewing which she sat up all night to finish. She buys a crimson ribbon to trim a bonnet for May, the youngest sister, for whom the finery seems always reserved, a new gown for "good little Betty, who is wearing all the old gowns"; and for her father new neckties and some paper, so that "he can keep on with the beloved diaries though the heavens fall."

Thus passed the years of first youth—no gilded years for her, but full of "hard facts, irksome duties, many temptations, and the daily sacrifice of self," accepted at the time without bitterness or complaint, and, later on, as the schooling of the spirit which had taught her "the sweet uses of adversity, the value of honest work, the beautiful law of compensation, which gives more than it takes, and the real significance of life." Disdaining no service however humble which fell to her lot, she was gradually drifting towards her true vocation. She was now twenty-two, but from childhood she had written poems, stories, and plays of a melodramatic type, among them a "Bandit's Bride," and "The Captive of Castile; or, the Moorish Maiden's Vow." One of her stories had already been published, and now, under the title of "Flower Fables," she published a little collection of tales written by her at sixteen for Mr. Emerson's daughter Ellen. The book had quite a little success. The edition of sixteen hundred sold well, and she received \$32. From this time she was seldom without literary work of some kind. She wrote book-notices and poems for the papers, and planned stories, which she worked at when she could, in the intervals of school, sewing, and housework. Her winter's earnings are, school \$50, sewing \$50, stories \$20—"if I am ever paid," she adds. But evidently her spirits do not flag with all these exertions. She is again negotiating to have her play brought out, goes all over the great new theater, she says, and dances a jig on the immense stage. "In the eve I saw La Grange as *Norma*. . . . Quite stage-struck, and imagined myself in her place, with white robes and oak-leaf crown." Besides the excite-

ment of the theater, she enjoyed all the best lectures and readings that Boston then afforded—heard Emerson and Lowell, Thackeray, Dickens, and Mrs. Kemble. Theodore Parker befriended and encouraged her. She went to his Sunday evening receptions, where she had a glimpse of the celebrities of the day—Phillips, Garrison, Sumner, and the rest. She shyly sits in a corner and listens, but Mr. Parker comes up to her, and with a word and a warm hand-shake leaves her both proud and happy, “though I have my trials,” she says. “He is like a great fire where all can come and be warmed and comforted.” January, 1857, at the age of twenty-four, she chronicles her first new silk dress—a New Year’s gift, in which she felt very fine, going to two parties in it on New Year’s eve. In October of the same year Mr. Alcott decides to go back to Concord, in order to be near Mr. Emerson, “the one true friend,” says his daughter, “who loves and understands and helps him.” Throughout the volume nothing is more touching than the relation between Mr. Emerson and the Alcotts. On one occasion Louisa relates how her father had four talks at Mr. Emerson’s house, where he made \$30. “R. W. E. probably put in \$20,” she adds. “He has a sweet way of bestowing gifts on the table under a book, or behind a candlestick, when he thinks father wants a little money and no one will help him earn.” With some money of Mrs. Alcott’s a picturesque old house near the Emersons’ was bought, known as Orchard House, which became the permanent home of the Alcotts. While making it ready to occupy they hired part of a house in the village, and here in the following spring occurred the first break in the family, the death of the younger sister, Elizabeth, from the effects of scarlet fever caught two years before from some poor children whom her mother had nursed. Very pathetic is the record of that illness and passing away. The family all seem to draw together. Mr. Alcott returns from the West, where he has gone on another venture. Louisa gives up everything to devote herself to the sufferer. “Sad, quiet days in her room,” she says, “and strange nights keeping up the fire and watching the dear little shadow try to wile away the long, sleepless hours without troubling me. She sews, reads, sings softly, and lies looking at the fire—so sweet, and patient, and so worn, my heart is broken to see the change. . . . Dear little saint! I shall be better all my life for these sad hours with you. . . . March 14. My dear Beth died at three this morning after two years of patient pain. Last week she put her work away, saying the needle was ‘too heavy,’ and, having given us her few possessions, made ready for the parting

in her own simple, quiet way. For two days she suffered much, begging for ether, though its effect was gone. Tuesday she lay in father’s arms, and called us round her, smiling contentedly as she said, ‘All here!’ I think she bid us good-by then, as she held our hands and kissed us tenderly. Saturday she slept, and at midnight became unconscious, quietly breathing her life away till three; then with one last look of the beautiful eyes, she was gone. . . . On Monday Dr. Huntington read the chapel service, and we sang her favorite hymn. Mr. Emerson, Henry Thoreau, Sanborn, and John Pratt carried her out of the old home to the new one at Sleepy Hollow chosen by herself. So the first break comes, and I know what death means—a liberator for her, a teacher for us. . . . Death never seemed terrible to me, and now is beautiful; so I cannot fear it, but find it friendly and wonderful.”

Back to life again, however, with a greater rush than before. The elder sister Anna becomes engaged to Mr. Pratt. Louisa goes for a visit to Boston, where she “saw Charlotte Cushman, and had a stage-struck fit.” She had serious thoughts again of going on the stage, and even agreed to appear as “The Widow Pottle.” “The dress was a good disguise,” she says, “and I knew the part well. It was all a secret, and I had hopes of trying a new life; the old one being so changed now, I felt as if I must find interest in something absorbing.” But the manager broke his leg, and she had to give it up; “and when it was known,” she adds, not without a touch of mischief, “the dear, respectable relations were horrified at the idea. I’ll try again by-and-by, and see if I have the gift. Perhaps it is acting, not writing, I’m meant for. Nature must have a vent somehow.” But there is no mention of it again, and probably from this time all hopes of such a career were definitely abandoned. She returned to Concord and worked off her stage fever in writing a story called, “Only an Actress.” “I have plans simmering,” she says, “but must sweep, and dust, and wash my dishpans a while longer, till I see my way.”

In July the family took possession of Orchard House, and, after seeing them comfortably installed, Louisa went off to Boston again in search of employment. And now we have hint of a dark hour—so dark, according to her biographer, that “as she walked over the mill-dam the running stream brought the thought of the River of Death, which would end all troubles.” But she conquered herself with the thought that there must be work for her somewhere, and that it was “cowardly to run away before the battle was over.” Mr. Parker’s words on Sunday again cheered and helped her. “Trust your fellow-beings,” he said, “and let

them help you. Don't be too proud to ask and accept the humblest work till you can find the task you want." So she took up life again, "teaching, writing, sewing, getting what I can from lectures, books, and good people. Life is my college," she says. "May I graduate well and earn some honors!"

A happy event in the spring is the marriage of her sister Anna, at Concord, of which she gives a bright account. "A lovely day; the house full of sunshine, flowers, friends, and happiness. . . . the old folks danced round the bridal pair on the lawn in the German fashion, making a pretty picture to remember, under our Revolutionary elm. . . . Mr. Emerson kissed her [the bride]; and I thought that honor would make even matrimony endurable, for he is the god of my idolatry and has been for years."

It would require no great penetration, even if she did not confess it herself, to discover that Miss Alcott was not disturbed by any sentimental proclivities or longings. Her heart was like a clear crystal well, reflecting the calm family affections, the free, active, and yet contained existence that is equal to its own needs and the needs of others. The supreme event of most women's lives, either as an ideal or a reality — marriage — had no hold upon her, and gave no color to her life or her imaginings. As she says herself, it is a boy's spirit that beats within her breast, and that leaps high now at a new and stirring call. Heroic times have come. The year 1861 brings the war; Miss Alcott says: "I like the stir in the air, and long for battle like a war-horse when he smells powder." "I've often longed to see a war," she says again, "and now I have my wish." As she can't fight she offers her services as a nurse, and starts off for the Union Hospital, Georgetown, in the December twilight, feeling as if she were the son of the house going to war. "A most interesting journey into a new world, full of stirring sights and sounds, new adventures, and an ever-growing sense of the great task I had undertaken. I said my prayers as I went rushing through the country white with tents, all alive with patriotism, and already red with blood. A solemn time, but I'm glad to live in it, and am sure it will do me good, whether I come out alive or dead." In January she writes: "I never began the year in a stranger place than this — five hundred miles from home, alone, among strangers, doing painful duties all day long, and leading a life of constant excitement in this great house, surrounded by three or four hundred men in all stages of suffering, disease, and death." She had evidently a talent for nursing, and loved it. Though often homesick and worn out, she found real pleasure in tending and cheering the poor souls who seemed so docile and grateful, and many

of them truly lovable and manly. She speaks especially of one,—"the prince of patients," she calls him,—a Virginia blacksmith, "about thirty, I think, tall and handsome, mortally wounded, and dying royally without reproach, repining, or remorse." After a while she took night-work, which she liked, as it gave her time for a morning run on the hills. "I trot up and down the streets in all directions," she says, "sometimes to the Heights, then half-way to Washington, again to the hill, over which the long trains of army wagons are constantly vanishing and ambulances appearing. That way the fighting lies, and I long to follow." But before the end of six weeks she was attacked with symptoms of typhoid pneumonia. She refused to give up at first, but finally, without her knowledge, her father was telegraphed for, and she was taken home, already in the delirium of fever. For three weeks she lay unconscious and at the point of death. When she recovered her senses she found herself quite another person. She did not know herself when she looked in the glass. Her beautiful hair, a yard and a half long, had to be cut off. When she tried to walk she cried because she found that her legs would n't go. She slowly convalesced in the spring, but never fully recovered her former health and strength. But the old life had to be taken up. Money was wanted, and she wrote hospital sketches, which, to her surprise, made a great hit, and showed her the vein in which she should excel. She also worked over her novel of "Moods," which, after careful revision and correction, was finally published, and attracted much notice. She was steadily growing into popularity, and her dreams seemed about to be fulfilled. But she was doomed to longer trials and struggles. The stories which were most in demand and paid best were sensational stories which she looked upon as "rubbish," but which were easily despatched, and kept the family comfortable. She could not always rise out of her depression, and writes with discouragement: "A dull, heavy month, grubbing in the kitchen, sewing, cleaning house, and trying to like my duty." Greatly feeling the need of change and relaxation, she took advantage of an opportunity which offered to go abroad, where she remained for a little over a year. On her return, she plunged into literary work more violently than ever, for the family were in arrears again. She agreed to write a fifty-dollar tale once a month, to do editorial work on a magazine, and furnish other stories, long and short, one of which, in twenty-four chapters, one hundred and eighty-five pages, she wrote in a fortnight, "besides work, sewing, nursing, and company."

Among other offers, the firm of Roberts Brothers made the request for a girls' book.

She meekly said she would try to write one, although she did not enjoy the task. "Never liked girls," she says, "or knew many, except my sisters; but our queer plays and experiences may prove interesting, though I doubt it." This was the origin of "Little Women," which was published in October, 1868. Before the month was over the first edition was gone, and one called for in London. Says her biographer: "Already twenty-one years have passed, and another generation has come up since she published this book, yet it still commands a steady sale." Nor is its success confined to this country. It has been "translated into French, German, and Dutch, and has become familiarly known in England and on the Continent." Inspired by her success, Miss Alcott began at once the sequel to "Little Women," which she finished in two months—so full of her work, she says, that she could not stop to eat or sleep. "Girls write to ask who the little women marry, as if that was the only end and aim of a woman's life!" she indignantly exclaims. She receives notes asking for pictures, autograph, family history, and more books at once, for Louisa Alcott was now a celebrity. People came to stare at her. "Reporters haunt the place to look at the authoress, who dodges into the woods à la Hawthorne" to escape. But the stress has been too much for her, and her health gives way completely. "Headaches, cough, and weariness" keep her from working, as she once could, fourteen hours a day. She writes the conclusion to "The Old-Fashioned Girl," "with left hand in a sling, one foot up, head aching, and no voice." Such conditions as these could not endure, and another visit abroad was planned with her sister May, who was studying to be an artist. While in Rome they had news of the death of their brother-in-law, Mr. Pratt, which was a great shock to them both. Taking upon herself, as usual, the cares and responsibilities of the family, Miss Alcott began at once to write "Little Men," in order to provide support for her sister and the boys, "to whom I must be a father now," she says. The book was published the very day she arrived home some months later. A great red placard announcing it was pinned up in the carriage, and fifty thousand copies already sold. She proudly writes in her diary: "Twenty years ago I resolved to make the family independent if I could. At forty that is done. Debts all paid, even the outlawed ones, and we have enough to be comfortable. It has cost me my health, perhaps; but as I still live, there is more for me to do, I suppose." And so she sets new tasks for herself, furnishing book after book in order to meet the eager demands of her publishers. Each of her volumes provides some added comfort or ease for her family. With \$1000 she sends May off to

London again to complete her art education. Another sum of \$4500 goes to buy a new home for her widowed sister and the boys. "So she has *her* wish," writes Louisa, "and is happy. When shall I have mine? Ought to be contented with knowing I help both sisters by my brains. But I'm selfish, and want to go away and rest in Europe. Never shall." On the contrary, more trials await her, and the shadow of a great sorrow had already fallen. Her mother's health, which had long been failing, began rapidly to decline. Louisa took charge of the nursing, fell desperately ill herself, and feared to go before her mother, "but pulled through, and got up slowly to help her die." November 25, 1877, Mrs. Alcott fell quietly asleep in her daughter's arms, looking up at her with a smile and calling her "mother." "I was so glad," says Louisa, "when the last weary breath was drawn, and silence came, with its rest and peace. . . . Quiet days afterward, resting in her rest. My duty is done, and now I shall be glad to follow her. . . . I never wish her back, but a great warmth seems gone out of my life, and there is no motive to go on now. . . . I think I shall soon follow her, and am quite ready to go now she no longer needs me." Very beautiful is her poem in memory of her mother.

TRANSFIGURATION.

MYSTERIOUS Death! who in a single hour
 Life's gold can so refine,
 And by thy art divine
 Change mortal weakness to immortal power!
 Age, pain, and sorrow dropped the veils they wore.
 And showed the tender eyes
 Of angels in disguise,
 Whose discipline so patiently she bore.
 Faith that withstood the shocks of toil and time;
 Hope that defied despair;
 Patience that conquered care;
 And loyalty, whose courage was sublime;
 The Spartan spirit that made life so grand,
 Mating poor daily needs
 With high, heroic deeds,
 That wrested happiness from Fate's hard hand.
 We thought to weep, but sing for joy instead,
 Full of the grateful peace
 That follows her release;
 For nothing but the weary dust lies dead.
 O noble woman! never more a queen
 Than in the laying down
 Of scepter and of crown
 To win a greater kingdom, yet unseen;
 Teaching us how to seek the highest goal,
 To earn the true success,—
 To live, to love, to bless,—
 And make Death proud to take a royal soul.

LOUISA MAY ALCOTT. (AFTER A PHOTOGRAPH BY NOTMAN, BOSTON.)

Close upon the death of the mother came the marriage of May in London to Ernest Nie-riker, a young Swiss, cultivated and artistic. They settled in Paris, and May's happy letters give a glimpse of a charming home and "an ideal life with painting, music, love, and the world shut out." For the first time Louisa's own heart utters a cry: "How different our lives are just now! I so lonely, sad, and sick; she so happy, well, and blest." The year passes. "I dawdle about," she says, "and wait to see if I am to live or die. If I live, it is for some new work. I wonder what? . . . So ends 1878, a great contrast to last December. Then I thought I was done with life; now I can enjoy a good deal, and wait to see what I am spared to do. Thank God for both the sorrow and the joy." But a crushing blow was in store for her now. In November a little girl was born to May. All went well at first. Then came forebodings. "May not doing well. The weight on my heart is not all imagination. She was too happy to have it last, and I fear the end is coming. . . . Wednesday, December 31. A dark day for us. A telegram from Ernest to Mr. Emerson tells us May is dead. . . . I was alone when Mr. Emerson came. Ernest sent to him, knowing I was feeble, and hoping Mr. Emerson would soften the blow. I found him looking at May's portrait, pale and tearful, with the paper in his hand. 'My child, I wish I could prepare you; but alas, alas!' Then his voice failed, and he gave me the telegram. I was not surprised, and read the hard words as if I knew it all before. 'I am prepared,' I said, and thanked him. He was much moved

and very tender. I shall remember gratefully the look, the grasp, the tears he gave me; and I am sure that hard moment was made bearable by the presence of this our best and tenderest friend."

Of all the trials of her life, Miss Alcott says she found this the hardest to bear, perhaps on account of her feeble health; nor could she understand why May should be taken when life was richest, and she be left, who had done her task and could well be spared. Letters came, telling the whole sad story. May had prepared for death. "If I die when baby comes," she wrote, "remember I have been so unspeakably happy for a year that I ought to be content." Louisa was to have her baby and her pictures. "A very precious legacy! Rich payment for the little I could do for her!" The box arrived with pictures, clothes, vases, ornaments, a little work-basket, and a lock of May's pretty hair tied with blue ribbon—"all that is now left us of this bright soul but the baby, soon to come." In the autumn the baby arrived, and Miss Alcott took it to her heart as her very own, for through her whole life this was the relation that appealed to her most strongly. She was always the caretaker, the protector. To her own mother she had been the mother, to each of her sisters in turn, and even to her nephews, and now more than ever to this motherless child, who from the first nestled in her arms and looked up to her for a mother's love. Miss Alcott threw herself into her new charge with all the passionate devotion of which she was capable. "My life is absorbed in my baby," she writes. And again: "I often go at night to

see if she is really *here*, and the sight of the little head is like sunshine to me. . . . When I hold my Lulu I feel as if even death had its compensations. A new world for me."

April 27, 1882, occurred the death of Mr. Emerson. Louisa pays him her last tribute. "Our best and greatest American gone. The nearest and dearest friend father has ever had,

A. BRONSON ALCOTT. (AFTER A BUST BY D. C. FRENCH.)

and the man who has helped me most by his life, his books, his society. I can never tell all he has been to me—from the time I sang Mignon's song under his window (a little girl) and wrote letters *à la* Bettine to him, my Goethe at fifteen, up through my hard years, when his essays on Self-Reliance, Character, Compensation, Love, and Friendship, helped me to understand myself and life and God and Nature. Illustrious and beloved friend, good-by!"

In the autumn of the same year Mr. Alcott was stricken with paralysis, from which he only partly recovered to be tended and lovingly provided for by the ever-watchful Louisa. Enfeebled, indeed completely broken down, by overwork and exertion, she yet feels the need to write and respond to the calls made upon her. She has attacks of vertigo and sleepless nights, her head working like a steam-engine, planning "Jo's Boys" to the end. The doctor wisely agrees to let her write half an hour a day. "Rebellious brains want to be attended to," she says, "or trouble comes." The records in the Journal are more and more scant.

She chronicles the birthdays, her father's and her own, which fall on the same day: "Nov. 29. Father eighty-five. L. M. A. fifty-two."

July, 1886, closes the Journal. Unable to write or even to read, she busied herself for the most part with fancy work, making flowers and pen-wipers for her friends. Her father was also rapidly failing. She could not now be with him, but visited him when she was able. In March she drove to see him for the last time. Entering the carriage, she forgot to put on her fur wrap, and the following day was seized with violent pain in the head, which the doctor at once pronounced serious. The trouble increased, and "at 3.30 P. M., March 6, 1888, she passed quietly on to the rest which she so much needed," not knowing that her father had already preceded her. She had made all her preparations, meeting death as she had met life, with composure and self-possession—ready at any call, and "not wanting to live if she could not be of use." "The friends of the family," says Mrs. Cheney, "who gathered to pay their last tribute of respect and love to the aged father were met at the threshold by the startling intelligence, 'Louisa Alcott is dead,' and a deeper sadness fell upon every heart. The old patriarch had gone to his rest in the fullness of time, 'corn ripe for the sickle,' but few realized how entirely his daughter had worn out her earthly frame. . . . Her body was carried to Concord and placed in the beautiful cemetery of Sleepy Hollow, where her dearest ones were already laid to rest. 'Her boys' went beside her as a guard of honor, and stood around, as she was placed across the feet of father, mother, and sister, 'that she might take care of them as she had done all her life.'"

"Faithful unto death" may be written of this devoted soul to whom the thought of self seems never to have occurred. In the presence of so admirable a life we must pause in silence and respect, and weigh well our words if we would even give a hint of what might seem like disparagement or criticism. But we can only do justice to so genuine and direct a character as Miss Alcott by directness and sincerity on our part as well. We can only truly measure the full worth and meaning of such a life by an earnest effort to understand and to explain its underlying principles, which may at the same time lay bare its limitations. So sturdy and practical a will, so firm a grasp on reality, so determined and even conscious a reaction against the exaggerations of idealism, made her the excellent, helpful woman that she was, but also, perhaps, prevented the higher flight, the "*élan*" which might have borne her still more aloft, within sight of illumined and infinite horizons. A greater power of imagination might have made her more restless, more sensitive

to the ruggedness of her lot, but at the same time it might have given wings to her feet and kindled that ardor and glow which make of self-sacrifice a beacon-light. Doubtless the fault lies greatly in ourselves, who are more slack of fiber, less drilled and less sustained than she was, that we are not more fired by her example, more stimulated by the story of her struggles and reward. But while we are necessarily aware of the deep spiritual life which was the source of so much energy and self-surrender, we are too persistently reminded of the material results — the money earned from her "brains," the comfort and freedom purchased for her family, rather than of the clearer insight gained, the indwelling satisfaction and repose, the vistas and heights whereto we also may aspire. Strangely enough, in her works, which are the counterpart of her life, her defect becomes a merit, and accounts for their phenomenal success. What was it in Miss Alcott's books that surprised and delighted the children of a score of years ago, and that still holds its charm for the childhood of to-day? Was it a new world that she discovered — a fairy-land of imagination and romance, peopled by heroes and enchanted beings? Far from it. It was the literal, homespun, child's world of to-day; the common air and skies, the common life of every New England boy and girl, such as she

knew it; the daily joys and cares, the games and romps and jolly companions — all the actuality and detail of familiar and accustomed things which children love. For children are born realists, who delight in the marvelous simply because for them the marvelous is no less real than the commonplace, and is accepted just as unconditionally. Miss Alcott met the children on their own plane, gravely discussed their problems, and adopted their point of view, drawing in no wise upon her invention or imagination, but upon the facts of her own memory and experience. Whether or not the picture, so true to the life, as she had lived it, will remain true and vital for all times cannot now be determined. For the literature of children, no less than for our own, a higher gift may be needed; more finish, and less of the "rough-and-ready" of every-day habit and existence; above all, perhaps, a larger generalization and suggestion, and the touch of things unseen as well as things familiar.

But whatever the fate of her books, Miss Alcott deserves the niche she has won, and the monument built for her in the record of a life which is a protest against the doubts of the age — the fear that duty may have lost its sway and character its foundation, and that happiness is the sole measure and rule of living.

Josephine Lazarus.

LOUISA MAY ALCOTT. (AFTER A BUST BY W. RICKERSON.)

ALONG THE BOULEVARD IN SOFIA.

A BULGARIAN OPERA BOUFFE.

I.

HE was a small waiter with a slightly bald head, and of no very pronounced nationality, and he spoke the fag-ends of five or six languages, one of which, I was delighted to find, was my own.

PRINCE FERDINAND.

These fragments he hurled continuously at other waiters of more pronounced nationalities — French, German, Hungarian, and the like — who were serving little groups of Turks, Russians, and Bulgarians scattered about the coffee-room.

Directly opposite me hung a half-length portrait of a broad-shouldered young soldier bristling with decorations, his firmly set features surmounted by a military cap.

"Is that a portrait of the prince?" I asked.

The man of many tongues stopped, looked at the chromo for an instant as though trying to remember to which one of the late princes I had referred, and then said blandly:

"Yes, monsieur; the present king; Prince Ferdinand."

"Is he now in Sofia?"

The slightly bald attendant elevated his eyebrows with a look of profound astonishment.

"Here? No, monsieur."

"He has really run away, then?"

The eyebrows fell, and a short, pudgy finger was laid warningly against his lips.

"Monsieur, nobody runs in Sofia. His Majesty is believed to be in a monastery."

"Yes; so they tell me. But will he ever come back?"

The man stopped, gazed about him furtively, refilled my glass, bending so low that his lips almost touched my ear, and then whispered, with a half-laugh:

"God knows."

I was not surprised. All Europe at that precise moment was straining its ear to catch a more definite answer. The conundrum was still going the rounds of the diplomats, and the successful guesser was yet to be heard from.

All that was positively known concerning his imperial highness was that several weeks prior to the time of this writing he had left his palace at Sofia,—within musketshot of where I sat,—and, attended by a few personal friends, had taken the midnight express to Vienna. From Vienna he had gone to Carlsbad, where for several consecutive weeks he had subjected his royal person to as many indoor baths and as much outdoor exercise as would entirely eradicate the traces of gout and other princely evils absorbed by his kingship during his few years' stay in the capital of the Bulgarians.

This done, he had visited his relatives in different parts of Europe; held midnight conferences in Vienna, now with his mother, Princess Clementine, now with the representatives of his uncle, Duke Ernest of Saxe-Coburg, and again with the Austrian authorities.

All this time the air had been full of the rumor of his abdication. The Russian ambassador at the court of Paris, Baron Mohrenheim, in an interview granted to the Paris correspondent of a St. Petersburg paper, insisted that there was no doubt that Ferdinand had quitted Bulgaria for good, "his life there being in constant danger." While the Austrian ambassador at Constantinople, Herr von Radowitz, was reported to have advised the Porte to postpone taking action on the Bulgarian Note for the present, hinting at the imminent retirement of the reigning prince, and a consequent solution of impending difficulties more in harmony with the purport of the Berlin Treaty.

These announcements continued, and with such persistency that the Bulgarian prime minister, M. Stamboloff, deemed it necessary to telegraph to a newspaper correspondent, "The rumors of the prince's intended abdication are pure fabrications."

More emphatic still was Ferdinand's own manifesto, issued through the columns of the Carlsbad "Temps," to the effect that "while there is a great national effervescence going on at this moment in Bulgaria, the Bulgarians are, nevertheless, free, and will welcome me back with rejoicings."

It was remarked, however, by the thoughtful that the prince made no statement as to the precise date of his return, or, in fact, as to whether it would ever please his highness to return at all.

Some idea of the "effervescence" through which the prince's adopted country was then passing may be gathered from two published statements in the Paris edition of the "Herald":

the first by M. Petko Karaveloff, President of the Council of Ministers of Bulgaria during the Servian war. M. Karaveloff says:

"The men who are now in power care little about the future of their country. They have no time for such an unimportant matter as the fatherland. Perhaps they are aware that five years hence their names will never be mentioned among us except with execration, and that they will be living in exile as disgraced and unworthy citizens. At present they are exclusively engaged in exploiting M. de Cobourg [Prince Ferdinand] and robbing the coffers of the country.

PRINCESS CLEMENTINE, MOTHER OF FERDINAND.

"A great disaster to the country, the purchase of the seventy thousand Mannlicher rifles from Austria, was a good stroke of business for M. Stamboloff. His little commission amounted to 320,000 francs. M. Toncheff, Minister of Justice, and Dr. Stransky, Minister of Foreign Affairs, his own colleagues, admitted in my presence that the premier took this enormous *pot de vin*. Should they have the audacity to deny the charge, which I now for the first time make public, I will confront them with convincing proof.

"These men have only time to look after their own interests. Patriots of all parties must look on powerless, and watch Bulgaria drifting hopelessly into troubled waters."

The second statement is from M. Radoslavoff, who was prime minister down to the accession of Ferdinand, and who was, and now is, the editor of the "Narodny Prava" ("National Rights"), a journal which always appears with big white spots where the government censor has made erasures.

"My paper has been going two years and four months," said M. Radoslavoff, "and dur-

ing this period ten of my editors have been sent to jail for terms amounting in all to 162 years. M. Peter Doneff, the responsible editor, was sentenced to twenty-three years' imprisonment, but after a year and a half he was pardoned by the prince. At present three of our editors are in jail — M. Evan Georgieff and M. Stoianoff at Stamkoff, where they each have four more years to serve, and M. Voutsko Sot-

iros, who is incarcerated here in Sofia, where he will have to remain two years and six months longer.

"During our journalistic career of two years and four months the paper has been brought to trial on sixty-eight separate occasions. We have tried to publish 400 times. We have only succeeded in getting out 160 issues. In no single instance has our original impression been allowed to stand unchanged by the authorities. Since January 20 last, when, in order to suppress and conceal from Europe the indignation of the Bulgarian nation over the arrest and mock trial of Major Panitza, the preventive censorship was inaugurated by Stamboloff, not so many of our editors have been sent to jail, — only about fifty per cent., — because their articles are not allowed to appear.

"Everything is done to hinder and hamper the appearance of the paper, in the hope that it will be given up in despair, and this would have been the case long ago were it not that the articles are written, the type set, and the distribution made, by patriots who ask for no remuneration."

It was while this political "effervescence," as the prince was pleased to call it, continued that the royal liver grew torpid enough to demand a change of air. This torpidity lasted, in fact, long after the change had been made, and long after the Carlsbad doctors had pronounced the diseased organ cured. Talleyrand tried the same experiment with similar results nearly a century before.

Then one day the prince turned up serenely on the slopes of the mountains, dismounted like a weary knight, and knocked for admission at the monastery at Ryllo.

It was here that my waiter had located him.

BEING myself a wanderer in this part of the world, with an eye for the unexpected and the picturesque, and anxious to learn the exact situation in Bulgaria, I had hurried on from Budapest, and at high noon on a broiling August day had arrived at a way station located in the midst of a vast sandy plain. This station the conductor informed me was Sofia. Following my traps through a narrow door guarded by a couple of soldiers, I delivered up my ticket and passport, crept under a heap of dust propped up on wheels and drawn by three horses abreast with chair-backs over their hames, waited until a Turk, two greasy Roumanians, — overcoated in sheepskins wrong side out, — and a red-necked priest had squeezed in beside me; and then started off in a full gallop to a town two miles away. Our sudden exodus obliterated the station in a cloud of dust through which the Constantinople express could be seen slowly feeling its way.

The interview with the waiter occurred within an hour of my arrival.

Half an hour later I was abroad in the streets of Sofia armed with such information as I had gathered from my obsequious attendant.

In the king's absence I would call upon the members of the cabinet.

It did not take me many hours to discover that his Excellency M. Stamboloff, Minister President, was away on a visit, presumably at Philippopolis; that the Minister of Justice, M. Salabashoff, had resigned a short time before; that Doctor Stransky, Minister of Foreign Affairs, had followed suit, the portfolios of both being still unassigned; that the Minister of Finance was in Varna, and Colonel Moutkourov, the Minister of War, in Vienna. In fact, not a single member of the Bulgarian Government from the king down was to be found at the capital. The Bulgarian Government had apparently absconded. Not a member, not a representative, was to be found, unless a gimlet-eyed man of about forty, with a forbidding countenance, a flat military cap, and a tight-fitting white surtout incrustated with

A STREET IN SOFIA.

gilt buttons, who answered as prefect of police, might be so considered.

I ran up against this gentleman before I quitted the palace grounds. He had already run up against me at the station on my arrival,—as I afterward discovered,—and had entered me as a suspicious character at sight.

In five minutes he had bored me so full of questions that I became as transparent as my passport, which he held up to the light so that

he could read its water-mark. Next he went through my sketch-book page by page, and finally through all my letters until he came to one bearing at its top the image of the American eagle and at its bottom the superscription of one of its secretaries, answering for my sobriety, honesty, and industry; whereupon he waved me to the door with full permission to roam and sketch at my will. Then he put a special detective on my track, who never took his eyes from me during any one of my waking hours.

I did not ask this potentate whether the prince was coming back. I did not consider it an opportune moment.

Neither did I discuss with him the present condition of Bulgaria, there being nothing in the cut of his coat—nor of his eye, for that matter—to indicate his present political views. He might have been an adherent of the prince, or a believer in Panitzza, or a minion of Stamboloff, or he might have been so evenly balanced on the edge of events as to be all three or none.

Nor did I explain to him how grieved I was that his present lords and masters should have seen fit to absent themselves just at the precise moment when their combined presence would have been so agreeable to me. I had really crossed desert wastes to study their complicated comedy, and now all the principal actors were out of town.

A REHEARSAL of the preceding acts of this play may be of use to the better understanding of the whole drama as it was then being developed in Bulgaria. It is not heroic; it cannot even be called romantic, this spectacle in which three millions of souls are seen hunting about Europe for a sovereign—a sort of still-hunt resulting in the capture of two kings in four years, with hopes of bagging a protector or a president before the fifth is out. But to the play itself.

At present in Bulgaria there are, first, the Russophiles, who, as Petko Karaveloff says, “pray for the time when Bulgaria shall march into Salonica, while Russia marches into Constantinople,” and who believe the Czar to be their natural friend and ally, with the only hope of settled peace in his protectorate. Secondly, the loyal oppositionists, headed by M. Radoslavoff, who would support the prince with certain concessions, but who detest his advisers. And thirdly, the sympathizers of Major Panitzza, the murdered patriot, who was “shot”—so ran a proclamation a week old, patches of which were still pointed out to me decorating the walls of the king’s palace—“by the order of the bloodthirsty Ferdinand, the scoundrel Stamboloff, and the ‘Vaurien’ Moutkourouf.”

The most active and aggressive of all these "traitors," as Stamboloff calls them, are the friends of Major Panitza. Their sympathy is not to be wondered at, for the circumstances surrounding Panitza's arrest and execution had not only been horrifying to his friends, but to many of his enemies as well; and all had been shocked at the brutal haste with which the death penalty had been inflicted.

This young officer, a devoted adherent of Prince Alexander, had served with distinction in the Servian war, having led one of the famous charges at Slivnitza. After the abdication of Alexander and the accession of Prince Ferdinand, he had taken the oath of fealty to the new régime, although he had never been a warm admirer of the prince. Becoming rest-

out for more than a week against the combined assaults of Stamboloff and his brother-in-law, Moutkourov,—then Minister of War,—and it was not until his prime minister threatened the resignation of the entire cabinet that he finally yielded. There is even a story current that when this threat failed Stamboloff followed the king to Lom Palanka with the death-warrant in his hand, and that when he still hesitated that implacable dictator remarked sententiously:

"Sire, Major Panitza dies on the morrow. If you continue to object, there is one thing we can always do for your Majesty — we can always buy you a first-class ticket to Vienna."

The next morning at ten o'clock a close carriage containing a priest, a gendarme, and the condemned man was driven from the house of detention to the summer encampment, two miles outside of Sofia. The whole garrison was drawn up. Panitza walked with a firm step to a designated tree,¹ saluting the officers as he passed. When a sergeant stepped forward to blindfold him, he caught the handkerchief from his hand. Then, with a cry that rang through the camp of "Long live Bulgaria!" he fell, pierced with twenty-one bullets.

So perished a gallant young soldier whose only crime, viewed in the light of the unrecognized government then assuming to rule Bulgaria, seems to have been his disagreement with the present political views of M. Stamboloff.

In view of these and preceding events it must not, however, be thought that the fortunes of Ferdinand and his prime minister are identical. If the prince is playing king in Bulgaria because he loves the sense of power,—and it is exceedingly difficult to believe that he can have any other motive,—it is still true that Stamboloff is manager and holds the box-office, and that he is likely to change the "star" whenever it pleases his fancy; provided, of course, the Bulgarian audiences still come to the play. In other words, provided the various factions struggling to get control do not break up the theater and throw the company and the properties into the street.

It is also equally true that M. Stefan Stamboloff is to-day by far the most commanding personality in his country. Never a soldier, and always a politician, with only three years' schooling at Odessa, he became when hardly grown a Russian correspondent, and for some years thereafter a Russian agent. Rising rapidly by his own force of character, he was appointed a regent by Alexander when he abdicated, and now when only thirty-six years of age occupies more of the nervous attention

MAJOR PANITZA.

less under what he considered the despotism of Stamboloff,—a man whom he knew thoroughly, being his own relative,—and believing that the only salvation for his country lay in Russian interference, he had joined hands with a Russian spy, Kolobkoff, in fomenting discord in the army. Unluckily, his own letters, carrying unmistakable evidence of the plot, fell into the hands of Stamboloff himself, resulting in his immediate arrest, trial, and condemnation by court martial. In consideration, however, of his former distinguished services to the state, the court urgently recommended the commutation of his sentence to banishment or imprisonment.

It is greatly to the credit of Prince Ferdinand that he was strongly inclined to grant the appeal and to spare Panitza. He, in fact, held

¹ This tree has since been carried off piecemeal, cut to its very roots by admirers of Panitza.

of the governments of eastern Europe than any other one man west of the Bosphorus.

Stamboloff's plan for governing was simple and to the point. It called for five millions of rubles and a king. Who this king might be, or where he should hail from, was a matter of detail. Anybody but a Russian or a Turk would do. And so numerous offers were made in a confidential way to various gentlemen who thought they had an especial, divine gift for reigning, and who lacked the opportunity only because of the depleted condition of their bank accounts. At last a fond and ambitious mother and an obliging son with an almost unlimited reserve fund—unlimited for the ordinary needs of life—took the bait.

It was not, however, a harmonious family arrangement; for it was well known that the young prince's uncle, the Duke of Saxe-Coburg, did what he could to prevent the final agreement; he being an older and wiser diplomat, and having had a long and varied experience in the ups and downs of several see-saw governments. Among other things, the duke boldly stated that it was only a question of money with the Bulgarian regents, and that Ferdinand would leave the throne when his guldens were gone, as Alexander had left, to whom the Bulgarian Government then owed three millions of francs. The duke's prophecy is not yet fulfilled. If, however, the statement of reliable Bulgarians is to be taken, a very considerable portion of Ferdinand's private estate (variously estimated at from one-half to all of it) has already been absorbed.

There were, of course, cogent reasons for these drafts on the king's exchequer, so the cabinet said. The army was to be re-armed and clothed, an important railroad built, and a thousand and one improvements made. The

MARRIAGE COSTUME OF A BULGARIAN PEASANT.

money, of course, would be returned. This schedule has been literally carried out,—except the money item,—if not to the benefit of Bulgaria herself, certainly to the depletion of the prince's bank-account.

Among these schemes the beautifying of the capital was the most seductive. Streets were to be opened, and trees planted, and flowers made to bloom. I recall now that vast band of stagnant dust leading from the station to the town, separated from its surrounding monotony by sundry depressions and grades indicated along the line by the excavated debris which fringed its edges; with a double row of infant trees marking its curb-lines, each one of which was shriveled to a crisp by the blistering heat. Added to this mockery, at regular intervals stood flower-beds in ovals, and diamonds, and circles, filled with plants burned to

MINARET OF BANIA-HASHIE, SOFIA.

a cinder, their very blossoms, which no man had dared pluck, dead for months, and still standing brown and dust-begrimed.

Such is the great boulevard leading from the railway to the palace!

Moreover, these particular adornments were not made at a season when it might have been possible to have justified their existence, but in the beginning of the hot season and during the continuance of a drought which lasted four

months. Indeed, many prominent oppositionists did not hesitate to say, and to say openly, that the haste with which these so-called improvements were carried out was due as much to the unsettled condition of public affairs as to anything else, and that the old adage of making hay while the sun shone had a double meaning in this case.

The boulevard, however, is not the only part of Sofia illustrating the prevailing taste to overturn and reconstruct. One sees it in the new part of the town, where government buildings, bare, white, and forbidding, are going up in all directions, replacing the humbler dwellings of the poor. One sees it also in the old mosque-and-garden-landmarks left standing high above new streets now being cut to their very edges; their preservation a tacit acknowledgment of their right to exist, their isolation a forerunner of their death—quite as the old traditions are being undermined by the present Government.

Many of these streets serve a double purpose. They make a short route to the palace of the king, where some of them end, and they provide right of way for hasty artillery practice. One cannot always tell in so changeable a climate as Bulgaria when the prevailing political wind may shift.

The palace itself, a great hospital-looking building surrounded by a garden, its mansard roofs rising above the trees, its barren and uninteresting, and contains only a few of the luxurious appointments one expects to find in an abode reserved for kings in high places. Indeed, the whole air of the interior suggests only stately discomfort and emptiness. In walking through its great halls and scantily furnished salons, I could not help pondering upon the peculiarities of human nature, and wondering what could have induced this fine young officer—and he is a fine fellow in every sense of the word—to give up his brilliant life in Vienna, the most delightful capital in Europe, and to a young man of fortune the most fascinating, in order to bury himself in this ugly pile of masonry. But then the market is never overstocked with empty thrones, while would-be kings are a drug.

The old part of the town is still quaint and Oriental, and has thus far escaped the restless shovel and saw. It lies in the dip of a saucer-shaped valley, surrounded by bare brown hills, the palace and the new buildings being on the upper edge. Netted with crooked, dirty streets and choked with low, shambling houses, with here and there a ruined mosque, it remains a picturesque reminder of the days of Turkish rule, unchanged since the signing of the Berlin Treaty, when in a single year five thousand of Mohammed's chosen shook the

dust of Sofia from their feet and sought refuge under the sultan.

One of the most interesting of these relics is the mosque of Buyuk-Jami with its queer half-dome-like inverted teacups on a tray — now used by the Government as a place for storage.

It stands, however, in the line of march of one of M. Stamboloff's new boulevards, and next year its beautiful façades and graceful roof will be toppled into the dust-heaps. That is, if the bank-account holds out and the king holds over. One could almost wish that the unspeakable Turk might come back, claim his own, and save it.

Several other of these quaint remnants of Oriental architecture are found in the old part of the city, the Mosque Bania-bashie, dating back to the year 1279, being by far the purest in style. This mosque is still the resort of the devout Mohammedan, who prays therein five times a day with his face towards Mecca, and who, despite the restrictions that vex his race, still prostrates himself on the floor of the mosque below, in obedience to the call of the muezzin from the slender minaret above.

To one unaccustomed to the forms of the Mohammedan religion, and especially to one who sees them for the first time, I know of no religious spectacle more impressive than that of a barefooted Turk standing erect on his prayer-rug with his face towards Mecca and his eyes looking straight into the eyes of his God. It is not a duty with him, nor a formality, nor the maintenance of a time-honored custom. It is his very life. Watch him as he enters this wretched interior of Bania-bashie, with its scaling and crumbling walls, and its broken windows, through which the doves fly in and out. Outside, at the trickling fountain, he has washed his feet and face and hands, bathing his throat and smoothing his beard with his wet fingers. He is a rough, broad-shouldered, poorly clad man in fez and skirt, his waist girt with a wide sash ragged and torn. He is perhaps a "hammal," a man who carries great weights on his back — a human beast of burden. His load, whatever it may be, is outside in the court. His hourly task is his daily bread; but he has heard the shrill cry from the minaret up against the sky, and stops instantly to obey.

He enters the sacred building with his shoes in his hands. These he leaves at the edge of the mat. Now he is on holy ground. Advan-

cing slowly, he halts half-way across the floor, and then stands erect. Before him is a blank wall; beyond it the tomb of the prophet. For a moment he is perfectly still, his eyes closed, his lips motionless. It is as if he stood in the antechamber of Heaven, awaiting recognition. Then his face lights up. He has been seen. The next instant he is on his knees, and, stretching out his hands, prostrates himself, his forehead pressed to the floor. This solitary service continues for an hour. The man stands erect one moment, with a movement as if he said, "Command

PORTICO OF MOSQUE BANIA-BASHIE, SOFIA.

me; I am here." The next moment he is prostrate in obedience. Then he backs slowly out, and, noiseless, regains his shoes, bends his back to his burden, and keeps on his way, his face having lost all its tired, hunted look.

There is no mistaking the impression. It is not a religious ceremony, nor a form of devotion, nor a prayer. This man has been in the very presence of his God.

Next to this crumbling mosque stands the Turkish bath, with its round dome pierced with bull's-eyes through which the light falls in parallel bars upon clouds of boiling steam. The water gushes from the ground at a temperature of 110° Fahrenheit, the pool being shoulder-deep and filling the whole interior excepting the narrow edge around which cling

the half-boiled natives in every variety of undress uniform from the Garden of Eden pattern down to the modern dressing-gown.

Outside of this circular room are cooling apartments smelling of wet towels and furnished with divans upon which men lounged half-clad, smoking cigarettes. Now and then from an inside cubbyhole comes the whiff of a narghile and that unmistakable aroma, the steam of smoking coffee.

What a luxury after a four months' drought and its consequent accumulation of Bulgarian dust! I wanted a bath at once; for I realized that whatever attempts had been made in the different capitals of Europe and America to establish this Oriental luxury,—even in Constantinople it is a delusion and a snare,—they were all base imitations compared with this volcanic-heated symposium. For more than six hundred years, and in fact before the mosque was built, had this pool of Siloam comforted the sick and soothed the well and cleansed the soiled. And it is hot, too—boiling hot out of the ground, running free night and day, and always ready with its accompaniments of Turkish coffee, pipes, and divans. Go to, with your marble slabs, and radiators, and high-pressure boilers under the sidewalk.

Beyond this section of narrow streets there runs a broad highway lined with booths attended by all sorts of people—Gipsies, Turks, Jews, Greeks, and Hungarians, selling every kind of merchandise entirely worthless to anybody but a native. There are rings of bread, squares of leather for sandals, messes in bowls with indescribable things floating about in boiling grease, heaps and lumps of other things served smoking hot in wooden plates, and festoons of candied fruit strung on straws and sugared with dust. Then there are piles of melons and baskets on baskets of grapes,—these last delicious, it being the season,—and great strings of onions, pyramids of tomatoes, and the like. Everywhere is a mob in rags apparently intent upon cutting one another's throats to save half a piaster.

Farther on is the Jews' quarter, the street Nischkolitza, with its low houses eked out by awnings under which sit groups of people lounging and talking, and behind these, in little square boxes of rooms let into the wall, squat the money-changers, their bank-accounts exposed in a small box with a glass top through which can be seen half the coinage and printage of eastern Europe.

If the king's continued absence caused any uneasiness among the people crowding these streets and bazars, there was nothing on the surface to indicate it. Many of them looked as if they had very little to lose, and those who had a little more either carried it on their per-

sons in long chains of coins welded together—a favorite form of safe-deposit with the Bulgarians—or, like the money-changers, hived it in a portable box.

Nor could I discover that any one realized that he was living over a powder-magazine with a match-factory next door. On the contrary, everybody was good-natured and happy, chaffing one another across the booths of the bazars, and bursting into roars of laughter when my brush brought out the features or costume of some well-known street-vender. This merriment became boisterous in the case of a bread-seller with a queer nose whom I stopped and sketched, and who contributed his share to the general fun, a slip of my brush having unduly magnified the already enlarged nose of his jolly face.

The only native who really seemed to possess any positive ideas on the uncertain condition of public affairs was a Polish Jew, the keeper of the bath, whom I found berating two soldiers for refusing to pay extra for their narghiles, and who expressed to me his contempt for the ruling powers by sweeping in the air a circle which embraced the palace and the offenders, spitting on the floor, and grinding his heel in the moistened spot.

MOSQUE AND BATH, SOFIA.

II.

NEAR the bath and, in fact, almost connected with it by a rambling row of houses is one of the few Oriental cafés left in Sofia—a one-story building with curious sloping roof, its one door opening upon the street corner. It is called the "Maritza." On both sides of this entrance are long, low windows shaped like those of an old English inn, and beneath these—outside on the sidewalk—is a row of benches, upon which lounge idlers sipping coffee and smoking cigarettes. Within are a motley crew of all nationalities liberally sprinkled with Bulgarian soldiers out on a day's leave.

Coffee is almost the only beverage in these Turkish cafés. It is always handed you scalding hot in little, saucerless cups holding hardly a mouthful each. A glass of cold water invariably accompanies each cup. This coffee

THE STREET OF NISCHKOLITZA.

is generally the finest old Mocha, with an aroma and flavor unapproachable in any brand that I know except perhaps the Uruapam coffee of Mexico. In preparing it the roasted bean is ground as fine as flour in a hand-mill, a teaspoonful of the powder, with half the amount of fine sugar, being put into a brass pot with a long handle. To this is added a tablespoonful of boiling water. The pot is then thrust into the coals of a charcoal fire until it reaches boiling point, when it is caught up by the waiter, who runs to your table and pours the whole into your cup. Although it is dark and thick, it is never strong, and there is not a wakeful hour in a dozen cups.

There is nothing so interesting as one of these Oriental cafés, and so I turned in from the street, drew a square straw-covered stool up to a low table, and held up one finger. A fez-covered attendant shuffled over and filled my cup. As I raised it to my lips my eyes caught the riveted glance of a black-bearded man with a beak-like nose and two ferret eyes watching me intently. He was dressed in a half-cloak ornamented with a dark braid in twists and circles, and wore a slouch-hat.

Being stared at in a café for the first five minutes is so usual an experience for me in my tramps abroad that I accept it as part of the conditions of travel. But there are different kinds of stares, all induced and kept up for the most part by idle curiosity, which generally ceases after my dress has been examined, and

especially my shoes, and when my voice has been found to be like that of other men.

This man's stare, however, was devoid of curiosity. His was the face of a ferret; a sly, creeping, half-shrinking face, with an eye that pierced you one moment and slunk away the next. The thought flashed through my mind of a Spanish Jew who hides his gold in a hole, and who is here changing money while the "effervescence" lasts. When I looked again a moment later he had disappeared.

The face haunted me so much that I traced its outlines in my sketch-book, trying to remember where I had seen it, and finally persuading myself that it must have been a resemblance either to some passing fancy or to a memory of long ago.

I finished my coffee, lighted a cigarette, and, picking up a stool, planted it across the street, and began a sketch of the exterior of the café.

The usual crowd gathered, many following me from the room itself, and soon the throng was so great that I could not see the lower lines of the building. No language that I speak is adapted to Bulgaria, and so, rising to my feet, I called out in honest Anglo-Saxon:

"Get down in front!" accompanied by a gesture like a policeman's "Move on."

Nobody got down in front or behind that I could detect. On the contrary, everybody who was down got up, and the sketch was fast becoming hopeless, when four gendarmes arose out of the ground as noiselessly and myste-

riously as if they had issued from between the cracks of the paving-stones, formed a hollow square, with the café at one end and me at the other,—the intervening space being as clear of bystanders as the back of my hand,—and stood like statues until the sketch was finished. When I closed my book half an hour later a man, wrapped in a cloak, on the outer edge raised his hand. The crowd fell back on each side, a gap was made, and the four gendarmes passed out and were swallowed up.

I turned and caught a glimpse of a black hat half-concealing a dark, bearded face. It was my friend of the café. Not a Spanish Jew at all, I thought, but some prominent citizen

two months watching this mouse-trap. Come into the café, where we can talk. You don't know what a godsend an American is in a hole like this."

An interchange of cards settled all formalities, and when, half an hour later, numbers of mutual friends were discovered and inquired after, we grew as confiding and comfortable as if we had been the best of friends through life.

B—— belonged to that type of man of whom everybody hears, few people see, and not many people know—one of those men with homes fixed by a telegram. Men with wits like their pencils, sharpened by emergency, with energies untiring and exhaustless,

CAFÉ MARITZA.

respected by the police and anxious to be courteous to a stranger. And again I dismissed the face and the incident from my mind.

Just here another face appeared and another incident occurred, neither of which was so easily forgotten. The face enlivened the well-knit, graceful figure of a young man of thirty dressed in a gray traveling-suit and wearing a derby hat. Every line in his good-natured countenance expressed that rarest and most delightful of combinations—humor and grit. From this face proceeded a voice which sent down my spine that peculiar tingle which one feels when, half-way across the globe, surrounded by jargon and heathen, he hears suddenly his own tongue, in his own accent, spoken by a fellow-townsmen.

"I heard your 'down in front' and knew right away where you were from; but these Bashi-bazouks blocked the way. My name is B——, correspondent of the ——. Been here

who ransack, permeate, get at the bottom of things, and endure. Individual men, sagacious, many-sided, and productive, yet whose whole identity is swallowed up and lost in that merciless headline "Our Correspondent."

I had heard of B—— in Paris a few weeks before, where his endless resources in the field and his arctic coolness in tight places were bywords among his fellow-craftsmen. At that time his friends supposed him to be somewhere between Vienna and Constantinople, although none of them located him in Bulgaria; great morning journals being somewhat reticent as to the identity and whereabouts of their staff.

"Yes," he continued, "life here would reconcile a man to the bottomless pit. I was in London doing some Irish business,—rose in your buttonhole at breakfast, Hyde Park in the afternoon, and all that sort of thing,—when a telegram sent me flying to Paris. Two hours

after I was aboard the Orient express, with my shirts half-dried in my bag, and an order in my inside pocket to overhaul Stamboloff and find out whether the prince had left for good, or was waiting until the blow was over before he came back. You see, the Panitza affair came near upsetting things here, and at the time it looked as if the European war circus was about to begin."

"Did you find Stamboloff?" I asked.

"Yes. Reached the frontier, learned he had left Sofia, and, after traveling all night in a cart, got him at Sistova, and caught our Sunday's edition three hours later. Here I have been ever since, waiting for something to turn up, and spending half my nights trying to get what little does turn up across the frontier and so on to Paris. And the worst of it is that for four weeks I have n't had a line from headquarters."

"What! Leave you here in the lurch?"

"No; certainly not. They write regularly; but these devils stop everything at the post-office, open and re-seal all my private letters, and only give me what they think good for me. For two weeks past I have been sending my stuff across the frontier and mailing it in Serbia. How the devil did you get permission to sketch around here?"

I produced the talismanic scroll with the water-mark and the image and the superscription, and related my experience with the prefect.

"Gave you the freedom of the city, did he? I wager you he will go through your traps like a custom-house officer when you leave, and seize everything you have. They have been doing their level best to drive me out of here ever since we published that first interview with Stamboloff, and they would if they dared. Only, being a correspondent, you see, and this being a liberal, free monarchy, it would n't sound well the next day.

"Come, finish your coffee, and I'll show you something you can never see outside of Bulgaria."

We strolled up past the bazars along the boulevard, stopping for a moment to note the cathedral, with one end perched up in the air—Stamboloff's commissioners of highways having lowered the street-grade at that point some twenty feet below the level of the porch floor.

Opposite this edifice was the skylight of the local photographer. The old, familiar smell of evaporating ether greeted us as we entered his one-story shop,—it would be a poetic license to call it a gallery,—and the usual wooden balcony, with its painted vase and paper flowers, was found in its customary place behind the iron head-rest.

Here were the portraits of the prince and

his mother, the Princess Clementine, and of poor Panitza,—whom I really could not help liking, traitor as he was to Stamboloff,—and the rest of the notables, not forgetting the de-throned prince, Alexander of Battenberg, and all of whom had occupied the plush arm-chair

PRINCE ALEXANDER OF BATTENBERG.

or had stood behind the Venetian railing with the Lake Como and Mont Blanc in the distance.

B—— hunted through the collection of portraits scattered about the table, and handed me two photographs—one of a well-built, handsome man with pointed mustache, dressed in the native costume and shackled with heavy chains fastened to his ankles. He was standing in a prison-yard guarded by a soldier holding a carbine.

"Good-looking cutthroat, is n't he? Might be a diplomat or a night editor? Too honest, you think? Well, that's Taco Voyvoda, the famous bandit who was caught a few years ago in the act of murdering a detachment, and who was filled full of lead the next day at the Government's expense. Now look at this"; and he handed me the other photograph.

I held it to the light, and a shiver ran through me. On a box covered with a piece of canvas rested the head of a man severed from the body. One eye was closed. The other was lost in a ghastly hole, the mark left by a rifle-ball. The mustache was still stiff and pointed, one end drooping a little, and the brow and the mouth were firm and determined. The whole face carried an expression as if the death agony had been suddenly frozen into it. About the horror were grouped the bandit's carbine, holsters, and cartridge-belt bristling with cartridges.

The belt hung over the matted hair framing the face.

B—— watched me curiously.

"Lovely souvenir, is n't it? The day after the shooting they cut off poor Taco's head, and our friend here"—pointing to the photographer—"fixed him up in this fashion to meet the popular demand. Their sale was enormous. Bah! let's go to dinner."

My friend had a better place than the one presided over by my slightly bald waiter with the

except the prince, who, I understand, has left Ryllo to-day for Varna. He is hanging on the telegraph now. Not the poles, but the despatches.

"The worst feature of the situation is that most of the factions are backed up by Russian and other agents, each in their several interests, ready to lend a hand. To-day it is a game of chess between Russia and Turkey; to-morrow it may involve all Europe. Through it all my sympathies are with the prince. He has been here now nearly three years trying to make something of these barbarians, and so far not a single European power has recognized him. He will get nothing for his pains, poor fellow. When his money is all gone they will bounce him as they did Battenberg.

"Certain members of the cabinet are not safe even now," continued B——. "While I was at Sistova the other day I had an opportunity of seeing some of the risks that Stamboloff himself runs, and also how carefully he is guarded. He was in a café taking his breakfast. As soon as he entered, a tall sergeant of gendarmes with his saber half-drawn and his red sash stuck full of pistols and yataghans moved to his right side, while another equally as ferocious and as heavily armed guarded his left. Then the doors were blocked by half a dozen other gendarmes, who watched everybody's movements. There is really not so much solid fun being prime minister in Bulgaria as one would think."

While B—— was speaking three officers entered the garden where we were dining and took possession of an adjoining table. My friend nodded to one of them and kept on talking, lowering his voice a trifle and moving his chair so that his face could not be seen.

The Bulgarians were in white uniforms and carried their side-arms.

The next instant a young man entered hurriedly, looked about anxiously, and came straight towards our table. When he caught sight of me he drew back. B—— motioned him to advance, and turned his right ear for a long whispered communication, interrupting by such telephone exclamations as, "Who told you so? When? How did he find out? To-morrow? What infernal nonsense! I don't believe a word of it," etc.

The young man bent still lower, looked furtively at the officers, and in an inaudible whisper poured another message into B——'s ear.

My host gave a little start and turned a trifle pale.

"The devil, you say! Better come to my room then to-night at twelve."

"Anything up?" I asked after the man had gone, noticing the change in B——'s manner.

"Well, yes. My assistant tells me that my

TACO VOYVODA.

Tower of Babel education. He would take me to his home. He knew of a garden where a few tables were set, girt about with shrubs and sheltered by overhanging trees that had escaped the drought. At one end was a modest house with a few rooms to let. His gripsack was in one of these. That was why he loved to call it his home.

Soon a white cloth covered a table for two, and a very comfortable dinner was served in the twilight. With the coffee the talk drifted into the present political outlook, and I put the universal conundrum:

"Will the prince return?"

"You can't tell," said B——. "For myself, I believe he will. He must do so if he wants to see his money again, and he can do so in safety if Stamboloff succeeds in carrying the elections next month,¹ which I believe he will. If he fails, the nearer they all hug the frontier the better; for there are hundreds of men right here around us who would serve every one of them as the soldiers did Taco Voyvoda. They know it too, for they are all off electioneering

¹ September 11, 1890.

last letter has been overhauled this side of the frontier, and that orders for my arrest will be signed to-morrow. I don't believe it. But you can't tell—these people are fools enough to do anything. If I knew which of my letters had reached our office I would n't care; but I have n't seen our paper since my first despatches appeared, more than a month ago."

"That need n't worry you. I have every-one of them in my bag at the hotel, and every issue of your paper since you arrived here. I knew I was coming, and I wanted to be posted."

B—— looked at me in open astonishment. "You!"

"Certainly. Come to my room; get them in five minutes."

"Well, that paralyzes me! Here I have been stranded for news and blocked for weeks by these brigands who rob my mail, and here you pick me up in the streets and haul everything I want out of your carpet-bag! Don't ever put that in a story, for nobody would ever believe it. Give me a cigarette."

I opened my case, and as I handed him its contents my eyes rested on a man watching us intently. He was sitting at the officers' table. With the flaring of B——'s match his face came into full relief.

It was my friend of the morning.

"There he is again," I blurted out.

"Who?" said B—— without moving.

"The man in the Turkish café—the one who ordered the soldiers around. Who is he?"

B—— never moved a muscle of his face except to blow rings over his coffee-cup.

"A mean-looking hound in a slouch-hat, with rat-terrier eyes, bushy beard, and a bad-fitting cloak?"

"Yes," said I, comparing the description over his shoulder.

"That's my shadow—a delicate attention bestowed on me by the prefect. He thinks I don't know him, but I fool him every day. I got two columns out last night from under his very nose—right at this table. The waiter carried them off in a napkin, and my man nabbed them outside."

"A spy?"

"No; a shadow—a night-hawk. For nearly two months this fellow has never taken his eyes off me, and yet he has never seen me look him in the face. Come, these people are getting too sociable."

In an instant we were in the street and in three minutes had entered my hotel. Leaving B—— in the hall, I mounted the broad staircase, went straight to my room, picked up my pocket sketch-book, and thrust the "clippings" into my inside pocket.

When I regained the corridor outside my door the man in the slouch-hat preceded me downstairs.

Smothering my astonishment,—I had left him sitting in the garden five minutes before,—I followed slowly, matching my steps to his, and turning over in my mind whether it would be best to swallow the despatches or drop them over the balusters.

I could see B—— below, standing near the door absorbed in an Orient express time-table tacked to the wall. (I was to leave for Constantinople the next day.) He must have heard our footsteps, but he never turned his head.

The man reached the hall floor,—I was five steps behind,—stood within ten feet of B——, and began striking matches for a cigar which was still burning.

I decided instantly.

"Oh! B——," I called out, "I found the sketch-book. See what I did here yesterday"; and I ran rapidly over the leaves, noting as I turned, 'The Jews' Quarter'—'Minaret of Baniabashee'—'Ox-Team down by the Bazar,' etc."

The man lingered, and I could feel him looking over my shoulder. Then the glass door clicked, and he disappeared.

B—— raised his hand warningly.

"Where did you pick *him* up?"

"Outside my door."

"Keyhole business, eh? Did you get them?"

I touched my inside pocket.

"Good." And he slipped the package under his waistcoat.

THE next morning I found this note tucked under my door:

The game is up. Meet me at station at twelve.
B——.

Five minutes before the appointed hour my traps were heaped up in one corner of the waiting-room. I confess to a certain degree of anxiety as I waited in the station, both on my own account and on his. I was yet unable to understand how the night-hawk could have reached my chamber door ahead of me unless he had sailed over the roof and dropped down the chimney, and I was also willing to admit that something besides a desire to see me safely in bed had induced him to keyhole my movements. Perhaps his sudden disappearance through the glass door was, after all, only preparatory to including me in the attentions he was reserving for B——.

When the exact hour arrived, and the Orient express direct for Philippopolis and Constantinople rolled into the depot, and still B—— did not appear, I began to realize the absurdity of waiting for a convict at the main entrance. He would of course be chained to two soldiers and placed in a baggage-van, or perhaps be shackled around the ankles like

Voyvoda and lifted out of a cart by his waistband. The yard was the place, and I made my way between the two door-guards, who eyed me in a manner that convinced me that I was under surveillance and would most likely catch both balls in the vicinity of my collar-button if I attempted to move out of range.

But there was nothing in the yard except empty cars and a squad of raw recruits sitting on their bundles awaiting transportation, and I tried the boulevard side again.

No B——.

Just as I was about to give him up for lost and had begun turning over in my mind what my duty might be as a man and an American, a fresh cloud of dust blew in the open door, and a cab pulled up. From this emerged a pair of leather gaiters followed by two legs in check trousers, a hand with white wristbands and English gloves, and last the cool, unruffled face of B—— himself.

"Yes, I am late, but I have been up all night dictating. You got my note, I see. I go as far with you as Philippopolis, where I get out to reach the Pomuk Highlands. You remember I told you about that old brigand chief, Achmet Aga, who rules a province of forty square miles and pays tribute to no one, not even the sultan. You know he murders everybody who crosses his line without his permission. Well, I am going to interview him."

This he said in one breath and with as much ease of manner and indifference to surroundings as if the man with a slouch-hat had been an idle dream instead of an active reality.

"But, what about your arrest, B——? I expected——"

"Expected what—dungeons? Nonsense. I simply went out on my balcony last night before I crawled into bed, sneezed, and called out in French to my man inside to pack my bag for this train. That satisfied my shadow, for all he wants is to get me out of the way. Don't worry; the dog will be here to see us off."

B—— was right. That ugly face was the last that peered at us as we rolled out of the station.

Six hours later I left my new friend at Philippopolis with a regret I cannot explain, but with an exacted promise to meet me in Constantinople a week hence, when we would enjoy the Turks together.

The week passed, and another, and then a third, and still no sign of B——. I had begun to wonder whether after all the brigand chief had not served him as he had done his predecessors, when this letter, dated Sofia, reached me:

Just returned from the mountains. Spent a most delightful week with Achmet Aga, who kissed me on both cheeks when I left, and gave me a charm against fire and sword blessed by all the wise women of the clan. Would have joined you before, but had to hurry back here for the opening of the Sobranje.

Stamboloff's party carried the day by a small majority, and the town is full of his men, including the prince, who opened parliament here yesterday.

F. Hopkinson Smith.

IN DISGUISE.

YOUR face possessed me while we talked;
It seemed the picture of a heart
In whose fair garden Sorrow walked,
While Joy, poor errant, stood apart,
A suppliant at the gate.

You do not dream that she is near,
So still she waiteth, and so shy.
You are not thinking of her, dear;
Almost you have forgot to sigh
She comes no more of late.

I know, I know, she longs to come,
And lift the latch with quick surprise;
And yet she standeth strange and dumb,
And looks, behind that still disguise,
As one you never knew.

But if she came with smile and dance,
With banners flying, music gay,
Oh, would you run with answering glance,
Or only turn your head away
From what was not for you?

I understand; you need not speak:
The heart that is for Sorrow strong,
For Joy too joyful were too weak;
She must not come with dance and song,
But lightly as a dove.

'T is thus she comes, and makes no claim;
She whispers soft, she kneeleth low,
And wears the while a gentler name.
Oh, hear me breathe it! Must she go?
The name she wears is Love.

Frances Louise Bushnell.

AT THE COURT OF THE CZAR.

MINISTER DALLAS IN ST. PETERSBURG.—I.

A DRAMATIC VISIT FROM THE EMPEROR.

Saturday, 29th July, 1837.—The *Independence*¹ made Dager Point on the evening of Thursday, the 27th instant, and with a brisk breeze on the quarter turned into the Gulf of Finland at about eight o'clock; continuing our course almost before the wind we reached the last light, the Tolbukin Light, at about ten o'clock last night, and the pilot deemed it most prudent to lay to until dawn at two o'clock this morning, when we made sail again and anchored in the harbor of Cronstadt at about five o'clock. While coming up the gulf on this side of Hogland, we passed a Russian squadron principally composed of three-deckers and line-of-battle ships, one dozen in number, with the admiral of which our commodore exchanged a salute of seventeen guns. We saluted after anchoring, with twenty-one guns.

The day has been rendered memorable by a dramatic visit from the Emperor Nicholas, accompanied by the chief officers now here, among them Count Nesselrode, Prince Mensikoff, and the governor of Cronstadt. The Emperor is fond of these abrupt and covered visitations, and plays the game with dexterity and ease. Our vice-consul at Cronstadt, Leonartzen, happened to be accompanying the commodore in his gig, on a visit to the governor of Cronstadt, at about eleven o'clock, when the barge belonging to the imperial steamboat passed them, and he immediately recognized the Czar acting as its coxswain,

and distinguishable from the officers who surrounded him by a close white cloth cap. The gig was immediately turned back in the just belief that the Emperor would come on board the *Independence*. He first, however, stopped at the Danish frigate lying near us, and remained undetected for half an hour. He then came to us, still acting as a mere aide or subordinate to Prince Mensikoff, and coming last up our gangway. As he obviously desired to pass without recognition, his retinue paid no attention to him, and it was a matter of obvious courtesy to forbear breaking in upon his fancied incog. He separated himself from the rest, peered actively throughout the ship, spoke inquiringly to a number of the seamen, and accidentally coming across my infant daughter, took her in his arms, expressed great delight at her beauty, and repeatedly kissed her.

His fine figure and penetrating eye had been remarked, however, by almost every one, and no one was deceived as to his reality. When going he touched his cap to Prince Mensikoff, inquired whether he was ready to leave, and being answered affirmatively, ran up the gangway, descended and again took the helm, while the ceremony of departure was going through by the others. Our commodore now broke through the disguise and saluted him with forty-one guns, which induced him at once to resume the Emperor, to hoist signals to the Russian frigate ordering a return of the salute, to run up at the mast-head of his steamboat the American ensign, and finally to display his

¹ The *Independence* line-of-battle ship, 74 guns, was built at Boston in 1814-15. In 1872 she was in use at

the Mare Island navy-yard, California, as a receiving ship.—EDITOR.

imperial standard. This last act was instantly followed by tremendous salutes from all the numerous men-of-war in the harbor, and from the various forts of Cronstadt. The effect was fine beyond description, and our ship seemed to be, for a time, the center round which was acting one of the most beautiful and exciting scenes imaginable. During this remarkable visit I became personally known to Count Nesselrode.¹

A COURT PRESENTATION.

Monday, 31st July, 1837.—The governor of Cronstadt having placed his steamer at my disposal for the purpose, I this morning sent all my baggage on board of her, and embarked with my family, accompanied by a number of the officers of the *Independence*, for St. Petersburg.

Saturday, 5th August, 1837.—I entered upon the possession of a house I have rented from Count Bobrinski, at the sum of 9000 rubles or \$1800 per annum; it is fully furnished, and promises to be alike neat, gentlemanly, clean, and comfortable. The operation of moving in has been laborious and fatiguing; but I am overjoyed at again finding myself under a roof of my own, with all my children around me, and, as it were, once more at home.

Sunday, 6th August, 1837.—Mrs. Dallas, my two daughters, and I, in one carriage, and Mr. Chew, my secretary of legation, in another, with an extra carriage for baggage, left St. Petersburg to-day at about ten o'clock, and reached Peterhof Palace by twelve. We were shown into a suite of apartments and had served up a comfortable *déjeuner à la fourchette*. After putting on our court costume, we were informed that imperial carriages would conduct us to the palace for presentation at about half-past three o'clock. Accordingly they came. I now rode with Mrs. Dallas in one carriage, and left my daughter to be escorted in the other by Mr. Chew. We were ushered into a splendid antechamber, upstairs, the walls of which were wainscoted with beautiful paint-

ings—at least four hundred different heads, all of great delicacy and nearly the same size. The master of ceremonies led the ladies into a corner of the apartment overlooking the grand waterworks, and I entered into easy conversation with Baron Nicolai. We were almost the first present. The room, however, rapidly filled with glittering officers, military and civil, and with ladies whose glowing, soft, and fair complexions it was impossible not to admire.

After some time passed in listless expectation and chat, I was conducted into a distant chamber and presented to Nicholas I. I had hardly entered the door before he came rapidly towards me, his hands both extended, and with an air of great frankness and ease shook me by the hands with the utmost apparent cordiality. His first words were: "Mr. Dallas, you are welcome to Russia; I have to thank you for the very handsome and hospitable manner in which my disguised visit to your ship was received. I have never seen a nobler vessel. I found you knew me, after I had gone—but did any one recognize me while on board? You were here twenty-four years ago, but you could hardly know me, changed as I am since then. I took your ship on the moment of her arrival, in her ordinary sea-trim; I did not want to see her dressed up. She is an admirable ship. I am going to send some of my naval officers to the United States to learn naval architecture and science, and I must request you to let them have such letters as will facilitate their progress. Can you persuade Commodore Nicholson to delay his departure until after Friday next, when the eighty-gun ship at the admiralty is to be launched? I should be much pleased to have him present and to hear his remarks."

To all and each of these inquiries I of course made replies. He asked me also what the disturbances in Canada were tending to, and observed that when a government became oppressive and forgot the tender care to which a colony was entitled, she justified resistance

¹ George Mifflin Dallas, the author of this journal (selections from which will be printed in two parts), was born in the city of Philadelphia on the 10th day of July, 1792. The family originated in the Highlands of Scotland. His father, Alexander James Dallas, was born in the island of Jamaica. On the 17th of June, 1783, he arrived with his bride in Philadelphia. He chose the profession of the law, and his rise was rapid. In 1801 he was appointed District Attorney of the United States by President Jefferson. In October, 1814, he accepted the Treasury portfolio in the Cabinet of President Madison. George Mifflin Dallas was the third child and second son. He was graduated from Princeton College in 1810, at the age of eighteen; he took the first honors of his class and delivered the valedictory oration, in which he gave promise of that graceful delivery and command of language for which he early became famous. He at once entered his father's office as a student at law, and in April, 1813, was admitted to

the bar. In politics it was the school of Jefferson and Madison and their followers to whose doctrines the elder and the younger Dallas adhered, and in whose political party the Republican, later called Democratic, George M. Dallas was for many years a widely recognized leader. When in 1813 President Madison appointed Albert Gallatin a special commissioner to proceed to St. Petersburg and with Mr. Adams, then Minister of the United States to Russia, to negotiate a peace with Great Britain under the auspices of the Russian Emperor, Mr. Gallatin tendered the post of private secretary to Mr. Dallas. On his arrival at St. Petersburg Mr. Gallatin found that England had declined the proffered mediation of Russia, whereupon Mr. Dallas was sent, alone, to England with despatches to the Russian ambassador in London, to ascertain, if possible, the views of the English Government. This movement resulted in the appointment of the commission to Ghent which after prolonged negotiations

and separation. I told him that I put little faith in the alleged spirit of independence in Canada; that dissatisfaction had long prevailed there, but the people were not, I believed, energetic or united enough for a decisive course of action. He then spoke about Russia, and I said that I had been much struck with the great improvements made during his reign in the department of his marine, especially at Cronstadt, and in the magnificent structures of St. Petersburg. "Why," said he, "I am perfectly satisfied with this people, and will do all I can for them."

At the close of the conversation he again shook me by the hand, and I bowed and left him. I had, during a pause, put my letter of credence in his possession, which he laid upon a table without opening; and in reply to my assurance that the United States were disposed to strengthen and confirm the harmonious relations subsisting between the two governments, he said that he felt delight at the conviction of that truth, and would not be behind my Government in manifestations of cordial friendship. I was immediately afterward conducted to the Empress, who remarked, among other things, that our Government was in practice of changing its representatives here very frequently, and she wanted to know whether the same course was pursued as to other countries and whether it arose from any settled principle of policy. I told her, that it was indiscriminately done—was partly ascribable to the changes to which all popular governments were more or less subject, and in many cases was imputable to accidental causes. "Well," said she, "I hope you will prove an exception to this practice, that you will be happy in Russia and remain long."

We had been formally invited to dine with the Imperial family as soon as we reached the palace; and as soon as the form of being presented had closed, and the Emperor, Empress, the Grand Duchess of Würtemberg, and the grand duchesses, daughters of the Emperor,

ended in the treaty of December 14, 1814, which closed the war. During his residence of more than a year in Europe Mr. Dallas visited France, Holland, and the Netherlands, as well as Russia and England, and met many of the distinguished men of the day. In London he called upon his cousin, Lord Byron, and an amusing anecdote is told of his republican independence in declining to recognize the privilege of the peerage and make a second call upon his distinguished relative until his first visit had been returned. Lord Byron is said to have been much amused when the state of affairs was reported to him, and to have exclaimed, "I like the young man's independence; I will call on him to-morrow." In his twenty-fourth year, on the 23d of May, 1816, Mr. Dallas married Sophia Chew Nicklin, daughter of Philip Nicklin, Esq., and granddaughter of Chief Justice Benjamin Chew. In 1828 he was elected mayor of the city of Philadelphia, but resigned in the year following on receiving from

had mingled in the crowd of the anteroom for about fifteen minutes, the doors of the banqueting-room were thrown open, a numerous band of music struck up, and the company proceeded with apparently very little formality to dinner.

One of the masters of ceremonies led me forward and placed me at table immediately in front of the Empress, while Mrs. Dallas and my daughters were placed next to the imperial family, alongside of the younger grand duchess. I was repeatedly addressed, on various topics, by the Empress, who spoke distinct if not handsome English. Among her other remarks was her desire to know whether our novelist, Cooper, had lately written another book, for he was her great favorite—especially in such works as the "Pioneer," "The Spy," and the "Last of the Mohicans"; she had, however, not read all, nor in my opinion his best productions; and I recommended the "Red Rover" and the "Water-Witch." She had not heard before of his last work on England, and seemed surprised that he should write about a country where he had been so little.

I had cause to be officially and personally highly gratified, and hastened to return to St. Petersburg. We galloped home by nine o'clock, driven by a coachman who was very drunk, but of whose condition we were not aware till safely housed.

I left in the hands of one of the officers in waiting the sum of two hundred rubles, the customary present on similar occasions, to be equally distributed among all who had participated in services to us.

Sunday, 13th August, 1837.—The frigate *Independence* sailed from Cronstadt about noon to-day.

GLIMPSES OF ST. PETERSBURG.

Sunday, 20th August, 1837.—Attended divine worship in the chapel of the British Factory on the English quay. The two front pews have been civilly devoted to myself and family. The

President Jackson the appointment of United States District Attorney, the same post to which his father had been appointed by Mr. Jefferson. In 1831 he was elected to fill a vacancy in the Senate of the United States; entering for the first time a legislative body.

Upon the accession of Mr. Van Buren to the Presidency in 1837, the mission to Russia was accepted by Mr. Dallas, who at his own request was recalled in October, 1839. In 1844 he was chosen Vice-President of the United States, James K. Polk and George M. Dallas receiving 170 out of 275 electoral votes.

In 1856, on Mr. Buchanan's signifying his desire to be recalled, Mr. Dallas was nominated by the Senate on January 31 and confirmed February 4 as Minister to England. He returned to the United States in 1861, arriving at Philadelphia on June 1. He died suddenly, as his father had done, on the morning of Saturday, the 31st of December, 1864.

clergyman, whose sermon was certainly good, is named Law, and is of the stock of Lord Ellenborough, and of Thomas Law, of Washington.

Saturday, 26th August, 1837.—The Spanish consul here, Don Raymonde de Chacon, paid me a visit, to inquire about his brother in Philadelphia. In the course of conversation he told me there was very little official business for him to attend to here; that although Spanish produce to the amount of fifty millions was annually brought into Russia from the West Indies or the Peninsula, sugar, coffee, wines, etc., it came in British or American vessels. During all last year but three Spanish vessels came to Russia, to the port of Riga.

Friday, 8th September, 1837.—Mr. Rodofinikie called this morning. Among other matters he referred to the wretched condition of the Russian peasantry, and said that they were in the habit of burying their money, whether silver or gold, and of pretending to be utterly destitute; that four or five hundred rubles was a very large sum for them to own—and that until a recent ukase of the present Emperor they were not competent to hold any portion of the soil, but that now there were a million of them who owned small tracts of land which they farmed. He expressed an opinion that too much labor was already bestowed upon agriculture, and that more was produced than could be consumed, and no markets were to be found for the surplus. Great quantities of sheep were raised in the southern provinces; and Count Nesselrode had in the neighborhood of Wosnesensk a flock of about seventeen thousand merinos.

Sunday, 10th September, 1837.—The imports of tobacco into St. Petersburg have been the subject of my study to-day. I am satisfied that we supply Russia with this weed to an extent of nearly half a million of dollars annually, and that the trade has increased, is still increasing, and might, by modification of the Russian tariff, be very largely increased.

The present Emperor proposes to emancipate the serfs on the imperial domain, and to confide their government to Kitisoff. The example will ultimately work its way; but its progress must necessarily be very slow, as it will be resisted by the great nobles.

Tuesday, 14th November, 1837.—The French ambassador, Baronte, paid us a long visit. He is obviously preparing for a permanent departure. His conversation, always intellectual, was peculiarly agreeable this morning. In speaking of the comparative characteristics of this country and England, France, and America, he was particularly emphatic in pronouncing society in Russia to be listless, somber, and indifferent or unexcitable. In Paris people had no time to note the weather or for

sickness; here time hung heavily upon the health and spirits of all but the natives, and they were heavier than time itself.

SOCIAL EXPERIENCES.

Thursday, 23d November, 1837.—We go to-night to our first Russian entertainment since the dinner at Peterhof: the soirée of Count and Countess Levachoff. We are invited to come at ten o'clock, and I presume we will reach there by eleven.

Friday, 24th November, 1837.—We remained at Count Levachoff's till between three and four this morning. He is an aide-de-camp of the Emperor, a cavalry general, a nobleman of great wealth, and his personal manners recommend him strongly, at least to a stranger like myself. His palace (for it cannot be otherwise called) is exceedingly splendid, and enjoys the reputation of being one of the most beautiful in this city of palaces. The countess has the look and deportment of an accomplished and unaffected American lady, and often reminded me of Mrs. Robert Morris, subsequently Mrs. Bloodgood. Both of them speak the English language fluently. I counted eleven rooms, of various sizes and furniture, open for the entertainment, all brilliant with light, paintings, and decoration. The two largest rooms were appropriated to dancing and card-playing. The order of arrivals and departures at the front door was protected by hussars in couples; and a shoal of most gorgeously liveried servants superintended every detail in-doors. The count, in full military costume, met us at the drawing-room door, took Mrs. Dallas from my arm, and led her to the countess and then to a seat. I was cordially saluted by several whom I had visited but not seen, and among them by my old acquaintance, Politica, who is remarkably unchanged in appearance. Many of the diplomatic corps were there.

Sunday, 3d December, 1837.—My presentation to the Grand Duchess Helen, wife of the Grand Duke Michel, took place at the palace at two o'clock. On entering the door, I was saluted by a company of dismounted dragoons, and ushered upstairs through rows of attendants into a magnificent hall of reception, supported in its vaulted and richly painted ceiling by noble columns of white mock marble. Here I remained in conversation with two officers of the household, and admiring the walls and other ornaments of the apartments. I was particularly struck with the glowing and immense paintings executed on the milk-white glossy walls and with the uncommonly beautiful mosaic floor. After waiting there about twenty minutes, I was marshaled through a suite of rooms until I reached one of special elegance,

in which the Grand Duchess advanced to meet me with much animation and grace. We stood in conversation for fifteen or twenty minutes. Her dress was in nothing striking, except a single enormous pearl of great purity which hung directly in the center of her forehead below the parting of her hair. We spoke about my family; about her travels during the summer; about the rapid improvements making in Russia under the auspices of the present Emperor; about the annexation of Texas to our Union, and about the possibility of Canada following in the same course. In all, she manifested much intelligence and vivacity.

Monday, 4th December, 1837.—My set of silversalts and cruets were purchased this morning for one thousand and thirty rubles [about \$200], and I think I thus adequately furnished my dining-table, having already procured English glass, French porcelain, Russian lights, and English cutlery. My aim has been to unite elegance and taste with as much simplicity as the subject-matter would admit. As to vying even remotely with the gorgeous extravagance exhibited by the principal members of the circle in which as a national representative I necessarily must move in this capital, the attempt would be equally out of character, in bad taste, and utterly futile.

I went accompanied by my daughter to a soirée at the Countess Laval's. It is one of the handsomest and most richly furnished houses in St. Petersburg. Nothing more strongly shows the magic of wealth. The count is said to have come here originally as a French hair-dresser; and certainly looks the origin at this moment admirably; he is short, mean, and insignificant in appearance. The countess is the impersonation of an indented toadstool, fat, coarse, short, and ugly. They are, however, both very kind persons and seem deservedly favorites. He is one of the four *maîtres de la cour*. His establishment presents many points worthy of admiration. It is on the largest scale of private dwellings in a city where all such dwellings are palaces: its various apartments are adorned with the utmost profusion and with great judgment; its largest saloon, an oblong square of about thirty-five by twenty-five feet, with vaulted ceiling, and walls covered with deep-crimson satin drapery, are hung with choice paintings of the best Italian and French masters. Adjoining this is an apartment of about the same dimensions, whose floor is ancient mosaic from the island of Capri, and whose sides are crowded with specimens of antique sculpture, vases, and curiosities. I noticed especially here a most exquisite antique gorgon's head, another of Augustus Cæsar, and several that I could not identify. The money expended in this single room must have been incalculable.

Beyond this, and after passing a narrow passage, I reached a most beautiful boudoir, modeled with the most elaborate exactness in all its colors, shape, size, and arrangements, after an excavated chamber of Pompeii. This seemed the pet piece of the count and countess, both of whom were eloquent in pointing out its peculiar beauties. There was one display at this entertainment which I had not seen at others, except at the two public balls of the Mineral Springs and l'Assemblée de la Noblesse. In the first of the range of saloons as you entered, one side of the room was occupied by an immense table covered with all sorts of delicacies, ices, jellies, fruit, cakes, sugar plums of all colors and fantasies, coffee, chocolate, wines, *liqueurs*, etc., which was the fountain whence the attendants afterward distributed on waiters to the company, or to which the gentlemen resorted whenever inclined for refreshment. Cards, particularly if not exclusively whist, were playing in four or five saloons; and Countess Laval with entire composure executed a most skillful game of chess with Countess Litta, in the very midst of her guests in the most thronged saloon. The party was what is here called a *roué*—without dancing; beginning at eleven o'clock, and closing in less than two hours; and it was composed chiefly of married ladies from thirty to seventy years of age. I should not suppose there were four girls, as we would call them, present. The dresses were exceedingly handsome, but some of the matrons shocked my American notions not a little by a most profuse display of the bust. Conversation does not seem to be as much a pursuit as it should be; generally speaking, gentlemen arranged themselves in a dark mass on one side of the saloon, respectfully and vacantly gazing at the ladies who were closely packed on divans, ottomans, or sofas on the other side or in the center. The diplomatic body are an exception to this remark, and seemed disposed to make themselves agreeable to their fair associates.

A DIPLOMATIC DINNER.

Monday, 18th December, 1837.—This being St. Nicholas day and therefore the name-day of the Emperor, it is the subject of universal celebration. Count Nesselrode has a multitudinous dinner at the "Hôtel du Ministère des Affaires Étrangères," to which I am obliged to go, *selon les usages* in grand uniform; and in the evening, as I was formally apprised by the secretary of the Court, Mr. Maikailoff, some days ago, the ball of the nobility will be attended by the Grand Duchess Helen, and all are expected to dress their loftiest. The city generally also undergoes

illumination at night and the Neva consecration.

Tuesday, 19th December, 1837.—At Count Nesselrode's dinner yesterday, all the diplomatic corps attended except Luchenfeldt, of Bavaria. On such occasions established etiquette requires that ambassadors and ministers should take their seats at table according to the precedence arising from the dates of their respective arrivals at this court, ambassadors of course as higher in grade being before ministers. I took my place next to Mr. Milbanke below, and as I presumed above Count Schimmelpenninck. In the course of the evening, after we had risen from the table, the Dutchman informed me that he disputed the right of Mr. Milbanke to the precedence he assumed; that he had spoken to Count Nesselrode upon the subject, and to Mr. Brunoff, and that both these gentlemen were inclined to agree with him in the views he expressed, and promised to communicate to him their formal decision on the point. The result would, of course, affect me by advancing me one step in the line should the conclusion be against the British representative. The grounds of his proceeding are simply these: Lord Durham was ambassador, and on quitting Russia he left Milbanke chargé d'affaires, an appointment since confirmed by the British Government. As chargé left by an ambassador, Milbanke ranks as a minister plenipotentiary and took that rank before either Count Schimmelpenninck or I reached here; but he is not an envoy extraordinary, and that is our most important and distinctive grade, and the count considers it essentially higher than the mere minister plenipotentiary, and therefore entitling us to precedence. It would seem also that Milbanke is even minister plenipotentiary more by a sort of diplomatic brevet than by actual commission in the line; and his personal deportment appears to have kindled a disposition to pull him a little back from the forward position he too boldly takes.

THE EMPEROR'S SLEIGH-RIDE AND HIS EARLY HOURS.

Tuesday, 26th December, 1837.—I dined today with Prince Butera, the Neapolitan minister. He married a Russian widow of immense wealth, owning productive gold mines in Siberia. His residence on the English quay is one of the most splendid establishments I have visited. There were present the Austrian and French ambassadors, the Prussian, English, and Dutch ministers, Count Woronzoff, Count Matuzewitch, the French secretary of legation, the Marquis de Villafranca, and a French attaché. The table was brilliant, and the din-

ner exquisite, especially the dish of Neapolitan macaroni, and the glass of imperial Tokay. During the repast much conversation of a lively character took place respecting Madame Taglioni, whose dancing last evening enchanted the Emperor and Empress. On this topic the Austrian was poetically eloquent, and described the feet of the actress as actually speaking. He insisted also that her extraordinary length of arms greatly contributed to her grace and activity, being admirable substitutes for the balance-pole employed by tight-rope dancers. The Marquis de Villafranca and I, after being introduced, had a long and interesting confab. He is not an unapt looking representative of the Spanish pretender, Don Carlos. Of about forty years of age, short figure, round limbs, jet-black hair and eyes, bushy mustache and swarthy complexion, he looks the young but grave grandee.

I crossed and recrossed the Neva upon the ice to-day, and was amused by seeing the preparations making by a body of men for an extensive skating plain. Trees were planted in the ice on the line of demarcation; some benches were already stationed; the snow was shoveled and wheeled off, and, through a hole cut, water was procured and thrown in buckets over the appointed space, thus securing a smooth and clean surface. On returning home, while walking carelessly with Philip along the English quay, a single-horsed, small sledge approached at a rapid pace, with apparently one of the numberless military officers in it whom we see in all directions, enveloped in a light-blue cloth cloak and with cocked hat and feather, and speeding exactly in the same unattended and simple manner. I did not notice, much less recognize, the person in the sledge until after he had made the usual gesture with his hand (putting it to the side of his hat by his forehead and there retaining it) and had nodded repeatedly at me, with smiles, as if endeavoring to make me know him. I had just time to whip my hat off, and turned towards him most respectfully; it was the Emperor of all the Russias! He flew rapidly by, and I observed that all who were in his track seemed aware almost by instinct of his approach, and doffed their hats and caps instantly. Here was the monarch of myriads—the despotic arbiter of life and death, and liberty, and law—actually and visibly enjoying a sleigh-ride in a style as entirely unassuming and fearless and natural as would be chosen by any one of his subjects or slaves. The constitutional king, Louis Philippe, could not venture on this without the music of whistling bullets being awakened; and even a king or queen of England would run some risk of violence or rudeness. Yet such is the everyday practice

of Nicholas the First. He is probably bold in the consciousness that he strives to do his duty, or the excessive degradation of his slaves presents the least hazard of a generous aspiration and struggle for liberty.¹

Wednesday, 27th December, 1837.—Dr. Leffevre's second lecture on chemistry was delivered this evening and I accompanied three of my children to it. At its close we went to Mr. Law's, the English clergyman, nephew of Lord Ellenborough and our Thomas Law, and remained till midnight. My daughters danced to the music of the piano, while I took my seat at a card-table and won from his reverence at whist ten rubles. How strangely different are the religious prejudices of different countries! Mr. Law dresses in black, and in that alone, when out of the pulpit, differs from any of the crowd of gentlemen who may meet in the ball-room, the theater, or at the green baize.

Friday, 29th December, 1837.—We were gratified last night by finding the Emperor among the guests at Count Woronzoff's. He had told the count, when at Moscow, that he would attend his parties, provided that they began at nine o'clock; the count feared that was an impossibility; his Majesty went, however, at the hour he had indicated, and was alone until nearly eleven. Fashion is more potent than autocracy. When I entered the room where he was, I perceived him to be in conversation with Count Schimmelpenninck, and forbore to advance; he caught my eye, left the count, and coming towards me, we shook hands, when he observed that he had met me ten days ago, that I obviously did not recognize him, but that he never saw any person for five minutes whom he afterward forgot.

The Winter Palace is just reported in flames!

BURNING OF THE WINTER PALACE.

Saturday, 30th December, 1837.—The great Winter Palace is now a quadrangular stack of blackened and gloomy walls; still, however, at twelve o'clock to-night blazing in every direction with almost unabated fury. As to a spectacle, it is more grand and imposing than any exhibition I ever beheld. The Emperor has ordered all dangerous efforts to arrest or ex-

tinguish the flames to be abandoned, and the noble pile with its gorgeous and rich contents is left, surrounded by an army in full costume, to consume itself away. The whole scene is the celebration of the obsequies of some mighty monarch. As yet, the origin of this calamity is merely matter of conjecture and rumor; but one story has an air of verisimilitude and is generally credited. Some persons are said to have been engaged in the apothecary's apartment in making chemical experiments, and having accidentally ignited a quantity of fluid, the blaze extended itself and gradually became irrepressible and inextinguishable. The Emperor was, at the time, in the theater witnessing the graces of Taglioni, and hurrying home he arrived at the palace at the moment when the fire burst forth from several points. This immense conflagration has in no manner disturbed the general tranquillity of the city. No bells have rung, no outcry has been made, no noisy engines have rattled along the streets, and no crowds have been collected. The process of supervising has been allotted to the military and police; the operation has been conducted with the silence, system, and despatch by which those two departments are characterized.

I did not retire to bed this morning until some of the household servants were bustling about, preparing for the day. Circumstances over which we sat brooding had excited vague alarm in all the family. In despotic governments fears of conspiracy and change are always more or less afloat. The agents of the police keep these fears alive as necessary to their own importance. Some of the French newspapers had contained a statement that a plot against the Emperor was being actively followed up. He went to Tsarskoe-Selo for some days, on his return hither, instead of taking up his quarters at once, as he was wont to do, at the Winter Palace. Then he moved about without attendance or parade, as witness the manner in which he appeared at Count Woronzoff's soirée. And we recollected, furthermore, many harsh things said of his extreme and passionate violence in the reviews at Wosnesensk, and especially towards a general officer of noble rank whose badges of honor he rudely tore from his breast with his own hand

¹ Nicholas I. was born in 1796. His eldest brother, Alexander I., noted for his part in the Napoleonic wars, arranged that his brother Constantine should forego his right to the succession; so with the consent of the latter Nicholas ascended the throne on the death of Alexander in 1825. Nicholas, who was a man of great activity, intelligence, and of fine presence, had shown a taste for military affairs, and from the suppression of the revolt that followed upon his accession pursued a policy of repression. In 1817 he had married the daughter of Frederick William III. of Prussia, sister of the late Emperor William. In concert with

England and France he helped to secure the independence of Greece. His war with Turkey in 1828-29 resulted favorably to Russia. The Polish insurrection which began in 1830 was ruthlessly stamped out; and in 1849 Nicholas helped Austria to subdue revolted Hungary. His demands upon Turkey led to the Crimean war, in which England and France overmatched him, and before the end of which he died, on March 2, 1855. His successor, Alexander II., made peace in the following year. It is said that the emancipation of the serfs by the latter accorded with a recommendation left by his father Nicholas I.—EDITOR.

in the presence of the troops. All these ideas, when aggravated by the light of the burning palace, would probably have given way to farther reflection, had not, as if to invigorate and confirm them, a notice been sent me from the imperial guard that two other large fires had broken out in distant quarters of the city; that a doubt existed whether they were not the explosion of some general plan, and that I was desired to be vigilant in care of my own household. I was on the point of revisiting the palace a second time, when I met the soldier at the door who gave this notice to my servant verbally. We were now countenanced in some degree in indulging our imaginations, and we very soon worked our way into the midst of a revolution and the conflagration of the city. I sent for the Secretary of Legation to take charge of the archives of the mission, stationed my servants at the points most suited for effective look-outs, and tranquillized the family as well as I could. The extraordinary silence that prevailed was, however, the great restorer of intellectual composure; and I got all to bed by two o'clock, except Mr. Chew and myself, who remained up and on the *qui vive*.

Monday, 1st January, 1838.—The incidents of the conflagration are rapidly developing and engage at present every attention. The number of lives lost is differently stated; some carry it up to more than two hundred, others to eighty, and a general in actual service on the fatal night explicitly assured me that but one man had been killed. A body of grenadiers are represented to have perished by the sinking of the floor at the moment they were endeavoring to remove and save the throne; and the Emperor is said not to have abandoned the hope of extinguishing the flames until he saw the staff of the standard which surmounted the palace blazing, when he lost color for a moment and exclaimed that it appeared to be the will of God and he would no longer hazard the lives of his officers and subjects in the attempt. He disappeared for a short time from among his attendants, who were alarmed at his absence. He had gone into his private cabinet to collect and secure his private papers, with a large bundle of which in his hands he again came out.

There were nearly four thousand permanent occupants of this immense palace, many of whom were entirely dependent upon this sanctuary for their means of livelihood. Numbers of young ladies attached to the court as maids of honor, or in other capacities, have been suddenly deprived of all their jewels and little property and made destitute. Several of them, in their extreme terror, fled from the scene and were not found again for forty-eight hours,

having taken refuge among their friends. Much of the most valuable furniture has been rescued; the Hermitage remains untouched; the interesting collection of portraits which covered the walls of the historical Hall of the Generals was saved by a regiment of soldiers who devoted themselves to that particular object. The crown jewels were early sent away; the Empress, after her return from the theater, went in person and preserved her own jewelry. The splendid malachite vase, esteemed one of the most precious articles, resisted by its weight and fastenings the exertions of sixty men and was lost. No attempt was made to sever the gorgeous jasper columns which adorned the saloons of the Empress from the walls, and they were reduced to powder. The estimated loss is fifty millions of rubles, or ten millions of dollars. Orders have already issued for the rebuilding, and the Emperor has said that he will reoccupy the palace next September—utterly and absolutely impossible!

I am informed this evening that a new ministerial department is about to be created, with General Kisileiff at its head. It is exclusively designed for the government of the private domain and properties of the crown, which have latterly been injuriously neglected; a matter of no inconsiderable importance, when it is recollected that the Emperor actually owns about eighteen millions of peasants, or one-third of the population of Russia. This enormous acquisition has been caused by the loans he made after the French war to the nobles, which being unpaid were followed by seizures, etc.

THE RUSSIAN NEW YEAR'S.

Saturday, 13th January, 1838.—This is the New Year's day of Russia, and an active interchange of personal civilities takes place. Cards are sent to all one's acquaintances.

The court convened at the Palace of the Hermitage, at twelve o'clock, to celebrate agreeably to my note and invitation the anniversary of the birth of Her Highness Helen. The ceremonial is one deemed peculiarly high and important, and the occasion rallies all the court, all the civil functionaries, and all the military officers, together with all the maids of honor, to the presence of the sovereigns. I made it a point to reach the palace door punctually at the hour designated, accompanied by the Secretary of the Legation. It was instantly obvious that the vast basement accommodations of the Winter Palace were no longer to be had. The door, though not obstructed, was flanked by throngs of liveried servants, whose masters had passed in, and the stairway was equally crowded. On my name being announced, an attendant, dressed fancifully as a

Highlander, presented himself as our guide, opened the mass of human beings in our way, and marshaled us through two lines of richly appareled gentlemen and officers along an extensive corridor hung with the finest paintings, until we reached the saloon appropriated for the meeting of the foreign ministers. On entering I found the corps diplomatique assembled with the exceptions of Prince Butera and Count Schimmelpenninck, who, however, soon appeared. We were all in full costume, and Counts Nesselrode and Woronzoff were with us. A folding-door at the extremity of the room opposite to where we had come in being suddenly thrown wide, we were gratified by beholding an immense array of ladies of honor, dressed in the rich and gorgeous national costume which had been prescribed by the present Empress. The apartment in which they stood was large and beautiful, and they moved about with ease and thus exhibited their fine figures and finer ornaments to entire advantage. The trains were mostly of crimson, purple, or light-blue velvet embroidered in gold or silver, and dragging about two yards upon the floor. The head-dress was a variation of the ordinary Russian nurse's cap, a peculiarity in attire which was very becoming. It was composed of every kind of material and of all varieties of color; diamonds, pearls, emeralds, topaz, etc., etc.; jewelry of all descriptions seemed to have been showered upon each of the ladies. We arranged ourselves in a sort of semicircle, with the Austrian ambassador at the head, and according to the rank of seniority; our secretaries stood behind us respectively; and soon the approach of the Emperor and Empress from the interior of the palace and through the splendid saloon before us was felt. The gentlemen of the bedchamber, with coats covered with gold embroidery, white buckskin trousers, shoes and buckles, and chapeaux and gloves, first moved by us in a throng of about two hundred, going out at the opposite door and halting at the entrance. Then came the high officers of ceremony, Litta, Laval, Narischkin, etc., with their appropriate attire and insignia, who ranged themselves on our left by the side of Nesselrode and Woronzoff; these were immediately followed by the Grand Duchess Helen, wife of the Grand Duke Michel, the Grand Duchesses Marie and Olga and their two younger nieces, daughters of the Grand Duke Michel, who in a line fronting us stationed themselves on our right, the Grand Duchess Helen being within easy speaking distance of Count Ficquelmont: following these imperial ladies were the Grand Duke Michel and the Grand Duke Heir, who as they entered turned a little to the left, and left the way clear for the Emperor and Empress. As their

majesties entered we all bowed first to the lady and then to the monarch, and the former advanced to the Austrian, offered her hand for the usual kiss, and conversed for a few moments. She was victoriously equipped; her train of sky-blue velvet, embroidered with silver flowers to the depth of two feet, was protected and occasionally adjusted by two pages who followed her in the garb of young lieutenants: her cap, in shape and meaning like that worn by the maids of honor, was decorated by rows of enormous pearls and diamonds and appeared to be of cherry-colored satin; her gown was of pink satin richly embroidered in gold, and her necklace, bracelets, rings, etc., were brilliant in proportion. As soon as she left the ambassador, the Emperor advanced to him, shook hands cordially, and talked with animation. His dress was that of a general, unincumbered by glitter, his coat green, his epaulets gold, his pantaloons white buckskin, fitting tight to the skin, and his boots long hussars, eclipsing Day and Martin by their polish. On these occasions, the sovereigns passed slowly down the line of diplomats, addressing each as they liked in succession. When my turn came, I kissed the hand of the Empress, and expressed my gratification at perceiving that her summer travels had improved her health. She said they had on the whole, but just now she felt exceedingly unwell, that she had not recovered from the shock of the conflagration and was utterly unfit to go through the labors of the day; that according to established rule she would be obliged to receive and shake hands with about four thousand persons, and being then scarcely able to stand from faintness how was she to get along? I told her she really looked very differently from what she felt, and expressed my sincere regret; but that perhaps the delight her presence would inspire might react upon herself and give her strength and spirit for the scene. The Emperor shook me by the hand, and at once asked me why I had not been at Count Woronzoff's party on Thursday; that he had seen Mrs. Dallas and my daughters there, but looked in vain for me. I told him that I had gone, unfortunately for me, too late; that I had been occupied (as in truth I had been, in preparing for all the emergencies that might arise in my interview with Count Nesselrode) until past eleven o'clock, but that had I been aware that I should have met his Majesty, no engagement should have detained me. He said, with a smile, "The plain truth is, you are more fashionable than I am!" The Empress spoke to me in English, the Emperor in French. After completing the semicircle, and being then by the door, they both turned round, gave a salutation to the corps generally, and left the room,

their attendants all following; and then came, in one splendid and prolonged sweep, with a magnificence of rustle and smile altogether overwhelming, the whole cavalcade of maids of honor, giving to us a rare and surpassing review. When the door closed we were at liberty to depart, and I hastened to my carriage, eager to reach home and to divest myself of my stiff uniform.

Monday, 15th January, 1838.—Countess Laval's first ball was to-night, and we repaired to it. Her magnificent dwelling expanded still farther than I ever noticed it before. A new series of splendid rooms was opened in addition to those heretofore described, and ended in a vast dancing saloon, with superbly arched ceiling, lighted by two immense bronze chandeliers and side candelabras, wax candles in all. No supper—but a large apartment with two tables kept loaded all the evening with refreshments. Card-tables innumerable and all occupied.

CONSECRATION OF THE NEVA.

Thursday, 18th January, 1838.—*La fête des Rois*, and the consecration of the Neva under a pavilion opposite the Hermitage and through a hole cut in the ice, performed by the Emperor. We started to witness the proceedings at half-past eleven, in a crowded carriage, and drove at once upon the frozen river, and within two hundred yards of the pavilion. It was thronged with priests in their sumptuous garments and with military officers who brought their respective banners to be dipped in the holy flood. All present stood uncovered, while mass was being performed. The vast multitude collected for the occasion could not be less than forty thousand in number; and those gathered immediately round the scene of consecration and in a compact mass upon the ice I presumed to be about twenty thousand.

Friday, 19th January, 1838.—At noon went to the Emperor's private palace of Annichkoff, high up the Nefsky prospect, and was in due form presented to his Imperial Highness, Monseigneur the Grand Duke Czarovitz Heir, with whose fine form, soft countenance, and unaffected good manners I was highly prepossessed. His destiny is a striking one, but I should much question his possessing the bold and resolute qualities of the will, as well as the active intellectual ones, without which he must be a sad and uncertain successor to his father.

RUSSIAN TOBOGGANING.

APPRISED by De Sersay that our diplomatic set of ice-hills at the country residence of Count Laval were ready, I drove Phil and my daughters forthwith to visit them. We were all de-

lighted with the amusement. Two parallel and nearly adjoining straight platforms of beautifully clear and smooth ice, formed of distinct but inseparably united blocks of uniform width and depth, run in opposite directions for perhaps two or three squares, and rise gradually at their opposite extremes fifty or sixty feet high into the upper chambers of two fanciful pavilions: the line separating the plains is a mound of soft and clean snow of sufficient elevation to prevent its being easily surmounted in the progress of the sport, and the outer boundaries are similarly composed. Very small and exquisitely neat and showy sledges are employed, with runners generally of polished steel, and with light and narrow cushions of differently colored velvet, or worked worsted, or red morocco; each accommodates two persons, and a lady may seat herself in front of a gentleman with her feet a little lifted and pointed the course she is going: the start from the pavilion is precipitous, and of course requires no external impetus: the velocity is extreme during the greater part of the transit; the course is governed by the gentleman, whose hands are covered with thick stuffed gloves or gauntlets, and who, leaning a little back, by the slightest touch upon the ice guides the vehicle with the nicety and precision which characterize the effect of a rudder upon a skiff: the sledge is arrested gently or abruptly according to the skill of its manager, at the end of the plain and at the foot of the other pavilion, into which the parties mount by a stairway with their feathery apparatus, and taking a fresh start in the reverse direction shoot back to the foot of the pavilion whence they first issued. The going and return may occupy two or three minutes, and seemed to be accompanied with great exhilaration and delight to the voyagers. The cold was severe, and we had somewhat too much wind, but my children, who immediately and fearlessly engaged in the excitement, were much pleased. There is no real danger, though awkwardness and failure in the descent may cause vexation, as they give rise to loud mirth in the spectators.

THE EMPEROR'S ENGLISH.

Tuesday, 23d January, 1838.—At half-past seven I repaired to Count Nesselrode's with Mrs. Dallas and Julia. It was a grand and select ball to the imperial family, and the early hour of meeting was designated to suit the health and medical advisers of the Empress. The Emperor, among other ways of indicating his disposition, raised his voice several keys louder than usual, and said to me: "You are the first gentleman that has ever induced me thus publicly to speak English; I hope you will

now undertake to teach me, by frequent conversations, how to speak it well." "With all my heart," was my reply, "though you really speak it so distinctly and correctly already, that I have little or nothing to teach: I will, however, undertake anything in order to be frequently honored by your attention." Shortly after this remarkable interview, the Grand Duke crossed one of the longest rooms, came directly up to me, and shook hands. He said he had met me the day before yesterday while he was in a sledge and I on the English quay, and that I had not recognized him. "How is it possible for me, an utter stranger, to know you when, without a single attendant, you drive along like any private person, muffled up completely in your cloak and covering your face from the cold? As soon as you lifted your hand and thus in some degree uncovered your face, I hope your Highness perceived that I knew you instantly."

"No doubt, no doubt; the truth is, I prefer moving about without escort. I think we are the only reigning family in Europe who attempt it. It is impossible for me, as a military man, to leave off my uniform and to divest myself of these tell-tale ornaments [epaulets and orders], but I should like to avoid the notoriety consequent upon them."

Our supper at half-past eleven was as rich, *recherché*, and gorgeous as possible. Prince Narischkin told me that he had himself purchased at Paris the golden and malachite ornaments of the table, and had given 95,000 rubles for them. He subsequently sold them to the Emperor, who gave them for the use of his vice-chancellor.

Wednesday, 31st January, 1838.—We went to the ball of the Princess Bellozelskoy at half-past seven. The imperial family were all there. The exterior of the house in the first story was illuminated by innumerable lamps. Four hundred and fifty guests were accommodated at the supper table. The magnificence of the whole scene is indescribable. The stone staircase, branching off at the first landing, and leading to the second story, was, in its vastness, ornaments, and style, worthy of the splendor to which it introduced one. After the company had collected in what seemed to be an endless suite of drawing-rooms, another suite embracing an immense picture-gallery was thrown open for dancing, and finally, beyond this, another and still more noble series were displayed for supper. The picture-gallery contained many very fine originals—especially of the schools of Correggio and Annibal Caracci—and one, Judith with the head of Holofernes by Andrea del Sarto, particularly struck me. Numbers of the subjects were too indelicate and ought to have been removed on this occasion. Suffering as I did during the whole

evening with a pain and fever in my head, I felt no disposition to partake in the gaiety around me, and less to converse: my chief occupation was, therefore, in examining the paintings and statuary. In the apartment appropriated to engravings, of which the collection in portraits is extensive and remarkable, I was surprised agreeably by seeing one of Trumbull's, of the Battle of Bunker Hill. While musing silently and in a retired niche, I was agreeably surprised by the Emperor's coming to me, shaking hands, and then leaning against the wall as if disposed to a little chitchat. I asked him, in allusion to what took place between us at Count Nesselrode's, whether he was ready to take his first lesson in English? He said he hoped to benefit by frequent conversations with me, and repeated emphatically the assurance that I was the only gentleman by whom he had ever been induced to speak the language publicly. I expressed myself highly flattered. He then asked me what I thought of the state of things in Canada, and intimated that he had heard of my doubting whether the insurgents had among them a single man competent to lead them. The Emperor said that it was neither his temper nor his policy to rejoice in the misfortunes of other countries even though they might be supposed beneficial in their tendencies to the interests of Russia; but, added he, almost in the very words repeating the sentiment he uttered when I presented my letter of credence at Peterhof, if the mother country will act oppressively and unjustly towards her colonies, they are right to resist. I told him I thought it would be on the whole the better policy for England to consent to the separation and independence of Canada.

"But where then is she to get her timber?"

"From the Baltic," I replied.

"Yes," he said, "she might; but perhaps not of such good quality nor as cheap."

This drew my mind to his fleet off Cronstadt, and I hazarded the remark that I should like to see those fine-looking ships of his out in the Atlantic.

"Why," he replied, "I will probably send some of them there; but really I am charged in all directions with such ambitious projects and such mischievous designs, that I am averse to do anything that in the slightest degree might countenance these imputations."

"Send a small squadron to visit us," said I, "in the United States. I assure you we shall give them a most cordial welcome."

"I should like to do so," he answered, "and think I will send one or two; but my men, who make such good soldiers, make poor sailors."

"Give them, or some of them," I observed,

"the opportunity of good long voyages and of a bold sea, and they will rapidly improve."

The Emperor then invited me to accompany him, as soon as the opening of navigation in the spring would permit it, on a visit to his Baltic fleet; an invitation which I of course accepted. I forgot to record that when he adverted to the accusations commonly made against him, I interrupted him, as apologizing for them in some degree, with the remark, "But, then, you are so powerful that you naturally inspire jealousy."

"Yes," he said, "we are powerful only, however, for defense, not for attack," and he seemed anxious that he should express this last idea distinctly, for he quit English, for an instant, to give it in French.

I became this evening personally acquainted with Count Cherchineff, the minister of the department of war. He is said to be distinguished by great ability and energy. His figure is tall and stout and well proportioned; his head and face rather small; his hair, eyes, and mustache peculiarly black; and his complexion somewhat pallid. His department exacts infinite labor. I told him that we had repeatedly interchanged visits and cards without meeting, and that I had ascribed it to his incessant engagements. He said I was right—that such an empire as this, with such a military system, required inconceivable exertion, especially with an emperor who entered into all the details of business. "For instance," said he, "here I am at midnight, but I must be up at five in the morning, and must meet the Emperor at nine. I have been eleven years in my present post, and can't tell how I live through it all." I should presume him to be about fifty.

GAMBLING IN RUSSIAN SOCIETY.

Wednesday, 7th February, 1838.—I played chess with Count Litta, the crack performer of the highest circles here, and beat him. This at once establishes my reputation; it does more, it affords me a resource at these soirées much better than the one of gambling at whist to which I am so generally persuaded, and to which the lack of something to kill time with strongly tempts me. The extent to which gambling is carried with this sober game of whist is surprising. One gentleman of the diplomatic corps told me that he frequently played for twenty thousand rubles a game, and that last year he lost about eighty-five thousand rubles. Écarté, too, is constant, and I have noticed many thousands changing owners at this sport in the course of fifteen minutes. At large entertainments twenty or thirty card tables may be readily counted—all actively going. I

have, however, noticed but one disagreeable scene of conflict, and that ended tranquilly and liberally.

Friday, 16th February, 1838.—The splendid ball and supper of Count Woronzoff, at which he entertained the imperial family, opened this evening at half-past seven o'clock.

I very soon heard, in the course of the evening, the intelligence which has reached here through the Berlin "Gazette," in relation to the attack made by Sir F. Head upon the Canadian insurgents on Navy Island in the Niagara River; his having routed them; and his having pursued an American steamboat, which was said to be engaged in their service, killed her crew within our jurisdiction, set her on fire, and allowed her to drift over the Falls. The incident is a stirring one, and is regarded here as involving an outrage upon the sovereignty of the United States, which cannot be overlooked. There is obviously a general dislike of English policy and pretension; and everything is eagerly caught at to fan a quarrel with her.

THE EMPEROR'S PERUKE.

Wednesday, 21st February, 1838.—In the evening we repaired to the ball of Madame Boutourlin at about nine. The Emperor and the two Grand Dukes, *Héritier* and Michel, came in the course of the night; the first danced a quadrille with our hostess. After shaking hands I expressed myself pleased to see that he still danced: he said he was too old, but that an old sentiment of attachment to the lady had got the better of him. "Certainly not too old," said I, "because you are several years younger than myself and have not got one of the gray hairs by which I am surmounted." "Yes," he replied, "my hairs are gray, the few I have, and this (pulling the curls on top) is a peruke."

On conversing to-day in terms of admiration of some of the things I had seen at the Imperial Library, Count Lerchenfeldt informed me that many, if not the most, of them had been obtained from the libraries of Polish nobles whose estates had been confiscated. I had noticed a Polish name in many of the volumes.

Monday, 19th March, 1838.—Mrs. Dallas and I at half-past four repaired to Prince Yonsouppoff's to dinner. The establishment is on the grandest and costliest scale. The endless range of lofty saloons, the countless paintings upon the walls, the masterly and exquisite statuary, and the numberless servants gorgeously dressed out in green and silver, with pages having caps and flowing feathers, altogether overwhelmed our faculties of admiration. It redeemed its reputation of being the largest

private residence in St. Petersburg, and far surpassed in splendor anything I have yet seen. I should suppose there could not have been less than a thousand paintings of the various masters, and some of them of immense size. For two alone, the present Emperor offered two hundred and fifty thousand rubles, but the sale was declined. That, however, which riveted my gaze was the noble piece of sculpture of Canova, "Cupid embracing Psyche"; it was placed in the center of a circular apartment whose roof was a dome, and whose walls were tapestried in glowing scarlet; the effect upon the white marble was beautiful. Our dinner was all that boundless wealth could

make it. The guests were fifty in number, Counts Orloff and Woronzoff, Prince Mensikoff, Princess Belozelskoy, Countess Laval, Sherbatoff, Blondoff, ministers of Prussia and Sweden, etc., etc. The dining-hall of spacious dimensions was on one side decorated with family pictures, and on the other with the family plate tastily arranged in two glass-covered cases, which filled the whole space, and which being divided into shelves enabled one to see every curiously worked piece distinctly, and to take the whole magnificent service in at one *coup d'œil*. The fashion of collecting family plate and of thus displaying it has recently been borrowed from England.

(To be concluded in the next number.)

George Mifflin Dallas.

A HEADY MAID.

DO men wive hypocrites from very choice
 Or very blindness? He who would a mate
 To cling about his flattered neck, and voice
 In purring tones her sweet obedient fate,
 — Though all the while she work her will withal, —
 Can none of me, who hate such warm deceit.
 I 'll say plain yea and nay; if th' occasion call,
 A round, firm nay, with tone in no wise sweet,
 But savored rather bitter, if there fell
 Necessity. . . . My grandame says, should *he*
 Speak out his yea as round and firm as well,
 What would the outcome be? 'T would plainly be
 — Poor dame! she 's worn with marriage many a day —
 That I should hate him till his yea grew nay.

A HEADY MAID IN LOVE.

DID I say hypocrites? I meant it not.
 How were a maid a hypocrite who 's led
 By love to use mild patience in the stead
 Of disputatious word and anger hot?
 Besides, it were not womanly; 't would mar
 The grace of dignity, a woman's crown.
 'T were but a child who needs must scream and frown
 For what he cannot grasp. . . . Sweet grandame, far
 Behind lies all that thoughtless time of mine,
 And everything is altered, I of all
 Most changed. The earth hath taught an alien lore
 That grants the sun and moon a bright strange shine;
 And something lost is held in gain's sweet thrall —
 Though one I know, myself I know no more.

Louise Morgan Sill.

EXHIBITION OF ARTISTS' SCRAPS & SKETCHES

EVERY artist objects to showing to his patrons or to others who are not members of his craft his picture unframed, his creed being—doubtless it is the result of accumulated wisdom and experience—that the canvas, no matter how well painted, needs the mass of gold or other material which he puts around it to separate it from adjoining objects and to give it a proper and fitting dress.

With him beauty unadorned is not adorned the most—unless his unadorned beauty is shown to those who, like himself, know its intrinsic merit or demerit without any adventitious aids; and the painter's understanding of the advantage to be gained by a good frame is perhaps, after all, more the artist's love for the symphonic tone of the gold than anything else. The dealer, however, understands not only this value, but also the effect to be produced on the expectant purchaser by the twists and curves of the carving, the play of light and shade of the gilding, and the general effect of a mass of suggested costliness as implied by so much gold, even when that gold is but a cob-web surface on plaster. But the dealer goes even farther. He is brought constantly in close contact with the great public. He knows their weaknesses and foibles, and can run the whole gamut of the various beliefs or suggestions which cause the man to make up his mind to exchange his money for a bit of painted canvas or paper. He not only uses the frame,—and he never spares expense on this adjunct of the picture,—but oftentimes places a glass in the front of an oil painting, to protect, as he tells his patron, this precious work from smoke and dust and dirt. He places around the outside of the frame what he calls a "shadow box," usually of some costly and rich-colored wood, and lined with crimson plush or silk velvet. Here is a gorgeous dress. Surely a thing which is worthy of so much costly decking out—a decking out of velvet,

precious woods, crystal, and gold—must have great value in itself. And yet almost every artist feels that this stage business of the dealer ought not to be necessary, and tolerates it only because the butcher and the baker will not wait longer and the studio rent must be paid. It was probably this feeling that caused so many New York artists to allow The Fellowcraft Club to take their canvases and their drawings and to place them on their walls without frames or decorations or any adventitious aid whatsoever.

The public, or rather such of the public as were fortunate enough to secure invitations, were asked to come to see artists' sketches and scraps. I am free to confess that without some explanation this latter term would have been meaningless to me. The word sketch everybody, or nearly everybody, understands; but what was the meaning of scrap?

The visitor understood after having seen the material exhibited. It consisted of outdoor studies, sketches from nature, figures made in the studio, *ébauches*, *pochades*,—the inspirational data, as one newspaper called these, for larger, more important works,—memoranda from pocket note-books; portrait studies, etc. Every medium was represented—oil, water color, crayon, pencil, pen and ink, and pastel. Nearly one hundred artists of New York had ransacked their portfolios, and turned out the corners of their *ateliers*, and given to the art committee of the club such material as is rarely seen even by the frequent visitor to the studios. For the artist is strong in his faith that such things as were here exhibited—things made with a real purpose, to aid in making something else—are not to be shown to those whom they expect to buy their finished works.

And yet perhaps no more interesting exhibition was ever held in New York; certainly none with so complete an absence of what for a better term might be called the commercial side of the artists' life. Only a few of the three or four hundred works exhibited had come into

existence in the expectation that anybody would want to buy them. Hence there was a better opportunity for judging the abilities of the exhibitors than at any of the regular picture exhibitions, and the universal feeling of artists, connoisseurs, and critics was that the exhibitors showed themselves stronger, truer, and better artists than they did in their completed works. This was especially apparent in some of the black and white rooms, where were seen, among other things, the original sketches by the side of the finished cartoons made by the staff of artists of one of the leading comic papers. After redrawing, and, in some cases, putting into color to attract the public eye, the virility and the artistic sentiment of the original sketch were often destroyed. Such of the art-loving public as knew the work of these men only by their published efforts obtained a more just and proper idea of their value as artists.

Again, the exhibited outdoor studies of one of the leading portraitists showed a phase of his art with which the public was unacquainted. One study in particular — a piece of Vermont hillside, with flying clouds and a group of trees, full of light and air and movement — had more of the *plein-air* quality than many works ostensibly of this school.

The exhibit (of which examples are given in the following pages) seemed to be strongest in its black and white work and weakest in its water color. In fact, in regard to the latter, although there were charming works by several of the leading men in this line, it seems as though we as a people have not yet risen to a sense of the beauty and power of this medium. When one thinks of the brilliancy, richness,

and directness of which water color is capable, one cannot help wishing that the tentative, or the merely clever, had not taken so firm a hold on our public. Perhaps the development of this art is hindered by the absurd feeling on the part of the picture buyer, confined happily to the United States, that it is not so serious or so valuable as oil painting.

There were, however, one or two notes which gave a suggestion of improvement in this respect, a few things bright, luminous, and sparkling—the true quality of water color.

I have said that the exhibition was strongest in its black and white. This was felt by all visitors. Here was a line of art in which New York was equal to any other city in the world, although it must be admitted that in the more important compositions there was, as a rule, a certain lack of true artistic strength. Technically everything was excellent.

There were drawings in pencil to which the adjective "charming" would be weak; splendid studies of heads and figures excellently drawn in charcoal and in crayon; while, as was to be expected, the work done with pen and ink was perhaps the best of all.

The teaching of this exhibition—and the artists have to thank The Fellowship Club for this—was, that the artist when unhindered does his best work; that rarely does a suggestion either from patron or dealer tend to improve at least the art quality. It may make it more literary, more understandable, or more interesting to the layman, but if the artist is to give us truly artistic work,—granted that he is an artist,—he had better be left alone to work out his conception.

William Lewis Fraser.

OLD GUS LAWSON.

"With pleasing toys he would her entertaine."

Faërie Queene.

IT is interesting to think of the ideas that used to be held by parents, and by many others who were not parents, about the importance of the rod in the education of boys and girls. They seemed to believe that a child of either sex, good, bad, or indifferent, could not be expected to get satisfactory development without receiving during that while an amount of flogging that in these days would be thought enormous. But the one who held this notion with greater confidence than any person with whose opinion I ever had opportunities to become acquainted, was neither a parent nor a grown man, but a schoolboy.

I do not remember how it came to pass that Augustus Lawson, even in the earliest of his teens, began to be called "Old Gus." Most of the girls, however, not willing to be regarded as wanting in decorum, called him "Mr. Old

Gus." Old Gus—now, after the lapse of more than fifty years, I cannot feel like speaking of him by any other name—had been a big baby, and he had been growing bigger until the period of the beginning of this story, when, eighteen years old, he was six feet four inches tall, and weighed one hundred and sixty pounds. He had reddish hair, a face very fair, but with so many freckles that a goodly number of them, not caring, as it seemed, to be crowded so much, had emigrated and colonized prosperous settlements upon his great, long hands and fingers. He had very large pale blue eyes and an extremely small mouth. This mouth was never entirely shut, and it was doubtful if it could be. Always lazy about books, and rather so about work of any kind, during the seven or eight years at school he had learned little more than a smattering of English grammar, geography, and arithmetic; yet in this while had gotten whippings that in numbers were

like the hairs of his head and the freckles on his face and hands. When he had come to be eighteen, his mother, a widow with a small, nicely kept dwelling, and a moderate property in land and negroes, residing a mile south of the village, wished him to stop from school and to go to work upon the farm. But he begged for another year, and as he was an affectionate son, and, besides, rather shiftless about any sort of field or domestic business, she consented.

"The simple fact of the business," he would often say, "it is jest about this. I've been a-goin' to school so long, and I've got so many whippin's while I were a-gittin' of my edification, that when it was complete, and I don't need no more, I got so that I jes loves to be thar, a-knowin' how much good it have done me, and me, a endurin' the time, a not knowin' ner a-expectin'. I don't git whipped now, of course, but somehow, with my expe'unce, a-knowin' what good they is *in* whippin', I loves to set thar and see it a-goin' on."

Those who had been with him in his younger time used to say that Old Gus Lawson did not mind a whipping any more than it was minded by any old, rusty-coated apple tree. It was certain that during this last year, in which he was taking leisurely his postgraduate course, his enjoyment of what he called the fun of the thing was great when one or more of his schoolmates received the discipline which was so beneficial. Especially was this the case when the recipient was a girl.

"Because," he argued, "wimming, it's their business not only to be mothers, but it's their business to be the very bul'arks of society, as them people that makes Fourth o' July speeches calls 'em, and it won't do for 'em to be raised wrong. I tell you that, now."

Yet he loved the fun as much as he valued the utility. Without a grain of malice, or envy, or jealousy in his nature, still, I have witnessed, often and often, in his great big face a delight that was up to the full when boys or girls were crying out under the infliction of the rod. Indeed, when matters in that line became rather duller than he could have wished, occasionally he would endeavor to enliven them in ways that I will tell about after a while.

There was not a single boy or girl in the school who did not like him; for, besides being as amiable in disposition as anybody in the whole world could be, his willingness to do favors for others, especially us little ones, was boundless. But after using the word "boundless" I have the thought that perhaps I ought not to have done so until I came to describe his pockets. I remember him as clothed never otherwise than in his long, baggy, walnut-dyed

breeches and waistcoat, over which, with varying shades of gray, was the longest frock-coat, and, opening from the outsides of the skirts, it had the widest, deepest pockets that I had ever seen before or that I expect ever to see again. In those pockets, as well as in those of his other garments, he carried habitually such articles—chiefly eatables—as children, especially girls, were particularly fond of—bits of sugar and ginger-cake, peaches, apples, and other fruit of any and all stages before and after ripeness, especially crab-apples, with small packages of salt to go along with those which he gave to the girls, who were intensely fond of eating them in school hours, when making wry faces over their sourness was attended with so many risks. Then in these store-houses were hickory-nuts, chestnuts, walnuts, chinkapins, haw-berries red and black, marbles won at sweepstakes, balls made of strips cut from worn-out india-rubber shoes and wound with woolen thread, slate-pencils and lead-pencils that he had picked up, goose-quills for making pens and toothpicks. Whatever period of the year it was, Old Gus on every morning brought these vast pockets full of stores of one kind or another, and during the rest of the day distributed as freely as if he had been another Santa Claus. Besides these things, behind the lapels of his coat and waistcoat and on his sleeve-cuffs were any number of assorted pins and needles, the latter already threaded, so as to be ready for sudden emergencies in his own or others' clothing. And people may believe me or not, just as they please, but it is a fact that he never was without a small vial of camphor, and one of opodeldoc, or other salve for healing, and strips of cloth for bandaging cut fingers, skinned noses and shins, and stumped toes. The girls used to say that he was the very convenientest boy in school, and I have heard some grown persons say that it was their belief that if he were to go upon a journey of a week he could carry in his pockets supplies to last him throughout. As for his pocket-knives, I think best to let them go into the next chapter.

II.

POCKET-KNIVES being articles that in a school are subject most often to be called for on loan, Old Gus was seldom without as many as four, ranging in original value from sevenpence (twelve and a half cents) to half a dollar. These he would lend freely, the worth of the instrument loaned depending partly upon the age, partly upon his estimate of the carefulness and responsibility, but chiefly upon the sex, of the borrower. Reasonably gracious in this respect to boys, even the smallest, he was never

known to refuse a loan of a knife of some sort to the request of a girl. Yet there was one, small and four-bladed, with a white handle, claimed to be of ivory, but declared to be nothing but bone by those who were refused the use of it. This knife, which he often said with much solemnity had come all the way from Augusta,—the favorite city of all middle Georgia people,—and had there cost a dollar one-and-nine (a dollar and thirty-seven and a half cents), was kept wrapped in a piece of buckskin, and carried in one of his vest-pockets; and two persons, and those two alone, could ever get the loan of it. No boy ever dreamed of such a thing as asking for it with any hope of success, and every girl but two forbore, except occasionally for the mischief of seeing the trouble that refusal cost him. These were Miranda Attaway and Sarah Ann Shy.

Miranda was a small, slender brunette, pretty, but thoughtful-looking and tongue-tied. For the purpose of untying her tongue, as it seemed, she had contracted the habit of thrusting a minute portion of the end of that member out of her pretty mouth and pressing her lower lip against it; which habit, in spite of its leading her to be called "tongue-sucker" by some of the ruder boys, made her look very interesting. She was about twelve years old, although she looked younger. Sarah Ann, of the same age, was fair, fattish, and red-haired, like Old Gus, but without a freckle, except an occasional one that took advantage of her carelessness about wearing her bonnet, and lived a brief life upon her lovely cheek. Almost always she wore a smiling countenance. The exceptions were when she was being whipped for her pranks in school time. While these exceptions were numerous, they were evanescent, and interfered little with the fun that she gloried in making. Her parents dwelt a mile east of the village, those of Miranda half a mile south in the direction of the Lawsons. Both families were industrious, plain people, and lived well on the small income arising from their property.

These girls, so unlike, were almost constant companions, occupying the same desk in school, being the very front of those assigned to the girls. The seat of Mr. Hodge, the teacher, was at the fireplace, facing both rows of desks. Old Gus, being so near a man, was allowed to have a whole desk to himself; and that next to the wall at the end of the schoolhouse in the rear of Mr. Hodge. This gentleman, although not of the very best temper in the world, yet was not at all cruel, as some schoolmasters, I am sorry to say, used to be. He whipped freely and conscientiously, but seldom very hard. It seemed as if he was apprehensive that unless he whipped with a

spirit and regularity exacted by the public, parents would become dissatisfied and turn him out of his office, or that his scholars might lose some of the respect which they had for him, and perhaps the boys, whenever they would want a special holiday, and could not get it otherwise, might "bar him out," or take him to the spring-branch, not far off, and give him a ducking. I think that his mind was to do no more whipping and no less than what was necessary to satisfy his patrons, to save from decay his reputation, and to keep his position entirely secure and comfortable all around. He put Sarah Ann in front because she was the most mischievous girl in school. Miranda he would have allowed to settle as far down in the row as she might have chosen. But Miranda preferred to be alongside her best friend, and take the consequences of such contiguity. Indeed, the truth is that Miranda, notwithstanding her serious-looking face and her soft, rather pitiful voice, had in her own way nearly as much love of fun as Sarah Ann.

There was another cause why Old Gus had been so favored in the matter of position. Mr. Hodge, for convenient and prudential reasons, was not disposed for him to be where he himself could constantly observe his actions. Then this position was the very one Old Gus preferred, because his two favorites were just in front of him, and convenient both for enjoying the sight of their interesting faces and conferring upon them by signs and otherwise such assistance as his judgment decided that they needed and his great fondness for them would not allow him to withhold. In the next chapter I will endeavor to show in what manner this charitable service was bestowed.

III.

CONVINCED of the wisdom and kindness of his reasons for thus helping these little girls, Old Gus often gave expression to them about in this wise:

"You see, I can't help likin' Sarann some, because she's red-headed like me; and then she's so mischievous that I loves to be on hand when she's a-cuttin' up in the schoolhouse, a not expectin' Mr. Hodge to notice her, and then him come down on her with his switch. And then it sweeten me down to my very bones to hear her holler, and make out like he's a mighty nigh a-killin' of her, when he ain't a hardly a-hurtin' of her a single bit, but is a-givin' it to her because he know people is a expectin' him to keep up the a'thority of his school. Now as for M'randy, she ain't red-headed, as people can see for theirself, but she's mighty nigh as fond of her mischievous as Sarann, a notwithstandin' she look so sol-

emn exceptin' when she 's obleeged to laugh at Sarann or me, one or t' other. And when she do begin to put up her little tongue-tie pleadin' to Mr. Hodge, and the man he have to actuil stop before he have give her half as much as she deserve, because she look so pitiful, and beg so pitiful, I declar' on my soul that it make me feel like laughin' so I 'd jes holler out, if it were n't in the schoolhouse, because they ain't any fun that is equil to it. And but, besides all that, it do 'em some of the good they need bad, in a-loosenin' of their skin, and lettin' 'em git their growth out of the little teenchy things they is. I 've had the expe'unce of whippin', and I call myself a example of the good it do, not only to boys but to girls, in gittin' 'em out o' their runty fix in which they 're bound to keep unless they 're whipped; at least occasional, and, of course, reasonable in the case of girls. This is what make me take such a likin' to both of them children, and I could n't keep 'em, even if I was to try, from takin' out of my pockets anything that ary one of 'em wants."

It was interesting to see his relations with them. Liberal with all, both in giving out his supplies and lending his knives, yet there were two favors that were restricted to Sarah Ann and Miranda, one of which was the loan of his dollar-one-and-nine knife, and the other, taking with their own hands whatever they wanted out of his pockets. This last liberty the larger girls did not desire, and they would not have accepted the offer of it. But Sarah Ann and Miranda! Knowing that they had full command over him and all his store, their habit was to pick and choose according to their varying wants.

"Thop, Mithter Old Guth, and comth here," Miranda often said; "me and Tharann want thomething, and we don't eghactly know what it ith."

Then, one on one side and the other on the other, they would dive their hands and arms up to their elbows, haul out and empty into their aprons quantities upon quantities, and, after selecting such as they preferred, dump back the rest. During this while, looking down upon them alternately with much fondness, his little mouth would make as big a smile as it could.

"That 'll do," one of them would say; "you may go now."

"That all you got to say?" he might remonstrate. "Them other girls have got some manners, but you two—"

"Oh, we thank you, Mithter Old Guth," Miranda would plead, "jutht ath much ath they do, but whath the uthe of thayin' tho every thingle time? People thath alwayth having to thank people get tired of it after a

while. You know jutht ath well ath you know anything that me and Tharann like you the beth of all the boyth in thith thchool. Don't we, Tharann?"

"Of course we do," Sarah Ann would answer; "but he came mighty nigh lending our Augusty knife the other day to Susan Leadbetter."

"You know I did n't want to lend it to her, Sarann Shy, and I did n't. What 's the use o' your plaguin' me that way, Sarann?" he would humbly remonstrate.

In such wise Sarah Ann and Miranda would tease him sometimes. Susan Leadbetter was the only girl whom they regarded as possible to get between them and Old Gus. For the Leadbetters were good people adjoining the Lawsons, and having about equal property. And then Susan was a tall, handsome girl, and so nobody would have been surprised if Old Gus in time were to conceive a special partiality for her. But thus far he had never shown any sign pointing in that direction, and it was one of his boasts that he never had been in love in all his life.

"Ah, Mithter Old Guth," Miranda said one day, "I 've heard old people thay bragging ith dangereth." Then taking hers and Sarah Ann's knife out of his waistcoat pocket, she unwrapped it, and, handing him back the buckskin, said:

"There, don't you go and lothe it, or let it get ruthty." Then she went her way.

Gratified as he was by the growth made by his favorites, still its rapidity was not entirely satisfactory. Therefore, partly for the purpose of enhancing it, and partly for the sake of the fun, he managed sometimes from his retired position to throw them into laughter which, on being detected by the master, would be followed quickly by desired results.

"Oh my!" he said often with greatest glee, "it 's positive music to hear 'em when they 're caught. Sarann farly bellers; but when M'randy comes out with her keen little tongue, that it 's all so tied up, if it don't sound sweet, the same if it was a little young bird, and I 'd actuil feel sorry for her if 't were n't for the good I know it 's a-doin' of 'em both, that it mighty nigh seem to me it 'll take more whippin's than any one of 'em gits to make 'em grow of any size worth talkin' about, let alone the ever bein' among the bul-arks o' society. And so, occasion'ly, when things is down, and I see them children a-needin' o' some stirrin' up, I wait to git their eye when Mr. Hodge ain't a-noticin' of 'em, and then I come the squirl a-gnawin' at a hickernut, or a rabbit a-eatin' greens. They can't stand nary one o' them, special in the schoolhouse, and then you ought to see how

the little ones in general, and them two in partic'lar, how they can't help bein' caught a-gig-glin', and so be took up and whipped. I ain't never afeard of their peachin' on me to Mr. Hodge, because they know if they do, no more crab-apples and things from me, which crab-apples is things I despises myself without they 're b'iled along of a whole lot of sugar to take some o' that everlastin' sour out of 'em; but it 's astonishin' how many of 'em them girls will destroy, special when you give 'em salt to go 'long with 'em. Yes, sir; they know better than to go to work to break up that business. No; they ain't no such low-down meanness in *our* school."

The performances thus referred to were so funny to the girls that their benign intentions always succeeded. The very idea of a person so big, long, and slow-moving claiming to personate as small and nimble a beast as a squirrel or a rabbit was absurd to the last degree. Ridiculous enough was the former with his hickory-nut between his forepaws, digging, or pretending to dig into the shell with his long, white teeth. But the rabbit at his meal of collards or turnip greens was yet more interesting. He used to declare on his very honor that this was done faithfully to life, as often he had watched from a crack of the fence around the garden or turnip-patch and witnessed the scene. If he had not a leaf from one of the trees in the grove, provided for the purpose, he improvised with his copy-book. It was curious as well as irresistibly laughable to observe his actions while in the rôle of this favorite animal. The curve in his back, made so from inactivity, mainly, but partly from the habit of getting down nearer to a level with those whose company he liked most, became much more noticeable as he bowed his head over his leaf. As interesting were his facial expressions. Practice had made him perfect in broadening his eye-balls, giving greater roundness to his profile, flattening his thin lips, and passing his teeth through their various playings and contortions, and the most dainty, modest, seemingly embarrassed, even almost painful, way in which, moving the while his long ears forward and backward, he munched in silence and with great rapidity first one and then another edge. It has been very many years since these and such like things occurred; but I often recall them with vivid distinctness, and in imagination look upon and listen to them, not with loud or suppressed laughter as when a child, but with smiles and with tears so fond that I feel as if I could be willing, even glad, to undergo the old-fashioned punishment, if but for a brief little while I could go back to childhood, and see for myself, and see and hear Miranda Attaway and Sarah Ann Shy look

up at dear Old Gus Lawson eating his greens, laugh their laughs, and take their whippings with the rest of us.

But just to think that down to this time with all those grownish girls, some of whom were as pretty and as lovely as any young man in this whole world ought to wish to have presented for his selections, Old Gus had not fallen in love! But both Sarah Ann and Miranda had told him that the only reason was that his time had not yet come.

"The only differenth, Mithter Old Guth," Miranda often said, "ith in the timeth it comth on people. Ith thertain to comth on you thome time, ain't it, Tharann? And then won't he be a thight? I hope I 'll be there to thee it."

"Certainly it 's going to come some time," answered Sarah Ann, "and when he 's not expecting it; and then no more crab-apples nor nothing else for *us*; because he 'll be for just loading down his sweetheart with them—Susan Leadbetter or somebody else."

"You talk, you jes talk, Sarann Shy, like—like you thought you was as wise as—as the very Queen o' Sheby!"

"No, I 'm not as wise—give me some more salt; these crab-apples are uncommon sour. That 'll do—No, Mister Old Gus, I 'm not quite as wise as all that; but I 'm wise enough to know what I 'm talking about, and you 'll live to see it. You see if you don't."

And so he did. The time came at last, and with it the passion, and in a way so peculiar that it not only surprised him and everybody else, but troubled his mind during a considerable period.

IV.

IN those days no Georgia boy who thought much of himself failed, by the time he became fourteen or fifteen, to fall in love with some woman if it were only a schoolmistress or a widow. Yet hitherto Old Gus, so far as the female sex was concerned, had seemed to have kept himself as cold as any frog. Some boys who claimed to know all that was worth knowing about the human frame gave it as their opinion that he had never had any gizzard; and Martin Woodall, thirteen years old, who had been in love several times, went privately one day to Dr. Lewis, the physician of the village, who had attended Old Gus during the only spell of sickness that he had ever had, and asked him confidentially for his opinion on the case; and, having gotten it, came away and betrayed the secret that had thus been reposed in him.

"Boys," said Martin, loud enough to be heard by some of the girls, "it 's so good I can't keep it, but when I asked Dr. Lewis he laughed and said Old Gus did n't have even

a *sign* of a gizzard, and he said that, if he knew anything about the case, he never would. But you all must n't say anything about it, because the doctor he told it to me as a secret."

But a change came over Old Gus. He quit personating not only the squirrel but the rabbit, although I think he parted from the latter with some regrets, particularly on account of the excellent influences it had exerted upon the physical development of Miranda and Sarah Ann, who began, towards the end of the year, to look, poor little things, as if they were about to make something of a start at last. But he told them one day that he had no heart for such as that any more, and he looked so awfully solemn when he was telling them that for a while they felt concern. They asked him what was the matter. He evaded an answer, but, after being pressed, he let it come, and it was as solemn in sound as any that was ever returned from the oracle of Delphi, or any other shrine.

"I have fell in love."

All of us laughed, for many others besides the two girls heard the confession. Then Sarah Ann and Miranda made him go off with them, when Miranda asked:

"Who ith it with, Mithter Old Guth?"

Sarah Ann declared that Miranda had taken the very words out of her mouth, and she said:

"Yes, do, please, Mister Old Gus, tell us who it 's with. Oh, I do think it is *so* interesting! Tell us, Mister Old Gus, please, quick!"

He looked sorrowfully down upon them, one with a hand in a pocket of his coat, the other with hers in that of his waistcoat, and answered:

"Ah now, children, right there 's the difficulty! I can't."

"Can't! Oh, pshaw! You know you can; but you just won't, and I think it 's mean of you."

Then Sarah Ann rammed her hand again into his pocket and said she was as mad as she could be. But Miranda said:

"Oh, Mithter Old Guth, I think you might tell me and Tharann, if for nothing elth, because we 've been good to you in letting you make uth take tho many whippinth for you. Why can't you?"

"Because I don't yit know myself, not quite. I don't."

And then, while they were laughing loudly, he went away and sat down upon a stump where he pondered for a long time. During the remainder of the term he told nobody, not even himself, as he often said, who it was that had effected the change in his feelings and deportment. For a while they suspected that

it might be Susan Leadbetter; but one day when she asked for his dollar-one-and-nine knife, to mend her pen, he took it out, unwrapped it slowly, partly extended it towards her, but withdrew it, saying:

"I some ruther not, Susan. Give me your pen, and I 'll mend it well as I know how."

"Never mind, Mister Old Gus; it makes no difference."

The fact was that the other girls had put forward Susan in order to find if she was his flame. She went away laughing, and after that Susan Leadbetter was dropped out of all calculations. For the time being Martin Wood-all was in love with Susan, although he had not the courage to tell her so in words; therefore he was glad of the happening of this incident, and said:

"It may be the old fellow is beginnin' to have some sort of a gizzard; but I doubt if it ever comes to anything worth speakin' about."

Considering the indefiniteness of its origin, it was indeed a very noticeable change. Occasionally Miranda or Sarah Ann drew from him a smile, which, however, was more woe-begone than his habitual lugubrious expression. But they never could induce him to repeat the thrilling performances which, with such varying attendant circumstances, they had witnessed so often. Instead thereof he usually sat at his desk almost motionless during school-hours, in which time he looked at the two girls with a look that was so mournful and so far away that occasionally they broke forth into the giggling—one of the results of which had been so benign—that he was thankful for their sakes that they were not suspended entirely. His pockets came as usual weighted with cargoes; and after they were discharged, like any patient camel whose burden had been removed, he slowly went off to himself. One day Miranda, impatient at such conduct, said to him:

"Mithter Old Guth Lawthin, I declare your conduct ith thimply oudathoth. What makth you won't do thoth funny thingth any more? I think ith mean ath it can be!"

Hauling out handfuls of goodies and emptying them into her apron, he said: "No, M'randy, I ain't, that is, I hope I ain't, so powerful mean. But a man person who he have once't fell in love th'ough and th'ough, like I am now, he don't feel like doin' them things."

"You don't *feel* like it!" she replied with disdain, as she cracked one of his chestnuts. "My opinion ith, your conthinth hurt-you for making me an' Tharann get tho many whippinth. But we never minded that, did we Tharann?"

"Of course not; I 'd be willing to take a whipping any time to see him eat greens like

a rabbit. If he was obliged to do something, he might be satisfied to take away our squir'l, but it was a sin and a shame not to leave us our rabbit. Hand me out some more of those biggest chestnuts. Your hand can get 'em more convenient than mine can."

"Me too," said Miranda. "Mithter Old Guth Lawthin, you know I think your being in love ith motht ath funny ath the rabbit? I know ith ath funny ath the thquirrel. Who ith it with, we keep on athking you."

Driven to the very wall, he answered in sorely pleading tones. "I jes *can't*, M'randy, because I don't know myself. I wish I could, and I wish I did; but if I did know who it was, you ain't big enough to understand the feelin'."

She regarded him for a moment with scorn, as the grinding of her chestnut was suspended. Perhaps reflecting that his ignorance of her capacity merited compassion rather than resentment, her grinding was resumed, and she answered:

"Right there you are mithtakened, thir, if you only but knew it. The very i-dea. Why I take the greateth *delight* in hearing about love ththorieth, and I underthand 'em ath well ath you do, and better too; becauth, if I wath to fall in love, I 'd know who it wath with and you don't. I never heard, and I never even read, of thuch a cathe. Lawth! Mithter Old Guth Lawthin, do try to thtop thome of that foolithneth, and let me and Tharann have thome fun. People are talking and laughing about you going on ath you do and hurting me and Tharann'th feelingth, when we are doing our beth to keep you from dithgrathe; and even Martin Woodall, thath alwayth been thuch a big man, he have to be going about telling people that you have n't got any githarth, or motht none at all, a-knowing no better that nobody exthept chickenth *hath* githarth. But thuch ath that makth me and Tharann athamed of ourthelvt, and we don't know what to thay. Here, tie up in thith handkerchief thome of thothe beth chinkapin, and do thop your foolithneth, becauthe, I tell you now, it maketh me and Tharann perfect mitherable. Don't it, Tharann?"

Sarah Ann's jaws were tired, but she managed to answer:

"That it does. He has actually got to that, if it was n't for his pockets, I actually don't know what we would do."

"The good laws!" he pleaded pitifully, "how *is* a body to stop sech as that? Why he can't no more do it than he can stop the measles — not until the things break out on him."

"Well, then" said Miranda, "I with they 'd break out on you, if that ith what 'th the matter with you."

At the end of the term Old Gus took his final, most melancholy leave of the school. After this he kept himself more closely at home than ever before, and delighted his mother with the new interest shown by him in work. If Martin Woodall had been entirely fair in giving expression to his opinions he would have been obliged to admit that, however abnormal in his anatomical structure, the old fellow gave promise of making a man in some important elements of his being. He showed especial interest in the growth of the young among domestic animals. Often he said:

"Ma, I jes loves to see young things a-growin', if it ain't nothin' but a pig, or a chicken, or a peachy-tree sprout, because they ain't no tellin' what they goin' to pejuce if they're took keer of."

His mother had been saying all along that she had never a doubt but that 'Gustus would make a man some day when the time came; for his father before him had been just such a boy, and everybody that knew him said that he was one of the best that ever was born. And so he kept on for three years, attending with reasonable diligence to all work that his hands found to be conveniently necessary, his walk and conversation being marked by sobriety rather than the deep solemnity that had been brought on by the first unexpected attack upon his tenderest feelings. It was not often that he met either Sarah Ann or Miranda; for as the time elapsed, he more seldom left home. But he was thankful to hear from time to time that the development which he had contributed so liberally to foster was going on without much complaint. Whenever he met either, if she happened to rally him for what he had made her suffer for his pranks, he answered:

"And you know jest as well as I do that I done 'em for your good, and you got the good of 'em, and you started on the growin' you both of you needed, and I 'm monstrous glad you 've kept it up."

One Sunday after meeting, together they met him, and asked if he had ever found out who it was he was in love with.

"Not yit," he answered. "Not quite yit; but my feelin's is that it 'll come after a while. I ain't in a hurry about it."

"And what do you do mothly thethe dayth," Mithter Old Guth?" asked Miranda.

"Oh, I 'm mostly raisin' chickens and sich."

"And do they grow to your thatithfaction?"

"It 's differ'nt among 'em, M'randy. Some of 'em is rapid, and some is ruther mod'rate, like you and Sarann."

When he had gone, Sarah Ann said:

"Was there ever such a case in the world?"

"It ith curiouth, and ith the funnieth love cathe I ever heard anything about. But, Tharann, thinthe he quit thchool, it theemth to me he 'th thome handthomer than he uthed to be, and hath better mannerrth."

"Yes; no doubt about that. Indeed, I think he 's got to be very passable. But I do wish the old fellow would come back to school, where we could see some of the fun we used to have."

"Ah, well! I thuppothe it ain't betht to have fun at thchool alwayth. Juth to think! Ith three whole yearth thinthe Mithter Old Guth left uth. I wonder if we 'll ever be ath happy again, Tharann. Ma thay I 've got to quit thchool after thith year and learn how to work and keep houth. It makth me thad to think about it, thometimeth."

"That 's what they say about me. Well, since Mister Old Gus quit, I 've seen so little fun that I 'm ready to stop whenever the word comes."

In those times country girls usually got their full growth by the time they were fifteen or sixteen years old, and it was thought well for them to leave school to begin to learn all about domestic work, and, if a good opportunity presented itself, to get married. Within these three years Miranda and Sarah Ann had improved much every way. Miranda, though yet rather small, was plump as any partridge, and to some looked even sweeter. Sarah Ann was large and luscious. Both had become more serious, and Mr. Hodge said openly that he had never turned out two girls who were better scholars. They left school without complaint, and went cheerfully to work. For some time before the end of their last term neither of them had seen Old Gus. He had been keeping himself, for the most part, about home, and everybody was talking about what a fine, domestic person he was getting to be. As for Susan Leadbetter, she had been married long ago and moved away somewhere on the other side of the Oconee. The world, they say, waits for nobody. Yet Old Gus, patient as the longest days, had been waiting, waiting, waiting, and not even his mother ever heard a word of complaint from his mouth.

VI.

A QUIET, harmless life was that during these three years. By slow gradations Old Gus had taken into his hands the conduct of plantation business, and was making as respectable crops as any. During this time few summer evenings had been more serene than his life. Yet, not long after the last school term, his mother suspected that she noticed some little restlessness in his deportment. Occasionally at night, after decently getting through with his chicken, biscuit, and coffee, he would look

sternly and mysteriously at his saucer of clabber, and then, leaving it untouched, rise, go out, and walk awhile on the piazza or in the yard. His mother did not think it best to allude to these symptoms, but waited to see what was to come of them, trusting, as had been her habit always, for the best. One night aftersupper he sat a long while in silence. Just before it was time to light his candle and go to bed he said:

"Ma, somethin' inside o' me have been a-workin' like it want to break out on me."

"Why, 'Gustus, my son, the measles *is* in the neighborhood, but I hain't been afraid of you a-ketchin' 'em, because you had 'em, and them thick as hops, as the sayin' is, when you were n't more than eight year old. But sometimes people does have the things twice't. I 'll make some tansy bitters to-morrow, and have it ready to fetch 'em out if it 's them."

Little else was said upon the subject. At breakfast the next morning his mother noticed nothing out of the usual way except that he had on his linen shirt and looked a trifle bashful. She was not alarmed, however, because he put in a reasonably hearty meal. When it was over, taking his hat, he said:

"Ma, I 'm goin' to step over to the Attaways awhile this mornin', and I may go on as fur as the Shys before I turn back; but I 'm toller'ble certain of gittin' back by dinner-time."

"All right, my son; but as you hain't been a-feelin' very well here lately, if I was in your place I 'd try and not git overhet."

"I 'll try to keep reason'ble cool," he answered her affectionate admonition.

He walked on to the Attaways neither fast nor slow. Arrived there, he found Miranda, after having put away the breakfast things, getting ready to begin on a pair of trousers that her mother had just cut for one of the negroes.

"Why, if it ain't Mithter Old Guth!" she said. "I 'm glad to thee you. Take a theat, won't you?"

He seated himself, and as soon as he had an opportunity for a special remark, said:

"M'randy, I found out who it is; or at leastways I *think* I have."

"Who it ith what, Mithter Old Guth?"

And when she asked the question she knew just as well as he did; for she blushed, and her fingers trembled while she was threading her needle.

"Who I 'm in love with. Come now, don't go to makin' out you don't know what 's been the matter with me all this long time, M'randy. I thought by this time you got old enough, if not quite big enough, to understand what made me so solemn them last days I were at school, a-knowin' you were n't old enough then for sech as you to understand how dead in love I fell with you and Sarann."

"With me and *Tharann*?"

"Yes," he answered, looking towards her with moderate interest. "You and Sarann. *Thar* was the de-ficulty. I could n't tell in my mind which was from which. Sometimes when I has heard Sarann's big, loud haw-haw, and see her nice white teeth, I thought 't were her; but then when you 'd look up at me, and say somethin' with your little tongue-tied voices, and the cold chills, or ruther, I might say, the warm chills run all over me, I says to myself, 'No; it must be M'randy.' And so now, to the best of my knowledge, I think it 's you. And besides, you live closteter to us, and it 's conven'ter. And so here I am."

Miranda, now red as a June apple, threw down her work, and, looking at him with glittering eyes, said:

"I 'd have no man on the top of the ground that came at me a-courting me in thuch a — myththeriouth thort of way!"

"Oh, well then," he replied resignedly; "I thought I 'd try you first. If I don't suit you, M'randy, I 'll peruse on to the Shys and see if I can do anything with Sarann."

He turned his head, as if looking for the place where he had put his hat.

"I never *thaw* thuch a perthon!" said Miranda, almost crying, "that he take a girl by thürprithe, and before thee have time to even think about what he thay to her, flare up mad becauthe — becauthe —"

"Now, right there, M'randy," — mildly interrupting her, — "you're mistaken in your mind about my flarin' up mad. I ain't mad; and as you say you been took by surprise, I 'm goin' back home, and I 'm goin' to stay there one whole, solid week, and then I 'm a-comin' back. What do you say, M'randy?"

"I thay you do juth ath you pleathe. There!"

The words were positive, but Old Gus thought that he could see that the tone was subdued. So he rose, and said:

"Good-by, M'randy. I sha'n't go to the Shys to-day; not to-day, I sha'n't."

After he had gone Miranda reported everything to her mother, and ended by saying:

"I don't care whether he comth back any more or not; I juth don't, and I ath good ath told him tho. Now!"

After some reflection the mother said:

"Of course, M'randy, in such matters people has to act according to the way their feelings is; but if it was me, I should hisitate before I turned off a young man that was of good respectable people, and good prop'ty to boot, and that all the old people said what a studdy, well-doing young man 'Gustus Lawson was. And as for his addin' in of Sarann, that would n't be nuther here nor there with me, straightforward person like him, that I would n't be surprised if he did n't do it just to let you see that he could n't be fooled with nor neither put off too long. Many a young man does such as that with girls, and even when they're most in yearnest. But of course, my daughter, you 'll have to answer accordin' to your feelings. He give you a plenty of time to think about it."

On the morning appointed by him here came on Old Gus, in whose eyes Miranda was glad to think that she could observe some little eagerness.

"Well, M'randy?" said he, after being seated.

"Mithter Lawthin, I 've talked with Ma what you athed me, and if it wath n't for what you thaid about *Tharann* —"

"Right thar now, M'randy — right thar," he broke in with a quickness entirely unknown theretofore, "let me interrup' you. I had a talk with *my* Ma too, and Ma she said I had no business a even namin' of Sarann's name on sech a arrant, and if it had been her, she say, she 'd a got mad as fire, jes like you did. And then Ma up and says to me: 'Gustus Lawson, *you* may n't know it, but *I* do; and it 's that you don't love Sarann Shy, but it 's M'randy Attaway you're in love with, and has been in love with her ever sence her and you went to school to Mr. Hodge.' And now I tell you, M'randy, that right thar the thing broke out all over me, and I see Ma were right. Not that I has any disrespects of Sarann; but the one I want for myself is you, and I want you bad."

Their union was speedy, and it became very happy. Many persons from time to time heard the following remarks:

"The way thome women are alwayth bragging about their hùthbandth ith juth thimply tirethome to me. I 'm not one of that kind of perthonth mythelf; but my private opinion ith I 've got the beht in thith whole *Thtate*, and I don't care who knowth I thaid tho."

Richard Malcolm Johnston.

THE CONFEDERATE DIPLOMATISTS AND THEIR SHIRT OF NESSUS.

A CHAPTER OF SECRET HISTORY.

N revolting against the Union in 1860 the Southern States were greatly influenced by the expectation of substantial support from Europe, and especially from the large cotton-spinning powers of England and France. These states must have cotton or a famine—thus reasoned the Confederates; cotton they cannot have without both slavery and peace, therefore they will wink at slavery and will soon find a pretext for intervening in some form for peace, which, as most of them were sufficiently infatuated to believe, meant the independence of the South. It is not rash to say that but for the confident expectation of transatlantic aid the war would not have broken out when it did, if ever. The South was singularly unanimous in the conviction that cotton was king in Europe as well as in the United States, and that an interruption of its supply would be so serious in its consequences that a new republic, where cotton was to be king and slavery its cornerstone, would be welcomed into the family of nations as the surest possible guaranty against the recurrence of such a disaster.

For a time the theory gave promise of yielding the fruit expected of it. The idea had been quite successfully propagated in Europe during the earlier stages of the war that slavery had nothing to do with bringing it on, but that the Northern States were animated simply by a lust for power and territory, while the South were only defending their homes and families from ruthless invaders. Even Earl Russell went so far in one of his public utterances as to say as much, and that the subject of slavery was not to be taken into account by foreign statesmen in their dealings with the belligerents. The noble earl lived to change his opinion, and the Southern leaders discovered before the war closed that their most formidable enemy was this of their own household. They were made to realize, with a cruel distinctness, that, with a constitution and a public opinion which made slavery the one institution within their borders which was too sacred to be debated, the one institution which neither the

people of the Confederate States nor their delegates in legislative assemblies or in national or State conventions could meddle with, they were fatally handicapped for the struggle in which they had embarked. They could not throw this Jonah into the sea, for it was their only pretext for rebellion; to retain it on board was inevitable shipwreck. The abolition of slavery meant peace and union at once, and, as a logical consequence, their success in war meant the perpetuation of slavery—that and nothing else. This in due time became apparent to the people of Europe, where the prejudices against chattel slavery were even stronger and more universal than in Massachusetts; nor could this conclusion fail to acquire control in the councils of the European powers—willing as they mostly were to see our Union go to pieces—the moment they began to look about for a plausible pretext for intervention. They found that in whatever direction they put out their hands to help the Confederates they became in spite of themselves the champions of slavery. This was inevitable, but its results the Southern people would not or could not see. They had an idea that the prejudice against slavery was confined pretty much to the puritans of New England and a few cranks of Exeter Hall. Having been brought up in the midst of it, it was incomprehensible to them, or at least to most of them, that a man of a sound mind should find anything revolting in the “peculiar institution.”

In selecting John Slidell and James M. Mason as commissioners to further their interests abroad, the Confederates were also most unfortunate. The names of both were associated in Europe with every scheme for the nationalization of slavery that had been presented in Congress since the annexation of Texas.

Slidell while representing the State of Louisiana in the United States Senate was the counselor and abettor of the filibustering expeditions of Lopez in 1849 and 1859 for the wresting of Cuba from Spain, with a view to the enlargement of the area and political representation in Congress of the slaveholding States.

In December, 1857, Walker, with a band of filibusters, was captured by an American vessel of war under the command of Commodore

Paulding, just after landing at Punta Arenas on the coast of Nicaragua, of which state he purposed to take possession, having once before landed in Nicaragua with another force, whence, after a warlike occupation of some months, he was expelled. Soon after Commodore Paulding made his report to the government the political associates of Slidell in the House of Representatives, under his inspiration, made a report disapproving of the conduct of Commodore Paulding in arresting Walker and bringing him a prisoner to the United States. Through the same filibustering influences Paulding was threatened with censure, while Walker was not only not convicted, as he should have been, and dealt with as a pirate, but was allowed to go at large to plan other predatory schemes upon the peaceful neighbors of the United States, until arrested by the hand of Providence.¹

It was through Slidell's influence that Soulé, also of New Orleans, was sent out to bully Spain into the sale of Cuba to the United States, and with Buchanan, then our minister to England, and John Y. Mason, then our minister to France, instructed to unite in the declaration of the conference at Ostend in 1854, that "the acquisition of Cuba was a political necessity for the United States, to be accomplished by whatever means, fair or foul, might prove necessary."

In the following session of Congress Slidell offered a resolution in the Senate directing the President of the United States to give notice to the European powers bound together under the treaty for the suppression of the slave-trade that after one year from date the United States would cease to be a party to that treaty, and would no longer maintain its quota of vessels upon the coast of Africa.

Failing to secure the adoption of this resolution by Congress, whereby he had contemplated a reopening of the slave-trade, he and his partisans, using Mr. Buchanan, then President, as their instrument, bullied England into a practical renunciation of the right of visit and search of suspected slavers bearing the American flag, and into the admission that the flag alone was conclusive and final evidence of nationality.

The effect of this was that, during the succeeding twelve months, more than a hundred vessels were ascertained to have been fitted out and employed for the slave traffic, and not one convicted by the courts until the accession of Lincoln and the appointment of a new régime of prosecuting attorneys.

Slidell was also one of the parties who took a prominent part in securing the repeal of the

Missouri Compromise, by which it was intended to open all the Northwestern territory to slavery.

Not content with the impulse given to the African slave-trade by England's practical abandonment of the right of visit and search, in the session of 1858-59 Slidell introduced a bill to place \$30,000,000 at the disposal of President Buchanan to be used in negotiating the purchase of Cuba.²

Mason was a party to all the measures for the extension of slavery that Slidell ever proposed or advocated. He was a member of the Senate committee on foreign relations and signed the report in favor of giving the President the \$30,000,000 to bribe and traffic for Cuba, and in his speech, made the day the report was presented, reiterated the declaration of the Ostend conference, that "the acquisition of Cuba was for the United States a political necessity."³

He was one of the authors of the fugitive-slave law of 1850, which made it a crime, punishable with fine and imprisonment, to harbor, feed, or give shelter to a fugitive slave, even in States where slavery was prohibited by law.

He was one of the inquisitors who besieged poor John Brown in his last hours to extort from him information by which other citizens of the North could be convicted of participating with him in the scheme for freeing the slaves in Virginia which cost him his life.

Mason, who was commissioned by the Confederates to represent them in England, had not been in London six months before the possibility of his being of any use to the cause he represented was at an end. Snubbed by Earl Russell, then Minister of Foreign Affairs, and only tolerated by Palmerston, then Premier, the question of recalling him was seriously considered as early as the fall of 1862. The average school-girl of sixteen was about as well qualified as Mason to cope with the bankers of London and Paris, the only foreign powers with which he seems to have had any intercourse or negotiations that amounted to anything. It is not easy to see how any minister, and least of all a minister of Mason's mental, not to say moral limitations, could earn his salary near a government that would not see him, nor pay any attention to anything he wrote, nor listen to anything he was instructed or inclined to say. To withdraw him from England at that time, however, and leave Slidell in France, who was already setting the eggs out of which it was expected a navy for the Confederate States was to be hatched, was attended with some inconvenience which Benjamin thought it better to avoid. Hence the following letters, the

earlier one to Mason, and the latter to Slidell.

Benjamin to Mason.

(No. 8.)

DEPARTMENT OF STATE,
RICHMOND, 28th Oct., 1863.

HON. JAMES M. MASON, etc., London.

SIR: . . . It is gratifying to perceive that you had, as was confidently anticipated, reviewed your impressions, and determined not to withdraw from London without the previous instructions of the President. Your correspondence with Earl Russell shows with what scant courtesy you have been treated, and exhibits a marked contrast between the conduct of the English and French statesmen now in office in the intercourse with foreign agents eminently discreditable to the former. It is lamentable that at this late period in the nineteenth century a nation so enlightened as Great Britain should have failed yet to discover that a principal cause of dislike and hatred towards England, of which complaints are rife in her Parliament and in her press, is the offensive arrogance of some of her public men. The contrast is striking between the polished courtesy of M. Thouvenel¹ and the rude incivility of Earl Russell. Your determination to submit to the annoyances in the service of your country, and to overlook personal slights while hope remains that your continued presence in England may benefit our cause, cannot fail to meet the warm approval of your government. I refrain, however, from further comments on the contents of your despatches till the attention of the President (now concentrated on efforts to repair the ill effects of the failure of the Kentucky campaign) can be directed to your correspondence with Earl Russell.

I am, sir, your obdt. servt.,

J. P. BENJAMIN, Secretary of State.

Benjamin to Slidell.

DEPARTMENT OF STATE,
RICHMOND, January 15, 1863.

HON. JOHN SLIDELL, etc., Paris.

SIR: . . . It is not to be denied that there is great and increasing irritation in the public mind on this side in consequence of our unjust treatment by foreign powers, and it will require all the influence of the President to prevent some explosion and to maintain that calm and self-contained attitude which is alone becoming in such circumstances. We should probably not be very averse to the recall of Mr. Mason, who has been discourteously treated by Earl Russell, were it not that such a step would have so marked a significance while you remain at Paris as would probably cause serious interference with the success of the preparations, now nearly completed, for the purchase of the articles so much needed in the further prosecution of the war. If the re-

pulse of the enemy at Vicksburg in addition to the terrible slaughter of his troops at Fredericksburg prove insufficient to secure our recognition, the continued presence of our agents abroad can only be defended or excused on the ground that the necessities of our position render indispensable the supplies which we draw from Europe, and which would perhaps be withheld if we gave manifestation of our indignation at the unfair treatment which we have received.

I am respectfully, etc.,

J. P. BENJAMIN, Secretary of State.

As already intimated, the two men who were sent abroad to negotiate European alliances for the Confederate States, more than any other two men in all our republic, incarnated everything that was most intolerant, aggressive, and offensive in the institution of slavery. With them slavery was not a disorderly social condition to be tolerated only for its incidental conveniences, or for the grave inconveniences of exterminating it, but an institution to be admired, cultivated, and propagated for its intrinsic merits and fitness. The fame of their opinions had gone before them all over the world. As a matter of course they had not been long in Europe before they were brought to book. Mr. Mason got his first lesson at a dinner at Lord Donoughmore's,² a thorough-paced old Tory and ready for anything that would contribute to bring the American republic to grief. Here is Mason's account of this lesson in a confidential note to his chief. The sentiments of the hard-hearted old peer were so shockingly philanthropical that Mason made his communication "unofficial," doubting the propriety of allowing such heresies to go upon the files of the Confederate Department of State.

Mason to Benjamin.

(Unofficial.)

24 UPPER SEYMOUR STREET, PORTMAN SQUARE,
LONDON, November 4, 1862.

DEAR SIR: The contents of this note I have thought had better be unofficial, and thus not to go on the files of the department, unless you should think otherwise; and yet the matter, it seems to me, should at once be brought under the consideration of the President, that we may be ready when the time arrives.

I have the strongest reason to believe, when, after recognition, we shall come to the negotiation of the ordinary treaty of "amity and commerce," this Government will require, as a *sine qua non*, the introduction of a clause stipulating against the African slave-trade. Although I well

¹ It is a curious coincidence that on the very day that Benjamin was commending to Mason the "polished courtesy of M. Thouvenel" Slidell in Paris was writing to Benjamin an account of his first interview with Drouyn de Lhuys, and saying, "After the first interchange of courtesies, I said that I had been pleased to hear from various quarters that I should not have

to combat with him the adverse sentiments that had been attributed to his predecessor in the Department of Foreign Affairs (M. Thouvenel), with what degree of truth I did not permit myself to appreciate."

² Donoughmore's name is recorded as a subscriber for ten of the bonds of the Confederate cotton loan.

knew the pertinacity of England on that subject, yet I had supposed that the voluntary act of the Confederate States Government, inhibiting this trade by the enactment of the constitution when the government was first established, would have satisfied England to be passive at least in her future intercourse with us. I have now great reason to apprehend the contrary.

Some few days since I dined with Lord Donoughmore, who was president of the board of trade during the late Derby administration, and will hold the same, or a higher office, should that party come again into power—a very intelligent gentleman, and a warm and earnest friend of the South. In the course of conversation, after dinner, the subject came up incidentally, while we were alone, and he said I might be satisfied that Lord Palmerston would not enter into a treaty with us, unless we agreed in such treaty not to permit the African slave-trade. I expressed my surprise at it, referring to the fact that we had voluntarily admitted that prohibition into the constitution of the Confederate States, thereby taking stronger ground against the slave-trade than had ever been taken by the United States; that in the latter it was only prohibited by law whilst in the former not only was the power withheld from Congress, but the legislative branch of the government was required to pass such laws as would effectually prevent it.

He said that was all well understood, but that such was the sentiment of England on this subject that no minister could hold his place for a day who should negotiate a treaty with any Power not containing such a clause; nor could any House of Commons be found which would sustain a minister thus delinquent, and he referred to the fact (as he alleged it to be) that in every existing treaty with England that prohibition was contained. He said, further, that he did not mean to express his individual opinions, but that he was equally satisfied, should the Palmerston ministry go out, and the Tories come in, such would likewise be their necessary policy; and he added that he was well assured that England and France would be in accord on that subject.

I told him, in reply, that I feared this would form a formidable obstacle, if persisted in, to any treaty; that he must be aware that on all questions affecting African servitude our government was naturally and necessarily sensitive, when presented by any foreign power. We had learned from abundant experience that the antislavery sentiment was always aggressive; that this condition of society was one with which, in our opinion, the destinies of the South were indissolubly connected; that as regarded foreign powers, it was with us a question purely domestic, with which our safety required that none such should in any manner interfere; that, of course, I had no special instructions on the subject, but I thought I knew both the views of our government and people; and that (to express it in no stronger term) it would be a most unfortunate thing if England should make such a stipulation a *sine qua non* to a treaty. I said, further, that I presumed it might be averted, by recognizing mutually the fact that

such a stipulation was not properly germane to a treaty purely commercial; and thus to be laid over as a subject for future negotiation, if pressed. He still maintained as his belief, that no matter who might be in power, it would be insisted on in the first treaty to be formed.

A few days afterwards Mr. Seymour Fitzgerald, passing through town, came to see me. I had known him very well, and during the late session of Parliament had seen a good deal of him. He is a man of ability and influence, was Under Secretary for Foreign Affairs in the Derby administration, and will take the place of Lord Russell, it is supposed, should the Conservatives again come into power; and he, too, is an earnest and sincere friend of our cause.

I told him of my conversation with Lord Donoughmore, and of my surprise at the opinion he entertained. I regret to say that Mr. Fitzgerald coincided fully with Lord D. in these opinions, not as his own, but as those which must govern any ministry in England.

We shall therefore have this question to meet, I take for granted, at the time and in the manner suggested.

I do not ask for any definite instructions in regard to it, but only bring it thus unofficially to the notice of the President and yourself.

Very respectfully and truly yours,

HON. J. P. BENJAMIN.

J. M. MASON.

Mason professes surprise at the nature of the conditions which his Tory friends assured him must form a part of any treaty with the Confederate States to which the Queen's signature could be attached, but it is far more surprising that any American statesman who had reached his age could have needed that information. But the way in which the Confederate diplomatist sought to turn this obstacle was even more surprising still. He says to this representative of a nation of abolitionists that "the antislavery sentiment was always aggressive"; "that this condition of [Southern] society [with slaves] was one with which . . . the destinies of the South were indissolubly connected"; and, finally, that it was a question purely domestic, with which no foreign power could with safety interfere. To understand the effect of such language upon any representative Englishman we should try to imagine the moral effect upon the American Antislavery Society of the late fire-eater Toombs attempting to call the roll of his negroes on Bunker Hill.

At the very time that Lord Donoughmore was saying check to the slavery apostolate in London, Jefferson Davis was receiving what should have been regarded as a more impressive warning from a source that could not be suspected of sentimentalism. Among the agents sent out to Europe at the beginning of the war was William L. Yancey of Alabama, who had sought and fairly won the

reputation of being the champion fire-eater of the country, and who contributed the only piece of pro-slavery rhetoric that seems likely to survive the rebellion, in proclaiming at its beginning the necessity of "firing the Southern heart." The object of his mission, in conjunction with Dudley Mann, was to take advantage of the reverse sustained by the Union army at Bull Run to secure the prompt recognition of the Confederacy by England and France. He returned in a few months, running the blockade at Sabine Pass. "When he arrived in New Orleans," said my informant, who saw him and from whom I had the facts I am about to recite, "he was the most broken-up, demoralized, and wretched-looking man I ever saw." He went to the St. Charles Hotel, then kept by Mr. Hildreth, afterwards manager of the New York Hotel, and immediately sent for William E. Stark and Pierre Soulé. The latter from being a noisy Unionist had been persuaded, by his appointment to the office of Provost Marshal, to fly the colors of the Confederacy. To escape observation and interruption, Yancey, Hildreth, Stark, and Soulé then went out to a restaurant to dine. While absent it leaked out in some way that Yancey had returned and was at the St. Charles, so that when the party returned they found the large domed reception hall of the hotel thronged with people, who no sooner recognized Yancey than they called upon him to address them. He reluctantly mounted the structure which occupies the center of the hall under the dome, "appearing to be the very embodiment of disappointment and despair." He said in substance that he did not bring them glad tidings from over the sea; that Queen Victoria was against them and that Prince Albert was against them. "Gladstone we can manage," he said, "but the feeling against slavery in England is so strong that no public man there dares extend a hand to help us. We have got to fight the Washington Government alone. There is no government in Europe that dares help us in a struggle which can be suspected of having for its result, directly or indirectly, the fortification or perpetuation of slavery. Of that I am certain."

In a day or two Yancey left for Richmond, where he is presumed to have made substantially the same report to the Confederate authorities. He died in about ten days after his arrival. His information, which deserved to be heeded, and if heeded would have led to negotiations which would have promptly led to a termination of the war, had about as much effect upon the lunatics at Richmond as reading the riot act or the Ten Commandments would have upon a pack of wolves. They knew not the time of their visitation.

While Mr. Benjamin and President Davis were chewing the cud of sweet and bitter fancies suggested to their English commissioner by his Tory friends as well as by their own agent, a gentleman from Florida had proposed to Mr. Benjamin that the slaves should be drafted into the army and compelled to fight for the deliverance of their masters from the chains of the old Federal Constitution. To this proposition Mr. Benjamin wrote a reply which for its length is certainly one of the most important contributions ever made to the literature of slavery.

Among those who have never enjoyed the advantage of studying the "peculiar institution" *in situ*, this letter is likely to beget a suspicion that the affection of slaves for their masters, and for the relation in which they stood the one to the other, have been somewhat exaggerated by the slaveholding apostolate.

The extent to which the conversion of a man into a slave reduced his value as a national asset in the time of war or civil disorder — was it ever better stated or more effectively illustrated?

Benjamin to B. H. Micon.

DEPARTMENT OF STATE,
RICHMOND, August 18, 1863.

BENJAMIN H. MICON, Esq., Tallahassee, Fla.

DEAR SIR: I have received and carefully read your letter of 10th instant. It is a subject which has awakened attention in several quarters lately, and which is of an importance too great to admit of its proper treatment within the limits of a letter, nor have I at this moment the time necessary for discussing it at length. With many and obvious advantages, such as you suggest in your letter, there are very grave practical difficulties in the execution of any general scheme of employing negro slaves in the army.

You know, of course, in the first place, that the President has no authority to initiate such a scheme — that it must be devised and matured by Congress. Whether Congress would advise it I know not, but let me suggest hastily a few of the difficulties.

1st. Slaves are property; if taken for public service, they must be paid for. At present rates each regiment of 1000 slaves would cost \$2,000,000, at the very least, besides their outfit, and the government would become a vast slaveholder, and must either sell the slaves after the war, which would be a most odious proceeding after they had aided us in gaining our liberties, or must free them, to the great detriment of the country.

2d. If instead of buying, the government hire them, it would stand as insurer for their return to their owners; it would be forced to pay hire for them besides their outfit and rations; and it would have to pay hire according to the value of their services on a fair estimate. Now negro men command readily \$30 a month all through Virginia. How could we possibly afford such a price, and what would be the effect on the poorer classes of whites in the army, if informed that negroes were

paid \$30 a month, while the white man receives only \$11?

3d. The collection and banding together of negro men in bodies, in the immediate neighborhood of the enemy's forces, is an experiment of which the results are far from certain. The facility which would thus be afforded for their desertion in mass might prove too severe a test for their fidelity when exposed to the arts of designing emissaries of the enemy, who would be sure to find means of communicating with them.

4th. It is far from certain that the male slave population is not doing just as valuable and important service now as they could do in the army. A nation cannot exist without labor in the field, in the workshop, on the railroad, the canal, the highway, and the manufactory. In coal and iron mines, in foundries and on fortifications, we could employ the total male slave population that could possibly be spared from the production of supplies for subsistence. This is the appropriate field for negro labor, to which they are habituated, and which appears at first sight to be altogether less liable to objection than to imitate our enemies by using them in military organizations.

I have not thoroughly studied the subject, but throw out these suggestions as food for thought, although they have probably been considered by you already. On one point, however, I think all must agree, and that is, the absolute necessity of withdrawing all male slaves from any district of country exposed to the approach of an enemy. This is a military precaution which commanders in the field may lawfully take, and to which I shall invoke the attention of the proper department.

Far from deeming your letter intrusive or improper, I see in it nothing but an evidence of patriotism and desire to serve your country, but of course I required no proof that you could not entertain any other sentiments.

Very truly and respectfully, etc.,

J. P. BENJAMIN.

In other words, a negro's labor, in the judgment of the Confederacy, was worth more than a white man's, and therefore his service in the army would be more expensive and his death would prove a greater loss than a white man's.

It was a matter of "absolute necessity" to withdraw "all male slaves from any district

of country exposed to the approach of an enemy." It goes without saying that soldiers who have to be withdrawn at the approach of an enemy would not make a very formidable army. How this absolute necessity is to be reconciled with the negro's alleged devotion to his master is one of the things which Mr. Benjamin failed to explain, doubtless because among slaveholders it was too elementary a topic to be discussed in a state paper.

Mr. de Leon, another missionary of the Richmond government, who was to enlighten the European public through the press with his twenty-five thousand dollar burners,¹ was not long in satisfying himself that "against a rooted prejudice and a preconceived opinion" against slavery which the Confederacy had to contend with in England "reason and argument are powerless," and he advised that no further attempt to secure recognition should be made through their commissioners, but that they should stand on their dignity and let other nations sue them for recognition.

Meantime he would feed the hungry and thirsty in England and France with "Visits to Southern Plantations by a Northern Man," and with "the utterances of Northern opponents of the Lincoln administration, such as the Woods of New York and Mr. Read of Philadelphia."

In fact Mr. de Leon writes as though he thought the Confederate States would get on quite as well without the assistance of any of its commissioners in Europe, an opinion which very few now on either side of the Atlantic do not share, though Mr. de Leon would have felt differently upon the subject, perhaps, if he had been one of the commissioners. Here is De Leon's political evangel.

De Leon to Benjamin.

PARIS, 19th June, 1863.

HON. J. P. BENJAMIN,

Department of State, Richmond, C. S. A.

SIR: . . . The mutual endearments which have passed between the Lincoln and Russian

twenty-five thousand dollars as a secret service fund, to be used by him in the manner he may deem most judicious, both in Great Britain and the Continent, for the special purpose of enlightening public opinion in Europe through the press. Mr. de Leon possesses to a high degree the confidence of the President as a man of discretion, ability, and thorough devotion to our cause. He will bear to you this despatch, and I trust you will give to him on all occasions the benefit of your counsel, and impart to him all information you may think it expedient to make public, so as to facilitate him in obtaining such position and influence amongst leading journalists and men of letters as will enable him most effectually to serve our cause in the special sphere assigned to him. . . .

"I am, sir, very respectfully, your obdt. serv't,

[Signed]

"J. P. BENJAMIN,

"Secretary of State."

¹ On the 12th April, 1862, Mr. Benjamin wrote Mr. Mason at London: "I have arrived at the conclusion that the interests of the Confederacy require a more liberal appropriation of the funds of the department in our foreign service. With enemies so active, so unscrupulous, and with a system of deception so thoroughly organized as that now established by them abroad, it becomes absolutely essential that no means be spared for the dissemination of the truth and for a fair exposition of our condition and policy before foreign nations. It is not wise to neglect public opinion, nor prudent to leave to the voluntary interposition of friends, often indiscreet, the duty of vindicating our country and its cause before the tribunal of civilized men. The President shares these views, and I have therefore, with his assent and under his instructions, appointed Edwin de Leon, Esq., formerly consul general of the United States at Alexandria, confidential agent of the department, and he has been supplied with

despotisms have greatly edified and surprised the European world and have embarrassed not a little the democratic friends of "the model republic" who are rabid partisans of Poland. To cover their chagrin they have revived the old cry of slavery, the real *bête noire* of the French imagination.

In England too the same claptrap has been revived, and to counteract it I have caused to be republished and widely circulated the pamphlet which you will receive with this despatch, "Visits to Southern Plantations by a Northern Man" — republishing a French version also in a very widely circulated paper. To affect the public sentiment of England free use has been made of the utterances of Northern opponents of the Lincoln administration, such as the Woods of New York and Mr. Read of Philadelphia. I have caused to be republished, with an introduction written by myself, the very outspoken sentiments of the latter gentleman to the Northern Democracy, and its circulation has done much good. A copy of this also is sent you. Almost incredible as it may appear, the slavery question is more of a stumbling block to our recognition in France than in England, for it is really and truly a matter of sentiment with the French people, who ever have been more swayed by such consideration than their cooler and more calculating neighbors on the other side of the Channel.

From the hour of my arrival here until to-day the same thing has been repeated over and over again by persons connected with the government and enjoying the confidence of the Emperor — "France cannot take the lead in acknowledging the Southern Confederacy without some promise for prospective emancipation." The same statement was made by one of our warmest friends in the French ministry, and one nearest the Emperor, — Count de Persigny, — but three days ago, and M. de Lesseps says the same. It is vain to tell them how utterly impracticable such a proposition must be, and that the Southern people never would consent to purchase recognition at the price of such a concession of wrong-doing as it would imply; the answer is always the same — "Well, then, the feeling of our people compels us to make the condition."

Against a rooted prejudice and a preconceived opinion like this reason and argument are powerless, and the concessions demanded would deprive the gift of all value if recorded, besides humiliating us to the level desired by our enemies. Therefore it is that, despairing of removing by diplomatic efforts the calculating selfishness of England and the sentimental repugnance of France, I have counseled, and now reiterate the suggestion, the entire suppression of the attempt made through accredited commissioners in Europe for recognition, waving the question of the heavy expenditure thereby incurred, and placing the matter on the footing of self-respect and true policy. I may add also that in the opinion of influential and sagacious French statesmen such a step would produce a most favorable impression on the public sentiment here, which responds to such appeals.

Very respectfully,
EDWIN DE LEON.

After reading this suggestion of De Leon for mitigating the diplomatic representation of the Confederacy in Europe, it is not surprising that a pretext for relieving its author from his costly duty was soon found. He was regarded by Slidell from the first rather as a spy upon him than as an auxiliary, and that they would not get on harmoniously together needed no prophet to foresee. Besides, De Leon's curiosity got the better of his judgment, and he fell into the habit of opening Slidell's despatches, a practice eminently fitted to strain the relations between these "high concocting powers." In less than six months after De Leon's suggestion reached Richmond his head was in the basket. Writing of this matter to Slidell on the 28th of January, 1864, Mr. Benjamin says:

Your No. 50 despatch in relation to Mr. De Leon bears nearly the same date as my despatch to you on the same subject, and requires no special remark. While appreciating the motives which induced your forbearance from complaint, I cannot but think that the department ought to have been apprised earlier of the facts related in your despatch, especially as to his opening, without the slightest warrant of authority, the sealed despatches addressed to you and committed to his care. This fault was of so very grave a nature that it alone would probably have sufficed to put an end to Mr. De Leon's agency, and we should have thus been spared the annoyance of the scandal created by the interception and publication of the objectionable correspondence which caused his removal.

How mysteriously slavery seemed to increase the friction in every part of the Confederate machinery!

President Davis did not reply as promptly as he might have done to his English commissioner's despatch of November 4, in relation to the antislavery clauses with which it would be necessary to decorate any treaty of alliance of the Confederate States with Great Britain. Perhaps he thought no people so intelligent as the English really cared whether their cotton was grown with free or slave labor, or whether their ships trading with Africa brought away negroes or elephants' tusks; perhaps there was not entire harmony of opinion upon the subject among his advisers; perhaps deference to Mr. Mason's notification that he needed no instruction influenced them. Whatever may have been the reason, several months elapsed before the Richmond Government was agreed upon the instructions it should give to its commissioners. In January, 1864, it finally sent to the commissioners the following despatches, the first unofficial and the second official:

Benjamin to Mason.

(Unofficial.)

DEPARTMENT OF STATE,
RICHMOND, January 15, 1863.

HON. JAMES M. MASON, etc., London.

DEAR SIR: Your unofficial communication, inclosed in despatch No. 20, was duly received. We are greatly surprised at its contents, but the suspicions excited abroad through the numerous agencies established by the Northern Government, of our intention to change the constitution and open the slave-trade, are doubtless the cause of the views so strongly expressed to you by Lord Donoughmore and others.

After conference with the President, we have come to the conclusion that the best mode of meeting the question is to assume the constitutional ground developed in the accompanying despatch, No. 13. If you find yourself unable by the adoption of the line of conduct suggested in that despatch to satisfy the British Government, I see no other course than to propose to them to transfer any negotiations that may have been commenced to this side, on the ground of the absence of any instructions or authority to bind your government by any stipulations on the forbidden subject, and the totally unexpected nature of the proposition made to you.

If the British Government should persist in the views you attribute to it, the matter can plainly be disposed of to much more advantage on this side, and it may very well happen that that haughty government will find to its surprise that it needs a treaty of commerce with us much more than we need it with Great Britain. Of this, however, I am sure you will allow no hint to escape you.

Very respectfully, etc.,

J. P. BENJAMIN, Secretary of State.

Benjamin to Slidell and Mason.

Circular.

(No. 12.)

DEPARTMENT OF STATE,
RICHMOND, Jan'y 15, 1863.

HON. JOHN SLIDELL, etc., Paris.

SIR: It has been suggested to this government, from a source of unquestioned authority, that after the recognition of our independence by the European powers, an expectation is generally entertained by them that in our treaties of amity and commerce a clause will be introduced making stipulations against the African slave-trade. It is even thought that neutral powers may be inclined to insist upon the insertion of such a clause as a *sine qua non*.

You are well aware how firmly fixed in our constitution is the policy of this Confederacy against the opening of that trade, but we are informed that false and insidious suggestions have been made by the agents of the United States at European courts of our intention to change our constitution as soon as peace is restored, and of authorizing the importation of slaves from Africa. If therefore you should find in your intercourse with the cabinet to which you are accredited that any such impressions are entertained, you will use every proper effect to remove them;

and if an attempt is made to introduce into any treaty which you may be charged with negotiating stipulations on the subject just mentioned, you will assume in behalf of your government the position which, under the direction of the President, I now proceed to develop.

The constitution of the Confederate States is an agreement made between independent States. By its terms all the powers of government are separated into classes as follows, viz.:

1st. Such powers as the States delegate to the General Government.

2d. Such powers as the States agree to refrain from exercising, although they do not delegate them to the General Government.

3d. Such powers as the States, without delegating them to the General Government, thought proper to exercise by direct agreement between themselves contained in the constitution.

4th. All remaining powers of sovereignty which, not being delegated to the Confederate States by the constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people thereof.

On the formation of the constitution, the States thought proper to prevent all possible future discussions on the subject of slavery by the direct exercise of their own power, and delegated no authority to the Confederate Government save immaterial exceptions presently to be noticed. Especially in relation to the importation of African negroes was it deemed important by the States that no power to permit it should exist in the Confederate Government. The States by the constitution (which is a treaty between themselves of the most solemn character that States can make) unanimously stipulated that "the importation of negroes of the African race from any foreign country other than the slave-holding States or Territories of the United States of America is hereby forbidden; and Congress is required to pass such laws as shall effectually prevent the same." (Art. I., Sect. 9., Par. 1.)

It will thus be seen that no power is delegated to the Confederate Government over this subject, but that it is included in the third class above referred to, of powers exercised directly by the States.

It is true that the duty is imposed on Congress to pass laws to render effectual the prohibition above quoted. But this very imposition of a duty on Congress is the strongest proof of the absence of power in the President and Senate alone, who are vested with authority to make treaties. In a word, as the only provision on the subject directs the two branches of the legislative department, in connection with the President, to pass laws on this subject, it is out of the power of the President aided by one branch of the legislative department to control the same subject by treaties; for there is not only an absence of express delegation of authority to the treaty-making power, which alone would suffice to prevent the exercise of such authority, but there is the implied prohibition resulting from the fact that all duty on the subject is imposed on a different branch of the government.

I need scarcely enlarge upon the familiar prin-

ciple that authority expressly delegated to Congress cannot be assumed in our government by the treaty-making power. The authority to lay and collect taxes, to coin money, to declare war, etc., are ready examples, and you can be at no loss for argument or illustration in support of so well recognized a principle.

The view above expressed is further enforced by the clause in the constitution which follows immediately that which has already been quoted. The second paragraph of the same section provides that "Congress shall also have power to prohibit the introduction of slaves from any State not a member of, or Territory not belonging to, the Confederacy." Here there is no direct exercise of power by the States which formed our constitution, but an express delegation to Congress. It is thus seen that while the States were willing to trust Congress with the power to prohibit the introduction of African slaves from the United States, they were not willing to trust it with the power of prohibiting their introduction from any other quarter, but determined to insure the execution of their will by a direct interposition of their own power.

Moreover, any attempt on the part of the treaty-making power of this government to prohibit the African slave-trade, in addition to the insuperable objections above suggested, would leave open the implication that the same power has authority to permit such introduction. No such implication can be sanctioned by us. This government unequivocally and absolutely denies its possession of any power whatever over the subject, and cannot entertain any proposition in relation to it.

While it is totally beneath the dignity of our government to give assurances for the purpose of vindicating itself from any unworthy suspicion of its good faith on this subject that may be disseminated by the agents of the United States, it may not be improper that you should point out the superior efficacy of our constitutional provision to any treaty stipulations we could make. The constitution is itself a treaty between the States of such binding force that it cannot be changed or abrogated without the deliberate and concurrent action of nine out of the thirteen States that compose the Confederacy. A treaty might be abrogated by a party temporarily in power in our country at the sole risk of disturbing amicable relations with a foreign power. The constitution, unless by an approach to unanimity, could not be changed without the destruction of this government itself; and even should it be possible hereafter to procure the consent of the number of States necessary to change it, the forms and delays designedly interposed by the framers to check rash innovations would give ample time for the most mature deliberation and for strenuous resistance on the part of those opposed to such change.

After all it is scarcely the part of wisdom to attempt to impose restraint on the actions and conduct of men for all future time. The policy of the Confederacy is as fixed and immutable on this subject as the imperfection of human nature permits human resolve to be. No additional

agreements, treaties, or stipulations can commit these States to the prohibition of the African slave-trade with more binding efficacy than those they have themselves devised. A just and generous confidence in their good faith on this subject exhibited by friendly powers will be far more efficacious than persistent efforts to induce this government to assume the exercise of powers which it does not possess, and to bind the Confederacy by ties which would have no constitutional validity. We trust, therefore, that no unnecessary discussions on this matter will be introduced into your negotiations. If, unfortunately, this reliance should prove unfounded, you will decline continuing negotiations on your side and transfer them to us at home, where in such event they could be conducted with greater facility and advantage, under the direct supervision of the President.

Very respectfully, etc.,

J. P. BENJAMIN, Secretary of State.

How Mason was affected by Benjamin's instruction to have no unnecessary discussions on the slavery clause introduced into his negotiations, and the alternative proposal to transfer the negotiations to Richmond, is not disclosed in his official correspondence, though it may be imagined, and indeed it may be inferred from the following paragraph in a despatch from Benjamin to Mason, written August 4, 1863, only seven months after the despatch last cited.

The perusal of the recent debates in the British Parliament satisfies the President that H. B. M.'s Government has determined to decline the overtures made through you for establishing, by treaty, friendly relations between the two governments, and entertain no intention of receiving you as the accredited minister of this government near the British court. Under these circumstances the President requests that you consider your mission at an end, and that you withdraw with your secretary from London.

Mr. De Leon was not the only person employed to enlighten the public mind of Europe at the Confederacy's expense. There were besides one Henry Hotze, a literary soldier of fortune, whose chief theater of action was London, and James Spence, who was a merchant in Liverpool. They too found that the proslavery banner could not be successfully flown in Europe. Spence was infocent enough to write a book in behalf of the Confederates in which he presumed to denounce slavery in good round terms. He also got Hotze and other partisans of the Confederacy to recommend the Richmond Government to appropriate some money to circulate it, and also to make its author a sort of foreign correspondent of the State Department. The following letters from Secretary Benjamin will show with what success. They will also show how Earl Russell compromised his character as a gen-

tleman, in the secretary's estimation, by snubbing this hybrid London commissioner.

Benjamin to Henry Hotze.

(No. 13.)

DEPARTMENT OF STATE,
RICHMOND, 9th January, 1864.

HENRY HOTZE, Esq., London.

SIR: . . . Your appreciation of the tone and temper of public opinion in France in your Nos. 29 and 31, although not in accordance with the views of the other correspondents of the department, concurs entirely in the conclusion to which I had arrived from the perusal of the principal organs of French journalism. It has been impossible to remain blind to the evidence of the articles which emanate from the best known names in French literature. In what is perhaps the most powerful and influential of the French periodicals, "*La Revue des Deux Mondes*," there is scarcely an article signed by the members of its able corps of contributors which does not contain some disparaging allusion to the South. Abolition sentiments are quietly assumed as philosophical axioms too self-evident to require comment or elaboration, and the result of this struggle is in all cases treated as a foregone conclusion, as nothing within the range of possibility except the subjugation of the South and the emancipation of the whole body of the negroes. The example of San Domingo does not seem in the least to disturb the faith of these philanthropists in the entire justice and policy of a war waged for this end, and our resistance to the fate proposed for us is treated as a crime against liberty and civilization. The emperor is believed by us to be sincerely desirous of putting an end to the war by the recognition of our independence; but, powerful as he is, he is too sagacious to act in direct contravention of the settled public opinion of his people, while hampered by the opposition of the English Government.

I fully appreciate the wisdom and prudence of your suggestions relative to the distinction which ought to be made by the press and by our government between the English Government and people. You will doubtless have observed that the President's message is careful (while exposing the duplicity and bad faith of the English cabinet, and Earl Russell's course of abject servility towards the stronger party and insulting arrogance towards the weaker) to show no feelings of resentment towards the English people. The sentiment of wrong and injustice done to us, of advantage meanly taken of our distresses, of conduct towards our representative in London unworthy of a man possessing the instincts of a

¹ The mildest view of chattel slavery which Mr. Spence dared present to the English people, whose sympathy for the Confederacy he was trying to secure, may be gathered from the following paragraph, which is taken from his book entitled "*The American Union*," p. 131: "In fact slavery, like other wrongs, reacts on the wrong-doer. Taking the most temperate view of it, stripping away all exaggerations, it remains an evil in an economical sense, a wrong to humanity in a moral one. It is a gross anachronism, a thing of two thousand years ago; the brute force of dark ages obtruding into the midst of the nineteenth century; a remnant of elder dispensations whose

gentleman, all combine to produce an irritation which it is exceedingly difficult for the most temperate to restrain, and Earl Russell has earned an odium among our people so intense as to require the utmost caution on the part of those in authority to prevent its expression in a form that would be injurious to the public interests. At the same time we have not failed to observe and to appreciate at its full value the warm and generous sympathy which the intelligent and cultivated classes of English society have exhibited towards us in no stinted measure.

Your remarks in relation to Mr. Spence have been carefully weighed. You have perceived with your usual acuteness the exact embarrassment under which we labor in dealing with this gentleman, whose ability and services to our cause are recognized to the fullest extent. But Mr. Spence must be regarded in one of two respects — either as an English gentleman entirely independent of all connection with our government, and therefore at full liberty to express his sentiments and opinions about our institutions and people; or as an agent or officer of this government, and therefore supposed to speak with a certain authority on all matters connected with our country. In this later aspect it could not be permitted that he should make speeches denunciatory of its policy or institutions. No man can reconcile the exigencies of these two positions, and if connected with the government, Mr. Spence must of necessity forego the expression of his individual opinion on points where they differ from those of the government which he serves. Now this is precisely what I understand Mr. Spence is unwilling to do. I send you inclosed an answer to a letter he has written to me, which you may read before sailing and forward it to him.

I am, very respectfully,

Your obedient servant,

J. P. BENJAMIN, Secretary of State.

Benjamin to James Spence,

DEPARTMENT OF STATE,
RICHMOND, January 11, 1864.

JAMES SPENCE, Esq., Liverpool.

SIR: . . . I feel some embarrassment in replying to your observations on the subject of slavery, but will be entirely frank in what I have to say. I freely admit that, as a private gentleman entirely disconnected from this government, you could not, consistently with self-respect, conceal or color your true sentiments on this or any other question in which principles are involved. It is also quite probable that the fact of your entertaining the opinions which you profess renders

harsh spirit was law, in conflict with the genius of Christianity, whose mild spirit is love. No reasoning, no statistics, no profit, no philosophy, can reconcile us to that which our instinct repels. After all the arguments have been poured into the ear there is something in the heart that spurns them. We make no declaration that all men are born equal, but a conviction — innate, irresistible — tells us, with a voice we cannot stifle, that a man is a man, and not a chattel. Remove from slavery, as it is well to do, all romance and exaggeration, in order that we may deal with it wisely and calmly, it remains a foul blot, from which all must desire to purge the annals of the age."

your advocacy of our cause more effective with a people whose views coincide with yours, and it would be folly on our part to request the aid or alienate the feelings of those who, while friendly to our cause, are opposed to the institutions established among us. On the other hand, it appears to me that candor requires on your part the concession that no government could justify itself before the people whose servant it is, if it selected as exponents of its views and opinions those who entertain sentiments decidedly averse to an institution which both the government and the people maintain as essential to their well-being. The question of slavery is one in which all the most important interests of our people are involved, and they have the right to expect that their government, in the selection of the agents engaged in its service, should refuse to retain those who are in avowed and public opposition to their opinions and feelings. I answer your appeal, therefore, by saying that, "as a man of the world," I would meet you on the most cordial terms without the slightest reference to your views on this subject; but that, "as a member of a government," it would be impossible for me to engage you in its service after the publication of your opinions.

While therefore it would be most agreeable to me to receive from you at all times any communications of facts, views, or opinions which you might be good enough to send to me, and while such communications would be very valuable from you as a private gentleman, my public duty compels me to forego the advantage of establishing an official relation between us, although quite sensible of the value which would result from such relation.

I am, with great respect,

Your obedient servant,

J. P. BENJAMIN, Secretary of State.

Looking back to these letters written a quarter of a century ago, the infatuation of these Richmond statesmen seems to have approached, if it did not reach, the stage of dementia. They depended for the success of their revolt, as they confessed, upon the sympathy and co-operation of two powerful European states, in neither of which could be found a single statesman who would have dared to speak of slavery in any public assembly except in terms of abhorrence. Yet, in full view of this notorious fact, they proclaimed in an official note that they could accept the services of no one who was publicly identified with the antislavery opinions proclaimed by Mr. Spence. The man who should refuse to go down stairs because he was unwilling to accept the services of the law of gravitation would scarcely be a more fit subject for a commission of lunacy.

Mr. Dudley Mann, whom President Davis sent to Rome to convert the Pope, was also pleased to take the Richmond view of Mr. Spence's efforts to place the Confederates with their backs to the sun. He deprecated the

efforts of Mr. Spence, and such as he, to de-africanize the issue. He called it keeping up the slavery agitation in the following letter to Benjamin, dated some twenty days after Benjamin's letter to Spence was written, and after its purport had transpired in England. The time is significant, because Mann was a courtier, and since his interview with Pio Nono he had been indulging aspirations. Though two of a trade can rarely agree, Mr. Mann would probably not have written so harshly about Spence if the latter's efforts to put the Confederates on "praying ground" in England had been approved of in Richmond.

A. Dudley Mann to J. P. Benjamin.

40 ALBEMARLE STREET, LONDON,

January 29, 1864.

SIR: . . . Herewith I transmit the prospectus of the "Southern Independence Association of London." British subjects undoubtedly have the right to do and say what they choose, as relates to any influence which our country can exercise over their doings and sayings, but it is lamentable to perceive that our professed and — as I am inclined to believe — well-disposed friends have committed themselves to the keeping up of an agitation against the cherished institution of the States composing our Confederacy, even after our recognition. Exeter Hall itself could do nothing more hurtful to our general interest. We have no conditions to make with Englishmen or with England as respects the active management by ourselves of our own internal affairs. Rome required nothing whatever in this regard. My explanations to the Sovereign Pontiff upon the subject were satisfactory to him, and he did not, in the slightest manner, allude to the matter in the letter which in virtue of his eminent position he wrote to the President.

It is supposed, but whether correctly or not I cannot undertake to say, that Mr. James Spence is the author of the offensive paragraph — the same gentleman who has the reputation of being, *par excellence*, the British champion of our cause. Personally I do not know this individual, who is represented as one of high worth of character, but I have always had a horror of would-be champions of public causes. Their zeal for success, often for their own selfish glorification, is most frequently unsustained by the prudence of sound common sense.

In the cast of the committee there are very elevated, and to myself several truly dear, names; but I would be willing to endure the pain of severing my social relations forever with those who bear them if I could conceive that they were capable of connecting us with an unceasing antislavery agitation. It is scarcely possible that each of the members of the committee perused the prospectus. Mr. Gregory, I know, has been, as well as others, a long time absent from the metropolis. I have the honor to be, sir, etc.,

A. DUDLEY MANN.

Hon. J. P. BENJAMIN,

Sec'y of State, C. S. America, Richmond, Va.

The following is the offensive paragraph which so wounded the sensibilities of Mr. Mann. It is the closing paragraph of the circular of the Southern Independence Association.

This Association will also . . . in particular steadily but kindly represent to the Southern States that recognition by Europe must necessarily lead to a revision of the system of servile labor unhappily bequeathed to them by England, in accordance with the spirit of the age, so as to combine the gradual extinction of slavery with the preservation of property, the maintenance of the civil polity of the true civilization of the negro race.

Mr. Mann is pleased to contrast the politeness of the Pope in his treatment of the slavery question with the officious indiscretion of "would-be champions of public causes" in England. "My explanations to the Sovereign Pontiff . . . were satisfactory to him," says Mr. Mann.

As the views of the Papacy on the question of slavery are interesting at all times, and its opinions at the time of Mr. Mann's writing were especially so, let us see what were the explanations which Mr. Mann submitted, and what were the views that proved so satisfactory to his Holiness.

In his letter to Benjamin, giving an account of the interview at which he presented the letter of Jefferson Davis to Pius IX., Mr. Mann says:

His Holiness now stated, to use his own language, that "Lincoln and Co." had endeavored to create an impression abroad that they were fighting for the abolition of slavery, and that it might be judicious in us to consent to gradual emancipation. I replied that the subject of slavery was one over which the government of the Confederate States, like that of the old United States, had no control whatever; that all ameliorations with regard to the institutions must proceed from the States themselves, which were as sovereign in their character, in this regard, as were France, Austria, or any other continental power; that true philanthropy shuddered at the thought of the liberation of the slave in the manner attempted by Lincoln and Co.; that such a procedure would be practically to convert the well-cared-for civilized negro into a semi-barbarian; that such of our slaves as had been captured or decoyed off by our enemy were in an incomparably worse condition than while they were in the service of their masters; that they wished to return to their own homes, the love of which was the strongest of their affections; that if, indeed, African slavery were an evil, there was a power which in its own good time would doubtless remove that evil in a more gentle manner than that of causing the earth to be deluged with blood for its Southern overthrow.

His Holiness received these remarks with an approving expression.

Considering how much space Mr. Mann devoted to the exposition of his own views in this interview, the compactness of his report of the wary old pontiff's reply is disappointing. The envoy favors Mr. Benjamin with his own speech verbatim, but when it is the Pope's turn we are only told that the interviewer's speech was received "with an approving expression." What that expression was is left to the reader's imagination. That a smile at Mr. Mann's simplicity was a part of it may safely be assumed. The Italians are famous for their unwritten speech; for their inexhaustible store of shrugs, exclamations, and gestures, which sometimes mean a great deal, but which cannot be parsed nor subjugated to the rules of grammar. It would not be strange if Mr. Mann, who had never been in Italy before, had failed to gather up all the fragments of meaning that had fallen from the pontiff's lips with his "approving expression," as he certainly did misconceive the tenor and import of the Pope's written communication to Jefferson Davis, with which he had been intrusted. Nor did he seem to have duly weighed the import of his Holiness's inquiry whether *it might not be judicious* for the Confederates *to consent to gradual emancipation*.

In his first interview with the Emperor of France in July, 1862, Mr. Commissioner Slidell also encountered the slavery question, but his mind was put at ease upon that subject as readily as Mann's was by the Pope and very much in the same way.

"He asked me," said Slidell, "whether we anticipated any difficulty from our slaves." I replied that they had never been more quiet and more respectful, and that no better evidence could be given of their being contented and happy. This was the only reference made to slavery during the interview, but to Slidell's divining spirit it was conclusive.

How the Arcadian picture here given of the slaves in the South was to be reconciled with the scenes of bloodshed and rapine which we were told were to follow their liberation is one of the problems which the emperor does not appear to have invited Mr. Slidell to grapple with.¹ Perhaps the slaves were as contented and happy as Bluebeard's last wife when she saw the dust and heard the clatter of the hoofs of her brothers' horses, and for similar reasons.

It is a curious fact that none of Mr. Davis's diplomatic representatives in Europe ever seemed up to this time to have entertained

¹ Benjamin, not long after this interview, in a tirade against the Union people, addressed to Slidell, charged them with exciting slaves to murder their masters. If anything can demonstrate the predestination of the African for slavery, it is the fact here stated, if fact it be, that they could be excited to murder masters who made them so happy.

the thought of conciliating public opinion in Europe, on which they knew from the very beginning of the war that their success depended, by sacrificing slavery or even by treating it as second in importance to any other political right or privilege. What is yet more curious, until the Confederate Government had returned to the gases in which it had its origin these gentlemen seem to have counted confidently upon a conversion of the world to their views. This is the burden of the very last official communication on this subject penned by Commissioner Mason. It ran as follows:

Mason to Benjamin.

(No. 1.)

OFFICE OF THE COMMISSIONER OF THE CONTINENT,
16 RUE DE MARGNAN, PARIS.

January 25, 1864.

The HON. J. P. BENJAMIN, Secretary of State.

SIR: As some evidence that we have earnest and active friends in high position there, I inclose a circular recently issued by the "Southern Independence Association of London," and which fully explains itself. With most of the members of the committee I have a personal acquaintance, and am, with many of them, on terms of intimate relation. As of like character, I inclose also another circular, just issued at London, under auspices of which I am fully aware, by a society for "Promoting the Cessation of Hostilities in America," which also discloses its object. It is important to note that both these movements are purely of English origin; their promoters have indeed freely consulted with me, but not until after the respective plans were devised and to some extent matured by themselves. They are really, as they import, views of Englishmen addressed to the English people, and in this light is to be received the concluding paragraph in the circular of the "Southern Independence Association of London." My attention has been called to it by more than one of my countrymen hereabouts, to whom my answer has always been: it is a view presented by Englishmen to their own people, and it is not addressed to us; it remains their affair, and for which we are in no manner responsible.

In my conversations with English gentlemen I have found it was in vain to combat their "sentiments." The so-called antislavery feeling seems to have become with them a "sentiment" akin to patriotism. I have always told them that in the South we could rely confidently that, after independence,—when our people and theirs became better acquainted by direct communication, when they saw for themselves the true condition of African servitude with us,—the film would fall from their eyes; and that in meantime it was not presumptuous in us to suppose that we knew better than they did what it became us to do in our affairs. . . .

I have the honor to be, sir, etc.,

J. M. MASON.

Though the thought of sacrificing slavery for success does not seem to have entered the

minds of the diplomatic representatives of the Richmond Government, the logic of events was not so completely lost upon the ruined and suffering people at home. On the 20th of June, 1865, Mr. Duncan F. Kenner of Louisiana called at the United States Legation in Paris to take the oath prescribed by the President in his amnesty proclamation of the 29th of May. In communicating the record of the oath to the Secretary of State the minister added:

Mr. Kenner left with me the memorandum of which Inclosure No. 2 is a copy, and he wished me to say that while he had yielded to the pressure of public opinion about him so far as to cast his fortunes with the enemies of his country in the late rebellion, he is now satisfied that the whole movement was a mistake, and he is anxious to be restored to the privileges of a citizen of "the United States." He also hoped for a favorable decision as early as possible, as his family, now in Louisiana, stand in pressing need of his protection.

The memorandum referred to as Inclosure No. 2 ran as follows:

Mr. Kenner is a native of Louisiana, where he has constantly resided. He is fifty-two years of age, passed. He has never held any office or position of any kind under the Federal Government. He took no part in bringing about secession, never was a member of any meeting or convention gotten up for the purpose of inducing the State to secede from the Union. Was educated in the South, and had been led to believe that in the double relation of citizen of the United States and citizen of Louisiana he owed allegiance first to his native State. Acting under this conviction, when the State of Louisiana seceded he followed her destiny, and was subsequently elected a member of the Richmond Congress. The class of exceptions in the President's proclamation under which he comes are Nos. 1 and 13—under No. 1 as a member of Congress, and under No. 13 as having property estimated over \$20,000 in value.

In January he succeeded in passing through the military lines and came to Europe, in the hope of being joined by his family, who are still in Louisiana. Hence his being here at the present time.

PARIS, June 20, 1865.

Mr. Kenner, in the last paragraph of the foregoing memorandum, assigned one of the reasons correctly for his being in Paris at that time. There were others, which he naturally did not assign, but which have a most interesting relation to the subject under consideration.

Kenner was a member of the Confederate Congress. He had long been satisfied that it was impossible to prosecute the war to a successful issue without a recognition of the Confederacy by at least one of the maritime powers of western Europe, into the ports of which the

Southern States might carry their prizes, make repairs, and get supplies. He was also satisfied that they would never secure recognition or any substantial aid so long as the foundations of their projected new empire rested on slavery. He communicated these views to President Davis. The President asked what he had to propose in the premises. He said he wanted the President to authorize a special envoy to offer to the governments of England and France to put an end to slavery in the Confederacy if they would recognize the South as a sovereign power. The President consented to submit the suggestion to several of the leading members of the Congress, by some of whom it was roughly handled.¹

They protested that the emancipation of the slaves would ruin them, etc. Mr. Kenner told them that he and his family owned more slaves, probably, than all the other members of the Congress together, and that he was asking no one to make sacrifices which he was not ready to make himself. The result of the consultations was that Kenner himself was sent abroad by President Davis, either with or without the confirmation of the Senate, with full powers to negotiate for recognition on the basis of emancipation. As soon as he received his commission he took a special train to Wilmington, N. C. On his arrival there he found either that the blockade was too strict, or that there was no suitable transportation available from that port, and returned at once to Richmond, determined to go by the way of the Potomac and New York. When he mentioned his purpose to Davis, "Why, Kenner," he exclaimed, "there is not a gambler in the country who won't know you. You will certainly be captured." Kenner had been one of the leading turfmen in the South for a generation. "I am not afraid of that," said Kenner. "There is not a gambler who knows me who would betray me. I am going to New York."

Being a very bald man, Kenner provided himself with a brown wig as his chief if not only disguise, and proceeded on his journey. By hook and by crook he finally reached New York and drove to the Metropolitan Hotel. Here, discovering that the waiters were colored, and that there were too many chances of some of them knowing him, also that ex-

Senator Foote of Mississippi, who had deserted the Confederates, was residing at this hotel, he sent a note at once to Mr. Hildreth, then managing the New York Hotel, and an old and trusty friend, saying that he wished a certain room on the lower floor and north side of the hotel made ready for him, and named the hour that he might be expected, adding that he could not sign the letter, but was a friend. At the time named he went to the hotel and directly to the room he had ordered. The fireman was preparing a fire. While at his work at the grate the door opened, and in walked Hildreth to see who his "friend" and new lodger might be. Upon recognizing Kenner he exclaimed, "Good God!" He was checked from continuing by observing Kenner's fingers on his lips. They talked upon indifferent matters until the fireman left, and then Hildreth asked Kenner what could have brought him to New York at such a time. "Do you know," said he, "that it is as much as your life is worth to be found here?" "I am going to sail in the English steamer on Saturday," said Kenner, "and I wish to stay with you quietly until then. You can denounce me to the government if you choose, but I know you won't." Kenner did not leave his room till he left it in a cab for the steamer. His meals were served in his room by Cranston's personal attendant.

As soon as Kenner arrived in London he sought an interview with Palmerston, to whom he unfolded his mission. Palmerston said that his proposition could not be entertained without the concurrence of the Emperor of France. "With the Emperor's concurrence would you give us recognition?" asked Kenner. "That," replied Palmerston, "would be a subject for consideration when the case presents itself, and may depend upon circumstances which cannot be foreseen."

Kenner went to Paris and had an interview with the Emperor, who told him he would do whatever England was willing to do in the premises, and would do nothing without her.

Kenner then returned to Palmerston to report the Emperor's answer. During his absence, the news of Sherman's successful march through the South had reached London. Palmerston's answer to him was, "It is too late."

John Bigelow.

¹ The writer was informed that the proposition was debated in the Congress, but he has not succeeded in finding any record of such debate. Mr. Ben C. Truman, speaking of Robert Toombs of Georgia, in a communication to "The New York Times" of July 24, 1890, said, "Toombs believed that if the South had

made the abolition of slavery a part of its policy it would have had England and France on its side, and that the Confederacy would have succeeded."

If the South had made the abolition of slavery a part of its policy there would have been no war, and the Confederate maggot would never have been hatched.

PIONEER MINING IN CALIFORNIA.

The Earth at the end of the Diggings.
(Reprinted from "Punch.")

EUREKA! We have found it! The coast had many hours been anxiously watched through glasses to discover the Golden Gate, and there it was. Our long voyage of ninety-seven days from

Panama was about over. The old brigantine, leaking at every seam, was headed for the opening between the rocky headlands, and in the bright moonlight, August 4, 1849, she slowly made her way, all sails set, into the magnificent bay of San Francisco. She rounded Clark's Point, and before dawn swung with the tide up to the spot occupied by the rear end of Montgomery block, between Montgomery and Sansome streets, now a half-mile inland from the water-front of San Francisco.

It was an exciting hour. We had received no news from home since our departure from New York on the 1st of March, and everybody was eager to get ashore for letters and papers. Not far away was a little shell of a building, probably sixteen feet square, erected on four posts, each resting on a hoghead filled with stones and thus stayed in the mud. From this a plank ran to *terra firma*. The sun had not risen when we landed from our iron cockle-shell and wandered in squads through a straggling village, chiefly of tents; only a few wooden houses had yet been built, while three or four adobe structures told of Mexican occupation. Sand-dunes were plenty, and when the winds came in from the Pacific the dust made lively work, and gave us our first lessons in Californian climatology.

With the morning light the tents gave forth their sleepers, and such a motley tenantry! And such a stir! Americans in great variety of dress, natives of the islands, with a picturesque mingling of Mexicans in wide trousers and short jackets with a profusion of small globular buttons, their shock heads thrust through slits in their serapes and topped off with brown, sugar-loaf-crowned, broad-brimmed, heavy felt sombreros.

Ship-fare had given us a longing for a fancy breakfast. A restaurant-sign attracted me, and I went in. The table was a bare plank against one of the walls of the tent; the plates and

cups were of tin, and the meal consisted of fried beef, bread, and black coffee. The bill was three dollars.

Some of the largest tents were devoted to gambling on a large scale, though the vice had not reached the magnitude of succeeding years, when the El Dorado gambling-tent paid a rental of \$40,000 a year, and \$20,000 were staked on the turn of a card. In those early days these gambling-tents were the most attractive places in the larger towns. They were commodious, and were about the only places warmed by fires; they had well-furnished and somewhat tasteful bars, where liquors were dispensed at a dollar a glass. Tables were distributed along the sides, and in rows through the middle, at which monte, faro, vingt-et-un, roulette, lansquenet, and I do not know how many other games were played. When the whole was ablaze with lights of an evening, an occasional woman seen assisting at the games, and a band of music or singers giving forth a concourse of sweet sounds, crowds surged before the bar and around the tables, some attracted by the novelty, some to get warm, but more to try their luck.

Our stay in San Francisco was but for a day or two. We had come to mine for gold, and though the inducements for business in the incipient city were flattering, even wages commanding eight to ten dollars a day, or a dollar an hour, we determined to push on to the mines. Glowing accounts induced us to try the southern mines, and a passage to Stockton was secured on an old tub of a schooner at the rate of three ounces of gold, or thirty-six dollars, per head. The deck was crowded with men of every nationality. The rolling hills, tawny, and flecked with green trees, bounding the bays of San Francisco, Suisun, and San Pablo, were novel and interesting. The very color of the earth, covered with wild oats or dried grass, suggested a land of gold. The sight was inspiring. But when we reached the mouth of the San Joaquin our miseries began. This river has an extraordinarily tortuous course almost entirely through tule, or marshlands, that in 1849 produced bushels of voracious mosquitoes to the acre. I had never known the like before. It seemed as if there was a stratum of swarming insect life ten feet thick over the surface of the earth. I corded my trousers tight to my boot-legs to keep them from pulling up, donned a thick coat, though the heat was intolerable, shielded my neck and face with handkerchiefs, and put on buckskin gloves, and in

that condition parboiled and smothered. In spite of all precautions our faces were much swollen with the poison of numberless bites. To escape the hot sun we took refuge below deck, and to drive away the pests a smudge was made on some sand in the bottom of the boat, which filled the hold almost to suffocation. The mosquitoes were too ravenous to be wholly foiled by smoke. I think I never endured such vexation and suffering. Sleep was impossible. The boat had to be worked by hand around the numerous bends, and half the time the sails were useless for want of wind. It was a burning calm in the midst of a swamp. But even in our distress there was a humorous side, provoking grim smiles at least.

We finally arrived at Stockton, then also a village of tents. The newest style of architecture called for light frames on which canvas was tacked for sides and roof. There was no need of windows except for air currents, light enough coming through the cloth. We were impatient to go on to our destination, the Big Bar of the Mokelumne River, and soon were on the way with pack-mules and horses hired for the purpose. Camping on the bank of the Calaveras the first night, we were treated to our first serenade by coyotes. A peculiarity of this small wolf is that he can pipe in any key, fooling you with the belief that he has twenty companions, though one little wretch is making all the noise. We passed the plain of the San Joaquin Valley, with its dark, spreading live-oaks, like an old orchard miles in extent, and began the ascent of the foothills. Brown and red soil made its appearance hot and dusty; nut-pines were mingled with oaks and manzanitas, ceanothus, buckeye, and poison oak. Wild oats and burr clover still remained in patches unfound by the cattle of the plain. The air was dry, but grew more bracing. The trail wound among trees, around hills, through ravines, and sometimes up steep ascents, but at last, on the third day from Stockton, after a journey of more than seven thousand miles by land and sea, we reached the mines.

My first impressions were not pleasant. The first miner I saw at his work was a rough, dirty-looking man in a dry ravine. The banks were about as high as his shoulders. A double-barreled shot-gun lay on the edge of the bank within easy reach. He was picking up dry clay and gravel from the bottom of his claim, pulverizing it in his wooden pan with a stone, and then shaking it about till the lighter particles came to the top and were brushed over the rim. The pulverizing and shaking continued until a small quantity of dust and gold was left in the bottom. The dust was blown out with the breath. This process was called "dry washing."

The Big Bar of the Mokelumne lay in the gorge six or eight hundred feet below. The sight was not at all inspiring. What in mining parlance are called "bars" are deposits of sand, gravel, clay, and boulders made by rivers, usually opposite the angle of a bend. Sometimes these are small, and sometimes several acres in extent, and vary from a few inches to ten feet or more in depth to the bed-rock. Our bar, as its name denotes, was a large one, of perhaps five or six acres, covered with boulders from a few pounds' weight to several tons. A few tall pines were scattered over it, and here and there were a number of tents. Though perhaps a hundred miners were at work, the river went merrily on unstained to the sea. Down the steep banks of the gorge we went, stirring up the red dust and covering ourselves with it from head to foot. The animals did not like so steep a trail, and would have their own way among the timber, loosening the packs; but we made the descent with average success. On the bar we found friends that we had made in Panama, who had preceded us a few days, long enough to speak the vernacular of mining and to pride themselves on being "old miners," assuming as such to know just where the gold would be found in the largest quantities, and where to expect the least.

And now my mining life began. It was as free from restraint as the air that came through the sighing pines. Only Mexican law could be said to exist, and in all the mining region there were no officers to enforce its feeble demands. Every man was a law unto himself, and it is little to say in behalf of the pioneers of California that they carried the laws of justice and humanity in their hearts to such a degree that no more orderly society was ever known on the face of the earth than in those early days.

Pioneer mining life—what was it? The miner must have an outfit of a pick, pan, shovel, rocker, dipper and bucket of wood, or of rawhide. A tent was good to have, but he could make shift during the dry season with a substitute of boughs, for there was no fear of rain from May to October. A blanket of rubber spread on a stratum of leaves, on which his woolen blankets were laid, sufficed for a bed. His culinary utensils were confined to a frying-pan, a small iron pot, tin cups and plates, knife, fork, and spoon. His wardrobe consisted generally of a pair of serviceable shirts, a change of trousers, strong boots, and a slouch-hat. With these, and a supply of bacon, flour, salt, saleratus, beans, a few candles, and occasionally fresh beef, the miner was ready for work. His luxuries were tea and raw sugar, with occasionally the addition of dried peaches from Chili. His bread was made by mixing flour, water,

HARRY FENN.)

and saleratus in the tin or iron pan which did double duty in the kitchen and in gathering gold, and baking it about two inches thick, like a shortcake. But slapjacks, the legitimate successors of the Mexican tortillas, were also a standard article of diet. Tin teapots were sometimes affected, but the small iron pot with a hollow handle did duty for both tea and beans or frijoles. The latter were of a brown variety grown in Chili, and were prepared after the Mexican style with a piece of bacon or fresh beef and plenty of chili colorado, or red pepper. They were allowed to cook a long time, often standing in the hot embers over night to be ready for breakfast in the morning. The bill-of-fare did not vary much for breakfast, dinner, and supper.

The most expensive instrument of the early miner was the rocker, which, though simple in construction, cost in the mines from fifty to a hundred dollars. In general appearance it was not unlike a baby's cradle as used by our grandmothers and as still seen on the frontier. It consisted of a flat bottom with two sides that flared outward, and an end board at the head, while the foot was open save a riffle about an inch and a half high at the bottom to catch the gold that might pass another riffle across

the bottom near the middle. At the head of the cradle was a hopper about eighteen inches square, with a perforated sheet-iron bottom or wire screen. Under this was an apron, or board, sloping downward towards the head. Two substantial rockers under the whole completed the simple machine which gave to the world millions of dollars. The *modus operandi* may be described as follows: Two sticks of wood hewn on the upper side were imbedded at the river's brink, one four inches lower than the other, on which the rockers were to rest, thus securing a grade in the machine to facilitate the outward flow of the water and sand. Two miners usually worked together as partners. One shoveled the earth into the rocker, while the other, seated on a boulder or block of wood, dipped the water from the river, and poured it upon the earth in the hopper with one hand, all the time rocking with the other.

THE OLD SACRAMENTO TRAIL NORTH OF DONNER LAKE.

When the earth was thoroughly washed, he rose, lifted the hopper from its place, threw out the stones and gravel, replaced it, and thus the work went on. As the ground about the rocker became exhausted to the bed-rock, recourse was had to the bucket, and the earth was carried sometimes a few rods, making laborious work for the miner. To keep the rocker going another hand would be employed to carry earth, and each would carry two buckets at a time. Hard work of this kind suggested improvements in mining. At noon the gold and black sand collected above the riffles were taken up on a scraper and thrown into the pan, which was carried to the river and carefully washed to remove as far as possible all but the gold. The yield of the forenoon was carried to the camp, dried over a blaze, the dry sand blown out, and the gold weighed in scales or guessed at, and poured into the partnership purse and deposited under the bed or anywhere else out of sight. Few miners thought of weighing themselves down with gold, and few taxed their resources much to find places of concealment. I was in many camps down to 1854, and in none did I ever know of a theft of gold, and I heard of but one, and that was punished by a cat-o'-nine-tails, which was afterward nailed to the center-post of a trader's tent, as a warning to evil-doers.

The gold taken from the river bars was mostly in the form of scales resembling cucumber seeds, and of varying size. It was most plentiful on the bed-rock and in a few inches of soil above it, though sometimes three or four feet of earth would pay to wash. Where the bed-rock was hard the miner cleaned it, for a shovelful of dirt might contain a few dollars in small particles. Where the bed-rock was soft shale or slate on edge the miner picked away an inch or so and washed it, as frequently

the scales were found to be driven quite thickly into the crevices. When the ground was very rich the rocker was cleaned of gold every hour or two. When work was over, around the supper fire the events of the day were discussed, earnings compared, reports made of grizzly bears or deer being seen or killed, of better diggings of "coarse gold" discovered. This was the hour for speculations as to the origin of the gold in the rivers, and a strong opinion was entertained by many who were not well-read that immense masses of the precious metal would some day be brought to light in the snow-capped peaks towering to the east. "Coarse gold" was a charm to the ear of the ordinary miner. His claim might be paying him an ounce a day in fine gold, but he was always interested in some reported diggings far away where the product was in lumps, and not infrequently he left a good mine to seek some richer El Dorado. The characteristic and besetting fault of the early miner was unrest. He was forever seeking better fortune. Yet it was this passion for prospecting that resulted in the discovery of gold in an incredibly short time from the southern end of the San Joaquin Valley to the northern limit of the State. To "prospect" was to find a spot that looked favorable and make an examination of it. The miner would take a pan of earth, shake and gyrate it under water, raising and tipping it frequently to run the dirt and water off, then plunge it again, and so continue until a small residuum of black sand and gold remained. A speck of gold was the "color," several specks were "several colors," and the number and size determined the judgment of the miner whether he should go to work or move on. I have seen ounces taken in this way in a single pan, but in the earlier days

WORKING A CLAIM.

"NOT EVEN THE COLOR."
(COMPOSED FROM AN OLD PRINT.)

we counted a "bit" to the pan, twelve and a half cents, a fair prospect.

The average gain of the miner in those days can never be known. Though he was extraordinarily frank and confiding in the offhand conversations about the camp-fire, yet there is reason to believe that his largest receipts were sometimes not reported. My observation was that the industrious worker rarely brought to his supper less than ten dollars, often an ounce (reckoned at sixteen dollars), and sometimes six ounces, or even more. I myself took from the earth nearly one hundred and fifty ounces in seventeen successive working days. My largest clean-up was \$224. One day, in less than half an hour, I took with my knife from a crevice in the rocks six and a half ounces of gold. When the river went down after it had been swollen by the first rains and had swept over the bed-rock of bars supposed to be worked out, hundreds of glittering scales were left exposed, affording pleasant picking for a day or two.

The nights in the mines were glorious for sleep. However hot the days,—and I have known a thermometer hung on the north side of a pine-tree to show 128° at two o'clock,—the nights were cool, requiring at least one good pair of blankets for comfort. Stretched on the ground under a tent or canopy of boughs, or with nothing but the purest air between him and the stars, the miner was lulled to rest by the murmur of the river or by a coyote, running his remarkable gamut. The great heat did not interfere with work, and there was not a case of sunstroke, nor was the atmosphere sultry or very oppressive. Eighty-eight degrees in the moist climate of Panama made life vastly more uncomfortable.

At first, and until the blue-shirted population became numerous, not much regard was had to the size of claims, the miner occupying about all the ground he desired. But a change soon came. The sense of justice of the first occu-

pants of a locality, inspired, it may be, by the fact that the swarms of new immigrants would soon compel a division, allowed a mining statute limiting claims to a certain size. This varied in the different camps, and depended somewhat on the richness of the earth. Generally each miner was restricted to about fifteen feet front on the river, the claim extending across the bar to the hill, but where the bar was a wide one the length was shortened. In some cases a claim was from fifteen to eighteen feet square. Back from the river and near the foot of the mountain the bed-rock was sometimes ten or twelve feet below the surface, and great labor was required to throw off the top earth to reach the auriferous stratum, and often such deep claims were very wet, calling for constant bailing. Of course such claims must be rich to pay, and some of them were, but it was not always so. I have known days and sometimes weeks of hard work to be spent in one of these pits, to find a smooth bed-rock at last with very lit-

tle gold on it. Now and then, after long and tedious toil and discouragements, the miner "struck his pile," but as often he found nothing but barren rock or gravel.

Mining is one of the most fascinating and exciting of employments. But in the earlier days, when we knew less about genuine indications, mining was, more than now, a species of gambling. The effects are yet to be seen in hundreds of men still living near their old haunts, who, in common phrase, have "lost their grip"; others live in our memories who, after repeated disappointment, sleep on the mountain sides in nameless graves. Yet these same unfortunates did their part in giving to the world thousands of millions of dollars,

SURFACE SLUICING.

LONG TOM. (COMPOSED FROM A LITHOGRAPH, BY BRITTON & REY, PUBLISHED ABOUT 1849.)

thus stimulating progress probably more than was ever known in any other epoch of similar length in the history of mankind.

The early miner soon observed in working by the river's shore that the pay dirt sometimes extended down under the water, and he was not slow in going after the yellow metal wherever it was to be found. Large prospects suggested turning the stream from its bed to work the bottom, and this was usually done by digging a canal across the bar, or by carrying the water in a wooden flume over the channel or across the bends. I have seen companies of men, filled with enthusiasm and confidence, at work for weeks until the river-bed was laid bare, to find only a narrow strip of pay ground along the edge. But in some cases the reward was enormous.

One Sunday in September, 1849, putting on my "store clothes" and "biled shirt," brought along from the old home in utter ignorance of the real life I was to lead in the mines, I went on a pedestrian trip of observation down the river. The air of the morning was like champagne. The shaking of rockers or rattle of stones thrown from hoppers was little heard. Miners were washing their clothes by the side of the river. Camp-fires smoked everywhere, and many resting or sleeping men were stretched on buffalo-ropes or blankets under trees and brush awnings. The trail was across rocky bars, stony points, and along the steep sides of the hills. I had sauntered for three or four miles when, on rounding a point, a busy and novel scene burst on my view. Files of Mexicans were coming and going, bearing earth in wooden bateas on their heads to make a dam in order to turn the stream. The work was being superintended by a stalwart American, the projector of the enterprise, in broad sombrero, and reclining on a serape spread on the bank, reminding one of a planter with his slaves. It proved to be Colonel James,

who was afterwards a distinguished criminal lawyer of San Francisco. I learned from him that the dam, after weeks of labor, was nearly completed; an hour more and the river would be flowing in an old channel. My curiosity was excited, and I remained to see the result of his venture. When the water was drawn off, the bed of the river presented the appearance of successive strata of hard slate, on edge, from three or four inches to a foot or more apart, the softer slate or shale between having been worn out and the depressions partly filled with sand and gravel. These strata on edge extended diagonally across the channel, forming an abundance of natural riffles to catch and retain the gold. My recollection is that the bed of the river had been laid bare to an extent of 200 yards in length by 60 feet in width. The great moment of expectation had come. By invitation I followed the colonel, who carried a pick, a pan, a shovel, and a small tin cup. It was plain there would be little gravel to wash, as the claim was on the slope of a "rapid," the grade being so great that most of the light material borne by the waters had been carried over. The shovel at once showed the wealth of one of the crevices, and I distinctly saw the colonel take his tin cup by the handle and scrape up from the bottom of the crevice a few handfuls that seemed to me to be half gold. I did not stay to see the gold washed, but I can safely say that I saw at least a thousand dollars go into the pan in half an hour.

I had seen enough to make a rosy report, and soon was a member of a company to turn the river near our camp on the bar. We dammed the river, the bed-rock of which was smooth and barren. It was no child's play, working in the water in the hot sun, sometimes up to our necks, laying boulders into a wall across the stream, and filling in above with the red clay of the mountain side. Miners would

MARYSVILLE BUTTES, A LANDMARK OF THE SACRAMENTO VALLEY.

A RUSH FOR NEW DIGGINGS.

pass and repass, envy us our claim, and chances were numerous to sell out interests at good figures; but we had come to California to make a fortune and return as soon as possible, and had no thought of selling a "sure thing" for a few thousand dollars. Alas, for great expectations! the river claim proved a failure. The earnings from washing the bar were nearly all gone, newcomers occupied all the ground not exhausted, and so we prepared to wander.

Pictures of camp-life crowd upon one. Who can forget the trains of loaded mules descending the mountain to the bar, with their attending Mexicans, raising a cloud of red dust and filling the air with their cries of "Hoopa!" "Mula!" and other expletives? Or the herds of wild cattle galloping down at breakneck speed, followed by swarthy and dust-begrimed *vaqueiros*, "in sugar-loaf hats and legs of leather," and their headlong riding over the boulder-covered bar, swinging their riatas and lassoing the frightened bullocks for the butchers? Almost every store-tent had one or more rude tables where card-playing was indulged in "for the drinks," or where monte, the favorite gambling game, was played for dust, and at night these places were alive with miners purchasing supplies or trying their luck at the tables. As illustrative of the confidence of traders in the miners, I

may here mention that in 1849 and for a year or two thereafter I never knew of a miner being refused credit for anything he wanted. A trader, a total stranger to me, who had heard a rumor of better diggings, once offered me his tent and contents at cost—about \$2200, not a dollar to be paid until all the goods were sold. The miners on the bar were always ready to help others with purse or counsel, to share the last flapjack or frijole, or to espouse the cause of the injured. On Sunday or when the work of the day was over visits were exchanged without formality, and there was a general cordial mingling of men from all parts of the country and from every quarter of the globe. A considerable number of the first gold-seekers had brought books to the mines which passed from hand to hand, and there could be found a variety of volumes. Reading and argument were common sources of amusement, and in some of the tents one might hear the picking of improvised banjos.

The autumn of 1849 came on. The leaves had begun to fall; the winds in the towering pines and the murmur of the waters had more melancholy tones, the crickets sang more plaintively, the few birds were restless, and what with the want of claims to work and the coming of the rainy season it was needful that we

A ROUGH ROAD TO THE MINES.

seek another locality and prepare for the winter. I had already prospected the Rich Gulch of the Calaveras five or six miles away, had worked one day on a claim and had left a pick and shovel there as an evidence of ownership. The custom of the miners was to recognize mining tools in a claim as equivalent to possession, and in the absence of the claimant these tools were sufficient to hold the claim ten days. But my partner had fallen sick, and I was not able to leave him, and when we moved to the gulch eleven days after I had left it, we found the tools on the bank and two "jumpers" at work. We were too late, but we took the loss philosophically, as there was plenty of ground not taken. I understood afterward that the jumpers realized out of the claim about \$7000 in six weeks, which was more than I pocketed from the gulch during the entire winter.

The Rich Gulch was a good type of what were called "dry diggings"—a long arroyo, dry in summer with a good stream running

down it after a rain. Claims extended from bank to bank, and for sixteen feet in length. The brown and red soil from the hills had run down in the course of time and changed the channel of the stream in many places, and here the miners had to expend a good deal of labor on what they called "dead work," removing this hill soil, sometimes twenty feet in depth, to get to the old gold-bearing bed. As coöperation in the way of drainage had at this time been little thought of, each claim had to get rid of its own water in any way without much consideration for neighbors below. The amount of bottom dirt washed was slight compared with the whole removed, but in most claims it was exceedingly rich. Many a man had reason to remember with pleasure those winter diggings for the fortune they gave him. The gold was coarser and rougher than that of the rivers, not having been so much ground among the sand and gravel.

During the winter of 1849-50, the cost of living was extreme. As the season was a very wet one, the roads and trails were full of mud-holes, in which supply wagons were stuck and mules and oxen mired. Wagons and animals were unloaded several times a day to extricate them from the mud, and in one instance at least fourteen days were spent on the road from Stockton, fifty miles away. Flour reached a dollar a pound, rice the same, pork and bacon a dollar and sixty cents a pound, saleratus sixteen dollars a pound, and spermaceti candles a dollar each. An ounce of gold was the price of a pick or shovel, and almost anything needed, except fresh beef, commanded

A WOMAN IN THE MINES.

a proportionate price. That all miners did not get rich is accounted for in the statement that it took a fair claim to pay expenses. The short duration of a placer claim, the loss of time in finding another, and the too general restlessness, tell the story of many failures to realize a fortune by even those who were the most lucky. Too often it was due to extravagance, gambling, or the guzzling of brandy or

the little community. Some of his decisions in cases of double ownership of claims did not square with our notions of justice. It was more than suspected that he had been "greased," *i. e.* bribed, to make them. A meeting of miners was called, and a committee was appointed to draft laws for the gulch. The alcalde, a stalwart and swarthy Creole, gathered his boon companions around him and tried to interrupt

PROSPECTING IN CALIFORNIA IN 1851.

whisky at eight dollars a bottle. But, drunk or sober, one was obliged to pay two ounces for a pair of pantaloons, a hundred dollars for a pair of long-legged boots, and four dollars expressage for a letter.

There were not more than four or five log-huts in the gulch, nine-tenths of all the miners living in common soldier tents, about eight feet square, the entire winter. Ours had a huge fire-place in front, that sent through our thin, cotton dwelling a warm glow from a fire of manzanita wood, which is nearly equal to hickory for fuel. The weather was at no time very cold, and we suffered no discomfort. February was like May in New York.

It was during this month that an alcalde, assuming to have derived his authority from an alcalde at Stockton, began to give law to

the reading of the proposed laws, loudly declaring that he was alcalde and was going to govern the camp at any hazard. But the odds against him soon cooled his courage, and though pistols were exhibited and violence was threatened, no blows were struck. The next morning the blustering alcalde retired from the gulch forever. The new laws constituted the first code (so far as I know) adopted in the mines, and sufficed for the settlement of disputes for a long time.

I neglected to state in the proper place that in the early part of October business took me to Sacramento, and I only go back to relate an incident which will help to illustrate mining life as it was in California. The trip was made in a large mule-wagon dignified with the name of stage, and consumed nearly three days. Late

A MINERS' BALL.

in the afternoon of the first day, the driver said it was about time to camp, but he remarked that at a house four miles farther on there was a woman. Now a woman in the mines was a rarity; we had had a glimpse of one on the bar during the summer, and that was all. It was at once put to vote to determine whether we should camp or go on. Of course there can be no doubt of the result. In the evening we halted in front of a log house with a very steep roof made of tules, and applied for supper. The hostess, a tall, raw-boned Missourian, on presenting our bill in the morning, to weigh the dust put a cube of lead in the scales that approximated the size of a hymn-book, but the generosity and chivalry of the early miner and the rarity of women combined to make us ignore it.

In the spring of 1850 I returned to San Francisco, and in May, with one companion and four animals, went around the bay to Sonoma and from thence began the exploration of that unknown region from Sonoma to Oregon. Wandering miners we knew had already gone over the mountains and found gold on the Trinity. Were there not other streams flowing into the Pacific north of San Francisco, and might not all be auriferous as well? It was a tedious, eventful, but fruitless journey of forty-seven days, almost wholly over mountains trodden by Digger Indians and, what was more perilous, by ferocious grizzlies, of which we saw five at one time. No gold was found in any stream till we reached the Trinity, thirty-six days from San Francisco, and there the diggings were not remarkably rich. The hardest toilers reported but from eight to ten dollars a day. The style of mining did not differ from that which I have described, except that the pay dirt was carried a considerable distance in buckets from high and dry bars down to the river to be washed. Something better must be found, and a prospecting party was sent on an exploring expedition farther north.

There were some queer distinctions in those days. One Sunday, going to the butcher's booth, I found a customer ahead of me, who inquired if he could not have a piece of a liver which was hanging on a tree in plain sight.

"Don't know if you can or not," said the butcher.

"I'd like to know why? I've been trading with you all along, and never asked for liver before; but I want some variety now."

"Stand around and let me look at you. No, you can't have any liver."

"Well, why?"

"There ain't enough to go round. I have to have some rule about givin' it out, and I have decided that no miner can have a scrap

of liver from me unless he wears a canvas patch on the seat of his pants."

The canvas patch was a badge of precedence as well recognized in our camp on the Trinity as the star of the Order of the Garter is in Great Britain.

On the 3d of July two of our prospecting party returned and whispered the news that rich bars had been found on a stream full of salmon farther north, and the next morning we were off. The night of the fourth and fifth gave us the variety of a snow-storm, from which we took shelter under a roof of spruce boughs inclosed on three sides with the same material. After eleven days of exhausting climbing and descending steep and lofty mountains, tearing our clothes in the tangled chaparral, camping at night in the chilly air where the water from melting snows made green pastures for our mules, we reached the virgin diggings on Salmon River. There was no evidence that any white man had preceded us. The bars by the river were untouched; an interminable forest stretched all over the mountain sides and up and down the winding river, unmarked by the woodman's ax — not dense, but relieved by glades and openings, and but for the steepness of the mountains easily traveled.

Here was a newer scene and a more novel life. There were but eleven Americans of us all told, and a wide and rugged region lay between us and others of our race. Indians came in squads, shyly viewed us, made their comments, and passed on. They were superior to the Diggers of the California valleys, and were of the blood of the Modocs, who committed such atrocities in the lava-beds twenty years after.

My partner in the new diggings was a printer from the establishment of Harper & Brothers, who had come around the Horn as one of Stevenson's regiment in 1847. Displeased with our allotment of claims, which were too wet, we resolved to take chances alone with the Indians. So one fine morning we quietly packed the mules, forded the river at a shallow place, and proceeded to go we knew not whither. A tramp of eight or nine miles on elk and Indian paths, along a ridge that rose two hundred feet above the river, brought us to a point at the junction of streams. Crossing the north fork we made our camp on a high bar covered with young pines and oaks and already occupied by an Indian family, with whom we hastened to make friends by gifts of beads, bracelets, and other trinkets captivating to the savage. We had no tent, and made our camp by inclosing a small space with ropes tied to saplings for corner posts, to keep the mules, turned loose upon the bar, away from our bed and provisions.

Here, again, was a still fresher and wilder

SAN FRANCISCO CARICATURES.

(FROM AN OLD LITHOGRAPH BY JUSTH AND QUIROT, IN THE COLLECTION OF COMMANDER JOHN R. BARTLETT.)

life. Cut loose from our kind we trusted to uncorrupted natives, and did not trust in vain. A little prospecting gave glowing promise. Fifty cents to the pan was not infrequent. The rocker was speedily screwed together and real work begun. The river was high from melting snows on the mountains, and the portions of the bars out of water were small, but our first day's work yielded about fourteen ounces. Thus we

passed two weeks, mining in patches and with varying success, when miners on the Klamath, hearing from the Indians that white men were working on one of the branches above, pushed up the country to see if somebody had not something better than they. Among the newcomers were a few Texans who laid claim to a very wet bar down the river, and were soon doing well. Somehow a rumor came to our

isolated camp that big lump diggings had been found to the northeast on Scott River, and the Texans were on the wing. My partner took the big lump fever and went along. I associated myself with three others, entire strangers, and we took possession of Texas Bar, threw a slight breakwater of clay along the river's edge to stop the water from spreading over the bar, and then cutting a drain to the bed-rock from the lower end, we had comparatively dry ground and went to washing. We worked early and late, sometimes not ceasing till starlight, for all our provisions except flour were exhausted, and our only reliance was on the Indians, who supplied us with salmon in exchange for trinkets. This kind of living could not last, and we strained every nerve to get as much gold from the claim as possible. The average spoil of a day was rather more than a hundred dollars to the man. About the middle of September a conference of the few miners left on the river was held at the Forks, and as the diggings were too good to abandon it was agreed to despatch six men and twenty mules to Trinidad on the coast for supplies to last the winter. The train was made up and took the trail at once. Haste was necessary, as even flour, the last link to civilization, was nearly gone.

Meanwhile the mining went on. Few in numbers, and without provisions; our position could easily become critical. Our relief party came back suddenly; it could not go through. The Indians on the Klamath were hostile. Oregon men had shot some Indian dogs down the river, and the young bucks had retaliated by killing a horse. Thus began the so-called Klamath war, that cost the State, and ultimately the nation, a large sum of money. The miners were without delay in council. My party of four had scant rations for four days. At four o'clock we abandoned claims, picks, and shovels and commenced a forced march for the Trinity. I shall not detail the experiences of that hurried tramp on foot over the roughest of mountains. It is enough to say that one day four of us subsisted on a ground squirrel and a woodpecker, and the last day on copious draughts of water when fortunate enough to find it. And when at last we struck the Trinity it was only to be disappointed. The river was deserted; the miners had gone to winter quarters in the "dry diggings" at Weaverville. Wet, weary, and disgusted, with a dreary prospect for supper, we crawled up the bank and dropped down at a fallen tree to make a fire for the night. The mules were relieved of their packs and left to graze. They were too nearly dead to stray. A smoke was seen a few hundred yards away. I went to reconnoiter. A Mexican pack-train

was encamping. Meeting two muleteers gathering faggots for the fire, I inquired what they had to sell. "*Ninguna cosa*" ("Not a thing") was the answer. Going on to the camp-fire I inquired if they would sell me something to eat. The reply in Spanish was that they only sold by the cargo. Then I observed, sitting by the fire and smoking a cigarette, a Mexican whom I recognized. Stepping up to him I asked in Spanish if he did not know me. He said no.

"But, Don Fernando, do you not remember the man who bought an iron-gray mule of you on the Calaveras last year?"

"*Ah, si, señor,*" and he grasped my hand. I explained the situation in as few words as possible. Instantly, snapping his thumb and finger, he called out to two men:

"*Mira, hombres! Ven aca! Dos quintales de harina, carne seca, panocha, y todas cosas por los Americanos; anda!*" ("Attention, men! Come here! Two quintals of flour, dried beef, raw sugar, and everything for the Americans; travel!")

"How much for it all?" I inquired.

"*Ninguno centavo; gracias á Dios, señor*" ("Not a cent; thanks to God, sir"), he replied with emphasis, and the *hombres* carried an abundant supply of substantials to our camp. That tall and swarthy Don in brown sugar-loaf hat, his head thrust through a hole in the middle of a blanket that served for a cloak, standing in his spurs, the rowels of which were four inches in diameter, is not a figure to be readily forgotten.

There was an incredible amount of cooking that night. Slapjacks and sugar, ropes of dried beef broiled on the coals, coffee made of an extract—everything was welcome. It was a merry night. I never knew before the intoxication of eating. We cooked, ate, lay back upon the blankets, told stories, returned to the cooking again, and so alternated until sleep overtook us in the warm glow of the fire.

When, in the afternoon, we made our entry into Weaverville, a scattered village of about four hundred miners' cabins, Don Fernando found himself in trouble. He could find but one trader with money in the whole town—and he was a type of the monopolists who have since become the curse of California. He offered the Mexican about half-price for his cargo, and there was no other place to which to carry the goods. It was now our turn. It was suggested that we help Don Fernando out. He had been offered \$1200. We told him that we did not want his goods, as we did not know what we were going to do, but we would make the trader pay more for them.

"Tell him we offer you \$1500." In a short time we learned that \$1600 had been bid.

"Tell him we will give \$1800."

Again came a bid of \$1900. We offered \$2000, and soon were confronted by an angry Missourian, who "was n't goin' to have any durned Yankee git in 'tween him and a greaser in a trade." So he jumped our bid \$200. Don Fernando in a whisper said it was *bastante* (enough), and the Missourian was the buyer. We had paid off some of our obligations to Don Fernando and had made a little stir in the new diggings.

The autumn of 1850 was unlike that of 1849. The miners in the dry ravines had thrown up on the banks large quantities of pay-dirt from the beds, and were continuing their work hoping to be able to wash. But little rain fell till the following March. The miners scattered again along the Trinity to pay expenses, and I with others departed for Sacramento.

The early summer of 1851 found me in the mines at Nevada City, in the richest gold-producing section of California, or perhaps of the world. The two mining towns of Nevada and Grass Valley are but four miles apart, and that either of these is more populous than any other town in the Sierra Nevada is evidence of the great wealth of the region. The miners of Nevada County originated or adopted most of the improved methods for facilitating washing and saving gold. The long tom came into use early as the successor of the rocker. It was a trough of boards ten or twelve feet long, two feet wide on the bottom, with sides eight or ten inches high, and was furnished with a perforated sheet-iron plate three feet long, which had the end part curved upward to stop the stones and gravel, while the water, sand, and small gravel dropped through into a riffle-box below, set on an incline to allow the lighter matter to pass off with the water. The long tom was put on an easy grade and supplied with a constant stream of flowing water, enough to drive and wash all the earth thrown into it down upon the perforated screen. Two or more men shoveled the earth into the tom, and one threw out the stones from the screen with a fork or square-pointed shovel, when they were sufficiently washed. As the claim was worked back, the long tom was extended by means of sluice boxes until a dozen or more miners were shoveling dirt into them on both sides. Afterward it was found that by putting riffles into the sluice boxes the long tom could be dispensed with, and miles of sluices of all sizes were seen, some supplied with a few inches of running water, miners' measure, while others bore torrents of the muddy fluid. The sluice requiring a rapid flow of water was set on a grade of say four inches to twelve feet in length. It is plain that in a short distance the pay dirt would have to be lifted higher than the miner's head. A descending bed-rock added to the difficulty,

and sometimes the earth was thrown by one set of miners up on a platform to be shoveled by another set into the sluice. Numerous small boulders were kept in the sluice, around and over which the water boiled and leaped, dissolving the clay. When the gold was fine and difficult to save, quicksilver was poured into the sluices to catch it, the riffles arresting the amalgam as it moved down.

More and more, as experience was gained, water was made to do the labor of men. Instead of carrying the dirt in buckets to the river to be washed, the river was carried to the dirt. Ditches were dug at great expense and water from them was sold at a dollar an inch for ten hours' use, and often it was resold in its muddy state one, two, and three times at decreasing rates. The water belonged to the ditch owner as long as it could be used. The fact may here be noted that one of the first ditches constructed was that from Rock Creek to the hill diggings about Nevada City. It was nine miles long, and cost about ten thousand dollars, and so rich were the diggings and so active the demand for water that the enterprise paid for itself in six weeks.

It was early discovered that the river gorges in which the first mining was done—those deep channels from the high Sierra—cut across ancient river-beds filled with auriferous gravel, the bottoms of which were hundreds of feet above the beds of the modern streams. From these deposits of far-back ages much of the gold found on the later river bars had come, and these ancient storehouses, exposed by the wear and tear of centuries, led to another kind of mining. Great canals from high up the rivers were carried with fine engineering skill and large outlays of labor and money, without the aid of foreign capital but by the pluck, purses, and brawny arms of miners along frightful precipices, across cañons in lofty flumes and through tunnels to the ancient filled river channels. Here the water was carried down the banks in strong iron tubes or hose, and large quantities were compressed through nozzles and thrown with terrific force against the banks of auriferous gravel. Ditches dug in the earth on a moderate grade, or sluices of lumber, caught the muddy debris and separated the gold, leaving it on the bottom. A steady throw of this water against a bank, directed with a miner's judgment, was kept up for days and even months without cessation night or day. This was called hydraulic mining, and it was introduced into California in 1852. To facilitate the work of the monitor or water-cannon that shot the compressed stream, tunnels were run into the banks where they were hard and tons of powder were exploded in them at a single blast, pulverizing the deposit to the ex-

tent of acres and often to a depth of more than a hundred feet.

In the great mining region of California, which has given to the world more gold than any other area of like extent on the globe, all this is now over. The fiat of courts has gone forth that no debris of any kind can be allowed to be dumped into any stream or its affluent to the danger of property below or to the impeding of navigable waters. Thus has been destroyed the market value of hundreds of miles of canals, great artificial lakes to store the waters of winter, and vast deposits of auriferous gravel—in a word, a hundred million dollars in mining property. Thousands of miners who have exhausted their energies and the best part of their lives in the mines have, with their families, been reduced to poverty and distress.

The old miner, full of cherished memories of that wonderful past, on revisiting the scenes of his early labors sees no winding line of miners by the river marge, with their rattling rockers or long toms; no smoke from camp-fire or chimney arises from the depths of gorges; cabins are gone; no laughter nor cheery voice comes up from the cañons; no ounce a day is dried by the supper fire. Gone are most of the oaks and pines from the mountain-sides; the beds of the rivers are covered deep with the accumulated debris of years, over which the water, once clear and cold from the melting snows of the Sierra, goes sluggishly, laden with mud, in serpentine windings from bank to bank. On the tableland above, in the chasms made by hydraulic power in the pleiocene drift, the hollow columns of iron that once compressed the water stand rusting away; the monitors lie dismantled like artillery in a captured fortress. All is silence and desolation where once was the roar of water and the noise of busy life.

The same red and brown soil is beneath your feet, the same alternation of ridges and gorges is here, the same skies unflecked by clouds from May to November are overhead; the same pure air is left to breathe in spite of courts and monopolies; a considerable portion of the soil is cultivated; scattered here and there over the mountain slopes are homes surrounded with flowers and fruits—but the early miner sees it all with the sad belief that the glory is gone.

The early miner has never been truly painted. I protest against the flippant style and eccentric rhetoric of those writers who have made him a terror, or who, seizing upon a sporadic case of extreme oddity, some drunken, brawling wretch, have given a caricature to the world as the typical miner. The so-called literature that treats of the golden era is too extravagant in this direction. In all my personal experience in mining-camps from 1849 to 1854 there was not a case of bloodshed, robbery, theft, or actual violence. I doubt if a more orderly society was ever known. How could it be otherwise? The pioneers were young, ardent, uncorrupted, most of them well educated and from the best families in the East. The early miner was ambitious, energetic, and enterprising. No undertaking was too great to daunt him. The pluck and resources exhibited by him in attempting mighty projects with nothing but his courage and his brawny arms to carry them out was phenomenal. His generosity was profuse and his sympathy active, knowing no distinction of race. His sentiment that justice is sacred was never dulled. His services were at command to settle differences peaceably, or with pistol in hand to right a grievous wrong to a stranger. His capacity for self-government never has been surpassed. Of a glorious epoch, he was of a glorious race.

E. G. Waite.

A "COMIC" OF RICHARD DOYLE'S FROM "PUNCH."

IN BEAVER COVE.

HEY were having a dance over in Beaver Cove, at the Woods'. All the young people of the settlement were there, and many from adjoining settlements. The main room of the cabin had been almost cleared of its

meager furniture, and the pine-plank floor creaked under the tread of shuffling feet, while dust and lamp-smoke made the atmosphere thick and close.

But little did the dancers care for that. Bill Eldridge sat by the hearth playing his fiddle with tireless energy, while a boy added the thumping of two straws to the much-tried fiddle-strings. A party of shy girls huddled in a corner of the room, and the bashful boys hung about the door, and talked loudly.

"Hey, there; git yer partners," Bill cried to them tauntingly from time to time.

Armindy Hudgins and Elisha Cole were preëminently the leaders in the party. They danced together again and again; they sat on the bench in the dooryard; they walked to the spring for a fresh draught of water. Armindy was the coquette of the settlement. In beauty, in spirit, and in daring, no other girl in Beaver Cove could compare with her. She could plow all day and dance half the night without losing her peachy bloom, and it was generally admitted that she could take her choice of the marriageable young men of the settlement. But she laughed at all of them by turns, until her lovers dwindled down to two, Elisha Cole and Ephraim Hurd. They were both desperately in earnest, and their rivalry had almost broken their lifelong friendship. She favored first one and then the other, but to-night she showed such decided preference for Cole that Hurd felt hatred filling his heart. He did not dance at all, but hung about the door, or walked moodily up and down the yard, savage with jealousy. Armindy cast many mocking glances at him, but seemed to feel no pity for his suffering.

In the middle of the evening, while they were yet fresh, she and Elisha danced the "hoe-down." All the others crowded back against the walls, leaving the middle of the room clear, and she and her partner took their places. They were the best dancers in the settlement, and Beaver Cove could boast of some as good as any in all north Georgia. The music

struck up, and the two young people began slowly to shuffle their feet, advancing towards each other, then retreating. They moved at first without enthusiasm, gravely and coolly. The music quickened, and their steps with it. Now together, now separate, up and down the room, face to face, advancing, receding, always in that sliding, shuffling step. The girl's face flushed; her lithe figure, clothed in the most primitively fashioned blue print gown, swayed and curved in a thousand graceful movements; her feet, shod in clumsy brogans, moved so swiftly one could scarcely follow them; her yellow hair slipped from its fastenings and fell about her neck and shoulders; her bosom heaved and palpitated. Panting and breathless, Elisha dropped into a seat, his defeat greeted with jeering laughter by the crowd, while Armindy kept the floor. It was a wild, half-savage dance, and my pen refuses to describe it. Nowhere except in the mountains of north Georgia have I ever witnessed such a strange performance.

Armindy would not stop until half-blind and reeling with exhaustion she darted towards the door amid the applause of the crowd. Elisha Cole started up to follow her, but Ephraim Hurd reached her side first, and went out into the yard with her.

"You 've nearly killed yourself," he said, half-roughly, half-tenderly.

"No such a thing," she retorted.

"You 're out o' breath now."

"I want some water."

"Better sit down on this bench and rest a minute first," he said, attempting to lead her to a seat placed under an apple tree; but she broke away from him, running swiftly towards the spring bubbling up from a thicket of laurel just beyond the dooryard fence.

"I ain't no baby, Eph'um Hurd," she cried, gathering up her hair and winding it about her head again, the breeze fanning her flushed cheeks.

The moon was clear and full over Brandreth's Peak, and Ephraim looked up at it, then down on the girl, softened, etherealized by its magic beams.

"What makes you act so, Armindy?"

She broke a spray of laurel bloom and thrust it through the coil of her hair.

"I don't know what you 're talkin' about, Eph'um; but I do know I 'm waitin' for you to give me that gourd o' water."

He sighed, stooped, and filled the gourd to the brim, and gave it to her. She drank deeply, then threw the remainder out in a glittering shower, and dropped the gourd into the spring.

"Don't go to the house yet," he pleaded, as she turned away.

"I 'm tired."

"An' I — I am — you don't keer anything for 'Lishy, do you? Armindy, do you recollect what you said the last time we went to the singin' at Rock Creek?"

She looked at him from under her lashes, half smiled, then said:

"I don't recollect anything perticular."

"I do," he muttered softly, and stepped across the spring-run to her side. "You said —"

"Oh, don't tell me — I don't mean anything I say," she hastily cried.

His face clouded with jealous anger again; he laid his hand on her shoulder.

"You 'll — make me do somethin' turrible, Armindy, if you don't mind. I love you; don't — don't — treat me like a dog, flingin' crumbs to me one day, an' whippin' me off the next."

She pushed away his hand, for, with all her coqueties, no man dared take any liberties with her, and stepped beyond his reach.

"I ain't done nuthin' to you, Eph'um Hurd. I —"

"You have," he cried, stamping his feet: "you 've made me love you, tell I don't feel as I could live without you; you let me think that you loved —"

"Law! what's the use o' listenin' to a girl's foolishness. Maybe I love you; an' again maybe I love 'Lishy Cole an' a dozen others. You 're too set on havin' your own way," she exclaimed with a loud laugh.

Somebody called to her from the fence.

"That's 'Lishy now."

"An' you 're goin' to him?" said Ephraim with a pale face.

"Yes, I'm goin' to him. He don't bemean me," with a pretense of being aggrieved, but with mocking laughter in her eyes.

She ran up to the fence, and he heard her talking to Elisha about the flowers in her hair.

The party was over. Ephraim Hurd could scarcely contain the violence of his rage when Armindy refused his company home to accept Elisha Cole's. And how hurt he felt, as well as angry! The slight cut to his soul. He watched them as they went away with a party of the neighbors; he listened to their conversation and loud laughter until the maddening sound of it was lost in the distance; then he mounted his mule and rode swiftly through the Cove down towards the town on the banks of the Cartecay River where revenue-officers were

stationed. A fierce, irresistible temptation had assailed, had conquered, him. If he could not have love, he could have revenge. The revenue-men would be glad to know where Elisha Cole concealed his distillery; they would be better pleased to get Elisha himself. Just a hint, scrawled and unsigned, would be sufficient for them, and no one need know who had furnished the information.

It was morning, full daylight, with mists and clouds afloat in the upper rays of the yet invisible sun, when Ephraim Hurd forded Rock Creek on his way home. The jaded mule dipped his steaming nostrils in the cool, fast-flowing stream, drank thirstily, then, coming out, stopped to crop the high, tender grass growing by the roadside. Ephraim let the rein fall loosely on the faithful creature's neck, while his dull eyes wandered over the landscape. He looked haggard, and the chilly, uninvigorating air made him shiver instead of infusing fresh life into him. He dismounted to tighten the girth, then leaned his arm on the saddle, seemingly forgetting to pursue his way home. He was tall, and held himself unusually erect for a mountaineer. He had a rather fine face, with soft, dark beard on lip and chin, and his eyes were a deep, serene blue. He did not look like a coward or a traitor, and yet he secretly felt that he could be justly called so; for repentance had followed quickly upon his rash betrayal of his friend.

The night would have seemed only like a bad dream, a nightmare, had he not gone on that journey to Buckhorn, stealing like a thief through the sleeping town, to slip that line of information under the door of the court-room, where it would be found by the revenue-officers the first thing in the morning. Viewed in the clear, cold light of the morning, when jealousy and savage anger had spent themselves, the deed appeared base to the last degree. He passed his hand over his face with a sense of deepest shame. According to the mountaineer's code of honor, a man could not do a meaner, more contemptible thing than to betray a comrade to the revenue-men. He would fare better as a thief or a vagabond. No wonder Ephraim Hurd felt like hiding his face from the clear accusing light; no wonder he groaned in anguish of soul. He had lost his own self-respect; he had forfeited all right to the trust of his neighbors.

He raised his eyes and looked slowly around again, and, with his mental faculties all quickened by the trouble he was in, he seemed to realize the preciousness of freedom. A perception of the wild, primeval beauty of the world around thrilled him. He looked up at the cloud floating over the deep blue of the sky,

tinged with the rose-light of sunrise; at the fog-wreaths curling around the summits of the higher mountains; at the green depths of the forests; at the winding streams, bordered by laurel and rhododendron, rushing in sparkling cascades or lying in clear, silent pools. All the ineffable loveliness and charm of the new world, the new day, penetrated his soul. The deep solitude, broken only by the murmur of the streams and the liquid, melancholy notes of the hermit thrush, influenced him as it never had before. Think of leaving it all for the courtroom, and the prison! Think of languishing within four close walls through sultry days and restless nights!

Pity for the man he had betrayed melted his heart. At this moment how slight seemed the provocation. Elisha Cole had as much right to Armindy's favor as he could claim.

On the upper side of Rock Creek, just under the great cliff rising boldly towards the clouds, a clump of laurel bushes in full bloom hung over the stream, the opening buds a fine delicate pink, the wide-opened flowers faded to dull white. Ephraim's eyes fell on them, and his face contracted with a keen thrill of pain as he remembered Armindy standing by the spring in the moonlight and fastening a spray of laurel in her hair. Flushed from the dance, radiant with triumph, she had no thought for him, no kind words. Nevertheless his heart softened towards her; he writhed as he thought of the sorrow he had laid up for her. He had lost account of time in the midst of his bitter reflections, and a sun-ray, striking across his face, startled him. He sprung into the saddle and rode out of the highway into the settlement road leading through Beaver Cove.

The Hudgins lived on that road, at the foot of Bush Mountain, in an old log cabin built in the "double pen" fashion, with an open entry, and in the rear a rude kitchen. Below the house lay a freshly cleared field, the fence skirting the roadside, and as he drew near Ephraim heard Armindy singing an old baptismal hymn in a high, clear voice, making abrupt little pauses to say "Gee!" or "Haw!" or "Get up there!" to the ox she was driving before the plow.

Last night she danced the "hoe-down" with spirit and grace, the belle of the party; to-day she plowed in her father's cornfield, barefooted, and clothed in a faded homespun gown, singing for the mere joy of existence, of conscious life. She had on a deep sunbonnet, and coarse woolen gloves covered her hands—strong, supple hands, grasping the plow-handles like a man's.

She reached the end of the row just as Ephraim drew near, and looked over the fence at him with a smile and a blush.

"Good mornin', Eph'um," she cried in a

conciliatory tone. "You look as if you had been out all night."

"I have."

"Law! what for? At the 'stillery?" Her voice dropped to a softer key.

"No."

She looked attentively at his sad, haggard face, then took off her bonnet and fanned herself.

"Are you mad at me, Eph'um?"

"No; I ain't mad now, Armindy."

"Then what makes you look so—so strange?"

"I was mad last night."

She turned the cool loam of the freshly opened furrow over her naked feet, a faint smile lurking in the corners of her mouth. He saw it, but did not feel angry.

"Good-by, Armindy," he said gently.

"I did n't mean anythin' last night, Eph'um," she said hastily, sobered again by the gravity of his voice and manner.

"I know how it was."

"I don't believe you do. I—" But he rode away while the defensive little speech remained unfinished on her lips.

She looked after him, slowly replacing the bonnet on her head.

"He is mad, or somethin' 's happened. I never seed him look like he does this mornin'."

She turned the ox into another furrow, but stepped silently behind the plow. She sang no more that morning.

Beaver Cove was really a long, narrow valley shut in by ranges of high mountains, the serried peaks sharply outlined against the sky on clear days. The mountainsides were broken into deep ravines, and here and there near the base rose sheltered nooks in which mountaineers dwelt, cultivating patches and eking out a primitive livelihood with game and fish. It was in one of these retreats that Ephraim Hurd and his mother lived, with all the length and breadth of the valley lying below them, and the mountains overshadowing them above.

As Ephraim turned from the main settlement road into the wilder trail leading up to his house he met Elisha Cole driving a yoke of oxen. He was whistling a dance-tune, and hailed Ephraim with a cheerful, friendly air, his whole manner betraying a suppressed exultation. Ephraim noticed it quickly, and clenched his hand on the switch he held. That manner said so plainly, "I have won her; I can afford to be friendly with you now."

"Just gittin' home?" he inquired with a jocular air.

"Yes."

"Oh, ho! Which one o' the Wood girls is it, 'Mandy, or Sary Ann?"

Ephraim flushed, but let the rude joke pass.

"Where are you goin'?"

"To the saw-mill for a load o' lumber."

"Goin' to build?"

"Yes; in the fall."

"Thinkin' o' marryin', I s'pose."

"You 've hit it plumb on the head, Eph'um. I am thinkin' o' that very thing," he said, with a loud, joyous laugh.

It grated on the miserable Ephraim. He was full of one thought, which he repeated over and over to himself, "To-morrow he 'll be in prison, an' Armindy 'll be cryin' her eyes out."

"You 'll not be at the 'stillery to-night?" he inquired stammeringly.

"Yes, I will. Man alive, what ails you, Eph'um?"

"Nothin'; nothin'. Had n't you better go to see Armindy?"

Elisha eyed him suspiciously.

"Me an' Armindy understand's one another," he said roughly.

Ephraim rode on, his guilty conscience forbidding any more conversation. He longed to give Elisha a hint of approaching danger, to say carelessly, "I hear the raiders 'll be out to-night"; but he knew that he could not without betraying the whole truth.

Breakfast awaited him, and his mother sat in the doorway smoking when he arrived at home—a homely woman, yellow as saffron, wrinkled as parchment, and without a tooth in her mouth. Her face lighted up at the sight of her son, and she knocked the ashes from her pipe. He had been a good son, a steady boy, and his absence alarmed her.

"Law! but this is a relief," she cried as he came in after caring for the mule. "I did n't know you 'lowed to stay out all night."

"I did n't neither when I left home."

"I was pestered, thinkin' o' the raiders. Anythin' happened to you?"

"Nothin', mother."

"Are you sick?"

"No."

She watched him silently while he ate sparingly of the breakfast. His dull eyes, his haggard face, made her anxious. He had no appetite; he plainly did not care to talk. Her suspicions fell on Armindy Hudgins as the cause of his dejection. She began to question him about the party. She mentioned Armindy and Elisha Cole several times, and each time he betrayed some feeling. She felt resentful towards the girl.

"I s'pose Armindy had things her own way las' night?"

"Purty much."

"I don't for the life o' me see why you all should be crazy about that girl. Now 'Mandy, or Sary Ann Wood, or Betsey—"

"Ugly as crows, all of 'em."

"Well, they may n't be as purty as pictur's, but they are a sight better than Armindy Hudgins," she retorted indignantly.

"They certainly ain't smarter, mother."

"No; I s'pose they ain't for work," said Mrs. Hurd, reluctantly; "but principles count for somethin', Eph'um—you 'll 'low that."

"Yes; yes," he cried, and hastily left the table. Who could show less principle than he had?

He went out to work, hoeing and thinning the young corn in a field he had cleared on the mountainside, but the vigor had gone out of him with hope and courage. The sunlight dazed him, and after a while he stopped and leaned upon his hoe, looking down into the valley, his eyes following the cloud-shadows sweeping silently over the fields, blotting out the silvery gleam of Beaver Creek. It was a day of strange, conflicting thoughts. He had never passed through such an experience in all his simple, primitive life. The impressions of the morning lingered in his memory through the heat of the languid noon and the soft decline of the evening. He had brought upon himself a great question of right and wrong—at least it seemed great to him; so great he could scarcely grapple with it, or settle it with wisdom and justice.

After a supper, partaken almost in silence, he took down his gun and carefully loaded it. Mrs. Hurd watched him until he picked up his hat; then she anxiously inquired:

"Where are you goin', Eph'um?"

"Down to the 'stillery."

"It 'pears to me you'd better take some rest."

"I will later."

"Well, do be keerful an' keep an eye out for the raiders. I've been so oneasy an' pestered to-day that I feel mighty like somethin' 's goin' to happen."

He went out, but turned on the doorstep to speak to her.

"If anythin' does happen, mother, you 'll be prepared for it."

She sighed, and her wrinkled face quivered with emotion.

"I'm always prepared for the worst, an' expectin' it. To have some sort o' dread on your mind 'pears to me to be a part o' life."

Ephraim shouldered his gun, and disappeared in the darkness. He followed the road for a short distance, then turned out into a trail leading over a ridge. It was not easy walking, but the sure-footedness and agility that are a birthright of the mountaineer made it easy for him.

Out of the deep, clear sky overhead the stars shone softly, but afar in the northwest

lay great masses of clouds. Constant flashes of lightning shot over them, and through the profound silence came the dull mutterings of thunder. It was a good time for the raiders to be abroad, and the thought quickened Ephraim's steps. He felt sure they would come before moonrise. On the other side of the ridge he traversed a wilder region of country. Half an hour's rapid walking brought him to a small clearing surrounded by a low rail-fence. In the center of the clearing stood a cabin, a stream of ruddy light pouring from its open door. It was where the Coles lived. Two fierce hounds greeted Ephraim's approach with loud, hostile barking, and when he called out to them a young woman appeared at the door with a child on her breast—Elisha Cole's sister-in-law.

"Any o' the men folks at home, Miss Cole?" Ephraim inquired, leaning over the fence.

"No; John an' his pap have gone over to Fannin' County, an' 'Lishy's just started to the stillery."

"Oh, just started, you say?"

"Yes; he ain't been gone five minutes. Won't you come in, Eph'um?"

"Not to-night, Miss Cole. I 'lowed I'd see 'Lishy before he got off."

With a brief good night he turned away, following a trail leading down through a ravine. It was a wild, lonely way, and so dark that one could scarcely see an inch ahead. But the pathway presently took an upward turn, and the gray starlight penetrated the sparse underbrush. He heard the snapping of twigs ahead of him, and whistled softly. Then the sound of stealthy footsteps fell upon his alert ears. He ran forward a few paces, not daring to speak; then he stumbled over the prostrate body of a man.

"'Lishy," he whispered, peering into the upturned face.

"Is it you, Eph'um?"

"Yes; what 's the matter?"

"The raiders they tied me; they 're lookin' for Jed Bishop."

It was the work of an instant for Ephraim to get out his knife and to cut the thongs binding Elisha's hands and feet. But the prostrate man had not scrambled up before the revenue-officers were down upon them again. Ephraim snatched his gun, and leaped between Elisha and his foes.

"Get out of the way if you can," he cried to his friend, and fired blindly at the officers.

It was early the next morning, as Armindy sat on the entry steps engaged in sewing some patchwork together before the outdoor occupations of the day began, that a neighbor rode up and hailed her father.

"Heard about the raid last night?"

"No," exclaimed Mr. Hudgins, hastening to the fence. "Who'd they get?"

"Nobody but Eph'um Hurd."

Armindy dropped her work, her face growing white, her lower lip caught between her clenched teeth.

"It seems they'd caught 'Lishy Cole, an' 'was lookin' for Jed Bishop, when Eph'um come up an' set 'Lishy free again. He had n't more 'n done it when up come the raiders, an' 'Lishy says Eph'um fit like old Satan hisself, shootin' at 'em tell 'Lishy cleared out."

"Well, well; that does beat all. He'd better 'a' looked out for hisself."

"That 's what I say, an' he with his ma to look after. He wounded one o' the officers, an' it 's bound to go hard with him. You need n't look so skeered, Armindy"—raising his voice and looking over at the girl. "'Lishy's safe."

"Oh, yes; 'Lishy's safe. I'm only thinkin' o' what might 'a' happened to him." She laughed loudly, then gathered up her work and rushed into the house.

WITH slow, uncertain steps a man walked along the settlement road through Beaver Cove. His clothes hung loosely from his slightly stooping shoulders; he leaned on a stick. All about him were the joyful influences of spring. The mountains were clothed in palest green, and every stream could boast its share of laurel and rhododendron abloom along its banks. The man drew in deep breaths of the fine air, his eyes wandered lingeringly over scenes familiar yet long unvisited. Once he stooped and drank from a clear, shallow stream purling along the road, and, drawing his sleeve across his mouth, muttered softly:

"Ah, that 's good. I ain't drunk nothin' like it in more 'n four years."

He sat down on a fallen tree rotting on the roadside to rest a few minutes. A market-wagon, white-covered and drawn by a yoke of sleek oxen, rumbled down the hill. In the driver the wayfarer recognized an old neighbor.

"Howdy you do, Mr. Davis?"

Davis stared, then leaped from the wagon.

"Why—why—it 's Eph'um Hurd, ain't it?"

"What 's left o' him," said Ephraim, rising, and shaking hands with his old friend.

"Well, you do look used up an' peaked."

"I 've been sick."

"An' your hair is gray."

"It 's the prison life done it."

"You 've been through a good deal, I take it," in a tone of compassion.

"I don't want to think o' it any more if

"I can help it," Ephraim exclaimed. "They did n't treat me so bad, but—oh, I thought it would take the soul out o' me!"

Davis shook his head sympathetically.

Ephraim's face sunk on his breast for a moment. There were some questions he longed, yet dreaded, to ask. At last he plucked up courage.

"How—how is mother?"

"Purty well."

"'Lishy Cole is married, is he?"

"Yes; he married more 'n two years ago."

Of course he had expected that answer, but it caused him thin, worn face to twitch and contract with pain. He hastily picked up his stick.

"I— I'd better be gittin' on."

"Your ma's moved down to the Wood place," his neighbor called after him as he started up the road. "The Woods moved to Fannin' County last year, you know."

"Is that so?" said Ephraim, but without halting again.

Married! Yes, why should they not marry? It was for that he had saved Elisha Cole. He had known it from the night of the dance, had clearly foreseen it all that morning he stopped at Rock Creek—facing the awakening world and his own conscience. He had struggled for resignation during his prison life, but never had he been able to think of Armindy sitting by Elisha Cole's fireside, Elisha Cole's wife, without the fiercest pang of jealous anguish.

He sat down again, trembling with exhaustion, and bared his throbbing head to the cool breeze. He looked at his long, thin hands, stroked his face, feeling the hollows in his cheeks and under his eyes. He would never get back his youth and vigor again. It was well no woman loved him except his mother. She would not criticize his changed appearance, or care less for him on account of it.

It was dusk when he reached the old Wood cabin. The shutters had not been drawn over the small, square window in the chimney-corner, and he crept across the yard to look into the room, himself unseen. A low fire burned on the hearth, he could smell the bread baking before it, and the smoke of frying bacon filled the room. Then he saw his mother sitting at the corner of the hearth knitting, while another woman stooped over the fire. Suddenly she stood erect, and he caught his breath sharply, for it was Armindy Hudgins, Elisha Cole's wife, flushed, handsomer than ever. What did it mean? Had they taken his mother to live with them? He writhed at the thought. He leaned forward, for Armindy was speaking.

"Now I'll step to the spring for a pail o' water; then we'll have supper."

"I wish Eph'um was here to eat it with us.

Do you think he'll ever come, Armindy?" she said wistfully.

"I know he will," said Armindy, firmly; but a shadow fell upon her face, and Ephraim could see that she looked older, more serious than in former days. But what a fine, elastic step she had, what supple curves in her figure! His eyes dwelt upon her with admiration, with despair. He loved her as deeply as ever. She stepped out of the room and went away to the spring. He followed her, determined to find out the cause of her presence in his mother's house.

He vividly remembered that other night when they stood at the spring together, and raised his eyes to Brandreth's Peak, but the moon hung low in the west, a pale crescent. Armindy knelt by the spring, dipping up the water, when his shadow came between her and the faint moonlight. She glanced up, then sprang to her feet half frightened; the next moment she ran to him and fell weeping on his neck.

"Eph'um! Eph'um! I said you'd come! I've always said you'd come!"

He gathered her to him; then tried to push her away.

"Don't—I—where is 'Lishy?" he stammered.

"I don't know. What do you want to think o' him for now?" she cried, looking at him with wet eyes, drawing his face down to hers.

"Ain't you 'Lishy's wife?"

She fell back a little.

"Did you think I'd marry him? I loved you, Eph'um—you."

"Is that the reason you're here with my mother?"

"Yes; I've been with her nearly all the time."

"It was my fault the raiders come out to get 'Lishy, that night."

"I knew it when I heard how you saved him from them. Oh, don't hate me for makin' you suffer so. It seemed like fun then, but I've been paid back for it all."

He felt dazed. Armindy free, Armindy faithful, and loving, and humbly entreating him not to hate her! Life thrilled afresh through him.

"Who did 'Lishy Cole marry?" he inquired at last.

"How you keep thinkin' o' him."

"I can afford to now."

"He married Sary Ann Wood."

They were standing by the laurel thicket. She saw that his eyes were fixed on the flowers, and turned quickly away to take up the pail of water.

"I ain't danced the hoe-down since that night."

He broke off a spray of the flowers and fastened it in her hair.

TOPICS OF THE TIME.

International Copyright Accomplished.

IN every compromise there are two points to be considered: its propriety, and its wisdom or necessity—first, Is the concession to be made in the interest of a higher good? and, secondly, Will the concession, as a matter of probability, be likely to effect that good? The passage of the Copyright Bill, accomplished as it has been by concessions at one time or another on the part of nearly all concerned,—last of all, by the representatives of the Typographical Unions,—is a full justification of the Authors' League in uniting, four years ago, for the advocacy of what was substantially the present law. Had the measure failed, the authors would still have been conscious of their own devotion to the principle of the bill; as it has succeeded, they have the additional satisfaction, in having made a sacrifice of their preference, of having redeemed the literary fraternity from the charge of being "dreamers" and "impracticables."

Mr. Lowell, the President of the League, writing under date of February 19, 1891, accurately stated the position of American authors in general in saying:

I still remain of the opinion that it is wise politics to accept the good that is possible under the circumstances, secure that the mission-work of its practical application will give us something nearer to our ideal. The great thing is to get the principle admitted in our national legislation.

Both before and after the passage of the bill the difficulty has been to get attention to what the bill will accomplish rather than to what it will not. Ill-advised editorial utterances in England have already denounced the new law as a "fraud" and a "sham," as a measure wholly in the interest of American manufacturers, and of little benefit to English authors. Let us see.

First. The bill extends unconditional copyright to the producer of any map, chart, dramatic or musical composition, engraving, cut, print, painting, drawing, statue, statuary, or model or design intended to be perfected as a work of the fine arts. It is easy to forget that artistic property is not less important or sacred than that of the author. For a time during the campaign it was feared that adherence to a false analogy might lead the Senate to persist in its first thoughtless denial of copyright in artistic property, and it is not a small matter for congratulation that this calamity has been avoided. After July 1, Sir Arthur Sullivan, Mr. Burne-Jones, M. Saint-Saëns, and M. Gérôme will be as completely protected by our law as Mr. Dudley Buck, Mr. St. Gaudens, and Mr. Shirlaw.

Again, copyright is also granted to all producers of foreign literary property, upon a condition which, though it must be confessed to be a limitation upon the ideal right of property, is practically not an onerous condition upon the foreign author. The unsolved doubt in the English law as to whether the American author must be on English soil at the time of the publication of his book, and the requirement that the publication of the book in England must precede its appear-

ance in any other country—these conditions are also limitations on the ideal right of property; and so, for that matter, is the term-clause in nearly all copyright law. In the "evolution of copyright"—to quote Mr. Brander Matthews's suggestive phrase—it is difficult to determine where the principle of security to literary property merges into a question of public policy. But the main fact to be borne in mind is, that by the new law, if the English author choose, he can prevent the piracy of his book in the United States. *Our law no longer tolerates the literary "pirate."* This is the heart of the whole matter, and it would be sheer hypocrisy to pretend that because the American market for foreign books here copyrighted is in the main reserved for American workmen, there will not be substantial security to the literary property of foreigners. A little more of that most serviceable attribute of the mind, the sense of proportion, would have saved our English critics from this headlong error.

The gain to American letters and American prestige is incalculable. By doing justice to the foreign author the American spirit in literature will be reinforced, and before long a better day may be expected both for the author and for the reader. The main value of the law is that it raises a barrier against materialism by the encouragement it offers and the dignity it adds to the production of things of the mind. Art, music, and literature are no longer outlawed of our statutes, and may have a freer range of activity among us, with a fuller promise of admirable native products. Where before all seemed neglect or indifference, now

The astonished Muse finds thousands at her side.

The accomplishment of the reform, as Mr. Maurice Thompson has well said, "draws the nation into the atmosphere of honor in literary affairs." It arrests a widespread moral deterioration in the direction of a dishonest communism which had begun to affect many well-meaning people. It stimulates American patriotism by removing a just grievance which American authors have always felt against their country, and makes it unnecessary longer to apologize for our exceptional position as a nation. The friends of the reform may be felicitated upon its success, while its opponents may sincerely and without irony be congratulated on their failure to defeat a measure which is in the interest of the whole country and of a higher civilization.

Lobby Evils and Remedies.

THE most thoughtful students of the lobby evils as they exist in our national and State legislative bodies are convinced that effective remedial legislation must be of two kinds—first, in the direction of general laws for the control of special legislation, and, secondly, in the direction of enforced publicity of the acts of the lobby agents and their employers. The experience of England in this, as in many other political reforms, is of great interest and value. Fifty years ago the lobby, as we understand the term, was as pernicious an influ-

ence in the House of Commons as it ever has been in Congress or our State legislatures. During the great railway construction era in England Parliament was besieged by a powerful lobby whose members plied their trade in ways very similar to those employed in this country to-day. They were given enormous sums of money with which to secure the success of certain railway bills and the defeat of others. Opposition lines of railway were projected for the sole purpose of creating business for the lobby in buying them off. These were the forerunners of the familiar "strikes" of our day, which are aimed at every corporation which is suspected of the ability to pay to have undesirable legislation withdrawn. Instances are on record in which from £80,000 to £450,000 were paid to get railway bills through Parliament. The scandal became so great that radical means were adopted for the regulation of the lobby and the removal of special legislation beyond the reach of its influence. All private bills and special legislation were taken from the control of Parliament by the adoption of the quasi-judicial procedure which is observed at the present day. Under this all bills of a local and personal character are brought in on petition, notice of which must be given by advertisement nearly three months before the opening of Parliament. Copies of such bills must be deposited some weeks before the opening of the session. After their second reading in Parliament, if there is any opposition, these bills go to a private bill committee. "Public opinion," says Mr. Bryce in his chapter on the Lobby in the Appendix to the first volume of "The American Commonwealth," "has fortunately established the doctrine that each member of a private bill committee is to be considered as a semi-judicial person, whose vote neither a brother member nor any outsider must attempt to influence, but who is bound to decide, as far as he can, in a judicial spirit on the footing of the evidence tendered. Of course practice is not up to the level of theory in Parliament any more than elsewhere; still there is little solicitation to members of committees, and an almost complete absence of even the suspicion of corruption." Hearings for and against bills are held before these committees, and so complete is the confidence in their decisions that any measure which is reported favorably from committee to Parliament is almost invariably passed without question.

At the same time that Parliament adopted this procedure for special legislation it enacted a stringent rule, which is also still in force, by which every private bill or petition is required to be in charge of some known and recognized parliamentary agent. No person is allowed to act as a parliamentary agent until he has signed an obligation to observe and obey the rules and orders of the House of Commons. He must also give a bond of £500 and be registered, and must have a certificate of respectability from a member of Parliament or a member of the bar. Any such agent who misconducts himself in prosecuting any claim before Parliament is suspended or prohibited from practising by the Speaker. No written or printed statement can be circulated in the House of Commons without the name of the parliamentary agent attached, who will hold himself responsible for its accuracy. These regulations have worked so well in England that it can be said that lobby evils as we know them exist there no longer.

It has been wise, therefore, for the Massachusetts reformers, who are taking the lead in the movement against the lobby in this country, to follow in the footsteps of English experience. The law which the Massachusetts legislature passed last year requires all counsel and agents employed by any special interest to advocate measures before the legislature to be registered anew each year, and to file under oath, thirty days after the adjournment of the legislature, a "full, complete, and detailed statement . . . of all expenses paid or incurred . . . in connection with promoting or opposing in any manner, directly or indirectly, the passage by the general court of any legislation." Similar statements must be filed by corporations, through their president or secretary, in case they have employed counsel or agents. It is too soon to judge of the efficacy of this measure, but one good effect was at once apparent when the Massachusetts legislature assembled at the beginning of the present year. A great many lobbyists who had formerly appeared every year at the State House staid away, not wishing to register their names, though the regular agents of railroads and other corporations put their names on the lists. The law had thus operated to limit the size of the lobby, and, judging them not unfairly by their unwillingness to give an accounting of their doings, it seems safe to conclude that those who were cut off were the most objectionable of all.

There is nothing in the law which gives any such authority over lobbyists as the English rule gives the Speaker. Neither is there a bond required as in England. The penalty for failure to file the sworn statement specified, either by an agent, or counsel, or corporation, is not less than \$100 nor more than \$1000; and in case of an agent or counsel is accompanied also by disqualification to act in such capacity for three years from date of conviction. This seems to be inadequate, especially so far as a corporation is concerned, for the payment of even the maximum sum of \$1000 would be a comparatively easy escape from the revelation of the details of an extensive plan of legislative corruption. Another weak point in the law is that the requirement for publication thirty days after adjournment secures publicity, if at all, too late to affect pending legislation.

In his annual message of January last Governor Russell of Massachusetts, who had made the lobby question a leading issue in the campaign preceding his election, took the ground that while the present law, if fairly and thoroughly enforced, would result in good, still it falls short of being a sufficient remedy, since it "makes public the names of all persons employed, but not the acts of the lobbyist." To get at these acts, which may be performed in places far removed from the halls of legislation, he made a suggestion which is both novel and interesting. He argued that prevention by non-intercourse was improper and impossible because of the constitutional right of a constituent or any other person to have the freest access to a legislator; but he added: "Prevention by publicity is possible, and I would suggest for your consideration whether a remedy may not be found in this direction by making it easier than it now is publicly to investigate the methods used and money spent on pending legislation; and also by giving power to some proper officer, before a measure finally becomes law, to demand under

oath a full and detailed statement as to these matters. The fear of publicity, and, through it, of defeat, may stop improper practices by making them worse than useless." To this suggestion he added, as a further and fundamental remedy, the relief of the legislature from much special legislation by the enactment of general laws. Thus, while he would hold the fear of publicity over the lobby at all times, he would strike a more direct blow at its existence by removing from its reach a great deal of the legislation which now gives it its life and strength.

General laws must do for us what the quasi-judicial committee process does for England, for as long as our legislative committees are constituted as they are at present it is useless to hope for them to attain the judicial character of the committees of Parliament. Special legislation has attained with us a far wider range than it ever had in England, and our problem in regulating it is much more difficult in consequence. Our lobby evils have also grown to much more formidable proportions than theirs ever reached, for they have had an almost unrestricted field for growth both in Congress and in our State legislatures since their first appearance in the former in 1795, until they have attained a stage of development extraordinary in the ingenuity and intricacy of its ramifications. In most cases nowadays the lobby's real work is no longer done in the State House or Capitol, but in the primaries and nominating conventions at which the men who are to act as the lobby's agents in the legislative body are selected. The bargain for their services is made then, their election expenses are paid for them, and in ignorance of this corrupt compact the people elect them, supposing they are to be the public's servants. Neither is the work of corruption which may be necessary later, when the members are in session, done directly, as formerly, about the Capitol, but indirectly by means of banquets and receptions and in various other forms of personal solicitation carried on in quarters all safely removed from the publicity of the lobby precincts. In fact, nearly all the most pernicious lobby work at present is done elsewhere than at the State House or Capitol, and the only kind of publicity about it that will be dreaded, and therefore effective, is the kind which can be forced, as Governor Russell suggests, at the critical moment before a bill is to come up for final passage. If at that point every one concerned in the bill's welfare—author, sponsor, agent, corporation, lobbyist—could be forced under oath to reveal all that he had done for or against it, in and out of the halls of legislation, there would be publicity of incalculable value. This, combined with general laws removing all the private and special legislation possible of such classification from the control of legislative bodies, would free us as completely as England has been freed from lobby evils.

The National Conference of Charities and Corrections.

Now that altruism in one or another of its manifestations has come to occupy so much of the public mind, and the study of social questions may be said to be almost the fad of the hour, it is rather singular that the annual meetings of a body which is doubtless best entitled to speak with authority on subjects of philanthropy and penology have commanded very little of

public attention. Still more singularly the newspapers, usually so quick to apprehend the drift of events and to foresee, if they do not form, the public interest, have entirely failed to perceive the significance of these meetings, and seem to be totally unaware that their proceedings have been potent in influencing legislation, and that they are, though indirectly and without observation, an important factor in the formation of public opinion on the subjects which come within their scope.

This body, the National Conference of Charities and Corrections, has issued a call to its eighteenth annual meeting, to be held in Indianapolis from the 13th to the 20th of May, and since Indianapolis is a city peculiarly awake to sociological interests, and since the Rev. Oscar McCulloch, the president of the coming conference, is president of the organized charities of the city as well as pastor of one of its prominent churches, the conference is likely to be a notable one.

It will doubtless surprise our readers to be told that a large number of them are in all probability members ex-officio of this conference. There are, indeed, few intelligent men and women of our day who are not connected with some charitable or reformatory or other philanthropic institution as managers or trustees or members of committees, or who are not active workers in some organized form of benevolence, and all such, though they be as little aware of it as M. Jourdain that he was talking prose, are in fact entitled to a seat in this conference and to a voice in its discussions. The presiding officer is always a member of a State board of charities, and this official connection gives the needed stability and definiteness to a body which is otherwise one of the loosest and most flexible of organizations, being made up, as a matter of fact, of all who will come, members being bound by no constitution, nor subject to any duties, not even that of an annual subscription. That the proceedings of such a body as this are of such value as to be eagerly sought by public libraries not only in this country but all over Europe, the annual sale of the volume containing them forming the only and the adequate revenue of the association, is a sufficient proof of the standing and ability of those who take part in these meetings. Indeed, many of the members of the conference, though unknown to the public, are specialists of wide repute in their own lines.

The great task of the sociological reformer is to educate public opinion and to inform the public mind. As Bishop Gillespie said at one of these conferences, "Public abuses do not exist where there is public knowledge," and that public abuses do exist in such large numbers shows how much the community needs such a fountain of illumination as these conferences are. Many public abuses of long standing have indeed been abated as the direct result of the light shed abroad from these meetings. For instance, it was reported at the Boston Conference, several years ago, that there was a boy in jail; and within a year, through the exertions of members of that conference, a law had been passed making it impossible that there should ever be a boy in jail in Massachusetts. And very much of the wisest legislation in several States, especially with reference to the care and the reformation of dependent and delinquent children, is to be traced directly to this source.

It is evident that the knowledge to which Bishop

Gillespie referred to the knowledge not only of facts but of theories and of methods; it is that sociological culture which, like culture in its larger sense, consists, as Matthew Arnold has told us, in knowing the best that has been thought and said. And it is precisely here that these conferences are of value. The papers presented (reports of committees and others) embody the results of wide research controlled by large practical experience, and in the discussions which follow may often be heard some of "the best" which has ever "been said" on these subjects. In the coming conference, for example, in the reports of committees on public indoor and outdoor relief, prison reform, the commitment and detention of the insane, the public care of children, and other subjects, there will doubtless be brought forward such advanced and well-reasoned views, supported by such evidence of practical knowledge, as would secure, were the meetings attended by the great body of legislators and workers, that our entire system of charities and corrections would be placed upon a new basis of enlightened and efficient treatment. In these conferences the scientist and the humanitarian meet, and here at least it has long since become an axiom that there is no true science which is not humane.

But for the present, and perhaps for a long time to come, the best results of these conferences are to be seen in the improved work of officials who have to do with penology and charity, through the illumination and inspiration which they here receive. It is, of course, only the best class of these officials who attend these meetings, but through the knowledge and the enthusiasm which they thus gain the standard for all officials is being surely, if very gradually, raised. To look at the men and women, wardens and matrons of public institutions, who attend these conferences, to hear their utterances, and to note their devotion to their work, is to gain a new hope for the future of our dependent and criminal classes.

Not to be undervalued is the influence of these conferences on the cities where they have been held. This, though not adequately appreciated by the public, is realized by governors of States and mayors of cities, and strong efforts are always made to secure their presence, several cities usually contending for the honor of the next annual meeting. It only needs a wider public knowledge of the immense value and the deep interest of these conferences for them to become an acknowledged power in those sociological reforms for which the whole community is sighing.

An American Cheap Money Experiment.

WE gave in the April number of *THE CENTURY* an account of the Land Bank experiment in England in 1696, as an object lesson from history upon the fatuity of seeking prosperity for either nations or individuals by means of "cheap money." We purpose this month to supplement that lesson with another drawn from American experience about a century later, which was based upon similar delusions, and which resulted in far more disastrous consequences.

At the close of the Revolutionary War the people of Rhode Island found themselves in extreme poverty and heavily burdened with their share of the national debt. The war had seriously crippled their trade, upon

which they were mainly dependent, and in their distress the people, instead of patiently waiting for relief to come by the slow process of rebuilding their trade, turned to paper money for relief. They began to clamor for a paper bank in 1785, and when petitions for such a bank were rejected by the General Assembly, a new party was organized with paper money as its chief principle. They went before the Assembly again in 1786, and their petitions for a paper bank were met with counter-petitions against it, signed by the merchants of Providence, and the project was defeated again by a vote of two to one. They then carried the question into the elections, and won a surprising victory, gaining control of the General Assembly by a large majority. This body assembled in May, 1786, and one of its first acts was the passing of a law establishing a paper-money bank of one hundred thousand pounds. The bills were to be loaned to the people on the principle of the English Land Bank, though on much less generous terms.

Every farmer or merchant who came to borrow money must pledge real estate for double the amount desired. The money was to be loaned to the people upon this pledge according to the apportionment of the last tax, and must be paid into the treasury at the end of fourteen years. Great expectations were entertained by the farmers of the beneficent results which were to follow upon this new influx of wealth. "Many from all parts of the State," says McMaster in a very interesting chapter upon the subject in his "History of the People of the United States," "made haste to avail themselves of their good fortune, and mortgaged fields strewn thick with stones and covered with cedars and stunted pines for sums such as could not have been obtained for the richest pastures. They had, however, no sooner obtained the money and sought to make the first payment at the butcher's or the baker's than they found that a heavy discount was taken from the face-value."

The depreciation of the new money began literally with its issue. Every merchant and tradesman in the State refused to receive it for its face-value, and the holders of it refused to make any discount. The General Assembly came to the aid of the bank and sought to give its paper money full value by statutory enactment. A forcing act was passed subjecting any person who should refuse to take the bills in payment for goods on the same terms as specie, or should in any way discourage their circulation on such terms, to a fine of one hundred pounds and to the loss of his rights as a freeman. This made matters worse than ever. Merchants and traders refused to make any sales whatever, many of them closing their shops, disposing of their stock by barter, and going out of business. In fact, money almost ceased to circulate at all. Nearly all kinds of business was transacted by barter, rents were paid in grain and other commodities, and the only people who used the paper money were those who had borrowed it on their land. The chief cities of the State, Providence and Newport, presented a very remarkable spectacle. Half their shops were closed, their inhabitants idle, and their streets animated only by groups of angry and contentious men blaming one another for the blight which had fallen upon their business and industries. In order to retaliate upon the merchants and traders for refusing to take their money,

the farmers refused to bring their produce to market. A famine was so imminent in Providence because of this withholding of supplies that a town meeting was called to devise means for obtaining the necessities of life. To provide immediate relief for persons in want of bread five hundred dollars was authorized to be borrowed and sent abroad to buy corn to be sold or bartered by the town council. In Newport a mob brought on a riot by attempting to force grain dealers to sell corn for paper money.

In August, about two months after the establishment of the bank, affairs became so desperate that a State convention controlled by the country towns adopted a report recommending the General Assembly to enforce and amend the penal laws in favor of paper money, and advising farmers to withhold their produce from the opponents of the bank. The General Assembly, convened in special session for the purpose, passed an additional forcing act, which suspended the usual forms of justice in regard to offenders against the bank, by requiring an immediate trial, within three days after complaint was entered, without a jury and before a court of which three judges should constitute a quorum, whose decision should be final, and whose judgment should be instantly complied with on penalty of imprisonment. The fine for the first offense was fixed at from six to thirty pounds, and for the second at from ten to fifty pounds. "This monstrous act of injustice," says S. G. Arnold in his "History of the State of Rhode Island," "was carried through the legislature by a large majority, and the solemn protest against it as a violation of every principle of moral and civil right, of the charter, of the articles of confederation, of treaty obligations, and of every idea of honor or honesty entertained among men," which a minority of the members presented was not allowed to appear on the record.

This second forcing act brought matters to a crisis. A butcher in Newport was brought into the Superior Court on a charge of refusing to receive paper money at par in payment for meat. A great concourse of spectators attended the trial, which was before a full bench of five judges. Leading lawyers appeared for both sides, and their arguments occupied an entire day. Two of the judges spoke against the forcing acts, and the other three were of the same mind. On the following morning the formal decision of the court was announced, declaring the acts unconstitutional and void, and dismissing the complaint. The wrath of the General Assembly at this decision was great. A special session was at once convened, and the judges were summoned, in language of incredible arrogance, to appear before the Assembly to assign the "reasons and grounds" for their decision. Three of the judges obeyed the summons, but as the other two were detained by sickness the hearing was postponed till the next session. At the next session four of the offending judges were removed. Before adjourning the General Assembly prepared a new act to "stimulate and give efficacy to the paper bills." This was called the Test Act, and it contained one of the most remarkable oaths ever prescribed to a free people. Every one taking the oath bound himself in the most solemn manner to do his utmost to support the paper bank and to take its money at par. All persons refusing to take the oath were disfranchised. Ship-captains were for-

bidden to enter or to go out of ports of the State, lawyers were not to be allowed to practise, men were not to be allowed to vote, politicians were not to be allowed to run for office, and members of the legislature were not to be allowed to take their seats until the oath had been taken. This was so stringent a measure that the General Assembly was afraid to take the responsibility of enacting it, and, after considering it, referred it to the people of the towns for approval. Only three towns in the State voted in its favor, all the others rejecting it.

This ended all efforts to force the people to take the money at par in ordinary business transactions. The General Assembly, in January, 1787, formally repealed the forcing acts, and then took the first step towards the repudiation of the State debt by ordering the treasurer to pay off one-fourth of it in the bills received for taxes, that is in the depreciated paper money, which, at that time, was circulating on the basis of six to one. By successive steps of this and similar kinds the entire State debt was extinguished, public creditors being forced to take it on terms prescribed by the State, or to forfeit their claims. The last instalment of the debt was got rid of in 1789, in a forced settlement, when the paper money which the helpless creditors received was worth only one-twelfth as much as coin. "Had a general act of insolvency," says Arnold, "relieving all debtors from their liabilities and the State from its legal obligations been passed in the first instance, the same end would have been more speedily accomplished, and the means would not have differed very widely from those that were actually employed. . . . It fell but little short of repudiation."

During 1787, when the value of the paper money ranged from one-sixth to one-tenth that of coin, bills in equity for the redemption of mortgaged estates were filed in large numbers in the courts. The Superior Court of Newport declined to try any case in which a large sum was involved. Suitors came to court with paper money in handkerchiefs, bags, and pillow-cases, asking to have the holders of their mortgages forced to take this at par in redemption of their lands. One bag, containing fourteen thousand dollars, was brought for the redemption of a single farm. But the court refused to try all cases of the kind. The value of the paper money dropped steadily till fifteen paper dollars were worth only one coin dollar. In August, 1789, the General Assembly showed its first sign of returning reason by suspending the operation of the tender law. It followed this by repealing the statute of limitations, because of the depreciation in the value of paper money, and by extending the time allowed for the redemption of mortgages from five to twelve years. Finally, in October, it repealed as much of the Paper Bank act as made the bills a tender at par, and debtors were authorized to substitute property, at an appraised value, for money in discharge of debts. The act which effected the repeal fixed the value of the paper bills at fifteen to one. This was the end.

Throughout this entire struggle to make money valuable by statute, by calling it a dollar and saying that it represented two dollars' worth of land, the bills had remained almost exclusively in the hands of their first takers. No one else was found who would receive the money, save those whom the State compelled to take it, or to forfeit their just claims. Absolutely nobody

had benefited by the experiment except the State, which had got rid of a large portion of its debt by dishonestly refusing to keep its obligations. Industry and trade of all kinds, as well as the State's good name, had suffered incalculable injury, and the State's material progress had been retarded so seriously that it required many years to regain what had been lost. The deluded people who borrowed of the bank on their land as collateral realized their desire of having more money in their pockets; they realized the dream cherished by the believers in "cheap money" in all lands and in all times, for a larger *per capita* currency in which they should share, but they very soon found out that none of the blessings which they had so fondly imagined would follow possession were destined to appear. What was gained by having plenty of money if it could not be used in payment of debts, if nothing

could be bought with it save at greatly advanced prices, and if it were to become less and less valuable as time went on?

They began their experiment with a firm belief that they could compel capitalists to share their wealth with them by exchanging their hated dear money with their own cheap money on equal terms, but they soon discovered that all the power of a State government, exerted with unscrupulous zeal, was not sufficient to compel a man to employ his capital in ways against his will. They might prevent him from collecting usury, but they could not interfere with him when he chose to keep his capital to himself and to make no use of it in trade, either by buying, or selling, or lending. Every "cheap money" experiment that has ever been made has resulted in precisely the same demonstration, and the same fate awaits all those of the future.

OPEN LETTERS.

Certain Criticisms of Certain Tales.

HUME'S rule of never replying to a critic was a good one, and it might have answered in the case of certain attacks which of late have been made upon me by Catholic newspapers for writing "The White Cowl" and "Sister Dolorosa." It has been urged, however, that these criticisms ought to be met — hence publicity here given to very private affairs. But if I have to say anything I will say everything. To be silent under misrepresentation does no great harm; to make a poor defense — that is another matter. So that I am not to throw a ray of light upon my actions; I am to make the sun shine as at noonday.

It is charged, then, that I was admitted to the interior of the Trappist monastery, treated with every courtesy as a favored guest, allowed to learn much more than ordinary visitors do about the manners of life, rules, labors, fasts, and penances of the community; that afterward I repaid this confiding hospitality by "the ungentlemanly trick" of writing an extravagant, foolish romance, in which I distorted and misrepresented the Trappist monk and the Trappist rule.

It is charged, secondly, that I went to the convent of Loretto, was received with hospitality, unreserved kindness, and confiding charity; and for these I made the poor return of writing a tale which is fixed as a caricature and a stigma upon the Sisters.

My conduct is otherwise described as a very serious moral delinquency, a social offense, an impertinence, and a bearing of false witness against my neighbor.

The truth is this. Requested by THE CENTURY MAGAZINE to write an article on the Trappist monastery, I went to it and at once made known to the abbot the purpose of my coming. I staid several days; and upon leaving paid for my lodgment and entertainment a sum small indeed, but larger than the prior was at first willing to accept. Soon afterward I wrote the article which was published in THE CENTURY for August, 1888. A copy of this was sent to the abbot, was read aloud to the assembled community, and was said by the abbot to be the best article that had ever been written on the

Order. I received from him a special invitation to revisit the place. I received again and again from Catholics, known and unknown, words and letters of congratulations and thanks. It was even strongly hinted that I would turn Catholic. This is the way in which I discharged my obligation to THE CENTURY MAGAZINE and to the monastery. But of course all this need not be remembered by my Catholic critics at this time.

My obligation thus discharged, I was again in possession of my natural liberty and my imagination; and several weeks later, being still under the influence of the impressions received during my stay, I conceived for the first time the idea of attempting a short tale of Trappist life. "The White Cowl" was the result. But I want it distinctly understood that in this tale there is not a shred of knowledge touching the rules of the Order that I did not myself get, or may not this moment be gotten by any one, from writings to be found in public libraries, and from books on sale in Catholic shops. Such works are "The Rule of St. Benedict," a copy of which the abbot gave me, and which is still in my possession; "The Centenary of Catholicity in Kentucky"; "The Life of the Rev. Charles Nerinckx"; Chateaubriand's "Vie de Rancé"; and articles on the Trappists in old magazines — discoverable through "Poole's Index." If, then, any one wishes really to know the truth, he can thus find it out for himself. So far as knowledge of Trappist rule goes, the tale could have been written without my ever having visited the place; and I fail to see how my having visited it placed me under obligation not to use material which is the common public property of the reading world. Besides, it is idle to suppose that a person admitted to the abbey for the purpose of publishing an account of its life would have been told things that he should not tell.

After having written "The White Cowl," I heard through friends of the convent of Loretto; and it was suggested that I write a descriptive article of it also. With this view I began the study of the Order and of early Catholic missions in Kentucky in two of the books named above — "The Life of the Rev.

Father Nerinckx," and "The Centenary of Catholicity in Kentucky." While thus engaged I conceived the idea of the tale of "Sister Dolorosa"; and from these two books I drew what slight knowledge I possess of early Catholic life in Kentucky and of the foundation, history, dress, and rules of the Order of Loretto. Thus this second tale was framed and the material for it gotten long before I ever visited the convent; and it would have been written had I never gone thither. What my visit to the convent actually gave me was the impression of local color, and this I could have gotten merely by walking across the fields in that region and by looking at the convent buildings half a mile away.

But the facts of my visit are these. Presenting myself in company with a friend, I stated that I had written an article on the Trappist monastery, and that, if material existed, I wished to write an article on Loretto. To determine whether this material existed I asked permission to see the buildings and the grounds. We—my friend and I—were both promptly and politely conducted by two Sisters through the church and the school building and to certain parts of the grounds. In less than an hour we were gone.

This is the beginning, extent, and end of my visit, of the courtesy shown, of the obligation incurred. During my conversation with the Sisters, if anything worth remembering was said, it is forgotten now. Not an item of information was given that could have been used for them or against them. The next day—their Commencement—we returned and sat in the chapel among an invited public, listening to exercises; or we strolled over the grounds. No one so much as spoke to us, with none spoke we; dinner was served to a throng of guests, and we were not noticed; we tried to buy dinner, but could not, and went away.

The material for a descriptive illustrated article did not exist at Loretto, and the idea of writing it was dropped. Otherwise I should have written it, and should have done my utmost to make it as sympathetic as was the study of Gethsemane. But I went on with the writing of my tale; and I am still unable to see how my having thus visited the convent placed me under obligation not to write a story, the idea of which was already fixed, the material for which was already gathered. I am glad to say that my visit had this result—it enabled me to speak of the Sisters in a tone of more intelligent respect.

As to the charge that I gave Sister Dolorosa to the public as though I had drawn her from life, it can only be said that in the same way Mr. Haggard gives "She" to the public as though he had drawn her from life, and Mother Goose gives "Old King Cole" to the public as though she had drawn him from life.

But really this is little to the purpose. For, at bottom, my offense is not in having visited these places and then written the stories: it is the stories themselves. The question then arises, May the American writer avail himself of conventual and monastic life in America as material for his art? If so, his tales must be located somewhere; and if thus located, will they not give offense?

Perhaps this question has never yet been forced into prominence during the development of the national literature; but prominent sooner or later it will become, and it is not too soon to form and to agitate convictions on the subject. Certainly not now and here

may such a discussion be opened. But it is well, meanwhile, to remember that every form of Protestant belief in this country has been freely used, and without bringing upon the writer overcharged denunciations of a sympathetic religious press. Puritans, Quakers, Shakers, Dunkards, shouting Methodists, Hard-Shell Baptists—all have been freely used, neither for attack nor defense, but merely as furnishing material for tales. But the Quakers have never cried, "False witness"; the Methodists have never shouted, "Impertinence!" And the use that has been made of Protestant life in America has for hundreds and hundreds of years been made of Catholic life in every country of Europe. Balzac treats the character of a nun who lies to the Mother Superior that she may have an interview with her lover. She dies of love in the convent, and her body is carried off from the convent by her lover. But Balzac, himself a devoted Catholic, was not charged with wishing to fix a stigma on the Carmelites. Valera portrays in "Pepita Ximenes" a Catholic libertine studying for the priesthood; and yet Valera declares that the most orthodox Jesuit is pleased with his novel. M. Daudet represents a community as forcing a brother of the Order to continue the manufacture of the wine which is the source of its wealth, although he declares that he is drinking his soul to damnation because he cannot possibly make it without tasting it. So that every evening while they are praying for Father Gaucher's benefit at one end of the monastery Father Gaucher is going to the devil at the other. But M. Daudet was never charged with grave social and moral delinquency, nor with fixing a caricature on the White Fathers. Nobody ever supposed that Dumas meant to ridicule Cardinal Richelieu in "The Three Musketeers." And what of Von Scheffel's "Ekkehard"?

It has been understood in Europe for a thousand years that the writer is after tales, not sermons; but if a good tale makes a good sermon, so much the better. It was on the traditional privilege granted to the European writer that I based my own action in writing my own tales. But suppose that they were deliberately directed against these Kentucky institutions, as embodiments of the Catholic idea; what then? Is it not my right to oppose the Catholic idea in any form? For does not the Catholic consider it his right and his duty to attack the Protestant idea in any form? Has any Protestant ever denied to him the exercise of that right? And the right that he enjoys, will he not grant?

James Lane Allen.

The Negro in Nashville.

I HAVE long believed that of all places in the South the negro has had in Nashville, Tennessee, the fullest opportunity to show what he could make of himself, has there been more nearly than elsewhere accorded all that the law allows him. For some time, therefore, I have watched pretty closely his progress, and now offer some of the results of my observation, so far as I can without advancing any theory or pleading any cause.

It has doubtless been very fortunate for the negroes in Nashville that they have been in a decided minority, so that they have given less attention to politics than they might otherwise have done. Nashville is a city of schools and colleges and churches, of considerable culture, decided liberality of thought, a thriving place

where honest men can make a living and more, where the people like to own their homes and make themselves comfortable in them. It is a good place, therefore, for the negro to learn by contact.

The city superintendent of public schools says that the negroes show even more eagerness to get an education than the whites, and he claims that no discrimination is made against them in the appointments of their schools, which are now taught exclusively by negro teachers, thirty-six in number. To the credit of these teachers he mentions that at the last examination for teachers the highest marks were made by one or two negro applicants. Besides their public schools there are three negro colleges in Nashville — Fisk, Central Tennessee, and Roger Williams. Two decades ago the two older of these institutions were little more than primary schools, most of the pupils just beginning to read, some in the Fifth Reader, none beyond cube root in arithmetic. In 1888 the college department of Fisk numbered 42, the normal 46; in Central Tennessee, college 16, normal (in classes corresponding to Fisk) about 61; in Roger Williams, college 7, normal (in classes corresponding to those at Fisk) 21; total in Fisk (in all departments) 475, in Central Tennessee 541, in Roger Williams 192. All these students were perhaps as far advanced as were the farthest twenty years ago. At Central Tennessee there are also regular departments of medicine, dentistry, and law. Though the charge is just that the negro at his present stage needs Latin, Greek, and the so-called liberal studies less than anything else, surely 42 A. B. students out of 475 is not an excessive proportion. The ministry and other professions need already a larger ratio. The greater part of the remainder are simply getting the plain elements that are necessary to any man's or woman's well-being. Besides, these institutions pay considerable attention to industrial training. All boarding pupils are required to devote an hour a day to such forms of labor as may be required of them, and the cleanest school-building I ever saw is Livingstone Hall of Fisk University, which is kept clean by the pupils. A certain number of young men at Fisk learn printing every year, and others will henceforth learn carpentry and other useful handicrafts; while the young women are taught nursing the sick and the rules of hygiene, cooking, dressmaking, and plain sewing. The course of industrial training in Central Tennessee College and Roger Williams University is about the same.

The catalogue of Fisk University informs us where its graduates are and what they are doing. Of 62 college graduates 38 (or 61 per cent.) are teachers; 8 (or 13 per cent.) are preachers; of 48 normal graduates 32 (or 66 per cent.) are teachers; eight of the remainder are wives, leaving only eight (or 17 per cent.) for other occupations. Doubtless the great majority of all that study in any department become teachers at present.

Does this education lift up the negroes, as it usually does the rest of humanity? I visited lately, with the city superintendent, a negro school the average attendance of which is nearly eight hundred, in "Black Bottom," the very heart of the worst quarter of the city, and I saw there hundreds of negro children — very many of whom came from environments hostile to all that is good and elevating — with clean faces, for the most part neatly dressed, orderly in behavior, studious and attentive — in conduct equal to any school I ever saw. A

college president who has an exceedingly frank way of talking of the dark as well as the bright side of the situation says that of more than four thousand pupils in twenty years he has never heard of one in the penitentiary; and there had never been, so far as known, a case of unchastity among the pupils boarding at the college, such cases as had occurred being among pupils from the city. Other evidence will be given indirectly below.

Just here I wish to say that Nashville has been blessed in the character of the Northern men and women who have come to teach in these negro colleges. They have come in the truest missionary spirit; have patiently submitted to a kind of social ostracism; have endeavored to cultivate in the negro only such qualities as make for peace, patience, honesty, and good citizenship. They have "respect unto the recompense of the reward," but do not expect it here. They possess their souls in patience. The good men and women estimate their own trials and sacrifices as less than those of foreign missionaries, while those of their Southern neighbors who appreciate the situation know how much easier it is to go to China and Japan and Africa, and be considered heroes and heroines, than to do this home-mission work. They are the best friends of the Southern whites, as well as of the Southern negroes, but only the next generation of us will fully know it.

But the country knows more about the negro's education than about his efforts in business and how he lives at home. I have visited the places of business of a large number; *e. g.* a tailor's shop where from five to eight hands are employed; a shoe shop employing from eight to fifteen men, two of them white; a poultry and egg store having two branch houses in other towns and a trade extending into several States, the business amounting to 100,000 dozen eggs per month and a shipment of five car-loads of poultry per week, requiring seven clerks, two of them white bookkeepers; a feed store with a business worth over \$1000 per month; three furniture stores, new and second-hand; a coal and wood yard requiring four wagons; two undertakers' shops; the offices of three doctors, one of whom requires two horses and, though two-thirds of his practice is charity, collected last year \$2600, another a graduate of the Harvard Medical School and already after three months making a living; grocery stores and butcher shops; a livery stable; several offices of lawyers and real-estate dealers, to say nothing of hack drivers, owning from one to several carriages; barbers, and the like. I have heard white business men commend the character of some of them in a manner of which any man might be proud. The trade of most of them is mainly, or very largely, with the whites. They are only a few of the most thriving of the well-to-do negroes of Nashville; but of course the great majority are still only day laborers. A number of negroes told me with pardonable pride of their investments in real estate. One had made his first purchase with money saved while in a Government clerkship, and now his income from city property is \$100 per month. Most buy, I am told, with the view to building a home. The negroes realize already that nothing so elevates them in the eyes of the world as property, and the "business" fever among the young is so strong that one of the colleges has found it necessary to have

sermons preached against excessive eagerness to make money.

The negroes of Nashville have also made a promising beginning in the way of combining for church or benevolent enterprises. The only negro-church publishing-house in the world is located here, the building, five stories high, being situated on the public square. It was purchased with the contributions of the children of the African Methodist Episcopal Church. A home for aged and indigent negroes is the latest enterprise, while a shop for teaching mechanical trades was opened a year or so ago. The number of benevolent church societies is of course legion.

More interesting still were the discoveries I made in the homes of the negroes. Through the courtesy of a well-educated negro who works ardently for the welfare of his race I had the opportunity, in company with a friend, to inspect in one day more than twenty of the better class of homes. The list of representative homes we were to see included more than fifty; but the time was too short. Most were taken by surprise, but willingly showed their houses from cellar to garret. The result may be summed up as follows: The occupant was the owner in every case but one. In most parlors there were pianos, and handsome carpets on the floor, with other furniture to match; indeed the houses were generally carpeted throughout, while bedrooms, dining-rooms, and kitchens were remarkably clean. I noted with pleasure several bathrooms, and remarked how one thrifty pair had so arranged their handsome base-burner stove that it heated comfortably the whole house of four or five rooms at a cost of only a few cents a day. It was interesting to learn that in most cases where the heads of families were young they had been educated at one of the negro colleges in the city; where old, that the children had attended these. Let one example stand for all. A — is the janitor of one of the banks of the city. By working hard at the bank, while his wife worked and saved at home, he has graduated one son and two daughters at Fisk University, the fourth, and last, child being now there. His son, at first a teacher, is now in the service of the Pullman Company, one daughter is married, the other is a teacher. His house is comfortably furnished, and his lot extends one hundred feet in a very respectable street in the heart of the city.

Just two or three remarks at the close. First, I am quite sure that more comfortable and well-kept homes could not be found anywhere among the same number of whites of the same income, and the owners of these homes have the same interest in good government, peace, good morals, the well-being of society, as the better class of whites have. These well-kept homes are not only the best proof of the progress in civilization of the negro race, but they are also the best security for the welfare of the whites in property and in morals, and I have never had so much hope for the future of this region as since I learned these things. Granted that these may be the picked few, it is most hopeful that there is a picked few, whose example will inspire others to lift themselves up. Finally, an interesting fact which I have not found place for elsewhere — one of the daily papers of Nashville reports a circulation among the negroes of the city of more than eighteen hundred copies.

"Does Vivisection Help?"

I.

IN the October number of *THE CENTURY*, among the "Open Letters," will be found an article under the above heading which is well calculated to mislead a non-medical public.

One would judge from its opening that surgery had made no progress since the time of the ancient Hindus, but towards its end the author admits that "surgery has advanced with giant strides."

That surgical and dental instruments have been found in the excavations at Pompeii and in the ancient tombs in Egypt is true, but they are of the rudest patterns, and only foreshadow, as it were, the instruments of the surgeon of to-day. Other instruments, surgical appliances and procedures, are described in the *Susruta*, and by Hippocrates, Celsus, and others, but none of these are claimed by intelligent surgeons as "crowning glories of nineteenth-century surgery." Any one who will study into the history of surgery will see that "rhinoplasty" is of ancient date, and that the "operation for stone" was practised in Egypt as long ago as two thousand years. Even at that date specialists were recognized in Alexandria who confined themselves to the extraction of stone. These operations are not claimed for nineteenth-century discoveries, but the perfection of the methods employed in their performance is claimed for the surgeons of our century. While attempting to detract from the credit due the surgeon, the author is inclined to glorify the instrument-maker as a prime factor in the advancement of surgery. The multiplication of instruments is not the cause of the advances that have been made, for some of our best surgeons do their best work with the simplest instruments, and in all cases the instruments are made to fill the surgeon's needs. To whom is the credit due — to the architect who plans the structure or to the workman who follows his directions?

It is true that the ancients had some faint idea of the proper treatment of wounds, and that the good Samaritan carried out antiseptic principles when he poured oil and wine into the wounds of him who fell among thieves, but does this detract from the glory of Semmelweis and Lister, who formulated rules and perfected methods, the adoption of which has saved thousands of lives annually to the human race?

The author makes a mistake when he states that the "expectant plan of treatment" consists in "letting the disease severely alone." If such be the case, how can the great mortality in countries where no physicians exist be accounted for? How can we explain the fact that with increase of physicians the average human life has increased, in spite of the daily accidents attending the progress of civilization? A comparison of our century with the middle ages shows an addition of several years to the life of each individual that is born. The "expectant plan" consists in carefully watching the disease, and fortifying the system so that it will be able successfully to combat the evil influences with which it has to contend. Nature is always willing but not always able to effect a cure, and in these cases she must be assisted. But now we come to our question, "Does vivisection help?" It will perhaps make it clearer to a non-medical public to formulate the question thus — "What shall we vivisect?"

A glance at the statistics of different operators will show marked improvements in their results as the operations increase in number. This is noticeable in all operations, but more especially in operations in the abdominal cavity. Formerly one woman out of every three died who was operated on for ovarian tumors, while now the mortality has fallen to less than one in twenty!

To what is this improvement due? It is due to more perfect methods, greater boldness, and greater dexterity. And how can these requisites for success be acquired? Only by experience on the living animal, either man or beast. Hear what Dr. Senn, one of America's greatest abdominal surgeons, has to say on the subject. "The necessary diagnostic skill and requisite manual dexterity in the operative treatment of gunshot wounds of the stomach and intestines can be acquired only by experiments on the lower animals." Mr. Lawson Tait of Birmingham, who is so frequently mentioned in the former article, is one of the boldest and most successful of abdominal surgeons, and his diagnostic skill and manual dexterity have been acquired only by experiments on women! Listen to what Dr. Winkel, one of the most celebrated German surgeons, has to say while speaking of and condemning the unsexing of women. "One can scarcely furnish a sadder proof of these assertions than the statistics presented by Lawson Tait in August, 1881, before the International Medical Congress at London, of cases on which he had operated. They were, in fact, animal experiments on living women, and for that reason it is not strange that Lawson Tait is such an energetic opponent of vivisection."

Does the attempt then seem "barefaced" that was made some months ago to show the "wonderful success of Lawson Tait's operations in abdominal surgery the results of experiments on living animals"? (women). Why should not his operations be brought to the support of vivisection?

Alas! it is only too true that "the real history of surgery . . . teaches us that it was by Baker, Brown, and Keith" (and others), "working by experience on the indications offered by human patients, that the mortality of the abdominal operations was so reduced that surgeons were emboldened to attempt what they now so nobly and bravely carry out." But would it not have been better if Mr. Keith had gained from experiments on the lower animals the experience he has gained from the sacrifice of many female lives before he came to the conclusion that electricity, as applied by Apostoli, was better in the treatment of certain tumors than the application of the knife?

The author is pretty nearly right when he asserts that "we should have been precisely where we are now in this respect if a surgeon had never opened the peritoneal cavity of dog or rabbit," for while "what is known as the scientific school of doctors" have been painlessly sacrificing a few of the lower animals so as to become more dexterous and better able to cope with the afflictions of the human race the antivivisectionists have been pandering to the tastes of a morbidly sentimental public and at the same time mutilating or destroying God's noblest creation.

The assertion that there is little analogy between the brain of man and the brain of the lower animals is utterly unfounded; and as far as locating the centers on

the surface of the brain which govern certain groups of muscles is concerned, scientists are sufficiently in accord for all practical purposes. This is shown by the successful operations, performed almost daily, for the removal of tumors, or the evacuation of cysts and abscesses of the brain.

The knowledge gained from accidents and injuries comes slowly, and frequently at the expense of the patient. This knowledge must be had before it can be applied; now, shall it be acquired slowly and at the expense of poor, suffering humanity, or rapidly, by sacrificing a few useless curs?

And what will these antivivisectionists do with the bacteriologists who are daily sacrificing thousands of animals on the altar of science?

Could Pasteur have discovered a remedy for hydrophobia without experimenting? Could Koch have made his wonderful discoveries which render probable the cure of consumption? These and many other diseases will probably become extinct or lose their terrors through the knowledge gained by experimenting. For advance, individual or general, experimentation is necessary. Shall it be on man or beast?

SCRANTON, PA.

Thomas W. Kay.

II.

I OFFER the description of a "vivisection" as an appendix to the above letter. It is taken from the notes of a justly horrified eye-witness.

"They seized a sentient animal, quivering with apprehension, bound it fast upon a table, and began their fiendish work by injecting a deadly poison under its skin. While the whole nervous system of the victim was still reeling under the assaults of this drug, an assistant completed certain manœuvres, which, in the diabolical phraseology of one of the most notorious of this class of criminals, 'dissected apart the nerve-centers, separating the so-called vital portions of the medulla from the hemispheres of the brain'; thus, it is to be presumed, leaving the latter in an unnatural isolation. And yet they dare pretend that the physiological conditions were sufficiently preserved to render the experiment useful!

"But to proceed with the horrid recital. The ruthless principal in the crime now advanced, glittering knife in hand, and at a single stroke ripped up the belly of the poor beast, and plunged his hand among its smoking entrails. Not a gleam of compassion lightened his fixed eyes; not a sign of reverence for the shrine of life, whose sanctity he thus dared to violate. Then from the body of the helpless, inarticulate creature prostrate before him this demon in man's form literally tore out a vital organ—or rather an organ far more precious than those which merely conserve individual life, for it contained the countless germs of future generations. It was a symbol of immortality! This Sacred Thing was tossed carelessly into a basin, and the bloody work went on.

"At this point I, at least, hoped to see the unfortunate animal put to death—receiving the last meed of mercy yet possible. But no! The gaping wound was only partly closed; through it was plunged a glass tube into the vital parts, and there left as a festering source of irritation. The subject of the fearful experiment was then borne away and left for days to toss about in

agony. And this — Heaven save the mark! — is modern science! Let us pray rather for medieval ignorance."

These notes will be more intelligible to the general reader when it is explained that they accurately, if somewhat too fervently, describe an ordinary surgical operation for removing diseased ovaries. The "deadly drug" injected is morphine; "the maneuver" which serves to dissect apart nerve-centers is the inhalation of ether, which removes the consciousness of the brain while leaving intact the cardiac and respiratory centers of the medulla; the animal—*i. e.*, the sick woman—is absolutely unconscious and free from pain during the operation; the cystic ovary removed has ceased to be capable of normal functions, and has become a focus of painful disease, constantly threatening death.

The one essential difference between the human operation and one performed on animals under the same condition of anæsthesia, is that the operator expects to benefit the human being and to sacrifice the life of the animal for the ultimate benefit of a human being. From one point of view, therefore, the laboratory ranks with the surgical operating-room; from another, with the well-legitimized slaughter-house, where animals are daily sacrificed by the thousand for human food, and only the vegetarian or the Buddhist objects.

NEW YORK CITY.

Homeopathy and "Expectant Treatment."

IN the October CENTURY appears an "Open Letter" under the caption, "Does Vivisection Help?" The letter will attract, I trust, as it deserves, much attention among physicians and the general mass of readers as well. That it voices the judgment of the majority of both classes concerning the oft-repeated experiments upon living animals there can be but little room for doubt.

But that the writer of the letter in question, while apparently so well equipped with facts, should have attempted to strengthen his position by assuming and proclaiming a relationship between homeopathy and "expectant treatment," seems unfortunate.

While it may be a fact that "expectant treatment" is the flower—perhaps I should say the nearest approach to *fruit*—of modern "scientific" medicine, remaining between it and the grave, it is not true that "expectant treatment" and homeopathy are identical, nor that "the success of homeopathy is simply the success of the expectant treatment." The merest tyro among the disciples of Hahnemann can bear witness to the absurdity of the statement above quoted.

If homeopathy offers nothing more than "the art of letting the disease severely alone,"—that is, "expectant treatment,"—why should there be better results attending the let-alone policy when administered by the strict homeopath than when that policy is adopted by his "old school" brother in the same class of cases?

C. H. Oakes.

BRIC-À-BRAC.

Observations.

NO man is accountable for the mistakes of his friends.

Don't call a spade a spade when it is a shovel.

No man ever yet minded his own business who did n't get into trouble.

HOWEVER great some men's abilities are, their liabilities are always greater.

A MAN is frequently known by the company he keeps out of.

HONESTY is the best policy, because it is the only policy which insures against loss of character.

DON'T lose sight of an honorable enemy; he 'll make a good friend.

THE soaring hawk has no ear for music, and rates the cry of the partridge above the song of the nightingale.

AFTER a while the king will do no wrong, because he will never have a chance.

THE man who believes in ghosts may be a better citizen than the one who does not believe in his fellow-creatures.

FASHION and decency should be always on good terms.

Friend and Lover.

WHEN Psyche's friend becomes her lover,
How sweetly these conditions blend.
But oh, what anguish to discover
Her lover has become—her friend!

Mary Ainge De Vere.

To a Thermometer.

O SLENDER, silver thread,
Whose proud or 'minished head
Marks truly heat and cold,
The genial summer's glow
Or wintry winds that blow
Your rise and falling show
In figures bold.

Yet, all to what avail!
Your puny forces fail
To tell what fain I 'd learn.
I ask, most weatherwise,
What subtle force there lies
Within my lady's eyes
To freeze and burn?

For more uncertain she
Than weather e'er can be,
Or April day.
Mark now her sunny mood,
Then her cold attitude,
And tell me, pray,
Is drought, or wind, or snow,
More deep and hard to know
— Or woman's way?

W. D. Ellwanger.

Ashes.

BESIDE the blazing log, at eventide,
He read his glowing lines with honest pride.
In the gray dawn he read the lines anew.
The log was ashes—and the poem, too.

THE LATEST INDIAN OUTRAGE. (DRAWN BY E. W. KEMBLE.)

When Youth Mounts and Folly Guides.

WHEN Youth mounts and Folly guides —
Holla! the gayest of all rides:
Stallion black, with feet a-dance,
In the world to prick and prance,
Snorting, champing bit, and hoof
Clattering like rain on roof.

When Youth mounts and Folly guides —
Holla! the gayest of all rides:
Cloth of gold the trappings bright,
Chosen by this merry wight;
Ribbons blue, green, yellow, red,
Fluttering from the steed's proud head.

When Youth mounts and Folly guides —
Holla! the gayest of all rides:
How the bells go jingle-jangle,
And lights flash from gems that spangle
Youth's rich doublet, belted o'er
The stoutest heart man ever wore.

When Youth mounts and Folly guides —
Holla! the gayest of all rides:
Mark the gallant retinue,
A maze of scarlet, gold, and blue.
Tall Pride with cap of peacock tips,
Nose in air, and pursed-up lips.

When Youth mounts and Folly guides —
Holla! the gayest of all rides:
Laughter tossing jests in air
With sugared comfits to the fair;
And clanking Wealth in mail and steel
Crushing blossoms 'neath his heel.

When Youth mounts and Folly guides —
Holla! the gayest of all rides:
With silver trumpet puffing Fame
Is blowing fanfares to Youth's name;
Dame Pleasure, singing roundels sweet,
Follows fast with footsteps fleet.

When Youth mounts and Folly guides —
Alack! the saddest of all rides:
The steed is broken by the pace,
Sweet maiden Truth slain in the race;
Now Youth 's a wan, old, palsied man,
And Folly—shun her you that can.

Esther Singleton.

Love's Young Dream.

VAGUE as the shadows 'neath April-leaved trees
Is Love's young dream.
Light as a thistledown tossed on the breeze
Is Love's young dream.
Frail as a fiber of frost-woven lace,
Dim as the thought of a phantom face,
Faint as the footprints of planets through space,
Is Love's young dream.

Oh, brilliant and cold as the moon on the snow
Is Love's young dream!
Oh, pulseless in bliss and unwounded in woe
Is Love's young dream!
Shallow as brooklets that laugh as they run,
And soulless as starlight when dawn is begun!
Oh, unlike to Love as glow-worm to sun
Is Love's young dream!

Grace Denio Litchfield.

Fame.

I.

I GAZED upon tall, dusty shelves,
Where gilded volumes, stiffly standing,
Looked comfortless as we ourselves
Would be on such a crowded landing;
And though so costly and commanding,
They made me muse: "What 's in a name?
Hid where the bookworm's tooth is branding,
Methinks I do not care for fame."

II.

I found a maiden, unaware,
A faded scrap-book slowly turning;
Unheeded fell the gold-brown hair,
Her eyes with gentle light were burning;
And as they shone with tender yearning,
And soft she breathed a poet's name,
I realized that I was learning
That, after all, I cared for fame.

C. H. Crandall.

The Survival of the Fittest.

DE grasshopper set on er mighty tall stalk,
Wipin' his mouf on er red hollyhock;
F'om de vine on de railin' de debbil-hoss call,
"Oh! what you is good fur I cain't see er tall."

Oh! what am de use er sech er quare creater,
De fly an' de gnat an' de ole lean muskeeter?
Oh! de worl' hit am big an' de a'r hit am tall;
Dar gwine ter be room ernoough—Gord make 'em
all.

De sparrer he "chee, chee," yearly an' late,
Er buil'in' de nes', an' er feedin' de mate,
An' he holler ter de wo'm des er cuttin' de tree,
"Oh! what you is good fur I cain't ebber see."

Oh! what am de use, etc.

De tucky he gobble an' say ter de hen,
"I cain't see de use er de t'ing dey calls men."
An' de man he set in he cheer an' sing,
"All de whole worl' am mine, an' I am de king."

Oh! what am de use, etc.

But de man he gobble dat ole tucky sho,
An' de cat she waitin' en dar by de do'—
Gwine catch dat sparrer what say, "chee, chee,"
W'en he eat de wo'm dat cuttin' de tree.

Oh! what am de use, etc.

Yaller gal come erlong, wid er jeck an' er toss,
Gwine lay dat brume on de ole debbil-hoss;
De cole winter come, w'en de flakes gwine ter fly,
An' de leetle, bitter ants hab er grasshopper pie.

Oh! what am de use, etc.

Now all dat am lef' am de cat an' de man,—
De cat, ef she brack, f'om de debbil own han',—
But er bootjack gwine catch 'er sho, yearly some
morn—
An' er flea gwine bite de man, sho 's you born.

Oh! what am de use, etc.

NO. 2.

COLONEL WILLIAM BYRD OF WESTOVER, VIRGINIA.

He who has courage to turn his back upon Richmond all abloom in a lovely day of spring,—whose impatient spirit is content to abandon stimulating thoughts of modern progress and to steep itself in the by-gones of Virginian history,—may join in a May-day pilgrimage upon the classic James. To achieve it in the flesh there is but one method known to the ordinary traveler, who must take heed to a porter's knock sounding on the door of his room at the hotel all too soon in the morning, and commit himself to a jolting drive down the full length of stony Main street to the steamboat wharf at Rocketts. There waits the steamboat *Ariel*, plying three times a week between Richmond and Norfolk; such a lame old sprite, so short of breath, so patched and broken-backed, that the dwellers along the river-banks, accustomed to see it pass, may well live in continual expectation of news of its collapse. But, with the usual confiding cheerfulness of the American public, passengers by the *Ariel* come and go. With the exception of a few outsiders not to the manner born, the company on board is like a family gathering. Most of them live in the isolated mansions of the many-acred plantations we shall see at intervals during the day's slow voyaging. They are returning from the busy centers of civilization to an existence that in its salient features repeats that of the eighteenth century. In the kindly, cordial life they lead the three matters of first interest for discussion are the negro, the crops, the church; and then the government of these United States in general comes in for a share of notice. They are

all, each to the others, "Cousin"; and of the late war nothing remains as a reminder, after the fortifications at Drewry's Bluff and the canal at Dutch Gap, but the titles of colonel, major, captain, and occasionally an empty sleeve or a crutch among the groups of planters smoking and chatting upon deck. The fine-looking, intelligent stewardess who flits about among the ladies attending to their wants is of the old-time type of a colored housemaid of the higher class. She is on familiar terms with the river gentry, and can single out their bags and rugs with a glance of her experienced eye, conveying also indifference to the luggage, however smart, of the mere transient who is beyond the pale of Virginia aristocracy.

Standing and looking back from the *Ariel's* deck at Richmond upon her seven hills in the light of early morning, one's mind reverts to the various shocks of revolution the old town has survived. Blended with memories of the war between North and South are traditions of Indian onslaught and the raids of English troopers. Down yonder steep incline of Richmond Hill galloped at breakneck speed Arnold's cavalry in the wild ride of 1781, when, working havoc in the town, the British flooded the streets hereabout with rum, till, so the story goes, cows and hogs partook of it, and were seen staggering about the thoroughfares.

At this point, in the early days of the seventeenth century, the Indians fell upon Master West's little settlement — one of the first mentioned in colonial history — of contumacious Englishmen who had refused to be guided by Captain Smith, and slaughtered a number of them. Here, also, about sixty years thereafter, a young Cheshireman named Byrd

secured a grant of land from the crown, covering nearly the whole site of modern Richmond, and of Manchester on the opposite bank of the James. With his wife Mary, daughter of a Kentish cavalier named Warham Horsemanden, and a garrison of fifty able-bodied men, Captain Byrd took up his abode in a dwelling called Belvidere, built by him on the height overlooking the present State penitentiary, and well-fortified against Indian forays. Behind these stanch walls and solid palisades children were born to the young pioneer. Thence, more than once, he, like a Scottish border lord, led his followers to dashing sorties

upon enemies in ambuscade. He was feared by the Indians, and respected by his fellow-colonists. Fortune smiled on his various mercantile endeavors, and he inherited a large estate from his uncle Stagg. He was chosen to be a burgess, aided Commissary Blair in establishing the College of William and Mary, and, as receiver-general of the king's revenues for the province, acquired the title of colonel, so often repeated in the annals of colonial history as to be puzzling to the student of the times. To his son, the second William Byrd, who in 1733 mapped out near the site of his father's little fortress of Belvidere a town "to be called Richmond," was reserved a brilliant and exceptional career as courtier, author, traveler, and patron of the arts, fairly entitling him to high rank among the leaders of his time.

Of the English origin of a family thus transplanted to Virginia soil the tale is told in full by a curiously perfect scroll of illuminated vellum to-day in possession of their representative in America. This parchment—a joy to the eye and the touch of the lover of old manuscripts—was recently pronounced by experts in the Heralds' College in London to be an undoubted relic of heraldic skill in Elizabethan days. Together with the volume of manuscripts from the hand of the second Colonel Byrd, and a correspondence including many names of

THE WEST GATE, WESTOVER.

WESTOVER.

note at the courts of Anne and the two succeeding Georges, now at Brandon on the James, it furnishes a chain of history of which none of the links are missing, and none are dull. Such relics, as much a matter of course in the hereditary homes of England as ghosts or rats behind the arras, are more rare, but should not be less esteemed, in republican America.

As the boat at seven A. M. moves from her dock at Rocketts, and proceeds leisurely downstream, there is ample time to consider Virginia's relation to the past, and at every turning of one's head or glass there is some point familiar through association with the founders of the Commonwealth. But in this paper it will suffice to consider the family best known in the person of William Byrd the second — and in their ancestral home, Westover, to be seen from the boat soon after passing City Point.

Westover House, with its broad façade of red brick, its steep slated roof, and its glorious row of overshadowing trees, stands amid close-shaven lawns and wide encompassing fields of wheat and clover, close to the river's edge. These fields are to-day the pride not only of their owner but of the State. One does not readily forget a drive over grassy roads behind fleet Virginia horses, skirting on one side the fence inclosing a hundred and forty acres of growing wheat, a vast sea of living green rippled by winds of May, but showing neither dimple nor ridge in the soil below, and on

the other, clover as rich, wherein stand Jersey cattle knee-deep in purple blossoms amid the booming of inebriated bees. The mansion and estate, more fortunate than many others in being admirably kept up, convey to modern guests some of the same impressions carried away by Chastellux, the airy marquis, who as he journeyed through Virginia at the close of the Revolutionary war threw kisses from his fingertips to kindly entertainers. At Westover the Frenchman broke into pæans over the great extent of rich acres, the happy slaves, the elegance indoors, the sport, the sturgeons, and the wall of honeysuckle covered with humming-birds. Seen through the hall, always open in summer weather upon outer flights of quaint three-sided steps of stone, the great gates, surmounted by the martlet crest, display their iron tracery against a background of wheatfields girdled in by woods. To the right and the left of the door upon the river-front the avenues from the boat-landings are cut off for vehicles by smaller gates of delicate design, wrought in England two hundred years ago, their hinges moving stiffly in the embrace of the roses and the wistaria of yesterday. The line of trees whose tops caress the dormer windows of the roof has grown up since the founding of the house. Some of them have survived war, fire, and lightning-stroke. Looking out through their branches by moonlight from the bedroom windows at the wide reach of shining river beyond a lawn washed in silver brightness, one

may, if he listens keenly, hear them whisper the secrets they have been hoarding this century or so.

There have been many stirring scenes at Westover since the redman ceased to launch his canoe in the river that was for so long Virginia's highway. The dispossessed monarch brought his tomahawk back to these forest glades in 1622, and thirty-three souls of white settlers were here called to a swift accounting. Once owned by Sir John Paulet, the estate passed into the possession of Theodoric Bland and his brother before it was bought and built upon by William Byrd of Belvidere. The house erected by Byrd stood intact until 1749, when, through the upsetting of a brasier of hot coals on which a careless housekeeper had left her posset simmering, it took fire and was partly destroyed. The dwelling, as at present seen,

was restored in the same year, and has since been little changed. In the track of successive armies, it has known rough visitors but no material harm. Bacon's men, bivouacking here on their daring expeditions against the Indians, ate, drank, slept upon their arms, and rode away. Benedict Arnold, on his way to capture Richmond, landed and slept at Westover. In the old nursery on the ground floor Cornwallis quartered the horses of his troopers, but stout timbers and well-set brick defied their ravages. During our recent war several generals of the invading army made their headquarters at the mansion so popular with the soldiers of earlier revolutions.

Such was the pleasant home in which young William Byrd the second and his little sister Ursula ("Nutty" they call her in the family chronicles, afterward married to Beverley the historian of Virginia, and dying a wife and mother at seventeen) spent their years until of an age to be put aboard slow-sailing ships and despatched to England to be educated. That was frequently a feature of colonial life. The letters of parents written to friends across the sea are full of prayers and yearnings for the little travelers sent oftentimes alone under the captain's care. Schools in the province there were none; and even if a tutor might be had, the solitude of those great estates peopled by negroes was not adapted to the development of youth in an age that held polish for the manners to be as indispensable as powder for the hair.

The second William Byrd's history is epitomized by the inscription upon a stately shaft rising in a garden full of old-fashioned shrubs and flowers in the rear of Westover House. The monument is still in excellent preservation.

Here lyeth

The Honorable William Byrd, Esqr.

Being born to one of the amplest fortunes in
this country,

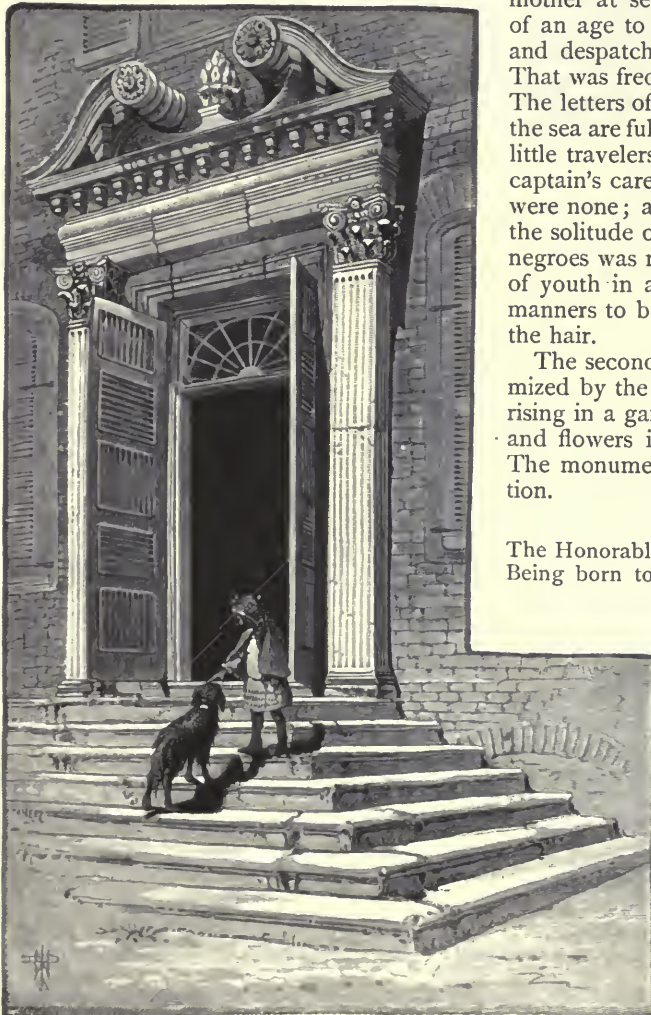

he was sent early to England
for his education,

where,
under the care and direction
of

Sir Robert Southwell,
and even favoured with his
particular

instructions,
he made a happy proficiency
in polite and various learning;
by the means of the same
noble

friend he was introduced
to the acquaintance of many
of the
first persons of that
age for knowledge, wit, virtue,
birth, or

THE DOORWAY AT WESTOVER.

COLONEL WILLIAM BYRD. (FROM THE PORTRAIT AT BRANDON.)

and particularly attracted a most high station,
close and bosom friend-ship with the learned and illustrious Charles Boyle, Earl of Orrery. He was admitted to the bar in the Middle Temple, studied for some time in the low countries, visited the court of France, and was chosen Fellow of the Royal Society.

On the other face of the tomb is continued : Thus eminently fitted for the service and ornament of his country, he was made receiver-general of his Majesty's revenues here, was thrice appointed

publick agent to the court and ministry of England ; and being thirty-seven years a member, at last became president of the Council of this Colony. To all this were added a great elegance of taste and life, the well-bred gentleman and polite companion, the splendid œconomist and prudent father of a family, with the constant enemy of all exhorbitant power and hearty friend to the liberties of his country. Nat. March 28, 1674. Mort. Aug 26, 1744. Ætat 70

When, at his good father's death, this Colonel Byrd took possession of the Virginian property

he was about thirty years of age, debonair and handsome, to judge from the portrait in the drawing-room at Brandon. Although the general style of the picture suggests what Macaulay irreverently styles "the round-faced peers, like each other as eggs to eggs, who look from the middle of the periwigs of Kneller," the features are clear-cut, the brows arch over almond-shaped dark eyes, and beneath the line of the thin lips the chin is cleft with the dimple said to be fatal to the peace of mind of woman. But the rather effeminate appearance of the portrait is contradicted by what we know of the man. Hardy and virile, he spent days in the saddle, tracking the pathless wildernesses of Virginia and North Carolina, enduring all hardships with an airy indifference that inspired his followers to continual endeavor. He was an ardent agriculturist, sportsman, hunter, fisherman, and, in fine, knew as well when it was time to put away his lace ruffles and silver snuff-box, as when to take them out.

Two years after coming into his inheritance—his father died in 1704—Colonel Byrd married Lucy Parke, daughter of the aide-de-camp of the Duke of Marlborough who carried the news of the victory of Blenheim to Queen Anne. Another daughter was the progenitress of Martha Washington's first husband and of the wife of General Robert Edmund Lee. One of Kneller's portraits of Colonel Daniel Parke hangs in the dining-room at Brandon, another in the house of General Custis Lee at Lexington, Virginia. In both he is gorgeously attired in crimson velvet, with embroidery, and with a steenkirk and ruffles of costly lace, wears around his neck the queen's miniature set in pearls, presented to him by her placid majesty in reward for his good tidings, and looks prodigiously well pleased with himself, while the battle of Blenheim is raging in the background.

Mrs. Lucy Parke Byrd did not too long enjoy her life at Westover, for, on going to London to join her husband for a visit in 1716, the poor lady was swept away by smallpox, that scourge of our ancestral homes. In the same year a lonely, motherless little girl was sent out from Virginia to console her widowed father, and remained in England until ready to make her appearance before the fashionable world. This was Evelyn Byrd, the charmer who, in immortal youth, from her place of honor in the Brandon gallery continues to win hearts. Her portrait, which in the lapse of years has had several backings of canvas, has lost the artist's name, but possesses a charming quality of tone and style to which reproduction can do no justice. She is painted as a shepherdess in a robe of blue-green, in color like Enid's of the "shoal-

ing sea," a red-crested *bird* perched on a brown bough overhead, a straw hat wreathed with morning-glories in her lap, a knot of the same flowers in her hair, one brown lock escaping upon her shoulder, and a little *accroche-cœur* upon her brow, her pretty pensive face set on a swanlike throat. Thus she has received the homage of generations of pilgrims both before and since her removal from Westover to Brandon, whither all the family portraits went on the marriage of their owner. With the exception of one adventure,—that of being hurried with grandfathers and grandaunts, statesmen and warriors, into a farm wagon and jolted miles away into a remote country where the chance of war might not invade their solitude,—Evelyn has hung on the wainscoting at Brandon since before the century came in. When, on her return from this enforced journey, her mild gaze again rested on her accustomed haunts, it was to find a house with roof and walls indeed, but without windows; the floors knee-deep in drifted leaves; birds, squirrels, and foxes its tenants; a house wantonly made desolate by useless gunshots from gunboats in the James, and by vagabond marauders. And now that Evelyn once more beholds the outward semblance of a happy home restored, of that which is irrevocably gone her sad eyes seem to say, "What matters it to one who has seen almost two centuries of sorrow, one to whom a war or a heartbreak more or less means nothing?"

Let us glance in passing at the conditions of English society under which this fair scion of Westover grew up to womanhood, and, at sixteen, made her courtesy to the king. Of the toilet worn upon the great occasion of Miss Byrd's presentation at court there remains, in possession of Miss Harrison of Brandon, a tiny carved fan of Chinese ivory carried in the maiden's hour of triumph. To handle it is to be transported to the time of England's history when the Jacobite cause had just received its death-blow in the banishment of Bishop Atterbury, who had dared tell Bolingbroke that he stood ready to put on his lawn sleeves and proclaim James Stuart king at Charing Cross so soon as the breath should leave the body of Queen Anne. Lord Orrery, Colonel Byrd's nearest friend, was, according to Mahon, one of the junta of five peers suspected of conspiring with the Pretender; and certain we may be that Evelyn,—a daughter of cavaliers and like other women,—carried the white rose of the Stuarts in her heart if not upon her breast. At this period the world of London was recuperating from the collapse of so many hopes and fortunes with the South Sea Company. Sir Robert Walpole, another good friend of Colonel Byrd's, whose clever little boy Horace was then a puny weakling of five years of age, was

MISS EVELYN BYRD. (FROM THE PORTRAIT AT BRANDON.)

bending all his energies to the task of pacifying Europe. In the dawn of peace there was great hilarity, and at all the routs, drums, balls, plays where Mistress Evelyn appeared with her papa, she was fêted and followed to her heart's desire. She was toasted by the young bucks assembled in coffee-houses or strutting upon the Mall. But that the gentle Addison had recently passed into the shadows, he might have been impelled to put this trans-Atlantic blossom between the pages of a choice number of his incomparable "Spectator." But

when it was reserved for the most famous gentleman in Europe—my Lord of Peterborough—to set the stamp of his approval on the new beauty, what could have mattered that of a mere literary man?

In addition to her personal charms, "Mrs." Evelyn had the reputation of great wealth; for the colonel, although vaunted on his tombstone an "œconomist," shed his guineas with pleasing prodigality. The "Belle Sauvage" the beaus may have called her, in memory of her predecessor, the other American princess,

Pocahontas, so much glorified, and to this day so much more respected in England than in irreverent America.

What an atmosphere for the dewy innocence of the colonial girl was that court of George, the brutal husband of the imprisoned Countess of Ahlden! One can fancy the watchful father playing lion to his Una.

And now for the tradition connecting Evelyn Byrd's name with that of the Earl of Peterborough, to whom she is said to have been actually affianced, and for the love of whom, her father interfering, she preferred to die unmarried. It is a thankless task to stick pins into the bubbles of family tradition, but if Evelyn Byrd pined away for the sake of Charles Mordaunt, then verily the world was out of joint. The earl, born in 1658, was sixty-four years old when he is supposed to have been betrothed to the young Virginian of sixteen. Brilliant and renowned, having achieved undying glory as a leader of England's armies on sea and land, a companion of the brightest wits and literati of the day, he may have dazzled her young imagination into fancied love; but this is scarcely credible in view of the reverse of the medal. Peterborough was ever gallant to young women. His approval decided the claims of a fashionable débutante. It will be remembered that to Miss Beatrix Esmond he presented "a grinning negro boy with a bird of paradise in his turban and a collar with his mistress's name around his neck." Perhaps Evelyn took one of those tea-table Mercurys, to be seen in the prints of Hogarth, back with her to Westover. Thackeray tells how this unconquerable squire of dames, when full seventy years of age, fell to writing love-letters to Mrs. Henrietta Howard, afterward Countess of Suffolk, who "accepted the noble old earl's philandering; answered his queer letters with due acknowledgment; made a profound courtesy to Peterborough's profound bow, and got John Gay to help her in the composition of her letters in reply to her old knight." But Peterborough was also eccentric to absurdity, notoriously dissolute, even in that age, and threw his glove in so many different directions that it is unfair to think Evelyn would have stooped to pick it up.

It may be that the memoirs destroyed by his widow (the excellent Anastasia Robinson, the singer, whom he married in 1724 and acknowledged as his wife in 1735), and which are said to have contained his confession of three capital crimes committed before he was twenty-one years old, might have thrown light on the Byrd affair.

Peterborough's marriage with Mrs. Robinson had taken place two years before Colonel Byrd's family returned to live in the colony. He died, "laughing and mocking in the intervals of agonizing pain, and entertaining a com-

THE TOMB OF WILLIAM BYRD.

pany of ten at dinner immediately before the end," eleven years later, yet it is still asserted and accepted in Virginia that the persistent wooer followed Evelyn to her home and there renewed the suit upon which her father frowned. Evelyn never married, and two years after her reputed lover was laid to rest found a grave under the oaks at Westover. Upon her tomb is the following melancholy inscription, which yearly the moss and lichens do their best to hide from sight:

HERE IN THE SLEEP OF PEACE
REPOSES THE BODY
OF MRS. EVELYN BYRD,
DAUGHTER
OF THE HON^{ble} WILLIAM BYRD, ESQ.

The various and excellent endowments
of Nature, improved and perfected
By an accomplished education,
formed her
For the happiness of her friends,
For the ornament of her country.
Alas, reader!

We can detain nothing, however valued,
From unrelenting death —
beauty, fortune, or exalted honour.
See here a proof!
And be reminded by this awful tomb
That every earthly comfort fleets away,
Excepting only what arises
from imitating the virtues of our friends
And the contemplation of their happiness,
To which

God was pleased to call this lady
On the 13th day of November, 1737,
In the 29th year of her age.

And, as no well-authenticated haunt of ancient aristocracy is to be found without its ghost, Westover traditions tell twilight listeners, or groups around the fire at Yule-tide, how the tap, tap of Evelyn's high-heeled slippers continues to be heard in the corridors or on the stairs of the home from which she faded broken-hearted to the grave.

All of this is delightfully consistent with the canons of romance. It has thrown an enduring halo around the memory of the fair one whose hand was kissed by my Lords Oxford and Chesterfield; of whom sneering Hervey deigned to approve; who snupped with Pope at his Twickenham villa, while yet the town was ringing with the success of his *Odyssey*; who was noticed by Beau Nash, the autocrat of Bath; who saw Cibber and Mrs. Oldfield play; who read Gulliver's Travels as they were first presented to the public by his reverence the dean of St. Patrick's, then resident in Dublin; who from the presence-chamber of unroyal royalty, through a society reeking with wine and musk and snuff and scandal, passed back to her plantation home in the New World as unblemished as she came.

But a later-day skeptic must protest against allotting for the hero of bonny Evelyn's love-idyl one more grotesque than picturesque. "I should have liked to have seen that noble old madcap Peterborough, in his boots," says Thackeray, "(he actually had the audacity to walk about Bath in boots), with his blue ribbon and stars, and a cabbage under each arm, and a chicken in each hand which he had been cheapening for dinner." Hogarth caricatured him upon his knees before the singer Cuzzoni, who draws in his gold pieces with a rake. A spirited description is that of Horace Walpole. "Peterborough was one of those men of careless wit and negligent grace who scatter a thousand *bons mots* and idle verses, which we painful compilers gather and hoard, till the authors stare to find themselves authors. Such was this lord, of an advantageous figure and enterprising spirit; as gallant as Amadis, and as brave, but a little more expeditious in his journeys; for he is said to have seen more kings and more postillions than any man in Europe. . . . He was a man, as his friends said, who would neither live nor die like any other mortal." In one

of the witty letters written by Peterborough to Pope occurs this example of his views of womankind: "You seem to think it vexatious that I should allow you but one woman at a time to praise or love. If I dispute with you upon this point I doubt every jury will give a verdict against me. So, sir, with a Mahometan indulgence, I allow you pluralities, the favorite privilege of our church. . . . I find you don't mend upon correction; again I must tell you you must not think of women in a reasonable way. . . ."

That Miss Evelyn's papa was busy on his own account with secrets of the heart at this time is revealed by a bundle of letters, still extant, addressed in the autumn of 1722 by the colonel to a mysterious "Charmante," one of the Sacharissas of high fashion who had enslaved his fancy in London. The best comment upon them is to be read in his own indorsement on the packet.

"These passionate billets were sent to a lady who had more charms than honour, more wit than discretion. In the beginning she gave the writer of them the plainest marks of her favour. He did not hint his passion to her, but spoke it openly, and confirmed it with many a tender squeeze of the hand which she suffered with the patience of a martyr; nay, that she

THE TOMB OF MISS EVELYN BYRD.

might have no doubt of his intentions, he put the question to her in the plainest terms, which she seemed to agree to by a modest silence, and by great encouragements for more than a month afterwards. She saw him every day, received his letters, and fed his flame by the gentlest behaviour in the world, till at last, of a sudden, without any provocation on his part, she grew resty, and, in a moment, turned all her smiles into frowns, and all his hopes into despair. Whether this sudden change was caused by private scandal she had received about him,

or from pure inconstancy of temper, he can't be sure. The first is not unlikely, because he had a rival that had no hopes of success openly, and therefore it might be necessary to work underground and blow him up by a mine. This suspicion is confirmed a little by the rival's marrying her afterwards, who then was so poor that 't is likely the good-natured woman might wed him out of charity; especially as at that time he was so unhealthy that he stood more in need of a nurse than a wife. She did not choose him for his beauty and length of chin, tho' possibly she might for those pure morals which recommended him to his Grace of W——r for a companion. But if, after all, she did not marry him for his virtue neither, then it must have been for that worst quality any husband can have—for his wit. That, I own he has his share of, yet so overcharged and encumbered with words that he does more violence to the ear than a ring of bells; for, if he had never so sharp a wit, a wife may be sure the edge of it will be turned against herself mostly. . . ."

The true name of Charmante and her successful suitor are not given. The colonel, however, lived to fight another day. In 1724 was celebrated his second marriage, with a charming and well-born young lady, Miss Maria Taylor of Kensington. In the reigns of Anne and George the suburbs of Kensington were still a lovely rural region, dedicated to "milkmaids and sportsmen," and carpeted with daisy-sprinkled turf. Here, it is evident, the colonel's wooing sped better than in the garish atmosphere around perfidious Charmante. The new bride, in person, fortune, and connections, was all that he could have asked.

No portrait now certainly known to be that of Maria Taylor remains to rejoice the eyes of her numerous descendants in America. Her letters and those of her husband concerning her give ample proof of her strength of character and unselfish tenderness.

Through this alliance Colonel Byrd became connected with a family handed down to literary history by the biographers of Alexander Pope. A near relative of the Taylors had married Teresa Blount, the elder of the two daughters of Lyster Blount of Mapledurham who were the charm and consolation of the poet's tortured life. An exquisite painting of "Miss Blount," brought to Virginia by Colonel Byrd, is now at Upper Brandon. This is a half-length portrait of a young woman in amber satin, sitting by a harpsichord, and holding a sheet of music in her hand. She is a brunette, with soft dark eyes, and chestnut hair, and a complexion radiant with the tints of the peach on its sun-kissed side. Gazing upon her mellow loveliness, one does not wonder that Pope

chose Teresa first, Martha afterward. For although tradition has linked with this portrait the name of Martha Blount, we have Walpole's evidence that Patty was a blonde, with "blue eyes that survived her other beauties." Warton says, "Swinburne the traveler, who was Martha's relation, tells me she was a little, neat, fair, prim old woman, easy and gay—her eldest sister, Teresa, had uncommon wit and ability." Teresa, also described as "religious and jealous," was "in the full bloom of her beauty at the coronation in 1714, and it is most natural to suppose that Colonel Byrd would have selected for transportation to Virginia her portrait rather than that of Martha.

It was through the Blounts, no doubt, that Evelyn Byrd formed the acquaintance of Pope, and received the hospitality of his villa at Twickenham, since Pope declared to Gay that for fifteen years he had spent three or four hours of every day in Patty Blount's society.

A delightful, laughter-loving dame, whose name repeatedly appears in the letters of Colonel Byrd, is she who is called "my invaluable sister," and "Cousen Taylor," the wife of Mrs. Byrd's brother, and a member of the family of Lord Camden. As viewed in the line upon the Brandon walls she is tall, slight, long-waisted, dressed in red satin over a hooped white satin petticoat, with agraffes of pearl and gold fastening the bodice, and her dark hair secured with a pearl dart. One pink-tipped hand is extended, the other holds back her gown coquettishly. She is a fair illustration of her correspondence, merry, witty, and a creature not too bright and good for human nature's daily food. She was, after his return to Virginia, the colonel's fountainhead of town talk, and her letters sparkle with gossip and philosophy—news about a new game called "whisk" (whist), the latest scandal in high life, and what is said in private circles about the affairs of the "Queen and Mistress Vane."

"Lord Orrery," says Walpole of him who was called Byrd's bosom friend, "was one of a family where genius had hitherto been a sort of heirloom, and he had not degenerated." But modern biography, which despoils us of ideals, gives another version of the character of this earl. "He was a dull member of a family eminent for its talents," writes Mr. Leslie Stephen. "His father had left his library to Christ Church, Oxford, ostensibly because his son was not capable of profiting by it. The son, eager to wipe off this imputation, sought the society of Swift, Pope, and other wits." A portrait of him is among those now at Brandon, as is also a rather saturnine-looking, life-size picture of Sir Robert Southwell, who

MISS BLOUNT. (FROM THE PORTRAIT BY KNELLER AT UPPER BRANDON.)

died in 1702, and had been a second father to the young Virginian during the time of his tutelage in England. He was a barrister, statesman, and diplomatist of high rank, and was five times chosen president of the Royal Society.

Sir Charles Wager, whose fine monument may be seen in Westminster Abbey, and whose portrait is included in Colonel Byrd's gallery, was a sailor of the best old British stock, treasurer of the British Navy, first lord of the admiralty, and is said to have originated and

matured the idea of Commodore Anson's voyage around the world. In private he was manly, simple, and beloved. Brave as a lion when in action, cheerfully submitting to be bled or hacked by the surgeon's knife, if needs must, he had a fierce antipathy to doctoring by medicine. "You may batter my hulk as long as you please, but don't attempt to board me," he would say to his surgeons, when they prescribed pills or potions.

To Sir Charles Wager some of Colonel

Byrd's most pleasant letters from Virginia are addressed. He was a believer in the colony, and interested in many schemes for its development.

Colonel Martin Bladen, the gallant soldier of Queen Anne's wars, and later one of the lords of trade and plantations, who was also a litterateur, finding time to edit *Cæsar's Commentaries* in the intervals of service to the State, was a close associate with Colonel Byrd in affairs of business and of pleasure.

There is a letter from Byrd to him, projecting a canal between the sister colonies of Virginia and North Carolina, "one moiety of the stock to be subscribed in England, one moiety here, that the project may have friends on both sides the water," and naming as additional members of the ring Sir Charles Wager, the Earl of Orkney, and Governor Gooch.

Another correspondent and ally was Peter Beckford, son of the governor and commander-in-chief of Jamaica, whose grandfather had been a tailor in Maidenhead, and whose descendant was to be the author of "*Vathek*" and the builder of Fonthill Abbey, that new wonder of the world. Mr. Beckford, indeed, had thought of settling in Virginia near the Byrds, but decided in favor of Jamaica. He was the father of the well-known Alderman Beckford, and grandfather of the owner of Fonthill.

Of William Anne Keppel, second earl of Albemarle, there is a finely executed portrait in miniature style. He wears a red coat covered with gold embroideries and looped with gold cords, and a resplendent periwig. This nobleman, who was a godson of Queen Anne, fought gallantly at Dettingen, Fontenoy, and Culloden, and was commander-in-chief of his majesty's forces in Scotland. He was well liked by George II., and was appointed colonial governor of Virginia in 1737.

The Duke of Argyll, who to readers of Sir Walter Scott will claim remembrance as the protector of Jeanie Deans, has a place among the portraits selected by Colonel Byrd. Near him hangs Charles Montagu, Earl of Halifax, a dilettante scholar, and collaborator of the poet Prior, with whom he composed the well-remembered parody of "*The Town and Country Mouse*." Byrd, with his own bias for elegant literature, would have been sure to affiliate with this polished amateur. The Earl of Egremont and Sir Robert Walpole complete the list of portraits of the nobility brought to Westover, but now at Brandon.

In this aristocratic circle a certain Master

Waltho, clerk of the court at Williamsburg, offered Colonel Byrd a diamond ring for permission to hang his own picture, wearing his cocked hat. The merry colonel took Waltho at his word. Facing the stately line of English noblemen may be still seen the swarthy countenance of the grim little republican under a self-assertive hat, and his ring sparkles on the finger of the chatelaine of Brandon.

One of the most notable of Colonel Byrd's collection, however, and prized now for its intrinsic worth as a work of art, is a lovely half-length portrait, handed down as a Sir Peter Lely, and said to be Elizabeth Claypole, Cromwell's favorite daughter, whose death preceded her father's by a few weeks only. She is sitting with a book in her left hand, resting her cheek in the right hand, an exquisitely graceful figure, a beautiful face, with reddish brown hair escaping in a single errant lock, and with drapery of palest blue. Is not this Mrs. Byrd herself? ¹

And now we have come to the time when, renouncing the congenial joys of London life, Colonel Byrd decided to return to Virginia and to take up his duties as a colonist. He not only covered the walls of Westover House with pictures but filled the stables with horses and stocked the cellars with fine wine. From far and near came his friends and kinspeople to taste his royal hospitality. The iron gates he put up were ever ready to fly open at a touch. In his library, the best in the province, the catalogues of which, in the Historical Society of Virginia, show the shelves to have been exceptionally furnished with well-chosen books, he sat penning numerous letters, verses, fables, full of quips and quirks of wit, and bristling with his favorite points at the expense of womankind. His visitors and cronies were Sir Alexander and Lady Spotswood; Sir John and Lady Randolph, and many Randolphs, all descended from his father's friend, "Will" Randolph, the squire of Turkey Island; the Reverend Peter Fountain, the rector of his parish; the Carters, Burwells, Harrisons, Bassetts, Pages, Amblers, Carys, Bollings, Digges, Nicholases, Beverleys, and other friends and neighbors, arriving in relays to wait upon the master of Westover, and to kiss the hands of his fair English lady, and of the celebrated Miss Evelyn, whose praises had long since come across the sea to gladden the ears of her compatriots.

Although we have no time to touch upon his connection with colonial affairs, the colonel was not one to rust in idleness. With pen, purse, and brain he was ever ready to serve

¹ Why should Colonel Byrd have included in a collection of family pictures and portraits of his friends a likeness of Cromwell's daughter? And how could he have failed to secure a portrait of his own beautiful wife? This canvas, in the dress and pose and in the

arrangement of the hair, seems to be of the same date as the pictures of the other ladies I have mentioned; and it appears to be the work of the same school, if not of the same hand.

the king and the province. As a pleasant picture of a plantation of the day, we insert here a letter written to Mr. Beckford, which, with a few changes, might serve to describe the Virginia of immediately before our war.

I had the honour to pay you my respects in June last and to send you as perfect a description of my seat of Westover as truth would permit me. I represented it honestly as it is, and used not the French liberty of dressing it up as it

governour must first outwit us before he can oppress us. And if ever he squeeze money out of us, he must first take care to deserve it. Our negroes are not so numerous or so enterprising as to give us any apprehension or uneasiness, nor indeed is their labour any other than gardening, and less by far than what the poor people of other countrys undergo. Nor are any cruelties exercised upon them, unless by great accident they happen to fall into the hands of a brute, who always passes here for a monster. We all

THE DINING-ROOM AT WESTOVER.

ought to be. But since my last I have got a person to make a draught of it, which perhaps will appear a little rough; but if it should not be found according to art, it will make amends by being according to truth. I wish with all my heart it may tempt you at least to make us a visit in the spring. But if the torrid zone be still your choice, and you should resolve to lay your bones where you first drew your breath, be so good as to honour this country with one of your sons, of which I hear you are blessed with several. You may make a prince of him for less money here than you can make him a private gentleman in England. We live here in health, in plenty, in innocence and security, fearing no enemy from abroad, or robbers at home. Our Government, too, is so happily constituted that a

lye securely with our doors unbarred, and can travel the whole country over without arms or guard. And all this not for want of money or rogues, but because we have no great city to shelter the thief, or pawnbrokers to receive what he steals.¹ If these happy advantages can tempt either you or any of your friends or relatives hither, my plantation of Westover is at your service.

By the summer of 1728 we find the frequenter of courts and coffee-houses settled down to the life of a Virginia burgess, and father of an increasing family. To "Couzen Taylor" he writes: "Your great-niece Griz begins to prove her sex by the fluency of her tongue,

¹ The first provision to give shelter to such marauders was made by Colonel Byrd himself, in 1733, when he mapped out two towns, "one at Schoccos, to be called Richmond, the other at the point of the Appo-

mattox, to be called Petersburg, localities naturally intended for marts. Thus we build not castles but cities in the air," he wrote, commenting on his project.

and, like Mrs. P——, talks nonsense very prettily. She is a sound, sturdy little wench, never having had any disorder but from breeding teeth." He complains of having had no recent letters from England, and says he is reduced to read the former ones as often as he does the Psalms. He protests against being forgotten as if he were dead, but asserts "a substantial advantage over the harmless people of the other world. We can at least pelt you with plaintive epistles, which no dead person ever

disquisitions upon English politics, fears that "the ally of Hanover, and particularly Great Britain, hath shewed a very unusual patience in bearing with the peevish humour of the Spaniard," and hyperbolic satires after the manner of the day.

It was thanks to the piping times of peace enjoyed by Virginia during that second quarter of the eighteenth century that Colonel Byrd found such opportunity for literary dalliance. He has left behind, in addition to these numer-

THE HALL AT WESTOVER.

sent to the living in our days, but Tom Brown to the Bishop of Cambray." He assists in carrying out the "darling project" of Sir Jacob Acworth, of growing hemp in Virginia. He receives from Lord Islay and from Mr. Warner — "the owner of extensive gardens of curiosities in the North of England" — grafts of vines and fruit-trees, with which he is experimenting on the sun-warmed slopes of Westover. He frequents the polite society of Williamsburg during the sessions of the House of Burgesses, and entertains at Westover many coachloads of pleasure-seeking gentry. Above all, he dictates to his secretary — for whose legible chirography the student of colonial manuscripts must ever be grateful — page after page of letters to the originals of his gallery of portraits, jaunty

ous drafts of letters, a large manuscript volume bound in vellum, and beautifully transcribed, containing the three works known as "The Westover Manuscripts." A recent perusal of this ancient tome in its stronghold behind the ivied walls of Brandon, and under supervision of the smiling author in his frame, has revealed a fascinating glimpse into Virginia life during that period, of which the records are so scant.

The most considerable of William Byrd's productions is the "History of the Dividing Line," a chronicle of his expedition, in 1728, as a commissioner from the crown to establish the boundary line between North Carolina and Virginia. The "Journey to the Land of Eden" and "Progress to the Mines" are briefer but not less sprightly diaries of local travel.

In the autumn of 1728, after due waiting "for the snakes to retire into winter-quarters," the party, consisting of three commissioners and two surveyors from each State, reinforced by a famous guide named Epaminondas Bampton, and accompanied by Indians, negroes, pack-horses, and dogs, pushed their toilsome way on horseback from the lowlands near the Dismal Swamp to the Appalachian mountains, across three hundred miles of bog, brake, flood, and forest, returning as they went. An addition supplied by authority was the chaplain, good Mr. Peter Fountain, "sent along by Government for our edification and to christen the Gentiles on the frontier of Carolina"; and there were as many as one hundred baptisms, by gurgling wayside springs, in tents, and in cabins, wherever the family of a pioneer had pierced the fringe of the wilderness to live, for the changing of little backwoods heathen—called by the colonel "arrant pagans"—into legitimate appendages of Mother Church. The chief part of the way lay through virgin woodland. Daily they must force a trail through resisting undergrowth; burst from the embrace of strangling vines; fight intermittent fever with tea from the bark of dogwood; ford torrents; scale precipices; feed on their own bread and "rumm" and pork, supplemented by the meat of "buffalo, deer, bear, and turkeys,"—the last three killed every day,—and at night, listening to the bark of wolves, fall asleep upon oozy soil, till they "were more like otters than men." And always they were in continual fear of a surprise from Indians. Through these varied adventures the colonel's bright spirit seems never to have abandoned him. He "travels five miles on a Sunday, and pays for violating the Sabbath by losing a pair of gold buttons"; takes a hand at tooth-pulling; "knocks down" game; discovers ginseng, the "plant of life," by its scarlet blossom; picks chestnuts that his men, "too lazy to climb the trees, cut them down to secure"; runs upon an inscription carved on a tree by "traders who slept there in 1673"; and makes fun of all his comrades, especially "the small major, who has had a small fever, and bore it like a child." On a supposed alarm from hostile Indians "the little major, whose tongue had never lain still, was taken speechless for sixteen hours. . . . After we put ourselves in battle array we discovered the whistle to be nothing but the nocturnal note of a little harmless bird. We were glad to find our mistake, and, commending the centinel for his great vigilance, composed our noble spirits again to rest till morning. Some of the company dreamed of nothing but scalping all the rest of the night."

To obtain the full account of this successful expedition, we recommend a search for the now

rare volumes of a small edition which was allowed by the owners of the Westover Manuscripts to be printed in 1866. Elsewhere the original documents tell of Byrd's visit in 1732 to Germanna, the settlement where Virginia's late governor, the martial Spotswood, had first established his palatines sent over by Queen Anne to assist in the manufacture of wine and iron in the colony. At the outset of his ride to the Rapidan Colonel Byrd, "for the pleasure of the good company of Mrs. Byrd and her little governor, my son," drives in his chariot from Westover about half-way to what is now Richmond. "There we halted not far from a purling stream, and, on the stump of a propagate oak, picked the bones of a piece of roast beef. By the spirit which it gave me I was the better able to part with the dear companion of my travels and to perform the rest of the journey on horseback by myself. I reached Schocoes before two o'clock, and crossed the river to the mills. I had the grief to find them both stand as still for the want of water as a dead woman's tongue for want of breath. It had rained so little for many weeks above the falls that the naiads had hardly water enough left to wash their faces."

Stopping overnight at a friend's house, the colonel is caught in a flood of long delayed rain, and makes himself agreeable to the ladies by reading aloud the "Beggar's Opera," which had enjoyed a run of forty nights in London; then, getting sleepy, goes off to bed, leaving "Mr. Randolph and Mrs. Fleming to finish it, who read as well as most actors do at a rehearsal. Thus we killed time and triumphed over the bad weather."

Beyond the deserted village of Germanna—where the palatines had by that time moved on across the river—Byrd spies the "enchanted castle" where Sir Alexander has enshrined his bride, Mistress Anne Butler Bryan of Westminster, goddaughter of the Duke of Ormond. The master of the house being from home, he is graciously made welcome by my Lady Spotswood in a saloon "elegantly set off with pier-glasses." While they are chatting a tame deer strays into the room, catches sight of his own reflection in one of the mirrors, makes quickly for his imaginary rival, crashes the glass with his antlers, and overturns a table laden with the china nothings dear to a lady's heart. Lady Spotswood, however, meets this trial with "moderation and good humor." The host returns; they talk of iron chiefly, Spotswood complaining of one Graeme's management, and says he "is rightly served for committing his affairs to the care of a mathematician whose thoughts are among the stars." They walk with my lady and her sister "Miss Theky"

through a shady lane, and drink "fine water from a marble fountain," thence to the banks of the Rappahannock, "fifty yards wide and so rapid that the ferryboat is drawn over by a chain, and is here therefore called the Rapi-dan." At night they sup, and tell "a legion of old stories"; "drink prosperity to all the Col.'s projects in a bowl of rack punch, and then retire to our devotions."

"Having employed about two hours in retirement," writes the traveler, "I sally'd out at the first summons to breakfast, where our conversation with the ladys, like whipt syllabub, was very pretty, but had nothing in it. This, it seems, was Miss Theky's birthday, upon which I made her my compliments, and wish't she might live twice as long a marry'd woman as she had lived a maid. Then the Colonel and I took another turn in the garden to discourse further on the subject of iron. He was very frank in communicating his dear-bought experience.

"We had a Michaelmas goose for dinner of Miss Theky's own raising, who was now good-natured enough to forget the jeopardy of her dog. [There had been a scene at breakfast between Sir Alexander and his sister-in-law over her offending lap-dog.] In the afternoon we walked in a meadow by the river, which winds in the form of a horseshoe about Germanna, making it a peninsula containing about four hundred acres.

"30th. The sun rose clear this morning, and so did I. It was then resolved to wait on the lady's on horseback, since the bright sun, the fine air, and the wholesome exercise, all invited us to it. We forded the river a little above the ferry, and rode six miles up the neck to a fine level piece of rich land where we found about twenty plants of ginseng with the scarlet berries growing on the top of the middle stalk. The root of this is of wonderful virtue, particularly to raise the spirits and promote perspiration. The Colonel complimented me with all we found in return for my telling him the virtues. We were all pleased to find so much of this king of plants so near the Colonel's habitation, and surprised to find it on level ground, instead of on the north side of a stony mountain. I carried home the treasure with as much joy as if every root had been a graft of the Tree of Life, and wash'd it and dry'd it carefully.¹

¹ There is a letter to Sir Robert Walpole from Colonel Byrd recommending this plant for some malady, and forwarding a decoction of it made at Westover.

"This airing made us as hungry as so many hawks, so that between appetite and a very good dinner 't was difficult to eat like a philosopher. In the afternoon the lady's walk't me about amongst all their little animals with which they amuse themselves and furnish the table. The worst of it is, they are so tender-hearted they shed a silent tear every time any of them are kil'd. At night the Col. and I quitted the threadbare subject of iron and changed the scene to politicks. [How the ministry had receded from its demand to raise a standing salary for all succeeding governors of Virginia, for fear "some curious members of the House of Commons should enquire how the money was disposed of that had been raised in the other American colonies for the support of their governors," etc.]

"Then the Colonel read me a lecture on tar, affirming that it can't be made in this warm clymate after the manner they make it in Sweden and Muscovy, etc.; and then we entered on the subject of hemp."

This is almost the only glimpse history affords us of the latter-day life, at home, of the famous leader of the Knights of the Golden Horseshoe, the Tubal Cain of Virginia, as he has been called for his ardor in founding the iron industry in America, the ex-soldier under Marlborough who carried about with him a wound in the breast received at Blenheim, the stern ruler of Virginia, who, as deputy of the absent Earl of Orkney, is among the few of the crown governors deserving to be held up for the praise of future generations. After it we must stop for want of space, leaving again to their mellow solitude the writings of "Will Byrd, gentleman," who, surnamed in Virginia the "Black Swan" or "*Rara Avis*" of his day, lived to the green old age of seventy, and sleeps at his own Westover in the sunshine of the garden near the river-bank.

By the passing traveler Westover, and Brandon too, may be descried under summer garniture of leaves as the boat plows down the James. But to absorb the full flavor of the legends of both homes one must know them from within.

Constance Cary Harrison.

Ginseng would seem to have been much discussed in England at the time, and is still in great demand among the Chinese.

PENSIONS AND SOCIALISM.

VARIOUS trains of argument have been used to justify the indiscriminate and lavish distribution of pensions in which the national government has lately been indulging. Every intelligent man who is not blinded by partisanship apprehends the true cause — a determination to be rid of the Treasury surplus in any way productive of political results, and therefore under the guise of patriotic gratitude to secure the vote of the soldiers in the late war with it. But so adroit is the reasoning of those who seek political benefit therefrom that they not only deceive others but even themselves by sophistries which cannot too often be exposed. The present, the immediate future, and the times of posterity may be influenced by them and a bias given to other matters with even more disastrous results.

We are told that the state owes a debt to those who have endangered their lives in its service, and that the payment of pensions is an obligation like that incurred by contract.¹ Every one admits the obligation, but the ground of it is a sense of gratitude which establishes no right for those who have served and suffered. Viewed from any standpoint there is no department of the public service more glorious than that of the coast guard or life-saving patrol. Every station along the shore bids defiance to the elements. Restless and treacherous ocean, stormy winds, and blackest night combine against the seafarer. But the surfboatmen sometimes baffle them all and bring safe to land tens upon tens and hundreds upon hundreds of human beings with precious lives. The personal risk of every member of every crew is extreme; exposure produces disease

and brings on premature old age. The whole character of the work demands the utmost devotion, and not only subjects the men to intellectual and physical strain but jeopardizes their lives. And yet their pay is a pittance, the pay of the day laborer; neither individually nor corporately do they demand a money reward from the rescued and government grants only temporary pensions. He who saves lives has simply done his duty, and in private life would be regarded as a monster if he demanded all or any of the wealth of those whose lives had been spared through his agency.

On the other hand gratitude is expected from the rescued, and if he does not show it men mark him down as less than human. And gratitude is shown by some return, but not one commensurate with ability, for that would be compensation and destroy gratitude, which rests on a sense of obligation and honor. Hence even if the state were not the sovereign which it is, daily bestowing on the man benefits which he can only acknowledge but never requite, still the ground of its obligation to surviving soldiers and the families of those who died would be gratitude, and gratitude measured by the personal good will of its citizens.

And speaking of the sovereignty of the State we come to the legal aspect of this question of debt. The field is too large for extended discussion. It is believed that there is absolutely no precedent for the contention seriously made by so many advocates of the present pension system, that the claim of the soldier for support is a legal claim like any other presented for services rendered. The powers of the judiciary under which the individual seeks redress from the State are all granted by one of the parties concerned, to wit, the political

¹ For a veteran soldier's views on the subject of pensions, see a communication from George L. Kilmer in *THE CENTURY* for August, 1889.—EDITOR.

sovereign, and limited to such pleas as deal with unfulfilled obligations laid upon the political corporation by its members. Local governments are responsible for the condition of roads and the proper lighting of streets, for sanitary conditions in certain instances, and can be sued for failure to perform their duty, the damages to be commensurate with the loss. But such governments were created for that purpose and lay taxes expressly to fulfil it. Was it ever conceived, however, that a householder should have the right to demand damages for the silver stolen by a burglar, the theft being possible by reason of inefficient police supervision? Could his family, if he were murdered in defense of his property, demand a pension of the state for their support? And the theory becomes the more absurd when it is urged that the soldiers who were once in arms saved the Union, that in so doing they preserved for us all that we have and all that we enjoy, and that therefore we are niggards when we refuse to share and share alike on the ground of a technicality in the laws which justice demands should be remedied by statute. The truth is that man as a social and political being incapable of either physical or spiritual welfare without the state has therefore a double character. On one hand his personality, his manhood, his right to life, liberty, and the pursuit of happiness must be his first concern. On the other hand all these come to him only in organized society; and in the necessary sacrifices, even to the risk of life, which he has to make for it under the safeguards of constitutional government he is merely performing an act of enlightened selfishness. Whatever obligation is incurred is one with the conditions of his existence in the personality which is everything to himself, which is in fact himself. In this way he is the state in a truer sense than that in which Louis XIV used the phrase.

Many classes of men go to war; but for our purposes they may be separated into two categories—those who serve for gain whether as wages, booty, or political advancement, and those who serve for honor and patriotism. With the former we have nothing to do; they embark like every adventurer on an enterprise the success of which is all their own if it comes, and the risks of which they must therefore take. But the citizen-soldier who enlists from a sense of duty, jeopardizes his lawful calling, and with cheerful courage and self-denial ventures all for his country and his home—does not he also receive pay? There may be two opinions as to this question. If the comparatively small sum which is given to the soldier either in the ranks or as an officer is an adequate return for his services in a difficult and dangerous occu-

pation then there is an end of it, and there is no obligation on the part of the employer lasting for the lifetime of the employee. But many things combine to discredit this view. In the first place if we compare two men of equal parts and equal social standing, one fighting in the field, the other pursuing his occupation at home, the pay, equipment, and rations of the former are far less than the earnings of the latter, about sixty per cent. being a fair estimate. The soldier can sustain life and spare something for the support of those who are dependent upon him. And that is all; there is no question of growing rich by honest means in the military profession. On the other hand he pays no tax on his income and is not subject to forced contributions except in the uncertainty of pay day. It looks as if the burden of war were thus divided between the fighting citizen in the ranks and the tax-paying citizen at home. But in the second place the salaries of professional soldiers in the regular army are certainly calculated with reference to the life-long pension paid on retirement or disability. This pension is as much a part of the remuneration as the full pay during service, the total being spread over a lifetime to guard against imprudence, thriftlessness, or misfortune on the part of the recipient. If then the volunteer soldier, as is normally the case, receives the same pay as the regular or less without promise of pension, it follows that the idea of compensation does not enter into the offer of either bounty or monthly payment made on enlistment. Taking therefore either horn of the dilemma, that the citizen soldier either does or does not receive hire, he is neither legally nor morally right in demanding a pension for disability, much less for service. The state in emergencies has the power and the right to the assistance in some form of all its citizens, and by the enforcement of war contributions upon the capital of all and upon the labor of the non-combatants equalizes in a measure their burden with the service of those who fight.

It appears then that the citizen soldier has neither a moral nor a legal right to a pension. But, if so, why have most civilized nations been in the habit of granting pensions to disabled soldiers? The answer is one creditable to human nature. Gratitude, wisdom, and a sense of merciful compassion prompt us to a liberal pension system on the ground of disability. At the close of the civil war we were told, and properly so, of the nation's widows and orphans, of the nation's dependents, and the nation's wards. To all who take great risks, whether of life, property, or credit in the public service, we owe an endless debt of gratitude. Such a debt cannot be paid, and so the world has de-

vised a system of military promotion or decoration, of societies and uniforms, which are a public proclamation of the nation's debt. Distinction and honor in some form are the rewards of merit, and human experience has stamped as both inexpedient and dangerous any attempt to transmute them into money.

Giving to honor grace, to danger pride,
Shine, martial Faith and courtesy's bright star
Through all the wreckful storms that cloud the
brow of war!

But the general common-sense and right feeling of mankind realizes that for the disabled, for the widows and young children of the fallen, something more must be done. After the close of the war Americans showed themselves more grateful and lavish than any people had ever done. Every provision for the care and comfort of the sufferers was made in hospitals and soldiers' homes, and pension laws on a scale of liberality never before known were enacted. The sums granted were large and were steadily increased by successive acts; in one class of pensions from twenty-five to seventy-two dollars a month for the honorably discharged private. The restrictions as to those who were to receive the pension of the killed were so magnanimous as to give it to a widow, child, dependent mother or orphan sister, and three years after the war additions were made so as to increase the pension by a fixed sum (\$2.00 monthly) for every child under sixteen. The whole system was right and most creditable to the nation. Under this plan the number of pensioners increased steadily as might have been expected for ten years after the war. There were 85,986 in 1865 and 238,411 in 1873. Under the same system the decrease in numbers as was natural then began, falling until the passage of the Arrears of Pensions Act in 1879, at the rate of about 2500 a year, the figures for 1878 being 223,998. Correspondingly the disbursements ran from \$8,525,153 in 1865 up to \$33,077,383 in 1871, decreasing to \$26,844,415 in 1878. But since that date the number of pensioners has increased to 550,000 in 1890 and the appropriations for pensions to something over \$100,000,000, without deficiencies.

This growth in pension expenditure has been brought about by several causes, some of which are in themselves not connected with wrong tendencies in the nation as a whole, but inhere in the insufficiency of all human devices. One of these is the practical impossibility of determining on legal evidence such as the Pension office demands the fact of disability—so that many worthy cases were without remedy under the old statutes. Another is the tendency of men under the prevailing evolutionary philosophy to trace the causes of disease to

remote periods, and surviving soldiers who are now growing old and suffering from the ordinary physical ills which herald approaching incapacity for labor trace their origin with unerring certainty twenty-five years back to the hardships and exposure of camp and field. Still a third is a sentiment, one of the purest in the human mind and ordinarily very rare in American life—that of veneration. But uncommon as it is, and splendid as it is in the right place, the adversary is using it for bad ends.

Special cases call for special remedies, and in our earlier history the feeling had sometimes good, sometimes bad practical results. So arduous and meritorious were the services of the officers in the Revolution regarded, that the country bestowed upon them in 1785 a service pension. But many of them had no other return for private means expended in the public service, and the measure was not abused. In 1818, however, when, as Madison said, "Most of the survivors of the Revolutionary struggle had paid the debt of nature, but some still living and not provided for by existing laws were reduced to indigence and real distress," Congress passed a bill to pension every soldier who had served nine months or more, and "was in need of assistance from his country for support." The expectation of Mr. Bloomfield, the promoter of the bill, was that there would be something over 700 pensioners under it, and that the annual expenditure would be about \$40,000. The fact was that public morality was so debauched by the prospect of getting something for nothing that the appropriation required in the first year was a little less than two and in the second nearly three millions. Congress was therefore driven to pass stringent measures in 1820 to diminish fraud and punish offenders; but in 1822 there remained 12,331 pensioners under that bill, and there are still a number on the rolls. In 1832 we granted service pensions to some of the soldiers and sailors of the war of 1812 and in 1871 to such as were sixty-two years of age. We have at present 9000 pensioners of that war on our rolls. In 1878 we followed the same policy with reference to the survivors of the Mexican and Indian wars. In all such cases we acted from a sense of veneration. We waited long, set a limit at the age beyond which men work with difficulty, and the total number under all such bills is about 117,000. Nevertheless the claim is made and reiterated, that the precedent for dependent and service pensions was set by the fathers, the wise men of old. If the pension office would relax its stringent rules as to evidence, and the cases of soldiers not disabled while in service, but afterward incapacitated by disease for labor, should be handed over to the local authorities, where they belong under

our federal system, the moral force of such arguments would be spent as far as the government at Washington is concerned. But there is no remedy for the folly which, dazzled by the logic of extremes, would apply the veneration argument for dependent and service pensions to the veterans of the civil war, except imminent national bankruptcy.

Even under the normal disability statutes many men of means draw substantial sums of money year by year. Every one of us has personal knowledge of individuals well-to-do in various walks of life, day-laborers, tradesmen, professional men, who think it not only no harm but thoroughly just to increase their income and their comfort by drawing from other taxpayers what they do not really need. The community at large sustains them in their course of conduct, which is either taking advantage of a technicality, their disability coming under the language of the statute not precluding self-support, or else accepting money as compensation for services rendered. It is to be hoped for the sake of American honesty that the latter is the conscience-salve applied by such persons. But a lofty principle of independence and patriotism should forbid it, and the State should refuse it to those who have not a nice sense of honor. If notions of that kind were to pervade a whole community it would be an end of strength in the government should other wars arise. No land dare deliberately enter upon the uncertainty of war knowing that the surviving soldiery would expect and demand so lavish a reward in the event of success and that public opinion would uphold their mercenary spirit. If the tender compassion shown by right feeling to the few is to degrade the many, destroying their self-respect and extinguishing the heroism of peace, then our nation is verging to its decline and American virtue is to go down before petty temptations.

But mischief of this kind produced by the selfishness, greed, or thoughtlessness of a comparatively small minority could be checked if the majority were sound in its views and scrupulous in its conduct. Since 1879, however, there have been many symptoms of tendencies in the national mind which indicate neither lethargy nor happy-go-lucky good-nature, but point to a thorough reversal of old and tried opinions as to the essentials of American life. Some facts which justify such a fear are clear. See how tolerant we have been of inequality in taxation and the creation of privileged classes. Many illustrations might be given, but we confine ourselves to pensions.

During the last war there were enlisted into the Union armies 2,778,304 men, of whom 2,418,082 survived. There were 489,000 on

the pension rolls at the beginning of last year, and about 1,100,000 are still living. The inception of this process of inflation in expenditure dates back to 1879, fourteen years after the war, when under the operation of a reasonable but humane pension system a diminution in the number of pensioners and in the expenditure for benefactions to disabled soldiers and their families had been constant for six years. The theory up to 1868 had been that five years of pension arrears was more than enough, in other words that within that period any disability contracted in service would show itself. But in 1879 all such limitations were discarded and Congress passed a bill, the notorious Arrears act, which became a law, granting to every successful claimant of the nation's bounty the amount of his monthly dole dating from his discharge from the service. This statute withdrew no less than \$500,000,000 from the national treasury. The deed was the more flagrant because previous bills of the same nature had failed under the scathing denunciations of the great leaders in the war, and one of them had actually been vetoed by President Grant. He declared it to be "needlessly extravagant, uncalled for as offering the most dangerous inducements to fraud, as not demanded by the soldiers themselves, and as likely to benefit them less than the pension and claim agents who were the real authors of the measure." The act of 1879 was a victory not for the honest pension agent, but for the "pension shark."

Since that date there has been a steady succession of similar measures varying from the stealthy private bill to the most monstrous proposals for service pensions on a scale of extravagance hitherto unheard of. President Cleveland said in one of his vetoes: "Every relaxation of principle in the granting of pensions invites applications without merit and encourages those who for gain urge honest men to become dishonest." If to those weighty words he had added by saying: those who for gain or for *partisan purposes* urge honest men to become dishonest—he would have exactly portrayed the next stage of development in the disastrous agitation. The great accumulations in the national treasury were a standing menace to honest government and a clear indication of a dangerous and unscientific system of taxation. They furnished therefore an irresistible argument against the conditions under which we were living. Hence some means must be contrived to distribute the surplus and empty the treasury. Adroit and unscrupulous managers were quick to take advantage of the fealty of one great party to the economic system now in vogue, and enlist its representatives in the plan of indiscriminate

pensioning. They speciously represented that it was either that or the over-throw of protection. Other attacks on the surplus had been made and had failed. This was the last resort and it succeeded. Public opinion was swept from its old moorings and the second stage to the end was passed. We now have a law granting a pension to every man who served for ninety days, and was honorably discharged; if he suffer under a permanent disability not caused by his own vicious habits "which incapacitates him from the performance of manual labor in such a degree as to render him unable to earn a support." The nation maintains every soldier who cannot maintain himself, without regard to his services, to his sufferings for his country, or the reason of his disability. The hero covered with honorable wounds, the faithful and courageous soldier who served long and bore the brunt of battle, is now no better than the deserter, the straggler, the bounty-jumper, and the coward. Could the true military spirit of any people bear up and survive such a blow? Already within the year¹ more than 600,000 applications have been made under the measure; \$30,000,000 have been added to the pension appropriation; if the demands are favorably considered next year \$80,000,000 will be needed, and the grand total expenditure will be something like \$200,000,000.

The next step, that to a *service* pension law, is easy. If more than two-fifths of the total cost of national administration is to be taken from the earnings of one set of men for the support of another, why not say three-fifths or even four, and swell the annual outlay of the Federal government to seven or eight hundred millions? Words like these have actually been used in the Senate of the United States. It is as easy to say one sum as another. They tell us this is not a cheap nation; and advise us "to be noble"! Yet we must face the facts and the direction in which they point. A most striking historical parallel could be drawn. Rome won her great and early wars, in con-

trast with Carthage and other nations, by the valor of her own citizens. But no reward was too great for the generosity of the nation to bestow on her victorious legions. Expectation and performance finally laid such a burden on her that mercenaries had to be employed for economy's sake, until at last the professional soldier realized his power and became the arbiter of her sinking destinies. Since then the tale has been more than twice told. Can we too, like the great and unsuccessful Austrian premier Prince Schwarzenberg, learn nothing from history? If we were really paying pensions instead of indulging in the dangerous trifling with the eighth commandment which is called in these days by various euphemisms we would abide in practice by the standard meaning of that word. Prussia under Frederick the Great distributed annually to disabled veterans less than one week's expenditure in the United States at present, and the total German pension appropriation to-day after three great wars fought within thirty years is about nine millions of our money. France gives somewhat more. Grant thought that \$27,000,000 annually was not only an ample but a lavish provision for those who had suffered in the last war, barring all schemes of back-pay, service and dependent pensions which he denounced as highway robbery. Garfield in 1872 said that nothing but unwarrantable extravagance would increase the pension list above \$29,000,000 a year. But we have changed all that, and the great surplus being annihilated at one stroke, by the next the utmost resources of this rich land will be taxed beyond endurance, unless we come to our senses and retrace our steps.²

There are extant a few copies of the first volume of a work by Freeman entitled: *The History of Federal Government from the beginning of the Achaian League to the disruption of the United States of America in 1861*. Mention of the title brings a smile to the faces of most of us, possibly a blush to that of the author; and yet if the date had been advanced

¹ 1890. The figures for 1891 are of course not available.

² See the "Weekly Tribune," for July 9, 1890, editorial "Time to Halt," which shows that about half the entire revenue of the Federal government is paid to an eightieth of the population at the per capita rate of \$224 a year. The exact amount of the pension appropriation including deficiencies for last year was \$167,824,733.33.

On July 30, 1890, the editor explained officially the attitude of the paper to pensions. The Tribune "has stoutly maintained that the soldiers of the Union armies are entitled to a Service Pension"; "that the ability of the government to grant a Service Pension would necessarily depend on what other legislation was enacted," and as a canvass showed that *seventy-five per cent. of the veterans preferred the Service Pension Bill first*, but the G. A. R. committee on pensions fa-

vored the Disability Bill which is now a law, and as that bill makes greater demands than the treasury can meet, the veterans, "poorer as a class than they would have been had they not served . . . will cheerfully stand aside until after the really dependent and helpless have been cared for and *until the proper time comes for renewing their own appeal before Congress*." The italics are mine.

On February 9, 1891, was published a strong and sensible editorial calling attention to the change in public opinion due to excessive appropriations and the disclosure of abuses in the pension department. It gives warning that if it appears that "the system is an instrument of plunder rather than of national gratitude" the payment of pensions to the deserving may cease. It calls for a revision of pension rolls and the reform of abuses, but there is not a word withdrawing the claim that a Service Pension would be righteous if only there were money in the treasury.

about thirty years and for disruption had been substituted centralization—the title would not have been so misleading after all. Philosophers tell us that the whole man is, in the phenomena of which he is the theater, the cause and the spectator. In this fact lies the difficulty of founding a scientific personal psychology. Much the same thing is true of national psychology, but while all analysis is distinction all distinction is not separation. If, therefore, we discover in ourselves many actions which point in one direction unmistakably, it will not do to reply that we mistake what is accidental for that which is essential. The almost unrebuked and unbroken trend of our legislation is towards centralization and state socialism.

We are no longer on the verge of socialism, we are in it, far advanced in both the principle and practice of what was but a very few years ago an abhorrent doctrine to all Americans. Nothing can explain our tolerance of the present and prospective pension expenditure but socialism of an extreme and dangerous type. It is not formulated as such a movement in the national mind, perhaps not even in the minds of most men who favor it. But no other explanation can be found for our legislative career than the insidious increase of state socialism as a force in the land. Protection, admirable within limits as a means of national growth and the conservation of balance between classes, has gone to lengths which were never contemplated by its early and philosophical advocates. What masquerades to-day under that name is simply the distribution to one class in the community of what belongs to another. The legitimate demands of a well-planned system of internal improvements have been exaggerated into River and Harbor Bills which grow as does nothing else but evil report. The practical politician, as he calls himself, knows that in their current shape they are merely the means of distributing a percentage of the national revenues among henchmen who do not necessarily waste the money, but do use the employment of laborers to influence votes. Nearly successful were the attempts made to parcel out what is the property of the whole country among the people of one section under the name of educational grants. But the climax is reached under a system approaching, not socialism but communism in the pension measures already operative and those which are seriously proposed as possible. Bishop Berkeley's panacea for Ireland was: "Let them be good." Any political system, however vicious, will work, in a way, where citizens have lofty principles and exercise self-restraint. But where thousands and millions of people with neither principle nor self-control are brought under a

polity the corner-stone of which is manhood suffrage, the danger is clear. Demagogues struggle to buy votes at any price, trusting in their star, or Jesuitically justifying the means by the end; and more insidious still is the gradual dissemination of the feeling that where civil and political equality are universal, economic and social equality must follow as a corollary.

Some curious psychological phenomena are revealed to the close observer of American life. One of these is the substitution of legality for morality in the minds of vast numbers who lie outside the immediate limits of that educated and polite society within which we are sadly familiar with the idea, "Get wealth, my son, honestly if thou canst, but get wealth." But even the children of honest God-fearing immigrants hold the same view. They are educated in the common schools too often just far enough to have the pride of opinion and fear of the masses without the check-wheel of moral training. Soon comes the discovery that any religion which demands of its adherents a rigid outward observance of ritual is an object of ridicule among their schoolmates, and false pride destroys the hold of ancestral belief. Growing to manhood they lose along with their religious profession the morality which had its sanction in faith. So unconsciously they change the religious sanction for a legal one and pass into the unfortunate mental attitude of the servant who declared to a possible employer that she was neither a Roman Catholic nor a Protestant—she was an American. Among large numbers of a higher social rank there is the same confusion, but in their case it is largely due to easy good-nature. Holland, the greatest of the late English writers on jurisprudence of a certain school, defines a legal right as that which a man can get without the use of force, *i. e.*, by means of organized public opinion. The natural conclusion then is that whatever desirable thing can be had from whatever source is to be taken if only public opinion does not condemn. It is awkward if the taker land in jail, and in that case of course the means by which he laid hands on others' property are highly reprehensible. But if he escape the condemnation of the courts a large section of society, high or low, receives and secretly admires him. And if legislation, the law of the land, invites thousands to dishonesty why shall not the leaven of legality permeate the whole lump?

In reality it was by an appeal to such undeclared but powerful sentiments that our present socialistic condition was reached. Loud and noisy outcries were made to a forced, exaggerated, and unreal sentiment of gratitude in the case of pensions. National self-preservation was the plea in the matter of educational

grants. The amelioration of the condition of the poor and general blessedness, without any experiences of suffering, are the professed ends of the Nationalists; and the single tax will not merely aid the poor, it will abolish poverty. All such arguments are made by men of the highest probity, but they are also the fleece in which the wolf disguises himself. So with the various responses to them. There are many ill-balanced enthusiasts who forget that if the ten commandments had never been promulgated amid the thunders of Sinai, both tables would still be valid to-day as the crystallization of human experience in society. But far more numerous are the thoughtless, would-be honest people who find human law a tangible standard and fail entirely to grasp either the nature or validity of ethical principles. An English chartist was told that if the wealth of all the Rothschilds were equally divided among all the men in England his share would be about seven shillings. "I ha' naught to do with it," said he, "I ha' six pun' in the bank myself."

Militant socialism finds unblushing and public support in two classes of organizations of differing degrees of respectability. One class acts under the mask of ostensible ends; the other manfully avows its purpose. The right of association is one of the most important in the history of free government, but there are so-called political societies which have neither political nor moral aims. They exist solely for the creation and distribution of spoils, that is, of taking by the machinery of the state large sums of money from the pockets of individuals which are not needed for good government and putting those sums into their own pockets. An even more scandalous procedure is perhaps the more common, that of taking for personal and private ends the money raised and needed for good government and leaving the duties of office unperformed. Scarcely a great city in America is without some such hall, ring, or machine, as it is variously called. Such socialism does not of course deserve so comparatively decent a name. It is adroit rascality taking advantage of the insufficiency of all human devices. Sometimes associations of the purest aims sink temporarily or permanently into similar practices.

When our armies were disbanded in 1865 the whole world looked on in delighted wonder as the men and officers returned to the duties of private life with the same ease and readiness with which they had taken up arms. There was no blustering, no lawlessness, no discontent. They were even better men in every walk in life than they had been before by reason of the severe discipline they had undergone. Gradually, however, as they watched

with discontent the process of reconstruction, and misapprehended in some measure the temper of their gallant but defeated foes, their association became closer and their meetings more frequent. At last the Grand Army, theoretically organized for laudable purposes of sociability and the perpetuation of the most ennobling memories and sentiments, became more or less a political organization. It took new strength as a body with political aims, and for a time stood blameless even in the eyes of unsympathetic opponents. But in so doing it lost its moral force and hold on the nation as a disinterested band of war-worn veterans who had deserved well of their country. In its latest stage the question is asked whether it be even a legitimate political association. Its foes within its own household try to make it a machine with all the ear-marks of "bosses," "demands," and "workers." It has many honorable members who do not sympathize with its course, men who abhor dependent and service pensions as the devil's device to degrade the military profession into a huckstering trade. But so far the country has vainly waited for them to organize for the reform of their society from within or for a rupture and protest from without. The one great object of the war had been Union, to prevent present and future disintegration and avoid the disastrous example of Europe in the contiguity of States with discordant interests and therefore perpetual wars and enormous armaments, taxing every man, woman, and child for their unproductive support. But the brave defenders of this sound principle have helped in peace to bring about exactly what they fought to prevent by war, *viz.* unjust and unnecessary taxation. We spent for the war on the northern side thirty-five hundred millions between 1861-65, excluding the expenses of states, cities, and towns and the values destroyed by Confederate privateers. What the war cost the South can never be known. But since 1865 we have already disbursed in pensions one-third of the total expense of the national government for the war, and will probably on the present system spend as much more. If service pensions become the rule our outlay will far exceed the cost of our own war in its entirety, saddling us with a permanent annual expenditure sufficient to support the enormous armaments of France and Germany combined. At this moment the 62,000,000 people in the United States are annually paying \$44,000,000 for a military establishment, \$22,000,000 for a navy, and \$160,000,000 for pensions including deficiencies — a total of \$226,000,000, which is 80 per cent. of what the combined 86,000,000 people of France and Germany together pay for their armaments. We bemoan their sad fate and the

oppressive burdens under which the men, women and children of old Europe groan. But this is the pass to which we have come: 86,000,000 of French and Germans pay \$265,000,000 for armaments and pensions—63,000,000 of Americans already pay \$226,000,000. A simple sum in ratio. At our rate they would disburse \$308,000,000, about \$40,000,000 more than they actually do. And yet the appetite of some posts in the Grand Army whetted by the Disability Pension Bill is clamorous for more! This democratic land, neutral, industrial, and devoted to the arts of peace, is to be taxed for war reasons far beyond the dreams of the most ardent war-lord of Europe. Not long since you could scarcely open a newspaper without reading of the "demand" made by some post for a service pension.

It seems almost a waste of time and energy to say anything about avowed theoretical socialism in the face of such unavowed practical communism. But I have tried to find the most dispassionate and yet the frankest statement of its aims and the argument by which it tries to support them. It seems most tersely and candidly put by Bax in an essay first published in one of the leading English reviews and now reprinted in a volume to which it gives its title, "The Ethics of Socialism." The author claims, and he is in substantial harmony with the latest exponents of socialism, that according to its ethic every man should identify himself with humanity not in the way of self-sacrifice to other individuals as such but by the identification of the material conditions of individual well-being with those of social well-being. This being an economic age these conditions are economic. We ask ourselves in passing whether this is not on the whole a truthful generalization of the drift of the popular mind and the tendency of legislation. But hear the writer in his own words: "In what I may term a concrete ethic self-sacrifice can never be more than an accident. The substance of such ethic consists not in the humiliation of self before God but in the identification of self with humanity. By this we should observe is not especially to be understood the 'living for others' of the current Christian ethics which at best means sacrificing oneself for other individuals as individuals. What we here mean is . . . that affirmation of self with or identification of self in society which in the first instance can only be brought about by the identification of the material conditions of individual well-being with those of social well-being." Put in less philosophical terms this seems to mean that we are not, as the Christian ethic claims, to live for others but on others. Legal right, not duty, is the rule of conduct. The obligations of the moral law and

the golden rule must yield to changed standards just as far and as fast as public opinion can be brought to tolerate them. The organization of the socialists is on the whole more dignified than that of the advocates of indiscriminate pensions because it is open and avowed, but as far as the latter have gone it looks as if their aims were identical. Even the German socialists, fiercest of their kind, now propose to abandon strikes and boycotts except in emergencies of the most extreme sort. They too propose to appeal to the majority. This is not caution or gentleness born of recent emancipation, as has been suggested, but shrewdness. They believe, wrongly we hope, that they no longer need force for their schemes, but that what is done every day under specious pretexts by others may be done through peaceable agitation and openly by themselves.

There is one aspect of the whole matter to which allusion has incidentally been made which deserves somewhat further emphasis. The giving and taking of money where service has been rendered are honorable acts. They are honorable in a still higher degree where necessity is relieved by an able and generous patron; as when the feeble, aged, or incapable are cared for by the state. But they are dangerous in every respect to both parties where neither service is rendered nor real want exists. The legitimately pensioned soldier is a man worthy of all respect; but the individual who masquerades as a disabled soldier where military service had nothing to do with his weakness is an impostor or self-deceived. When a great class of such men are offered and accept grants from the treasury (that is from the pockets of their fellow-citizens) not only is their own manhood destroyed, which might be endured, but there rises at once a far more serious menace to the public welfare in that their example becomes contagious. There was an old debate among the encyclopædists as to whether strong individuality be the representation of class or differentiation from class. The man who widely differs from all of his kind is eccentric; class type makes the strong-personality. If this be true the pauperization of any class will produce representative paupers whose effrontery rests on the support of numbers. This is already happening, and the men with glib tongues and spurious arguments who support measures such as we are discussing grow more numerous and influential every day. We are threatened with the pauperization not of a few of the million unpensioned survivors of the late war but with the degradation of a body of citizens once the most heroic in the land. The old soldier, independent, self-respecting, and ubiquitous, should be a strong moral force in the community, an example and

inspiration to us, to our children, and perhaps to our children's children. But, alas! the prospect is otherwise. Already the decline of his influence has begun. Veterans of the army wonder why they often fail to arouse enthusiasm where once they were received with rapture. In the ordinary community, city or country, their power, which should be enormous, is nothing at all, for they are too often immovable partisans and drones without energy. The reason is surely not because the flight of time has dulled our true gratitude or diminished the luster of glorious service. As yet there is not a respectable community where a man putting forth a fraudulent claim against his fellow-man, and supporting it by false evidence, could hold up his head. This is done, however, every day in the matter of pensions. Prosecutions have been tried, but, as a rule, they fail because the jury will not convict. Now juries are in an important sense the barometer of public morality, and we are forced to confess that the country as a whole tolerates the recipients of fraudulent pensions. The reason is in part cowardice born of political affiliations, in part a general feeling that any one who can get something from the government is a clever fellow and ought to enjoy it. But the general moral sense, though degraded, revenges itself in a diminished respect for the sharpers, and secondarily on the military survivors as a class.

There are crises when the truth must be told. This is one of them. Never was there more elusive duplicity in any movement than in the whole pension agitation since 1879. It is a time which calls for men fixed in principle and conduct, fearless to proclaim the truth when branded as pessimistic and un-American, words which are nearly worn out in the service of wire-pullers and job-masters. As Burke said of the repeal of the stamp act—done “in the teeth of all the old mercenary Swiss of state, in despite of all the speculators and augurs of political events, in defiance of the whole embattled legion of veteran pensioners and practiced instruments of the court, we have powerful enemies but we have faithful and determined friends and a glorious cause. We have a great battle to fight, but we have the means of fighting.”

What are these means? Above all, the great Irish leader said: “Agitate, agitate, agitate.” The country is not rotten: “tidal” waves or, as the phrase now is, “land-slides,” of sterling

honesty and sound sense still occur at regular intervals on the sluggish surface of politics. And the first one to be set in motion must be that of economy. Let us be mean, stingy, if need be, in our federal taxation. After all, the chief functions of government throughout this Union are entrusted to the State members of it. In them taxation is direct and, being so, is promptly felt and carefully regulated. Last year the total of taxes levied by the States was about \$70,000,000, a very reasonable sum for 62,000,000 people. Of course we may not hope under our system for direct federal taxes in the immediate future, but we may so far rouse ourselves as to demand that the sums raised indirectly shall but suffice, and barely suffice, for the expense of government. This is no place to unfold a plan, but there are able men who can and do explain feasible methods, and the necessity cannot be too strongly urged.

But agitation is not sufficient without organization. We want no new parties; constitutional government is not only hampered, it is endangered by the existence of minor political groups. But a well considered and easily understood appeal for a tax-payers' league to watch and expose the conduct of members of Congress who bind burdens of extravagance and folly on the public ought to be tried. There never was a time when free government owed more to a free press in the exposure of shams than now. Let everything be done to uphold the hands of journalists by displaying the public appreciation of fearlessness whenever shown. A group of right-minded men in every city, willing to unite and pay for the services of an active secretary to collect and disseminate abundant, ungarbled, and trustworthy evidence concerning the disability or service pension sham, would very soon correct the socialistic tendencies of pension expenditure, and shatter the false pretence of veneration which masks it. If to that were added the courage of conviction in the action of the same and similar men inside of party and out, our present well-grounded fears would shortly vanish.

And then it seems as if we must make a passionate appeal to the hitherto unheard sane majority in the Grand Army to save their comrades from themselves. So far there have been a few influential and manly protests,¹ but they have been inoperative. We can easily understand that those who make them shrink from

¹ The letter of General Francis C. Barlow printed in the “Evening Post” of August 9, 1890, was seasonable and vigorous. To it and similar articles by soldiers and clergymen which appeared in many journals, I am indebted for important suggestions. “Other things being equal,” says General Barlow, “the soldier of our great army will stand higher in public estimation than his neighbors who did not share in the dangers and toils of the war, and in most States he is preferred

to others by the civil service statutes in public employments. This and his own approving conscience is the soldier's surplus reward over and above what the government agreed to pay him. This can be taken from him only by his own act in seeking to barter it for money. This indiscriminate pensioning in my judgment is not only a great wrong to the tax-payers of this country but is fatal to its military spirit and to the manhood of the soldier.”

unpopularity with comrades whose virtues all men admire. But blindness to fault and feebleness in action sometimes become criminal. Let us have, if necessary, reform from without. I can conceive of no more helpful institution to the country than a compact association of the soldiers who are self-respecting, modest, God-fearing citizens—and there are tens of thousands of them—pledged to redeem the good fame of our military service by opposition to both disability and service pensions, by demanding that the case of any deserving applicant shall be adjudicated by local officials, judges, or State officers, without regard to technicalities of evidence, and by securing, where disability not caused by service must be relieved, the necessary legislation in State legislatures to establish proper homes or retreats for the very exceptional cases of those soldiers who, through no vicious habits, but by misfortune or sickness have become unable to earn a living.

And yet we ought solemnly to consider that no public movement is possible, based on a principle of ethics either much higher or far lower than the average moral standard of the citizen. Such is the intricacy of society that not only is it difficult to trace chains of cause and effect, but even the single link is often inscrutable. The lack of high principle in individuals undoubtedly lies at the foundation of immoral public action, but on the other hand popular movements powerfully influence private judgment. Hence remedies for both evils are essential, and with every suggestion for the organization of agitations there must be an appeal to the pure standard of personal morality which John Bright hoped might be the measure of state action. Here, therefore, is the great opportunity of the church. For one, I believe in political preaching, not to advocate partisan measures but to bring to every listener the most difficult lesson that emotional, intellectual, and practical morality are one and the same thing. The counting house, the polling booth, and the church have not different morals nor different theories. The history of progress has been a history of the separation of organs. The early king was legislative, judiciary, and executive all in one. Now we have a hundred thousand men to carry on all the nice divisions and subdivisions into which each of these functions is cut up. So also with the occupations of men. A single pioneer builds a whole house, is architect, carpenter, mason, plasterer, and what-not. In high civilization each man of the forty trades called into requisition by house-building can do but one small thing, and his capacities in every other direction suffer atrophy. And so in the intricacy of our modern lives we are often scrupulously moral on one side, but find it, alas! most

difficult to be moral all around; in our relations to the State as well as in our relations to persons like ourselves; in the fervor of religious emotion and in the reaction of commonplace trade or profession; in the quiet of well regulated private life and in the mad tumult of public business. Morality without the sanction of religion is, I believe, of doubtful possibility, but too often the charge is brought that what passes for religion is common enough without morality. If this reproach were taken home by the church, and the remedy found, the pension grab would find its place under the rubric of the moral law where it belongs. We would hear less said about law-abiding citizens like pensioners under a disability or service statute, and more about good men; less of legality and more of duty, less of economic socialism and more of personal exertion for ourselves and others.

Nothing which has been said above is intended to destroy the sentiment of gratitude for the soldier, or the moral obligation of any individual in this great nation, expressed in the immortal words of Lincoln's second inaugural.

With malice toward none, with charity for all; with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in; to bind up the nation's wounds; *to care for him who shall have borne the battle and for his widow and his orphan*, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

But the words are: "who shall have borne the battle." The honor of such is magnified in the receipt of the country's ungrudged gifts, the honest pensioner is the stimulus to patriotism of the generations which grow up about his knees. Reverence and love are his due, for his example calls for imitation; and the assurance of ease in his declining years is the guarantee of similar self-sacrifice when danger again appears. Heroism and patience mark the loftiest type of character. Let those whose welfare has been secured by his suffering praise him in the gate and shower their benefactions upon him as far as may be consistent with his manhood. The nation has nothing but the tenderest interest in such as these. It is for the sake of his honor, to preserve unfading his hard-earned laurels that we protest against the shame of legislation which in his name depletes our purse in the interest of pension brokers, and against the indiscriminating lavishness which draws no distinction between suffering heroes and those who should be content with the honor, which pales before no other, of having saved their country in the hour of her greatest need.

Wm. M. Sloane.

GENERAL SHERMAN'S LAST SPEECH. THE OLD ARMY.

DELIVERED AT THE PRESS CLUB DINNER TO H. M. STANLEY, AT DELMONICO'S, JANUARY 31, AND PRINTED FROM MANUSCRIPT DICTATED BY GENERAL SHERMAN.

General Sherman said :

MR. PRESIDENT AND GENTLEMEN :

'T WAS Burns, I believe, who said,

A chiel's amang ye, takin' notes,
And, faith, he 'll prent it.

Here I find myself among a hundred such who will print their notes with variations, and silence would better become me. Von Moltke has the press reputation of being silent in seven languages, yet on a visit some years ago I found him not only communicative on professional topics, but fluent on the subject of his experience in the Turkish service on the Tigris and Euphrates. The same was true of General Grant, who could be most congenial and fluent with boon companions, but as dumb as an oyster when a news reporter was announced.

Therefore, Mr. President, I ask of you the special privilege to speak on this occasion from notes, giving my own version of what I intend to say to your official reporter, to be printed or not as you may order.¹

The toast assigned me is "The Old Army." Yes, that army is "old," older than the present government. It began to take form the moment the colonists made a lodgment on the coast of Massachusetts and Virginia; grew in proportion up to the French war of 1756, and still larger during the Revolutionary War, 1776-1783.

In 1783 the armies of the Revolution were all disbanded, except "eighty privates and a due proportion of officers, none to exceed the rank of captain," to garrison West Point and Fort Pitt.

In June, 1784, the Congress of the thirteen States provided for two companies of artillery and eight of infantry, not to exceed 37 officers and 700 enlisted men. In 1786 it increased the number to 46 officers and 840 men. At that date these troops garrisoned the frontier posts, viz. : Fort Harmar, now Marietta, Ohio, Vincennes, Indiana, and Venango, New York, in addition to West Point, Fort Pitt, and Springfield, Massachusetts. Then came 1789, with its new Constitution, and Washington be-

came its first chief executive. He was the father of this nation. No man ever better comprehended the meaning of the expression "Life, liberty, and the pursuit of happiness"; that government was meant to "govern," not to be governed; that *force* to compel the right was as necessary as patriotism, industry, thrift, and patience to the citizen, and one of his first acts was to organize an army as the right hand of his administration of law and justice in the face of clamoring theorists. His efforts resulted in the formation of the present army of the United States.

Its first commander was Josiah Harmar; and the army was composed of a battalion of artillery commanded by Major John Doughty, and one regiment of infantry, of which Harmar was lieutenant-colonel, the whole numbering 46 officers and 840 men.

Before Washington had concluded his eight years of administration in 1797, he had by his influence with Congress raised this force to one general officer (James Wilkinson), two of the general staff, one corps of artillerists and engineers, two companies of light dragoons, and four regiments of infantry, aggregating 189 officers and 3158 men.

Were I to follow all the changes for a hundred years, I know that you gentlemen of the press would be more fatigued than when your mothers made you read the Book of Numbers. Let me, however, conclude this branch of my subject by stating that at the end of the last century the old army was composed of 2347 officers and men; that the pay of a lieutenant-colonel was \$50 a month; a major \$45; a captain \$35; a lieutenant \$26; and a cornet \$20; that a sergeant's pay was \$6 a month; a corporal's \$5; and a private's \$4.

Nevertheless, in proportion to the population and wealth of our country, that small army exceeded in strength and cost the present regular army of to-day.

But it is not the numbers or pay which constitute an army, but the spirit which animates it. Every military expedition, great or small, demands many conditions—a clearly well-defined object or purpose to be accomplished, ample means, a leader with unbending will, confident of his strength and power, and followers obedient, loyal, and with intelligence

¹ The General did not, however, read the notes, but followed them from memory. The speech was not reported.

enough to understand the nature of the work to be done.

That little army possessed all these qualities, bequeathed to us lessons of inestimable value, and were in fact the pioneers of civilization on this continent. They fought the Shawnees and Ottawas in Ohio, Michigan, and Canada; the Cherokees and Creeks in Georgia, Alabama, and Mississippi; the Comanches in Texas; the Sioux, Cheyennes, and Arapahoes on the plains; the Utes and Apaches in New Mexico and Arizona, and the Nez Percés in Oregon, without expectation of honor, reward, or profit; and I am sure Stanley learned here from personal experience and from reports much that was of great use to him in his three several expeditions into the heart of the dark continent of Africa. He now reports that in his recent expedition from the mouth of the Congo to Zanzibar he traveled from west to east, by river and land, 6032 miles to rescue the governor of Equatoria, who found himself cut off from his base (Egypt) by the death of Gordon and the reconquest of the Soudan by the fanatic Mahdi. Thirty thousand pounds sterling had been subscribed for his use in England, and Stanley had volunteered to go and rescue Emin Pasha, which he did at terrible sacrifice of life and money. He has recorded the tale well and truthfully, and I think that the man he went to save, who could not rescue his followers from the tight place in which he found himself, was not worth the cost. Stanley, however, did his part heroically; therefore all honor to him and his faithful associates; and I repeat that I am sure he had received in America inspiration from the examples of our old army during its history of the past hundred years. One or two of these, of which we must have known, I will briefly trace.

In 1803 Mr. Jefferson bought of Napoleon for fifteen millions of dollars the Upper and Lower Provinces of Louisiana, as little known then as are Unyoro and Uganda to-day. You young men of the press think you are smart and original, but if you will search the journals of that period you will find that for personal abuse and wit your predecessors were your equals if not your superiors. They poured on President Jefferson their choicest vocabulary, and said that he had bought "the great American Desert, fit only for Indians, buffalo, and rattlesnakes." 'Tis true these did then abound, but behold the result! The territory then acquired by purchase now comprises twelve States of our Union, with unlimited minerals, pastoral and agricultural resources, in fact is one of the great granaries of the world. But in 1804 it was a wilderness, and the French village of St. Louis was like a seaport where trappers, traders, and explorers fitted out for voyages to last three,

four, or five years, often covering eight or ten thousand miles of travel. Mr. Jefferson desired to explore these regions to see what he had bought, and naturally turned to the little army of which he was the constitutional commander-in-chief. The first expedition fitted out was in 1804, that of Captain Meriwether Lewis and Lieutenant William Clark, of the old army, with a detachment of soldiers, boatmen, and trappers with orders to ascend the Missouri River to its source, thence cross to the Columbia River, descend it to the Pacific Ocean, and return to St. Louis. There were no steamboats then, and for 1800 miles they had to pole, cordelle, and drag with towlines their bateaux against a current which steamboats now can hardly stem; then march afoot across the mountains, build new boats, and paddle down the Columbia. All was accomplished, and their report of what they saw and encountered is as true to-day as when it was written.

The next noted expedition was in 1805 by Lieutenant Zebulon Montgomery Pike, who ascended in like manner to the source of the Mississippi. On his return to St. Louis he was ordered up the Osage River to restore some fugitive Indians, and then go on to explore the Red River, which was the boundary line between Spanish territory and our new purchase. Mistaking the Arkansas for the Red River he followed it to its source, became bewildered among the snow-clad mountains, got back to the plains for game, then went south to the Sangre de Cristo Pass which he crossed to the head of the Rio Grande del Norte, called the "Colorado" or Red; built a fort when he found himself on the wrong Red River, was captured by Spanish troops, taken to Santa Fé, and afterward sent on to Chihuahua. His journals were taken from him, and he and his small party were sent back to Natchitoches, Louisiana, by way of Texas. His experiences were recorded and printed in 1810, and are most interesting, especially to us who can now travel the same route in palace cars where he suffered such privations. In the war of 1812, he was killed by the explosion of a magazine at Little York, now Toronto, Canada.

I might go on with similar tales, but must refer the curious to Washington Irving's "Astoria" and "Bonneville." It was not until 1842 that Captain Frémont, of the Topographical Engineers, began his systematic explorations of the transcontinental routes with adequate means and proper equipment, and since that day the government has caused every nook and crevice of that vast region, nearly a thousand miles north and south and two thousand east and west, to be explored. Four great railways have been built with numerous branches, so that you can buy a ticket here in

New York which will carry you to Puget's Sound, San Francisco, or Los Angeles in one week—a trip which took us a whole year in 1846. In all this development, more like a dream of Aladdin than of reality, the little regular army has gone ahead, pointing out the way and encouraging the pioneers. I know of my own knowledge that the builders of the Union Pacific Railroad, the pioneer of them all, would have abandoned the enterprise in 1867–68, had it not been for the protection of the army of the United States.

Indeed the history of the old army is the history of the United States; and the spirit which animated it is illustrated by the example of Colonel James Miller of the 21st Infantry at the battle of Lundy's Lane, who when asked by General Scott if he would capture a certain battery answered, "I'll try, sir"; afterward when the desperate nature of the undertaking was pointed out to him, he answered, "It must be done, I've got the order in my pocket"—and it was done.

The hardships and privations from the revolutionary war down to that with Mexico lay the foundation for the heroic virtues which prepared us for the herculean struggle of the civil war, and brought down to the memories of officers yet living, personal triumphs, one of which I will endeavor to paint.

During the years 1842–46, just before the Mexican war, Fort Moultrie, South Carolina, was garrisoned by four companies of the 3d Artillery, commanded by its colonel (Gates). I was one of the lieutenants, and Brevet Major Martin Burke was the senior captain who habitually commanded us on drill and parade. He had entered the service in 1820; had imbibed all the habits, prejudices, and thoughts of the olden time, resisted all innovations, and could not learn new inventions such as Scott's Tactics, or the percussion musket, but always contended there could be no better weapon than the old revolutionary firelock with flint and steel, and in spite of regulations clung to his old Steuben's Tactics. The Mexican war of 1846 came, which scattered us—Burke to Mexico, and me to California "around the Horn."

Early in 1850 I came back to New York bearing despatches to General Scott at his office in Tenth street; delivered them into his hands and received orders to report to his office daily till he was ready to send me on to Washington. Taylor and Scott were the heroes of the Mexican war; the former was already president, and Scott was the ideal of the soldier and gentleman, six feet five inches high, about sixty years old, fond of admiration and conscious of his fame. I on the contrary remained a lieutenant, feeling oppressed by the thought

that I had lived through a great war without having heard a hostile shot in anger. I reported daily and was ordered to dine with General Scott, and listened to his special grievances and to his estimates of the men who had composed the army which conquered peace with Mexico. On one occasion I ventured the expression, "Of all your great feats in war, General, the one that arrests my attention is, that you made a hero of Martin Burke." "Yes," he replied, "Martin Burke! Martin Burke! Every army should have one Martin Burke, but only *one*, sir. I recall me," he continued; "it was at Contreras that the enemy occupied the crest of a plateau to our left. I detached Riley with one brigade to march that night to the left rear of the enemy by a circuit, and Persifer Smith with another brigade to the right by another circuit to fall upon and dislodge this force: and then Major Burke was ordered to move straight forward with his battalion of artillery through a *cornfield*, as a feint. Everything resulted as planned. The enemy was driven by the rear attacks down the face of the declivity to a road leading towards Churubusco, along which all the army followed, the result the next day being the battle of Churubusco—a victory to our arms. When at night the rolls were called all were present or accounted for except the artillery battalion of Martin Burke; and where was Martin Burke? Why, sir, he was back in *that* cornfield, and would be there to-day had I not sent orders for him to come forward."

During the great civil war this same Martin Burke was a colonel, commanding the island Fort Lafayette in the Narrows of New York harbor, a safe place for political prisoners, and there for years he fought gallantly against writs of habeas corpus and of contempt. No sheriff's officers were allowed to land, and he defied the powers of the great State of New York to rescue civil prisoners committed to his custody by Secretaries Stanton and Seward. To his last day he regarded the great writ of habeas corpus as a monster, and for years after the civil war would not risk his person in New York City for fear of writs of contempt which he believed were in pursuit of him. He died in this city on April 24, 1882. The last time I saw him was about 1878 at Fort Wool, on Bedloe's Island, where the majestic Statue of Liberty now stands, and where by permission he was quartered with a garrison of one old ordnance sergeant, to defy the minions of your State courts who dared to claim possession of any person committed to his safe keeping. I tried to persuade him that the civil war was over; that without fear of "habeas corpus" or "writ of contempt" he might land at the Battery, board at the Astor House or the Fifth Avenue Hotel; go to the theaters, and live out

his short remainder of life without fear and in absolute comfort; but he preferred the isolation of that island fort and the security of that little flag of the Union which he and his old sergeant could hoist to the morning sun, and take in at its setting, to demonstrate to the active, busy world outside that he still lived. Times had changed, but Martin Burke could not change. He was reared in the old school: the soldier should obey his superiors; defend his post to extremity; be firm, yea, stubborn in

upholding his government, civil and military, as Caleb Balderstone did the master of Ravenswood.

He is gone, like nearly all of his type, but we realize that new boys are born as good as those in the past; they grow up into stout manhood and will take our places and be none the worse for the old traditions of courage, manhood, and fidelity passed down to them legitimately by the "old army" which you have so kindly remembered in this festive hour.

William Tecumseh Sherman.

[THE bust from which the accompanying portrait of General Sherman was taken was made by Augustus St. Gaudens during the winter of 1888-9 and was the last sculpture-portrait made. It was modeled entirely

from life in about eighteen sittings of two hours each. The sculptor avoided purposely the use of photographs in order to get a clear personal impression of his subject.—EDITOR.]

SHERMAN.

I.

GLORY and honor and fame and everlasting laudation
For our captains who loved not war, but fought for the life of the nation;
Who knew that, in all the land, one slave meant strife, not peace;
Who fought for freedom, not glory,—made war that war might cease.

II.

Glory and honor and fame;—the beating of muffled drums;
The wailing funeral dirge, as the flag-wrapped coffin comes.
Fame and honor and glory, and joy for a noble soul;
For a full and splendid life, and laureled rest at the goal.

III.

Glory and honor and fame;—the pomp that a soldier prizes;
The league-long waving line as the marching falls and rises;
Rumbling of caissons and guns, the clatter of horses' feet,
And a million awe-struck faces far down the waiting street.

IV.

But better than martial woe, and the pageant of civic sorrow;
Better than praise of to-day, or the statue we build to-morrow;
Better than honor and glory, and history's iron pen,
Is the thought of duty done and the love of his fellow-men.

R. W. Gilder.

AFTER THE BUST BY AUGUSTUS ST. GAUDENS, MODELED FROM LIFE IN 1888-9.

W. L. Garrison

PLAY AND WORK IN THE ALPS.

I. PLAY.

THE BRIDGE AT NEUBRÜCKE.

GOING to Switzerland was one of the bravest things we ever did. The hundreds of thousands who yearly crowd the playgrounds of Europe go innocently for amusement or rest, or, if they are English, because it is the correct thing. They do not know that their arrival is an intrusion, their departure a blessing, and they themselves but impudent or ridiculous Americans, cockneys, and Cook's tourists, to be sneered at as they deserve by the some five hundred Englishmen for whom alone the Alps were created. But we knew this only too well when we started for Zermatt,—the very holy of holies of the Alpine Club,—and this is why I think our bravery as great as that of any of the heroes immortalized in the "Alpine Journal."

We arrived one rainy August day at Visp, a town you reach by railway, going up the Rhone in a train the speed of which is rivaled only by that of the slow-plodding mule of the country.

At the station three gorgeous porters in gold-laced caps invited us in fluent English to ride for nothing to their hotels. But we had sent our baggage, as we had been advised, to the post-office, where we at once went. The bag which we wished to post to Zermatt seemed to us very heavy, but scythes and barrels and bundles of old iron, labeled and addressed, were lying on the floor, and we supposed it

must be all right, though the postmistress, as soon as we had paid our money, turned away without giving us stamps or receipt, and had nothing more to do with us. We need not have worried, for the Swiss post-office takes anything and everything that the express companies at home would carry; and if one does not bother about his baggage, it is as certain to turn up at his journey's end as it would be to disappear in England, if one ventured to let it take care of itself.

We got off the next morning about seven, for, though the rain had stopped, it looked as if it might begin again at any minute. From Visp to St. Nicholas, half-way up the valley, there was only a bridle-path on the mountain-side, though probably by this time the railroad on which we saw men working has been opened. We passed through Neubrücke, a tiny village which, with its high-pointed, one-arched bridge spanning the deep river-bed, might have been the composition of an old landscape-painter; and later, an hour and a half from Visp, we lingered for a while at Stalden, which was crowded with tourists, and like a great German beer-garden; and at last reached St. Nicholas in the rain.

The talk at lunch was all about Zermatt and the difficulty of getting rooms at its hotels now

THE CHURCH AT STALDEN.

CHALETS ON THE OUTSKIRTS OF ZERMATT.

that the Queen of Italy was staying there. That she was at Zermatt was not news to us. Before we left London there had been much about her and her Alpine climbing in the English papers, which indeed had encouraged us to come. What she could do we thought most certainly we could too. As several English families who had telegraphed for rooms had been answered that there were none, almost every one decided to pass the night in St. Nicholas. This made us hope that there might be more chance for us, especially as the inn kept filling with people coming down the valley; so, without telegraphing, we left as soon as we had lunched.

From here there was a carriage-road the rest of the way, and the gold-laced porter ordered out one of the two-seated wagons—the native *chars*—drawn up in front of the hotel, and brought a ladder by which we mounted into it. For driver we had a delightfully picturesque little fellow, with gold rings twinkling in his ears, and with a broad-brimmed felt hat into which a feather was stuck. The afternoon was indescribably dreary. The rain poured in torrents, the clouds fell lower and lower, and the farther we went the colder it seemed to grow, for even here, it must be remembered, we were as high as the top of Mount Washington or of Snowdon. At Randa, a village by the way, of which all that I remember, indeed all that I saw, was the hotel, we waited an interminable half-hour while the mule and his driver had something to eat. Another carriage drove up behind us, and we knew that if it got to Zermatt first there would be one chance the less for us. For relief we turned to our Baedeker. But our view, between the steady drops of rain, was bounded by an horizon apparently about twenty-five feet off in the clouds, and a few yards of mist and streaming rain were all we had to look at for the rest of the afternoon.

We had been driving for an eternity, it seemed to us,—in reality for about five hours,—when a slight descent brought us to a level stretch. “It is Zermatt,” our driver said, and he took off his blanket, emptied the water from the brim of his hat, and jumped into the carriage. A few black masses developed into chalets; one or two large, gray, shadow-like forms became hotels, with dreary tourists looking out of the windows; and then an enormous pile began to shape itself into a huge barrack with windows and a long porch, and “Hotel Mont Cervin” painted in big letters on its face. A group of men in broad-brimmed hats, hands in their pockets, pipes in their mouths, were lounging at the door as we drove up. Madame the manager came running out.

AN OFF DAY AT ZERMATT.

A STREET IN ZERMATT.

"Has Monsieur telegraphed?"

"No."

"Then there is nothing for Monsieur." And she simply turned and left us.

We drove on, jolting up and down over the vilest cobbles, through a narrow street, between black chalets with water pouring in streams from the spouts which stick out like gargoyles from their eaves, to a small, low building with "Hotel Mont Rose" over its door. Again a madame ran out to meet us.

"Has Monsieur telegraphed?"

"No."

"Then,"—but very polite and sympathetic,—"I regret that Monsieur can be given nothing."

Opposite, with a wide open space between, was a third hotel, the Zermatt, and here, when we were again asked, "Has Monsieur telegraphed?" we began to wish ourselves back in St. Nicholas and royalty anywhere but in the haunts of common men. But madame, standing for a minute in the rain, seemed to feel sorry for us, and, though there was nothing, she promised us a salon for the night and sent us to her own room in the mean time.

It cleared during the night, and the next morning when we went out we could see that the little green plain of Zermatt formed the arena of a vast amphitheater of mountains, many with dense pine forests almost to their ap-

parent summits, others with little patches of yellowing grain on their lower slopes, though not anywhere were there signs of the pleasant orchards and vineyards which ascend from the Lake of Geneva far up the hillsides, and border the rocky bed and wild swamps of the Rhone. So completely did the heights shut in the plain that they hid from it the loftier peaks men have risked their lives to conquer, save at the upper end of the valley, where the mighty Matterhorn towered alone.

It was a reminder of what had brought us here to the very heart of the High Alps, and at once we took our boots for the orthodox supply of nails to one of two rival cobblers who, just a little beyond the Monte Rosa Hotel, looked across the street at each other. We walked on to select good, sound alpenstocks from one of the half-dozen shops for tourists. Two or three carriages bumped past towards St. Nicholas; on the steps of the post-office Englishmen were reading the "Times" or the "Star"; the Swiss army, in the shape of one soldier in red and black uniform, was chasing a goat round a corner; women with handkerchiefs over their heads were carrying huge bundles of hay or fagots of wood into the black chalets; the guides with the broad-brimmed hats now touched them to us as we came to the Mont Cervin Hotel, in front of which they still lounged; and tourists went by on mules or on

foot, the iron points of their alpenstocks clanging in time with their steps.

To climb in shoes and without nails would have been too amateurish, and so our first day was spent in waiting for our boots. We found some young French Anglomaniacs playing tennis in front of the hotel; and on the porch men in knickerbockers and Norfolk jackets suggestive of Highland moors, and girls in

ters, close to the telescope, while whoever had his eye at the glass played the showman. "Now they're on the snow. They're going up the shoulder. The poor fellow's on all fours; the first guide is away ahead, but the second keeps very close. You can't see them now; they're behind the rocks. There they come again. Oh, dear! what a hard time he's having!" And so on, and on, and on, in a

THE COBBLESTONES OF ZERMATT—ON THE MAIN STREET.

approved Thames costume, were grouped about a telescope which was directed towards the Matterhorn and balanced by an empty bottle hanging from it. Every minute the crowd increased, and parties crossed from the Monte Rosa to look, for a man and his two guides, the first to venture after a heavy snow-storm, could be seen upon the great peak. In the course of the morning we managed to have one peep each, but just as with much difficulty I had discovered three black things like ants crawling over the snow, I had to give way to the next in the long line waiting. All day long the interest never wavered. Men smoked their cigarettes, women wrote their let-

terless stream. For a little while at lunch the porch was deserted, but the afternoon brought back as large an audience as ever. Either the snow made it really difficult, or the poor climber was as exhausted as he looked, but certainly at half-past six, when we went to dinner, instead of being back in Zermatt, as he should have been, he was but two-thirds of the way down to the first hut, and excitement at the hotel was intense. For the time I was deeply impressed with the dangers of the Matterhorn; but the next day before noon thirteen men had been seen upon its summit.

In Zermatt the Matterhorn is not only the dominating feature in the landscape but the

great center of interest, the chief topic of conversation. Sometimes in the evening there was an attempt at dancing, and an Italian and his two daughters came with violins, guitar, and mandolin, but the dancers left the *salon* before the musicians. Sometimes during the day there were polite, languishing games of tennis. Few climbed, and the only other resource was to watch the man on the Matterhorn, who, in making the ascent, was therefore providing not merely for himself but for all below an occupation with a decided flavor of excitement. Nowadays every one who goes up anything goes up the Matterhorn, unless indeed he objects to its price: \$50 for one

his feet with a slip-knot, and he swinging from rock to rock, suspended thousands of feet in the air, and they never bothering to look at him; and of the Italian count who made the ascent with seven guides in front, seven behind, and one man to keep his legs straight against the rocks; and of the boy of fourteen following in the train of the conqueror; and of the woman reaching the top, and then, as the guides literally ran her down, quietly sleeping all the way back from the lower hut until the bells of the little church in Zermatt awoke her. And yet even the cynics who laughed at these tales could be stirred into a show of enthusiasm, and more than once were we roused from our first sleep

THE CLUB-ROOM AT ZERMATT.

day's climb, to say nothing of incidental expenses, is no light matter, and there are people who think the game not worth the candle. But this is the only consideration. Times have changed since every Alpine climb was a journey of discovery; and terrible as the cliffs of the Matterhorn still look from the valley, they have been shorn of their chief danger. Rocks have been blasted, chains and ropes hung, huts set up on its slopes, and a comfortable hotel built at its foot.

The street between the wall and the hotel was called the club-room of Zermatt, and it was there that my feelings of respect for the cliffs and precipices of the Matterhorn perished. For there I heard the story of the fat German hauled like a log up the peak by four guides, the rope tied around his waist and fastened to

by the ringing cheers with which the men at the Monte Rosa greeted the return of the last hero of the Matterhorn. And, after all, there are certain perils which the exploiters of the Alps cannot wholly counteract.

The second morning after our arrival our boots were in fine working order—at every step we left an impression of nails on the hotel floors, on the gravel paths in front, on everything but the cobbles. And so, with Baedeker in our pocket, and the Matterhorn lifting its peak in front of us, we started on our first Alpine ascent. We were going to the Riffel, but our Baedeker was four or five years old, and the directions not clear. We consulted some Germans, who explained at great length, pointing to the road straight ahead. As we could not understand a word, we relied upon

CHAISE À PORTEUR.

their gestures, and kept on until we crossed a little bridge over a stream that rushed down towards the Visp. And here most unaccountably we lost the mule-track, and made a path for ourselves up the green slopes of the mountain, apparently just below the Matterhorn. Here our climbing began. For me it ended above the last group of chalets, where the last tiny field of grain gave way to rough boulder-strewn pastures. But to prevent protests from the Alpine Club, or too many letters of explanation inundating the editor of this magazine, let me at once admit that the expedition on which I collapsed is usually taken comfortably on muleback by old ladies and small children, and that the point where I left off is thousands of feet below that at which the real climber begins.

From a sunny lichen-covered rock I looked down in sullen disgust on the great curve of the Gorner Glacier as it came sweeping round the opposite heights, where stood two hotels, one above the other, evidently those for which we thought ourselves bound; and be-

yond to the mountains I had gaily planned to climb. Far below, Zermatt, set out like a toy village in the midst of green fields, was shut in by its ramparts of hills, which from here I could see were separated from each other by the white lines of glaciers and of streams leaping from them, and were crowned by snowy peaks. And even as I looked, and listened to the cow-bells ringing sweetly from the near pastures, I wished myself back in London. And I wondered at the foolish infatuation of the people toiling up the foot-path, some with guides, and all with eyes fixed upon the ground. Where was the pleasure? J — came back finally, and had an ascent to talk about. He had climbed, and climbed, and climbed, and made his way through snow quite two feet deep, until he was sure he was half-way up the Matterhorn, when suddenly he saw on a wild and desolate platform in front of him a big hotel with a sign bearing, in enormous letters,

“Hotel Schwarz See, 8392 feet,” while far above it, and seemingly but little nearer, the great peak sprang aloft into the blue air.

That very day we saw the Queen of Italy returning from a royal expedition. We had made another attempt to ascend the Riffel, for no sooner had I recovered my breath and my temper than I was eager to be mounting something else. Round a turn in the road down which we had just walked came a long cavalcade, and in the middle

GOING TO THE RIFFEL.

a horse bearing the queen. But could this disheveled woman, with the big gray felt hat and draggled feather on the back of her head and suspicious streaks marking her face, hanging on with all her might and main to the railing of her saddle and bobbing up and down on her horse, be the same we had seen, so elegant, and handsome, and smiling, and perfectly dressed, driving through the streets of Rome? It was well Italian subjects did not see their queen. We stood and stared, and it was rather surprise at her ludicrous appearance than any latent radicalism which made J—— omit to take off his hat. But I do not know why she should have been so utterly demoralized, for she made her ascents on mules or in *chaises à porteur*. She was a perfect mine for guides and porters, who, for the time, deserted their usual lounging place in front of the Monte Rosa for the Mont Cervin, where she had her apartment. I only hope she proved as profitable to the proprietor, who has fought shy of royalty since the ex-Emperor of Brazil came to Zermatt. His majesty and suite, numbering twenty-five in all, had also taken possession of the Mont Cervin, and for them the whole place was turned topsy-turvy, and illuminations were given in their honor, and there were fine goings on, all of which were duly remembered when the time came to make out the bill. His majesty himself studied every item attentively, looking at the bill from beginning to end, and then handed it back to Seiler with twenty-five Cook's hotel coupons! And Seiler, who is no ordinary hotel-

keeper, thought the joke too good to keep to himself.

Though I never learned honestly to like the lower slopes, I

gradually got used to them. The very next day I managed to reach not only the Riffelalp, the first of the high hotels, but the Riffelhaus. When we started from the Hotel Zermatt we were given luncheon-coupons good in either, so we had the day before us. I let J—— go at his own pace, which was really very amateurish; it is only your novice who tears up a mountain. I walked as slowly as a guide or as a mule, though not as steadily, for I rested every half-hour or less. This gave me a chance to see, between the blighted and gnarled pine trees, on one side a dazzling stretch of glacier, on the other the far blue Oberland, as unsubstantial as the clouds above its summits. Up, up, up went the path, always through the woods, save for a little space where it skirted a grassy level. "How much farther is it?" in despair I asked a benevolent-looking middle-aged lady, in bonnet and dotted net veil, bound for Zermatt. She comforted me. "Only half an hour more." I took what hope I could, and toiled slowly on, for I feared my next resting-place would be my journey's end. At last, just above me, I saw an enormous hotel, and in a few minutes more I was on the wide terrace in front, where

J—— was already established, a half-dozen guides were loafing, and an artist was painting the valley of the Visp, from which uprose one white church-spire, the center of a village, while the far horizon was bounded

CHOOSING A GUIDE.

AN ARRIVAL AT THE RIFFEL.

by the shadowy blue mass and faint white peaks of the Bernese Oberland.

It was so cold every one was sitting inside. When the lunch-bell rang, and I went to present our coupons, I found groups of women in heavy wraps on the glass-inclosed porch, and round the stove in the hall others were seated, only their faces showing out of a bundle of shawls. We had come too late. Every place in the large dining-room with its three long tables, every place in the small dining-room, was taken. "You can go up to the Riffelhaus," the waiter said. Of course I could, and die on the way. And people come to the Alps for pleasure!

There was nothing else to do, however. Behind the hotel the path continued its windings, though now above the trees, on the bare mountainside, where cows were grazing on the scant pasture, and snow lay in great patches. Up here the ground on every side was white with snow. One or two guides and porters waiting in the open space in front of the hotel were stamping their feet to keep them warm. Inside, women were lunching in their fur-lined cloaks, men in their ulsters. The porch in front, as at the hotel below, was inclosed with glass, and here after lunch we had our coffee. Once the place was literally invaded by a phenomenal French family, father, mother, five daughters, and four sons, all in white berets, chattering, laughing, shivering, enjoying themselves immensely and undisguisedly to the disgust of a group of solemn Englishmen in a corner. "All those who want coffee hold up their hands," said the father of the family when he gave his order.

Outside, when we ventured again into the cold, the clouds were falling, and a keen, sharp wind was blowing. It would have been as much fun to walk in a blizzard at home, and we turned back.

But the Alpine fever was upon us. I am sure I cannot explain the reason, but the more disgusted we were with one expedition, the greater always was our impatience to make another, and the next morning we were off on a long glacier walk. For this we took a guide, and as we conferred with him outside the hotel, just as we had seen the superior climbers confer with their guides, and followed him in single file, I flattered myself that we looked as if we meant business.

The first part of the journey was up the mountain side to the Schwarz See, but I was too impressed with our appearance to give up as on the first trial. Perren, the guide, kept us to the mule-track and made the pace, but he never volunteered to stop, and I noticed that Mr. U——, who was with us, and I were so delighted with the fine view of the Gorner

Glacier and the snow-range beyond that now and then we stood in mute admiration, surreptitiously getting our breath, while the guide pointed out the different peaks. At the Schwarz See Hotel we lunched, and then went on, for a while still towards the Matterhorn, until we dropped down upon the Furgg Glacier, over the moraine, which from above always looks like a level pile of stones and rubbish, but which, once you are on it, develops into a succession of rough hills and rougher ridges of unsteady rocks and stones, to cross which is like climb-

THE VILLAGE OF FINDELEN.

ing over the ruins of a city. The guide wound his way through the maze of crevasses which from the rocks had seemed only so many beautifully marked lines and curves on a smooth icy surface, but which now opened at our feet, sinking to profound depths, with polished walls of purest blue and green. Into them he threw stones in the approved fashion for amusing the tourist, and then, when we drew near the edge, pulled us away to inspire us with proper respect. Here and there he cut steps in an icy wall we had to scale, and at a miniature *bergschund* which the Alpinist would have despised he even lifted me in his arms down to the lower side, and altogether did his best to give the walk an air of adventure. On the short dry grass of the slope above, where sheep were wandering, more pipes were smoked, and the guide showed us the book which every guide carries, and in which many

THE MATTERHORN FROM OUR WINDOW.

men had written compliments, especially upon his gallantry to ladies; and these, after the episode of the *bergschrund*, I could but reëcho.

After we had crossed the Gorner Glacier, and were on the road again, nearing Zermatt, the guide quietly fell behind for the first time. Among guides it is good form to lead when danger or, at least, work is ahead, but to let the tourist lead when only the glory of a successful home-coming awaits him.

This walk was our most enterprising so long as we remained in the valley. Another day we did manage to get up to the Findelen Glacier, one of the many gulfs of thawless ice between the heights which rise behind and beyond the mountains encircling Zermatt. And we walked up the Zmutt Thal to the Zmutt Glacier, just below the really inaccessible cliffs of the Matterhorn, to meet a friend—a hero—who was coming over the high snow-pass from Zinal, and who arrived an object of pity, with scarlet face, cracked nose and lips, and the stubby beard of a few days' growth, wearing clothes in which we would not have recognized him at home. We also took a rough climb along the footpath, hopelessly losing itself every now and then among the rocks, high above the Trift Glacier, on the mountainside where so often the long threads and wreaths of cloud lay quietly, and where edelweiss grew in rich velvety clumps.

It was the day after this climb that we moved up to the Riffelalp, all our belongings on a

mule, while we followed on foot, as if merely out for an afternoon's walk. There we found many well-known faces from Visp, and St. Nicholas, and Zermatt—the Archbishop of Canterbury in knickerbockers, sack-coat, and low hat, with archiepiscopal suggestion in the turned-up brim and button in front; the young ladies with their sketch-books, vigorously attacking the Matterhorn; the guides loafing with the inexhaustible pipes in their mouths; the climbers, now revolving round the woman famous for losing her toes by a night spent at the bottom of a crevasse; the maiden ladies with Dorcas and missionary propensities writ large on their benevolent faces. The only foreigners were an elderly Frenchman and his young wife, who sat hand in hand under the trees, laughing ecstatically, and an Italian artist, who never worked, but spent his time exchanging cards with likely patrons in knickerbockers.

We had a delightful corner room with two windows and a balcony. When we jumped out of bed in the morning the first thing we saw, beyond the pines and the glacier and the snowfields, was the Matterhorn; and as we dressed for dinner we could watch its cloud-banner turn to gold, as the light of the unseen sunset fell upon it, or else, from the other window, we could look far down the valley of the Visp, where, perhaps, we had already watched the shadows slowly creeping up the mountains, which on each side stretched far away to the dim peaks of the Oberland. And when I blew out the candle at night, and there was a moon, the last object upon which our eyes rested was still the Matterhorn, pale but distinct in the soft silvery light.

From the Riffelalp I made my most enterprising expedition, and started for the second hut on the Théodule Pass, from which you look down into Italy. Our path led high up the mountainside above the Gorner Glacier, and then dropped steeply down upon it. A thin coating of ice still covered the little streams and pools, but gradually the hot morning sun melted it, though the wind blowing over the great snow-range was fresh and cold. One man with his guide overtook us and passed quickly out of sight, but we saw no one else. I hardly know what happened the rest of the way, for the mountain sickness, I suppose it was, seized upon me, and I wearily dragged one foot after the other, as step by step I felt the steeper rising of the glacier. I remember how for an hour or more the little Matterhorn seemed only a few paces in front of us, but we never got any closer to it; and then some one pointed to a white dot on the rocks to our right, which he said was the first hut, and I eagerly kept my eye on it; but we walked and walked,

and yet it grew no bigger. At last we were at the foot of the rocks, and Perren started up, a wall as steep as a mansard roof, with loose stones and sand falling and slipping from it, and the higher we climbed the higher it seemed to rise above us, until suddenly—everything is seen suddenly in the Alps—in front of us I saw a little two-storied house, with smoke curling gaily out of its window, guides drinking at a table at its door, mules coming up round the other side of the rocks, and tourists putting on their gaiters. A man with a napkin over his arm at once stepped forward to ask what we would drink.

In the mean time the rest of our party had eaten lunch, and were now putting on their gaiters. I would not look at mine. And yet from here to the second hut was the part of the walk for which I had specially come, for between lay vast snowfields it was not safe to cross without being roped, and until the rope was tied

haus, and then kept on, up the path beyond, to the Gorner Grät, the roads becoming rougher and rockier at every step, though never quite impassable for the mules. It was like going up stairs steadily for an hour and a half, but on the way were no rocks as steep as those below the Théodule hut, nor was the path even as steep as the road to the Riffel. It came to an end finally on a narrow, rocky ridge, every hollow filled with snow, a wooden hut on one side, and at its door a telescope through which a placard offered us a look for fifteen centimes. Several groups of men and women, coat-collars turned up, alpenstocks and ice-axes at their sides, were gathered round unpacked luncheon-baskets, and they turned to glare, as we arrived, as if daring us to intrude upon them. We went as far away as we could, unpacked our own baskets, bought some extra luxuries at the hut for a price which included the 10,289 feet elevation of the picnicking-ground

THE MATTERHORN AND THE RIFFELHORN FROM THE RIFFEL.

round my waist I felt that I should have had no real Alpine experience. From my sunny bed on the rocks I saw the others walk off, and just above stop and rope themselves together; and I was left alone.

When the climbers came back they found me comfortably seated at a table in the sun, eating some excellent soup, and bread and butter. They had not only been to the second hut, but had scrambled up the Théodule Horn, and altogether had been so brave and energetic that I walked back to the Riffel more ashamed of myself than ever. Whatever woman may be at the polls, I am ready to prove her man's inferior on the Alps.

One cloudy day, with a large party, we followed the long, weary windings to the Riffel-

and the view it commanded. And then we glared in our turn as another party of tourists threatened us; but it was no use.

At last the clouds, which had been falling behind and over the Riffel all the morning, closed about us and blotted out the entire panorama. There being nothing more to eat or to see, we began our descent through the clouds.

"Some persons," Mr. Leslie Stephen says, "hold that every pleasure they cannot sympathize with is necessarily affectation." And the man who in the Alps is only happy on a mountain-top, or on the way to it, can hardly be expected to understand that there is real enjoyment left for those who sit all day long in the sun, or linger for hours in the pine woods,

or whose energies are exhausted by a three or four hours' journey. My only climbs were those of which I have just written, and yet no one could have felt more deeply the great charm of Zermatt and the Riffel. It seemed to grow greater with each day, and I think I never regretted leaving a place so much as the Riffelalp Hotel the September noon I made my last descent between the pine trees, when a keen sweet wind blew over the mountains, now arrayed in all their autumn glory

of scarlet and gold, and on the plain men and women were cutting hay, its scent filling the pure air, and girls, minding a cow or a goat, were lying on the grass in the warm sunshine. If it were brave of us to journey to Zermatt in the beginning, let me be braver still in the end, and, risking the wrath of the Alpine Club, say that I know of no lovelier place to go for a month's holiday, as one at home goes to the mountains or to one of the many cities by the sea.

Elizabeth Robins Pennell.

A DIFFICULT CORNER.

BREAKING THROUGH AN ICE-BRIDGE.

II. WORK.

"ALPS; yes," was the form of a cablegram which reached me one day last summer, and as soon as possible we were in Zermatt. For the first ten days I agreed perfectly with the eminent medical authority who, having climbed with his family on mules to the Riffel, on his return said that it was pure recklessness and foolhardiness to go up anything. But on the eleventh day a friend appeared. Now I have a very profound respect for him in many walks of life, but as an athlete my contempt for him was then unbounded.

The afternoon of the day on which he appeared he insisted on going off for a walk. He came out in a beautiful cap of an entirely new style, a most appropriate suit, a tremendous pair of hob-nailed boots,—they were ready long before he left London,—and a gorgeous ice-ax, which lived in a leather cover.

We went up to the Riffel, and on the way I did receive a lot of good advice. I discovered, for example, that one does not climb mountains at five miles an hour, and that there is very much to learn in the way of throwing your weight and placing your feet. Having secured rooms at the Riffel, he proposed that we should return by the Findelen Glacier, and in about

an hour, over a good path, we reached the moraine, which from the distance looks like a winding brown ribbon, and which becomes a huge wall of loose rock the minute one gets on to it. From the top he pointed out the Rimpfischhorn miles away, up which we purposed later to climb. F—— half ran, half slid down the slippery mass of debris. I attempted to follow, but slid down altogether, and landed on my hands and knees on a great flat floor of dirty ice. Up the ice, which rose all around in front of us steeper than a church-roof, he walked with his ice-ax. I jammed my pole in, struggled up to it, went beyond it, and found myself fixed something like a V, the pole being one arm, my body the other. I endeavored to brace myself up, but suddenly sat down, and slipped backwards to the bottom. I then tried to crawl up, but only slid back again. F—— walked slowly down, seized me by the back of the neck, and with dignity, his ice-ax in one hand and me in the other, strode up to the top. I was beginning to have some respect for him. We came straight down over the end of the glacier, on which I now thought I was quite at home. I jumped on to a long, smooth dirt-covered slope in front of me, and in a

CROSSING A COULOIR.

second was yards below the place where I had started, up to my knees in mud, small rocks, and water. It was a slope of pure ice hidden under a layer of mud and loose stones, and the whole surface had given way with me; and as I tried to pull myself out of the bed of the small avalanche I had set in motion, I heard F—— calmly remark, "Well, have you broken your neck?" Then he came down by the rocks on the side. Save for several holes in my hands and clothes I was none the worse for it. The walking here was very much easier, and we came out on a still, black little lake,—one of two which lie one on each side of the Findelen,—struck a curious level path which seemed to go for a mile or more along the side of the mountain, and blocked out the bare rock above from the almost sheer grass-slopes below. We followed this until we were just above the high chalets of Findelen, which seem to be anchored on the mountainside. At Findelen the only native who could understand my French informed us that it would take two hours to reach Zermatt, while we knew dinner would be served in three-quarters. We scurried down the continuous zigzags for about fifteen minutes at a pace which scarcely gave the slow-going peasant time to touch his hat and get off the inevitable good evening, until I

noticed a dry water-course running straight down the mountainside, with Zermatt apparently a quarter of a mile below at the foot of it. Without waiting for F——'s advice, I jumped into it. Stones, dirt, mud, branches of trees started off with me, and, sticking the point of my alpenstock into the ground behind me, I went with them at about a 2:30 gait. Sometimes I bounded for about ten or fifteen feet through the air, and then I would slide twenty or thirty, tearing out stones and rocks with my hands, trousers, and legs. Suddenly the alpenstock went over my head and began on its own account a race in which I was badly beaten, and before I could think where I was going I found myself close to the little white church on the Findelenbach, half a mile from Zermatt, and I heard a voice away up the mountain saying, "Are you down there?" And when I said, "Yes," I saw another avalanche coming, and in a few minutes out of the bottom of it emerged F——, covered with mud and dirt from head to foot, and remarking, "What in the mischief did you come down such a place as that for?" To which the one obvious answer was, "Why did you do it yourself?" And a sermon on the dangers of sliding down unknown water-courses was cut short. But it seemed to me that doing

a two-hours' walk in about twenty minutes ought to be considered quite a feat. However, a few minutes afterwards we were in Zermatt toggged up as if we were in London, with the addition of some ornaments in the shape of sticking-

who had done the Matterhorn, and we were happy, though we were deemed worthy only of the withering contempt of all respectable climbers.

The night before we were to start for the

GETTING UP TO THE ROCKS.

plaster, and I had made up my mind to go in for anything.

After this we went to work regularly; that is, we loafed two days, and then climbed one. We saw all those sights which E—— has described, and we did a lot of other things which she has not. By the end of another week I was considered a fit subject to be dragged up the Rimpfischhorn. We had been successful in many attempts, and were quite certain that we had enjoyed ourselves as much as the men

Rimpfischhorn, up which S——, who had planned everything for the whole trip, determined we should go, I went to bed as soon as it was dark, leaving the other two to arrange with old Perren the guide to get the lunch, to see to the rope, to find another guide — in fact to look after the endless details of such an expedition. I was to be called at twelve, and we were to start before one. Some time during the night I was awakened by a furious thunder-storm, but I went to sleep again, only

THE MATTERHORN.

to be aroused by unceasing peals of nearer thunder on the bedroom door. I was dressed in a few minutes, and wandered downstairs. Soon a lightly tripping step announced the approach of F—— in his stockings, while an unusual amount of crashing in the upper stories told us that S——, who was near-sighted, was making his way down. I was beginning to chaff them for being late, when they silenced me by saying, that we were away behind time, that we ought to have started before the thunder-storm, that it was now after four, and that it was very doubtful if we ever got anywhere.

Breakfast did not take long. In the middle of it, Perren, looking rather sleepy and muttering about the weather, came in for the lunch, and as soon as we went outside we found him and Imboden stowing away into their sacks the things which the yawning, automatic waiter had given them. We started off in single file, suggesting Rembrandt's "Night Watch," though we were not so picturesque. In a comparatively short time we had gotten to the moraine of the Findelen Glacier, and crossed it. I had nearly upset the whole party by slipping down among them, and to save time was

ignominiously jerked up in front by Perren, and shoved from behind with the top of Imboden's ice-ax. The lantern had been left behind, concealed in a hollow tree by the path, for the morning was coming on, not with the Alpine glow, but with an increase of grayness, with here and there a watery star high over us in the heavens. We walked in a straight line up the glacier, here hardly crevassed, and almost a perfectly smooth incline nearly to the ice-fall. A few tacks around crevasses, and we crossed a small medial moraine; a few more tacks on very smooth ice, where Perren had to cut some steps for a foothold, a rapid slide down a steep slope, and a jump over a little *bergschrund*, and westward on a ledge at the base of the great lateral moraine. As we were leaving the moraine we stopped for a minute and looked around. Down by the Riffelalp, behind and now considerably below us, a thunder-storm was again raging. In front of us the mountain of loose rock which hid the Rimpfischhorn stood up darkly against a clear sky. Between Monte Rosa and the Breithorn was rising that thick, heavy gray cloud out of which at home always comes a heavy snow-storm. Nobody said anything, and we went on. We came down off the moraine on to the last patch of grass, wound around a quiet little lake, and began to climb a mountain which was simply a mass of loose boulders. We wound around and over and under, and swarmed up these boulders, always coming out sooner or later on a little pile of stones topped by a bottle. By what sense Perren always struck these bottles was a mystery. We began a long process of skipping from one block to another, or rather Perren and Imboden skipped, and we jumped and stumbled about and fell in between them, rising a foot with almost every stone. A few flakes of snow began to fall, the wind, which had been slight, died away entirely, and the clouds crept up from Zermatt and poured over the sides of Monte Rosa and down the peak in front of us. And all at once long winding sheets of vapor gathered around us and spread from one mountain to another, completely shutting us in, and the snow fell thick and fast.

Perren led steadily onward across a small snowfield which we did not see until we were on it, and up a tower of loose rock which loomed momentarily out of the storm. Just below the top two great boulders, standing side by side and covered with a flat stone, made a natural shelter large enough to hold all five of us, and here we had our breakfast. Between seven and eight o'clock a furious roaring began up above us; the snow fled away before it, and a burst of sunshine followed and chased it down the valley up which we had come, until even the Matterhorn glittered in the distance.

As we wound around the corner of the rock, the wind, blowing almost level and carrying with it sleet out of the now clear sky, struck us full in the face. Mufflers, gloves, and goggles went on, and we dropped straight down on to another glacier. As we crossed this, the clouds came down again, only to be whirled away, giving us marvelous glimpses of jagged coal-black peaks above us, or a momentary peep down the valley, miles away and thousands of feet below. Then we began to ascend slowly and steadily; the ice became snow covered with a crust, through which, as the ascent grew steeper, we began to break. Then for an hour it was plod, plod, plod, up an ever-steepening slope in a thick mist through which we could not see at all. Gradually the mist began to lighten; suddenly Perren stopped, and said, "Look up!" and right above, seemingly almost over us, came a great snow-peak, rushing out of the mist as if to fall upon us. Then we came to some rocks which from the Riffel look like a mere stain on the snow, but which form a huge ledge, sheeted with ice, up which one has to crawl. Stretching to the base of the Rimpfischhorn, which we had not yet reached, was a snowfield, curving over into a beautiful cornice fringed on its under side with icicles, and above the curve of the cornice a sharp ridge, or *arête*, led right into the midst of the peaks of the Rimpfischhorn. All below us now was perfectly clear, though the higher peaks were still hidden, and as the snow was soft, we went steadily forward to the foot of the *arête*. To mount this was like going up the roof of a house. The mist came down again, and it began to rain, every drop freezing as it fell, and we could not see ten feet on either side of us. But after many grunts and protests from F—— as to the pace, to which Perren paid absolutely no attention, we reached the rocks. These Perren began to climb at once, while the rest of us stood still, he having to knock the newly formed ice off each rock before he could scale it.

The rocks sloped away upward in the mist, the strata lying like stairs, only the steps were so broken that merely two inches or so of foothold remained of each step, and sometimes for four or five feet these would be broken away altogether. Perren would climb the ten or twelve feet of his rope, and steady himself; I, who was next, would yell, "*Êtes-vous sûr?*" A grunt would come back; I would begin to climb; my ice-ax would begin to slip; and then, with a wild tug at my waist, though we kept the rope tight all the time, I would be nearly jerked into space, and find myself alongside of him. The same thing would happen with the rest, except the placid, puffing Imboden, who had a most provoking way of walking

up these places without much regard to anybody. Then more snowy slopes and more rocks, the latter getting steeper all the time. Finally we reached a sheer smooth bit of rock ten or twelve feet high. I came up to Perren, who showed me where to put my hands and feet, and told me to stand firm. I looked up this face of rock; there was apparently nothing beyond it, and below I could see nothing. Perren took my ice-ax, and put the head of it firmly into a crack in the rock as high as he could reach. He then told me to brace myself, stepped on my knee, then on my shoulder, clambered to the top of the ice-ax, and then this lively old boy of sixty-five made a spring for the top of the rock, grabbed it, and disappeared over the other side. The rest of us, even Imboden, came up very much like bags of bones to a ledge decorated with two broken champagne bottles. Was this the top? It was hardly the bottom, and the clouds kindly blew away and showed us peaks almost over us. There was a drink all around, and then we started on again, one at a time. Just a little ahead was seemingly the last of it, but when we got there the face of the rock fell sheer away into the mist, and twenty or thirty feet beyond was another peak still towering above us. We had struck the top of a *couloir*. Connecting the two masses was a perfectly smooth sheet of ice thinly covered with snow, evidently leading down to the glacier we had left two hours before. Perren turned right towards it, swung his ax two or three times, and stuck one foot into the niche he had cut. He made two or three more niches, and came to the end of his rope. He swung his ax round with all his might and buried the point deep down into the slope above him. On this he rested his weight, and, turning round as far as he could, looked at me. "*Allons ! Courage !*" If ever I needed courage, if ever I wished to be out of a mess, it was at that minute. F—— said, "Stick your ax in like his. Are you right? Step out!" As I put my foot into the step a piece of ice broke off and began to slide, picking up the snow with a queer hissing sound. I looked at it for a moment, and then over the other side; I shut my eyes, and began trying to sit down. But I at once heard the most complicated oaths in three or four languages, and was nearly jerked out by the tightening of the rope in front and behind me. Still it was no place for a lecture, and Perren cut another step, and I took another; F—— came on, and then S——, and then Imboden. And, strangely enough, after that first step I felt perfectly easy. There really is no more difficulty in standing in a little niche on a steep wall of ice a thousand feet high than there is in putting your feet together and standing on the floor. The only necessity is confi-

dence in yourself and the people you are with. Some more rocks, another couloir, up, and not across, which we cut, one or two balancing steps on the top of it, with only clouds about us, another bit of rock, a yodel from Perren, and we were on the summit—a flat space a few feet around, a few stones, a little cairn, or stone man, some more bottles, and nothing to see. So we looked at one another. It was hailing hard, and our hair, eyebrows, and whiskers were coated with ice. F—— had become a Father Christmas; every one of Perren's wrinkles was outlined in ice. Icicles formed on the brims of our hats and on the tails of our coats; the rope was frozen stiff. And we were 13,700 feet up in the air. We filled a cup with snow, and, pouring wine into it, ate the mass. Perren put my name into the empty bottle. In less than five minutes we were chilled through and through, and we turned about and started down, Perren now being last.

One at a time we came down, our backs to the rocks, each one, even Perren, dropping his ice-ax, all but harpooning those below, for the rocks were now sheathed with ice like glass. The wind fell, and the snow descended in a cloud so heavy that by the time we reached the first couloir not a step that we had cut was to be seen. The long Imboden hacked out a new flight with all his might, but they were of the flimsiest description, and just as Perren, who hung on to the rocks in the rear as long as he could, had warningly said, "You must not slip here," F—— quietly remarked, "My step is breaking." Perren gave a fearful yell; Imboden, who was cutting, drove his ax in, burying the top in the ice. As the rope was almost perfectly taut between all of us save S—— and F——, who were stepping, F—— only slid about a foot, and hung against the slope, while he cut a new step for himself. Had not the rope been taut, as it should be, the papers at the beginning of last September would have been filled with the accounts of another horrible Alpine accident. As it was, although we came down much more slowly than we went up, we gradually reached the flat, smooth rock where S—— and F——, who had been leading by turns since Imboden had stopped his step-cutting, became perfectly blind with the snow beating in their eyes and filling up their glasses. Perren gave Imboden a longer bit of the rope, we let him out over the face of the rock, and he disappeared into space, the rope swaying about wildly two or three seconds. The ice-axes in a bundle next went down, F—— and S—— also disappeared, and it was my turn. I looked over one side before I started into the clouds; the rocks seemed simply to stick up right into the air. Perren asked if I was ready; he began to pay out the rope slowly, and, helplessly claw-

ing at the icy face with my fingers and toes, I was let down.

Each one struggled on down the rocks, and at last, with a howl and a rush, we came out upon the top of the arête, and tore down what we had so painfully toiled up in the morning. When we came to the next mass of rocks the whole upper world, which had been perfectly quiet save for the noise we made, suddenly became filled with a sound not unlike that made by a telegraph-wire in a wind. The heads of our ice-axes had a curious feeling, and in a minute every one of us knew that we were in the middle of a thunder-cloud, and were acting as lightning-conductors. Though we all felt this to be rather a risky position, we hurried on, and presently the sound ceased, and we knew that we had come out of the cloud. Out again, on to another snow-slope, and there it was as black as night. We walked ahead until we found ourselves going uphill; as we could not see from one end of the rope to the other, we turned back, and crossed a fairly level plain. The plain got steeper, the guides began to talk in *patois*; the plain curved rapidly over, and Imboden suddenly yelled wildly, "Halt!" Right in front of him the vapor broke away, and we now saw that we were traveling rapidly towards the edge of a mighty precipice. Perren turned straight about, and we slowly climbed the long stairway we had so quickly descended. When, after nearly an hour of climbing, we reached the top, every one sat down, for the moment thoroughly done. Some Alpinists may say that we had bad guides, but the fog was as thick as a London one, and I do not see that they were to blame for missing the track, as it was buried under nearly half a foot of snow. But we found our track at last, and passed on to our shelter in the morning. We tore on as fast as we could, sometimes breaking through nearly to our waists, and clapping our hands and rubbing our ears to keep up some

sort of circulation, for it was bitterly cold. Once or twice, despite all Imboden's sounding with the pole of his ax, one of us would break through into a hidden crevasse; but we were pulled out by the tightening of the rope, though the wind was almost knocked out of us by the process. The snow soon got hard again, and we tramped silently along. At our shelter the rope came off, and the climbing was over. We had been about ten hours on the peak.

The rest of the provisions were eaten, and two or three pipes smoked, while we waited vainly to see if the drizzle which had now set in would stop. Instead, it turned to heavy rain, and in this we scrambled down our mountain of boulders, and at last came out on a sort of spongy hillside, where one could run without thinking about every step. The path seemed endless, but at last Perren took to the glacier and, slipping, sliding, running, every man for himself, we crossed it, and gained the little hut just beyond, where, soaking as we were, the guides insisted on stopping. Then on down the path, now turned into a water-course, stumbling over stones, tripping over roots, and sometimes almost falling in the darkness. Perren came to the lantern, and found a dry match somewhere about him; and at last, around one of the flanks of the mountain, the lights of Zermatt came in sight away below us, though they never seemed to get nearer, and the mountain buttresses never seemed to come to an end, until, when we were thoroughly sick of it, the lights of the Riffelalp showed through the trees. Into the hall we passed, leaving a trail of water and mud behind us, and here we aroused enough interest for one of the real Alpinists to ask where we had been. As I turned away I heard him say to another over his coffee, "What, to-day? I don't believe it."

And the worst of it was that the men who were below us on the Strahlhorn said that they had hardly been in a cloud!

Joseph Pennell.

IN SHADOW.

FROM the town where I was bred
I have been so long away,
In its streets I met to-day
Both the living and the dead.

Though the upland paths we trod,
Long ago, are overgrown,
When to-day I walked alone
Your step sounded on the sod.

In still valleys I walked through,
My heart's throbbing deafened me:
Suddenly I seemed to see
Jealous Death's dim shape of you.

Long I climbed the eastern hill
Till the woods lay at my feet;
In my heart your own heart beat,
On my hand your touch lay still.

Nothing there had changed; and there,
Through that hushed and shadowed place,
I passed, meeting face to face
My old fancies everywhere.

L. Frank Tooker.

A GIRL WITHOUT SENTIMENT.

“BSERVE the dotted quarter notes, and mark the time carefully. Allready! One—two—three, one—two—sing!”

As the choir-leader began this exordium, the wheezy bellows was heard, packing the wind-chest against the time of need, and at the word of command organ and voices took up the strain of melody which in the morrow's service should lift heavenward the aspirations of devout, church-going hearts.

The choir of the Battleford Orthodox Church was led by Jared Ames, the teacher of the village high school. The voices, though in the main harmonious, were the untrained voices of a country chorus, to which almost any recruit is welcome without being required to pass a strict civil-service examination.

As the rehearsal proceeded the words sung were those of devotion, but some of the singers seemed not fully charged with devotional feeling. The leading basso cast a resentful look over his note-book at the chorister. Amateur sportsman, as well as amateur musician, he had that afternoon umpired a match game of ball, and, as autocrats soon come to brook no interference, a mild criticism from Mr. Ames had roused his ire. The prima donna, whose full, expressionless voice now waked the echoes in the distant corners of the ark-like auditorium, had just before been confiding to the contraltos near her some extremely amusing bit of gossip, and the laughter had not yet died from her jolly face as the rout of voices turned the corner of the third line and came in upon the homestretch in tolerably good form.

As the verse concluded, Tom Tanner, or “Tom Tenor,” as he was usually called, leaned over to the yonkers in the bass row in front of him, and resumed his oracular remarks where they had been broken off.

“When you sing tenor,” said Tom, “the better you sing the more of a discord it seems to you, and you think you are ’way off the key. That’s why it’s so hard a part to sing.”

Most country boys who are musically inclined take naturally to the bass part when their voices “change,” and, until they have been encouraged to attempt it, tenor is to them an object of awe. The Battleford boys had many a time looked admiringly upon Tom as agony followed contortion in his facial expression, and as his eyes bulged with

his effort to reach the high notes of his score. Tom enjoyed at that day a local reputation as a singer, and by his present auditors his astonishing statement, being the dictum of an expert, was accepted as fact.

Richard Temple, from the bass row, acknowledged the confidence of the tenor oracle by a quick, backward look towards Tom's face. His glance in the circling return to his music-book paused to focus for an instant in the direction of the front soprano row, where gleamed in partial profile the bright faces of the girls who supported the *première*.

Had you followed his gaze, a bright bit of color might have held your eye; red cheeks and red-gold curls under a natty hat—a milliner's “creation” in blue. Doubtless you would have thought that it must have been this bright-hued flower that young Temple's light-winged glance had hovered over. But as the hymn rose again, had your ear been adept at following each strand of the chord of harmony, you might have forgotten Bell Creighton's curls and pink cheeks in listening to the voice of her nearest neighbor. Not powerful, nor fully trained, but clear and pure as the soul of a saint was the voice of Winifred Barton, as against the blank wall of the first soprano's full song her finer notes stood in relief like the graceful vine of a sweetbrier rose.

Wholly unconscious of auditors or observers was the possessor of the voice. Her hat lay beside her, and her well-rounded head was crowned with hair warm brown in color, and wavy and abundant. So intent was she upon the music that from the rear seats it was not easy to catch a view of her face, but a chance turn might have shown you a well-cut profile, a forehead neither high nor low, a piquant nose,—hardly straight enough for a Grecian model,—a mouth firm but delicate, the lips not too thin for good nature.

Here eyes were brown, and deep, and honest—good eyes to see with, and pleasant to look into. Failing to see them, you would have missed the chief charm of a most attractive face.

Just now the eyes could be seen to best advantage by one who stood, as Mr. Ames did, leaning against the gallery rail and facing the singers. Possibly the young leader appreciated his ground of vantage, being a person of taste in the matter of eyes and other feminine attractions.

As the choir was dismissed there was the usual hurry and scurry incident to departure. Some of the more stolid of the young men sauntered unconcernedly out of the gallery and down the stairs, each sure that he would a moment later meet at the outer door the one girl whom he considered his peculiar property, and would thence proceed in orderly fashion with the damsel tucked under his arm.

Not so philosophical was Richard Temple. The blue eyes of pretty Bell Creighton had flashed saucily at him as the rehearsal closed, and his cheeks had flushed at the challenge, which implied that the village beauty would not say nay were he to proffer his escort. Why not thankfully take the rose he might most surely win, rather than seek the violet which might be refused him?

Winifred Barton's usual escort had not appeared, a cousin with whom she had had some sort of convenient compact. The flush in Richard's brown cheeks deepened as he noted Jim Barton's absence and realized how favorable was the opportunity for a long-meditated venture. He had long admired Winifred Barton, and had come to know her well, but he had never acted as her escort, and, to the shy, conscious youth, to ask for the privilege was a bold undertaking.

A young soldier advancing into the open, for the first time under the enemy's guns, might feel the same curious tremor and panic which Richard felt as he stood at the great doorway while the stream of jolly, chattering girls eddied round the turn, rippled down the gallery stairs, and advanced across the vestibule. Winifred was between two girl friends. Dare Richard attempt to capture a prize so safely convoyed and defended? He could feel the thumping of his heart as the trio approached; and he stood hesitant, wishing that the two too many were anywhere but there. And then his delay had almost cost him dear, for suddenly from the other side he heard the voice of Mr. Ames.

"Will Miss Barton allow me the pleasure?" Here indeed was a "discourager of hesitancy," and Richard's was gone in an instant.

How he dared he hardly knew, but his hand just touched her arm, and he had hastily said, "Miss Winifred!" before the easy flow of the teacher's request had reached its conclusion. Winifred had turned with some surprise to see the professor's handsome face; then in the same instant she had felt the slight touch upon her arm, and, turning towards it, had heard her name so eagerly uttered, and had met a pair of appealing gray eyes.

"Thank you, Mr. Ames; will you kindly excuse me to-night?" she said, with a grave sweetness which took the sting from her refusal.

To Richard Temple's excited imagination

she seemed almost too rare and sweet for human fellowship, as, without a word, she put an ungloved hand within his arm, and they went down the granite steps into the moonlit summer night.

He could have been content to walk silent, but they talked, as young people will, of a thousand trivial things—the moon, the weather, the midday heat which had been, the high-school reception which was to be. As they passed his boarding-place, Richard relieved himself of the burden of his music-books and a volume of "Addison on the Law of Contracts," by depositing them under an ever-green tree, until he should return. Thence, by the way, an early passer abstracted them the next morning, and through the medium of the waste-paper man they found their way back to the paper-mill to be ground over.

Down another street Richard and Winifred passed, chatting of the informal party which both had attended Tuesday night. Light clouds flecked the sky, the moon now feigning to hide behind their convenient curtain, now brazenly observant, ever curious to watch the ways of young people. As the wise old moon's face peered cautiously out, the little white hand gleamed on Richard's arm. The sight of it was not needed to assure the young man of its presence, for he could not become more conscious of it than he had every moment been, as he felt its light weight and had drawn with timid pressure her arm against his heart. Some of its traditional witchery must have been in the moon's beams, for at length, as they walked and talked, Richard's disengaged right hand stole over in the most casual fashion, and the moon must have lost sight of the white hand on account of a brown one which intervened. Not for long, however. A moment the brown hand rested there undisturbed, and then the smaller hand was quietly withdrawn and a voice said hesitatingly, but with gathering resolution:

"You ought not to do that, Richard."

"Why not?"

"Because—it's—flirting."

The curious moon, finding a convenient rift in the fleecy cloud-curtain, was again peering through. The face it saw looking up at Richard was sweet and girlish, but it was a very determined little face, and the brown eyes in the dim light were very grave. Richard flushed, and turned the talk into its former inconsequent channels, but he felt the reproof and chafed under the imputation. Whatever had been his boldness, whatever his indiscretion, he believed himself guiltless of any intention of flirting; but he clearly saw that he could not justify himself without making a confession which he felt would be premature.

Through all the random talk which followed

a little constraint had fallen upon their comradeship. As for Richard, the strife raged hot within him. How could he bear to be considered a flirt by Winifred Barton? For weeks he had been tortured by anxiety lest, before he should have won her love or even have become able to avow his own, some more fortunate fellow should seize the prize. What fearful odds would lie against him were his cause to be still further handicapped by his being adjudged a common trifler, and on what seemed the best of proof!

At last he could refrain no longer.

"What do you call flirting, Miss Winifred?" he said.

She was at some loss to define what seemed so obvious.

"Why—*flirting*. Doing what you did—paying a girl such attentions which mean nothing."

"If they mean nothing," said Richard, tentatively, "what's the harm?"

The girl's brown eyes flashed as they looked up again.

"I choose to accept no such attentions, sir, even were there no harm," she said. "Luckily, I'm not one of the sentimental sort, but some poor girl may come to lose and break her foolish heart through such meaningless attentions, while, fancy-free, you go your thoughtless way."

Her personal resentment had become merged in the championship of her sex.

In the early banter of their walk her eyes and voice, laughing in merry unison, had charmed him with their witchery. If the girlish features had lacked a line of strength, his lover eyes had not taken note of it; but when now he stole a look at the womanly little face, flushed and indignant, the dignity of a gracious womanhood had transfigured it. He could not repress a humorous expression of his admiration.

"I ought to be abashed," he said, "but I can't look down. You are too pretty."

He went no further, for her hand was suddenly pulled from his arm, and, turning, she faced him. So he was just a trifler, and her kindness had been thrown away. Her eyes were ablaze, and one trimly shod foot struck the pavement with a decisive little stamp.

"Mr. Temple," she said, "I will excuse you from further attendance. I prefer to go on alone."

Richard's head was bare in an instant; his face had turned suddenly grave and earnest. His gray eyes looked frankly into hers, where anger and trouble were blent. He put out his hand in deprecation and manly apology.

"Forgive me, Miss Barton, if I seemed rude; I care for no friendship if I lose yours."

He seemed so like his old, deferential self, and so truly penitent, that she could not refuse his propitiation, and they walked on.

"It was because I, too, have valued our friendship," Winifred said, "that I resented your change of manner. You have seemed so different from most boys, and your manner with ladies has been so deferential and—nice—that to have you take to flirting and making foolish speeches was too bad. I could have cried with vexation."

And, in fact, the brown eyes were full as she spoke, like those of a grieving child. How could she know that her words would compel him to justify himself?

"It is almost worth having been misunderstood," he said, "to know that you cared."

"Friends are not so plenty," she rejoined, "that one can give them up without caring. I always liked you even before I knew you, you seemed so manly and so free from sentimental folly. I suppose I hate sentiment because I have n't a bit myself."

Richard, with a touch of masculine effrontery, took advantage of her evident compunction.

"Was it," he said in raillery, "to balance the over-credit of your former good opinion, that you were unfair to me just now?"

"Wh-what?" she stammered. "I do not understand you."

"Was it quite fair, Miss Barton, to condemn a friend so summarily?"

Her eyes were round with astonishment. Had she not been magnanimity itself in her forgiveness?

"Was I not justified?" she cried.

"If I had been what you thought me, yes; If I paid such attentions to other girls, yes; Oh," he cried impetuously, "I can't bear to have you think I was flirting. Instead of meaning nothing, it meant that I coveted even the touch of your hand! O Winifred, do you not see that to me you are the one woman in all the world and that with all my heart I love you?"

As he uttered the avowal of his love he felt a slight tremor in the arm within his own, and with eager eyes searching her face he read there, even in the dim light, pain and dismay.

"O Richard!" she said, "I wish—oh, I ought to have prevented this!"

"I have frightened you," he said remorsefully. "I ought to have been less precipitate."

They had reached the Barton homestead, and Winifred's hand was upon the gate.

"I thought," she said, "that I could help you by my friendship, and it has only led you into trouble. And I—I wanted a friend." She looked at him ruefully. "I did n't want a lover."

"But don't reject me out of hand," he said. "I have been too quick. Give me time to win your love—or—let me be just what you say—the friend you wanted. You shall be free; and if you find you never want a lover—" his manly voice trembled a little as he corrected himself—"if you find that you never want me for a lover—even then—even then—I shall thank God always that I knew you and loved you."

Winifred Barton had declared herself to be a girl without sentiment. Young as she was, it had been her fortune, good or bad it matters not to say, to hear once before words of love spoken to her, but she had had no doubt or question of her answer, and had utterly rejected and refused to listen. But as Richard Temple had made his appeal, she had been conscious of a certain indefinable impression produced upon her. She said afterward that it seemed as if her heart had been an empty room into which his words had been spoken, and their vibrant echo there had thrilled her, even though she felt that she could not accept his love. The brown eyes were full of compassion and motherly pity for this youth whom she must reject. He was a manly fellow too: she could not lightly cast away the love of such a friend.

"I wish I could have answered as you wished," she said; "I fear delay can only make it harder for us both, and if I defer my final answer as you ask, it is not that I can give you ground for any hope. I know that you have offered me a true man's love. Believe me, it makes me proud,"—a little exultant thrill would rise in her heart,—"*but it makes me very humble too. O my friend, do not grieve! My love is not worth a heartache. Good night!*"

He had silently clasped her extended hand, and she had traversed the short walk, and was already part way up the steps, when he recovered his voice. The closing of the door after her, such was his fancy, would bar out his hope forever.

"Winifred!"

She turned upon the porch and looked down at him, her white draperies fluttering in the fitful evening breeze.

"The night is so pleasant," he said, "won't you walk down to the park bridge? I will say no more of this. You can trust me."

What a pretty, white-robed casuist it was that he looked up to, as she considered the propriety of again putting herself in the way of this young man's appealing influence. She felt, almost guiltily, that even in deferring his rejection she had abandoned the outwork of her defenses, but she was sure that the citadel itself was impregnable. Even while she looked

down upon him like a benignant spirit, she fortified her resolution anew.

But how miserable he seemed! If her walking with him could soften her refusal of his love, ought she to deny him that small comfort? Surely it was a duty to be kind to the sorrowful. She would go, but she would be, oh, so very careful that he should understand that she could be only his friend.

So sternly practical was the maid, so absolutely devoid of sentiment, that her gentle heart almost ached with the intensity of her resolve and purpose to be to his solitary young manhood the best friend that youth ever had.

As they walked down the shaded street they talked of many things, but never of what had just passed between them. Appropriate to some chance allusion, Richard had briefly recounted some adventure of his boyhood, and Winifred, unconsciously fascinated by that which pertained to his former personality, had questioned him in regard to the life in that borderland hill country of New Hampshire in which his boyhood had been spent. Led on by her questions to recount his youthful experiences, they had given the action to dramatic pictures with grand mountains for their background, those mountains whose silent reserves had strengthened in him the self-reliance and boyish independence that had first commended him to Winifred's appreciation.

Bits of hardy adventure and mountain craft he told her simply, wondering at her interest in such uneventful tales. The girl listened and questioned with eager zest. This revelation of a phase of life hitherto unknown came to her like a cool breeze from off his native hills. The world seemed to have grown wider; her breath came with deeper inspirations. In thought she saw the summer snow upon the mountain top, the green mazes of the trackless woods, the unaffected touch of nature in the simple village ways. She caught glimpses, too, of the home life in that country parsonage, unconventional, pure, and generous.

When she asked him about his parents, he said: "My father came of an old Bay State family who intended him for the law, but he chose the ministry. He is the most unselfish man I ever knew, and the truest gentleman."

She cast a sweet side glance at him as she thought of the old adage, "Like father, like son."

"After graduating at Andover," Richard continued, "to qualify himself further, father engaged in city mission work in Boston. Singularly, it was in that work that he met my mother, a Beacon street girl, daughter of a great merchant. You see charitable work is not so very new a fad for society girls after all. Ill-sorted as their stations seemed, they

fell in love, with prospects of next to nothing a year. Mother's family were furious. They had protested against her mission work; they drew the line at marrying a poor minister. She must choose between him and them.

"How disgraceful!" said Winifred, flushing.

"She did choose. They were married in the little mission chapel, and moved to New Hampshire, where father had been settled over a country parish; and there we children—three of us—were born. Will is at Yale, and Betty has just entered Wellesley."

He took a little photograph-case from his pocket. They had come to where the street crossed Tumbledown Brook by an open bridge of single span. Richard opened the case. The moonlight fell unobstructed, but the small pictures showed but dimly.

"I wish it was lighter," he said, fumbling in his vest pocket. "Here is a match, luckily."

He scratched the match upon the guard-rail of the bridge, and, by its momentary flash and glare, the girl bent over the miniatures.

"Here are father and mother," said Richard.

"What good faces, and how sweet your mother is," she said.

"Mother was very pretty when a girl, they say. If I had another match, I could have shown you Betty and Will. We are very proud of our collegians. They will make their mark yet, for they are both bright and both ambitious. They've been such a comfort to father and mother."

She glanced at him archly, adding, "While the elder son must have been a continual disappointment."

He smiled appreciatively. "How good they are," he said, "not to twit me with it."

From the wooded heights on the left the brook descended, trickling from shelfy ledges and gurgling over the stones in its steep and rocky bed. Densely shaded, its course was for the most part unseen, but here and there a ripple glinted and gleamed in a patch of moonlight. Close to the bridge, indeed, a level shallow spread, through which a lowly side-track ran, for the convenience of watering horses, after the primitive fashion. Under the bridge the water ran smooth and still, as if abashed by the bridge's frowning shadow, but once beyond, and freed from restraint, it sped away, leaping and frisking along its wild course through Battleford Park, the narrow but pretty bit of wooded sward which slopes here from the street to the river.

Here on another July night more than a century ago, in the old French and Indian War, occurred the fight which gives name to the town. From where rises that slender shaft of granite, dimly seen through the trees, the wily redskins opened their deadly fusillade; and the ford,

whose level reach now glimmers white and still beneath the moon, answered angrily then to the patter of leaden hail, and was streaked with the red of patriot blood. That was long years ago, but public spirit had raised this monolith as a lasting memorial of the fight.

Village tales had it that belated travelers, by night, along this way, had sometimes seen, upon the anniversary of the battle, the shadowy reënactment of the tragedy in ghostly pantomime of surprise, conflict, and battle-smoke. However that may have been, the shaded park was a favorite resort on warm afternoons, when the wood might be filled with merry children, and the benches occupied by mothers knitting, or by white-capped nurse-maids and their infant wards. In the evening it was usually deserted, and so far was it from the center of the town, which had clustered about the factories at the falls farther up, that the bridge had few passers at this hour.

As Richard and Winifred leaned upon the low parapet the only sounds beside their own voices were the babble of the brook and the incessant disputation of the katydids in the maple trees.

There had been Bartons in the old fight, so Winifred proudly said, as she told the story of the ambush, and the cruel attack which stubborn courage had at length repelled. She spoke in a hushed voice of the tales of ghostly reappearance, and he laughed at mankind's proneness to superstition, gently bantering her upon her own respect for the old traditions.

"My grandfather saw the vision once," said the girl, quietly, "and his grandfather was in the fight."

"You are plainly in the line of succession, then," said Richard, "and if this were one of the muster-nights, your eyes could not fail to see the wonder; but mine are alien,"—he turned their laughing gaze upon her fondly,— "and perhaps too unbelieving." Though he had laughed, she seemed to him only the gentler and more womanly that she had no jest for the supernatural.

In its sweet unfolding her girlhood had not been impoverished by being kept from the dear old fairy lore. Nymph and brownie, fay and water-sprite, had lived in her childish fancy. Old tales of Araby, which had delighted the ears of Haroun the Just, had done their part, and so had the weird Bible silhouette of the Witch of Endor, and even reverent thoughts of the risen Christ.

These all had stimulated her imagination, and wakened the poetry of her nature, in spite of the material environment of a factory town.

And yet she liked Richard none the less that, child though he was of the mysterious mountains, he did not believe in ghosts.

Dreamily she looked out upon the park. "How pretty," she said, "the flecks of moonlight are upon the grass."

"They remind me," said Richard, "of Wiles's picture, 'Noon,' which I saw at one of the New York exhibitions. It was just a row of roughly drawn house fronts, and a pavement shaded by bordering trees. But one could feel the sultry noontide; the shade was palpable reality; while the vivid patches of sunlight on the paving fairly glowed and flickered before one's eyes. Walking close to see how such effects of light and shade could have been produced, I found that the sunlight was—what do you think?—nothing but splashes of white, as flat as if they had been put on by a house-painter!"

"But how could such simple strokes produce such realistic effects?"

"Ah, that's the art! Rightly to put together the simple strokes and the flat white splashes—is n't that the secret of all genius? Just think of poetry and literature: all the words are in the dictionary,—free to all,—but only—"

His preaching came to a sudden close. Winifred had laid a hand upon one of his, which grasped the bridge-rail. Looking down, he smiled whimsically at this reversal of his ill-received attention, and resisted an impulse to remind his companion that this was sometimes called flirting. As he turned instead for explanation, the girl was mutely pointing along the glade towards the ford.

Dimly seen across the river, where shallow and shore met, vaporous forms, white and indistinct, seemed entering the stream. The eyes of the watchers upon the bridge grew large and fixed. To the minds of both the old tales recurred. Were they true, then? Without taking her gaze from the river, Winifred moved closer to Richard's side. Not an audible splash in the stream such as living waders make, not a ripple disturbed its surface, yet steadily on, on, came the shadowy vanguard into midstream, and, indistinct behind, followed a straggling host.

In the awful hush louder sounded the tinnabulation of the brook, shriller the harsh notes of the katydid. How the mind grasped at their tangible resonance, a welcome link to the world of the living, a lifeline of safety from the undertow of the supernatural.

The watching eyes were strained more clearly to define the lambent outlines; every alert sense was at its utmost tension. Suddenly the column wavered, as if their unsubstantial forms were shaken by the rising breeze. Did not one seem to stagger and to fall? And there another? Was that a puff of rifle-smoke? The scene grew cloudy and indistinct, as if with spreading smoke-wreaths. Suddenly, like the

final signal of a weird transformation scene, an unearthly cry rent the noisy quiet with reverberant clangor. Winifred's overwrought intensity found relief in a little startled scream. With great rustle of leaves and crashing of small branches, a great bird disengaged himself heavily from his leafy covert near the monument, and flapped his way over their heads into the denser woods beyond.

Their eyes had followed the feathered brawler until his disappearance in the wood; when then they turned again towards the spectacle at the ford, neither ghostly veterans nor river could be seen. Whether apparitional battle-smoke or sublunary fog, a soft white curtain had shut out the shore from sight, and with deliberate insistence was rolling up the slope through the trees.

The air had grown chill and damp, and Richard suddenly awoke to his responsibility.

"I am not taking good care of you," he said.

Winifred suffered him to draw her light wrap more tightly about her. As she lifted her face to pin the soft folds at her throat her eyes burned clear and bright. Her bearing was that of a queen. It was not that she triumphed in the proof of the existence of the supernatural. She exulted that to her eyes had come this experience. She was a Barton, and Richard had said truer than he thought. She *had* been in the line of succession. She *had* seen; and this young man—was it not because of his love for her that he too should have seen the vision? As they turned toward, she said:

"It vexes me that just because I am a woman I should cry out as I did. You do not think I was afraid?" She looked up at him almost defiantly, but his demeanor reassured her. "I think I should not have been afraid even if I had been alone," she added; and then, more gently, "and yet I was glad that you were with me."

Richard drew her arm closer. "I don't wonder that you were startled. One is excusable for having excited nerves after such a sight."

"Then you did see it, Richard?"

"Yes." His own mind was in perplexity. Against his will he had seemed to see what his reason said was impossible. "But what it was that we saw I am not sure. Perhaps it was only the rising fog. I can not fully explain it so, but I think that may be the explanation."

"At the last," said the girl, "it did look like a mist, but before that how plain it was, even in its indistinctness—the travel-worn men, the wading passage, the waver of surprised attack, the answering volley." Her face was aglow. "I never saw a battle, but I think it must have happened so." To her the supernatural seemed the simplest explanation. "And remember,"

she added, "that others have seen the same thing before."

"Yes," replied Richard, gently; "whatever others saw, we must have seen. It may be that with just the right combination of circumstances—wind and water and air just right—the fog may first form and rise in such separate flamelike shapes. I should want to make some experiments before I testified as to what it was that we saw."

"I'll wait for your report," she said. She was not unwilling to put the subject aside. Although strangely wrought upon by the incident at the bridge, her mind had held tenaciously through all to a line of inquiry she purposed to resume. A thought had come to her as they had talked of his family and home affairs which she desired to have explained.

"You are to be a lawyer, Richard, are you not?" she now said. "I have heard that you were studying law out of hours at the factory."

"I *am* a lawyer," he answered, with mock gravity, "and have been for nearly three whole days—passed my examination on Thursday."

She had planned her campaign.

"I should have thought that, choosing a profession, you would have gone to college. It seems to have been the family bent, too."

Her furtive scrutiny detected the shade which crossed his face, but he answered bravely:

"I should have been glad of a college course, but it did not seem best."

"Your father seems to have been able to send the others," she rejoined relentlessly; "why did he not insist on your going?"

"Country parishes don't pay large salaries as a rule," he said patiently; "and besides,—I did not tell you,—when I was ten years old my grandfather—the Boston merchant, you know—failed in business. He had a son, my uncle, a harum-scarum fellow, always in some scrape or other. To keep him from disgrace, after some especial escapade, father indorsed his note for a large sum. The note was not paid, of course, and the holder looked to father. You can imagine how much money a country minister had to pay with. Father had only to say that he had no money, as was true, and there would have been no property on which the creditor could have levied to collect the debt. But that was not father's way. He said he would pay as fast as he could, and he has paid it, little by little, though it has been a long pull and a hard one."

"He must have been heavily taxed to raise so much extra money."

"Oh, he has been. But never a complaint! Mother has economized and managed, and Will and Betty have figured expenses close. It has kept them all poor."

Winifred faced him triumphantly. Richard,

with surprise, beheld her cheeks aflame and her eyes like stars.

"For how much sagacity, sir," she exclaimed, "do you give me credit? Who else has been kept poor, to eke out a country minister's salary, to pay other people's debts, and to keep your brother and sister at college? And you would not tell me about your share in the work; but don't I see what you have been doing?—you aggravating—unselfish—noble fellow!"

She had seized his hand in both of hers, and if the brown eyes had flashed as she turned towards him, they were suffused now and full of a tender light. Suddenly her clasp relaxed, and, dropping the hand she had held, she turned demurely to walk on again, her hand once more upon his arm.

"I came near being sentimental," she said, "over your—*faults*!"

Richard had blushed as his self-sacrifice had been brought home to him; now he said:

"Praise from you is very sweet, but I've done no great thing. Father is the true hero. How could I do less—who have my life before me?"

She looked at him curiously.

"You're a funny boy," she exclaimed. "Most young men claim great credit if they even pay their own way without help from their fathers."

Their eyes met. The girl's were full of a new and shy proprietorship in all his virtues.

"O Richard!" she said impulsively. Her eyes fell before his scrutiny as she continued, "It must seem very fickle in me, but I think I need wait no longer to know my own mind. I don't understand it, but it seems to me now as if I did love you, and had always loved you, even in those days of your boyhood, before I had ever even seen you." She was looking down now, as she uttered this confession, but she heard his quick "Thank God!" and she felt, rather than saw, his eager impulse as he turned towards her as if to clasp her to his heart.

She put up her free hand with a slight gesture of dissent. The impulses of her heart had indeed risen like a flood and broken bound, but already her mind was full of reactionary conflict.

After all her calm resolves, what had she done? Had she not surrendered the fortress without even waiting for the expiration of the truce? What had become of all those rules of prudent and judicial reserve which, in the meditation of her maidenhood, she had firmly decreed should govern her behavior when the "prince" should really come, and which should decide her consideration of his proposals when they should have been formally made?

Something like a pang of dismay seized her. Were her theories going all to pieces? And was she to prove as weakly sentimental as other engaged girls, whose folly had been her horror?

"But, Richard," she said, "people are sometimes mistaken, and discover after a time that they do not love each other after all. I think we ought to be very, very sure. And it will be best that no one should know yet that we are engaged."

"For how long, do you mean?"

"Oh, for some time. I can't tell. Maybe six months, maybe longer."

A cloud settled upon the young man's face.

"But, Winifred, I am afraid your plan is not practicable. Awkward mistakes will occur, and, besides, people will find us out, we shall be so much together."

"Oh, but we must n't be," she answered; "we must be very careful about that. It will be best that you should not come often to see me, and when we are in company together we must not look at each other, nor pay each other any attention."

Richard's heart felt like a weight in his breast. In their sauntering they had come round again to the Bartons' house, and stood talking. Winifred's quiet voice went on gravely:

"There is a deal of foolishness, too, that goes on between engaged people in the way of—kissing—and showing their affection. I could n't do it; I'm not demonstrative—and I don't come of a kissing family either. We girls shake hands, but we almost never kiss each other. When I came home from New York this spring father kissed me, but Sally only shook hands, while Meg simply said, 'Well, Winny, home again? Had a good time?'"

Richard looked ruefully at the girl across the gate now between them. Over his first exultant pride of conquest had come an undefined gloom of disappointment. He did not understand her. In vague search for precedent, his mind reverted to the heroines of romances he had read. Not a girl of them all had been so contradictory, not one had talked like this,

nor been such a model of Platonic propriety. If she maintained these reserves, what should he do? He might as well be engaged to her grandmother. How utterly unreasonable it all was! If, now, Winifred had been homely, he thought in his resentment of fate, he would not have cared so much.

The girl's face was upturned, so that the moon lighted up the fluffy hair about her white forehead. The clear deeps of the brown eyes looked calmly into his troubled, wistful face. How pretty she was! If he might win her for his own, a lover might serve a lifetime for the right to kiss her.

Through the moody mists of his discontent, the thought flashed a ray of light and warmth to his heart.

He could wait. And proudly he thought that he would never claim the right till she had given it to him freely.

Winifred had not fully read his thoughts, but a wave of womanly intuition seemed to sweep across her face as she perceived the dim trouble in his eyes. In vain her resolution summoned her attention to her code, so carefully formulated, so prudently adopted. Even now, in rapid retrospect, she could find no fault with her system. The law was good. But here, she reasoned, was an exigency for which her rules had not provided. This young man was in great trouble. She discovered in herself a curious impulse to proffer him comfort.

Surely, when it was to relieve the distress of another, the relaxation of her rule could not count against her as a breach of self-discipline.

Suddenly, standing upon tiptoe, and reaching forward across the picketed gate, she clasped his face in both her hands, and with a quick movement drew him towards her.

"You dear boy!" she said with tender eagerness.

Before he had recovered from the shock of his surprise she had kissed him full upon his lips, and with a quick "Good night!" had turned, and, flashing up the steps, had disappeared from his sight.

HAROUN THE CALIPH, AND OTHERS.

I.

HAROUN the Caliph, walking by night in Bagdad, saw one standing without the great closed doors of the bazar of the gold-workers with naught upon him but his frail khamees, and it was cold. "Whose son art thou?" said the Caliph.

"I am a merchant of amulets," returned the man. "I am starving, and I sold my coverings one by one, as a tree in autumn letteth a fierce wind have its leaves, rather than fall a heap and die. I am a child of misery from my birth."

Then said the Caliph, "Take this, eat, drink, and be merry," and he gave the great ruby that men call the "Eye of Love," and went on his way in peace. The next night came again Haroun, and, finding the merchant of amulets about to die for need of food, cried, "Alas! why did not you sell my jewel, and live?"

"Then answered the dying man: "Some said it was false, some said it was stolen, and none would buy. It is as when Allah gives a too great gift of soul to a lowly man—it getteth him only the food of mockery. But now I have the amulet called death, and I shall no more hunger or care."

Upon this the man died, and the Caliph took the "Eye of Love" from the clutch of death and went his way hand in hand with thought.

II.

A DERVISH, lazy and hungry, met a Sufi poet, and he begged of him alms; but the son of songs and the father of sayings said, "I have only the wisdom of God, the advice of the dead, and the songs of men."

"Will a song fill my paunch?" cried the other. To whom made answer the poet: "Sing a song of sixpence, and that will fill your pocket with rye; and scatter the rye, and that will fetch silly blackbirds to make for you a pie—and any girl will cook it."

"Thanks," said the man.

III.

A SUFI DERVISH, the father of sorrow and the son of grief, sat at night by the sea. The waves like sleek serpents writhed at his feet,

and hissed forth, "Come, let us strangle thee and thy griefs, and make an end."

"Ah, welcome death!" he answered. Then a greater billow, rolling in, covered him, and went back, and the man was very wet. Thereupon he went home and dried his clothes.

IV.

AT noon prayer, on a Friday, in Ramazan, the Caliph looked from the Maksurah and saw the Khateb exhorting the many who were poor or sad by reason of death, and who daily went to and fro from the house of weeping to the grave of loss, and found neither peace in one nor forgetfulness in the other. At last, seeing that none shed their sorrows or sought comfort, but still slept on the bed of grief and watered the pillows of lamentation, the Khateb descended from his seat, and sat himself by the fountain in the courtyard, and one by one repeated the Hundred Sacred Names, and murmured "the words light on the tongues of men and heavy in the balance of God." Then came one, a teller of tales, and the son of a teller of tales, and the father of all such as listen to a tale and love it. And as the Khateb murmured and mumbled, the teller of tales lifted his voice to the faithful and said:

"Once in a strange land a king took a city and, meaning to destroy it, bade each dweller therein to carry away with him what most he valued. Some took gold and some food, but one a great sack. Said the king, 'What is that you carry?' And the man replied, 'It is full of laughter.' To him returned the king, 'You are wise. I have forgotten how to laugh. Divide with me.' Whereon said the man, 'Allah teacheth charity. Take what you will.' And the king took, and grew gay with the wine of mirth, and said, 'This shall ransom the city.' As for him who bore the sack, he made him lord over all who cannot smile."

Such as heard this story were moved to merriment and forgot to weep. But the saint cried, "When death taketh thy city, canst thou carry away a sack of laughter?"

"I know not," said the teller of tales; "Allah, who maketh all, is maker of mirth as of grief. Some say, 'Who wins, laughs'; but I, 'Who laughs, wins.' Therefore let us fill our mule bags with laughter and our camel bags with mirth, and wait for the king to destroy this city of earth."

V.

THE dead of a graveyard sat in their tombs, for now it was the feast of the Melad, when the dead are as alive and may walk the earth for a night, and neither the angel Moonkir questions, nor the angel Nekeer forbids.

But many missed their bones, and wailed with vain rattle of speech, till one, which was a miser, with dry laughter spake: "What need have I to walk? Here be bones to sell." Then a woman gave for a leg bone a ring, and another a fillet of gold for a hand; and thus there was soon left of him only a skull, and to that skull some treasures. These others stumbled away rejoicing, and as the muezzin sounded the first sunrise call to prayer clattered into their graves. But at morning came down from the palms monkeys, and took the miser's skull for a foot-ball. The gold and jewels a beggar found, and the fakir and Sufi speaker of verse, Ferishtah, who saw all this wonder, said, "As the living, so are the dead."

VI.

ONCE, at night, the Caliph, having lost his way, said to one standing where the roads divide, "I have lost my way." Cried the stranger, "How canst thou lose what thou hast never owned?" Then, seeing that he to whom he spake was ill at ease, he added, "Be not dismayed. As is the pig, so is the pearl. Allah hath made both.¹ What one man loses another finds. Thy grandson may be fortunate."

"O dervish, quickener of the soul," said Haroun, "I have found in thy mouth knowledge, but it does not help me to reach home; for, truly, to ask and to get are not as one, and kibobs of rubies fill not the empty belly."

"Thou art wise with such wisdom as is feeble in the knees," cried the stranger. "Thou hast a vain desire to get somewhere. Better is it never to arrive than to sit on the throne of satisfaction. In the bazar of the philosophies are no divans." "Alack," said the Caliph, "I am neither a pig nor a pearl!";² and went his way.

Ferid el din Attar.

THE HOUSE WITH THE CROSS.

IT was a large red brick house on the outskirts of Flemington. Once it had been the dwelling of the Catholic priest; hence the white cross bricked above the doorway. But long ago the Catholic church had

moved down to the river-bank, where the factories streamed flame and smoke into the sky, filth into the river, various products to the metropolis, and wealth and prosperity into the once small village of Flemington. The house stood many years untenanted, save for the rats which reveled in the damp rooms. Sun and frost, wind and rain and snow, worked their will upon it. And in the spacious garden, where the old priest had once culled his simples and dreamed his hours through, the weaker flowers died out, and the stronger ones entered into conflict with the rank weeds. In spring the town children rifled the lush leaves of the lily of the valley. After that the birds had it their own way.

At last came a change. One April morning there walked through Flemington streets a woman from no one knew where. The woman was not tall, but seemed to be, and, in spite of her shabbiness, "had an air about her," female

Flemington said. She had a prematurely withered face, and black eyes which had surely been handsome in days of youth and innocence, but which were not now pleasant to look into. With one child she took up her abode in the priest's house—"The house with the cross" Flemington called it. There the two lived; how, no one knew, and no one cared—except Miss Cynthia Meeker.

Miss Cynthia Meeker was a person of ripe experience. For experience, as all know, ripens less of time than of intensity; and almost from babyhood Miss Meeker had lived, one might say, with her soul in her hand. Now, at the age of eighteen, she had reached the point of actual Flemingtonian, if not churchly, canonization. In her own breast there was no protesting conscience. Happy Miss Meeker! And into the satisfaction of her own attainment she honestly longed to bring the whole world. Come one, come all, poor, rich, young, old, Miss Meeker yearned to gather them about her little feet.

Now in a world where disease and dirt and dishonesty are unpleasantly rampant, such an aspiration has its drawbacks; or so Mrs. Meeker thought and emphatically asserted, Mrs. Meeker being herself uncanonized, and, in a measure, driven to uphold the practical, not to say the worldly, side of affairs. But undaunted in her wanderings among the highways and byways, Miss Cynthia stood one summer day in the priest's garden.

¹ This is a little obscure in the original prose. The Arabic of this date is often difficult.

² This again is obscure.

It was a drowsy place. Upon the rich undergrowth shadow and sunbeam slept in a maze as tangled as that of the unpruned, wanton branches overhead. All sorts of vagabond flowers flaunted their gay heads unabashed. The silence of years of neglect seemed heavy upon the spot. It might have been the garden of the Sleeping Princess, save for the face upturned to Miss Meeker.

A wan little face, and, staring out of it, a pair of unchildishly solemn eyes. Then, with a toss of her elf-locks, the girl sprang to her feet. "What—a—pretty—lady!" she said softly.

Miss Cynthia blushed, dimpled, and felt her heart go out to the child.

"Is your mother at home?" she smilingly said.

"No, ma'am; she's working over at the Marstons' to-day."

"Then I will ask you. My dear, how old are you? What is your name?"

"Lee Mason."

"How old did you say?"

"I don't know."

"Don't know how old you are!" exclaimed the young lady. "Did n't you ever ask? I will set you down for ten, anyhow. Did you never go to school? Nor to Sunday-school either? Yet I see you can read. Who taught you?"

"Nobody. I always knew how."

"Always knew how," repeated Miss Cynthia, helplessly, looking down into the serious eyes. "And—and what were you reading?"

"Its name is 'Paradise Lost,'" answered the little creature, with a loving glance at the old vellum covers lying uppermost on the grass. "Mrs. Marston gave it to me because I liked it best. It's a beautiful book. Though there are some dreadful parts; they frighten you so when you wake up in the night. But there's the garden! Oh, don't you think?"—with an eager gesture—"this garden must be something like it?"

Miss Meeker, who had taken the honors of Flemington Female Seminary with a mind quite unencumbered by the process, changed the subject.

"Lee, would you like to go to Sunday-school, and read the Bible, and learn to be a little Christian?"

"I don't—know," said the child. "Would I be with you?"

"Well, yes; I will have you put in my class. Come next Sunday morning, then, at nine o'clock. It is the large white church. You can just see the steeple between those trees. Ask for Miss Meeker. Now good-by, Lee. Don't forget."

It was, after all, Miss Meeker who forgot, and who was brought to a startled remembrance the following Sunday by the appear-

ance of a disreputable little figure in the corner of her class, a target for the angry glances of the rest of the girls. It was really very awkward. Miss Meeker's girls were the young flowers of Flemington, and, in spite of their tender years, they knew it. However, she managed it nicely by placing a solitary arm-chair for the newcomer.

Apparently the child was satisfied. Her eyes rarely wandered from her teacher's face. Indeed so promising a pupil did she prove that the minister himself, one morning some six months later, approached Miss Meeker's class, and sat down beside the small figure in the big chair.

"My dear child, I have received most encouraging reports of you," he said, with a benevolent, careful smile. "Now tell your teacher and me freely, do you love the Lord?"

"Come, speak up, Lee," prompted Miss Meeker, somewhat anxiously. "You love the Lord Jesus Christ, don't you?"

"Oh, him, Miss Cynthia? Yes—I think so. But—I wish—I lived when he did in that country. I wish I could *really* see him and talk to him."

"Yes, yes, yes," nodded the minister; "that is quite right and beautiful, my dear little one. And you give yourself to him, do you not? and are resolved to walk in his ways?"

"You will do all he says, won't you, Lee?" prompted Miss Meeker.

The child dropped her head. Her face was scarlet.

There was a painful silence.

"Miss Cynthia, I can't. I've tried, but it's no use. I've just cut that verse out of my Bible. I hate those girls."

The passionate anger leaping from the child's eyes to the half-tittering, half-terrified young ladies was awful to see. But in a moment it was gone, and the old melancholy came back with the old pallor.

"I don't want to love them. I don't want to bless them. I just want to punish them. I want to take off their beautiful things. I want their hair to be short and ugly. I want them to live in a cold, empty house. And I want the rats to come out every night and sit beside the bed, their eyes like coals—"

"Dear me, what a strange child! What a very strange child!" exclaimed the minister, rising to his feet with an undisguised shudder through his slim frame. "Miss Meeker, I am astonished, I must say I am astonished, that you should recommend for church-membership a child of such a description!"

It was Miss Meeker's face that was scarlet now. The light that gleamed through her tears of vexation was not saintly.

"Lee Mason, you are a wicked girl! You are a disgrace to your teacher! How could

you? I'm sorry I ever took you into my class!" exclaimed Miss Meeker, exasperated by the tears which just then fell down to stain her pretty gloves and further to publish her humiliation. "I declare, I never want to see you again!"

The little face grew paler and wider-eyed.

"You don't want me in Sunday-school any more, Miss Cynthia?"

The young lady hesitated. But anger had now quite overwhelmed her better nature.

"No, I don't."

"Yes, ma'am," said Lee Mason, and slipped from her perch, and went softly down the long aisle and out of the house. So ended her Sunday-school record.

Nevertheless, the world did not end, though she thought it would. The broad, billowy fields behind Flemington went on with their rhythm of the blade, and the ear, and the full corn in the ear. The factory-wheels rang their refrain of man's need and man's greed. And human life kept time with the wheels—or mysteriously stopped. The pastor of the white church was dead. Flemington laid him away with honor, and immortalized his virtues on a marble tablet. Then a new minister came; a young man, a sincere one, consequently with the universe upon his shoulders. The whole town was freshened by this new life.

It was the fifth summer after Miss Cynthia Meeker's visit to the house with the cross, when Robert Carr, the young minister, one day found his way there. The old house had furbished up itself in these years, had curtained its windows, and tidied its dooryard. Was not some one calling him from that garden? Tall Egbert Carr strode over the grass.

A garden? The flowers rioted everywhere. The only path was this grassy glade, at the farther end of which a girl—or was it the genius of the place?—at that moment threw down her book and began gaily reciting:

"Over hill, over dale,
Thorough bush, thorough briar,
Over park, over pale,
Thorough flood, thorough fire,
I do wander everywhere,
Swifter than the moon's sphere,
And I serve the fairy queen—"

and came whirling towards the gate and the unobserved visitor.

"Well done, Lee Mason! And who are you, sir?" said a thin, black-eyed woman who had silently come from the house. With a bow she added, "Ah, I see—the new minister out upon his visitations."

A glimmer in her eyes, the tone and manner of her salutation, galled the young man; but he tried to ignore it.

"This is Mrs. Mason, I presume," he said, with outstretched hand.

"Yes. What do you want with us, Mr. Carr? Shall I tell you? Lee, be quiet; go into the house. You would like to add us to the list of your successes. Do not trouble yourself. My daughter is, you see, quite happy alone in her garden. As for me, when I need counsel"—the smile upon her sallow face grew positively baneful. "Do not answer me!" Her fine gesture of command surprised him through his indignation. "Let me tell you something you may never have heard before. You are a minister of the gospel. Women weep over your beautiful sermons. The poor bless you. It is a sweet picture! But—there may be people who are beyond even such remedies. Good morning." And with the same smile upon her face, she went back into the house.

As she closed the front door her daughter left the rear one, sped across the intervening meadow, and stood in Egbert Carr's path as he strode villageward.

"Mr. Carr, Mr. Carr, I am so sorry!"

He did not recognize her at once, so changed was she from the bright genius of the garden. The change touched him, even to the point of self-forgetfulness.

"Never mind, my child," he said kindly. "Perhaps—let us hope—your mother will feel better disposed towards me another time."

"She is very unhappy," said the girl, simply, but with an intense gratitude in her eyes. "Do you know how hateful it makes people, being unhappy? I thought you would forgive her if you knew. And I wanted to say that I would like to go to your church, if I might."

"Why, of course you know the church is free to all."

She colored painfully.

"Not to me," she said, with an effort. "I used to go—to Sunday-school. But I was very bad, and they said I was not to go any more."

Her distress was so great that he forbore to question her.

"Well, I say you may," he responded brightly. "If you are so bad—which I do not believe—you must come and learn to be better, Lee." And then he shook her hand heartily, and left her.

That is, he left her bodily presence, standing there in the road and looking after him. But she went with him nevertheless. And suddenly, in his morning hours, she came dancing down his page, making his heart bound boyishly. In the twilight he heard again her quaint wisdom—"Don't you know how hateful it makes people, being unhappy?" and half turned to meet her beautiful eyes.

He saw much of her as time went on, and

she was one of his most regular hearers, and, later, a church-member. Being now a tastefully dressed, pretty-mannered young lady, she made a part of the church life, and won friends. The house with the cross was not shunned in these days. The objectionable mother was much less objectionable as a dawning pride in her daughter called back her earlier, better self. Moreover, Lee Mason had long been looked upon as a protégée of the fine old Quaker family of Marston.

It was in the Marston house, indeed, that the young minister best liked to meet the girl — in the low-ceiled sitting-room, where the spirits of just men made perfect, lettered and ranged for communion, filled the ample bookcases, and Dorothea Dix and Lucretia Mott kept serene watch and ward from their gilt frames, and busy Miss Martha stepped in now and then. The two always sat together — the aged mother of the family, in snowy cap and kerchief, and “the child,” in the low chair with her needlework. He liked to hear her words weighed and approved by the fine old lady. He liked to see the simple but noble influences of the house wrapping about and framing in, as it were, this beautiful, enigmatical being.

For she was an enigma to him. He could have compounded his ideal of womanhood; so many parts of orderly home influence, so many more of gracious school and church culture, then just enough of social success and adoration to make up the perfect sum of — well, of a Cynthia Meeker, for example. Who was this child who had started up in his path, with her noble features, with the charm of her varying moods, with her fearlessness and frankness? How had she come by so much, she, the waif, sprung like a flower from corruption? In spite of his priesthood, the young man was but a materialist in the final analysis. “The wind bloweth where it listeth, and thou . . . canst not tell whence it cometh . . .” This word was too hard for Egbert Carr.

Nevertheless, her image filled his days and nights. Her presence stirred within him new, strange impulses, mistrust them as he might. Divinity or wood-sprite, a word of hers had power to open to his startled eyes the secrets of earth and heaven.

There came a night of spring when the blossoms sent their fairy shallows afloat on every breeze, when the moonlight made enchanted bowers of the common Flemington streets. The spell of the season was in the young minister’s blood. He had thrown aside his cautiousness, he had broken past the groups in the church-door, past even Miss Meeker, at her prettiest in her spring bonnet, and had walked boldly off with Lee Mason. Why should he not? And why should he not as boldly break

through all conventionalities, defy his people’s criticism, take for his very own this wonderful child, this child with God’s warrant upon her being, even though it were only God’s? He seemed to see his future open before him, and they two walking together down it as down this moonlit way. The impulse was upon him to hold her in his arms. “Lee, I love you!” The words were at his lips, when she drew her arm from his, and he saw with a chill of disappointment that they stood before the old house which was her home.

“How distinct it is to-night!” she said, her eyes upon the cross over the door. “Mr. Carr, I love this house.”

“Love it!” he exclaimed almost petulantly. “I—I dislike it. It is a gloomy place for you.” Indeed he spoke only half the truth. For he hated the place, as, with many a pang of conscience he did Lee’s black-eyed mother. What had such things in common with the girl of his love?

“I first liked it through hearing about the old priest,” said Lee, her eyes still upon the cross. “Mrs. Marston once told me that he was a good man, with a peculiarly bright smile. After that I used to fancy I saw him always coming back from other people’s homes to his own empty house. I wondered how he could smile. I could not. I wanted everything myself. When I saw beautiful homes it drove me almost wild. But he always smiled, the good priest! ‘You have all I had,’ he seemed to say to me. ‘I have left you my garden, and my cross over your door.’”

“You had learned the smiling when I first saw you,” said the young man, half lightly. “How does it run? ‘I do serve the fairy queen.’” Why, I took you for the fairy queen herself. How did you beguile the lonely ghost of his treasure?”

“I suppose I learned his secret. Mr. Carr, it does n’t matter, does it, if you have not everything in the world, when your life is really full?”

“And has yours been full?” Egbert Carr’s pulse was throbbing painfully. Child of want, meeting the want with that grateful heart! Child of scorn, fronting the scorn with that innocent brow! But from henceforth, forever, he would shield her; he would lay all things at her dear feet.

“Yes. Of course I have not had the—little things,” she said, thinking her way slowly. “And I know I should have enjoyed them—very much. They say little things make up the sum of life. But that is only half true, after all. It is the great things that make life—friendship, books, nature, the spirit of God. Mr. Carr, I have sometimes thought that perhaps it is as well, for just me, that I have not had the rest.

MISS CYNTHIA MEEKER.

For I have noticed that sometimes, when people have so much, they become — entangled. I have no pride to bind me. I have no — no traditions of society, or family, or reputation, to shape my way to. When any call comes I have not to wait to deliberate whether it is safe, all things considered, to go God's way. Oh, from no virtue of mine; it is only a part of my lot. I am only Lee Mason—ready."

"God knows we are entangled," exclaimed Egbert Carr. "Miss Mason, you have n't an idea how we are bound by our traditions, as you say; by our shallow pride and ambition. The church itself, yes, the very men who would save the world—Oh, Jesus Christ knew it!" groaned the young minister. It was as though a flash of heaven's lightning had illumined

his life, his work, his calculating love. They lay before him, a very meshwork of intrigue. He bent down and kissed her hand, passionately, reverently. "My child, my child, forgive me. I am not fit to touch you so — not yet. But I will be, God helping me, if any sincerity of a man's heart can make him fit for your heavenly purity." And he was gone.

What had happened? Had everything changed? Or was it but this night of wonder, and would life be quite the same when the plain sunlight should come again?

No; never again the same. A messenger came that night to the house with the cross. In the late morning, when Lee, alarmed, broke into her mother's room, a body lay there from which the soul had all but fled.

The doctor was summoned, but could do little. Kind friends came to help the girl in the long watch which now began, and which lingered on through weeks and months. But the one for whom she most looked came, even at the first, very rarely. When he was there he was strangely cold and silent. In truth, no sick-bed had ever had for Egbert Carr the horror of this one; the horror of the staring black eyes, which from their awful vantage-ground seemed to fasten upon him in the old mockery. In their dreadful presence he was not the same man, nor did Lee seem the same Lee. The fascination was gone; and again his timid soul, with its partial insight, was the prey of its doubts.

The blossoms of that night of moonlight had long since faded. Earth had forgotten them, was decking herself with fresh blooms, when the life which had so long flickered in the house with the cross went out.

Good Doctor Dobbs was alone with Lee. "My poor, brave girl!" he said, taking her into his arms with almost a father's affection. "Now leave everything to me. Only just set the day of the funeral. Thursday? But what minister will you have, then? Mr. Carr? What! don't know about his marriage? It's to be on Thursday, so you'll have to get some one else. Poor child, you're faint, and no wonder. Here, lie right down, so. Now I'll run off for Mrs. Murphy. She's a splendid hand to have around at such times. And I'll send for the undertaker too.

"Perhaps you don't know who the bride is," added Doctor Dobbs, coming back to thrust his bald head into the room. "It's that pretty bit of sanctity, Cynthia Meeker. Tiptop match, is n't it? Everybody's delighted — except the girls that could n't get him themselves."

A week later the blossoms were raining into the open window of the Marston sitting-room.

"Child, thee does n't pick up fast enough," said old Mrs. Marston, after a study of the face

before her. "Put down that sewing, and go out for a run in the sunshine, do."

"Please let me stay here. I feel best here," pleaded Lee, laying her cheek down on the soft, withered hand.

"Well, as it pleases thee. I really want to talk with thee this afternoon. Lee, does thee know that that wretched Allingham girl is back again in the town?"

"Back again!" Lee sat up, intent.

"Yes; in great distress, they say. She was with us so many years, thee knows. I've been thinking about her all day, how she used to look, flitting about with her pink cheeks. She was more Martha's choice than mine. A plump, pert chit, who thought more of what she put on her back than of anything else. It surprised me in Martha, who never had any pink cheeks herself, nor any leaning to furbelows, so far as I know. But it was a dreadful shock to us all. With her innocent ways! Child, the depth of deception in the hussy! Does n't thee think so? Eh, Lee?"

"I think—in her—I should hardly call it deception," answered Lee, somewhat faintly, and stitching rapidly away. "Was there not weakness enough to account for it, and vanity, and love of excitement?"

"Weakness could never lead a girl so astray, to my mind," said the old lady, stiffly.

She settled back into the depths of her chair, her strong profile outlined against the light. But presently she turned again to Lee. "Does thee judge of her guilt in the same fashion?"

"Dear Mrs. Marston, do not let us speak of that," said Lee, almost imploringly. "What do I know about it? Who am I, that I should judge any one or any thing?"

"I merely want to know what thee thinks."

The girl laid her work down from her trembling hands.

"If I must, I will. For I have thought much about it in these two years since Maggie Allingham—went away. And, dear Mrs. Marston, I cannot think of her as you do. I wish I could. It frightens me that I cannot," went on the girl in a wild way. "For I know I am not like other people. What do I know of my father? or even of my poor mother? What evil may not be in me from my very birth, making me think lightly of sin? But for all, I must be honest, must I not? I must think as I do think. And Maggie was so thoughtless, so heedless, I have wondered whether she was really more of a castaway—oh, not from society, but from God!—than many a sinner whom the world—easily forgives."

For one moment Mrs. Marston was moved by the impassioned voice. But when she spoke, it was the more sternly for the weakness.

"Your doctrine has the merit of originality,

for me, at least. It is a strange one for a young woman; strangest for thee. I am not pleased with it."

The sunlight stole across the carpet and was gone. It was a relief to the two in the quiet room when heavy steps were heard in the porch and Doctor Dobbs burst in.

"I'm in trouble again, Mrs. Marston! It's got to that—eh, Lee?—that the whole countryside just throws itself at you. It's that Allingham woman," said the doctor, dropping with a sigh into a chair. "I told you how she looked. Well, to-night she's the sickest woman I've seen in one while. Typhoid fever, a wretched, low case. And she's stark alone, and there's not a soul will go near her."

Lee Mason slowly folded her work and laid it in the old lady's lap. Then she stood up.

"I will go, Doctor Dobbs."

"You? Why, nonsense! Sit down, child. Why, you're too young. You're not strong enough," remonstrated Doctor Dobbs, more excited than he liked to show. "Why, here's old Mrs. Marston here can't spare you. Ask her. She won't let you go away."

"What is that?" cried Miss Martha, coming in with a lamp. "Lee going away? What is the matter? What has happened? Mother, tell Lee she must not go!"

Old Mrs. Marston's cap-strings quivered beneath her chin; but she spoke calmly.

"Must not, daughter, is not the word for me to speak, thee knows. I advise Lee not to go. This is no call for her. I will provide for this wretched woman; and I will let thee go, Martha, if Doctor Dobbs really cannot find any one else. But Lee ought not to go. She is not strong enough, and then—I fear it would be dangerous for her reputation."

The girl lifted her white face. As the lamp-light fell upon it her expression silenced them all.

"Reputation? What is my reputation worth? Who would be surprised at the worst that I could do? Who would not expect it from the child of my mother? I have nothing to lose. In all Flemington there is no soul—not one—so free as I. And only I can feel for Maggie Allingham. Am I not akin to her? More akin to her than to the good Christian people of this town? O God! may we not have the same taint in our blood? We belong together. I am called—I am free—I will go."

In the same silence they saw her take her hat and cloak. Then, indeed, Miss Martha fell crying into her arms. But she put her gently aside, bent once above Mrs. Marston's hand, and went out with the doctor.

The next day all Flemington knew of it; knew of it with so many variations that before night the girl's best friends were asking anxiously, under their breath, "What is this about

Lee Mason? Turned out of the Marston house? Gone to Maggie Allingham? It is n't possible! We won't believe it! But, after all, what could one expect, poor thing, with such a mother?"

A few days later the story was better understood. Then some called her pretty names. Others did n't know. Most waited. They were

As the years went by the house was recognized. There were even some rich people who, having long ago roundly satisfied their worldly desires, fumbled now at their purse-strings for the mite for Heaven, and laid money in Lee Mason's hands. She found ample uses for it. But she herself worked on among her factory girls.

AT THE MARSTON HOUSE.

still waiting when, after Maggie Allingham's death, she found employment in one of the factories. Certainly her expression was not inviting in those days. It made an atmosphere about her into which few cared to break. Then they began to call her queer. Fatal word! So she walked their streets apart. So she sat apart in their church. And it was the old story of Sunday-school days over again — of the disreputable little figure in the big chair.

She found new friends.

Was a girl looked at askance? Did her heart fail her? Did she shudder back from ruin, cry out for help? Here was one who also stood apart; but with what compassion in her eyes, what help in the clasp of her hand! Was the street cold? Were earth and sky pitiless? In the house with the cross was a leaping fire. All night long the door stood on the latch. And how a wanderer was welcomed! — welcomed, when charity was weary and outraged; forgiven, if only forgiveness was wanted, ninety times and nine; and loved always, unconditionally, forever, as our Father in Heaven loves.

One stormy winter night there came a sharp ring at the door-bell of the Reverend Egbert Carr. A messenger from Miss Mason. There was a girl dying at the house with the cross who wanted to see him.

"Egbert!" cried Mrs. Carr, running out in curl-papers, "you surely won't go — to that wretched place — on such a night — with your cold — and I so miserable!" whimpered poor little Mrs. Carr, peevish tears trickling down over the cheeks where the roses had faded. Plainly the trials of life at first hand had not proved favorable to her sainthood.

"I must, Cynthia," called back her husband, patiently.

He plunged fiercely through the drifting snow. There was help in the storm. Had it been a night of spring, when the dreams of a young man's heart arise in moonlight; had it been a summer afternoon, and flowers in this garden — this desolate garden, with its tangled skeleton things rattling in the wind. Summer would come again for it. But for him —

Lee Mason opened the door. "Ellen is al-

most gone," she said hurriedly. "I am thankful you are not too late."

He followed her into a pleasant room. Two girls by the fire turned and went shyly away. A figure on the bed started partly up and fell back with a groan. "Mr. Carr, don't you remember me — Ellen Day?"

"Why, my dear girl!" he exclaimed, shocked beyond control. "You were in my Bible-class when I first came to Flemington. I thought you had left the town."

"Seven years ago," cried the creature on the bed. "Seven awful years! And they are gone, and I've not a day left, the doctor says; perhaps not an hour. Quick! Tell me one thing! I left Him. I refused Him. Now I've got to go to Him just as I am. Don't tell me I can change. I can't, and I won't be fooled into thinking I can. Tell me what He will say?"

"My child, He comes here to you. He says, with all love, with all forgiveness, 'Go in peace, and sin no more.'"

"Yes, but I would, though!" she screamed, exhausting herself dreadfully in the effort. "This angel here, Miss Mason, has said that to me, oh, time and time again. And I've gone every time and sinned. And so I would again, if I were off this bed. I know it, and He knows it!" Her voice went up in a shriek.

"Ellen, listen," said Lee Mason, on the other side of the bed. She folded the poor hands together. Her eyes held those wild ones. The dying girl lay still.

"Ellen, He takes the hands you hold up into His own strong hands, so. He looks down into your eyes, into your heart, and sees all the weakness, all the wickedness, better than you can tell Him. But you look up into His dear eyes — so loving, Ellen. You have never seen such

loving, loving eyes. And you look and look — and look!"

"She is gone," said Lee Mason, laying the hands tenderly down — it might have been a mother with her babe. "Did you see her smile? Thank God for death! Life was too hard."

"Too hard!" Egbert Carr threw up his arms in a gesture as despairing as the dead girl's had been. "Flung into it with our tendencies, our weaknesses; taught only by our ruin! What am I, what are most of the people whom I — I — counsel, but wrecks of what we might have been, as truly, if not as shamefully, as this girl? O Lee, Lee! And I had the world's secret within my grasp!"

"Mr. Carr." Her touch upon his shoulder roused him. "God who made us knows us — tendencies, weakness, all. Go home to your wife, to your lovely little children, to your work — and thank him for everything."

"And you?" He lingered, his greedy eyes devouring the deepened beauty of her face, her slight figure, her toil-worn hands. He would have every detail to carry with him down the years.

"Would you be glad to know that I am happy? I am." Her eyes were sweet, as from some inner well of delight. "It sometimes seems almost wrong," said Lee Mason, thinking her way, "to be so happy in a world where there are others so miserable. But, Mr. Carr, while I live — and work — and grow — indeed, I cannot help it."

She lighted him to the door. "Good night," she said. Their hands met.

At the gate he turned. She stood holding the light. It shone downward on her face and upward to the cross above her head.

Florence Watters Snedeker.

AB ASTRIS.

I SAW the stars sweep through ethereal space,—
 Stars, suns, and systems in infinity,—
 Our earth an atom in the shoreless sea
 Where each had its appointed path and place,
 And I was lost in my own nothingness.
 But then I said, Dost thou not know that he
 Who guides these orbs through trackless space guides thee?
 No longer, groveling thus, thyself abase,
 For in the vast, harmonious, perfect whole
 In infinite progression moving on,
 Thou hast thy place, immortal human soul —
 Thy place and part not less than star and sun.
 Then with this grand procession fall in line,
 This rhythmic march led on by power divine.

"I SUPPOSE THIS IS MRS. CRISTIE."

THE SQUIRREL INN.—II.

BY FRANK R. STOCKTON.

VII.

ROCKMORES AHEAD.

T was late in the afternoon of the day after Mrs. Cristie reached the Squirrel Inn that she slowly trundled the little carriage containing the baby towards the end of the bluff beneath which stretched the fair pastures where were feeding Mr. Petter's flocks and herds. All day she had been looking for the arrival of the young man who had promised to bring her some candidates for the position of child's nurse, and now she was beginning to believe that she might as well cease to expect him. It was an odd sort of service for a comparative stranger voluntarily to undertake, and it would not be at all surprising if he had failed in his efforts or had given up his idea of coming to the Squirrel Inn.

Having philosophized a little on the subject, and having succeeded in assuring herself that after all the matter was of no great importance, and that she should have attended to it herself, and must do it the next day, she was surprised to find how glad she was, when, turning, she saw emerging from the woodland road a one-horse wagon with Mr. Lodloe sitting by

the driver, and a female figure on the back seat.

The latter proved to be a young person who at a considerable distance looked about fourteen years old, although on a nearer and more careful view she would pass for twenty, or thereabouts. She wore a round straw hat with a white ribbon, and a light-colored summer suit with a broad belt, which held a large bunch of yellow flowers with brown centers. She had a cheerful, pleasant countenance, and large brown eyes which seemed to observe everything.

As the wagon approached, Mrs. Cristie rapidly pushed her baby-carriage towards the house. Before she reached it the young girl had jumped to the ground, and was advancing towards her.

"I suppose this is Mrs. Cristie," said the newcomer. "I am Ida Mayberry"; and she held out her hand. Without a word Mrs. Cristie shook hands with the nurse-maid.

"I think," said the latter, "before we have any talk I would better go to my room and freshen myself up a little. I am covered with dust"; and then she turned to the driver of the wagon and gave him directions in regard to a medium-sized trunk, a large flat box, and several long packages tied up in brown muslin, which had been strapped to the back of the

wagon. When these had been taken into the inn, she followed them.

As Mr. Lodloe approached Mrs. Cristie, hat in hand, she exclaimed in a tone which she was not in the habit of using to comparative strangers, in which category sober reflections would certainly have placed the gentleman:

"Will you please to tell me what is the meaning of this? Who is that girl, and where did she come from?"

And the two having walked a short distance over the lawn, he continued:

"I really believe that I have done a very foolish thing, but having promised to do you a service I greatly disliked not to keep my word. I could find no one in Romney, and of course the only way to get you a girl was to go to New York; and so I went there. My idea was to apply to one of those establishments where there are always lots of maids of

LODLOE IS INTRODUCED TO STEPHEN PETTER.

"Madam," said Lodloe, in a deprecatory tone, "I can scarcely pick up the courage to say so, but that is the nurse-maid."

"And you brought her to me?" exclaimed Mrs. Cristie.

"I did," he answered.

"Did you get her in Romney?"

"No," said Lodloe; "there was n't a girl of any sort or kind to be had there. I was obliged to go to New York for one."

"To New York!" cried the astonished Mrs. Cristie.

"Madam," said Lodloe, "let me propose that we retire a little from the house. Perhaps her room may be somewhere above us."

all grades, and bring one to you. That was the way the matter appeared to me, and it seemed simple enough. On the ferryboat I met Mrs. Waltham, a lady I know very well, who is a member of the Monday Morning Club, and a great promoter of college annexes for girls, and all that sort of thing; and when I asked her advice about the best intelligence office, she told me to keep away from all of them, and to go instead to a teachers' agency, of which she gave me the address, where she said I would be almost sure to find some teacher who wanted occupation during the holidays."

"A teacher!" cried Mrs. Cristie.

"Yes," said Lodloe; "and you may be sure

that I was as much surprised as you are. But Mrs. Waltham assured me that a great many women teachers found it necessary to make money during the summer, and were glad to do anything, just as college students wait at hotels. The more she talked about it the more she got interested in it, and the matter resulted in her going to the agency with me. Mrs. Waltham is a heavy swell in educational circles, and as she selected this girl herself I said not a word about it, except to hurry up matters so that the girl and I could start on an early afternoon train."

"Never in my life!" ejaculated Mrs. Cristie.

"Madam," interrupted Lodloe, "I beg you not to say what you intended. It is impossible for you to feel as badly about it as I do. Just to think of it stuns me. Did you see her baggage? She has come to stay all summer. There is no earthly reason to think she will suit you. I don't suppose she ever saw a baby."

Mrs. Cristie's mind was still filled with surprise and vexation, but she could not help laughing at Mr. Lodloe's comical contrition.

"I will see her presently," she said; "but in the mean time what are you going to do? There is Mr. Petter standing in the doorway waiting for your approach, and he will ask you a lot of questions."

"About the Germantown family, I suppose," said Lodloe.

"Yes," said Mrs. Cristie; "that will be one of them."

"Well, I don't know them," said Lodloe, "and that's the end of it."

"By no means," said the lady, quickly; "Mr. Petter has on his most impressive air. You must go and talk to him, and it will not do to sneer at the Rockmores."

"If it is absolutely necessary to have credentials in order to secure quarters here," said Lodloe, "I don't see what is to be done about it."

"Come with me," said Mrs. Cristie, quickly; "you have put yourself to a great deal of trouble for me, and I will see what I can do for you."

When Walter Lodloe and Mr. Petter had been formally introduced to each other, the brow of the latter bore marks of increased trouble and uncertainty. From the confidential aspect of the interview between Mrs. Cristie and the young man, the landlord of the inn had begun to suspect what his wife had suspected, and it galled his spirit to think of putting his usual test question to this friend of Mrs. Cristie. But he was a man of principle, and he did not flinch.

"Are you from Philadelphia, sir," he asked, "or its vicinity?"

"No," said Lodloe; "I am from New York."

"A great many Philadelphia people," continued the landlord, "or those from its vicinity, are well known in New York, and in fact move in leading circles there. Are you acquainted, sir, with the Rockmores of German-town?"

Mrs. Petter now appeared in the doorway, her face clouded. If Mrs. Cristie had known the Rockmores she would have hastened to give Mr. Lodloe such advantages as an acquaintance in the second degree might afford. But she had never met any member of that family, the valuable connection being entirely on the side of her late husband.

"I did not know," said Lodloe, "that you required credentials of respectability, or I might have brought a lot of letters."

"One from Matthew Vassar?" asked Mrs. Cristie, unable to resist her opportunity.

"Were you acquainted with Matthew Vassar?" interpolated Mrs. Petter with energetic interest. "He was a great and good man, and his friends ought to be good enough for anybody. Now put it to yourself, Stephen. Don't you think that the friends of Matthew Vassar, the founder of that celebrated college, known all over the world, a man who even after his day and generation is doing so much good, are worthy to be accommodated in this house?"

Mr. Petter contracted his brows, looked upon the ground, and interlaced his fingers in front of him.

"The late Mr. Matthew Vassar," said he, "was truly a benefactor to his kind, and a man worthy of all respect; but when we come to consider the way in which the leading circles of society are made up—"

"Don't consider it at all," cried Mrs. Petter. "If this gentleman is a friend of Mrs. Cristie, and is backed up by Matthew Vassar, you cannot turn him away. If you want to get round the Rockmores you can treat him just as you treat Mr. Tippengray. Let him have the top room of the tower, which, I am sure, is as pleasant as can be, especially in warm weather, and then he will have his own stairs to himself, and can come in and go out just as Mr. Tippengray does, without ever considering whether the Squirrel Inn is open or shut. As for eating, that's a different matter. People can eat in a place without living there. That was all settled when we took Mr. Tippengray."

An expression of decided relief passed over the face of Mr. Petter.

"It is true," he said, "that in the case of Mr. Tippengray we made an exception to our rule—"

"That's so," interrupted Mrs. Petter; "and as I have heard that exceptions prove a rule, the more of them we have the better. And if

the top room suits Mr. Lodloe, I'll have it made ready for him without waiting another minute."

Mr. Lodloe declared that any room into which the good lady might choose to put him would suit him perfectly; and that matter was settled.

VIII.

MISS MAYBERRY.

ABOUT five minutes after Walter Lodloe had departed for his loft chamber Miss Ida Mayberry made her appearance in the front doorway. She had changed her dress, and looked very bright and fresh.

"Is n't this a pretty place?" she said, approaching Mrs. Cristie. "I think I shall like it ever so much. And that is your baby? Is it a boy or a girl?"

"A boy," was the answer.

"And his name?"

"Douglas."

"I like that sort of name," remarked Miss Mayberry; "it is sensible and distinctive. And now I wish you would tell me exactly what you want me to do."

Mrs. Cristie spoke nervously.

"Really," said she, "I am afraid that there has been a mistake. I want an ordinary nurse-maid, and Mr. Lodloe could not have understood—"

"Oh, don't trouble yourself about that," said the other. "I understand perfectly. You will find me quite practical. What I don't know I can learn. My mental powers need a change of channel, and if I can give them this change, and at the same time make some money, I am sure I ought to be satisfied."

"But it seems to me," said Mrs. Cristie, "that one who is by profession a teacher would scarcely—"

"Perhaps not, years ago," interrupted the other; "but things are different now. Look at all the young college fellows who work during vacation, and we are beginning to do it, too. Now you will find me just as practical as anybody. Nine months in the year I teach,—moral and mental philosophy are my special branches,—and during vacation I am not going to wear out my brain in a summer school, nor empty my purse by lounging about in idleness. Now what could be better than for me to come to a perfectly lovely place like this, which I fancy more and more every minute, and take care of a nice little child, which, I am sure, will be a pleasure in itself, and give me a lot of time to read besides? However, I wish you to understand, Mrs. Cristie, that I am never going to neglect the baby for the sake of study or reading."

"But have you thought seriously of the position in which this would place you?"

"Oh, yes," was the answer; "but that is a disadvantage that has to be accepted, and I don't mind it. Of course I would n't go to anybody and everybody, but when a lady is recommended by a friend of Mrs. Waltham's, I would n't hesitate to make an engagement with her. As to salary, I will take whatever you would pay to another nurse-maid, and I beg you will not make the slightest difference because I am a teacher. Is that bell for supper?"

"Yes," said Mrs. Cristie; "and perhaps you have not yet reflected that my nurse-maid must take care of my baby while I am at my meals."

"That is precisely and exactly what she is going to do. Go in to your supper, and I will push him about until you come out again. Then you can show me how to put him to bed."

"Is n't she coming in?" asked Mrs. Petter, looking out of the window as she took her seat at the table.

"Of course not," said Mrs. Cristie, in a tone which was intended to make an impression upon Mr. Lodloe; "my maids do not eat with me."

"But, goodnessfulme!" said Mrs. Petter, "you can't look upon that sort of a young woman as a servant. Why, I put her in one of the best rooms; though of course that does n't make any difference so long as there is nobody else to take it. I wonder if we could n't find some sort of a girl to take care of the baby while she comes to her meals."

At this even Stephen Petter smiled. He was pleased that one of his guests should have a servant of such high degree. It was like a noble lady in waiting upon a queen.

"She shall be entertained," he said, "according to her station. There need be no fear about that."

"Upon my word," exclaimed Mrs. Petter, "if here is n't Mr. Tippengray! Well, sir, I don't know when I've seen you on hand at regular meal-time."

"Perhaps it is a little out of the common," said the Greek scholar; "but, after all," he continued, looking out of the window, "it appears I am not the last one to come in." And then, glancing around the table, he asked, "Am I taking her place?"

"Oh, no, sir," said Mrs. Cristie; "that is my maid."

Mr. Tippengray again looked out of the window; then he helped himself to butter, and said:

"Have you ever noticed, Mrs. Petter, that the prevailing style in wild flowers seems to vary every year? It changes just like our fashions, though of course there are always a few

old fogies among blossoming weeds, as well as among clothes-wearers."

The next morning Walter Lodloe came to Mrs. Cristie on the lawn.

"I have been waiting for some time," he said, "in order to tell you that I am ready at any moment to repair the unpardonable blunder that I made yesterday, and to escort back to New York the very unsuitable young woman whom I forced upon you."

"Oh, you need not think of doing anything of that kind," said Mrs. Cristie; "the young person is perfectly satisfied with the situation, and intends to stay. She gives me no possible excuse to tell her that she will not suit me, for she takes hold of things exactly as if she remembered what people did for her when she was a baby. She does n't know everything, but she intends to; that is plain enough. At present she is washing one of baby's frocks with my *savon de rose*, because she declares that the soap they gave her in the kitchen contains enough lye to corrode the fibers of the fabric."

"Then you think she may suit you?" said Lodloe.

"Oh, she will suit; she intends to suit: and I have nothing to say against her except that I feel very much as I suppose you would feel if you had a college president to brush your coat."

"My spirits rise," said Lodloe; "I begin to believe that I have not made so much of a blunder after all. When you can get it, there is nothing like blooded service."

"But you do not want too much blood," said Mrs. Cristie. "I wish she had not studied at Bryn Mawr, for I think she pities me for having graduated at Vassar. But still she says I must call her Ida, and that gives me courage."

There then followed a contention in which Lodloe was worsted about his expenses in the nurse-maid affair, and, this matter being settled, the young man declared that having shown what an extremely undesirable person he was to work for others, he must go and attend to his own work.

"What sort of work do you do?" asked Mrs. Cristie.

"I write," he answered—"novels, stories, fiction in general."

"I know that," said she, "having read your Vassar article; but I do not think I have met with any of your avowed stories."

"Madam," said Walter Lodloe, "there are so many people in this world, and so few of them have read my stories, it is no wonder that you belong to the larger class. But, satirize my Vassar article as you please, I shall never cease to be grateful to it for my tower room in the Squirrel Inn."

IX.

THE PRESERVATION OF LITERATURE.

WALTER LODLOE set out to go to his work, and on his way to the little garden at the foot of the staircase which led to his room in the tower he saw the Greek scholar sitting on a bench outside his summer-house smoking a large cigar.

"Good morning, sir," said Mr. Tippengray; "do you smoke?"

The tone of these words implied not only a question but an invitation, in case the young man did smoke, to sit down on that bench and do it. Lodloe understood the force of the remark, and, drawing out a cigar, took a seat by Mr. Tippengray.

"Before I go to my work," said the latter, "it is my habit to sit here and enjoy the scenery and a few puffs. I suppose when you come to a place like this you throw work to the winds."

"Oh, no!" said Lodloe; "I am a literary man, and I came here to write."

"Very glad to hear it," said the other; "very glad that that tower room is to have the right sort of occupant. If I had not this summer-house, I should want that room; but I am afraid, however, if I had it, I should look out of the window a great deal and translate a very little."

"What do you translate?" asked Lodloe, with interest.

"At present," said Mr. Tippengray, "I am engaged in translating into Greek some of the standard works of our modern literature. There is no knowing what may happen to our modern languages. In the course of a few centuries they may become as useless to the readers of that day as the English of Chaucer is to the ordinary reader of our time; but Greek will stand, sir, and the sooner we get the good things of the present day into solid Greek the better it will be for them and for the literature of the future."

"What work are you translating?" asked Lodloe.

"I am now at work on the 'Pickwick Papers,'" said the scholar, "and I assure you that it is not an easy job. When I get through with it I shall translate it back into English, after the fashion of Sir William Jones—the only way to do that sort of thing. Same as a telegraphic message—if it is n't repeated, you can't depend on it. If I then find that my English is like that of Dickens, I shall feel greatly encouraged, and probably shall take up the works of Thackeray."

Walter Lodloe was somewhat stunned at this announcement, and he involuntarily glanced at the gray streaks in the locks of the Greek

scholar. The latter perceived the glance, and, knocking the ashes from his cigar, remarked:

"Did you ever notice, sir, that an ordinary robin is perfectly aware that while squirrels and cats are able to ascend the perpendicular trunk of a tree, they cannot climb the painted pillar of a piazza; and consequently it is perfectly safe to build a nest at the top of such a pillar?"

Lodloe had noticed this, and a good many other intelligent traits of animals, and the two conversed on this interesting subject until the sun came round to the bench on which they were sitting, when they moved to a shady spot and continued the conversation.

At last Lodloe arose. "It must be nearly dinner-time," said he. "I think I shall take a walk this afternoon, and see some of the country."

"You ought to do it," said Mr. Tippengray. "It is a beautiful country. If you like I will go with you. I'm not a bad guide; I know every road, path, and short cut."

Walter Lodloe expressed his satisfaction at the proposed companionship, and suggested that the first walk be to the village of Lethbury, peeping up among the trees in the distance.

"Lethbury!" exclaimed the Greek scholar. "Well, sir, if it's all the same to you, I prefer walking in any direction to that of Lethbury. It's a good enough place, but to-day I don't feel drawn to it."

"Very good," said Lodloe; "we will walk anywhere but in the direction of Lethbury."

About half an hour afterward, Mrs. Petter, having finished carving a pair of fowls, paused for a moment's rest in serving the little company, and looked out of the dining-room window.

"Upon my word!" she exclaimed, "this is too bad. When other boarders came, I thought Mr. Tippengray would begin to behave like other Christians, and come to his meals at the proper time. At supper last night and breakfast this morning he was at the table as soon as anybody, and I was beginning to feel real heartened up, as if things were going to run on regular and proper. But now look at that? Is n't that enough to make a housekeeper give up in despair?"

Mrs. Christie, Lodloe, and Mr. Petter all looked out of the window, and beheld the Greek scholar engaged in pushing the baby-carriage backward and forward under the shade of a large tree while on a seat near by the maid Ida sat reading a book. Now passing nearer, Mr. Tippengray stopped, and with sparkling eyes spoke to her. Then she looked up, and with sparkling eyes answered him. Then together, with sparkling eyes, they conversed for a few minutes, evidently about the

book. After a few more turns of the carriage Mr. Tippengray returned to the maid; the sparkling eyes were raised again from the book, and the scene was repeated.

"He has lent her a book," said Mrs. Christie. "She did not take that one out with her."

"There's a time for books, and there's a time for meals," said Mrs. Petter. "Why did n't he keep his book until he ate his dinner?"

"I think Mr. Tippengray must be something of a philosopher," said Lodloe, "and that he prefers to take his books to a pretty maid when other people are at dinner."

"My wife does not altogether understand the ways of scholars," said Mr. Petter. "A gentleman giving most of his time to Greek cannot be expected to give much of his mind to the passage of modern times."

"If he gives some of his time to the passage of a good dinner to cold victuals it would help his dyspepsia. But I suppose he will come when he is ready, and all I have to say is that I would like to see Calthea Rose if she could catch sight of them this minute."

Mr. Petter sat at the end of the table where he had a view of his flocks and his herds in the pasture below.

"Well," said he, "if that estimable young woman wants to catch a sight of them, all she has to do is to step along lively, for at this present moment she is walking over the field-path straight to this house, and, what is more, she is wearing her bonnet and carrying a parasol."

"Bonnet and parasol!" ejaculated Mrs. Petter. "Fire in the mountains, run, boys, run! Debby, step out as quick as you can to Mr. Tippengray, and you need n't say anything but just ask if Miss Calthea Rose told him she was coming to dinner to-day, and tell him she's coming over the field."

In about one minute the Greek scholar was in his place at the table and beginning his meal.

"Now, Mr. Tippengray," said Mrs. Petter, "I don't suppose you feel any coals of fire on your head at this present moment."

"Madam," said the scholar, "did you ever notice that when squirrels strip the bark from the limbs of trees they are very apt to despoil those branches which project in such a manner as to interfere with a view?"

"No, I did n't," said Mrs. Petter; "and I don't believe they do it, either. Debby, put a knife, fork, and napkin for Calthea Rose. If she is coming to dinner it is just as well to let her think that nobody forgot to bring the message she sent. She never comes to meals without sending word beforehand."

But Miss Calthea had not come to dinner. She sent word by Debby, who met her at the

front door, that she had had her dinner, and that she would wait for the family on the piazza.

"Bonnet and parasol," said Mrs. Petter. "She has come to make a call, and it's on you, Mrs. Cristie. Don't eat too fast, Mr. Tippetgray; she's good for the rest of the afternoon."

to her husband. "Jealous as she can be of Mrs. Cristie till she sees that she's got a young man of her own; then as sweet as sugar."

When Miss Calthea Rose set about to be as sweet as sugar, it was very good sugar that she took for her model. She liked to talk, but was not a mistress of words, and although her re-

"PASSING NEARER, MR. TIPPENGRAY STOPPED."

X.

ROSE VERSUS MAYBERRY.

MISS CALTHEA ROSE was a person of good height, originally slender, but gathering an appreciable plumpness as the years went on, and with good taste in dress when she chose to exert it, which on the present occasion she did. She possessed acute perceptions and a decided method of action. But whether or not the relation of her perceptions to her actions was always influenced by good judgment was a question with her neighbors. It never was, however, a question with herself.

When everybody but Mr. Tippetgray had finished dinner, and he had desired the others not to wait for him as he would probably be occupied some time longer, the host and hostess went out to greet the visitor, followed by Mrs. Cristie and Lodloe. When Miss Calthea Rose turned to greet the latter lady her expression was cold, not to say hard; but when her eyes fell upon the gentleman by the side of the young widow, a softening warmth spread over her face, and she came forward with outstretched hands.

"Did you see that?" said Mrs. Petter, aside

marks were not always to the point, they were generally pointed.

At last Mr. Tippetgray came out on the piazza. He walked slowly, and he did not wear his usual ease of demeanor; but nothing could have been more cordial and reassuring than the greeting given him by Miss Calthea. If this were intended in any way to inspirit him, it failed of its effect. The Greek scholar stood apart, and did not look like a man who had made up his mind as to what he was going to do next; but Miss Calthea took no notice of his unusual demeanor. She talked with great graciousness to the company in general, and frequently directed remarks to Mr. Tippetgray which indicated a high degree of good comradeship.

Under this general warmth Mr. Tippetgray was forced to melt a little, and in a manner to accept the position thus publicly tendered him; but suddenly the maid Ida popped up the steps of the piazza. She had an open book in her hand, and she went directly and quickly to Mr. Tippetgray. She held the book up towards him, and put her finger on a page.

"You were just here," she said, "when you had to go to your dinner. Now if you will

finish the explanation I can go on nicely. You don't know how you help me. Every word you say seems to take root"; and she looked up into his face with sparkling eyes.

But not a sparkle sparkled from the eyes of the Greek scholar. He stood silently looking at the book, his face a little flushed, his eyes blinking as if the sunlight were too strong for him.

"Suppose you walk out on the lawn with me," said the nurse-maid, "and then we shall not disturb the others. I will not keep you more than five minutes."

She went down the steps of the piazza, and Mr. Tippengray, having apparently lost the power of making up his mind what he should do, did what she wanted him to do, and followed her. They did not walk very far, but stood barely out of hearing of the persons on the piazza; her eyes sparkling up into his face, as his helpful words took root in her understanding.

At the instant of the appearance of the maid Ida Miss Calthea Rose stopped talking. Her subsequent glances towards this young woman and Mr. Tippengray might have made one think of steel chilled to zero. Mrs. Cristie looked at Lodloe, and he at her, and both slightly smiled. "She understands that sort of thing," he thought, and "He understands that sort of thing," she thought.

At this moment Mrs. Petter glanced at her two guests and saw the smile which passed between them. She understood that sort of thing.

"Who is that?" said Miss Calthea Rose, presently.

Mrs. Cristie, full of the humor of the situation, hastened to answer.

"It is my nurse-maid," she said, "Ida Mayberry."

"A child's nurse!" ejaculated Miss Calthea Rose.

"Yes," said Mrs. Cristie; "that is what she is."

"I expect," said Mrs. Petter, "that he is teaching her Greek, and of course it's hard for her at the beginning. Mr. Tippengray's such a kind man that he would do anything for anybody, so far as he could; but I must admit that I can't see how Greek can help anybody to nurse children, unless there is some book on the subject in that language."

"Greek!" scornfully ejaculated Miss Calthea, and, turning her steely glance from the couple on the lawn, she began to talk to Mr. Petter about one of his cows which had broken its leg.

Ida Mayberry was a young woman who meant what she said, and in less than five minutes, with a sparkling glance of thanks, she

released Mr. Tippengray. That gentleman returned to the piazza, but his appearance elicited no more attention from the lady who had so recently brought into view their friendly relationship than if he had been the head of a nail in the floor beneath her. From Mr. Petter she turned to speak to some of the others, and if her words and manner did not make Mr. Tippengray understand that, so far as she was concerned, he had ceased to exist, her success was not what she expected it to be.

Although he had been amused and interested, Walter Lodloe now thought that he had had enough of Miss Calthea Rose, and wandered away to the little garden at the foot of his staircase. He had not reached it before he was joined by Mr. Tippengray.

"Look here," said the latter, with something of his usual briskness; "if you are still in the humor, suppose we walk over to Lethbury."

Lodloe looked at him in surprise. "I thought you did n't want to go there," he said.

"I've changed my mind," replied the other. "I think this is a very good day to go to Lethbury. It is a pretty village, and you ought to have some one with you to show you its best points."

As soon as she thought etiquette would permit, Mrs. Cristie withdrew, pleading the interests of her baby as an excuse.

"Do you mean to tell me," said Miss Calthea Rose, the moment the young mother was out of hearing, "that she leaves her baby in the care of that thing with a book?"

"Oh, yes," was the answer; "Mrs. Cristie tells me she is a very good nurse-maid."

"Well," said Miss Calthea, "babies are troublesome, and it's often convenient to get rid of them, but I must say that I never heard of this new style of infanticide. I suppose there is n't any law against it yet."

Mr. Petter looked uneasy. He did not like fault found with Mrs. Cristie, who was a great favorite with him.

"I am inclined to think, Miss Calthea," he said, "that you judge that young person too harshly. I have formed a very good opinion of her. Not only does she attend to her duties, but she has a good mind. It may not be a fine mind, but it is a good mind. Her desire to learn from Mr. Tippengray is a great point in her favor."

Here Mrs. Petter, who sat near her husband, pressed violently upon his foot; but she was too late, the words had been said. Mrs. Petter prepared herself for a blaze, but none came. There was a momentary flash in the Calthean eyes, and then the lids came down and shut out everything but a line of steely light. Then she gazed out over the landscape, and presently again turned her face towards her companions,

with nothing more upon it than her usual expression when in a bad humor.

"Do you know," she said abruptly, "that Lanigan Beam is coming back?"

"Goodness gracious!" exclaimed Mrs. Petter, "I thought he was settled in Patagonia."

"It was not Patagonia," said Mr. Petter; "it was Nicaragua."

"Well, I knew it was the little end of some place," said she; "and now he's coming back. Well, that is unfortunate."

"Unfortunate!" said Miss Calthea; "it's criminal. There ought to be a law against such things."

Again the host of the Squirrel Inn moved uneasily on his chair and crossed and re-crossed his legs. He liked Lanigan Beam.

"I cannot see," he said, "why it is wrong for a man to return to the place where he was born."

"Born!" scornfully exclaimed Miss Calthea; "it's the greatest pity that there is any place where he was born; but there's no use talking about him. He has written to them at the hotel at Lethbury that he will be there the day after to-morrow, and he wants them to have a room ready for him. If he'd asked them to have a grave ready for him it would have been much more considerate."

Mr. Petter now rose to his feet; his manner was very dignified.

"Excuse me, Miss Calthea," he said, "but I must go and look after my men in the corn-field."

Miss Calthea Rose sat up very straight in her chair.

"If there's anything you want to do, Mrs. Petter, I beg you won't let me keep you."

"Now, Calthea," said Mrs. Petter, "don't work yourself into such a terrible stew. You know Stephen does n't like to have Lanigan pitched into; I'm sorry for even what I said. But that about his grave was enough to rouse a saint."

Miss Calthea was on the point of retorting that that was something which Stephen Petter was not, by any means, but she restrained herself. If she quarreled with the Petters, and cut herself off from visiting the Squirrel Inn, a great part of the pleasure of her life would be gone.

"Well," said she, "we all know Lanigan

Beam, and if there's anybody who wants the peace of the community to vanish entirely out of sight, the responsibility's on him, and not on me."

"Mrs. Petter," said Ida Mayberry, appearing so suddenly before that good woman that she seemed to have dropped through the roof of the piazza, "do you know where Mr. Tippinggray is? I've been looking all over for him, and can't find him. He is n't in his little house, for I knocked at the door."

"Does Mrs. Christie want him?" asked Mrs. Petter, making this wild grasp at a straw.

"TEACH THE OLD HENS GOOD MANNERS."

"Oh, no," said Ida. "It is I who want him. There's a Greek sentence in this book he lent me which I am sure I have not translated properly; and as the baby is asleep now, there could n't be a better time for him to help me, if only I could find him."

Self-restraint was no longer possible with Miss Calthea Rose. A red blaze shot into her face, and without deigning to look in the direction of the creature who had just spoken, she said in the sharpest tones of contemptuous anger:

"Greek to a child's nurse! I expect next he'll teach French to the pigs."

The maid Ida lifted up her eyes from the book and fixed them on Miss Calthea.

"The best thing he could do," she quietly remarked, "would be to teach the old hens good manners"; and then she walked away with her book.

Miss Calthea sprang to her feet, and looked

as if she was going to do something; but there was nothing to do, and she sat down again. Her brow was dark, her eyes flashed, and her lips were parted, as if she was about to say something; but there was nothing to say, and she sat silent, breathing hard. It was bad enough to be as jealous as Miss Calthea was at that moment, but to be so flagrantly insulted by the object of her jealousy created in her a rage that could not be expressed in words. It was fortunate that she did not look at Mrs. Petter, for that good lady was doing her best to keep from laughing.

"Well!" she exclaimed, as soon as she could speak composedly, "this is too much. I think I must speak to Mrs. Cristie about this. Of course she can't prevent the young woman from answering back, but I think I can make her see that it is n't seemly and becoming for nurse-maids to be associating with boarders in this way."

"If you take my advice, Susan Petter," said Miss Calthea, in a voice thickened by her emotions, "you will keep your mouth shut on that subject. If your boarders choose to associate with servants, let them alone. It simply shows what sort of people they are."

Calthea Rose did not like to hear herself speak in a voice which might show how she was feeling, and as there was no use of staying there if she could not talk, she rose to leave, and, in spite of Mrs. Petter's hospitable entreaty to make a longer stay, she departed.

When her visitor was well out of sight, Mrs. Petter allowed herself to lean back in her chair and laugh quietly.

"Leave them alone indeed," she said to herself. "You may want me to do it, but I know well enough that you are not going to leave them alone, Miss Calthea Rose, and I can't say that I wonder at your state of mind, for it seems to me that this is your last chance. If you don't get Mr. Tippengray, I can't see where you are going to find another man properly older than you are."

XI.

LANIGAN BEAM.

THAT evening about eleven o'clock Walter Lodloe was sitting in his room in the tower, his feet upon the sill of the large window which looked out over the valley. He had come up to his room an hour or two before, determined not to allow the whole day to pass without his having done any work; and now, having written several pages of the story on which he was engaged, he was enjoying the approbation of his conscience, the flavor of a good cigar, and the beautiful moonlight scene which he beheld from his window.

More than this, he was thinking over the events of the day with a good deal of interest and amusement, particularly of his afternoon walk with Mr. Tippengray. He had taken a great fancy to that gentleman, who, without making any direct confidences, had given him a very fair idea of his relations with Calthea Rose. It was plain enough that he liked that very estimable person, and that he had passed many pleasant hours in her society, but that he did not at all agree with what he called her bigoted notions in regard to proprietorship in fellow-beings.

On the other hand, Lodloe was greatly delighted with Miss Calthea's manner of showing her state of mind. Quite unexpectedly they had met her in Lethbury,—to which village Mr. Tippengray had not thought she would return so soon,—and Lodloe almost laughed as he called to mind the beaming and even genial recognition that she gave to him, and which, at the same time, included effacement and extinction of his companion to the extent of being an admirable piece of dramatic art. The effect upon Lodloe had been such, that when the lady had passed he involuntarily turned to see if the Greek scholar had not slipped away just before the moment of meeting.

"When a woman tries so hard to show how little she thinks of a man," thought Lodloe, "it is a proof that she thinks a great deal of him, and I shall not be surprised —" Just then there came a tap at the window opposite the one at which he was sitting.

Now when a man in the upper room of a fairly tall tower, access to which is gained by a covered staircase the door at the bottom of which he knows he has locked, hears a tap at the window, he is likely to be startled. Lodloe was so startled that his chair nearly tipped over backward. Turning quickly, he saw a man's head and shoulders at the opposite window, the sash of which was raised. With an exclamation, Lodloe sprang to his feet. His lamp had been turned down in order that he might better enjoy the moonlight, but he could plainly see the man at the window, who now spoke.

"Hold hard," said he; "don't get excited. There's nothing out of the way. My name is Beam—Lanigan Beam. I tapped because I thought if I spoke first you might jump out of the window, being turned in that direction. May I come in?"

Lodloe made no answer; his mind did not comprehend the situation; he went to the window and looked out. The man was standing on the sharp ridge of a roof which stretched from the tower to the rear portion of the building. By reaching upward he was able to look into the window.

"Give me a hand," said the man, "and

we'll consider matters inside. This is a mighty ticklish place to stand on."

Lodloe had heard a good deal that evening about Lanigan Beam, and although he was amazed at the appearance of that individual at this time and place, he was ready and willing to make his acquaintance. Bracing himself against the window-frame, he reached out his hand, and in a few moments Mr. Beam had scrambled into the room. Lodloe turned up the wick of his lamp, and by the bright light he looked at his visitor.

He saw a man rather long as to legs, and thin as to face, and dressed in an easy-fitting suit of summer clothes.

"Take a seat," said Lodloe, "and tell me to what I owe this call."

"To your lamp," said the other, taking a chair; "it was n't burning very brightly, but still it was a light, and the only one about. I was on my way to Lethbury, but I could n't get any sort of conveyance at Romney, so I footed it, thinking I would like a moonlight walk. But by the time I got to the squirrel on the post I thought I would turn in here and stay with Stephen Petter for the night; but the house was all shut up and dark except this room, and as I knew that if I woke Stephen out of a sound sleep he'd bang me over the head with his everlasting Rockmores of Germantown, I determined to take a night's lodging without saying a word to him about it.

"There's a room back here that you can only get into by a ladder put up on the outside. I knew all about it, so I went to the ice-house and got a ladder and climbed into the room. I put my valise under my head, and prepared to take a good sleep on the floor, but in three minutes I found the place was full of wasps. I could n't stay there, you know, and I was just getting ready to go down the ladder again when I happened to look out of a window that opened on the roof, and saw you in here. I could see only the back of your head, but although it was pretty well lighted, I could n't judge very well by that what sort of person you were. But I saw you were smoking, and it struck me that a man who smokes is generally a pretty good fellow, and so I came over."

"Glad to see you," said Lodloe; "and what can I do for you?"

"Well, in the first place," said Beam, "have you any liquid ammonia? The first notice I had of the wasps in that room was this sting on my finger."

Lodloe was sorry that he did not possess anything of the kind.

"DON'T GET EXCITED."

"If I'm not mistaken," said the visitor, "there is a bottle of it on the top shelf of that closet. I have frequently occupied this room, and I remember putting some there myself. May I look for it?"

Permission being given, Mr. Beam speedily found the bottle, and assuaged the pains of his sting.

"Now, then," said he, resuming his seat, "the next favor I'll ask will be to allow me to fill my pipe, and put to you a few questions as to the way the land lies about here at present. I've been away for a year and a half, and don't know what's going on, or who's dead or alive. By the way, have you happened to hear any body speak of me?"

"I should think so," said Lodloe, laughing. "The greater part of this evening was occupied in a discussion on your life, adventures, moral character, disposition, and mental bias. There may have been some other points touched upon, but I don't recall them just now."

"Upon my word," said Lanigan Beam, putting his arms on the table, and leaning forward, "this is interesting. Who discussed me?"

"Mr. and Mrs. Petter had the most to say," answered Lodloe.

"I'm glad to hear they're alive," interpolated the other.

"And Mrs. Cristie, who knew you when her husband was alive."

"Dead, is he?" said Beam. "Very sorry to hear that. A mighty pretty woman is Mrs. Cristie."

"Miss Calthea Rose was not present," continued Lodloe, "but her opinions were quoted

very freely by the others, and sometimes com-bated."

"Calthea alive, is she?" ejaculated Beam. "Well, well, I ought to be glad to hear it, and I suppose I am. Anybody else?"

"Yes; there was Mr. Tippengray, one of the guests at the inn. There are only three of us in all. He had heard a great deal about you from Miss Rose. She seems to have been very communicative to him."

"Chums, are they?" cried Lanigan Beam. "Well, bless his soul, I say, whatever sort of man he is. Now what did they say about me?"

"It's my opinion," answered Lodloe, smiling, "that it is a very unsafe thing to tell a man what other people say about him."

Lanigan sprang to his feet, and stood, pipe in hand, before the other. "Now, sir," said he, "I have not heard your name yet—Lodloe; thank you. Now, Mr. Lodloe, I have before me the greatest chance of my life. It almost never happens that a man has an opportunity of hearing a straightforward account of what people say about him. Now if you want to do the biggest kind of favor to a fellow-being, just tell me what you heard of me to-night. You are a perfect stranger to me, and you can speak out plainly about it without having the least feeling one way or the other."

Lodloe looked at him.

"Here is a chance," he said to himself, "that seldom comes to a man; an opportunity to tell a man exactly what his friends and neighbors think about him. It's a rare experience, and I like it. I'll do it."

"Very good," said he, aloud; "if you want to see yourself as others see you, I'll turn on the lights and act as showman; but remember I have nothing to do with the painting. I have no prejudices one way or the other."

"All right," said Lanigan, reseating himself; "let the panorama move."

"About the first thing I was told," said Lodloe, "was that you were a good-hearted fellow, but the fact that your father was an Irishman had deprived your character of ballast."

"Umph," said Lanigan; "there are some people who are all ballast. I don't mind that."

"And then I heard that, although you were a wild and irresponsible youth, people generally expected that as you grew older you would gradually accumulate ballast; but instead of

that you had steadily gone downhill from the moment of your birth."

"Now, then," said Lanigan, "I suppose I have no right to ask you, but I would like very much to know who said that."

"I don't object in the least to telling you," said Lodloe; "it is fitter that you should know it than that I should know it. That was a quoted opinion of Miss Calthea Rose."

"HAVE YOU HAPPENED TO HEAR ANY BODY SPEAK OF ME?"

"Good for you," said Lanigan; "you'd be death to the members of a scandal-monger society. You would break up the business utterly."

"To this Mr. Petter remarked," said Lodloe, "that he thought in many ways you had improved very much, but he was obliged to admit that he could never think of anything that you had done which was of the least benefit to yourself or anybody else."

"Upon my word," cried Lanigan, "that's a pretty wide sweep for old Petter. I shall have to rub up his memory. He forgets that I helped him to make the plans for this house. And what did Mrs. Cristie say about me?"

"She said she thought it was a great pity that you did not apply yourself to something or other."

"She is right there," cried Beam, "and, by George, I'll apply myself to her. However, I don't know about that," he continued. "What else did Calthea say?"

"One remark was that having proved false to every friend you had here you had no right to return."

"That means," said Mr. Beam, "that having promised at least five times to marry her, I never did it once."

"Were you really engaged to her?" asked Lodloe.

"Oh, yes," said the other; "it seems to me as if I had always been engaged to her. Born that way. Sort of an ailment you get used to, like squinting. When I was a youngster Calthea was a mighty pretty girl, a good deal my senior, of course, or I would n't have cared for her. As she grew older she grew prettier, and I was more and more in love with her. We used to have quarrels, but they did n't make much difference, for after every one of them we engaged ourselves again, and all went on as before. But the time came when Calthea kept on being older than I was, and did n't keep on being pretty and agreeable. Then I began to weaken about the marriage altar and all that sort of thing, but for all that I would have been perfectly willing to stay engaged to her for the rest of my life if she had wished it, but one day she got jealous, kicked up a tremendous row, and away I went."

"Well," said Lodloe, "she must have considered that the best thing you could do for her, for Mrs. Petter said that she had heard her declare dozens of times that from her very youth you had hung like a millstone about her neck, and blighted her every prospect, and that your return here was like one of the seven plagues of Egypt."

"Mixed, but severe," said Mr. Beam. "Did anybody say any good of me?"

"Yes," answered Lodloe; "Mrs. Christie said you were an obliging fellow, although very apt to forget what you had promised to do. Mr. Petter said that you had a very friendly disposition, although he was obliged to admit the truth of his wife's remark that said disposition would have been more agreeable to your friends if you had been as willing to do things for them as you were to have them do things for you. And Mrs. Petter on her own motion summed up your character by saying, that if you had not been so regardless of the welfare and wishes of others; so totally given up to self-gratification; so ignorant of all kinds of business, and so unwilling to learn; so extravagant in your habits, and so utterly conscienceless in regard to your debts; so neglectful of your promises and your duty; so heretical in your opinions, political and religious, and such a dreadful backslider from everything that you had promised to be when a baby, you would be a very nice sort of fellow, whom she would like to see come into the house."

"Well," said Lanigan Beam, leaning back in his chair, "that's all of my bright side, is it?"

"Not quite," said Lodloe; "Mr. Tippet-

gray declared that you are the first man he ever heard of who did not possess a single good point; that you must be very interesting, and that he would like to know you."

"Noble Tippetgray!" said Mr. Beam. "And he's the man who is chumming it with Calthea?"

"Not at present," said Lodloe; "she is jealous, and does n't speak to him."

Mr. Beam let his head drop on his breast, his arms hung down by his side, and he sank into his chair, as if his spine had come unhinged.

"There goes the last prop from under me," he said. "If Calthea had a man in tow I would n't be afraid of her, but now—well, no matter. If you will let me take that bottle of ammonia with me,—I suppose, by rights, it now belongs to the house,—I'll go back to that room and fight it out with the wasps. As I have n't any good points, they'll be able to put some into me, I'll wager."

Lodloe laughed. "You shall not go there," he said; "I have more bed-covering than I want, and an extra pillow, and if you can make yourself comfortable on that lounge you are welcome to stay here."

"Sir," said Lanigan Beam, rising, "I accept your offer, and if it were not that by so doing I would destroy the rare symmetry of my character, I would express my gratitude. And now I will go down your stairs, and up my ladder, and get my valise."

XII.

LANIGAN CHANGES HIS CRAVAT.

EARLY the next morning, without disturbing the sleep of Walter Lodloe, Lanigan Beam descended from the tower, carrying his valise. His face wore that air of gravity which sometimes follows an early morning hour of earnest reflection, and he had substituted a black cravat for the blue one with white spots that he had worn on his arrival.

Walking out towards the barn he met Mr. Petter, who was one of the earliest risers on the place.

The greeting given him by the landlord of the Squirrel Inn was a mixture of surprise, cordiality, and annoyance.

"Lanigan Beam!" he exclaimed. "Why I thought—"

"Of course you did; I understand," said the other, extending his hand with a dignified superiority to momentary excitement in others. "You thought I would arrive at Lethbury in a day or two, and had no idea of seeing me here. You have reason, but I have changed my plans. I left New York earlier than I intended, and I am not going to Lethbury at

all. At least not to the hotel there. I greatly prefer this house."

A shade of decided trouble came over Mr. Petter's face.

"Now, Lanigan," he said, "that will not do

"Now then," said Mr. Beam, "I know you are not the man to allow trifles to stand in the way of important movements. I am here for a purpose, a great purpose, with which you will be in entire sympathy. I will say at once, frankly and openly, that my object is the improvement of Lethbury. I have a project which—"

"Now, now, now!" exclaimed Mr. Petter, with much irritation, "I don't want to hear anything more of any of your projects; I know all about them. They all begin with a demand for money from your friends, and that is the end of the project and the money."

"Stephen Petter," said the other, "you are not looking at my character as I told you to look at it. Every cent of the capital required for my operations I will contribute myself. No one will be allowed to subscribe any money whatever. This, you see, is exactly the opposite of what used to be the case; and when I tell you that the success of my plan will improve the business of Lethbury, elevate its moral and intellectual standard, exercise an ennobling and purifying influence upon the tone of its society, and

give an almost incredible impetus to faith, hope, and charity in its moral atmosphere,—and all that without anybody's being asked to give a copper,—I know you will agree with me that a mere matter of residence should not be allowed to block this great work."

Since he had been assured that he was not to be asked to contribute money, Mr. Petter's face had shown relief and interest; but now he shook his head.

"This is my season," he said, "and I have my rules."

Lanigan Beam laid his hand upon the shoulder of his companion.

"Petter," said he, "I don't ask you to infract your rules. That would be against my every principle. I do not know the Rockmores of Germantown, but if it were necessary I would immediately go and find them, and make their acquaintance—I should have no difficulty in doing it, I assure you, but it is not necessary. I staid last night with Mr. Lodloe, who occupies the top room of your tower. Don't jump out of your boots. I went to him because there was a light in his room and the rest of the house was dark, and he explained to me the Rockmorial reason why he occupies that room while the rest of your house is nearly empty. Now you can do the same thing for me. Let

"I AM HERE FOR A PURPOSE."

at all; of course I don't want to be hard on you, and I never was, but my season is commenced, I have my guests, my rules are in full force, and I cannot permit you to come here and disarrange my arrangements. If for once, Lanigan, you will take the trouble to think, you will see that for yourself."

"Mr. Petter," said the younger man, setting his valise upon the ground, "I have no desire to disarrange them; on the contrary, I would stamp them with fixity. And before we go any further I beg that you will be kind enough not to call me by my Christian name, and to endeavor to produce in yourself the conviction that since you last saw me I have been entirely rearranged and reconstructed. In order to do this, you have only to think of me as you used to think, and then exactly reverse your opinion. In this way you will get a true view of my present character. It does not suit me to do things partially, or by degrees, and I am now exactly the opposite of what I used to be. By keeping this in mind any one who knew me before may consider himself or herself perfectly acquainted with me now."

Stephen Petter looked at him doubtfully.

"Of course," he said, "I shall be very glad—and so will Mrs. Petter—to find that you have reformed, but as to your coming here—"

me have that upper room with no stairway to it; give me the use of a ladder, and I shall be perfectly satisfied."

"But the room's not furnished," said Mr. Petter.

"Oh, we can easily get over that little difficulty," replied Mr. Beam; "whatever furniture may be needed can easily be put in through the window. If there are any wasps up there I can fumigate them out. Now we call that settled, don't we? None of your rules broken, Lethbury regenerated, and nothing for you to do but look on and profit."

Mr. Petter gazed reflectively upon the ground.

"There can be no doubt," said he, "that Lethbury is in a stagnant condition, and if that condition could be improved, it would be for the benefit of us all; and considering, furthermore, that if your project—which you have not yet explained to me—should be unsuccessful, no one but yourself will lose any money, I see no reason why I should interfere with your showing the people of this neighborhood that your character has been reconstructed. But if you should lodge in that room, it would make a very odd condition of things.

I should then have but three male guests, and not one of them literally living in my house."

"Ah, my good friend Petter," said Lanigan, taking up his valise, "you should know there is luck in odd conditions, as well as in odd numbers, and everything will turn out right, you may bet on that. Hello," he continued, stepping back a little, "who is that very pretty girl with a book in her hand? That cannot be Mrs. Cristie."

"Oh, no," said Mr. Petter, "that is her maid, who takes care of her child. I think the young woman has come out to study before beginning her daily duties."

"Upon my word," said Lanigan Beam, attentively regarding Miss Ida Mayberry as she daintily made her way across the dewy lawn to a rustic seat under a tree. And then suddenly turning to Mr. Petter, he said:

"Look you, my good Stephen, can't you let me go in somewhere and furbish myself up a little before breakfast?"

And having been shown into a room on the ground floor, Mr. Beam immediately proceeded to take off his black cravat and to replace it by the blue one with white spots.

(To be continued.)

A SUMMER SONG.

AH! whither, sweet one, art thou fled —
My heart of May?
In vain pursuing I am led
A weary way.

The brook is dry; its silver throat
Rills song no more;
And not a linnet lifts a note
Along the shore.

Wilt thou return?—I ask the night,
I ask the morn.
The doubt that wounds the old delight
Is like a thorn.

Oh, come! I lean my eager ear
For laughter's ring;
Bring back the love-light cool and clear —
Bring back my Spring!

THE FAITH DOCTOR.¹

BY EDWARD EGGLESTON,

Author of "Roxy," "The Circuit Rider," "The Hoosier Schoolmaster," "The Graysons," etc.

XVII.

A FAITH CURE.

THE next day the cold wave had begun to let go a little, and there were omens of a coming storm. The forenoon Phillida gave to domestic industry of one sort and another, but in the afternoon she put on her overshoes against icy pavements, and set out for a visit to Wilhelmina Schulenberg, remembering how lonesome the invalid must be in wintry weather. There were few loiterers on the sidewalks on such a day, but Phillida was pretty sure of a recognition from somebody by the time she reached Avenue A, for her sympathetic kindness had made friends for her beyond those with whom she came into immediate contact as a Sunday-school teacher.

"O Miss Callender," said a thinly clad girl of thirteen, with chattering teeth, and arms folded against her body for warmth, rocking from one foot to the other, as she stood in the door of a tenement house, "this is hard weather for poor folks, ain't it?" And then, unable longer to face the penetrating rawness of the east wind, she turned and ran up the stairs.

Phillida's meditations as she walked were occupied with what Mrs. Frankland had said the day before. She reflected that if she herself only possessed the necessary faith she might bring healing to many suffering people. Why not to Wilhelmina? With this thought there came a drawing back—that instinctive resistance of human nature to anything out of the conventional and mediocre; a resistance that in a time of excitement often saves us from absurdity at the expense of reducing us to commonplace. But in Phillida this conservatism was counteracted by a quick imagination in alliance with a passion for moral excellence, both warmed by the fire of youth; and in all ventures youth counts for much.

"Dat is coot; you gomes to see Mina wunst more already," said Mrs. Schulenberg, whom Phillida encountered on the second flight of

stairs, descending with a market-basket on her arm. She was not the strong-framed peasant, but of lighter build and somewhat finer fiber than the average immigrant, and her dark hair and eyes seemed to point to South Germany as her place of origin.

"Wilhelmina she so badly veels to-day," added Mrs. Schulenberg. "I don' know,"—and she shook her head ominously,— "I was mos' afraid to leef her all py herself already. She is with bein' zick zo tired. She dalk dreadful dis mornin' already; I don' know." And the mother went on down the stairs shaking her head dolefully, while Phillida climbed up to the Schulenberg apartment and entered without knocking, going straight over to the couch where the emaciated girl lay, and kissing her.

Wilhelmina embraced her while Phillida pushed back the hair from the pale, hard forehead with something like a shudder, for it was only skin and skull. In the presence of sympathy Wilhelmina's mood of melancholy desperation relaxed, and she began to shed tears.

"O Miss Callender, you have from black thoughts saved me to-day," she said in a sobbing voice, speaking with a slight German accent. "If I could only die. Here I drag down the whole family already. I make them sorry. Poor Rudolph, he might be somebody if away off he would go wunst; but no, he will not leave me. It is such a nice girl he love; I can see that he love her. But he will say nothing at all. He feel so he must not anyway leave his poor sister; and I hate myself and my life that for all my family is unfortunate. Black thoughts will come. If, now, I was only dead; if I could only find some way myself to put out of the way wunst, for Rudolph it would be better, and after a while the house would not any more so sorry be. Last night I thought much about it; but when falling asleep I saw you plain come in the door and shake your head, and I say, Miss Callender think it wicked. She will not let me. But I am so wicked and unfortunate."

Here the frail form was shaken by hysterical weeping that cut off speech. Phillida shed tears also, and one of them dropped on the emaciated hand of Wilhelmina. Phillida

quickly wiped it away with her handkerchief, but another took its place.

"Let it be, Miss Callender," sobbed Wilhelmina; "it will surely make me not so wicked."

She looked up wistfully at Phillida and essayed to speak; then she turned her eyes away, while she said:

"If now, Miss Callender, you would—but may be you will think that it is wicked also."

"Speak freely, dear," said Phillida, softly; "it will do you good to tell me all—all that is in your heart."

"If you would only pray that I might die, then it would be granted already, maybe. I am such a curse, a dreadful curse, to this house."

"No, no; you must n't say that. Your sickness is a great misfortune to your family, but it is not your fault. It is a greater misfortune to you. Why should you pray to die? Why not pray to get well?"

"That is too hard, Miss Callender. If now I had but a little while been sick. But I am so long. I cannot ever get well. Oh, the medicines I have took, the pills and the sarsaparillas and the medicine of the German doctor! And then the American doctor he burnt my back. No; I can't get well anymore. It is better as I die. Pray that I die. Will you not?"

"But if God can make you die he can make you well. One is no harder than the other for him."

"No, no; not if I was but a little while sick. But you see it is years since I was sick."

This illogical ground of skepticism Phillida set herself to combat. She read from Wilhelmina's sheepskin-bound Testament, printed in parallel columns in English and German, the story of the miracle at the Pool of Bethesda, the story of the woman that touched the hem of the garment of Jesus, and of other cures told in the New Testament with a pathos and dignity not to be found in similar modern recitals.

Then Phillida, her soul full of hope, talked to Mina of the power of faith, going over the ground traversed by Mrs. Frankland. She read the eleventh of Hebrews, and her face was transformed by the earnestness of her own belief as she advanced. Call it mesmerism, or what you will, she achieved this by degrees, that Wilhelmina thought as she thought, and felt as she felt. The poor girl with shaken nerves and enfeebled vitality saw a vision of health. She watched Phillida closely, and listened eagerly to her words, for to her they were words of life.

"Now, Mina, if you believe, if you have faith as a grain of mustard seed, all things are possible."

The girl closed her eyes a moment, then she opened them with her face radiant.

"Miss Callender, I do believe."

Already her face was changing under the powerful influence of the newly awakened hope. She folded her hands peacefully, and closed her eyes, whispering:

"Pray, Miss Callender; pray!"

Phillida laid down the Bible and solemnly knelt by the invalid, taking hold of one of her hands. It would have been impossible to listen to the prayer of one so passionately sincere and so believingly devout without falling into sympathy with it. To the bed-ridden and long-despairing Wilhelmina it made God seem something other than she had ever thought him. An hour before she could have believed that God might be persuaded to take her life in answer to prayer, but not that he could be brought to restore her. The moment that Phillida began to pray, a new God appeared to her mind—Phillida's God. Wilhelmina followed the action of Phillida's mind as a hypnotized subject does that of the dominant agent: as Phillida believed, so she believed; Phillida's confidence became hers, and the weak nerves tingled all the way from the nerve-centers with new life.

"Now, Wilhelmina," said Phillida at length, slowly rising from her knees and looking steadily into her eyes, "the good Lord will make you whole. Rise up and sit upon the bed, believing with all your heart."

In a sort of ecstasy the invalid set to work to obey. There was a hideous trick of legerdemain in the last generation, by which an encoffined skeleton was made to struggle to its feet. Something like this took place as Mina's feeble arms were brought into the most violent effort to assist her to rise. But a powerful emotion, a tremendous hope, stimulated the languid nerves; the almost disused muscles were galvanized into power; and Wilhelmina succeeded at length in sitting upright without support for the first time in years. When she perceived this actually accomplished she cried out: "O God! I am getting well!"

Wilhelmina's mother had come to the top of the stairs just as Phillida had begun to pray. She paused without the door and listened to the prayer and to what followed. She now burst into the room to see her daughter sitting up on the side of her couch; and then there were embraces and tears, and ejaculations of praise to God in German and in broken English.

"Sit there, Mina, and believe with all your heart," said Phillida, who was exteriorly the calmest of the three; "I will come back soon."

Wilhelmina did as she was bidden. The shock of excitement thus prolonged was overcoming the sluggishness of her nerves. The mother could not refrain from calling in a neighbor who was passing by the open door, and

the news of Mina's partial restoration spread through the building. When Phillida got back from the Diet Kitchen with some savory food, the doorway was blocked; but the people stood out of her way with as much awe as they would had she worn an aureole, and she passed in and put the food before Wilhelmina, who ate with a relish she hardly remembered to have known before. The spectators dropped back into the passageway, and Phillida gently closed the door.

"Now, Wilhelmina, lie down and rest. Tomorrow you will walk a little. Keep on believing with all your heart."

Having seen the patient, who was fatigued with unwonted exertion, sleeping quietly, Phillida returned home. She said nothing of her experiences of the day, but Millard, who called in the evening, found her more abstracted and less satisfactory than ever. For her mind continually reverted to her patient.

XVIII.

FAITH-DOCTOR AND LOVER.

THE next day, though a great snow-storm had burst upon the city before noon, Phillida made haste after luncheon to work her way first to the Diet Kitchen and then to the Schulenberg tenement. When she got within the shelter of the doorway of the tenement house she was well-nigh exhausted, and it was half a minute before she could begin the arduous climbing of the stairs.

"I thought you would not come," said Wilhelmina with something like a cry of joy. "I have found it hard to keep on believing, but still I have believed and prayed. I was afraid if till to-morrow you waited the black thoughts would come back again. Do you think I can sit up wunst more already?"

"If you have faith; if you believe."

Under less excitement than that of the day before, Mina found it hard to get up; but at length she succeeded. Then she ate the appetizing food that Phillida set before her. Meantime the mother, deeply affected, took her market-basket and went out, lest somehow her presence should be a drawback to her daughter's recovery.

While the feeble Wilhelmina was eating, Phillida drew the only fairly comfortable chair in the room near to the stove, and, taking from a bed some covering, she spread it over the back and seat of the chair. Then, when the meal was completed, she read from the Acts of the Apostles of the man healed at the gate of the temple by Simon Peter. With the book open in her hand, as she sat, she offered a brief fervent prayer.

"Now, Wilhelmina, doubt nothing," she

said. "In the name of Jesus of Nazareth, rise up and walk!"

The invalid had again caught the infection of Phillida's faith, and with a strong effort, helping herself by putting her hand on Phillida's shoulder, she brought herself at length to her feet, where she stood a moment, tottering as though about to fall.

"Walk to the chair, dear, nothing wavering," commanded Phillida, and Mina, with much trembling, let go of Phillida's shoulder, and with sadly unsteady steps tottered forward far enough to lay hold of the back of the chair, and at length succeeded, with much ado, in sitting down without assistance. For years she had believed herself forever beyond hope of taking a step. She leaned back against the pillow placed behind her by Phillida, and wept for very joy.

"But, Miss Callender," she said after a while, "the man you read about in the Bible was made all well at once, and he walked and leaped; but I —"

"Perhaps our faith is n't strong enough," said Phillida. "Maybe it is better for us that you should get well slowly, like the man that Jesus cured of blindness, who, when he first saw men, thought they looked like walking trees. Let us be thankful for what we have, and not complain."

In a few weeks Wilhelmina's mental stimulation and graduated physical exercise had made her able to sit up nearly all day, to walk feebly about the house, and even to render some assistance in such affairs as could be attended to while sitting. The recovery, though it went no farther, was remarkable enough to attract much attention, and the fame of it spread far and wide among the people in the eastern avenues and those connected with the Mission.

This new development of Phillida's life increased her isolation. She could not speak to her family about her faith-cures, nor to Mrs. Hilbrough, and she did not like to confide even in Mrs. Frankland, who would, she felt sure, make too much of the matter. Most of all, it was not in her power to bring herself to say anything to Millard about it. The latter felt, during the three or four weeks that followed the treatment of Wilhelmina, that the veil between him and the inner life of Phillida was growing more opaque. He found no ground to quarrel with Phillida; she was cordial, affectionate, and dutiful towards him, but he felt, with a quickness of intuition characteristic of him, that there was some new cause of constraint between them.

"Phillida," he said one evening, a month after Phillida's work as a faith-doctor had begun, "I wish you would tell me more about your mission work."

"I don't like to speak of that," she replied. "It is too much like boasting of what I am doing." She had no sooner said this than she regretted it; her fierce conscience rose up and charged her with uncandid speech. But how could she be candid?

"I don't like to think," said Millard, "that so large a part of your life—a part that lies so near to your heart—should be shut out from me. I can't do your kind of work. But I can admire it. Won't you tell me about it?"

Phyllida felt a keen pang. Had it been a question of her ordinary work in the months that were past she might easily have spoken of it. But this faith-healing would be dangerous ground with Millard. She knew in her heart that it would be better to tell him frankly about it, and face the result. But with him there she could not get courage to bring on an immediate conflict between the affection that was so dear and the work that was so sacred to her.

"Charley," she said slowly, holding on to her left hand as though for safety, "I'm afraid I was not very—very candid in the answer I gave you just now."

"Oh, don't say anything, or tell me anything, dear, that gives you pain," he said with quick delicacy; "and something about this does pain you."

Phyllida spoke now in a lower tone, looking down at her hands as she said, with evident effort: "Because you are so good, I must try to be honest with you. There are reasons why I hesitate to tell—to tell—you all about what I am doing. At least this evening, though I know I ought to, and I will—I will—if you insist on it."

"No, dear; no. I will not hear it now."

"But I will tell you all some time. It's nothing *very* bad, Charley. At least I don't think it is."

"It could n't be, I'm sure. Nothing bad could exist about you"; and he took her hand in his. "Don't say any more to-night. You are nervous and tired. But some other time, when you feel like it, speak freely. It won't do for us not to open our hearts and lives to one another. If we fail to live openly and truthfully, our little boat will go ashore, Phyllida dear—will be wrecked or stranded before we know it."

His voice was full of pleading. How could she refuse to tell him all? But by all the love she felt for him, sitting there in front of her, with his left hand on his knee, looking in her face, and speaking in such an honest, manly way, she was restrained from exposing to him a phase of her life that would seem folly to him while it was a very holy of holies to her. The alternative was cruel.

"Another time, Charley, I mean to tell you all," she said; and she knew when she said it that procrastination would not better the matter, and in the silence that ensued she was just about to change her resolve and unfold the whole matter at once.

But Millard said: "Don't trouble yourself. I'm sorry I have hurt you. Remember that I trust you implicitly. If you feel a delicacy in speaking to me about anything, let it go."

The conversation after this turned on indifferent matters; but it remained constrained, and Millard took his leave early.

XIX.

PROOF POSITIVE.

THE more Millard thought of the mysterious reserve of Phyllida, the more he was disturbed by it, and the next Sunday but one he set out at an earlier hour than usual to go to Avenue C, not this time with a comfortable feeling that his visit would be a source of cheer to his aunt, but rather hoping that her quiet spirit might somehow relieve the soreness of his heart. It chanced that on this fine winter Sunday he found her alone, except for the one-year-old little girl.

"I let the children all go to Sunday-school," she said, "except baby, and father has gone to his meeting, you know."

"His meeting? I did not know that he had any," said Millard.

"W'y, yes, Charley; I thought you knew. Henry always had peculiar views," she said, laughing gently, as was her wont, at her husband's oddities. "He has especially disliked preachers and doctors. Lately he has got the notion that the churches did not believe the Bible literally enough. There were two Swedes and one Swiss in his shop who agreed with him. From reading the Bible in their way and reading other books and papers they have adopted what is called Christian Science. They have found some other men and women who believe as they do, and a kind of a Christian Science woman doctor who talks to them a little,—a good enough woman in her way, I suppose,—and they think that by faith, or rather by declaring that there is no such thing as a real disease, and believing themselves well, they can cure all diseases."

"All except old age and hunger?" queried Millard.

The aunt smiled, and went on. "But father and his woman doctor or preacher don't agree with your Miss Callender. They say her cures are all right as far as they go, but that she is only a babe, unable to take strong meat. The Christian Science woman in Fourteenth street, now, they say, knows all about it, and works

her cures scientifically, and not blindly as Miss Callender does."

This allusion to cures by Phillida set Millard into a whirl of feeling. That she had been doing something calculated to make her the subject of talk brought a rush of indignant feeling, but all his training as a man of society and as a man of business inclined him to a prudent silence under excitement. He turned his derby hat around and around, examining the crown by touch, and then, reversing it, he scrutinized the address of the hatter who did not make it. Though he had come all the way to Avenue C to make a confidante of his aunt, he now found it impossible to do so. She had rejoiced so much in his betrothal to her friend, how could he let her see how far apart he and Phillida had drifted? For some minutes he managed to talk with her about her own family matters, and then turned back to Phillida again.

"Tell me, Aunt Hannah, all you know about Miss Callender's cures. I don't like to ask her, because she and I disagree so widely on some things that we do not like to talk about them."

His aunt saw that Charley was profoundly disturbed. She therefore began with some caution, as treading on unknown ground, in talking with him about Phillida.

"I don't know what to think about these things, Charley. But in anything I say you must understand that I love Miss Callender almost as much as you do, and if anybody can cure by faith she can. In fact, she has had wonderful success in some cures. Besides, she's no money-maker, like the woman doctor in Fourteenth street, who takes pay for praying over you, and rubbing your head, maybe. You know about the cure of Wilhelmina Schulenberg, of course?"

"No; not fully. We have n't liked to talk about it. Wilhelmina is the poor creature that has been in bed so long."

This mere fencing was to cover the fact that Millard had not heard anything of the miracle in Wilhelmina's case. But seeing his aunt look at him inquiringly, he added:

"Is she quite cured, do you think — this Miss Schulenberg?"

"No; but she can sit up and walk about. She got better day after day under Miss Callender's praying, but lately, I think, she is at a standstill. Well, that was the first, and it made a great talk. And I don't see but that it is very remarkable. Everybody in the tenement house was wild about it, and Miss Callender soon came to be pointed at by the children on the street as 'the woman doctor that can make you well by praying over you.' Then there was the wife of the crockery-store man in Avenue A. She had hysterical fits, or

something of the sort, and she got well after Miss Callender visited her three or four times. And another woman thought her arm was paralyzed, but Miss Callender made her believe, and she got so she could use it. But old Mr. Greenlander, the picture-frame maker in Twentieth street, did n't get any better. In fact, he never pretended to believe that he would."

"What was the matter with him?" asked Millard, his lips compressed and his brows contracted.

"Oh, he had a cataract over his eye. He's gone up to the Eye and Ear Hospital to have it taken off. I don't suppose faith could be expected to remove that."

"It does n't seem to work in surgical cases," said Millard.

"But several people with nervous troubles and kind of breakdowns have got better or got well, and naturally they are sounding the praises of Miss Callender's faith," added his aunt.

"Do you think Phillida likes all this talk about her?"

"No. This talk about her is like hot coals to her feet. She suffers dreadfully. She said last Sunday that she wondered if Christ did not shrink from the talk of the crowds that followed him more than he did from crucifixion itself. She is wonderful, and I don't wonder the people believe that she can work miracles. If anybody can in these days, she is the one."

Millard said nothing for a time; he picked at the lining of his hat, and then put it down on the table and looked out of the window. His irritation against Phillida had by this time turned into affectionate pity for herself-imposed suffering — a pity rendered bitter by his inability to relieve her.

"Do you think that Phillida begins to suspect that perhaps she has made a mistake?" he asked after a while.

"No. I'm not so sure she has. No doctor cures in all cases, and even Christ could n't heal the people in Nazareth who had n't much faith."

"She will make herself a byword in the streets," said Millard in a tone that revealed to his aunt his shame and anguish.

"Charley," said Mrs. Martin, "don't let yourself worry too much about Miss Callender. She is young yet. She may be wrong or she may be right. I don't say but she goes too far. She's a house plant, you know. She has seen very little of the world. If she was like other girls she would just take up with the ways of other people and not make a stir. But she has set out to do what she thinks is right at all hazards. Presently she will get her lesson, and some of her oddities will disappear, but she'll never be just like common folks. Mind my words,

Charley, she's got the making of a splendid woman if you'll only give her time to get ripe."

"I believe that with all my heart," said Millard, with a sigh.

"I tell you, Charley, I do believe that her prayers have a great effect, for the Bible teaches that. Besides, she don't talk any of the nonsense of father's Christian Science woman. I can understand what Phillida's about. But Miss what's-her-name, in Fourteenth street, can't explain to save her life, so's you can understand, how she cures people, or what she's about, except to earn money in some way easier than hard work. There comes your uncle, loaded to the muzzle for a dispute," said Aunt Hannah, laughing mischievously as she heard her husband's step on the stairs.

Uncle Martin greeted Charley with zest. It was no fun to talk to his wife, who never could be drawn into a discussion, but who held her husband's vagaries in check as far as possible by little touches of gentle ridicule. But Mr. Martin was sure that he could overwhelm Charley Millard, even though he might not convince him. So when he had said, "How-are-yeh, and glad to see yeh, Charley, and hope yer well, and how's things with you?" he sat down, and presently opened his battery.

"You see, Charley, our Miss Bowyer, the Christian Science healer, is well-posted about medicine and the Bible. She says that the world is just about to change. Sin and misery are at the bottom of sickness, and all are going to be done away with by spirit power. God and the angel world are rolling away the rock from the sepulchre, and the sleeping spirit of man is coming forth. People are getting more susceptible to magnetic and psy—psy-co-what-you-may-call-it influences. This is bringing out new diseases that the old doctors are only able to look at with dumb amazement."

Here Uncle Martin turned his thumbs outward with a flourish, and the air of a lad who has solved a problem on a blackboard. At the same time he dropped his head forward and gazed at Charley, who was not even amused.

"What are her proofs?" demanded Millard, wearily.

"Proofs?" said Uncle Martin, with a sniff, as he reared his head again. "Proofs a plenty. You just come around and hear her explain once about the vermic, — I can't say the word, — the twistifying motion of the stomach and what happens when the nerve-force gets a set-back and this motion kind of winds itself upwards instead of downwards, and the nerve-force all flies to the head. Proofs?" Here Uncle Martin paused, ill at ease. "Just notice the cases. The proof is in the trying of it. The cures are wonderful. You first get the patient

into a state where you can make him think as you do. Then you will that he shall forget all about his diseases. You make him feel well, and you've done it."

"I suppose you could cure him by forgetfulness easily enough. I saw an old soldier with one leg yesterday; he was drunk in the street. And he had forgotten entirely that one leg was gone. But he did n't seem to walk any better."

"That don't count, Charley, and you're only making fun. You see there is a philosophy in this, and you ought to hear it from somebody that can explain it."

"I'd like to find somebody who could," said Charley.

"Well, now, how's this? Miss Bowyer — she's a kind of a preacher as well as a doctor — she says that God is good, and therefore he could n't create evil. You see? Well, now, God created everything that is, so there cannot be any evil. At least it can't have any real, independent — what-you-may-call-it existence. You see, Charley?"

"Yes; what of it?"

"Well, then, sickness and sin are evil. But this argument proves that they don't really exist at all. They're only magic-lantern shadows, so to speak. You see? Convince the patient that he is well, and he *is* well." Here Uncle Martin, having pointed out the easy road to universal health, looked in solemn triumph from under his brows.

"Yes," said Millard, "that's just an awfully good scheme. But if you work your argument backwards it will prove that as evil exists there is n't any good God. But if it's true that sin and disease have no real existence, we'll do away with hanging and electrocution, as they call it, and just send for Miss Bowyer to convince a murderer that murder is an evil, and so it can't have any real independent existence in a universe made by a good God."

"Well, Charley, you make fun of serious things. You might as well make fun of the miracles in the Bible."

"Now," said Millard, "are the cures wrought by Christian Science miracles, or are they founded on philosophy?"

"They're both, Charley. It's what they call the psy-co-what-you-may-call-it mode of cure. But it's all the same as the miracles of the Bible," said Uncle Martin.

"Oh, it is?" said Millard, gaily, for this tilt had raised his spirits. "Now the miracles in the Bible are straightout miracles. Nobody went around in that day to explain the vermicular motion of the stomach or the upward action of nerve-force, or the psychopathic value of animal magnetism. Some of the Bible miracles would stump a body to believe, if they

were anywhere else but in the Bible; but you just believe in them as miracles by walking right straight up to them, looking the difficulty in the eye, and taking them as they are because you ought to." Here Charley saw his aunt laughing gently at his frank way of stating the processes of his own mind. Smiling in response, he added: "You believe them, or at least I do, because I can't have my religion without them. But your Christian psychopaths bring a lot of talk about a science, and they don't seem to know just whether God is working the miracle or they are doing it by magnetism, or mind-cure, or psychopathy, or whether the disease is n't a sort of plaguey humbug anyhow, and the patient a fool who has to be un deceived."

"W'y, you see, Charley, we know more nowadays, and we understand all about somnambulism and hyp-what-you-may-call-it, and we understand just how the miracles in the Bible were worked. God works by law—don't you see?"

"The apostles did not seem to understand it?" asked Charley.

"No; they were mere faith-doctors, like Miss Callender, for instance, doing their works in a blind sort of way."

"The apostles will be mere rushlights when you get your Christian Science well a-going," said Charley, seriously. Then he rose to leave, having no heart to await the return of the children.

"Of course," said Uncle Martin, "the world is undergoing a change, Charley. A great change. Selfishness and disease shall vanish away, and the truth of science and Christianity prevail." Uncle Martin was now standing, and swinging his hands horizontally in outward gestures, with his elbows against his sides.

"Well, I wish to goodness there was some chance of realizing your hopes," said Charley, conciliatorily. "I must go. Good-by, Uncle Martin; good-by, Aunt Hannah."

Uncle Martin said good-by, and come again, Charley, and always glad to see you, you know, and good luck to you. And Millard went down the stairs and bent his steps homeward. As the exhilaration produced by his baiting of Uncle Martin's philosophy died away, his heart sank with sorrowful thoughts of Phillida and her sufferings, and with indignant and mortifying thoughts of how she would inevitably be associated in people's minds with mercenary quacks and disciples of a sham science.

He would go to see her at once. The defeat of Uncle Martin had given him courage. He would turn the same battery on Phillida. No; not the same. He could not ridicule her. She was never quite ridiculous. Her plane of motive was so high that his banter would be a

desecration. It was not in his heart to add to the asperity of her martyrdom by any light words. But perhaps he could find some way to bring her to a more reasonable course.

It was distinctly out of his way to cross Tompkins Square again, but in his present mood there was a satisfaction to him in taking a turn through the square, which was associated in his mind with a time when his dawning affection for Phillida was dimmed by no clouds of separation. Excitement pushed him forward and a fine figure he was as he strode forward with eager and elastic steps, his head erect and his little cane balanced in his fingers. In the middle of the square his meditation was cut short in a way most unwelcome in his present frame of mind.

"It is Mr. Millard, is n't it?" he heard some one say, and, turning, he saw before him Wilhelmina Schulenberg, not now seated helpless in the chair he had given her, but hanging on the arm of her faithful Rudolph.

"How do you do, Miss Schulenberg?" said Millard, examining her with curiosity.

"You see I am able to walk wunst again," she said. "It is to Miss Callender and her prayers that I owe it already."

"But you are not quite strong," said Millard. "Do you get better?"

"Not so much now. It is my faith is weak. If I only could believe already, it would allow me to be possible, Mr. Millard. But it is something to walk on my feet, is n't it, Mr. Millard?"

"Indeed it is, Miss Schulenberg. It must make your good brother glad."

Rudolph received this polite indirect compliment a little foolishly, but appreciation from a fine gentleman did him good, and after Charley had gone he was profuse in his praises of "Miss Callender's man," as he called him.

XX.

DIVISIONS.

MILLARD went no further through the square but turned toward Tenth street, and through that to Second Avenue, and so uptownward. But how should he argue with Phillida? He had seen an indisputable example of the virtue of her prayers. Though he could not believe in the miraculous character of the cure, how should he explain it? That Wilhelmina had been shamming was incredible, that her ailments were not imaginary was proven by the fact of her recovery being but partial. To deny the abstract possibility of such a cure seemed illogical from his own standpoint. Even the tepid rector of St. Matthias had occasionally homilized in a vague way about the efficacy of faith and the power of prayer, but he

seemed to think that this potency was for the most part a matter of ancient history, for his illustrations were rarely drawn from anything more modern than the lives of the Church fathers, and of the female relatives of the Church fathers, such as Saint Monica. Millard could not see any ground on which he could deny the reality of the miracle in the Schulenberg case, but his common sense was that of a man of worldly experience, a common sense which stubbornly refuses to believe in the phenomenal or extraordinary, even when unable to formulate a single reason for incredulity.

After an internal debate he decided not to call on Phillida this afternoon. It might lead to a scene, a scene might bring on a catastrophe. But, as fortune would have it, Phillida was on her return from the Mission, and her path coincided with his, so that he encountered her in Tenth street. He walked home with her, asking after her health and talking commonplaces to avoid conversation. He went in—there was no easy way to avoid it, had he desired. She set him a chair, and drew up the shades, and then took her seat near him.

"I've been at Aunt Martin's to-day," he said.

"Have you?" she asked with a sort of trepidation in her voice.

"Yes." Then after a pause he edged up to what he wished to say by adding: "I had a curious talk with Uncle Martin, who has got his head full of the greatest jumble of scientific terms which he cannot remember, and nonsense about what he calls Christian Science. He says he learned it from Miss Bowyer, a Christian Science talker. Do you know her?"

"No; I have only heard of her from Mr. Martin, and I don't think I ought to judge her by what is reported of her teaching. Maybe it is not so bad. One does n't like to be judged at second-hand," she said, looking at him with a quick glance.

"Especially when Uncle Martin is the reporter," he replied.

Meantime Phillida's eyes were inquiring whether he had heard anything about her present course of action.

"I saw Wilhelmina Schulenberg in Tompkins Square to-day," he said, still approaching the inevitable, sidewise.

"Did you?" she asked almost in a whisper. "Was she walking?"

"Yes. Why did you not tell me she was better?"

Phillida looked down. At this moment her reserve with her lover in a matter so personal to herself seemed to her extremely reprehensible.

"I—I was a coward, Charley," she said with a kind of ferocity of remorse. This self-accusation on her part made him unhappy.

"You?" he said. "You are no coward. You are a brave woman." He leaned over and lightly kissed her cheek as he finished speaking.

"I knew that my course would seem foolish to you, and I could n't bear that you should know. I was afraid it would mortify you."

"You have suffered much yourself, my dear."

She nodded her head, the tears brimming in her eyes at this unexpected sign of sympathy.

"And borne it bravely all alone. And all for a mistake—a cruel mistake."

Millard had not meant to say so much, but his feelings had slipped away from him. However, he softened his words by his action, for he drew out his handkerchief and gently wiped away a tear that had paused a moment in its descent down her cheek.

"How can you say it is a mistake?" she asked. "You saw Wilhelmina yourself."

"Yes; but it is all a misunderstanding, dear. It's all wrong, I tell you. You have n't seen much of life, and you'll be better able to judge when you are older." Here he paused, for of arguments he had none to offer.

"I don't want to see anything of life if a knowledge of the world is to rob me of what is more precious than life itself." Her voice was now firm and resolute, and her tears had ceased.

Millard was angry at he knew not what—at whatever thing human or supernal had bound this burden of misbelief upon so noble a soul as Phillida's. He got up and paced the floor a moment, and then looked out of the window, saying from time to time in response to deprecatory or defensive words of hers, "I tell you, dear, it's a cruel mistake." Now and then he felt an impulse to scold Phillida herself; but his affectionate pity held him back. His irritation had the satisfaction of finding an object on which to vent itself at length when Phillida said:

"If Mrs. Frankland would admit men to her readings, Charley, I'm sure that if you could only hear her explain the Bible—"

"No, thank you," said Millard, tartly. "Mrs. Frankland is eloquent, but she has imposed on you and done you a great deal of harm. Why, Phillida, you are as much superior to that woman as the sky is—" Millard was about to say, "as the sky is to a mud-puddle," but nothing is so fatal to offhand vigor of denunciation as the confirmed habit of properness. Charley's preference for measured and refined speech got the better of his wrath barely in time, and, after arresting himself a moment, he finished the sentence with more justness as he made a lit-

the wave with his right hand—"as the sky is to a scene-painter's illusion."

Then he went on: "But Mrs. Frankland is persuasive and eloquent, and you are too sincere to make allowance for the dash of exaggeration in her words. You won't find her at a mission in Mackerelville. She is dressed in purple by presents from the people who hear her, and Mrs. Hilbrough tells me that Mrs. Benthuyssen has just given her a check of a thousand dollars to go to Europe with."

"Why should n't they do such things for her? They hardly know what to do with their money, and they ought to be grateful to her," said Phillida with heat. "Charley, I don't like to have you talk so about so good a woman. I know her and love her. You don't know her, and your words seem to me harsh and unjust."

"Well, then forgive me, dear. I forgot that she is your friend. That's the best thing I ever knew about her."

Saying this, he put on his hat and went out lest he should give way again to his now rising indignation against Mrs. Frankland, who, as the real author of Phillida's trouble, in his judgment deserved severer words than he had yet applied to her. But when he had opened the front door he turned back suddenly, distressed that his call had only added to the troubles of Phillida. She sat there, immovable, where he had left her; he crossed the room, bent over her, and kissed her cheek.

"Forgive me, darling; I spoke hastily."

This tenderness overcame Phillida, and she fell to weeping. When she raised her head a moment later Charley had gone, and the full confession she had intended must be deferred.

To a man who has accepted as of divine authority all the conventions of society, hardly anything that could befall a young woman would be more dreadful than to become a subject of notoriety. His present interview with Phillida had thoroughly aroused Millard, and he was resolved to save her from herself by any means within his reach. Again the alternative of an early marriage presented itself. He might hasten the wedding, and then take Phillida to Europe, where the sight of a religious life quite different from her own would tend to widen her views and weaken the ardor of her enthusiasm. He wondered what would be the effect upon her, for instance, of the stack of crutches built up in monumental fashion in one of the chapels of the Church of St. Germain des Près at Paris—the offerings of cripples restored by a Roman Catholic faith-cure. But he reflected that the wedding could be hardly got ready before Lent, and a marriage in Lent was repugnant to him not only as a Churchman but even more as a man known

for sworn fealty to the canons of fashionable society, which are more inexorable than ecclesiastical usages, since there is no one high and mighty enough to grant a dispensation from them. It had long been understood that the wedding should take place some time after Easter, and it seemed best not to disturb that arrangement. What he wanted now was some means of checking the mortifying career of Phillida as a faith-doctor.

XXI.

MRS. HILBROUGH'S INFORMATION.

CASTING about in his thoughts for an ally, he hit upon Mrs. Hilbrough. In her he would find an old friend of Phillida's who was pretty sure to be free from brain-fogs. He quickly took a resolution to see her. It was too late in the afternoon to walk uptown. On a fine Sunday like this the street cars would not have strap-room left, and the elevated trains would be in a state of extreme compression long before they reached Fourteenth street. He took the best-looking cab he could find in Union Square as the least of inconveniences; and just as the slant sun, descending upon the Jersey lowlands, had set all the windows on the uptown side of the cross streets in a ruddy glow, he alighted at the Hilbrough door, paid his cabman a full day's wages, after the manner of New York, and sent up his card to Mrs. Hilbrough with a message that he hoped it would not incommode her to see him, since he had some inquiries to make. Mrs. Hilbrough descended promptly, and there took place the usual preliminary parley on the subject of the fine day, a parley carried on by Millard with as little knowledge of what he was saying as an automaton has. Then begging her pardon for disturbing her on Sunday afternoon, he asked her:

"Have you heard anything about Miss Calender's course as a faith-healer?"

Mrs. Hilbrough took a moment to think before replying. Here was a direct, even abrupt, approach to a matter of delicacy. There was a complete lack of the diplomatic obliquity to be expected in such a case. This was not like Millard, and though his exterior was calm and suave enough from mere force of habit, she quickly formed an opinion of his condition of internal ebullition from his precipitancy.

"I did not hear anything about it until Thursday, two weeks ago, and I only learned certainly about it yesterday," she replied, resting as non-committal as possible until the drift of Millard's inquiry should be disclosed.

"May I ask from whom?" He was now sitting bolt upright, and his words were uttered without any of that pleasing deference of manner that usually characterized his speech.

"From Mrs. Maginnis — Mrs. California Maginnis," she added for the sake of explicitness and with an impulse to relax the tension of Millard's mind by playfulness.

"Mrs. Maginnis?" he said with something like a start. "How does Mrs. Maginnis know anything about what takes place in Mackerelville?"

"It was n't the Mackerelville case, but one a good deal nearer home, that she was interested in," said Mrs. Hilbrough. "It's too warm here," she added, seeing him wipe his brow with his handkerchief. She put her hand to the bell, but withdrew it without ringing, and then crossed the room and closed the register.

Millard proceeded in a straightforward, businesslike voice, "Tell me, please, what Mrs. Maginnis had to do with Miss Callender's faithcures?"

"Her relation to them came about through Mrs. Frankland."

"No doubt," said Millard; "I expected to find her clever hand in it."

The mordant tone in which this was said disconcerted Mrs. Hilbrough. She felt that she was in danger of becoming an accomplice in a lovers' quarrel that might prove disastrous to the pretty romance that had begun in her own house. She paused and said:

"I beg pardon, Mr. Millard, but I ought hardly to discuss this with you, if you make it a matter of feeling between you and Phillida. She is my friend —"

"Mrs. Hilbrough," he interrupted, taking a softer tone than before, and leaning forward and resting his left hand on his knee, and again wiping his forehead with his handkerchief, "my whole destiny is involved in the welfare of Phillida Callender. I have n't quarreled with her, but I would like to show her that this faith-curing is a mistake and likely to make her ridiculous. You said that Mrs. Frankland —"

"Mrs. Frankland," said Mrs. Hilbrough, "through somebody connected with the Mackerelville Mission got hold of the story of the cure of a poor German girl somewhere down about what they call Tompkins Square. Is that the name of a square? Well, on Thursday, two weeks ago, when Phillida was not present, Mrs. Frankland told this story —"

"Trotted it out as a fine illustration of faith," broke in Millard, with something between a smile and a sneer, adding, "with Phillida's name attached."

"No, she did n't give the name; she spoke of her as a noble Christian young woman, the daughter of a devoted missionary to the heathen, which made me suspect Phillida. She also alluded to her as a person accustomed to attend these meetings, and again as 'my very

dear friend,' and 'my beloved young friend.' Mrs. Maginnis listened eagerly, and longed to know who this was, for she had a little girl troubled with Saint Vitus's dance. She had just been to see Dr. Legammon, the specialist."

"Who always begins his treatment by scaring a patient half to death, I believe, especially if he has money," said Millard, who, in his present biting mood, found a grim satisfaction even in snapping at Dr. Legammon's heels.

"He told Mrs. Maginnis that it was an aggravated case of chorea, and that severe treatment would be necessary," continued Mrs. Hilbrough. "There must be eyeglasses, and an operation by an oculist, and perhaps electricity, and it would require nearly a year to cure the child even under Dr. Legammon; and he did n't even give her much assurance that her child would get well at all. He especially excited Mrs. Maginnis's apprehension by saying, 'We must be hopeful, my dear madam.' Mrs. Maginnis, you know, is strung away up above concert-pitch, and this melancholy encouragement threw her into despair, and came near to making her a fit patient to the doctor's specialistic attentions in a private retreat. She could n't bring herself to have the eyes operated on, or even to have electricity applied. It was just after this first visit to the doctor, while Mrs. Maginnis was in despondency and her usual indecision, that she heard Mrs. Frankland's address in which the cure of the poor girl in the tenement-house was told as an illustration of the power of prayer."

"Mrs. Frankland worked up all the details with striking effect, no doubt," said Millard, with an expression of disgust.

"Well, you know Mrs. Frankland can't help being eloquent. Everybody present was deeply affected as she pictured the scene. As soon as the meeting closed, Mrs. Maginnis, all in a sputter of excitement, I fancy, sailed up to Mrs. Frankland, and laid her troubles before her, and wondered if Mrs. Frankland could n't get her young friend to pray for her daughter Hilda. Phillida, by solicitation of Mrs. Frankland, visited the Maginnises every day for a week. They sent their carriage for her every afternoon, I believe. At the end of a week 'the motions disappeared,' as Mrs. Maginnis expressed it."

"I believe it is n't uncommon for children to get well of Saint Vitus's dance," said Millard.

"You could n't make Mrs. Maginnis believe that. She regards it as one of the most remarkable cures of a wholly incurable ailment ever heard of. The day after Phillida's last visit she sent her a check for three hundred dollars for her services."

"Sent her money?" said Millard, reddening.

ing, and contracting his brows. "Did Phillida take it?" This last was spoken in a low-keyed monotone.

"Has n't she told you a word about it?"

"Not a word," said Millard, with eyes cast down.

"She sent back the check by the next postman, saying merely that it was 'respectfully declined.'"

"And Mrs. Maginnis?" asked Millard, his face lighting up.

"Did n't understand," said Mrs. Hilbrough. "These brutally rich people think that cash will pay for everything, you know. Mrs. Maginnis concluded that she had offered too little."

"It was little enough," said Millard, "considering her wealth and the nature of the service she believed to have been rendered to her child."

"She thought so herself, on reflection," said Mrs. Hilbrough. "She also had grace enough to remember that she might have been a little more delicate in her way of tendering the money. She likes to do things royally, so she despatched her footman to Mrs. Callender with a note inclosing a check for a thousand dollars, asking the mother to use it for the benefit of her daughter. Mrs. Callender took the check to Mrs. Gouverneur, and asked her, as having some acquaintance with Mrs. Maginnis, to explain that Phillida could not accept any pay for religious services or neighborly kindness. Mrs. Gouverneur"—here Mrs. Hilbrough smiled—"saw the ghosts of her grandfathers looking on, I suppose. She couched her note to Mrs. Maginnis in rather chilling terms, and Mrs. Maginnis understood at last that she had probably given offense. She went to Mrs. Frankland, who referred her to me, as Phillida's friend, and she called here yesterday in a flutter of hysterical importance to get me to apologize, and to ask me what she *could* do."

Millard was almost amused at this turn in the affair, but his smile had a tang of bitterness.

"She explained that she had not understood that Miss Callender was that kind of person," said Mrs. Hilbrough. "She had always supposed that ministers and missionaries and their families expected presents. When she was a little girl her father used to send a whole hog to each minister in the village every fall when he killed his pigs. But it seemed Miss Callender and her mother held themselves above presents. Were they 'people of wealth'? That is her favorite phrase. I told her that they were one of the best old families in the city, without much property but with a great deal of pride, and that they were very admirable people. 'You know, these very old and famous families hold themselves rather above the rest of us,

no matter how rich we may get to be,' I said, maliciously.

"This seemed almost to subdue her. She said that she supposed people would expect her to do something at such a time. It was always expected that 'people of wealth' should show themselves grateful. What could she do that would not offend such touchy people?"

"I suggested that Hilda should buy some article, not too expensive, for a love token for Miss Callender. 'Treat her as you would if she were Mrs. Van Horne's daughter,' I said, 'and she will be content.' 'I don't want to seem mean,' she replied, 'and I did n't think so pious a girl would carry her head so high. Now, Mrs. Hilbrough, do you think a Christian girl like Miss Callender ought to be so proud?' 'Would you like to take money for a friendly service?' I asked. 'Oh, no! But then I—you see, my circumstances are different; however, I will do just what you say.' I warned her when she left that the present must not be too costly, and that Hilda ought to take it in person. She was still a little puzzled. 'I did n't suppose people in their circumstances would feel that way,' she said in a half-subdued voice, 'but I'll do just as you say, Mrs. Hilbrough.'"

This action of Phillida's was a solace to Millard's pride. But one grain of sugar will not perceptibly sweeten the bitterness of a decoction of gentian, and this overflow into uptown circles of Phillida's reputation as a faith-doctor made the matter extremely humiliating.

When Mrs. Hilbrough had finished her recital Millard sat a minute absorbed in thought. It occurred to him that if he had not spoken so impetuously to Phillida and then left her so abruptly he might have had this story in her own version, and thus have spared himself the imprudence and indecorum of discussing Phillida with Mrs. Hilbrough. But he could not refrain from making the request he had had in mind when he came, and which alone could explain and justify to Mrs. Hilbrough his confidence.

"I came here to-day on an impulse," he said. "Knowing your friendliness for Phillida, and counting on your kindness myself, I thought perhaps you might bring your influence to bear—to—to—what shall I say?—to modify Phillida's zeal and render her a little less sure of her vocation to pursue a course that must make her talked about in a way that is certain to vulgarize her name."

Mrs. Hilbrough shook her head. She was flattered by Millard's confidence, but she saw the difficulty of the task he had set for her.

"Count on me for anything I can do, but that is something that I suppose no one can accomplish. What Phillida thinks right she

will do if she were to be thrown to the wild beasts for it."

"Yes, yes; that is her great superiority," he added, with mingled admiration and despondency.

"You, who have more influence than any one else," said Mrs. Hilbrough, "have talked with her. I suppose her mother has said what could be said, and Agatha must have been a perfect thorn in the flesh to her since the matter became known at home."

"Yes," said Millard, ruefully; "she must have suffered a great deal, poor child!"

"I don't suppose Mrs. Gouverneur let her off cheaply," continued Mrs. Hilbrough. "She must have made Phillida feel that she was overthrowing the statues of her great-grandfathers, and she no doubt urged the unhappiness she would cause you."

Millard saw at this moment the origin of Phillida's sensitiveness in talking with him.

"I don't care for myself, but I wish to heaven that I could shelter her a little from the ridicule she will suffer." He was leaning forward with his hand on his knee and his eyes cast down.

Mrs. Hilbrough felt herself moved at sight of so much feeling in one not wont to show his emotions to others.

"I will see if anything can be done, Mr. Millard; but I am afraid not. I'll ask Phillida here to lunch some day this week."

The winter sunshine had all gone, the lights in the streets were winning on the fast-fading twilight, and Mrs. Hilbrough's reception-room was growing dusk when Millard slowly, as one whose purposes are benumbed, rose to leave. Once in the street, he walked first toward one avenue and then toward the other. He thought to go to his apartment, but he shrank from loneliness; he would go to dinner at a neighboring restaurant; then he turned toward his club; and then he formed the bold resolution to make himself welcome, as he had before, at Mrs. Callender's Sunday-evening tea-table. But reflecting on the unlucky outcome of his interview with Phillida, he gave this up, and after some further irresolution dined at a table by himself in the club. He had small appetite for food, for human fellowship he had none at all, and he soon sought solitude in his apartment.

XXII.

WINTER STRAWBERRIES.

KNOWING that Phillida was a precipice inaccessible on the side of what she esteemed her duty, Mrs. Hilbrough was almost sorry that she had promised to attempt any persuasions. But she despatched a note early Tuesday morning, begging Phillida's company at lunch-

eon, assigning the trivial reason, for want of a better, that she had got some winter-grown strawberries and wished a friend to enjoy them with her. Phillida, fatigued with the heart-breaking struggle between love and duty, and almost ready sometimes to give over and take the easier path, thought to find an hour's intermission from her inward turmoil over Mrs. Hilbrough's hothouse berries. The Hilbrough children were fond of Phillida, and luncheon was a meal at which they made a point of disregarding the bondage of the new family position. They seasoned their meal with the animal spirits of youth, and, despite the fact that the costly winter berries were rather sour, the lunch proved exceedingly agreeable to Phillida. The spontaneous violence which healthy children do to etiquette often proves a relish. But when the Hilbrough children had bolted their strawberries, scraped the last remainder of the sugar and cream from the saucers, and left the table in a hurry, there came an audible pause, and Mrs. Hilbrough approached the subject of Phillida's faith-healing in a characteristically tactful way by giving an account of Mrs. Maginnis's call, and by approving Phillida's determination not to take money. It was a laudable pride, Mrs. Hilbrough said.

"I cannot call it pride altogether," said Phillida, with the innate veracity of her nature asserting itself in a struggle to be exactly sincere. "If I were to take pay for praying for a person, I'd be no better than Simon, who tried to buy the gift of the Holy Ghost from Saint Paul. I could n't bring myself to take money."

"And if you did, my dear, it would mortify your family, who have a right to be proud, and then there is Mr. Millard, who, I suppose, would feel that it would be a lasting disgrace." These words were spoken in a relaxed and indifferent tone, as though it was an accidental commonplace of the subject that Mrs. Hilbrough was settling.

Phillida said nothing. Here she was face to face with the old agony. If her faith-healing were only a matter of her own suffering she need not hesitate; she would take the cross with all her heart. But Mrs. Hilbrough's words reminded her again that her sense of duty forced her to bind Charley Millard for the torture. A duty so rude to her feelings as the half-publicity of it made faith-healing, ought to be a duty beyond question, but here was the obligation she owed her lover running adverse to her high aspirations. The questions for decision became complex, and she wavered.

"Your first duty is to him, of course," continued Mrs. Hilbrough, as she rose from the table, but still in an indifferent tone, as though

what she said were a principle admitted beforehand. This arrow, she knew, went straight to the weakest point in Phillida's defense. But divining that her words gave pain, she changed the subject, and they talked again of indifferent matters as they passed out of the room together. But when Phillida began her preparations for leaving, Mrs. Hilbrough ventured a practical suggestion.

"I suppose you'll forgive an old friend for advising you, Phillida dear, but you and Mr. Millard ought to get married pretty soon. I don't believe in long courtships. Mr. Millard is an admirable person, and you'll make a noble wife."

"We have long intended to have the wedding next spring. But as to my making a noble wife, I am not sure about that," returned Phillida. "I am engaged with my work, and I shall be more and more talked about in a way that will give Charley a great deal of suffering. It's a pity—"

She was going to say that it was a pity that Charley had not chosen some one who would not be a source of humiliation to him, but she could not complete the sentence. The vision of Millard married to another was too much even for her self-sacrifice. After a moment's pause she reverted to Mrs. Hilbrough's remark, made at the table, which had penetrated to her conscience.

"You said a while ago that my first duty is to Charley. But if I am wrong in trying to heal the sick by the exercise of faith, why have I been given success in some cases? If I refused requests of that kind would I not be like the man who put his hand to the plow and looked back? You don't know how hard it is to decide these things. I do look back, and it almost breaks my heart. Sometimes I say, 'Why can't I be a woman? Why am I not free to enjoy life as other women do? But then the poor and the sick and the wicked, are they to be left without any one to care for them? There are but few that know how to be patient with them and help them by close sympathy and forbearance. How can I give up my poor?'"

Her face was flushed, and she was in a tremor when she ceased speaking. Her old friend saw that Phillida had laid bare her whole heart. Mrs. Hilbrough was deeply touched at this exhibition of courage and at Phillida's evident suffering, and, besides, she knew that it was not best to debate where she wished to influence. She only said:

"It will grow clearer to you, dear, as time goes on. Mr. Millard would suffer anything—I believe he would die for you."

Phillida was a little startled at this assumption of Mrs. Hilbrough's that she knew the

exact state of Millard's feelings regarding herself.

"Have you seen him lately?" she asked.

"Yes; he called here after four o'clock on Sunday afternoon, and he spoke most affectionately of you. I'm sorry you must go so soon. Come and spend a day with me some time, and I'll have Mr. Millard take dinner with us."

As Phillida rode downtown in the street car she reasoned that Charley must have gone straight to Mrs. Hilbrough's after his conversation with her. When she remembered the agitation in which he had left her, she could not doubt that he went uptown on purpose to speak with Mrs. Hilbrough of his relations with herself, and she felt a resentment that Millard should discuss the matter with a third person. He had no doubt got Mrs. Maginnis's story from Mrs. Hilbrough, and for this she partly reproached her own lack of frankness. She presently asked herself what Charley's call on Mrs. Hilbrough had to do with the luncheon to which she had just been invited? The more she thought of it, the more she felt that there had been a plan to influence her. She did not like to be the subject of one of Mrs. Hilbrough's clever manœuvres at the suggestion of her lover. The old question rose again whether she and Charley could go on in this way; whether it might not be her duty to release him from an engagement that could only make him miserable.

He called that evening while the Callenders were at six o'clock dinner. He was in evening dress, on the way to dine at the house of a friend, and he went straight to the Callender basement dining-room, where he chatted as much with Mrs. Callender and Agatha as with Phillida, who on her part could not show her displeasure before the others, for lovers' quarrels are too precious to be shared with the nearest friend. He left before the dinner was over, so that Phillida did not have a moment alone with him. The next evening she expected him to call, but he only sent her a bunch of callas.

That night Phillida sat by the fire sewing after her mother and Agatha were asleep. During the past two days she had wrought herself up to a considerable pitch of indignation against Millard for trying to influence her through Mrs. Hilbrough, but resentment was not congenial to her. Millard's effort to change her purposes at least indicated an undiminished affection. The bunch of flowers on the table was a silent pleader. If he did wrong in going to Mrs. Hilbrough for advice, might it not be her own fault? Why had she not been more patient with him on Sunday afternoon? The callas were so white, they reminded her of

Charley, she thought, for they were clean, innocent, and of graceful mien. After all, here was one vastly dearer to her than those for whom she labored and prayed—one whose heart and happiness lay in her very palm. Might she not soften her line of action somewhat for his sake?

But conscience turned the glass, and she remembered Wilhelmina, and thought of the happiness of little Hilda Maginnis and her mother. Was it nothing that God had endowed her with this beneficent power? How could she shrink from the blessedness of dispensing the divine mercy? Her imagination took flame at the vision of a life of usefulness and devotion to those who were suffering.

Then she raised her head and there were the white flowers. She felt an impulse to kiss her hand in good night to them as she rose from

her chair, but such an act would have seemed foolish to one of her temperament.

She went to bed in doubt and got up in perplexity. She could not help looking forward to Mrs. Frankland's Bible-reading that afternoon with expectation that some message would be providentially sent for her guidance. The spirit perplexed is ever superstitious. Since so many important decisions in life must be made blindly, one does not wonder that primitive men settled dark questions by studying the stars, by interpreting the flight of birds, the whimsical zigzags of the lightning bolt, or the turning of the beak of a fowl this way or that in picking corn. The human mind bewildered is ever looking for crevices in the great mystery that inwraps the visible universe, and ever hoping that some struggling beam from beyond may point to the best path.

(To be continued.)

Edward Eggleston.

A MINER'S SUNDAY IN COLOMA.

(FROM THE WRITER'S CALIFORNIA JOURNAL, 1849-50.)

THE principal street of Coloma was alive with crowds of moving men, passing and repassing, laughing, talking, and all appearing in the best of humor: Negroes from the Southern States swaggering in the expansive feeling of runaway freedom; mulattoes from Jamaica trudging arm-in-arm with Kanakas from Hawaii; Peruvians and Chilians claiming affinity with the swarthier Mexicans; Frenchmen, Germans, and Italians fraternizing with one another and with the cockney fresh from the purlieus of St. Giles; an Irishman, with the dewdrop still in his eye, tracing relationship with the ragged Australian; Yankees from the Penobscot chatting and bargaining with the genial Oregonians; a few Celestials scattered here and there, their pigtailed and conical hats recalling the strange pictures that took my boyish fancy while studying the geography of the East; last of all, a few Indians, the only indigenous creatures among all these exotics, lost, swallowed up—out of place like

“*rari nantes in gurgite vasto.*”

It was a scene that no other country could ever imitate. Antipodes of color, race, religion,

language, government, condition, size, capability, strength and morals were there, within that small village in the mountains of California, all impressed with but one purpose,—impelled with but one desire.

A group of half a dozen Indians especially attracted my attention. They were strutting about in all the glory of newly acquired habiliments; but with this distinction—that one suit of clothes was sufficient to dress the whole crowd. The largest and best-looking Indian had appropriated the hat and boots, and without other apparel walked about as proudly as any city clerk. Another was lost in an immense pair of pantaloons. A third sported nothing but a white shirt with ruffled bosom. A fourth flaunted a blueswallow-tailed coat, bespangled with immense brass buttons. A fifth was decked with a flashy vest; while the sixth had nothing but a red bandana, which was carefully wrapped around his neck. Thus what would scarcely serve one white man just as effectually accommodated six Indians.

The street was one continuous din. Thimble-riggers, French monte dealers, or string-game tricksters were shouting aloud at every corner: “Six ounces, gentlemen, no one can tell where the little joker is!” or “Bet on the jack, the jack’s the winning card! Three ounces no man can turn up the jack!” or “Here’s the place to git your money back! The veritable string game! Here it goes! Three, six, twelve ounces no one can put his finger in the loop!” But

rising above all this ceaseless clamor was the shrill voice of a down-east auctioneer, who, perched on a large box in front of a very small canvas booth, was disposing of the various articles in the shebang behind him, "all at a bargain." What a ragged, dirty, unshaven, good-natured assemblage!—swallowing the stale jests of the "crier" with the greatest guffaws, and bidding with all the recklessness of half-tipsy brains and with all the confidence of capacious, well-stuffed bags. Behind a smaller box, to the left of the Yankee, was a Jew in a red cap and scarlet flannel shirt, busy with his scales and leaden weights, to weigh 'out the "dust" from the various purchasers. There was no fear of the weights being heavier than the law allows, or that the tricky Jew by chance should place the half-ounce on the scales when there was but a quarter due. That there should be a few pennyweights too many made no difference; it is only the hungry purse that higgles about weights or prices. A little bad brandy and a big purse made a miner wonderfully important and magnanimous; and he regarded everything below an ounce as unworthy of attention.

This German Jew was also barkeeper. Beside him were a few tin cups, and a whole army of long and short necked, gaily labeled bottles, from which he dealt out horrible compounds for fifty cents a drink. His eye brightened as he perceived coming up the street a crowd of rollicking, thirsty, sunburned fellows, fresh from their "diggins" among the hills. But the quick eye of the auctioneer also singled them out and read their wants.

"Here's a splendid pair of brand-new boots! cowhide, double-soled, triple-pegged, waterproof boots! The very thing for you, sir, fit your road-smashers exactly; just intended, cut out, made for your mud-splashers alone; going for only four ounces and a half—four and a half! and gone—for four and a half ounces; walk up here and weigh out your dust."

"Wet your boots, old boy!" sang out the companions of the purchaser.

The barkeeper, with his weights already on the scales, exclaimed, "Shtand back, poys, and let de shentlemens to de bar."

The newcomers approached, crowding tumultuously around their companion of the boots, who, drawing out a long and well-filled buckskin bag, tossed it to the expectant Jew with as much carelessness as if it were only dust.

"Thar's the bag, old feller! weigh out the boots and eight lickens. Come, boys, call for what you like; it's my treat—go it big, fellers! all one price."

"Vat ye takes?" asks the barkeeper, after weighing out the amount due and handing the purse back to its owner.

"Brandy straight," "brandy punch," "brandy sling," "gin cocktail," and thus they went on, each one calling for a different drink.

Then the bargaining began. Butcher-knives for crevicing, tin pans, shovels, picks, clothing of all colors, shapes, and sizes; hats and caps of every style; coffee, tea, sugar, bacon, flour, liquors of all grades in stiff-necked bottles—a word, almost everything that could be enumerated—were disposed of at a furious rate so that in an hour's time the contents of the little grocery were distributed among the jolly crowd.

Suddenly there was a great noise of shouting and hurrahing away up the street, and, the crowd heaving and separating upon either side, on came a dozen half-wild, bearded miners, fine, wiry, strapping fellows, on foaming horses, lashing them to the utmost, and giving the piercing scalp-haloo of the Comanches. They suddenly halted in front of Winter's hotel, and while the greater number dismounted and tumultuously entered the bar room for refreshment a few of the remainder made themselves conspicuous by acts of daring horsemanship—picking up knives from the ground while at full gallop, Indian-like whirling on the sides of their steeds, then up and off like the wind and, while apparently dashing into the surrounding crowd, suddenly reining in their horses upon their haunches, and whirling them upon their hind legs, then without a stop dashing off as furiously in the opposite direction. These few proved to be Doniphan's wild riders, who even excelled the Mexican caballeros in their feats of horsemanship. At last, all together once more they came sweeping down the street, apparently reckless of life and limb. As they passed, the scurrying footmen cheered them on with great good nature. The crowd closed again and in a brief time everything was as restless as ever.

Passing up the street, I came to a large unfinished frame-house, the sashless windows and doorway crowded with a motley crew apparently intent upon something solemn happening within. After a little crowding and pushing I looked over the numberless heads in front, and saw—could I believe my eyes?—a preacher, as ragged and as hairy as myself, holding forth to an attentive audience. Though the careless and noisy crowd was surging immediately without, all was quiet within. He spoke well and to the purpose and warmed every one with his fine and impassioned delivery. He closed with a benediction but prefaced it by saying: "There will be divine service in this house next Sabbath—if, in the meantime, I hear of no new diggin's!"

The audience silently streamed out, the greater part directing their steps to a large, two-story frame-house across the street. This was

AN AUCTION IN COLOMA.

the hotel *par excellence* of the town; one could easily perceive that by its long white colonnade in front, and its too numerous windows in the upper story.

A large saloon occupied the whole front of the building. Filling up the far side of the room was the gaudy and well-stocked bar, where four spruce young fellows in shirt-sleeves and flowing collars were busily engaged dealing out horrible compounds to thirsty customers strung along the whole length of the counter. The other three sides of the saloon were crowded with monte tables, each one of which was surrounded with a crowd of old and young so that it was almost impossible to obtain a glimpse of the dealers or their glittering banks. There was a perfect babel of noises! English, French, Spaniards, Portuguese, Italians, Kanakas, Chilians, all were talking in their respective languages. Glasses were jingling, money was rattling, and, crowning all, two fiddlers in a distant corner were scraping furiously on their instruments, seemingly the presiding divinities of this variegated pandemonium!

Crowding, inch by inch, into one of these motley groups, I found myself at last in front of a large table, neatly covered with blue cloth, upon which was a mass of Mexican silver dollars piled up in ounce or sixteen-dollar stacks. Immediately facing me was the banker; a well-dressed, middle-aged, quiet little man, with one of the most demure countenances imaginable. Beside him was the croupier, a very boy, whose duty it was to rake in the winnings and pay out the losses, which he did with wonderful dexterity.

Fronting the dealer, and dividing the silver into two equal portions, was a large Chinese box of exquisite construction. Upon it were ranged half a dozen packs of French and Spanish cards, several large masses of native gold, and a dozen or more buckskin bags of all sizes and conditions containing dust. Dollars and half-dollars were piled upon these purses—some with a few, others with a greater number thereon. One unacquainted with the game might guess for a day and not be able to hit upon the object of this arrangement, but a close observer might read elation or depression in the anxious eyes of the players, as the weight upon these bags was either diminished or increased. These purses were in pawn; the dollars and half-dollars were the counters wherewith the banker numbered the ounces or half-ounces that might be owing to the bank.

"There 's another millstone on the pile," groaned a thin-faced, watery-eyed little fellow in a hickory shirt and walnut pantaloons, as he saw another dollar added to his dust-bag.

"Take off two o' them air buttons," laughed a fat-faced man in red shirt and Chinese cap.

"I won two ounces on the deuce; another bet like that, and my bag 's not for your mill, old feller!"

The cards were all out, and the "old feller" was shuffling them for a new deal; during which operation he cast a furtive glance about the table to see if there were any new customers to bite at his game, or, perhaps, to note if any of those who had bitten seemed to be cooling off—a weakness which he hastened to counteract by singing out: "Barkeeper!" and inquiring "What will the gentlemen take to drink?" This invitation was given in such a quiet and insinuating manner that one hesitated to decline for fear of wounding the delicate sensibilities of the banker. Each called for what he wished, and all concluded to "fight the tiger" a little while longer. The sprightly barkeeper was back in a twinkling, with a large waiter covered with glasses. These he distributed with wonderful dexterity, remembering perfectly what each one had ordered; so that, much to the player's surprise, he found his own glass chosen from among twenty and placed before him. That barkeeper had a niche in his brain for every man at the table.

The drinking over, the glasses were whisked away, and all hands were again ready for the game.

"It's your cut," said the banker, reaching the cards towards our watery-eyed acquaintance.

"Jack and deuce! Make your bets, gentlemen."

The jack appeared to be the favorite; ounce after ounce was staked upon it; two more cards were thrown out.

"Seven and ace. Come down, gents; come down!" The seven was the favorite by odds.

"All down, gents?" inquired the dealer, as he rapped his knuckles on the table.

"Hold on!" exclaimed a shrill, puerile voice, as if coming from under the table. Every one looked down; and there was apparently a curly-headed boy, whose mouth was little above the level of the bank. He cautiously, coolly and methodically thrust forth a small hand, and laid down two dimes upon the ace. Every one laughed—all but the dealer, who with the same placidity thrust back the dimes and dampened the little fellow's ardor by observing:

"We don't take dimes at this bank."

But no, the little fellow had spunk; he was not so easily dashed. Picking up his dimes, his hand suddenly reappeared, this time holding a very weighty buckskin bag apparently filled with the yellow dust. This he tossed upon the ace, exclaiming:

"There! I guess you 'll take that. Six ounces on the ace!"

Every one was astonished. All looked around

THE FARO PLAYERS.

to see if he had any relatives or friends in the crowd. He appeared to be entirely alone and a stranger to every one; but the play began—and, strange to say, the ace won!

"Good!" "Bully!" "Lucky boy!" were the exclamations on every side. The fortunate little gambler pocketed his bag and placed upon the deuce the six ounces he had just won.

"Bar the porte!" shouted the boy as the dealer was about to turn the cards. It was well for him that he cried out in time, for the jack was in the door. It was a narrow escape, but the little fellow was safe for this time. The cards were brushed aside and others took their places. The betting went bravely on. The boy laid his money on the deuce and, wonderful to say, it won! He was now the gainer by twelve ounces. He was the hero of the table; all eyes were upon him; and it was seen that he was not as young as he seemed—an old head upon a child's shoulders! For the remainder of the deal old players regulated their bets by his, and he carried them along upon the wave. The bank looked a little sickly from this bleeding.

The deal being out, the banker, the same cool imperturbable figure, chose another pack of cards, and shuffled and cut and reshuffled them until the patience of the crowd was almost exhausted. It was the boy's cut, and a lay-out was made.

"Jack and queen. Come down with your dust. Gentlemen, make your bets."

The little fellow was very much puzzled; it was a hard matter to choose between the jack and the queen. Another lay-out was made: the deuce against the seven.

"Twenty-five ounces on the deuce," said the little man, piling all his winnings around the card. But few other bets were made; the older hands were afraid this sudden luck would change, and they all held back. The plucky lad was pitted against the man of fifty—youth, enthusiasm and a dare-all luck arrayed against the craft and cunning of an experienced gambler! How our sympathies were warmed by the fearlessness of the boy! The play began; the deck was faced; and, as I live, the deuce was in the door! The boy won the full amount of his bet.

The successful urchin was the least excited person in the room. He hauled in his winnings as carelessly as if those stacks of dollars were only chips. Another shuffle, and another lay-out was made. The field was now given up entirely to the two antagonists. The ace and the five were the cards; against all our hints the boy staked his fifty ounces on the five. We were breathless with fear; the dealer himself paused a little before drawing the cards,—but at length the deck was faced, and slowly and

cautiously the cards were drawn, one by one—deuce, tray, king, queen, and seven appear in succession—and then—the five! The boy was again victorious: his fifty ounces were now one hundred. The last round made a huge chasm in the appearance of the bank, and the table immediately in front of the little hero was absolutely covered with money.

The banker was as cool and methodical as ever; taking a fresh pack he shuffled it carefully and made another lay-out. The boy bet his hundred ounces and was again victorious! Two hundred ounces were now piled up before him. We advised him to desist, not to tempt his luck too far; but he coolly replied: "I'll break that bank or it'll break me!"

Did any one ever hear of such determination, even in a man? He increased in our estimation, and we liked him all the better for his grit. More than half the bank was his already, a fortune in itself! but the little, round, gray eyes of the boy were not upon his winnings, but were feeding eagerly upon the moiety that was not yet his.

"Queen and tray. Come down," said the dealer.

"How much have you in the bank?" asked the boy.

"A hundred and fifty ounces."

"I tap the bank upon the queen."

This would decide the game. A stillness as of death was upon the crowd; our breath was hushed; our very hearts almost ceased to beat; the suspense became painful; even the banker paused, and wiped the cold drops from his brow.

The deck was faced at last, and calmly, steadily, and without hurry the cards were drawn, one by one. One—two—three—four—five—he had lost! The queen had thrown him; and his entire winnings were ruthlessly swept away by the sharp croupier beyond.

Dizzy and sick with the result, we turned our eyes upon the loser; he bore himself bravely, and did not seem to feel the loss half as sensibly as ourselves. He looked about with a stern, defying air, as if to chide us for our sympathy. As yet he had lost nothing; his large buckskin bag was still intact. Laying it upon the table, with the air of a Cæsar, he put his all upon the throw, defying fate to do her worst! Our pity was suddenly changed to admiration. We felt that he was lost; but we were sure he would die game.

The cards were again shuffled and cut. The seven and the king were laid out; the boy chose the king. The cards were drawn, slowly and steadily; at last the seven appeared; and the game was ended. He saw his well-filled purse stowed away along with many others within that Chinese box and, whistling "O Califormy," turned his back upon the scene. The

crowd parted sympathetically to let him through; and he strutted out with all the importance of a noted hero, the eyes of the astonished and admiring assemblage following him to the door.

I passed out silently after him and joined him in the street. I could scarcely find words to express my sympathy for his loss. He looked

At the next corner I stopped for a few minutes to watch the manoeuvres of a tall, slim man, who was explaining the mysteries of thimble-rigging to a crowd of lately arrived gold hunters. He was young, and had a long, high-bridged nose, blue eyes, a florid complexion, and thin flaxen hair, without even the slightest appearance of a beard upon his chin. From

COLOMA IN 1857. (PHOTOGRAPHED BY E. SIMAS, FROM AN EARLY PICTURE.)

[The site of the Marshall Monument is on the hill back of the town on a line vertical with the bridge. The site of Sutter's mill, which was torn down in 1856, is at the extreme right of the picture where the race is shown.]

at me furtively with one eye, without ceasing to whistle. I took his arm and, leading him around the corner of the house, begged to know the amount of his loss, and if he had any money on which to come and go. He did not cease his whistling, but planted himself firmly before me and looked up. I took out my purse, and offered him a part; the whistling instantly ceased; his face swelled out into a broad and homely grin. Looking cautiously around for fear of being overheard, he whispered:

"Mum's the word; I believe you're a good egg! You want to know how much was in that bag? Well, I'll tell you; just four pounds of duck-shot mixed,—and—nothing more; what a swa'rin' and a cussin' when they open it!" and the little imp laughed till the tears were in his eyes. I, too, tried to laugh, but my sympathies were shocked; and I turned away from that premature scamp and strode off with a heavy weight upon my spirits. But I had not gone far until the trick was even too much for my feelings; and I laughed long and heartily at its audacity.

his language I saw that he was English—"a Sydney chap," no doubt, fresh from the galleys; there were thousands like him in the country. He was standing with his left foot upon a low box, so as to make a table of his thigh, on which were three small wooden thimbles and a little pellet of paper, with the movements of which he completely mystified his audience. With what dexterity he moved the little joker from cup to cup! and yet so slowly that every one could see it in its passage. Now you would be willing to swear it was safely ensconced under the farthest thimble, for you saw it distinctly when the cup was raised; but you might as well give up your money at once as to stake it on the movements of the little joker, who was the very genius of the thimble; even, like him of Aladdin's lamp, becoming visible or invisible as its owner willed. In vain did he invite a bet; no one was bold enough to risk six ounces. Then the thimble-rigger changed his tactics; he saw there were many willing and anxious to bet, were they but half assured there was no hidden trickery in this

manual dexterity. His movements, therefore, became slow and careless, as though he supposed there was no one there disposed to risk his money on the game. He was so absent-minded as to turn his head away, as though looking for some one beyond the crowd, but still moving his thimbles and the joker so carelessly that the little pellet was at last left outside of one of the cups, when it should have been totally concealed within. The gambler's mind was evidently not on his game, or he never would have made this mistake, which might be taken advantage of by some of his sharp-sighted auditors. A black-eyed little fellow had been intently watching him for some time past. He had the dress and appearance of a miner, but his hands were soft and delicate—a fact you noted as, taking advantage of the thimble-rigger's carelessness, he cautiously reached forward, and very dexterously swept the joker from the gambler's thigh, without the latter being aware of his conduct. This trick created a marked sensation among the bystanders; so much so, that the Englishman's attention was recalled to his game.

There was now an evident willingness to bet on the part of three or four of the lookers-on, but a swarthy miner, with his face covered with an immense black beard, got the start of all the rest and, trembling with excitement, exclaimed:

"I'll bet you ten ounces the 's no ball under thar at all."

"Put down your dust," replied the gambler. The miner drew a well-filled buckskin bag from his pocket, but, before he staked his money, had the foresight to declare that the gambler must not touch the thimbles, that he himself must have the privilege of lifting the cups. The Englishman assented to this. Without the least hesitation the miner put down his dust. We all circled closer, laughing within ourselves at the evident discomfiture of the careless gambler. The miner raised the nearest thimble, the ball was not there; he lifted the second, it was not there; he laid his fingers on the third and last and, with a triumphant laugh at his evident good luck, lifted it likewise. But his laugh was suddenly changed to a short, quick, smothered cry of astonishment. We all looked down; and there, lying as cozy as an egg in its nest, was the wonderful little joker!

The miner had been completely fooled. There had been two little paper pellets, and the dark-eyed man was a confederate.

Leaving the thimble-rigger, I passed along under the colonnade of the hotel, my ears almost deafened by the rattling of money and the hubbub of various dialects; and, piercing all, like the shrieking of termagants, came the

noise of the tortured fiddles. The saloon was filled with a mass of men, laughing, talking, gambling, drinking, and all apparently in the best of humor. It was no use trying for admittance, so I stepped down to the next house, where there was another large assemblage filling up half the street and intently watching something that was happening in the midst of them.

Edging my way with a good deal of difficulty, I at last saw a long, slab-sided, sleepy-looking Yankee, who was expatiating on the wonders of a small brass padlock, which he held up to the admiration of the crowd, declaring it to be "the wonder of the world," "the very essence of mechanical ingenuity," and "a thing that puzzles the scientific, considerable." And, as a voucher for the truth of his statement, he was willing and ready to wager any amount from ten ounces to a hundred that no man in the crowd could open it within the space of two minutes.

The crowd was agape with wonder; the lock was passed from hand to hand; it was twisted, turned, and tried in a hundred different ways, but all to no purpose,—it withstood the most rigid scrutiny. Some were willing to give it up in despair; but there were others whom the very difficulty of the undertaking impelled to still greater exertions. At last it fell into the hands of a rough, hairy, raw-boned fellow with the mouth and jaw of a bulldog, every feature of whose countenance showed an inflexibility of purpose to overcome every obstacle, whether for evil or for good. He twisted and turned the miniature lock into every conceivable position, searching for the hidden spring. At last he found it. He was astounded at his own success. He gave a furtive look at the owner, to see if he had been observed; but the Yankee was absorbed in conversation with a neighbor, to whom he was narrating the history of the wonderful lock, and did not even appear to know that this bulldog fellow had it in his possession. The latter, now satisfied with his success, gave his neighbor, a thick-headed German, a nudge with his elbow. The two withdrew somewhat from the crowd, and there, in a measure secure from observation, he showed his companion the hidden spring, and advised him to bet twenty ounces on the result, and agreed to "go his halves." The German eagerly accepted the proposition; and the two reentered the ring with the triumph of discovery in their faces. The German laid down his bag, and on the top of it the Yankee piled his twenty Spanish doubloons. The gambler drew out his watch to note the time; and handing the wizard lock to his opponent, told him to begin.

The German took the lock, and with a smile

A SUNDAY AFTERNOON SPORT.

of derision put his finger on the spring; and lo! the lock was still a lock. Perhaps he mistook the knob whereon to press; but no! that was the boss that but a moment since unhasped the lock. He pressed it again with a firmer hand; but it was of no use, the clasp was still unclasped. The German felt dimly that he had been victimized; the two minutes were rapidly passing away; large drops of perspiration oozed from his forehead,—his hands trembled with excitement,—every knob on the brazen puzzle was convulsively pressed,—but all in vain. The time was up—and his money lost! With a pitiable countenance he turned to his partner in misfortune, but he had gone! His spirit sank within him. He must bear the loss himself! His missing partner was of course a confederate of the Yankee's, and before the money was staked had quietly neutralized the spring upon which the German had so confidently relied.

By this time my appetite began to warn me of the near approach of noon. There were any number of eating-houses and booths, but which to choose I could not tell. However, suffering myself to be guided in a measure by the crowd which was now streaming to the other side of the river, I soon found myself in front of "Little's Hotel," the largest frame building on the right bank of the river, serving in the treble capacity of post-office, store, and tavern. Here I found all my acquaintances, who, like me, were on the search for a good dinner; and who

had been induced to go there by the enticements of "older hands," who every Sunday had made a custom of visiting Coloma for the express purpose of having one good dinner in the week. The first sounding of the gong had already brought a hungry crowd, apparently large enough to carry away the whole building. They were assembled in front of the closed door of the long dining-room, anxiously awaiting the second signal, when they were to be admitted.

While awaiting the opening of the door, my attention was directed to a diminutive, middle-aged Irishman, who was busily engaged narrating to a companion the various wonders and mysteries that "completely bothered him in this wondther of a place." After many famous adventures he had found himself on the bank of the river, hunting for a "quicksilver masheen," when the gong sounded for dinner; and he thus continued his narrative:

"An' do ye see, Dinnis, I jist went down be the wather to indivor to git a sight of a quicksilver masheen; for I niver seen the loike in this counthry yit; an' I had a great inclination to luck at one, ef it was oney to see the shape ov it, but I did n't see ony thing like the quicksilver masheen at all, at all; but a man that was there prospectin' tould me for to come up to the tavern, an' there was wun there sittin' out ov doors jist forinst the house. Jist thin I heerd a clatherin' as ov that big mounthin was tumblen down on us. I did n't know the manen'

ov it far a long time; whin it sthruck me right strate — it wos nothin' but the quicksilver masheen. So I hurried up the bank, an' thin I saw evry wan runnin' up this way, as ef it wos a rale Irish foight they were goin' to see, an' not the quicksilver masheen at all. Whin I sees thim all runnin' like pigs afther pratee skins—stir your stumps, Condj, says I, or you 'll niver git near the baste. An' thin, I run loike the rist ov thim; an' whin I got to where the noise come from,—what do you think I seen, Dinnis? Why, nothin' but a big nagur batin' the tamboreen!"

We had scarcely time enough to laugh at Condj's disappointment in search of the

ners. At home, one would associate such a crowd with the deck of a Mississippi steamboat, or the platform of an Alleghany River raft, with iron forks and spoons, and tin plates spread on a rough pine board for a table; but here they lorded it over every luxury that money could procure. There was not a single coat in the whole crowd, and certainly not over half a dozen vests, and neither neckties nor collars. But then, to make amends for these deficiencies, there were any number and variety of fancy shirts, from the walnut-stained homespun of the Missourian to the embroidered blouse of the fallow Frenchman. Never before was I so fully impressed with the truth

"ROUGHS IN TOWN." (ADAPTED FROM A SKETCH BY HUBERT BURGESS OF AN INCIDENT IN THE MINES.)

"quicksilver masheen" when the "tamborine" again sounded; the door flew open, and in a few minutes the long, narrow, dining-room was crowded with at least three hundred miners, seated at a well-furnished table and enjoying the unusual luxury of a chair to sit on, with silver-plated forks and spoons, and other little knickknacks of civilized society. The dinner was really excellent, and every one appeared heartily to enjoy it.

When the edge of my appetite had in a measure been ground away, I took occasion to look up and down the table, and I could but wonder how I happened among such a collection of uncouth men. The contrast was certainly startling between the snow-white tablecloth, china dishes, silver forks and spoons, and the unwashed, half-famished, sunburnt crowd of hungry and bearded mi-

of the old adage that "dress makes the man," for I doubt if the whole world could present to a stranger's eye a crowd of rougher or apparently lower characters than were then seated around that hospitable table. And yet many of these men were lawyers and physicians, and the rest principally farmers and mechanics from the "States"; who now with their long beards and fierce mustaches looked anything else than the quiet citizens they were at home. Men who formerly were effeminacy itself in dress and manners were here changed into rough and swaggering braves, with a carelessness of appearance and language that a semi-civilized condition of society alone could permit.

Men pocketed their pride in California in those days. I met in the mines lawyers and physicians, of good standing at home, who were acting as barkeepers, waiters, hostlers,

and teamsters. An ex-judge of oyer and terminer was driving an ox-team from Coloma to Sacramento. One man who had been a State senator and secretary of state in one of our western commonwealths was doing a profitable business at manufacturing "cradles," while an ex-governor of one of our southwestern States played the fiddle in a gambling saloon. These things were hardly remarked. Every one went to the Slope with

the determination to make money; and if the mines did not afford it, the next inquiry was what pursuit or business would the sooner accomplish the desired end. Thousands who had not the necessary stamina for the vicissitudes of a miner's life, nor yet the means of going into any of the various channels of trade, were for a time compelled to serve in capacities far beneath their deserts, until time and means should justify them in choosing for themselves.

Charles B. Gillespie.

"BROKE."

CALIFORNIANA.

ANECDOTES OF THE MINES.

BY HUBERT BURGESS.

One Way of Salting a Claim.

To "salt a claim" is to sprinkle gold dust about it in certain places in order to deceive those who may be seeking investment. In this way in the early days of California worthless claims were made to appear rich, and were often sold for large sums of money. In the course of time this practice became so common that purchasers were always on their guard, and it was necessary to exercise much ingenuity in order to deceive them. I know of one instance where solid earth was removed to the depth of six feet and, after coarse gold had been mixed with it, was replaced and covered with rubbish in such a way as to look firm and natural. Soon after, a party came along who wished to buy, and judging from appearances they selected the very place for prospecting which had been salted for them, deeming it less likely to have been tampered with than the rest of the claim. Of course they thought they had "struck it rich," but they realized only the salt. Sometimes claims were pronounced worthless before sufficient work had been done on them. When these were salted and sold to persevering miners they frequently netted large fortunes to those who had unwittingly purchased them.

In 1851 a party of American miners had been working a claim near Columbia, Tuolumne County, California, and not having even found the "color" they became discouraged; the more so as a company of Chinamen a short distance above them were doing very well. The Americans having expressed a willingness to sell, one day three Chinamen went to look at the claim. They talked it over among themselves and finally asked

the owners at what price they would sell. Of course the Americans made it out rich and put a high figure on it, though in fact they were resolved to sell out at any price, being sure that the ground was worthless. It was decided that the Chinamen should bring their picks and pans next day to prospect, and if they were satisfied they would buy at the figure agreed upon.

The miners, thinking it would probably be their last chance to sell, determined to salt the claim. It was a large piece of ground and the trouble was where to put the "salt." One of the men soon hit upon a very ingenious plan. He took his gun and went, as he said, to get a quail or two, but in reality to kill a snake. As there were a great many about the place, he soon killed a large gopher-snake, which resembles the rattlesnake in appearance but is perfectly harmless to man. Putting his game into a bag, he returned to camp.

On being asked by his companions what he had brought back for supper, he shook out the snake and explained his idea thus:

"Now, boys, when the Chinamen come to-morrow, they won't allow any of us to be too near, because they're afraid of 'salt.' Well, Jim, you walk along on top of the bank and have that dead snake in your pocket. Bill and me will stay talking to the Johns, I'll have my gun over my shoulder as if I was going for a rabbit, only you see I'll put 'salt' into the gun instead of shot. We'll find out where they're going to pan out next, and you be looking on, innocent like, with the snake ready to drop where I tell you. When them fellers start to walk there, just slide him down the bank, and when we all get there, I'll holler 'Hold on, boys!' and before they know what's up, I'll fire the 'salt' all around there and make believe I killed the snake. How'll that do?"

Next morning four Chinamen came prepared for work. They tried a few places, but of course did not get the "color." The Americans kept at a distance so that there could be no complaint.

"Well, John," said the schemer, "where you try next, over in that corner?"

The Chinamen were suspicious in a moment. They were familiar with salted claims and were well on their guard. "No likee dis corn'. Tlie him nudder corn'," pointing to the opposite one.

Jim, with his hands in his pockets, was above on the bank, many feet away, watching; when he saw them point in that direction, his partner gave a nod and he pitched the snake on the ground near the place. The leader exclaimed, "Hold on boys!" and fired before they could tell which way to look. Going up to the snake, he pushed the gun under it and carried it away hanging over the barrel. Jim walked off and Bill sat on a wheelbarrow on the opposite side from where they were at work. The Chinamen had no suspicion. They carried away several pans of dirt to wash in a stream near by, and when they returned Bill felt pretty sure they had struck some of the "salt," but the Chinamen said nothing except, "Claim no good. Melikin man talkee too muchee."

The Americans, knowing the game, refused to take less than the specified price, which the Chinamen finally paid and in two days the sellers were off to new diggings.

The strangest part of the story is that the claim turned out to be one of the richest in the district. The Chinamen made a great deal of money, sold out and went home.

"Hold on boys, till I make this shot."

In 1851 Mokelumne Hill was one of the worst camps in California. "Who was shot last week?" was the first question asked by the miners when they came in from the river or surrounding diggings on Saturday nights or Sundays to gamble or get supplies. It was very seldom that the answer was "No one."

Men made desperate by drink or losses at the gambling table, would race up and down the thoroughfares, in single file, as boys play the game of "follow my leader," each imitating the actions of the foremost. Selecting some particular letter in a sign they would fire in turn, regardless of everything but the accuracy of the aim. Then they would quarrel over it as though they were boys, playing a game of marbles, while every shot was likely to kill or wound some unfortunate person.

The gambling tents were large and contained not only gaming tables but billiard tables. At one of these I was once playing billiards with a man naming H——. A few feet from us, raised upon a platform made for the purpose, were seated three Mexican musicians, playing guitars; for these places were always well supplied with instrumental music. The evening seldom passed without disputes, and pistols were quickly drawn to settle quarrels. Upon any outbreak men would rush from all parts of the room, struggling to get as near as possible to the scene of action, and often they paid the pen-

alty for their curiosity by being accidentally shot. While H—— and I were engaged in our game, we could hear the monotonous appeal of the dealers, "Make your game, gentlemen, make your game. Red wins and black loses." Suddenly *bang, bang, bang* went the pistols in a distant part of the tent. The usual rush followed.

Bang, bang, again, and this time the guitar dropped from the hands of one of the unoffending musicians, who fell forward to the ground with a bullet through his neck. His friends promptly undertook to carry him past us to the open air. Our table was so near the side of the tent that only one person at a time could go between it and the canvas. H—— was standing in the way, just in the act of striking the ball with his cue, when one of the persons carrying the wounded man touched him with the request that he move to one side. He turned and saw the Mexican being supported by the legs and arms, the blood flowing from his neck; then with the coolest indifference he said, "Hold on, hold on, boys, till I make this shot," then, resuming his former position, he deliberately finished his shot.

These events occurred so constantly that residents of the place became callous, and although at the sound of the pistol crowds rushed forward, it was with no deeper feeling than curiosity.

Sometimes in the newer communities property as well as life was in danger. I remember that one night in West Point, Calaveras County, a party of roughs "cleaned out" the leading saloon because the proprietor would not furnish them free whisky.

A little later law and order began to assert their claims in the community. Several families from the East came in, and a protest was made against the sway of the gamblers. The result was that the card business did not pay so well; miners grew more careful of their money, and the professional "sports" left the place in great numbers. One of them as he packed up his chips remarked: "They're getting too partickler. If a feller pulls his pistol in self-defense and happens to blow the top of a miner's head off, they haul him up before a jury. The good old times are about over here, and the country's played out!"

"The Date of the Discovery of the Yosemite."

EDITOR OF THE CENTURY MAGAZINE: My communication in the December number of THE CENTURY on "The Date of the Discovery of the Yosemite" has brought to me several letters, including one from a writer from California who quotes a statement made by George Coulter, the founder of Coulterville, corroborating in detail the circumstances as narrated in my communication, *except in the one essential particular*. He is quoted as saying that the party I met at his store did not go so far into the mountains as the Yosemite, but made their attack upon the Indians in a cañon on the north fork of the Merced *below* the Yosemite. I accept his statement, as reported, and am pleased to withdraw all contention of the claim made by Doctor Bunnell that he was the original discoverer.

MONTCLAIR, March 27, 1891.

Julius H. Pratt.

THE CRY OF RUSSIA.

(Let the sorrowful sighing of the prisoners come before thee.)

WHERE all the Russias sweep northward and eastward,
League on and league on, the black land, the white,
We in our misery, sorrowful prisoners,
Send up our voice through the deep winter night.
Dost thou hear, Lord God?

From the foul mine, from the gray, squalid prison,
Where the chained wand'ers toil onward to die,
Over the whip-crack and over the death-shot,
Rises to heaven our desolate cry.
Dost thou hear, Lord God?

We that were men, once the stately, the stalwart,
Chief's blood and king's blood aflame in our breast,
Broken now, shattered now, sinking and dying,
Still, while the life holds, our cry shall not rest.
Dost thou hear, Lord God?

We that were women, once delicate, beautiful,
Nursed amid roses, on lily leaves laid,
Naked now, bleeding now, scourged and tormented,
Cry with a strong voice, and are not afraid.
Dost thou hear, Lord God?

Still for a moment, ye saintly ones glorified —
Still your clear voices that sing round the throne!
Once, only once, on the silence of blessedness
Let our keen anguish fall, sobbing alone.
Dost thou hear, Lord God?

Nay, but the earth hears. From southward, from westward,
Where men breathe freedom, nor faint with the bliss,
Over the freemen's sea, sweeping resistlessly,
Comes a deep murmur our ears cannot miss.
Dost thou hear, Lord God?

Murmur of pity, of anger, of sorrow,
Murmur of comfort, of brotherly cheer;
Saying they weep for us, they, the glad-hearted,
Saying they work for us, free, without fear.
Dost thou hear, Lord God?

Courage, O brothers! O sisters of steadfastness,
Look up once more through the anguish, the pain!
Where love is there is God, mighty, all-merciful.
Now are our tears and our blood not in vain.
Thou dost hear, Lord God!

Laura E. Richards.

AT THE COURT OF THE CZAR.

MINISTER DALLAS IN ST. PETERSBURG.—II.¹

THE EASTER FESTIVAL.

Friday, 20th April, 1838.—A stranger, who has not witnessed, can scarcely imagine the ardor with which the lower class of this city give themselves during the present week, immediately following the long *carême*, to the most childish sports. They are encouraged, too, by all sorts of military and police arrangements. During the last three days of the week, and particularly in the afternoon, immense crowds collect at the common rendezvous in the square fronting the Admiralty, where have been erected temporary playhouses, circus, juggler's booths, menageries, whirligigs of all kinds, flying horses, swings, &c., &c. During this afternoon, I should suppose there assembled no fewer than fifty or sixty thousand people, and the whole machinery of amusement was in full exercise. The throng of carriages, whose circuits are carefully directed and supervised by mounted dragoons and whose multitudes and equipments are equally countless and showy, all in regular and unceasing motion, give to the *coup d'œil* the effect of a most magnificent panorama. The pervading silence forms, however, a forcible and eloquent contrast to the noise and bustle which would accompany such a scene in the United States. Scarcely anything is heard but the sound of the driving carriages, the bands of music within the theaters, or an occasional wild and monotonous song from the women who are swinging with great velocity. Real and loud hilarity is not discernible; nor, indeed, is it possible to find in any of this dense mass the slightest disposition to quarrel or to controversy; the great occupation of those who meet seeming to be, notwithstanding beards, moustaches, whiskers and dirt, to exchange kisses on each side of the mouth.

Sunday, 22d April, 1838.—The exhibition

before the Admiralty has been eminently showy and amusing to-day, the last of the carnival. I went with Philip on foot, while the ladies crowded the carriage. The multitude exceeded any assemblage I ever before saw; men, women, and children, all dressed with cleanliness and finery, and carriages without number, most of which were splendid equipages with four horses and gaudy liveries. Without the slightest tincture of exaggeration, I should say that there were collected not less than two hundred thousand human beings. The usual perfect order prevailed. The carriages, which moved in several regular lines in front of the space appropriated to diversions, were divided into as many concentric circles, and proceeded in a walk; had they formed in one straight line they must have extended seven or eight miles. At about half-past five, while I stood on the terrace of the Admiralty admiring the spectacle, I noticed the composed and slow progress of a high military officer on horseback, in what might be termed the center aisle between the rows of carriages; he was distinguished by a broad blue ribbon, and was soon joined by another whom I recognized as the Prince of Oldenburg. There was obviously now some ceremony preparing, and I waited for it. In a short time the Emperor, in a brilliant uniform of scarlet and white, mounted on a fine bay charger, appeared at one extremity of the aisle, accompanied by the Grand Duke Michael in a hussar uniform and the Czarovitz in scarlet and white, with a throng of about a hundred aides-de-camp in the same glowing dress; the cavalcade passed up to the right extremity at which the Emperor formed it in a line. The Empress then, with her daughters, in an open barouche drawn by six grays, with three postillions clothed like jockeys in white satin jackets with light-blue satin sleeves and white breeches, and with silk cap and tassel, drove into the aisle and passed in front of His Majesty by whom she was formally saluted; several carriages followed her with her maids of honor

¹ This paper concludes the extracts from the late Vice-President Dallas's journal. For the first instalment see THE CENTURY for May.—EDITOR.

and a crowd of officers attended. The glistening of the uniforms, the nodding of plumes, the richness of the equipages, the caracoling of the beautiful horses, and all combined with the immensity of the crowd and the universal devotion to amusement and hilarity, produced an effect altogether beyond description. The imperial cortege rode up and down in the manner I have described, several times.

THE EMPEROR'S DRAUGHT FROM THE NEVA.

I MET the Emperor this morning on the English quay. He was alone, stopped, shook me cordially by the hand, and after a little chat, informed me that he had received news from Lake Lagoda which rendered it probable that the ice in the Neva would break away in the course of two or three days.

Thursday, 26th April, 1838.—Bets on the departure of the ice in the Neva are numerous and heavy. The Emperor himself gambles on this event. It has been expected to move for several days, but remains firm, and one unacquainted as I am with the effects and operation by which it is secretly governed would deem it stationary for ten days or two weeks more under almost any condition of atmosphere.

Saturday, 28th April, 1838.—The ice in the Neva gave way and started on its downward course at about ten o'clock to-day. At about five in the afternoon the usual ceremony was performed by the Emperor drinking a tumbler of the water, filling the tumbler with pieces of gold for the benefit of the officer who handed it, and ordering him to cross the river in his barge. The barge proceeds, cannons are fired when it is half-way and again when over, and thence forward the people are at liberty to use their wherries. The intercourse to-day between the city and the islands was suspended for about eight hours; between 6 and 7 P. M., but few cakes of ice were perceptible. The bridge of boats was swung on one side at about noon and will probably not be restored before to-morrow morning.

Thursday, 4th December, 1838.—Mr. Soltikof while spending this evening with us narrated several anecdotes with great spirit, which it may be worth while to preserve. He is a man about sixty-five years of age, of immense wealth and of great talent as he said. He was formerly high in Imperial favor, but owing to some personal indiscretion in his manners at Court he was obliged to retire at least from intimacy. It is a fact remarkably illustrative of the little attention which the United States receives from European savants that Mr. Soltikof, although unquestionably eminent for ability and erudition, and though he has a copy of the Declaration of Independence with au-

toph signatures hanging up in his library, did not know that General Washington had ever been President, but thought that he had retired wholly from public affairs, from the peace of '83 to the period of his death! He would hardly believe me when I assured him that he had been our chief magistrate for eight years under the existing Constitution. Mr. Soltikof says that the inundation of the Neva, in 1824, was very sudden and inconceivably disastrous in its effects; he occupied the house in which he now lives in the Small Moscoy, and was sitting at his office table sealing some letters and packages; he had felt an unusual coldness in his feet: he rang the bell for his servant, and ordered him to take some letters to the post-office, and to his utter amazement he received for answer that it was impossible as the waters were six feet high in the streets, and still rushing upwards. He had scarcely been told this before the floor on which he stood burst and opened and the waters rose in his apartment up to his own middle; this swell lasted for about six hours. The Emperor Alexander was born in 1777, a year memorable by a similar inundation; and when that of 1824 occurred he said it announced his approaching end, and became an altered man. Soltikoff describes the change as striking and distressing; the calamity seemed to be forever present in all its horror to his mind, and to weigh him down; one melancholy incident he particularly dwelt upon, that of an old woman whom he saw while he was wandering about to relieve the sufferers, and who was eagerly searching for the corpse of a young and only grandson. The Emperor offered her ten thousand rubles which she declined receiving, saying she wanted nothing but the body and continued to weep and search, when suddenly she espied the object of her pursuit covered with dirt and rubbish, and rushed to it frantic with delight, and embracing and clinging to it in prolonged delirium.

SOLTIKOF'S RECOLLECTIONS OF 1814.

WHEN in the campaign of 1814 the allies entered Paris, the Emperor Alexander separated himself from his staff and, in the confidence of good intentions towards the French people, confidently rode alone and in advance. He was stopped by a knot of *poissardes*, one of whom advanced and presented him a handsome bouquet of flowers, saying that he was the only one of the monarchs whom they loved.

During his stay at Paris, Alexander was in the habit of almost daily visiting the Empress Josephine at Malmaison, and, indeed, it was owing to his energetic friendship at the Congress of Vienna that Eugène Beauharnais,

Duke of Leuchtenberg, was allowed to retain Bavaria. On one occasion driving out to see the ex-Empress in his carriage with four horses abreast, and galloping as usual, he met a French officer in a rich curricule and pair; the Frenchman would not yield the road, but cried out, "Give way, give way!" and the consequence was that when the two equipages encountered the curricule was overturned and broken to pieces; its horses knocked down and much wounded, and their owner thrown out, rendered perfectly furious with rage; the Emperor alighted immediately, begged the officer's pardon, hoped he was not hurt and ascribed the disaster to the carelessness of his coachman. "No!" was the reply. "You are doubtless one of those who have conquered our capital and you think to ride rough-shod over us, but I will not submit to such indignities and wrongs. I demand the satisfaction due to an insulted man; there is my address, and I expect to see you by eleven o'clock to-morrow morning." "Agreed," said his Majesty, "you shall be satisfied." Early the next day the Emperor sent General Kissileff to the Frenchman with a splendid curricule and two of his finest horses, requesting him to accept them in lieu of the injured ones; at first the Frenchman haughtily declined, saying that he waited the personal presence of General Kissileff's friend and associate, and would receive nothing but the satisfaction of an apology or a duel: he was thunderstruck, says Mr. Soltikoff, and overwhelmed when Kissileff replied: "That is impossible, my friend is His Majesty the Emperor of Russia."

Thursday, 6th December, 1838.—I do not recollect to have seen the following anecdote, which is given me as illustrative of the political finesse of the Empress Catharine II., but which is probably an invention. Charles J. Fox had for some time been very hostile to Russia and its sovereign, in the House of Commons; the Empress gave a large entertainment at the Hermitage, to which she invited several distinguished Englishmen who happened to be here at the time. In one of the rooms there was a plaster cast of Fox, which was surrounded by busts of Cicero, Demosthenes, etc., and in this apartment and near the busts the Empress had engaged herself at whist; in the course of the evening her English guests sauntered into her neighborhood, and seeing the cast expressed aloud to each other their surprise; the Empress paused, listened for a moment, and then said to them: "What! gentlemen, are you surprised to see that bust in the midst of the greatest orators? Do you think me incapable of doing justice to an enemy? I can give Mr. Fox the rank to which his wonderful ability entitles him even while I suffer

under its exertions." These words were carefully reported to Fox, who soon afterwards became the parliamentary friend and eulogist of Catharine; the plaster cast soon gave way to one of marble and another of bronze.

THE HEIR'S OATH OF ALLEGIANCE AND A ROYAL BETROTHAL.

Thursday, 13th December, 1838.—At half-past ten went to a ball at Count Levaschoff's, it was exceedingly brilliant. Prince Hohenlohe apprised me that the diplomatic body would be invited to attend the ceremony of affiancing the Grand Duchess Marie and the Duke of Leuchtenberg on Sunday next, with their respective ladies. This necessarily involves a special and unexpected expenditure of at least two hundred and fifty dollars, which I can no more avoid than I could avoid returning the Emperor's salute as I pass him in the street, and yet I am expected to meet all such charges out of my salary!

Friday, December 18, 1838.—In the course of the evening Mr. Kaiserveldt made himself very entertaining by a number of anecdotes of his own personal experience. His description of the scene which took place at the Imperial chapel when the young Grand Duke became of age, and took the oath of allegiance, gave a delightful impression of the domestic feelings of the autocrat and his family. He says that the church was thronged with the high prelates of the church and dignitaries of State; a small table was placed in the center on which were placed the Bible, some religious emblems and the written draft of the oath to be taken; after some prefatory ceremonies the Emperor led his son to the desk and bade him read attentively and aloud the oath before he signed it. The young man began audibly and distinctly; but when he came to that part which imported that he vowed obedience and love to the Emperor, his father, his voice faltered, choked and finally ceased; he seemed to be overpowered by his feelings and wept profusely; the Emperor who stood close by remained motionless and gave no symptom of agitation except two heavy tears which rolled down his cheeks; a second time did the son endeavor to proceed, but again failed under the tenderest emotions about his father; the Czar allowed some minutes to elapse that he might master himself, and then with all the apparent unmoved dignity of the monarch pointed again to the scroll. As soon as he had completed the oath, the Grand Duke threw himself into his father's arms, where he sobbed aloud for an instant, when recollecting his mother to be at the side of the church he rushed toward her and was received with an affecting and prolonged em-

brace. The Emperor unable further to control himself went to them while thus clinging to each other, and encircling them both with his arms gave way to a paroxysm of emotion. In this scene, says Mr. Kaiserveldt, there was no acting; it was a sudden and obviously wholly unexpected overflow of parental love, it drew tears from all who beheld it.

Sunday, 16th December, 1838.—At eleven o'clock this morning I went accompanied by Mrs. Dallas and Mr. Chew, all *en grande tenue*, to the Imperial palace of the Hermitage. The accumulation of equipages on the river front probably induced our being invited to alight and enter at the door in the Milione, as we were driving on; the British ambassador and ambassadress had just preceded us. We passed through several rooms until we came to the one temporarily converted into a chapel, and crossing that we were ushered through two lines of brilliantly equipped officers, along the Vatican gallery or corridor, and into the apartment appropriated to the reception of the diplomatic corps. We were early, none of our colleagues, but Clanricarde and his suite being there, and the customary guard of grenadiers not stationed until ten or fifteen minutes afterwards. Lady Clanricarde was handsomely and tastefully dressed in a silk of deep blue, fronted with a costly show of point lace, and having an expansive train bordered with the same and richly worked with Roman pearls; her head glistened with a coronet of diamonds whose luster however seemed to fade when contrasted with those of the Russian court. Our associates soon arrived. The ambassadress of France wore a gorgeous but obviously old dress, white with a profusion of gold tinsel and a train of crimson velvet embroidered in gold. Countess Schimmelpennink was overwhelmed with finery of all sorts and of all colors; silver and gold tinsel, jewels of every description, a train fringed with silver, an upper gown of gauze fretted with golden stars, and a half-turban. Contrasted with these, the white satin gown with light pink satin train flounced with tulle and a headdress of a few flowers (the costume of Mrs. Dallas), unadorned by a single jewel of any sort, struck me as exceedingly modest, peculiarly suited to an American lady and withal really much the prettiest. The English and Austrian ambassadors wore their military uniforms of scarlet and white, only differing in the collocation of the colors, the first having scarlet coat and white trousers, the latter having white coat and scarlet trousers. Baron Barante was in civil dress richly covered with embroidery, Baron Blome, the Dane, resembled the Englishman, except that he glittered with some crosses and ribbons. Count Rossi, the Sardinian (whose wife is not yet out

of her room), wore a remarkably becoming dress of green and gold, turned up with white. Count D'Appony, the Austrian attache exhibited his fanciful and favorite costume of the Hungarian nobleman and ranger. The ceremonies began by the ambassadors and ministers (without their ladies or secretaries) being conducted in due order of rank to the large and lofty square apartment arranged into a chapel, and stationed along one side of it, with their chief, Count Ficquelmont nearest the door at which it was known the Imperial family would enter. A screen of the necessary size, with the external panels beautifully painted with saints and scriptural subjects, its parts movable on hinges and having two doors in front was fixed on the eastern side of the room and formed the retiring and preparing recess of the priests. Between its two doors was the altar, and on both sides of this screen, within a small, low railing, were the Court choir. Directly in the center, and at a short distance from the screen was a platform about ten feet square raised, say a foot or more, from the floor, and covered with crimson velvet bordered with gold lace. A small table was on this platform and the rest of the apartment was divested of furniture in order to make room; the large glass chandelier in the middle was illuminated, and when we entered, there were assembled only a few of the highest civil and military officers. About thirty of the clergy officiated, three of whom were of the highest rank, and one of these the very old gray-haired and enfeebled Metropolitan: three others were of a secondary rank, the bonnets or miters of these six were worn during most of the ceremony, and were ornamented with miniatures, pearls and other jewels in great abundance. The robes of all who officiated were of a material which resembles rich, thick, cut velvet of a glowing crimson color—with golden crosses worked in it in every direction, and with broad stripes of gold embroidery sunk as it were in the velvet. The manner in which these robes are adjusted is rather clumsy; they seem to be thrown over the shoulders, as one would throw a sheet or tablecloth, when intending that it should conceal the whole figure, without regard to grace or fitness. We had not been long in this apartment when we heard the customary suppressed "hush" which on such occasions preceded the Imperial family, and we of course fell into our line. The *fourriers*, *chambellans*, etc., etc., in double file and in their richest liveries, passed in at the northern door and went out at the southern one; the Grand Master of Ceremonies, and the Grand Marshal of the Court, with two or three other high dignitaries, bearing large golden square staves, surmounted with crowns in brilliants or gold

work, quitting the lengthened procession and stationing themselves at the extremity of the diplomatic line and in front of the velveted platform. Then entered the Emperor, Empress, their second son Constantine, their two other sons, the Grand Duke Michael and his Grand Duchess Helen, the Grand Duchesses Marie, Olga and Alexandra, and the betrothed (or "promis") the Duke of Leuchtenberg. At the threshold the Imperial party were met by the whole of the clergy, the Metropolitan at their head, bearing a sumptuous silver cross, with a golden full length image of the crucified Saviour upon it, and another carrying the chalice of holy water, drops of which were scattered by a sort of short bouquet of green leaves. Each of the Imperial family kissed the cross, held up for that purpose by the Metropolitan and his hand also; and each, bowing forward as if to approach the chalice of holy water received a few drops from the bouquet on the palm of the hand, which they carried to their lips. They then crossed the room and ranged themselves immediately opposite to us, the Emperor leaning his back against the edge of the open door, through which could be seen an endless vista of magnificently dressed ladies unable to get accommodations in the chapel. Directly behind the Imperial family, I was unexpectedly pleased to find that the ladies of the foreign ministers followed. My friend Count Schimmelpennink had not noticed this, and when the throng of maids of honor had passed and had (as many as could) arranged themselves throughout the room, he abruptly turned to me and said, "I believe I will go home!" "What for, Count?" "This neglect of our ladies is not to be borne; you perceive that they have been left with the secretaries and attaches in that remote antechamber." Had such been the fact and had I, as probably I should, encouraged the Count by the slightest assenting movement, we must have had an agreeable little flare-up. As it was, I relieved my colleague by pointing out to him his own wife, safely ensconced by my own, close to the Imperial family. The betrothment began by His Majesty's conducting his daughter Marie and the Duke to the platform, the latter being placed on the right of the former, and the Emperor returning to his former position. A lighted wax taper was then placed by two of the priests in the hands of each of the affianced. Religious exercises followed in the Greek form, of which I could understand nothing. Two priests brought, on large golden-plates, the wedding rings, and deposited them on the small table; that of the Grand Duchess, which I could distinctly scan, was a very large diamond of extreme brilliancy. The Metropolitan with some ceremony placed

each ring on the finger of its owner; and after other recitations the Empress went forward, took the ring off the hand of Marie and placed it on that of the Duke, and the ring off the hand of the Duke and placed it on that of Marie; at this instant, as if the artillery had actually witnessed the movement, a roar of guns issued from the fortress on the opposite side of the Neva, exceeding in number one hundred. The venerable Metropolitan administered to each of the parties the promise or engagement, reading it from one of their sacred volumes; and they in turn manifested their assent by kissing the golden cross he held up. They then descended from the platform; the Grand Duchess threw herself into her father's arms, and remained some seconds, clinging to him under the influence of strong emotions; they were embraced by all the Imperial circle in succession, and here seemed to terminate the special act of affiancing. The priests however proceeded with their performances, during a short part of which it was very inconveniently necessary for all who were present to kneel. The hymn for the safety of the Emperor, in which the choir joined with great effect, was delightfully executed. When the whole closed the Imperial family passed out at the door through which they entered, bowing to us as they passed, and were followed by the almost endless train of maids of honor, chamberlains, etc. The ladies of the foreign ministers went in the current and in the order they came; while the ministers themselves were detained in the chapel for some time, preparatory to their being led in the direction opposite to that taken by the court, the whole way round through the interminable saloons of the palace until they came to a large and richly ornamented one overlooking the river, where they again marshaled themselves in line awaiting the coming of the affianced couple, to whom they in due solemnity tendered their felicitations. Here we had been joined by the secretaries and attaches; our ladies being left in the apartment in which they were originally placed to receive first the visit of the Duke and his future Duchess. This ceremony gave me the first opportunity I have had to form any sort of opinion of the young man so suddenly exalted by the Emperor by incorporation into his domestic circle and into the highest grade of his honors and services. His appearance is prepossessing, though certainly not handsome nor striking.

COURT GOSSIP.

Tuesday, 15th January, 1839.—The Marquis Clanricarde made himself uncommonly agreeable. He described Queen Victoria to me; she was a little lady, with fine large gray eyes that

turned up impressively and a peculiarity of bearing and manner which would make her remarked in any company; when she is gay her joyousness is that of an open-faced girl, but the instant she is serious she draws down the corners of her mouth, drops her eyes and looks intent; she sings well and reads admirably, filling the largest hall with a voice and enunciation as distinct as a bell without the least exertion.

Monday, 27th February, 1839.—Prince Hohenlohe told me the following anecdote. Some ten or twelve years ago, Jerome Bonaparte, now called Count de Montfort, at a soirée of his own, played cards with great vehemence; he lost all the money he had about him, then pledged his rings, and finally laid his watch upon the table. It was a small gold one, the back of which opened by a spring. A lady overlooking the game admired the watch and took it up to examine; on her attempting to open the back, Jerome immediately clasped it, and said: "That must not be done." His wife, who stood by, insisted upon knowing what was in it—grew angry, reproached him with having some keepsake of a favorite there, and finally bursting into tears quit the room. Jerome then opened the watch, showed to all present that it contained a beautiful miniature of his first wife (Betsey Patterson) with the remark: "You see, I hope, that I could not with propriety let her look at it!" The Prince says that it was notorious that he remained deeply attached to his first wife long after their separation.

THALBERG.

Wednesday, 6th March, 1839.—Sigismund Thalberg gave his first concert in St. Petersburg this evening at the *Assemblée de la Noblesse*. I had obtained four tickets out of the nine hundred sold, which were at fifteen rubles or three dollars per ticket. We went half an hour earlier than the appointed time, in order to get convenient seats, but we found the saloon already crowded. Many had gone as early as five in the afternoon, to wait patiently till eight. Everybody of ton and distinction was there, and the Imperial box was graced by the three Grand Duchesses, Helen, Marie, and Olga, attended by Baroness Fredericks and Kitty Tschitcherine.

A great poet, a great orator, a great painter, and a great musician (composer as well as performer) are scarcely to be separated on the scale of intellectual power and interest. Thalberg is the first musical genius I have ever seen. I had anticipated much but he more than satisfied me. He executed on the piano three of his own pieces, and made the instrument speak in tones I never imagined it capable of. The vast and discerning audience testified in tumults of applause to his triumph. He seems

a young man of twenty-five, of rather slender figure, florid complexion, light chestnut hair, and a distinct Grecian profile. His personal deportment was modest, deferential but perfectly self-composed and calm. Dressed in full black, with white cravat and maintaining a mild but imperturbable serenity, he took his seat at the piano, with the preoccupied air of a young clergyman full of his most interesting sermon. His first touch carried conviction of his excellence. It involved a delicacy, a certainty, an entirety which made the note fall in its utmost perfection upon the ear. As he proceeded, this exquisite distinctness accompanied him through all the mazes of his elaborated composition. The instrument seemed like a wonderful combination of the richest, clearest and sweetest human voices.

In coming away, the sudden rush through the ante-chambers was rather alarming. We got, however, in the advanced group with Count Nesselrode (whose little rake-hat made him look as if he had already been squeezed to death, and who kept screaming for his weeping and terrified daughter Marie) Princess Soltikoff, Countess Kreptovitch, etc., etc., and were able to reach our carriage with no mishap, except the loss of a breastpin.

Tuesday, 12th March, 1839.—At half-past ten we went to Princess Hohenlohe's, and remained till half-past two. I played chess with the representative of Don Carlos, the Duke of Medina Sidonia and Marquis of Villafranca, giving him a castle and a knight, and then beating him. The company was numerous and gay. Thalberg made his appearance as a guest, and seemed very much courted by some of the younger married ladies. He declines playing at such parties, unless engaged for the purpose and then his fixed price is 1000 rubles or two hundred dollars for the evening, during which he executes two or three pieces. Hohenlohe is not up to such extravagance; but the pianist finds himself in pretty constant demand. What orator, statesman, lawyer, poet, or even novelist has ever been paid at this rate?

Thursday, 14th March, 1839.—At half-past four went with Mrs. Dallas to the splendid dinner of Prince Youssoukoff. There were about fifty guests. The extent of this palace and the magnificence of its furniture and arrangements struck us as forcibly as ever. The Prince has his band of music (the only private one of which I am aware) and it played at a short distance from the company, changing its position when the dinner was announced, during the whole of the entertainment. He has also a theater attached to the establishment, and his household servants number five hundred.

I sat at table between Prince Mensikoff and Madame Paliansky, both of whom were agree-

able: the Minister of the Marine very shy about the actual condition and number of the Russian navy, and the lady amazed to hear of a country in which husbands were faithful to their wives; she thought she would send her daughters to marry in America.

TRIALS OF THE PERSIAN AMBASSADOR.

Friday, 23d March, 1839.—The Princess Shakoffsky, who spent the *avant soiree* with us, gave an animated account of the recent Persian ambassador at this court. He was a young man, scarcely one and twenty. He dressed in the rich and magnificent costume of his own country, with a number of what we would call "morning gowns" which he would often remove, one by one, as he felt himself, while visiting, getting too warm. He could not bear to see ladies and gentlemen dancing together, considering it offensive to modesty, and at balls kept his eyes studiously upon the floor; and yet he esteemed all women as mere objects of sale, and on one occasion, at the theater, struck by the extraordinary beauty of the Countess Zavadowski he sent round to inquire at what price she could be purchased. He was passionately devoted to chess, and obliged the young men of his suite to play with him, and always to be beaten, morning, noon, and night. Once at a large party, Princess Shakoffsky challenged him to a game; he seemed to think it impossible for a lady to have any skill. She asked him whether she was bound not to win finally: he replied that he would not play unless she promised to exert herself to conquer; and they began. In a short time she checked his king and queen, and took the latter; he became excessively agitated and summoned to his assistance his four secretaries, who became themselves apparently much disquieted. The company clustered round the board, and took sides, and the Princess received so much and such various advice as to each move, that she ceased to think for herself and lost the game. Early next morning she was waited upon by the four secretaries, who believed she had purposely lost the game, and who came to thank her, as had she won it, they would probably have undergone imprisonment for a month! He was in the practice of walking about with his eyes shut or bandaged, saying that he wanted to accustom himself to live and move without seeing, as he presumed he should one day be deprived of his vision. Since his return to Persia, for some real or supposed offense, he has had his eyes torn out.

SONTAG SINGS FOR CHARITY.

Tuesday, 26th March, 1839.—At seven Mrs. Dallas, my daughters and I repaired to the

grand concert given by the Society of Patriotic Ladies for the benefit of their schools. On reaching the magnificent hall, the Salle de la Noblesse, we found it crammed with about fifteen hundred visitors, but seats had been set apart for the diplomatic corps, which we managed to attain by passing across the elevated platform appropriated to the music to the opposite side of the room very nearly *en face* of the Imperial box. Nothing could exceed the splendor of the scene. All that is noble and fashionable and elegant and tasty were assembled, the military and ladies richly dressed. The whole of the Imperial family (except the Grand Duchess Helen, who is unwell) were present. The Empress, Marie, and Olga, clothed in white, their foreheads glittering with diamonds, with the two boy grand dukes, Baroness Fredericks and Prince Volkonski were stationed, like the gorgeous figures of a superb tableau, on the crimson velvet-lined and curtained recess, or rather small room just in front of us; while the Emperor and Grand Duke Michael found their way at an open door close by, and stood tranquilly in the crowd. Here were certainly at a *coup d'œil* to be seen the elite of St. Petersburg if not of all Russia. All the dames and demoiselles d'honneur and ladies of distinction occupied the first ten or twelve benches nearest the music; all the general officers with their dazzling epaulettes and swords were clustered about, standing; all the Imperial Council and the Senate and the *État-Major* were collected. Nobody seemed to be absent whose presence could add to the brilliant *tout ensemble*.

This concert which takes place annually is one of the contributions of the nobility to charitable purposes; its performances are executed by the most distinguished ladies and the instruments are managed chiefly by amateur gentlemen. At the head, however, of the songstresses was the magnet of the evening, the celebrated and incomparable Sontag, now Countess Rossi. She had been persuaded to run the risk of reviving past recollections, to forget that she had stepped from the boards of the opera into the rank of a minister and the arms of a count, and to lead the flower of Russian noblesse and fashion on this benevolent occasion. What a splendid triumph did a single gift of nature seem to obtain! Her voice overwhelmed competition, and by its wonderful volume and sweetness produced a sort of enchantment which made you for a while insensible to anything else. The Czar, his court and his army, all seem to lose their prestige and their power, while that magical voice domineered the ear. She sang twice—first the finale of Donizetti's opera, "Anne Bolena," and was in this accompanied by Madame Bastiniëff and Madame Krudener and three gentlemen, second Bellini's

"Norma." The effect of the last song was beyond description, and the applause was vehement and protracted. It recalled Malibran to my mind, and yet seemed superior by the addition to her voice of that of her father, Garcia. Nothing could be richer, nothing could be clearer, nothing could be vaster, nothing could be softer, nothing could be deeper, nothing could be more delicate, and nothing could be more decided. I might go on multiplying epithets, without describing a bit more distinctly. On the whole I think it was the best singing I ever heard, and as good as can be. The manner of the Countess was perhaps a little constrained in the effort to avoid relapsing into the cantatrice, and on two occasions instead of confining her curtsy to the Empress, she for an instant bent to the applauding audience. I doubt much whether this taste of the glory of past times was not more really delightful to her than any of the rank or other results of her marriage. She was sent for by the Empress at the close of her song—an act which is the common courtesy shown to professional songsters, and which has been constantly shown to Taglioni; I thought the discriminating delicacy of Her Majesty might have avoided on this occasion.

POSTAL SPIES.

Thursday, 4th April, 1839. . . The discreditable practice of opening letters as they pass through the post-office, a practice said to be universal, and of which I have had convincing proofs, is attested by several anecdotes current here, of which I note the two following: Not long ago one of the foreign ministers complained in person to Count N. that he had received a bundle of dispatches through the post-office, rumpled, torn, and obviously having been opened. The Count coolly observed: "It must have been done very carelessly; I will give instructions against such negligence in future." On another occasion the Swedish minister, meeting the Director-General of the post-office, casually said to him that his subordinates ought to be more careful in their process of examining his letters. The director gravely protested that nothing of the sort was done: "Oh, I don't mind it," said the Baron, "but as in their hurry they sent me my dispatches from Stockholm with the seal of the Minister of Foreign Affairs of Holland, I think they want lecturing." The director only replied with the exclamation: "Is it possible!"

THE NEW WINTER PALACE.

Wednesday, 10th April, 1839.—The reoccupation of the Winter Palace has been signal-

ized by splendid "gratifications" from the Emperor to those who have contributed to its reconstruction. General Klein-Mihel has received a loan of one million of rubles with which to purchase an estate, and the Order of St. Andrews, with a gold medal surrounded by brilliants. Count Cernicheff received as a gift three hundred thousand rubles and it is supposed will be sent ambassador to Vienna, a post for which Benkendorff and Klein-Mihel were his competitors. All the subordinate laborers on the palace have received a silver medal and now parade them on their breasts at the Cachelles. At this season of every year, it is customary to distribute more or less of these imperial favors.

The mortality among the workmen engaged in rebuilding the Winter Palace is represented to have been frightful. As the emperor has undertaken to re-enter during the feasts of Easter, immense heat was kept up in the interior to dry the walls, etc., and this produced all sorts of fatal disorders. Of course this effect of his will was not communicated to his majesty.

Sunday, 14th April, 1839.—The court circle, intended to have been held at the Winter Palace on Tuesday last, was deferred, owing to the fatigue and indisposition of the Empress, to this day, at noon. I reached the diplomatic reception room, without traversing much of the residue of this magnificent newly-finished structure. The basement affords accommodation for any crowd of servants, and the white marble stairway leading to the upper story, with its lofty, painted and gilded ceiling, and its ornamental statuary, is vast, striking, and beautiful. The apartment assigned to the foreign ministers was one in which a small and handsome throne occupied the center of a large recess, immediately in front of a painting of Peter the Great guided by Wisdom: its walls were of crimson velvet studded with gold double-headed eagles somewhat larger than a man's hand. From the vaulted ceiling hung the richest and tastiest chandelier of solid silver, chased and worked into oak wreaths encircling Russian eagles, the immense size of which surprised me. Against the walls a number of lustres of the same rich and solid material, each six or eight feet high, exquisitely elaborated were attached, and in two piers stood wide tables of pure silver. The mixture of gold and silver, though it seemed to increase the gorgeous display, detracted from the taste of the ensemble. The steps and floor of the platform on which the throne stood were carpeted with rich crimson velvet; the rest of the floor was figured and waxed wood.

Monday, 15th April, 1839.—I procured tickets for the admission of my family to explore

the Winter Palace, and we repaired thither at one o'clock. We entered by the great central door on the river side, and mounted the noble marble staircase, whose solid, carved and polished banisters of the same material particularly struck us. . . . In surveying the endless elaboration of work of all kinds, bestowed upon this building, one is utterly at a loss to comprehend how it could be executed by human means in the course of the brief interval between the conflagration and the present moment. An exclamation to this effect involuntarily escapes the lips as you enter each one of the more important chambers. . . . Nothing more exquisitely luxurious, costly and refined can be imagined than the private apartments of the Empress. They remind one of the descriptions in *Lalla Rookh*, of the Moorish Alhambra, of Sardanapalus, and of the Arabian Nights. . . . There was a striking and agreeable difference between these apartments and those of the Autocrat. In the latter nothing was feminine, everything elegant, commodious, nothing useless or trifling. He has no bed, he has no carpets, he has no toilet table, he has no knick-knackery. Such also were the rooms of the Grand Duke. The Grand Duchesses's, on the contrary, partook of the delicacy and luxury of the Empress's. . . . In the chambers of the younger children was a room provided with a small sentry-box, two small muskets, and the posts usual in front of guard-houses as props for arms; this is the military closet of the two Grand Dukes. In one of the rooms of the Empress I was pleased with the apparent lightness and finish of the sofas, chairs, and tables; they were of iron highly polished, and looked like the most fragile ebony.

PRINCELY STYLE.

Wednesday, 17th April, 1839. . . . At eight o'clock, expecting to meet all the Imperial family, we went to the ball of Prince Yousouppoff's. The Emperor and Grand Duke Michael attended, but the Empress excused herself by sending word that her physician advised her staying at home, and all the Grand Duchesses remained with her. The interest of the evening to me arose from the presence of Marshal Paskevitch, with whom I had several agreeable chats. He is a younger man than I had supposed, has a lively air, and is frank and agreeable in conversation. He told me he was fifty-five. His decorations, crosses and orders were extremely brilliant, glittering on his left breast and from around his neck like a huge mass of diamonds. The Czar, after his usual kind shake of the hand, said he had not been to a party for nine weeks; that he wanted to induce his wife whose health was bad to stay

at home by setting the example. Everybody agreed in considering the entertainment the most splendid which could be given by any person below royalty. Nothing could transcend the magic of the supper: its groves of orange trees towering eight or ten feet above the heads of the guests and laden with fruit and flowers; its gorgeous arbor prepared for the Empress, over which hung in clusters ripe, red, white, and purple, intermingled with leaves, grapes of the largest and most luscious appearance; its gorgeous and glittering table ornaments, its golden chandeliers; its dazzling company and still more dazzling liveried servants. When from these two rooms, the eye passed to the adjoining ones, to the antechambers, the refreshment saloon, the endless suite of halls and galleries devoted to paintings and sculpture, the card-rooms, and the expansive branching stone staircase flanked with marble statues and fragrant with exotics, it was difficult to suppose the whole the creation and property of a private subject. He is said however to enjoy an incalculable revenue. He is, however, sufficiently noted already in the diary. I could not help thinking that the Empress stayed away, not because of any real malady, for she walked on the English quay this morning, but in order to avoid witnessing or countenancing a fête that approached too near the Imperial style to be agreeable in a subject. The poor Princess, who had hoped to make it worthy of her mistress and her guest, looked the picture of despair when told that she could not come.

Saturday, 20th April, 1839.—The evening spent at the soirée dansante of Countess Schimmelpenninck. Among the gentlemen were Villafraña and General Danieleffsky. I had with the latter a long and interesting conversation on the condition and history of Russia, and the characters of the Emperors Alexander and Nicholas. His mind is turned closely to these subjects; and he is now actually preparing for the press a work on the campaigns and policy of the late Autocrat. He accompanied Alexander as confidential secretary throughout all his great movements from the year 1804.

. . . Among other matters I remarked to Danieleffsky, that I felt surprised at their retaining, in a country like this, the law for the equal distribution of intestate estates, abolishing primogeniture; that their aristocracy must inevitably become poor and lose their consequence, and that we regarded such a law as the very cornerstone of our republicanism. He replied simply: "This is a despotism; our Senate now merely records after attesting the Imperial ukases. Peter the Great once made an ukase establishing *Les Majorats* or the right of primogeniture. The nobles soon felt their independence, and in less

than twelve years the Senate, while recognizing Peter's title to the throne, had advanced so far in their pretensions that they presented for his signature a written Constitution of Government! The law was certainly not the exclusive cause of this—great political results require a combination of causes—but it was the leading cause—and Peter abolished it without delay." Thus when the object is the same, the abasement or destruction of aristocracy, a republic and a despot must pursue the same course.

THE EMPEROR'S WHIMS.

Thursday, 2d May, 1839.—The Emperor met young Meyendorff with a companion near the boulevard the other day. He was on horseback, they walking on foot. Having been long absent from Russia, the young men did not know the person of the sovereign, and of course, omitted the customary bow. His Majesty immediately dismounted, went up to them, and reprimanded them sternly; they in vain pleaded their ignorance of his figure; he ordered them to proceed forthwith to the guard house, and upon their remaining stationary, not knowing where the guard house was, he called up a sentinel and directed him to accompany them to the prison. They were extremely alarmed, wept bitterly, and were immured for some hours in a wretched cell. At the expiration of that time, a guard announced to them that the Emperor had ordered them to be escorted to the Anischkoff palace; they went, expecting little short of Siberia or decapitation. When at the palace, they were stationed near a corner of one of the apartments, and then left to themselves. They were surprised to notice that several young ladies now and then, popped their heads in at the door, and looking at them for an instant, retreated laughing. At last the Emperor came in, and walking towards them said: "Young gentlemen, you have had lesson enough for the present; I am sure that you will know me hereafter, wherever you may see me; and now to remove the impressions of the day come and dine with my family and myself."

As an illustration of the extent to which the most important matters are subject here to Imperial whims, I give the following from young Count—. The Empress having written a letter to her father gave it to a servant to put into the hands of a courier then waiting to start; the servant, misunderstanding the order, deposited the letter in the post-office, and the mistake was not discovered until five or six hours had elapsed; in the meanwhile the regular mail for Prussia, and indeed all Western Europe was made up and dispatched. As soon as she was told what had been done, the Empress sent an express to command the whole mail, bag and

baggage, back to St. Petersburg: about fifteen hours were lost, everything was reopened, the Imperial missive recovered and placed in the courier's care, and then, but not till then, the mail allowed to resume its journey.

Friday, 7th June, 1839.—Rose this morning, after long and serious reflection, under the solemn conviction that it was my duty, at all hazards to take my family home this summer, and if my recall were not sent before I reached there, to abide the decision of the President whether I should return here myself or not. I accordingly inquired into the best modes of quitting, and found that my most convenient and economical course will be to proceed hence to Havre on board the steamer, the *Paris*, on the 24th of July next. I must set about preparing for this.

AN IMPERIAL DUCHESS'S TROUSSEAU.

Tuesday, 9th July, 1839.—Having received our "billets d'entree" we went this afternoon to see the trousseau of the Grand Duchess Marie. It is displayed in the Salle Blanche of the Winter palace. The throng of visitors was immense, producing a heat and a pressure nearly insupportable. Our party got broken into detachments, and we were obliged to move along with the dense tide without being able to see all that was exhibited, or to examine anything closely. The court dresses with their rich, embroidered trains were the most conspicuous objects, and were certainly very splendid. I counted in all one hundred and forty dresses most of them exceedingly elegant; and some of them morning wrappers trimmed with lace. The four sets of jewelry were in two large glass desks. The toilet-tables, and their ornaments, one of chased silver, and the other highly worked silver gilt were strikingly beautiful; the former purchased as a present for his sister from the Grand Duke Alexander on his recent visit in England. Nothing could surpass the collection of furs, the cashmere shawls, the countless bonnets, the laced and worked pocket-handkerchiefs; and all the etceteras of a fashionable toilette. The services of porcelain and of silver, and of silver gilt, each of great taste and execution, and apparently calculated for the largest scale of entertainment, formed to my eye, the richest part of the display. Glass in its most attractive shapes and in vast quantities loaded several tables. The tablecloth, napkins, doilies, etc., were endless. Even the culinary apparatus was admirable. Indeed it was impossible to imagine an article of use or ornament, with which a bride should be provided, that was not here in its utmost perfection and in exhaustless quantity. The whole was truly Imperial, and upon a moder-

ate estimate must have cost very little, if at all, short of a million of dollars.

VISIONS OF THE STEAM ENGINE.

Friday, 12th July, 1839.—In speaking upon the progress of human discovery and science, Count Michel Woronzoff, [the Governor of Odessa] remarked that the application of steam to propelling vessels through the water was, in fact, very far from being a modern idea; that he himself read a passage in an old Spanish author named Vilarete in which it was as clear as language could make it that an ingenious mechanic had undertaken the experiment before Charles V., and that though he failed its practicability was asserted by the historian, though he alleged that the machinery would be always liable to burst. So, also, he said that during the reign of Louis XIV. a Frenchman was visited at an insane hospital by a celebrated English nobleman who afterwards claimed the merit of discovering the steam engine; that the alleged madman was so-called and treated simply because he had over and over again pestered the chief of the Department of Marine with earnest entreaties for pecuniary assistance to enable him to show how vessels could be navigated by steam, and the count mentioned an authoress in whose works the whole of this last statement was made. The great merits, however, of Fulton were admitted as unquestionable.

AN IMPERIAL WEDDING.

Sunday, 14th July, 1839.—At twelve o'clock, accompanied by Mrs. Dallas, I went to the Winter Palace, agreeably to invitations, to witness the marriage of the Grand Duchess Marie and the Prince Maximilian of Leuchtenberg. The foreign ministers and ladies, after waiting with the general company for some time were escorted by Count Woronzoff to the chapel, and arranged on the two sides nearest the chancel, forming an alley for the imperial cortege. We noticed that two pairs of pigeons entered at the open windows, and alighted, after flying around the dome, over the altar; an incident that may have been accidental, but which many conceived to be the result of design. The Metropolitan and a concourse of twenty or thirty priests, robed in rich vestments of crimson thickly crossed with gold embroidery and with miters glittering with jewels and enamel pictures,—some bearing the sacred image, and others carrying wax lights, stationed themselves at the grand entrance to receive the Imperial party. Everybody wore their richest clothing, all the ladies having long trains, and all except the diplomatic ones having the Ka-

koshnick brilliantly studded with diamonds or otherwise ornamented. The bride wore a superb diadem of diamonds, and on the very top of her head, a crown of the same description. Her train was an immense one of crimson velvet, deeply bordered with ermine. Of the religious ceremonies I could understand nothing; they were exceedingly tedious. There was an interchange of rings between the bride and groom, effected through the agency of the Metropolitan; they sipped the consecrated wine from the same golden goblet, and during part of the proceeding, for about twenty minutes, while the Metropolitan was reading to them, golden crowns were held over the heads of the couple; over that of the Grand Duchess by her brother the hereditary Grand Duke Alexander, and over that of the Prince by Count Pahlen. At one time the couple were led, with their hands united, by the Metropolitan, three times round the altar. At the close of the ceremony, the groom led his bride to the Emperor by whom he was directed to embrace her, and then followed the family felicitations and kissing. The court choir performed the great *Te Deum* most effectively and the cannon of the fortress aided by peals from all the huge bells of the innumerable churches sent forth a deafening and yet exhilarating uproar. After kissing a number of the priests in succession, the Imperial circle left the Greek chapel, and went to where a temporary Roman Catholic chapel had been constructed in some interior apartment and the marriage ceremony was here performed again. We got home as expeditiously as we could at about four o'clock.

At eight o'clock we repaired to the *bal paré* at the palace. La Salle Blanche, an apartment of extraordinary magnificence; its one hundred and twelve Corinthian columns and the balustrades above them with its immense chandeliers having, since we were last in it been most richly gilt. Here also, all the ladies wore trains. No dancing was executed but the Polonaise; there were no refreshments; and the ceremony lasted only for about two hours; the fatigues of the day being too much for the strength of the Empress. Among the remarkable costumes seen on this occasion were those of the Sultan of Kirghis, with his retinue, come to make presents to the Emperor on the marriage of his daughter, and of a Queen of Georgia.

Monday, 15th July, 1839.—We were bound to be at the great theater *en gala* at eight o'clock. I was assigned by the Director a box in association with Count Rossi. The performance was a dull ballet only relieved by one capital scene representing a theater crowded with spectators before whom a danseuse was

making her *début*, while we were supposed to be behind the scenes. Nothing, however, could equal the brilliancy of the *coup d'œil* presented when the whole audience rose to greet the entrance of the Imperial family into their box. The Grand Duchess Marie, as the bride, came in first, and was saluted with vociferous acclamations; then her husband, then the Empress, and lastly the Emperor. By the by, I had noticed yesterday that during the wedding ceremonial there appeared to be an air of abstraction or preoccupation in His Majesty, and I found it to have been caused by the arrival of news of the death of the Sultan Mahmoud, who has by will directed his son, only eighteen years of age, to be under the guardianship of one of his sons-in-law until he attains twenty-five, and who directed the other son-in-law to be forthwith strangled. Nicholas seemed tonight to have, in a measure, recovered his spirits.

LEAVE-TAKING.

Tuesday, 23^d July, 1839.—Count Woronzoff apprized me that the Emperor was in his cabinet to grant me an audience of leave. I shall never cease to remember this conference with pride and delight; it convinced me I had not lived in Russia without doing public service and without achieving the reputation I desire. The Emperor was cordial, kind and full of feeling. He first addressed me, after we had shaken hands, upon my personal motives for returning to the United States "at the moment," he said, "when we all have learnt to appreciate you and your family, and when my whole court, without exception, are cherishing the best dispositions for you." I answered with the undisguised frankness due to such an inquiry from such a man; told him that my private affairs, the education of my children, and my limited resources compelled me to quit him, and that I felt deep regret at a necessity which I could not control. He again seized me by the hand, and assured me that he heard it with sincere pain and sorrow, and hoped that, if ever fortune should improve my ability, I might again visit Russia and desired me to be sure of a hearty welcome. I told him that I derived some consolation in the reflection that I left him *au comble du bonheur*; that I could distinctly perceive in the happy marriage of his daughter a source to him of unbounded and unalloyed gratification, and that all I had had the happiness to see and hear of the Prince of Leuchtenburg satisfied me that his confidence was well founded. He received this remark with apparent delight and grasped my hand anew, and said: "I believe him to be an admirable young man, worthy of everything I am doing for him, and that he will make my

child perfectly happy. You are right in thinking me, at this moment, as happy as a father can be." I then indulged in the trite reflection that the period of attaining such contentment was the one at which philosophy told us we should, in this unstable world, be most prepared against change and adversity. This thought seemed congenial to his mind. His countenance varied its expression from joy to melancholy, and he replied, giving it at once a special direction: "Yes, the ill health of my wife gives me much anxiety; I cannot persuade her to omit anything she deems a duty, and to refrain from exposure or fatigue. She becomes daily more feeble, and now she insists upon going through the distractions of this fête, its intense and crowded heats and all its labors, as if her health were perfect."

He then returned to our political relations; was happy to know that between him and the United States there could exist no sentiments but those of the most friendly character, and hoped that I went away under the same impression. I told him that my attention to the subject had produced a conviction that our highest interests as a nation were identified with those of Russia. "Not only are our interests alike," said he, "but (with emphasis in his tone), our enemies are the same." We recurred freely to the fact that the political institutions of the two countries were radically and essentially different; "but" he remarked, "they tend in each to the happiness and prosperity of their respective inhabitants; and I am engaged in introducing some liberal ameliorations, particularly in the department for the administration of justice, which I hope will be attended by most salutary effects." I commented upon the necessity, however, of his having an eye to everything, and he said *that*, under the circumstances of Russia, was a vital duty.

I handed him my letter of recall which, he observed, he very reluctantly received, and he laid it on his desk without breaking the seal. We again shook hands, and I left him. Count Woronzoff met me, in great haste, saying that the Empress was waiting to receive me. Mrs. Dallas and my two daughters had just taken leave of her. There was obvious impatience all round to commence the ceremonies or gaieties peculiar to the evening, and I went through as rapidly as was consistent with respect.

I then put off my sword, and put on my Venetian or domino, and entered the *bal masqué*. A more absolute jam of human beings of all sorts, conditions, grades, forms, physiognomies, gaits, costumes and tongues cannot be conceived. The heat in the halls was intense. The polonaise immediately began, led off by the sovereigns, before whom as they advanced, turning in every zigzag direc-

tion, the compact mass gave way and opened an avenue for the brilliant train of courtiers, officers and fashionables, almost as if by magic. On one occasion as the glorious file came forward, I found myself screwed tight and motionless between two Kirghese Khans, some Chinese, and one or more Russian serfs, but falling back resolutely, I caught the eye of the Emperor, who saw my predicament and effort and exclaimed aloud in clear English; "I beg your pardon, sir!" to which I had no time for replying except by a bow of the head and a smile. Shortly afterwards, I perceived him approach Mrs. Dallas and with the polite inquiry "*Oserais-je vous demander pour une polonoise,*" lead her repeatedly by the hand through the apartments. He congratulated her upon her intended visit to Paris, said it was a magnificent capital and that many years ago he had attended one of the most magnificent balls given there; and he repeated to her the regret he felt to part with us.

A splendid supper was served apart from the crowd, at about nine o'clock, and the chamberlains having arranged the parties which were to occupy the several *lignes* classified numerically, each carrying eight persons and the number being about thirty, destined for the principal persons of the court, we left the table and hurried, amid some confusion and mud and wet, to the equipages. Ours was number three, superintended by Count and Countess Borke: all being comfortably seated the Czar and Czarina in the van gave the order to proceed, and off we went for a drive of an hour through all the labyrinths of illumination and amid the finest display of water-works I ever beheld. The scene was as wonderful as any of the creations of Aladdin's wonderful lamp. There could not have been less than 500,000 lights, arranged in every possible form, creating a bright day, shining in reflection from the beautiful lakes, and glistening behind cascades, extending into dazzling alleys of a quarter of a mile in length, forming obelisks of vast heights, or spanning in arches the rivulets which intersected the walks. The great *jet d'eau*, the

Samson or Hercules, with countless others in all directions, sparkled and rumbled most musically, while a host of festive frolickers, estimated by Count Borke at 200,000, opened into avenues, as the cavalcade advanced, in front of the tents which were pitched for their enjoyment and accommodation within the open spaces of the gardens. Fine bands struck up at certain distances from each other; and in one of the widest and longest alleys of glowing fire, the court cortège, in order as it were to heighten their pleasure by seeing and saluting each other, turned round and passed repeatedly. It is however impossible, adequately to describe the details or wonders of this extraordinary spectacle. To me and mine it was perfect enchantment, realizing and surpassing all we had read or anticipated.

We drove to our quarters about one in the morning, and bent upon achieving our regulated plan we hastily changed to our traveling dresses, packed up our finery, bade adieu to our friends, among whom we must ever affectionately remember the Barantes, the Hohenlohes, the Butaras, the Rossis, etc., etc., and pushed forward for St. Petersburg. Here, however, began a fresh and exhaustless source of surprise and amusement. The entire road from Peterhof to the capital was crowded with vehicles of every possible kind, forming three and sometimes four lines and occasionally coming to a dead standstill. The droshky, the kibitka, the telega, the omnibus, the caleche, the carriage, the huge diligence, were all in succession before us, and apparently without end, crowded by men, women, and children, in all sorts of motley wear, and with all the ludicrous appearance which follows fatigue after frolic. We laughed especially and heartily at the infinite variety of dozing, nodding, and drunken drivers. As our chasseur was on the box, our coachman found his way with ease and safety. We got home at four o'clock, pretty considerably exhausted, but unwilling to retire or lie down until a finishing hand was put to packing trunks and boxes for the departure at noon.

George Mifflin Dallas.

ENGRAVED BY R. G. TIETZE,

AFTER A RUSSIAN LITHOGRAPH OWNED BY MISS DALLAB.

EMPRESS ALEXANDRA FEODOROVNA, WIFE OF NICHOLAS I.

LOVE AND THE WITCHES.

IT was a little, fearful maid,
Whose mother left her all alone;
Her door with iron bolt she stayed,
And 'gainst it rolled a lucky stone—
For many a night she 'd waked with fright
When witches by the house had flown.

She swiftly shot the iron bar,
And rolled the lucky stone away,
And careful set the door ajar—

"Now enter in, Sir Love, I pray;
My mother knows it not, but I have watched
for you this many a day."

DRAWN BY F. S. CHURCH.

ENGRAVED BY F. S. KING.

To piping lute in still midnight,
Who comes a-singing at the door,—
That showeth seams of golden light,—
"Ah, open, darling, I implore"?
She could not help knowing 't was Love,
Although they 'd never met before.

With fan and roar of gloomy wings
They gave the door a windy shove;
They perched on chairs and brooms and things;
Like bats they beat around above—
Poor little maid, she 'd let the witches in with
Love.

Mary E. Wilkins.

CLOUGH HALL.

WOMEN AT AN ENGLISH UNIVERSITY.

NEWNHAM COLLEGE, CAMBRIDGE.

THE great educational movement for women which was seriously begun some twenty-five to thirty years ago was not the outcome of a moment's impulse; it was rather the result of opinions, which had been slowly working their way through society since the beginning of the century. But it was not until 1848 that Professor Maurice, with the help of Charles Kingsley and others, succeeded in obtaining a royal charter for the foundation known as Queen's College, London. This and Bedford College, opened a year later, were the first two institutions where advanced lectures were delivered to women. After this, however, and for some twenty years or so later, little progress seemed to be made; but, in reality, much good work was quietly being done; and all who were interested in the higher education of women were encouraged to persevere by the support and sympathy of John Stuart Mill, Mrs. Browning, Mary

Somerville, and Harriet Martineau, and others whose writings gradually prepared the public for what was to follow.

The year 1867 is a memorable one for women. During the previous years Miss Emily Davies had worked hard to induce the university of Cambridge to open its local examinations for boys between the ages of twelve and eighteen, to girls of the same ages, and the school-mistresses had formed themselves into an association to improve the system of school-teaching. Advanced lectures to women had been delivered experimentally, and had proved successful. All was now ripe for a further advance. In that year, 1867, the North of England Council was formed, which undertook to provide for women advanced lectures given by university men, in all the chief towns of England. In that year, too, the university of Cambridge first admitted girls formally to its local examinations; and it is interesting to note that it was in that year that John Stuart Mill presented to Parliament a petition for the political enfranchisement of duly qualified women, signed by 1499 women.

The North of England Council, besides pro-

MISS J. A. CLOUGH. (FROM A PHOTOGRAPH BY H. BELL, AMBLESIDE.)

viding the advanced lectures spoken of, was the agency through which the university of Cambridge was induced to provide in 1868 a "higher local examination" for women over eighteen years of age; and this led later on in the same year to the establishment of a college for women at Hitchin, under Miss Emily Davies, the lecturers attending from Cambridge and London. This was the beginning of university life for women, for in the following year—twenty-one years ago—an organized committee of university men provided lectures in Cambridge especially for women; and they were so successful that applications from women came from all parts of England, asking if arrangements could not be made to enable them to enjoy the same advantages. As an outcome of this a house was taken by Professor Sidgwick, and opened for the reception of women students. It was placed under the management of Miss Clough, who had been most energetic in promoting the higher education of women. This was the origin of Newnham College. About the same time the college

at Hitchin, which had grown rapidly, was moved to Girton, near Cambridge, and became known as Girton College.¹

Thus there are two colleges for women students at Cambridge. Girton College, which is a fine, handsome building with extensive grounds lying about three miles out of the town and Newnham College, which, together with the principal colleges of the university, lies within the precincts of the town, only a few minutes' walk from the lecture rooms and laboratories.

Students multiplied so rapidly at Newnham that, in four years' time (1875) Newnham Hall was built. This is the present Old Hall; it is a red brick building in the Queen Anne style. It was long presided over by Miss Clough, now the principal of Newnham College. This hall was soon found to be too small to accommodate all the students, and in 1880 Sidgwick Hall was built (then known as North Hall). This hall was presided over by Mrs. Henry Sidgwick for a couple of years, when she was succeeded, in 1882, by Miss Helen Gladstone, daughter of the statesman, who is still there as vice-principal of Newnham College.

In 1888 a third structure was added—Clough Hall—named after the principal, who now resides there.

Clough and Sidgwick halls adjoin each other, and there is a covered passage between the two. Old Hall lies opposite them. Each building contains a dining-hall, that of Clough Hall being the largest. It is very lofty, and is beautifully decorated; it has a gallery at the end, and along one side of it, which is used by strangers who come to the college meetings. It is not used as a common dining-hall, for, except on special occasions, the students prefer to dine in their respective halls. Each hall possesses a newspaper room and a music room. In Old Hall is the college library, duplicate books only being placed in the other halls; in the grounds of Old Hall, also, are the gymnasium and the chemical laboratory.

The college has ample grounds; those of Old Hall are specially delightful, and are much favored by the students, who on a fine summer's day may be seen basking full length

¹ In 1879 two halls—"Somerville" and "Lady Margaret"—for the reception of women students were opened at Oxford. And before this date the London University had thrown open its degree examinations to women. At Oxford, however, the women are only examined "by courtesy," whereas, at London, they

are entitled to receive both the degrees and the honors of the university. At the University of Cambridge women are entitled to take the university examinations, and the class obtained is duly stated, but a certificate is granted instead of a degree.—E. F.

on the lawn watching the tennis players, or curled up under the trees with a book, wandering arm in arm up and down a shady avenue, or forming cozy little tea parties in sheltered nooks.

There are about a hundred and forty students in residence.¹ All students must reside in college unless they are living with their parents, or are over the age of thirty, when special permission may be granted for their becoming out-students. The average age of the students is from about twenty to twenty-two; some are much older than this, some younger. No student is allowed to enter under the age of eighteen, unless her case is exceptional, and has had special consideration.

dents are allowed a great deal of liberty, but there are rules which have to be observed.

The following are the few restrictions imposed upon them: In the summer terms the doors are closed at 8 P. M.; in the winter terms at 6 P. M.; if students wish to go out after this hour they have to give in their names, and they are then expected to be in by 11 P. M., unless under very special circumstances, when they may perhaps receive permission to stay till later. Students are expected not to absent themselves from lecture.

Out of lecture hours the students are free to go where they will, but if they boat or ride they must provide themselves with a chaperon. In the spring and summer terms the students en-

CLOUGH HALL — DINING AND ASSEMBLY HALL.

It appears difficult for an outsider to realize the conditions of student life at Newnham or Girton College; some seem to imagine that the student has absolute freedom; others, on the contrary, that college life is a second edition of school life—that a student must not go out without leave, that she has certain tasks to prepare, and that there is some one to see that she prepares them. The reality is neither the one thing nor the other. Certainly the stu-

joy a good deal of boating. It is not unusual for them to make up a party and row down the river to some little inn or cottage where they have tea before returning.

At first women students used to work for the Cambridge higher local examinations, and sometimes to enter, informally, for the final examinations of the university; but, in 1881, the Senate of the University of Cambridge agreed to admit women, formally, to their honor examinations, so that now the majority read for an honor or tripos examination—that is for the same examination as the men. They attend the same lectures, and work

¹ The year 1890. In 1886 there were seven American students and two from South Africa in residence. In 1882-84 the two daughters of the poet Longfellow were in residence.—E. F.

under exactly the same conditions; the only difference being that whereas the men have a degree conferred on them, which entitles them to use the letters B. A., the women have to content themselves with a certificate which states the class obtained, but does not confer any title on the owner. The woman graduate has no hood, nor does she wear any distinctive dress as an undergraduate. It is not compulsory to work for the tripos examinations; some

MISS GLADSTONE. (FROM A PHOTOGRAPH BY N. BRIGGS, PORTMAN SQUARE, LONDON.)

still work for the higher local examinations, though they are then supposed to stay at college for a couple of years only. Students are permitted to work with no examinations in view, but in this case they are only allowed to be in residence so long as the authorities are satisfied that they are doing good work.

Three years is the usual time allotted for preparing for a tripos examination, though some may be taken after a residence of two years. If a student fail to keep the stated number of terms the examinations cannot be taken.

That women are able to make good use of these privileges is amply proved by the results of the examinations. Even in classics and mathematics, subjects in which they are usually handicapped by not having enjoyed the same training as the men before going up to college, they have taken extremely good places from time to time; and in those subjects in which they start fair, they have always come well to the fore. Among the women who have done remarkably well are Miss Scott, of Girton, who was eighth wrangler, and who is now Professor of Mathematics at Bryn-Mawr

College, near Philadelphia; Miss Chamberlain (Newnham), who was senior of the modern languages tripos, 1886, and is now also teaching at Bryn-Mawr College; Miss Moberly and Miss Hughes (Newnham), who were seniors of the moral sciences tripos in the years 1881 and 1884 respectively; Miss Rolleston (Newnham), history tripos, bracketed senior, 1886; Miss Ramsay (Girton), senior of the classical tripos, 1887, and lastly Miss Philippa Fawcett (Newnham), who in 1890 held the anomalous position of being "above the senior wrangler."¹

Each student has her own room or rooms. The college supplies these with all necessary furniture; the decorations are left to the taste and ingenuity of the student; and in most cases they are made to look very charming. If the student has only one room her bed is made in the daytime to resemble an ordinary couch.

One very characteristic article of furniture in every Newnham room is the oak bureau — "burry" — which besides serving as a writing table possesses the most astonishing capacity for receiving anything and everything.

It is not all work and no play at Newnham; and the hours are admirably arranged to afford plenty of opportunity for both. A gong sounds at 8 A. M. for prayers; as a rule the majority of the students appear, though attendance is not compulsory. At about twenty minutes past eight breakfast is served, and at this time any one peeping in would look upon a very animated scene. Every one seems bright in the morning, and the gayest laughs are heard every minute from one or other of the merry parties which are congregated at the various little tables studded over the dining-hall. At 9 A. M. breakfast is cleared away, and, as a rule, there is a grand rush made by the late comers just at the last. If students are tired or unwell they may have the meal taken to their own rooms.

From 9 A. M. to 12.30 P. M., from 3.30 to 6.30 P. M., and from 8 to 10 P. M. are work hours, during which students are expected to be as quiet as possible, and there are justices of the peace (students nominated by their colleagues) to maintain order. Luncheon is an informal meal; it is ready at half-past twelve and students drop in as they like up to about two o'clock. In the interval between 12.30 and 3.30 P. M. the students set off for long walks, or they crowd to the tennis and fives courts; wet or fine, every one tries to go out somewhere.

¹ Twenty years ago, when Miss Fawcett was only a year and a half old, one of the first meetings held to discuss the establishment of Newnham College met in Mrs. Fawcett's drawing-room, in Cambridge, and was presided over by Professor H. Sidgwick.—E. F.

On wet days the gymnasium is a great resort. There are numbers of tennis courts, both of grass and cinder. The latter dry so quickly that students are able to play all the year round.

Afternoon tea is laid in the dining-halls and is obtainable from 3 to 4.30 or 5 P. M. Some prefer to have it in their own rooms; they then provide it themselves, and often ask friends from the town to join them.

The hours from 3.30 to 6.30 P. M. are considered the best time for work. During the morning a great deal of time is taken up with lectures; these generally cease at 1 to 2 P. M.; few are given in the afternoon.

Of course it is quite optional whether students work during "work hours" or not—they suit their own convenience; many prefer, especially during the summer months, to take the whole afternoon to themselves, and work only morning and evening. It depends a good deal on the subject the student is reading. Some subjects require more hours than others. As a rule mathematical students are able to read a much shorter time than those who are taking natural science or history, and they have consequently more time at their disposal. As a general rule the average number of hours devoted to reading is about six; many students work eight hours a day, particularly those who have to spend much time in the laboratories; others only four or five.

Dinner, the formal meal of the day, is served at 6.30 P. M., and the students are all expected to assemble at once. Though evening dress is not *de rigueur*, most of the students endeavor to appear in a change of dress. The students have no special places allotted to them; they may sit where they like; but in each hall there is "the high table," where the principal or vice-principal sits, and to which it is considered an honor to be invited.

The other larger dining-tables are, as a rule, presided over by resident lecturers; this is a capital arrangement, for it gives the students an opportunity of becoming intimate with them.

Immediately after dinner, especially in the winter terms, most of the societies hold their meetings. These are numerous and various; some are small, and include a few students from one hall, such as the Browning Society; some are larger, and include all the students from one hall, such as the Musical Society of Old Hall; others include all the students belonging to the college. Of these last the most conspicuous are the Debating Society and the Political Club. Debates are held usually twice a term, and, as a rule, the whole evening is devoted to them. The subject to be discussed is known to the students some days

before the debate takes place. As a rule abstract questions are the favorites; but now and then a very practical subject is brought before the house—such, for instance, as on the bringing up of children. The following are a few of the subjects of debate during the past year, together with the majorities by which the proposals were carried:

1. That the influence of fashion is morally, intellectually, æsthetically, and socially wrong. Carried by 4.

2. That it is well for most people to cultivate a good opinion of themselves. Carried by 39.

3. That people with one-sided views only are necessary to the accomplishment of any great reform. Lost by 46.

4. That in order to think more we should read less. Lost by 54.

About once a year an intercollegiate debate is held between Girton and Newnham, and there is generally great excitement on the occasion.

The Political Club meets once a week during the winter terms; it is the most flourishing of all the societies. At present, I believe, there is a very strong Conservative element in the House; but in my time the Liberals were in an overwhelming majority. The House is supposed to sit only from 7 to 8 P. M., but often the excitement becomes so great that it does not break up till later. Visitors may obtain an

KING'S COLLEGE BRIDGE, OVER THE CAM.

entrance by procuring a card of admission from a member of the Cabinet. While I was at Newnham arrangements were made for any special news to be telegraphed direct to the college, so that the students might not have to wait until the morning papers came in. This was often the cause of a good deal of excitement. One evening during one of the meetings of the Political Club, news arrived of the fall of Kartoum. The confusion and dismay which followed are not to be described.

To become a cabinet minister is a very serious undertaking, as it often means devoting evening after evening to the consideration of some important measure. Once a week the interval between dinner and tea, 7 to 8 P.M., is devoted to dancing. The largest hall is

laughing and talking. This is the great time for social gatherings—"cocoas," as they are called. The hostess provides cocoa and cakes, and the guests amuse themselves according to taste. As a rule serious discussions are tabooed, and games and songs are the order of the day.

SIDGWICK HALL.

OLD HALL.

cleared, and is nearly always well filled. The dance is looked forward to with great pleasure, and the students seem to enjoy it most thoroughly. A large room, perfect floor, good music, and a partner whose step suits one's own exactly—surely these afford scope for real enjoyment, even though the said partner does not wear a black coat.

The Newnham College Choral Society sets apart one evening in the week for a practice which is conducted by Dr. Mann, organist of King's College, Cambridge. The society generally entertains the students with a small concert once or twice a year, and in the Lent term a larger one is given, to which friends of both sexes are invited.

From 8.30 to 10 P. M. silence reigns. At about ten minutes to ten bells ring out from the neighboring colleges, Selwyn and Ridley, and this is usually the signal for a general closing of books. At ten o'clock precisely, the lights in the corridors are turned out; there is a general opening and shutting of doors, and most of the students are seen hurrying along in their dressing-gowns (which are usually elaborate and more like tea-gowns) towards some room from whence proceed lively sounds of

Sometimes, in the midst of one of these lively gatherings the guests are suddenly dispersed in all directions by the sound of the fire-alarm. Some belong to the fire-brigade, and have to be at their posts in an instant; the rest have to fly to their rooms to shut the windows and doors. The fire-brigade practises two or three times a term, but it is only very occasionally that an "alarm practice" is held, and then, fortunately, it occurs during the evening, and not in the early morning.

At 11 P. M. all is quiet again. Students are now supposed to retire to their rooms; or, if they do remain with their friends, they are expected to talk very quietly. Of course it frequently happens during the course of the day that a student wishes to remain undisturbed in her room; in this case she pulls out a little card with "Engaged" on it, which is fitted in her door. No one attempts to go near so long as this is out.

A tennis tournament is held between Newnham and Girton once or twice a year; and in the long vacation Girton and Newnham play against Lady Margaret and Somerville of Oxford. As a rule this university match is held in the vicinity of London; one year,

I know, it was held at Croydon, and another at Harrow.

Such, then, is the general every-day life of Newnham College; but it is rare for a week to pass without bringing some fresh interest in its train. If nothing particular takes place outside the college walls (there are generally lectures, political meetings, or concerts to go to in the town), the students are not slow to make amusements for themselves. For instance, let them come down some Friday morning feeling that things have been rather dull for the last few days, and on looking at the notice-board on their way to breakfast they will find that for the next few hours their ingenuity will be taxed to the utmost in preparing a costume for "A fancy dress ball, to be held on Saturday evening at ten o'clock"—short notice! But it is purposely arranged that the students should not devote too much time, thought, or money to the affair. When the night itself arrives, it is quite astonishing how wonderfully well every one looks.

If students feel they want a change at any time, they are quite at liberty to visit their friends in the town. They are also allowed to invite a friend to stay with them in college for a few days, at a small nominal charge; or they may invite one to dinner under the same conditions. A great feature in Cambridge social life is, of course, the "kettledrum." The "dons" of the various colleges are quite adepts in the art of holding these afternoon teas; it seems natural to see them put out their cakes, brew their tea, and then preside over the table. They frequently invite the Newnham and Girton students to join their parties, and such invitations (which may be accepted if there is a duly qualified chaperon present) usually mean a very pleasant afternoon, for, if in the summer time, the hour or so after tea is usually spent in wandering through the college grounds, which are for the most part really delightful—with their long, shady avenues and beautifully kept lawns sloping gradually down to the river.

Once a year, February 24, the students assemble to commemorate the day on which "the graces" were granted to the college—the day on which women were formally admitted to the university examinations. This is a grand occasion; after dinner the students rise *en masse* to cheer the names of the founders of the college, and of those most active in promoting its interests. There is generally a concert or dance during the evening, and the festivities close with a verse of "Auld Lang Syne" sung with a will.

There are no special rules as to the way Sunday should be kept, though the principal prefers to know whether students attend any

place of worship, and if so, which one they go to. On Sunday morning the majority attend King's College Chapel, which is kindly thrown open to the women students. A great many also go to the afternoon services held in the same chapel. At one time there was a current opinion that the women students of Cambridge possessed few, if any, religious beliefs. That is certainly not the case now, nor was it so when I first went there six or seven years ago. Certainly, students are thrown greatly upon their own resources; which is one reason why very young girls should not be sent to college. Questions are raised, and points discussed, which, if one is not sufficiently experienced to deal skilfully with, are apt to puzzle and overwhelm. Still, in the majority of cases I fancy the student feels all the stronger for being obliged to think matters out for herself; and we must all agree that we cannot go through life without, sooner or later, being brought face to face with vital problems, which, whether at college or at home, have to be dealt with alone. To those who fancy that at college questions such as I have referred to are dealt with roughly, I simply say that such is not the case; they are treated as reverently as elsewhere.

What strikes one as most characteristic of Newnham is the ease with which the students turn from work to play, from play to work, and the energy they throw into both. At one moment the halls are alive with sounds of music and laughter; the next moment a dead silence reigns.

One is frequently met with the question: "Well—but what is the good of all this advanced education—to what does it all tend—what do the students do after they have left college?"

Is not this question a short-sighted one? Is it not through the exertions of those who have the higher education of women most at heart, that the entire school system of Great Britain and Ireland has been improved? Is it not from the chief centers of the advanced education movement that well-trained women are drawn to fill the schools, not only at home, but abroad, in India, Australia, the United States, South Africa, and Japan—whose teaching influences not only the children themselves, but, indirectly, society at large?

Besides taking up the profession of teaching, women are entering the fields of medicine, of art, and literature. The peculiar fitness of women for certain medical work is being gradually acknowledged; only recently two women doctors have been appointed medical officers to the female post-office clerks of London and Liverpool. Some of the women graduates have devoted themselves to research, and the Royal Society has accepted and printed papers writ-

ten by them. A year or two ago a number of university women formed a settlement at Southwark, in the southeast of London. Here they endeavor to provide teaching and amusement for the poor children of the district. But it is not necessary that a woman graduate should enter upon public duties in order to make the most of the advantages she has enjoyed. There is a wide field for quiet, unobtrusive work at home; a capable woman, trained to habits of self-control and self-reliance, must always be a useful member of society.

A great deal is said about the overstrain of college life, and about the ill-health which the higher education of women engenders. During a residence of four years at Newnham College

I was particularly struck with the average good health enjoyed by the students. Since then a most careful census has been taken of students past and present, which goes far to prove that the higher education is not detrimental to health; and, indeed, the arrangements at the large colleges provide such opportunities for recreation that it is only very exceptional students who are likely to overwork. And surely, all will agree that a regular life, with plenty of occupation and good healthy pursuits, must be an enviable one; and that it must be more beneficial than otherwise for once in a lifetime to have to work steadily on towards one goal, to reach which all the best energies must be concentrated in one honest effort.

Eleanor Field.

NOTE ON THE HEALTH OF WOMEN STUDENTS.

THE Sixteenth Report of the Massachusetts Bureau of Statistics of Labor contained some interesting data, furnished by the Association of Collegiate Alumnae, in regard to the health of American female college graduates. Mr. Carroll D. Wright, the Superintendent of the Bureau, summed up the statistics in these conservative words: "It is sufficient to say that the female graduates of our colleges and universities do not seem to show as the result of their college studies and duties any marked difference in general health from the average health likely to be reported by an equal number of women engaged in other kinds of work." At that time the only data relating to the health of a distinct class of women, that were available for purposes of comparison, were a report on the working women of Boston. Five years have passed since this report appeared, and we are now presented with some English statistics on the same subject, which in some respects are more valuable than the American report which suggested them.

"Health Statistics of Women Students of Cambridge and Oxford, and their Sisters," is the title of a pamphlet issued by the University Press, Cambridge, 1890, and edited by Mrs. Henry Sidgwick, the secretary of a special committee which undertook to secure scientific data as to the "effect of a university course of study on the health of women." For good reasons, not in any way detracting from the results, the inquiries were confined to students of Newnham and Girton Colleges at Cambridge, and of Lady Margaret and Somerville Halls at Oxford. These students fall into four classes: first, and most important those who have resided in college three or more years, and have read for Tripos Examinations at Cambridge, and for Final Examination Schools at Oxford; these "*honor students*" may fairly be compared to those who were put down in the American report as having "*studied severely*"; second, students who resided for three years or more, but did not try for honors; third, students who resided for two years; fourth, students who resided for one year. There are three terms in a year at the English universities, and students who took less than three terms were omitted altogether.

To these picked women, the majority of them devoted both before and after college life to intellectual work of a more or less laborious nature, schedules were sent containing, besides the direct query, "Has your health been *a* excellent, *b* good, *c* fair, *d* poor, *e* bad, between the ages of three and eight years, eight and fourteen years, fourteen and eighteen years, at the time of entering college, during college life, and since leaving college," tabulated queries as to family health, as to individual history before going to college, as to conditions of college life, and as to history after leaving college. The object of these questions was mainly to throw light on all causes other than study that might have affected health.

An identical schedule of questions (omitting those about college life) was also sent to each student to be filled up by, or for, *the sister* (or lacking a sister, a first cousin) *nearest her in age*, who had attained the age of twenty-one and had not been to college. In this way was obtained "a parallel series of statistics, with which to compare those about the students—a feature in our inquiry which we think greatly adds to its value."

Elaborate and detailed tables (41 in number) have been carefully made up from the 562 answers received to the 663 schedules sent out. The answers received in the United States amounted to a little over half of those solicited, so that our English sisters have shown a commendable willingness to have the question looked into as thoroughly as possible. Indeed, of the 136 women honor students from Newnham, 130 answered; furthermore, in order to show that the percentage of answers withheld would not have materially affected the average, the Secretary was able, from her personal knowledge of the six women who made no answer, to give the missing health facts in their special cases.

The following condensed and representative table, showing the percentage who have enjoyed different degrees of health at different periods, will, we believe, sufficiently indicate the character of the investigation, and illustrate the comparative position which college training may be claimed to hold among influences that affect the health of women:

ALL HONOR STUDENTS. TOTAL NUMBER 269.

	<i>Excellent or good, per cent.</i>	<i>Fair, per cent.</i>	<i>Poor, bad or dead, per cent.</i>
From 3 to 8 years of age..	71.26	16.86	11.80
From 8 to 14 " " ..	69.78	20.15	10.07
From 14 to 18 " " ..	66.54	23.79	9.67
At time of entering college..	74.35	17.47	8.18
During college life	67.66	22.68	9.66
Present health	74.72	18.96	6.32

SISTERS OF ALL HONOR AND OTHER THREE YEAR STUDENTS. TOTAL NUMBER 264.

From 3 to 8 years of age..	65.87	12.70	21.43
From 8 to 14 " " ..	65.12	18.60	16.28
From 14 to 18 " " ..	56.44	29.17	14.39
From 18 to 21 " " ..	60.61	24.62	14.77
Present health	60.99	27.65	11.36

It appears from this table that throughout life the students in the aggregate maintain a higher standard of health than their sisters. Of this fact, two possible explanations are suggested, that a higher average of physical vigor is implied in the desire to go to college, and that the healthier members of a family are, on the average, expected to obtain remunerative work, and accordingly to prepare themselves for it. But how are we to account for the temporary depression of average health at college? For although the health of students is better than that of their non-college sisters, it shows a deterioration from their own standard, both before and after the period of college life. There seems little doubt that a large part of this loss must be ascribed to the effect of "worry over personal and family affairs." A similar connection between health and worry was indicated in the American Statistics.

No part of the report is more interesting than that portion dealing with the occupations of both the students and their sisters. It does not seem unreasonable to assert that a very positive relation exists between congenial intellectual occupation and good health, and that there is an equally direct although subtle one between desultory and untrained (even when ardent) efforts and much of the indifferent health of women of the upper and middle classes. The tables prove that 77 per cent. of all the students and 83 per cent. of the honor students have engaged in educational work since leaving college, while less than one-half the proportional number of their sisters have done so, and "for a much larger number of sisters than of students no regular occupation at all is reported."

The difference in the rate of marriage of students and of their sisters is unimportant, if we take the end of

the college life of the former as the starting-point for the comparison, as a certain number of the sisters marry while the students are at college. Taking the students and the sisters together, as a fairly representative group of women from the English professional classes, we must face the serious conclusion that a large proportion of these women do not marry at all. We find, however, that there are fewer childless marriages among the students than among the sisters, that there is a slightly larger proportion of still-born children among both than among the average population, but, "on the other hand, that the proportion of deaths among children born alive is smaller than ordinary, especially in the case of the children of students." Of the married students nearly 78 per cent. enjoy excellent or good health, whereas but 62 per cent. of their married sisters are equally fortunate, and the students' children are healthier than those of the sisters. Although such a statement may seem superfluous in this age of physical culture, the report reveals the fact that among the women of both divisions, those who during their school life enjoyed much out-of-door exercise and amusements showed the benefit of such robust physical preparation for the stress and strain of mature life, by a better standard of health.

Of course broad and certain conclusions cannot be drawn from tentative and numerically small statistics. Nevertheless, such are the facts so far collated. That any serious alarm as to the effect of University education on the health of women is groundless, is clearly shown by the fact that the net amount of increase in good present health, as compared with health between fourteen and eighteen years of age, is greater in the health of students than of their sisters.

A final word of comparison between the English and American statistics:

The average health of the American college student seems to be higher than that of her English compeer (probably accounted for by certain college physical conditions), but the American student who has "studied severely" does not appear to recover as high a tone after leaving college as the English woman. The proportion of Americans who report *bad* health on entering college is 25 per cent., of English women only 8 per cent. Such figures throw a side-light on the ordinary hygienic condition of American well-to-do homes. While a large proportion of American college graduates marry, a larger proportion are childless. A smaller proportion of them are engaged in educational work — in other words, more American college-bred women are absorbed in the home and philanthropic work of the nation, and so act as an invaluable leaven.

Catherine Baldwin.

A SPRING ROMANCE.

THE yellow March sun lay powerfully on the bare Iowa prairie, where the plowed fields were already turning warm and brown, and only here and there in a corner or on the north side of the fence did the sullen drifts remain, and they were so dark and low that they hardly appeared to break the mellow brown of the fields.

There passed also an occasional flock of geese, cheerful harbingers of spring, and the prairie-chickens had set up their morning symphony, wide-swalling, wonderful with its prophecy of the new birth of grass and grain and the springing life of all breathing things. The crow passed now and then, uttering his resonant croak, but the crane had not yet sent forth his bugle note.

Lyman Gilman rested on his ax-helve at the wood-pile of farmer Bacon to listen to the music around him. In a vague way he was powerfully moved by it. He heard the hens singing their weird, raucous, monotonous song, and saw them burrowing in the dry chip-dust near him. He saw the young colts and cattle frisking in the sunny space around the straw-stacks, absorbed through his bare arms and uncovered head the heat of the sun, and felt the soft wooing of the air so much that he broke into an unwonted exclamation:

"Glory! we 'll be seeding by Friday, sure."

This short and disappointing soliloquy was, after all, an expression of deep emotion. To the western farmer the very word "seeding" is a poem. And these few words, coming from Lyman Gilman, meant more and expressed more than many a large and ambitious spring-time song.

But the glory of all the slumbrous landscape, the stately beauty of the sky with its masses of fleecy vapor, were swept away by the sound of a girl's voice humming "Come to the Savior," while she bustled about the kitchen near by. The windows were open. Ah! what suggestion to these dwellers in a rigorous climate was in the first unsealing of the windows! How sweet it was to the pale and weary women after their long imprisonment!

As Lyman sat down on his maple log to hear better, a plump face appeared at the window, and a clear girl-voice said:

"Smell anything, Lyme?"

He snuffed the air. "Cookies, by the great

horn spoons!" he yelled, leaping up. "Bring me some, an' see me eat; it 'll do ye good."

"Come an' get 'm," laughed the face at the window.

"Oh, it's nicer out here, Merry Etty. What's the rush? Bring me out some, an' set down on this log."

With a nod Marietta disappeared, and soon came out with a plate of cookies in one hand and a cup of milk in the other.

"Poor little man, he's all tired out, ain't he?"

Lyme, taking the cue, collapsed in a heap, and said feebly, "Bread, bread!"

"Won't milk an' cookies do as well?"

He brushed off the log and motioned her to sit down beside him, but she hesitated a little and colored a little.

"O Lyme, s'pose somebody should see us?"

"Let 'em. What in thunder do we care? Sit down an' gimme a holt o' them cakes. I'm just about done up. I could n't 'a' stood it another minute."

She sat down beside him with a laugh and a pretty blush. She was in her apron, and the sleeves of her dress were rolled to her elbows, displaying the strong, round arms. Wholesome and sweet she looked and smelled, the scent of the cooking round her. Lyman munched a couple of the cookies and gulped a pint of milk before he spoke.

"Whadda we care who sees us sittin' side b' side? Ain't we goin' t' be married soon?"

"Oh, them cookies in the oven!" she shrieked, leaping up and running to the house, looking back as she reached the kitchen door, however, and smiling with a flushed face. Lyme slapped his knee and roared with laughter at his bold stroke.

"Ho! ho! haar—whoop! did n't I do it slick? Ain't nothin' green in *my* eye, I guess." In an intense and pleasurable abstraction he finished the cookies and the milk. Then he yelled:

"Hey! Merry—Merry Etty!"

"Whadda ye want?" sang the girl from the window, her face still rosy with confusion.

"Come out here and git these things."

The girl shook her head, with a laugh.

"Come out an' git 'm, 'r by jingo I 'll throw 'em at ye! Come on, now!"

The girl looked at the huge, handsome fellow, the sun falling on his golden hair and beard, and came slowly out to him—came creeping along with her hand outstretched for the plate which Lyme, with a laugh in his sunny

blue eyes, extended at the full length of his bare arm. The girl made a snatch at it, but the giant's left hand caught her by the wrist, and away went cup and plate as he drew her to him and kissed her in spite of her struggles.

"My! ain't you strong!" she said half-ruefully and half-admiringly as she shrugged her shoulders. "If you 'd use a little more o' *that* choppin' wood, dad would n't 'a' lost s' much money by yeh."

Lyme grew grave.

"There 's the hog in the fence, Merry; what 's yer dad goin' t' say —"

"About what?"

"About our gitt'n' married this spring."

"I guess you 'd better find out what I 'm a-goin' t' say, Lyme Gilman, 'fore you pitch into dad."

"I *know* what you 're a-goin' t' say."

"No, y' don't."

"Yes, but I *do*, though."

"Well, ask me and see, if you think you 're so smart. Jest as like 's not you 'll slip up."

"All right; here goes. Marietty Bacon, ain't you an' Lyme Gilman goin' t' be married?"

"No, sir, we ain't," laughed the girl, snatching up the plate and darting away to the house, where she struck up "*Weevily Wheat*," and went busily on about her cooking. Lyme threw a kiss at her, and fell to work on his log with startling energy.

William Bacon was one of the richest farmers in Cedar County, and held half a dozen farms in Dry Run township. He was a giant in strength even now when his hair was getting grizzled, and his voice, like that of Jephthah, would quell a lion. Lyman, therefore, looked forward to his interview with the "old man" with as much trepidation as he had ever known, though commonly he had little fear of anything.

Marietta was not only the old man's only child but his housekeeper, his wife having long ago succumbed to the ferocious toil of the farm. It was reasonable to suppose, therefore, that he would surrender his claim on the girl reluctantly. Rough as he was, he loved Marietta strongly, and would find it exceedingly hard to get along without her.

Lyman mused on these things as he drove the gleaming ax into the huge maple logs. He was something more than the usual hired man, being a lumberman from the Wisconsin pineries, where he had sold out his interest in a camp not three weeks before the day he began work for Bacon. He had a nice "little wad o' money" when he left the camp and started for La Crosse, but he had been robbed in his hotel the first night in the city, and was left nearly penniless. It was a great blow to

him, for, as he said, every cent of that money "stood fer hard knocks an' poor feed. When I smelt of it I could jest see the cold frosty mornin's and the late nights. I could feel the hot sun on my back like it was when I worked in the harvest-field. By jingo! It kind o' made my toes curl up."

But like the brave fellow that he was he went out to work again, and here he was chopping wood in old man Bacon's wood-yard, thinking busily on the scene which had just passed between him and Marietta.

"By jingo!" he said all at once, stopping short, with the ax on his shoulder. "If I had n't 'a' been robbed I would n't 'a' come here—I never 'd met Merry. Thunder and jimson root! Was n't that a narrow 'scape?"

And then he laughed so heartily that the girl looked out of the window again to see what in the world he was doing. He had his hat in his hand and was whacking his thigh with it.

"Lyman Gilman, what in the world ails you to-day? It 's perfectly ridiculous the way you yell and talk t' y'rself out there on the chips. You beat the hens, I declare if you don't."

Lyme put on his hat and walked up to the window, and, resting his great bare arms on the sill, and his chin on his arms, said:

"Merry, I 'm goin' t' tackle dad this afternoon. He 'll be settin' up the new seeder, and I 'm goin' t' climb right on the back of his neck. He 's jest *gut* t' give me a chance."

Marietta looked sober in sympathy.

"Well. P'raps it 's best t' have it over with, Lyme, but someway I feel kind o' scarey about it."

Lyme stood for a long time looking in at the window, watching the light-footed girl as she set the table in the middle of the sun-lighted kitchen floor. The kettle hissed, the meat sizzled, sending up a delicious odor, a hen stood in the open door and sang a sort of cheery half-human song, while to and fro moved the sweet-faced, lithe, and powerful girl, followed by the smiling eyes at the window.

"Merry, you look purty as a picture. You look just like the wife I be'n a-huntin' for all these years, sure 's shootin'."

Marietta colored with pleasure.

"Does dad pay you t' stand an' look at me an' say pretty things t' the cook?"

"No, he don't. But I 'm willin' t' do it without pay. I could jest stand here till kingdom come an' look at you—Hello! I hear a wagon. I guess I better hump into that wood-pile."

"I think so too. Dinner 's most ready, and pap 'll be here soon."

Lyme was driving away furiously at a tough elm log when farmer Bacon drove into the yard with a new seeder in his wagon. Lyme whacked away busily while Bacon stabled the team, and

in a short time Marietta called in long-drawn, musical fashion —

"Dinner-r-r!"

After sozzling their faces at the well the two men went in and sat down at the table. Bacon was not much of a talker at any time, and at meal-time, in seeding, eating was the main business in hand; therefore the meal was a silent one, Marietta and Lyme not caring to talk on general topics. The hour was an anxious one for her and an important one for him.

"Wal, now, Lyme, seedin' 's the nex' thing," said Bacon as he shoved back his chair and glared around from under his bushy eyebrows. "We can't do too much this afternoon. That seeder 's got t' be set up an' a lot o' seed wheat cleaned up. You unload the machine while I feed the pigs."

Lyme sat still till the old man was heard outside calling "Poo-ee, poo-ee" to the pigs in the yard, then he smiled at Marietta, but she said:

"He 's got on one of his fits, Lyme; I don't b'lieve you 'd better tackle him t'-day."

"Don't you worry; I 'll fix him. Come, now, give me a kiss."

"Why, you great thing! You—took—"

"I know, but I want you to *give* me 'em. Jest walk right up to me an' give me a smack t' bind the bargain we 've made."

"I ain't made no bargain," laughed the girl. Then feeling the force of his tender tone, "Will you behave, and go right off to your work?"

"Jest like a little man—hope t' die!"

"*Lyme!*" roared the old man from the barn.

"Hello!" replied Lyme, grinning joyously and winking at the girl, as much as to say, "This would paralyze the old man if he saw it."

He went out to the shed where Bacon was busy as serene as if he had not a fearful task on hand. He was apprehensive that the father would "gig back" unless rightly approached, and so he waited a good opportunity.

The right opening seemed to present itself along about the middle of the afternoon. Bacon was down on the ground under the machine tightening some burs. This was a good chance for two reasons. In the first place the keen, almost savage, eyes of Bacon were no longer where they could glare on him, and in spite of his cool exterior Lyme had "jest as soon not" have the old man looking at him.

Then, besides, the old farmer had been telling about his "river eighty," which was without a tenant; the man who had taken it, having lost his wife, had grown disheartened and had given it up.

"It 's an almighty good chance for a man with a small family. Good house an' barn, good land. A likely young feller with a team an' a woman could do tiptop on that eighty.

If he wanted more, I 'd let him have an eighty j'inin' —"

"I 'd like t' try that m'self," said Lyme, as a feeler. The old fellow said nothing in reply for a moment.

"Ef you had a team an' tools an' a woman I 'd jest as leef you 'd have it as anybody."

"Sell me your blacks, and I 'll pay half down, the balance in the fall. I can pick up some tools, and as fur a woman, Merry Etty an' me have talked that over to-day. She 's ready to—ready to marry me whenever you say, now."

There was an ominous silence under the seeder, as if the man could not believe his ears.

"What? 's—what 's that?" he stuttered. "Who'd you say? What about Merry Etty?"

"She 's agreed to marry me."

"The — you say!" roared the old bear as the truth burst upon him. "So that 's what you do when I go off to town and leave you to chop wood. So you 're goin' to get married, hey?"

He was now where he could see Lyme, glaring up into his smiling blue eyes. Lyme stood his ground.

"Yes, sir. That 's the calculation."

"Well, I guess I 'll have somethin' t' say about that," nodding his head violently.

"I rather expected y' would. Blaze away. Your privilege — my bad luck. Sail in ol' man. What 's y'r objection to me fer a son-in-law?"

"Don't you worry, young feller. I 'll come at it soon enough," went on Bacon as he turned up another bur in a very awkward corner. In his nervous excitement the wrench slipped, banging his knuckle.

"Ouch! Thunder-m-m-m!" howled and snarled the wounded man.

"What 's the matter? Bark yer knuckle?" queried Lyme, feeling a mighty impulse to laugh. But when he saw the old savage straighten up and glare at him he sobered. Bacon was now in a frightful temper. The veins in his great, bare, weather-beaten neck swelled dangerously.

"Jest let me say right here that I 've had enough o' you. You can't live on the same acre with my girl another day."

"What makes ye think I can't?" It was now the young man's turn to draw himself up, and as he faced the old man, his arms folded and each vast hand grasping an elbow, he looked like a statue of red granite, and the hands resembled the paws of a crouching lion; but his eyes smiled.

"I don't *think*, I know ye won't."

"What 's the objection to me?"

"Objection? What 's the inducement? My hired man, an' not three shirts to yer back!"

"That's another; I've got four. Say, old man, did you ever work out fer a living?"

"That's none o' yer business," growled Bacon, a little taken down. "I've worked, an' scraped, an' got t'gether a little prop'ty here, an' they ain't no sucker like you goin' to come 'long here, an' live off me, an' spend my prop'ty after I'm dead. You can jest bet high on that."

"Who's goin' t' live on ye?"

"You're aimin' to."

"I ain't, neither."

"Yes, y' are. You've loafed on me ever since I hired ye."

"That's a——" Lyme checked himself for Marietta's sake, and the enraged father went on.

"I hired ye t' cut wood, an' you've gone an' fooled my daughter away from me. Now you jest figger up what I owe ye, and git out o' here. Ye can't go too soon t' suit me."

Bacon was renowned as the "hardest man in Cedar County to handle," and though he was getting old, he was still a terror to his neighbors when roused. He was honest, temperate, and a good neighbor until something carried him off his balance; then he became as cruel as a panther and as savage as a grizzly. All this Lyme knew, but it did not keep his anger down so much as did the thought of Marietta. His silence infuriated Bacon, who yelled hoarsely:

"Git out o' this!"

"Don't be in a rush, ol' man——"

With a curse Bacon hurled himself upon Lyme, who threw out one hand and seized his assailant by the collar, stopping him, while he said in a low voice:

"Stay right where you are, ol' man. I'm dangerous. It's fer Merry's sake——"

The infuriated father struck at him. Lyme warded off the blow, and with a sudden wrench and twist threw him with frightful force to the ground. Before Bacon could rise, Marietta, who had witnessed the scene, came flying from the house.

"Lyme! Father! What are you doing?"

"I——could n't help it, Merry. It was him 'r me," said Lyme, almost sadly.

"Dad, ain't you got no sense? What're you thinking of? You jest stop right now. I won't have it."

He rose while she clung to him. It was the first time he had ever been thrown, and he could not but feel a certain respect for his opponent, but he could not give way.

"Pack up yer duds," he snarled, "an' git off'n my land. I'll have the money for ye when ye come back. I'll give ye jest five minutes to git clear o' here. Merry, you stay here."

The young man saw that it was useless to remain, as it would only excite the old man; and

so, with a look of apology, not without humor, at Marietta, he went to the house to get his valise. The girl wept silently while the father raged up and down. His mood frightened her.

"I thought you had more sense than t' take up with such a dirty beggar."

"He ain't a beggar," she blazed forth, "and he's just as good and clean as you are."

"Shut up! Don't let me hear another word out o' your head. I'm boss here yet, I reckon."

Lyme came out with his valise in his hand.

"Good-by, Merry," he said cheerily. She started to go to him, but her father's rough grasp held her.

"Set down, an' stay there."

Lyme was going out of the gate.

"Here! Come and get y'r money," yelled the old man, extending some bills. "Here's twenty——"

"Go to thunder with your money," retorted Lyme. "I've had my pay for my month's work." As he said that he thought of the sunny kitchen and the merry girl, and his throat choked. Good-by to the sweet girl whose smile was so much to him, and to the happy noons and nights her eyes had made for him. He waved his hat at her as he stood in the open gate, and the sun lighted his handsome head into a sort of glory in her eyes. Then he turned and walked rapidly off down the road, not looking back.

The girl, when she could no longer see him, dashed away, and, sobbing violently, entered the house.

THERE was just a suspicion of light in the east, a mere hint of a glow, when Lyman walked cautiously around the corner of the house and tapped at Marietta's window. She was sleeping soundly and did not hear, for she had been restless during the first part of the night. He tapped again, and the girl woke without knowing what woke her.

Lyman put the blade of his pocket knife under the window and raised it a little, and then placed his lips to the crack, and spoke in a sepulchral tone, half groan, half whisper.

"Merry! Merry Etty!"

The dazed girl sat up in bed and listened, while her heart almost stood still.

"Merry, it's me——Lyme. Come to the window." The girl hesitated, and Lyman spoke again.

"Come, I hain't got much time. This is yer last chance t' see me. It's now 'r never."

The girl slipped out of bed and, wrapping herself in a shawl, crept to the window.

"Boost on that winder," commanded Lyman. She raised it enough to admit his head, which came just above the sill; then she knelt on the floor by the window.

"Lyme, what in the world do you mean —"

"I mean business," he replied. "I ain't no last year's chicken; I know when the old man sleeps the soundest." He chuckled pleasantly.

"How d' y' fool ole Rove?"

"Never mind about that now, they 's some-thin' more important on hand. You 've got t' go with me."

"O Lyme, I can't!"

He thrust a great arm in and caught her by the wrist.

"Yes, ye can. This is y'r last chance. If I go off without ye t'-night, I never come back. Why do ye pull back? Air ye 'fraid o' me?"

"N-no; but—but—"

"But what, Merry Etty?"

"It ain't right t' go an' leave dad all alone. Where ye goin' t' take me, anyhow?"

"Milt Jennings let me have his horse an' buggy; they 're down the road apiece, an' we 'll go right down to Rock River and be married by sun-up."

The girl still hesitated, her firm, boyish will unwontedly befogged. Resolute as she was, she could not at once accede to his demand.

"Come, make up your mind soon. The old man 'll fill me with buck-shot if he catches sight o' me." He drew her arm out of the window and laid her bearded cheek to it. "Come, little one, we was made fer each other; God knows it. Come! It's him 'r me."

The girl's head dropped, consented.

"That 's right! Now a kiss to bind the bargain. There! What, cryin'? No more o' that, little one. Now I 'll give you jest five minutes t' git on your Sunday-go-t'-meetin' clo'es. Quick, there goes a rooster. It 's gittin' white in the east."

The man turned his back to the window and gazed at the western sky with a wealth of unuttered and unutterable exultation in his heart. Far off a rooster gave a long, clear blast — would it be answered in the barn? Yes; some wakeful ear had caught it, and now came the answer, but faint, muffled, and drowsy. The dog at his feet whined uneasily as if thinking all not well. The wind from the south was full of the wonderful odor of springing grass, warm, brown earth, and oozing sap. Overhead, to the west, the stars were shining in the cloudless sky, dimmed a little in brightness by the faint silvery veil of moisture in the air. The man's soul grew very tender as he stood waiting for his bride. He was a rough, illiterate man, yet there was something fine about him after all, a kind of simplicity and a gigantic leonine tenderness.

He heard his sweetheart moving about inside, and thought: "The old man won't hold out when he finds we 're married. He can't

get along without her. If he does, why, I 'll rent a farm here, and we 'll go to work house-keepin'. I can git the money. She sha'n't always be poor," he ended, with a vow.

The window was raised again, and the girl's voice was heard low and tremulous:

"Lyme, I 'm ready, but I wish we did n't —"

He put his arm around her waist and helped her out, and did not put her down till they reached the road. She was completely dressed, even to her hat and shoes, but she mourned:

"My hair is every which way; Lyme, how can I be married so?"

They were nearing the horse and buggy now, and Lyme laughed. "Oh, we 'll stop at Jennings's and fix up. Milt knows what 's up, an' has told his mother by this time. So just laugh as jolly as you can."

Soon they were in the buggy, the impatient horse swung into the road at a rattling pace, and as Marietta leaned back in the seat, thinking of what she had done, she cried lamentably, in spite of all the caresses and pleadings of her lover.

But the sun burst up from the plain, the prairie-chickens took up their mighty chorus on the hills, robins met them on the way, flocks of wild geese, honking cheerily, drove far overhead towards the north, and, with these sounds of a golden spring day in her ears, the bride grew cheerful, and laughed.

At about the time when the sun was rising, Farmer Bacon, roused from his sleep by the crowing of the chickens on the dry knolls in the fields as well as by those in the barnyard, rolled out of bed wearily, wondering why he should feel so drowsy. Then he remembered the row with Lyme and his subsequent inability to sleep with thinking over it. There was a dull pain in his breast, which made him uncomfortable.

As was his usual custom, he went out into the kitchen and built the fire for Marietta, filled the tea-kettle with water, and filled the water-bucket in the sink. Then he went to her bedroom door and knocked with his knuckles as he had done for years in precisely the same fashion.

Rap — rap — rap. "Hello, Merry! Time t' git up. Broad daylight, an' birds a-singin'."

Without waiting for an answer he went out to the barn and worked away at his chores. He took such delight in the glorious morning and the turbulent life of the farmyard that his heart grew light and he hummed a tune which sounded like the merry growl of a lion. "Poo-ee, poo-ee," he called to the pigs as they swarmed across the yard.

"Ahrr! you big, fat rascals, them hams o' yours is clear money. One o' ye shall go t' buy Merry a new dress," he said as he

glanced at the house and saw the smoke pouring out the stove-pipe. "Merry 's a good girl; she 's stood by her old pap when other girls 'u'd 'a' gone back on 'im."

While currying the horses he went all over the ground of the quarrel yesterday, and he began to see it in a different light. He began to see that Lyme Gilman was a good man and an able man, and that his own course was a foolish one.

"When I git mad," he confessed to himself, "I don't know anythin'. But I won't give her up. She ain't old 'nough t' marry yet—and, besides, I need her."

Having got his chores done as usual, he went to the well and washed his face and hands, then entered the kitchen—to find the tea-kettle boiling over, and no signs of breakfast anywhere and no sign of the girl.

"Well, I guess she felt sleepy this mornin'. Poor gal! Mebbe she cried half the night."

"Merry!" he called gently at her door. "Merry, m' gal! Pap needs his breakfast."

There was no reply, and the old man's face stiffened into a wild surprise. He knocked heavily again, and got no reply, and with a white face and shaking hand he flung the door open and gazed at the empty bed. His hand dropped to his side; his head turned slowly from the bed to the open window; he rushed forward and looked out on the ground, where he saw the tracks of a man.

He fell heavily into the chair by the bed, while a deep groan broke from his stiff and twitching lips.

"She 's left me! She 's left me!"

For a long half-hour the iron-muscled old man sat there motionless, hearing not the songs of the hens or the birds far out in the brilliant sunshine. He had lost sight of his farm, his day's work, and felt no hunger for food. He did not doubt that her going was final. He felt that she was gone from him forever. If she ever came back it would not be as his daughter, but as the wife of Gilman. She had deserted him, fled in the night like a thief; his heart began to harden again, and he rose stiffly. His native stubbornness began to assert itself, the first great shock over, and he went out to the kitchen, and prepared as best he could a breakfast, and sat down to it. In some way his appetite failed him, and he fell to thinking over his past life, of the death of his wife, and the early death of his only boy. He was still trying to think what his life would be in the future without his girl when two carriages drove into the yard. It was about the middle of the forenoon, and the prairie-chickens had ceased to boom and squawk; in fact, that was why he knew that he had been sitting two hours at the table. Before he could rise he heard

swift feet and a merry voice. Then Marietta burst through the door.

"Hello, pap! How you makin' out with break—" She saw a look on his face that went to her heart like a knife. She saw a lonely and deserted old man sitting at his cold and cheerless breakfast, and with a remorseful cry she ran across the floor and took him in her arms, kissing him again and again, while Mr. John Jennings and his wife stood in the door.

"Poor ol' pap! Merry could n't leave you. She 's come back to stay as long as he lives."

The old man remained cold and stern. His deep voice had a raucous note in it as he pushed her away from him, noticing no one else.

"But how do you come back t' me?"

The girl grew rosy, but she stood proudly up.

"I come back a wife of a *man*, pap; a wife like my mother, an' this t' hang beside hers"; and she laid down a rolled piece of parchment.

"Take it an' go," growled he; "take yer lazy lubber an' git out o' my sight. I raised ye, took keer o' ye when ye was little, sent ye t' school, bought ye dresses,—done everythin' fer ye I could, 'lowin' t' have ye stand by me when I got ol',—but no, ye must go back on yer ol' pap, an' go off in the night with a good-f'r-nothin' houn' that nobuddy knows anythin' about—a feller that never done a thing fer ye in the world—"

"W'at did you do fer mother that she left *her* father and mother and went with you? How much did you have when you took her away from her good home an' brought her away out here among the wolves an' Indians? I 've heard you an' her say a hundred times that you did n't have a chair in the house. Now why do you talk so t' me when I want t' git—when Lyme comes and asks for me?"

The old man was staggered. He looked at the smiling face of John Jennings and the tearful face of Mrs. Jennings, who had returned with Lyman. But his face hardened again as he caught sight of Lyme looking in at him. His absurd pride would not let him relent. Lyme saw it, and stepped forward.

"Ol' man, I want t' take a little inning now. I'm a fair, square man. I asked ye fer Merry as a man should. I told you I 'd had hard luck, when I first came here. I had five thousand dollars in clean cash stole from me. I hain't got a thing now except credit, but that 's good fer enough t' stock a little farm with. Now I wan' to be fair and square in this thing. You wan' to rent a farm; I need one. Let me have the river eighty, or I 'll take the whole business on a share of a third an' Merry Etty, and I to stay here with you jest as if nothin' 'd happened. Come, now, what d' y' say?"

There was something winning in the whole

bearing of the man as he stood before the father, who remained silent and grim.

"Or if you don't do that, why, there's nothin' left fer Merry an' me but to go back to La Crosse, where I can have my choice of a dozen farms. Now this is the way things is standin'. I don't want to be underhanded about this thing —"

"That's a fair offer," said Mr. Jennings in the pause which followed. "You'd better do it, neighbor Bacon. Nobuddy need know how things stood; they were married in my house — I thought that 'ud be best. You can't live without your girl," he went on, "any more 'n I could without my boy. You'd better —"

The figure at the table straightened up. Under his tufted eyebrows his keen gray eyes flashed from one to the other. His hands knotted.

"Go slow!" went on the smooth voice of

Jennings, known all the country through as a peacemaker. "Take time t' think it over. Stand out, an' you'll live here alone without chick 'r child; give in, and this house'll bubble over with noise and young ones. Now is short, and forever's a long time to feel sorry in."

The old man at the table, knitted his eyebrows, and a distorted, quivering, ghastly smile broke out on his face. His chest heaved, then he burst forth:

"Gal, yank them gloves off an' git me somethin' to eat — breakfus 'r dinner, I don't care which. Lyme, you infernal idiot, git out there and gear up them horses. What in thunder you foolin' around about hyer in seed'n'? Come, hustle, all o' ye!"

And then they shouted in laughter, while the cause of it all strode unsteadily but resolutely out towards the barn, followed by the bridegroom, who was laughing — silently.

Hamlin Garland.

TALLEYRAND REPLIES TO HIS ACCUSERS.

THE MEMOIRS OF TALLEYRAND.¹

TALLEYRAND AND THE DUC D'ENGHIEN.

[The young Duc d'Enghien, grandson of the Prince de Condé, was seized by order of Napoleon at his residence in Baden, hurried across the frontier, tried by court-martial in Vincennes, executed for treason the next morning, and buried in a grave which had been dug for him in anticipation of the verdict before the trial began. Talleyrand gave a ball the same night.

At St. Helena, Napoleon said: "The Duc d'Enghien only perished because Talleyrand feared the return of the Bourbons; and to-day the wretch is Prime Minister of Louis XVIII." Thiers, in his "History of the Consulate and the Empire," says that Napoleon, in a council of ministers, denounced Talleyrand for the death of the Duc d'Enghien. Talleyrand stood immovable, with his back against the chimneypiece, while Napoleon exclaimed with lively gesticulations, "You have pretended that you had nothing to do with the death of the Duc d'Enghien. Do you forget, then, that you advised it in writing?" Many French writers of the time have insisted on Talleyrand's complicity — among them Méneval, "Napoléon et Marie-Louise, souvenirs historiques"; Röederer, "Mémoires"; and Nougarede de Fayet, "Recherches historiques sur le procès et la condamnation du Duc d'Enghien."

In this case, for the first time in the "Memoirs," Talleyrand makes a serious and detailed reply to an accusation against himself. The reply

is a denial without proof, save in the way of adroit and plausible argument. The case is thus reduced almost to a choice between the word of Napoleon and the word of Talleyrand — a dilemma which only the gravity of the subject preserves from becoming ludicrous.

In the same chapter Talleyrand deals with the accusation of complicity in the plot for the assassination of Napoleon, but with scarcely more success. The evidence against him is certainly fragmentary and inconclusive; and he has probably succeeded in breaking down the credibility of Maubreuil. But the fact remains that the most amazing orders were given, putting practically the whole army under the orders of the agent of this plot whenever he chose to call on it. Who was powerful enough in the government at that time to give such orders over Talleyrand's head or without his knowledge? — WHITE LAW REID.]

PARIS, January, 1824.

I FIND myself obliged to add some sentences to these memoirs with regret at having to recall a cruel and painful event which I was unwilling even to mention in the foregoing pages.

I have never deigned to answer the lying and injurious accusations which, in such times as those wherein I have lived, could not fail to be leveled at all who devoted themselves to great public matters. But there is some limit to this disdain, and when it is a question of

¹ Extracts from the Memoirs, printed in advance of the volumes by arrangement with Messrs. Griffith, Farran & Co., the English publishers. (See also THE CENTURY for January and February.)

blood, silence — at least to posterity — is no longer possible. The vile and shamefully self-confessed crimes of my accusers would in ordinary cases be a sufficient denial of their accusations. But in the present case the nature of the events, their historic importance, the modicum of truth in these accounts, the greatness of the persons involved, the honor of my name and of my family, all force me to repel the crimes of blood with which passionate hatred and cupidity would bespatter me.

I have been accused by M. Savary, Duc de Rovigo, of being the instigator, and therefore the author, of the hideous crime of which he confesses himself to have been the instrument, and which was committed twenty years ago upon the person of Mgr. le Duc d'Enghien. Monsieur le Marquis de Maubreuil on his part pretends that I attempted to bribe him in 1814 to assassinate the Emperor Napoleon while on his way to the island of Elba. Madmen have strange hallucinations! This is all I ought to say about this last accusation, which is so ridiculous and senseless that it could only have been invented by a fool or a madman; but M. Savary is neither the one nor the other, and him I will first answer.

All the accusations which M. Savary makes are, indeed, lost in those of which he has accused himself. No man charged with a crime has ever more imprudently or more shamefully revealed himself. Shall we follow him to the depths into which he has voluntarily sunk to answer his foolish and false allegations? But these allegations fit in with some statements from another source. Writings coming from, or alleged to have come from, St. Helena have been published with the sole purpose of restoring a great and lost reputation by means of passionate and studied defamation of all contemporaneous celebrities. I find myself flattered by seeing my name continually associated with those of all the princes and all the ministers of our time. I can only feel proud that such a large part is reserved for me in the expressions of resentment whose dominant motive was to satisfy implacable and jealous hatreds, and to punish France for its past glory, its recent misfortunes, its present prosperity, and the hopes of its future. Nothing in these formless compilations, silly conversations, speeches full of vanity, pedantic dissertations, and defamatory calumnies can be brought as proof against any one in the world.

In these writings, as in the pamphlet of M. Savary, two letters of mine have been quoted. They are not faithfully reported. I will give them verbatim as they must be in the archives, and I still hold myself responsible for them. These letters do not represent the painful part of the duty I was then called upon to perform;

I have nothing to hide in connection with this dreadful catastrophe, for my part in it has been made public, and if it inspires me with painful regret it leaves me with no remorse.

Let us recall the facts, which will be the best way to refute the lying imputations of M. Savary.

We know that at the end of 1803 and the beginning of 1804 there were several plots against the life of the First Consul.

In the first months of 1804 a suit was instituted against Georges, Pichegru, Moreau, and others. After investigations by the home police, some other plots were discovered abroad, and they naturally sought to make some connection between them. The Ministry of the General Police had been abolished for several months past, and one of the Councillors of State had the charge of this part of the administration and was thereby subject to the direction of the chief judge, Minister of Justice, M. Régnier. This minister made the following report to the First Consul on the 7th of March, 1804 (16 Ventôse, year XII):

CITIZEN FIRST CONSUL.

At Offenbourg, Electorate of Baden, near the Rhine Provinces, there is a committee, paid by the British government. This committee consists of French *émigrés*, former general officers, chevaliers of St. Louis, etc. Its object is to excite troubles in the Republic, by all possible methods.

Its principal agent is an *émigré* called Mucey, a person long known by his intrigues and the implacable hate he has cherished towards his country.

This wretch is charged by the committee with introducing into France and widely circulating the incendiary mandates of rebel bishops, as well as all the infamous libels which are manufactured in foreign parts to the detriment of France and its government.

A person called Trident, postmaster at Kehl, is the man employed by the committee to forward their correspondence to his associates in Strasbourg. These associates are known, and orders have been given for their arrest.

But I do not think that we should stop at this measure. Public peace and the dignity of the nation and its head demand the destruction of this hot-bed of intriguers and conspirators in Offenbourg, who impudently insult the Republic and its government at its very gates. Both should be avenged by prompt punishment.

I therefore propose, Citizen First Consul, that you demand from his Serene Highness the Elector of Baden the immediate extradition of Mucey, Trident, and their accomplices.

Salutation and respect.

(Signed) RÉGNIER.

Certified according to law:

Secretary of State,
HUGUES MARET.

The First Consul in communicating this report to me ordered me to transmit it to the Elector of Baden, and to ask for the extradition

of the persons mentioned in it. This is the note which I addressed on this subject to the Baron of Edelsheim, Minister of Foreign Affairs to his Serene Highness the Elector of Baden :

PARIS, the 19 Ventôse, Year XII.

The undersigned, Minister of Foreign Affairs of the French Republic, has the honor to forward to the Baron Edelsheim a copy of a report made by the Grand Judge to the First Consul. He begs his Excellency to submit this important document to His Serene Highness the Elector of Baden. His Serene Highness will find therein new and conspicuous proofs of the kind of warfare waged by the British government against France, and will be painfully surprised to find that in his own state, at Offenburg, there exists an association of French émigrés who are among the most active workers in these wicked conspiracies.

The undersigned is charged with formally demanding that the persons composing the committee of Offenburg should be arrested and delivered at Strasbourg to the French officers charged with the duty of receiving them, together with all their papers.

The official demand which the undersigned submits in this connection is derived from the official text of the first article of the treaty of Lunéville. And when the subject is a state conspiracy, the well-known facts of which have already excited the indignation of Europe, the relations of friendship and neighborliness existing between France and His Serene Highness the Elector do not allow us to doubt that he will be anxious to comply with the demands of the French government in carrying out this main article of the treaty of Lunéville, and to aid in other ways in unveiling the plot which threatens at once the life of the First Consul, the security of France, and the peace of Europe.

The undersigned is charged to demand that, by a general and irrevocable order, all the French émigrés should be sent away from the countries forming the Electorate of Baden. Their residence in that part of Germany nearest to France can only be a cause of anxiety and an occasion of disquiet, and for themselves an incitement to form intrigues by which England profits and which she extends and directs according to her own wicked plans.

If it is taken into account that the émigrés who are still out of France are all men in league against the present government of their former country, men whom no circumstances, no change could reconcile, and who are in a constant state of war against France, it is evident that they are persons who by the terms of the treaty of Lunéville ought not to find refuge nor protection in the German states. It is therefore proper that they should be rigidly excluded. But the well-known sentiments and principles of His Serene Highness the Elector are alone an assurance that he will be glad to banish from his states such dangerous men, and give an additional proof of the value which he attaches to the perfectly friendly relations which so many circumstances have con-

tributed to establish between France and the Electorate of Baden.

The undersigned awaits with all confidence the decision of His Serene Highness the Elector in regard to the demands which he has been charged with forwarding, and takes the occasion to renew the assurance, etc:

This note and the enclosed document show that it was only upon data furnished by the police that the French government demanded the extradition of certain persons and the expulsion of others from the Electorate of Baden, and we will see that in fact the Minister of Foreign Affairs was not the source of the information which was the cause of the proceedings against the Duc d'Enghien.

My note was dispatched the tenth of March. Some hours later, at his order, I went to the First Consul. I found him in a state of violent agitation; he was reproaching M. Réal, Councilor of State, charged with the general administration of police,—who was present,—with not knowing that the Duc d'Enghien was at Ettenheim with General Dumouriez plotting against the security of the Republic and against his own life and that these plots had their principal center at Offenburg. Soon turning upon me he reproached me in the same manner, demanding how it was that the chargé d'affaires of France at Carlsruhe had not reported upon such facts. As soon as I could get a hearing, which was not easy as his rage was so great that he left no time to answer, I reminded him that the presence of the Duc d'Enghien in the Electorate of Baden had been long known to him; that he had even charged me to inform the elector that the prince might reside at Ettenheim; that as to the intrigues which were going on at Offenburg, the chargé d'affaires at Carlsruhe, M. Massias, might not have been cognizant of them or might have neglected to mention them in his correspondence, either because he regarded them as of little importance or because he feared to compromise the Baroness de Reich, who was, they said, a relation or connection of his wife's. I tried in vain to allay the anger of the First Consul. He showed us the reports of General Moncey, first inspector of gendarmes, which announced the presence of Dumouriez at Ettenheim. These reports, as indeed all of this kind, were founded more upon induction than upon facts — all but the presence of Dumouriez, which was stated definitely and which nevertheless was not true. But the First Consul was very much impressed by them, and nothing could shake his belief that these intrigues were directly connected with the plots which were then being followed up in Paris. He therefore immediately formed the fatal resolution to have French soldiers on Baden soil arrest all the émigrés who were at Offenburg

and at Ettenheim. He dictated himself the order to the Minister of War to carry out this resolve, and the duty fell upon me to inform the Elector of Baden, after the fact, of the measure which he had thought necessary. I therefore wrote to the Baron of Edelsheim the letter which I here insert.

PARIS, 20 Ventôse, XII.
11 March, 1804, 3 A. M.

M. LE BARON:

I had just addressed to you a note, the object of which was to demand the arrest of the committee of French émigrés resident in Offenbourg, when the First Consul, by the arrest of the brigands which the English government has vomited upon France, as well as by the progress and result of the examinations here, has fully discovered the share which the English agents in Offenbourg have taken in the horrible plots against his person and the peace of France. He also learned that the Duc d'Enghien and General Dumouriez were at Ettenheim, and as it is impossible that they should both be in this town without the permission of His Serene Highness the Elector, the First Consul sees with the deepest sorrow that a prince whom he was pleased to honor with the especial friendship of France should give refuge to his most cruel enemies, and allow them quietly to hatch such terrible plots.

In these extraordinary circumstances the First Consul has considered it his duty to send two small detachments to Offenbourg and Ettenheim, and to seize there the instigators of a crime which, by its very nature, places those convicted of it outside the law. General Caulaincourt is charged with the orders of the First Consul in this affair. You may be assured that he will use, in executing them, all the consideration which His Serene Highness the Elector can desire. He will have the honor to transmit the letter which I have been charged to address to Your Excellency.

Accept, M. le Baron, etc.

In sending this letter to General Caulaincourt I wrote to him the following lines:

PARIS, 21 Ventôse, XII.
11 March, 1804.

GENERAL:

I have the honor to forward to you a letter for the Baron of Edelsheim, Prime Minister to the Elector of Baden. You will be kind enough to transmit it to him as soon as your expedition to Offenbourg is accomplished. The First Consul charges me to tell you that if you are unable to get your troops into the States of the Elector, and if you learn that General Ordener has not been able to enter, this letter shall remain in your hands and not be delivered to the Elector. I am charged to request you especially to seize and bring back with you the papers of Madame de Reich.¹

I have the honor to salute you.

¹ The Baroness Reich had already been arrested at Offenbourg by the Baden officials, who had given her up to the French authorities, and she had been taken to Strasbourg with her papers.

I have given these three letters entire because they constitute the real and only part which I had in the wretched affair of the Duc d'Enghien.

It is enough to examine these letters in order to see how much I had to do with the whole affair. The First Consul had long known the presence of the Duc d'Enghien in the Electorate of Baden. The French chargé d'affaires at Carlsruhe had informed us of it in the name of the Elector of Baden, and he had answered that the inoffensive conduct of the Prince, which he reported, made his further sojourn there unobjectionable. The Minister of Foreign Affairs had had nothing whatever to do with the investigation which the French police carried on then in the provinces next to our Rhine frontier. These investigations were directed either by the prefect of Strasbourg, by the order of Councilor of State Réal, in charge of the general police of the Republic, or by the officers of gendarmes of the towns under orders from the first inspector of gendarmes, General Moncey. Réal and Moncey delivered directly to the First Consul the reports as they received them. I knew nothing of these matters until the First Consul informed me of them, when he had orders to give me. As may be seen I transmitted to Baron Edelsheim the report of the Grand Judge, M. Régnier, in which there was as yet no mention of the Duc d'Enghien. When on new information, whose authority I sought to invalidate, I received the peremptory order to write again to the Baron Edelsheim, it is not possible that my letter could have any part in the arrest of the prince, since it was written to announce the arrest to M. d'Edelsheim, after the arrest should have taken place. The letter to General Caulaincourt attests, moreover, that I made provision in case of failure to carry out this violation of the Baden territory, which proves that I was ignorant that the order given to the Minister of War to send troops into the Elector's territory was precise, imperative, and to be obeyed absolutely. Still more was I ignorant of the bloody deed decided upon in the mind of the First Consul.

I insist upon these facts, sustained by all the published and unpublished documents, because they form a complete refutation of all the affirmations and evil insinuations of M. Savary. Beyond these letters I was left in the most complete ignorance, and M. Savary himself, without knowing it, and assuredly against his will, has taken pains to attest the fact. In one of the most important paragraphs of his libel he attempts to prove that at that time the inquiries of the police did not extend beyond the frontier, and that my ministry was alone charged with outside matters, and yet he tells

us further on that the First Consul was ignorant of the very name and existence of the Duc d'Enghien, not fearing to strip his whole story of plausibility by such an absurd statement. He goes on to tell in the greatest detail all that Councilor Réal and the chief of police had concocted in the way of police stratagems and methods to get exact information about the residence, the absences, connections, correspondences, and travels of the unfortunate Prince. It is upon their reports and those of their agents that the fatal and disastrous step was taken, and never did I myself, nor the agents of my department in foreign countries, appear either in the preliminaries or the execution of any of these measures.

Councilor Réal and the First Consul both knew very well that such things were not in accordance with my character or the principles of my diplomacy; that my assistance was useless, and that it would be better for me to be ignorant of the whole matter.

As to the letters which I addressed to Baron Edelsheim, I do not think they need an apology, but, if they do, it is to be found in the official post which I held at the time, in the difficult position that great events had created for France, and, lastly, in the entirely new relations which these events had formed between the newly made government and the other governments of the Continent.

I may be allowed here to make some comment on the duty of men in high position at those unfortunate periods in which Providence chooses to separate violently the personal destiny of kings from that of their peoples. The king is absent, his future is hidden, his personal servants are allowed to remain with him and follow his fortune, partake of his misfortunes, his dangers, and his hopes; in leaving their native land they espouse irrevocably his cause, and I respect and admire their generous choice.

But for others the country remains; it has the right to be defended and governed; it has without a doubt another right, that of demanding from them the same services which they owed to it and gave to it before the absence of the king. This is the light in which I have seen my duty and regulated my conduct.

At this moment France was again engaged in a war with England, while at peace with the rest of the world. The duty of the Minister of Foreign Affairs was to do everything in his power, within the limits of justice and law, to keep that peace.

In this respect, no one knows how complicated was such a duty. Placed between timid and suspicious governments, apprehensive of danger, and all more or less reconciled to each other—and a powerful sovereign whose genius, character, and ambition were only too well

calculated to inspire them with distrust and disquiet, the Minister of Foreign Affairs had need to keep equal vigilance with regard to the policy which he was obliged to moderate and that which he had to combat. His relations with the government of which he was the minister were often much more difficult and strained than they were with the governments which it was his duty to placate.

The letter to General Caulaincourt, which I have given above, throws a strong light upon this subject and proves distinctly that the First Consul had taken precautions against this kind of negotiation; and this fact alone proves that I had done all I could to stave off events which must bring to my ministry a long series of inextricable difficulties. My letters to the minister of the Elector of Baden are the prelude, and it must not be forgotten, if their true sense is to be apprehended, that I fortunately had only to justify those measures of which I was aware.

To urge a feeble prince not to incur the enmity of a powerful neighbor; to send away from the French frontier assemblages of enemies which could accomplish nothing against the established government except by imprudent attempts, as fatal to the peace of Europe as to that of France; lastly, to prevent any cause of misunderstanding between the French government and the adjacent countries—such is the object of the first letter. The second, it is true, justifies weakly an act which strikes directly at one of the main principles of public justice, and this I admit to be wrong; but it is one thing to attempt to make a plausible excuse for, and quite another matter to counsel such an act or help to carry it out. In this latter case there is crime; in the former an unfortunate, a painful necessity. I use too strong a term in using the word crime in regard to a simple violation of a neighboring territory. In the course of this war, and of every other war, much more serious ones were committed by the enemies of France and by France herself, and the governments which commanded them were not branded as criminal any more than the ministers who were charged with excusing them. In the present case there was a crime committed, but it was in the final result contemplated in the violation of a foreign territory, and I am excused by my ignorance of this intention. Here the crime consists in the fatal consequences following this violation. But has the accuser any right to assert, without proof, that I foresaw these consequences? Such horrible foresight is only possible to an accomplice.

I must add to my words above on the subject of the duties of men in power at extraordinary epochs. A man finds himself obliged to live and to work under a government which has no other sanction than that of the events

which have raised it to power, and the need of the people for the safeguard furnished by that power. There may arise emergencies when a man must weigh his duties with regard to the position in which he is placed. Has the government which you obey commanded you to commit a crime? Doubtless you must unhesitatingly refuse at all hazards, run the risk of disgrace, and prepare to meet the consequences. But if this government, without your aid, has rendered itself criminal? Here is a double hypothesis. If the crime violates public order, if it brings the country into great danger, if it tends to social disorganization, the contempt of law, the ruin of the state—no doubt you must resist so far as to shake off the yoke, and take arms against a power which has henceforth become the enemy of the country and has lost all right to govern.

But if the crime is isolated, limited in its object and in its effect; if its general result is only to blast the name of him who has committed it, and to hold up to public infamy the names of those who made themselves his agents, his executioners, and his accomplices, then we must feel bitter and inconsolable sorrow, and weep over such a mixture of greatness and weakness, of nobleness and baseness, of energy and perversity which nature occasionally is pleased to combine in a single character. But we must leave it to the justice of posterity to apportion that share of glory or infamy which is due. There is nothing forfeited in such crimes but the reputation of those who commit them, and if the laws of the country, the public morals, the security of the state and public order are not subverted, you must continue to serve.

If it were not so, imagine a government suddenly abandoned by every man in the country of honor, capacity, intelligence, and conscience, and all its departments flooded by the scum and dregs of the nation. What terrible results would follow such a state of things! And where would be the blame if not in the refusal to adhere to the principle which I have set forth; which principle justifies the help that the most sincere enemies of illegitimate governments are obliged deliberately to accord to these very governments? This principle compels them also to remain faithful to these governments so long as the law of society and the defense of the nation's rights against foreign encroachments are the results of their fidelity.

This is the apology for the entire French administration at this epoch. It must never be forgotten that shortly before this time the social order of the country and the political system abroad had been in a state of anarchy. The French administration put a stop to these excesses, and fulfilled this noble enterprise with zeal and success. History will be tasked to tell

all that was done then to calm excited spirits, to curb wild passions, to bring back into the different departments order, regularity, moderation, and justice. A correct financial system, the establishment of prefectures, the formation on a good basis of large armies, the maintenance of highways, and the publication of the Civil Code date from this time and bear witness to the excellent service rendered by all branches of the military and civil administrations of France. The Concordat, the Peace of Amiens, the political organization of Italy, the Swiss mediation, the first attempts at German federation, show the activity, the wisdom, and the good standing of the administration which I had formed and which I directed. The rules of prudence and moderation which I had been at the greatest pains to establish, to maintain, and to defend were later disregarded, and my determination to resign at that time will exonerate me in the eyes of posterity from all responsibility for those later mistakes. But what was possible in 1807 was not feasible in 1804; it would have been deserting the duties which I felt I owed to my country. Indeed my view of the matter was common to many besides myself, and it may be remembered that not a voice was raised in the whole country to protest against the dreadful outrage of which the Duc d'Enghien was the victim. It is sad to say this, yet it is true, and can only be explained by the fear that filled every one of seeing that government shaken which had saved France from anarchy.

Whatever may be thought of these reflections, which I considered well founded, let us sum up the different points which belong to and which caused this deplorable affair, and repeat what concerns myself:

1. That it was not through the Minister of Foreign Affairs, therefore not through me, that the First Consul was informed of the real or exaggerated plots which were being concocted the other side of the Rhine.

2. That I had nothing to do with the entire affair of the Duc d'Enghien except, first, to transmit to the minister of the Elector of Baden the report of the Minister of Justice, and later to inform him, after the act, of the orders given to Generals Ordener and Caulaincourt—orders with which I had nothing to do and which I could not influence.

Now as to the judgment and execution of the Duc d'Enghien, it will not be difficult for me to show that I had absolutely nothing to do with it. As Minister of Foreign Affairs I had nothing to do with appointing a council of war, nor with the execution of which M. Savary so boldly accepts the responsibility. To maintain that I played a part in this bloody drama it must be supposed that deliberately,

and for pure love of blood, I thrust myself into it. If my character and antecedents do not shield me from such an infamous and odious suspicion, I might ask my accuser a question which he could answer better than any one else, and demand what interest I would have in the murder of the Duc d'Enghien? I had no part in any of the crimes of the Revolution. I had given too many proofs of my devotion to the order of things established by the First Consul to find it necessary to influence his passionate anger in order to obtain a confidence which I had possessed completely for five years. Posterity can judge between me and M. Savary and all who, like himself, have one motive or another in trying to throw upon me the responsibility of a crime which I deny with horror. I have not accused any one, and will not; I only wrote to the king the following letter, to which I append the answer of M. de Villèle:

To the King, Louis XVIII.

SIRE:

I do not tell your Majesty any new thing in saying that I have enemies. I have them beside the throne, and far from the throne. Some cannot forget that I took a different view from them of the troubles of the Revolution, but whatever their judgment they must know that it is owing to the stand I then took that I could later, at the time marked out by Providence, so happily aid in the restoration of your throne and the triumph of legitimacy. This very restoration, this very triumph it is which my other enemies cannot forgive, and never will forgive. Hence all these libels, these voluminous souvenirs of Saint Helena, in which I am constantly insulted, defamed, by men who, vending the utterances, either true or imagined, of an illustrious dead man, speculate upon the greatest names of France, and by this disgraceful traffic make themselves the executors of the posthumous vengeance of Napoleon Bonaparte.

Sire, it is with these last that I must class a former minister of the Emperor, the only one whose name I do not venture to pronounce before your Majesty. This man in a moment of insanity has just pilloried himself as the executor of a vile assassination, happy if, by wallowing in blood, he can drag me with him and, by linking my name to his, blight in me the principal instrument of two restorations. Yes, Sire, of two restorations. In me they seek revenge for the 30th of March, 1814, and the 13th of April, 1815 — days of glory for me, of joy for France — days which linked my name to the founding of the constitutional order which we owe to your Majesty. But in vain envy, hate, and disappointed ambition join to deprive me of the esteem of my contemporaries and the justice of history; I know how to defend myself, and leave my honor intact to the inheritors of my name.

Amidst the storms of the past thirty years, calumny has poured many bitter lies upon my head, but there was one which I had so far been spared. No family had felt a right to demand of me the

blood of one of its members; and behold a madman conceives the idea that, suddenly abandoning the gentleness of manners, the moderation of character which even my enemies have never denied, I should have become the author, the instigator of the most abominable assassination. I who never said a word, — and I thank Heaven for it, — not one word of hate, one counsel of revenge against any one, even my most bitter enemies — I had chosen for a sole exception, who? — a prince of the family of my king, as my victim, and thus to signalize my début in the career of an assassin. And this shocking crime, not only I am supposed to have counseled it but — using my power to remove the victim from the clemency of the First Consul — it is in opposition to Bonaparte, against the orders of Bonaparte, and at the risk of terrible and just responsibility, that I am charged with hurrying the judgment and the execution! And who is the man that dares to frame such horrors against me? My accuser has sufficiently exposed himself.

Nevertheless, Sire, my name, my age, my character, and the high dignity I owe to your kindness do not allow me to leave such an outrage unavenged. As a peer of France I cannot demand this reparation from the courts which are charged with the punishment of calumny. It is before the Chamber of Peers that I must summon my accuser, and from it I will demand an inquiry and a judgment. This trial, Sire, which I ask of your justice, you do not fear for me any more than I fear it for myself. Calumny will be confounded and its impotent rage will expire in the daylight of truth.

I am with most profound respect,
PRINCE DE TALLEYRAND.

PARIS, 8th November, 1823.

M. de Villèle to the Prince de Talleyrand.

PRINCE:

The King has read with attention your letter of the 8th of November. His Majesty orders me to say that he is surprised that you should have conceived the idea of asking for a solemn examination by the Chamber of Peers of France of the events of which M. le Duc de Rovigo has published an account.

His Majesty desires that the past should be forgotten, except the services rendered to France in his person.

The King therefore could not approve a step both useless and unusual, and which would bring up unfortunate debates and awaken painful remembrances.

The high rank which you retain at court, Prince, is a certain proof that the imputations which wound and afflict you have made no impression upon the mind of His Majesty.

I am, Prince, your Excellency's very humble and very obedient servant,

JOSEPH DE VILLÈLE.

PARIS, 15th November, 1823.

By this letter silence was commanded, and I was silent; and if I have thought it right to make the statements just expressed, it is that

they will see the light long after my death, and will establish the truth without provoking the scandals feared in 1823. The papers of the 17th November, 1823, contained the announcement: "The king has forbidden the Duc de Rovigo entrance to the Tuileries."

When soon after the letter of M. de Villèle, I presented myself at the château to pay my court to the king, his Majesty on seeing me said :

"Prince de Talleyrand, you and yours may come here without fear of painful meetings."

I have nothing to add to this account.

TALLEYRAND REPELS THE CHARGE OF ATTEMPTING TO ASSASSINATE NAPOLEON.

AND now a word upon the accusation of M. de Maubreuil. This is so ridiculous that the very words of the author may be used to break it down. But first it is necessary to know who was M. de Maubreuil. Of an old and honorable family of Brittany, M. de Maubreuil entered military service under the Empire in 1807. After having served some time in the army which occupied Spain, he was turned out of the army at a moment when to be dismissed followed only the gravest misdeeds, for there was great need of soldiers. His name and the recommendations he managed to procure got him employment at the court of King Jérôme in Westphalia. This court was never considered very scrupulous in the choice of its servitors, as the selection of M. de Maubreuil after the Spanish incident may testify. Yet Maubreuil contrived to get himself driven away even from this court. Returning to Paris with a considerable fortune, Maubreuil plunged into business, the kind of business suited to men of his sort — army supplies. Whether from too great ability on his part or on the part of his associ-

ates, or bad faith on their side, he soon had troubles with the government, in consequence of which he says he had considerable losses which irritated him against the Emperor Napoleon. Such was his position at the time of the fall of the Empire. It is then, according to him, in the first days of the month of April, 1814, that he was several times called to my house by M. Roux Laborie, who at that time filled the position of secretary of the Provisional Government, and that he, in my name, proposed to him the assassination of the Emperor Napoleon. He was offered, he says, rewards for fulfilling this *secret mission*, as he calls it, and always by the intervention of M. Roux Laborie, for Maubreuil declares that he never spoke to me. These rewards were to be — I repeat his own words — "Horses, carriages, the rank of lieutenant-general, the title of duke, and the government of a province." He admits that he accepted it all and took measures for the execution of his *secret mission*. It seems that only after leaving Paris and already on the way, he was assailed by scruples and saw the horror of the deed he was about to commit. He immediately decides, generously, to give it up, and, as he wishes to signalize his return to virtue by a good action, he seizes the first opportunity. He meets on the road Queen Catherine, Princess of Würtemberg, wife of Jérôme Bonaparte, his sovereign in Westphalia. He stops her, seizes the wagon which follows her carriage, and robs her of all her money, clothes, and jewels, and returns triumphantly to Paris, where he is astonished at being arrested and prosecuted for highway robbery. This is an abridged history of my accuser M. de Maubreuil.

I ask if it is not of itself sufficient to refute the accusation?¹

¹ The paragraphs that follow have not reached us as we go to press, and will be given later.

THE STARRY HOST.

THE countless stars which to our human eye
Are fixed and steadfast, each in proper place,
Forever bound to changeless points in space,
Rush with our sun and planets through the sky,
And like a flock of birds still onward fly;
Returning never whence began their race,
They speed their ceaseless way with gleaming face,
As though God bade them win Infinity.
Ah, whither, whither is their forward flight
Through endless time and limitless expanse?
What Power with unimagined might
First hurled them forth to spin in tireless dance?
What Beauty lures them on through primal night,
So that, for them, to be is to advance?

• TOPICS OF THE TIME.

Modern Cheap Money Panaceas.

IN the two numbers of THE CENTURY immediately preceding the present one we have set forth the details of two historical schemes for making money cheap and plentiful, that of the Land Bank in England in the latter part of the seventeenth century and that of the Paper Bank in Rhode Island at the close of the Revolutionary War. We intend now to consider some of the plans with similar purpose that are put forth by the leaders in various kinds of cheap-money movements which have gained headway in the Western States during the last few months. With this consideration in view we have been making a collection of plans as they have been advanced from time to time in speeches and interviews. We append the more striking of these, giving the exact language in each instance, numbering them for convenience of reference, but withholding the names of the originators in order that our subsequent remarks may be free from all appearance of personality.

1. I am not stuck on silver and gold as circulating mediums. A piece of paper is my ideal. Geologists have things so fine that they can estimate the quantities of silver and gold in the mountains, and the Government should issue silver certificates to an amount equivalent to that estimate. It would be far safer, as it would be easy for a foreign nation to capture the coin in the treasury vaults at Washington; but the mountains they could not remove, even by all the faith they could muster.

2. People do not care whether a silver dollar contains seventy cents worth of silver or not, so long as it will buy a dollar's worth of sugar or coffee. For fifteen of these [holding up a copper cent] a man can buy copper enough to make two dollars, yet it is good money.

3. We [speaking for the Farmers' Alliance] believe in the people making their own money; we believe in the Government, which is simply the agent of the people, issuing their money directly to them without going around Robin Hood's barn to find them.

4. If the people had twice as much currency in their pockets as now, their prosperity would be greatly increased.

5. I am in favor of more currency. We have not enough currency *per capita* to do the business of the country. If we cannot increase the currency, I think somebody ought to issue more collaterals. There is usually enough money if a man has the collateral.

6. Under a free-coinage system I think people who have small quantities of silver would be more apt to deal directly with the Government, and the coin, flowing out of the mints to them in smaller individual amounts, would quickly find its way into the channels of ordinary trade. The rich speculators who now do most of the handling of the metal take their big sums that they receive from the Government, and use them in further speculation. Little enough of it ever gets out in petty sums for circulation among the masses of the people.

7. My monetary system eliminates from money both the element of intrinsic value and the power to limit or control the value of things of use. I propose that the Government only shall issue money for the public use. In order to do this, I would have it issue immediately 500,000,000 new treasury notes of the denomination of one dollar each. So much of this amount as was necessary the Government should loan to the people; ten per cent. of each loan to be paid back each year, nine per cent. to be applied to the extinction of the principal, and one per cent. covering the interest. In that way it would be possible to redeem every mortgaged farm in the land within fifteen years.

8. Banks should not be allowed to issue notes. These should be printed and put out by the Government. The

tariff should be reduced till there is a deficit in the treasury, and then greenbacks should be printed and issued to pay all claimants. These should not be redeemable in metal money. Each bill should bear the legend, "One dollar, receivable for all dues and debts." This would make it receivable for all taxes and import duties, and a legal tender. This would keep it perpetually at par.

9. Tens of thousands of our farmers have been unfortunate, and can never get out of debt without special relief. I would enact a law stopping the big interest they have agreed to pay, and substituting a debt at one per cent. interest. It would be done in this way. Suppose I owe you \$5000 and accumulated interest on my farm. This new law would direct you to add the interest to the principal, and go to the treasury of my county and file the mortgage and an abstract of the property, and get a check on the nearest bank for the entire debt. That would satisfy you. Then the county treasurer makes a draft on the United States treasurer for the money, and gets it in crisp, new bills. That satisfies him. The United States treasurer accepts the mortgage on the farm,—providing it is worth the amount of the mortgage,—and sends word to me when the one per cent. interest is due. Is not that simple? It is the first news I have had of the transfer of the debt. That ought to suit everybody.

These nine plans can be grouped into two general classes, those which preserve for the proposed cheap money some intrinsic value, and those which eliminate such value entirely. Of the former it is to be said that they are similar in character to the plans of the English Land Bank and the Rhode Island Paper Bank in that they propose the issue of money on land as security. The proposition for issuing notes against the estimated amount of silver and gold in a mountain is of course a proposition to issue them on the value of the land. They could be no more kept at par than the Rhode Island notes based on farm values could be, but would drop at once to a level of their own, which would inevitably be below the gold standard of value. As for the plans in the second group (those which favor paper money with nothing to fix its value save the Government stamp), they all contemplate a currency which the author of one of the plans (No. 8) says would be "perpetually at par"; that is to say, at par with itself. This was the peculiarity of the Continental, the Confederate, and the Rhode Island paper money, of the French assignats, and, in fact, of all inconvertible paper money ever issued. It is surely unnecessary, in view of unbroken human experience in testimony of the folly of such money, to enter into a formal argument against it at this late day. We shall continue to show its complete failure in practice in subsequent articles upon experiments with it in various countries.

When we come to examine carefully these various plans we find that the advocates of all of them are more or less perplexed as to the methods by which the money, when it shall have been made plenty by act of the Government, shall be got into the "pockets of the people." This is the shoal upon which many a fair cheap-money panacea has been wrecked. The primal cause of every cheap-money agitation is the same—a desire on the part of people who are suffering from a scarcity of money to possess more. They have nothing additional to offer in return for more,—that is, merchandise, or goods, or labor, or product of any kind,—but they imag-

ine that the scarcity from which they are suffering is due to the dearth of the money itself, or to the financial policy of the Government in limiting the amount issued, or to some other cause than their own inability to raise more, either by actual sale of something, or on credit. When they are asked how they are going to get possession of a share of the more plentiful supply, and are held down to a specific answer, their ingenuity is greatly taxed, and they turn to their leaders for a solution of the difficulty. The different ways in which the leaders, whose plans we have collected, have met this demand furnish most instructive material for study.

In the first and second plans this point is not touched upon. In the third the author says he favors issuing the money directly to the people, which seems to imply a free and unlimited distribution. In the fourth plan the incontrovertible assertion that "If the people had twice as much currency in their pockets as now, their prosperity would be greatly increased" is not accompanied with any suggestion as to how this doubling process can be accomplished. In the fifth—and this point we shall touch on later—the searching suggestion is dropped that perhaps an increase of collaterals is as much needed as an increase of currency. In the sixth the curious idea is brought forward that free coinage of silver would put money into the pockets of the people by enabling them to take what silver bullion they might happen to have on hand to the mints to be coined. In the seventh, eighth, and ninth plans an unlimited issue of inconvertible paper by the Government is advocated to be loaned to the people at one per cent., sometimes with land security and sometimes with none at all.

Of the relief which might come to the people by allowing them to have their own bullion coined, it is only to be said that it would depend entirely upon the amount of bullion which they had on hand and of the value of the silver dollars after they were coined. If the farmers of the west have bullion in considerable quantities stored about their premises, the fact is one which has not been suspected. Concerning the various plans for government loans of paper money at one per cent., the same comment can be made upon all of them. They would undoubtedly put money into the pockets of the people, but what would the money be worth? The farmers of Rhode Island had plenty of money put into their pockets in 1789, but they found that they could not buy anything with it save at heavy discount, could not use it in payment of mortgages and other debts, and that it paralyzed the commerce and industry of the State, and brought irreparable shame upon its honor. If the Government of the United States were to go into the business of lending money to the farmers in return for mortgage security, as some plans propose, or in return for no security, as others suggest, the only results would be that the entire farm mortgage debt of the country would be unloaded upon the Government, that farmers and all other people would have a lot of debased money in their pockets, and that in the end the credit of everybody, including that of the Government itself, would be undermined, if not completely destroyed.

The real need of the times is the one mentioned in the fifth plan; that is, for more collaterals. When the author of that plan says that "there is usually enough money

if a man has the collateral," he shows that he has been a close and accurate observer. Collateral, as defined by "The Century Dictionary," is "anything of value, or representing value, as bonds, deeds, etc., pledged as security in addition to a direct obligation." An advocate of cheap money was once going about Wall Street complaining of the scarcity of money, and saying that all existing industrial, commercial, and financial woes came from a too small supply of currency. When he was told that there was plenty of money to be borrowed at low rates of interest, he retorted, "Ah, but that is only on first-class security." Money is always obtainable on that kind of security, and few people are ever to be found who wish to loan it on any other. The man who calls for more collaterals means to call for more first-class securities, for upon no others does any prudent man care to lend money. In other words, every man who has something of value to sell, or to lend, can get money of value in return. He can compel no man who has money to lend to lend it on any other than good security. As the value of the collateral goes down the rate of interest goes up, until it reaches the prohibitive point. If a loan which has been granted on condition of interest and principal being paid in sound or "dear" money be repaid, under legal authority, in "cheap" money, the inevitable effect is always to make it more difficult for any one to borrow on any except the most stringent terms thereafter; that is, on the best security, and with principal and interest payable in gold.

Judicial Control of Contested Election Cases.

THANKS to Senator Saxton, New York has the honor of leading American States in a most important reform movement. His resolution, providing for the submission to the people of a constitutional amendment removing from the legislature the power to decide contests over seats in its own body and vesting it in the courts, was passed by both branches of the legislature last March. It must be passed again by the next legislature and then submitted to the people of the State for adoption or rejection. As Mr. Saxton's proposed amendment is the first of its kind, so far as we know, to receive even partial approval in an American legislative body, its provisions are worth quoting, so far as they change existing law. The words of the State Constitution empowering each house of the legislature to be the "judge of the elections, returns and qualifications of its own members" are stricken out and the following inserted:

The election, return and qualifications of any member of either house of the legislature, when disputed or contested, shall be determined by the courts in such manner as the legislature shall prescribe, and such determination, when made, shall be conclusive upon the legislature. Either house of the legislature may expel any of its members for misconduct; but every person who receives a certificate of election as a member of either house according to law shall be entitled to a seat therein unless expelled for misconduct, or ousted pursuant to a judgment of a court of competent jurisdiction.

This is a very radical remedy, since it not only takes from the two houses the control of contested cases but deprives them of all power to reject the judicial decisions. In various bills, not amendments, which have been introduced in Congress, providing for such decisions, power has always been reserved for Congress to ac-

cept or reject them at its pleasure, on the ground that Congress could not divest itself of a power conferred by the Constitution. That could only be done through an amendment to the Constitution of the United States similar to that which Senator Saxton proposes to our State instrument. It has been urged by advocates of these Congressional bills that Congress does have the power to refer such cases to the courts for preliminary trial, and that by acquiescing in these judicial decisions for a time it would soon establish the practice of accepting them without question, and that thus the reform would be accomplished without the formality and delay of a constitutional amendment. For States, Senator Saxton's method is by all odds the most desirable, whatever may be thought best in Congressional procedure.

The constitutional right which all our legislative bodies have to determine their own membership was derived from the English, and dates back to a time in which there was no other place in which a power so susceptible of abuse could be lodged. As the Speaker of the last Congress, Mr. Reed, pointed out a few months ago in an interesting article in the "North American Review," the "crown could not have it, for the House of Commons often represented a people entirely antagonistic to the king, and always a people who on some points differed from him, and whose control over taxation could not be suffered in any way to be taken from them. The power could not be vested in the judges, for in those days the judges were but representatives of the king himself, doing his work by his appointment and holding office at his will. Hence there was in early days no place where the right to judge of the elections could be lodged except with the elected body itself."

As we derived the idea from the English, we cannot do better than to follow in their footsteps in reforming the abuses which have sprung from the use of it in practice. Previous to 1770 all contested election cases in the House of Commons were tried by the whole House and determined by majority vote, but in that year dissatisfaction with the method became so great, since nearly every contest was decided in a partizan manner, that what is known as the Grenville Act was passed, which selected by lot all committees for the trial of election petitions. A few years later the law was amended so as to have the jury for these cases obtained by taking a ballot for thirty-three members, then striking from this number eleven for each party, the remaining eleven constituting the elections committee with final power. This system was continued in use with slight changes till 1848, when dissatisfaction with it led to the adoption of a law which put all contests into the hands of a committee of six members appointed by the Speaker, subject to the approval of the House. The members of this committee were usually men of high character and attainments, yet after twenty years' experience with their findings the House of Commons was informed by the Chancellor of the Exchequer in 1868 that this method of deciding contests was a failure, that expenditures had been increased, corrupt practices had not diminished, and decisions had been uncertain and contradictory. In concluding his statement the Chancellor struck for the first time straight at the root of the evil by saying, "There is something in the principle upon which the

jurisdiction of the House in regard to election cases rests which is essentially vicious."

With this declaration as a guide the House of Commons went into a long debate upon the matter, the result of which was the passage of a law which transferred the jurisdiction of contested cases to the courts. Decision of all such cases was placed absolutely in the hands of judges, one from each of the great divisions of the law courts, Queen's Bench, Common Pleas, and Exchequer, others to be added in case of necessity. One judge without a jury was to sit in each case, and, if he saw fit, might conduct the investigation at the place at which the election occurred. The judges were to certify their decisions to the Speaker, and they were to be accepted as final. The system has been in use since 1868 and has given perfect satisfaction. The judges were averse to having the power vested in them, and protested against such disposition while the bill was pending, but they have used it with such complete freedom from partizan influences that their decisions are never questioned.

Our problem to-day is precisely what theirs was in 1868, and Mr. Saxton's proposition is the first step towards meeting it with a like remedy. All authorities agree that our present method of deciding contests, first by a partizan committee on elections, and afterward by a partizan vote of the whole House, is unsatisfactory. In fact, so partizan is the use made of it in all cases in which the party majority in a house is small, that we have by common consent fallen into the habit of calling it "seat-stealing." So high an authority as ex-Speaker Reed admits this. In the article from which we have quoted above he said: "The committee usually divide on the line of party, when they divide at all, and the House usually follows in the same way. To any thinking man this is entirely unsatisfactory. The decision of election cases invariably increases the majority of the party which organizes the House and which, therefore, appoints the majority of the committee on elections. Probably there is not a single instance on record where the minority was increased by the decision of contested cases." To comprehend the full significance of this testimony to the evils of the present method, it should be borne in mind that in the Congress of which Mr. Reed was the Speaker a majority of seven was increased to one of twenty-four by a series of partizan decisions of the character which he depicts. Equally emphatic testimony is furnished by the Hon. Henry Cabot Lodge, member of Congress from Massachusetts, who said in a newspaper interview, published in December, 1889:

Indeed the House is rarely thoroughly and violently partizan except when it sits in a judicial capacity to try an election case. The present system offers a constant temptation to candidates defeated at the polls who happen to lose their election by a narrow margin to make contest on frivolous grounds, in the hope, too often fulfilled, that their party associates will be induced to seat them. To expect absolute impartiality from political representatives on questions which involve a gain or loss of votes in the House is to expect something of which human nature is not capable, and therefore it is desirable to substitute some less interested tribunal for the trial of these questions. To save the public time, to reach impartial decisions in election contests, and to reduce the number of such contests are the leading reasons for this measure, which I believe would be of very great benefit to the country as well as to the House. The courts to which we cheerfully confide the power of making decisions affecting the life, property, and character, which, as

we know, in all these grave matters render substantial justice, can certainly be trusted to decide impartially, in accordance with the law and the facts, conflicting claims to a seat in Congress.

In addition to the partizan consideration, there is also to be urged against the present method the expense and time which its operation involves. Mr. Reed estimates that the contests of the last eight Congresses have cost \$318,000, an average of nearly \$40,000 each, and that each contest consumed more than two days in the House, and much more in the committees.

It is clearly time for us to realize, as our English reformers in the same field realized in 1868, that there is something in the principle upon which our present method rests "which is essentially vicious." We ought to "reform it altogether," as they did, by removing the power of decision to the courts, leaving it there absolutely. That is what the Saxton amendment does. There is no reason for thinking that our courts would not be equal to the exercise of it with the same impartiality as the English courts have shown. In Congressional cases the circuit judges of the Supreme Court of the United States could be assigned in such numbers as were necessary for the duty. The recent increase in the number of these judges makes such service by them possible without serious interference with their regular duties. In the States the higher courts could be drawn upon. The danger of partizan influences affecting the decisions by such judges would be very small, even at the beginning of the practice, and would diminish with every successive case.

Law or Lynching.

WHY was it, when the news of the New Orleans lynching was sent over the country in March last, that nine people out of ten applauded the work of the mob, calling it justifiable and salutary? Why was it that so many law-abiding members of society were to be heard saying that if they had been in New Orleans they themselves would have joined the mob? Finally, why was it that in New Orleans itself a mob of such extraordinary character was collected, organized, and led to the execution of such barbarous work? The mass meeting from which it sprang was called together by a proclamation published in the newspapers and signed by the names of nearly one hundred prominent and respected citizens. The men who addressed the meeting were lawyers eminent in their profession. The mob itself was led by these same lawyers, and in its ranks marched other lawyers and merchants, men of wealth and position. This mob, so organized, composed, and led, marched to a prison, forced an entrance, seized and put to violent death eleven men. Its members then dispersed quietly to their homes. When their work was known, the entire press of the city, its exchanges and other organized bodies, and all other respectable elements of the city population, expressed approval. In the country at large the nearly unanimous voice of private approval was echoed in many reputable newspapers, and in London, the foremost representative of English public opinion, "The Times," gave the deed hearty commendation.

There was something so remarkable about this spectacle of civilized intelligence approving conduct which

was a subversion of the laws of civilization and a reversion to those of barbarism, that an examination into its causes has been going on in thoughtful minds for the past few months. If it is true, as all approvers of the lynching contend, that this was absolutely the only adequate remedy for the case, how did it happen that it was the only remedy? If the legal machinery for dealing with crime and punishing criminals had broken down completely, what had been the causes of its breaking down?

These are questions which go to the root of the matter, and in seeking to answer them we shall touch upon points to which we have more than once called the attention of the readers of *THE CENTURY*. We published in this department of *THE CENTURY*, in April, 1884, an article under the title of "Mob or Magistrate," in which the tendency in certain parts of the country to resort to lynching when there had been a failure of criminal justice was discussed and deprecated. In that article we said: "It cannot be too often nor too strongly proclaimed that these lynchings themselves are crimes; . . . that they furnish a remedy which is worse than the disease. . . . Nevertheless, the failure of criminal justice, which makes room for mobs and lynching, is a greater disgrace than the savagery of the mobs." That article, which was in the main a condemnation of the methods of criminal lawyers in twisting and torturing the law into a protection for undoubted criminals from the just penalties of their crimes, had scarcely been published when the country was startled with the news of the court-house riot in Cincinnati—a riot more nearly resembling that at New Orleans than any other in our history. It was caused, it will be remembered, by the fact that there were twenty murderers in the city jail who had, for one reason or another, escaped trial. Out of seventy-one prosecutions for murder and manslaughter in the courts of the county during two years, four resulted in acquittal, two in quashed indictments, six in imprisonment, and fifty-nine were still pending. In the presence of such a paralysis of justice public indignation gradually reached the point at which it found vent in a riot, provoked thereto by the failure of a jury to convict a murderer of unusual brutality and undoubted guilt. The mob attacked the jail, burned the court-house, and filled the streets of the city with fighting and bloodshed for several days, killing none of the murderers, but causing the death of more than fifty innocent persons, destroying valuable records and property, and bringing the good name of the community into reproach the world over. This was due to the presence of a set of criminal lawyers, astute and unprincipled, who by means of an absurd jury law were able to prevent the conviction of almost any criminal.

Back of the failure of justice in New Orleans there looms one great cause which of itself makes the search for others unnecessary. The State has a reckless naturalization law which allows immigrants to vote in State elections as soon as they have declared their intention to become citizens. Here we put a finger upon the root of the evil of defective justice in every city in the land, for we find in this haste to get votes the corrupting and demoralizing touch of "politics." The Italian consul at New Orleans, after speaking of the large number of his countrymen who are orderly and useful citizens of Louisiana, goes on to say in an interview published shortly after the riot:

This does not exclude the fact that there are among them about a hundred criminals escaped from Italian prisons, most of them long since naturalized as Americans, mixed up in the city and State politics, and caressed and protected by politicians through whose support several have obtained important political places. Their especial occupation was to naturalize the newly arrived Italians here.

Is it any wonder that, under such conditions, the whole system of criminal detection and prosecution became so paralyzed that nothing but a mob could restore the reign of justice and order? And who was responsible for the power which the criminals had gained in the community? Was it the criminals or the men who had received them with open arms and nourished and petted them into power?

Here is the point for every American to consider, and to keep on considering until it shall arouse him to the necessity of bearing his part of the burden in the government of the community in which he lives. In how many of our large cities has the machinery of criminal regulation and prosecution escaped all taint of the same kind as caused the uprising in New Orleans? In how many does it poison every branch of the municipal service, beginning with the police and running up to the highest executive and judicial officers? Is it not notorious that "politics" is at the bottom of all our naturalization laws, and that if it were not for the greed of the politicians for more votes in elections, we should have far more stringent regulations for admitting foreigners to the suffrage? In how many of our cities is the police force absolutely free from the control of "politics," and is there any large city in which the contact between the political bosses and the criminal and semi-criminal classes is not so close as to compel, to a greater or less degree, the protection of the latter from the vigorous and fearless administration of the laws? In how many of our large cities are the police justices, who sit at the fountainheads of justice, upright and just and fearless magistrates,

and in how many are they the agents of "politics," and the friends and protectors of the criminals whose support is valuable to politics?

Let us ponder these questions, and ask ourselves whether we are prepared to do in other cities what has been done in Cincinnati and New Orleans. Let us ask ourselves if we are prepared to tolerate the evils of misgovernment which we know to exist, and which we refuse to take a hand in correcting, until they so completely destroy our lawful methods of government as to force us to destroy them in turn by the unlawful and barbarous methods of riot and lynching. Shall we sit quietly and slothfully by and allow our boasted civilization to become a failure, and then try to set it right by hanging to the lamp-posts or shooting like dogs the miserable creatures whom our own negligence or indifference has permitted to get control over us?

These are the real lessons to draw from the New Orleans riot. It may be that our immigration laws are too lax or too poorly enforced; it may be that we ought to exclude more rigorously than we do the swarms of people who come to us from Europe, but our worst evils in government are not due so much to bad immigrants as to native indifference, or connivance, or cowardice, which permits or encourages ignorant or vicious immigrants to be put to base uses for political ends. If we are content to allow our cities to be governed by the least intelligent and least moral elements of their population, we must not complain if they make and administer laws to suit their own tastes; and we must be prepared to face, sooner or later, the crisis which will come when the laws cease to give the community that protection upon which its very existence depends. If we are going to do this, and are inclined to depend upon lynching to set us straight when the crisis arrives, it would be wise to have some system of martial law in readiness for use, for that would be at once a more effective and a more civilized method than that of a mob.

OPEN LETTERS.

Female Education in Germany.

ALTHOUGH the education of women has never been a subject of such widespread interest in Germany as it has been in western states, particularly England and America, a tendency towards reform is nevertheless present as a steady factor of the intellectual movement of the day. One small class of educational reformers, under the late jurist Holtzendorff, hold advanced and radical views as to the claim which the female population has upon the state for higher education. A larger and more moderate class, led by the famous and successful Lette, claim for German women such advantages as may be had in the common school, in special training schools, and in the domestic school. But the mass of Germans still hold to the conservative and traditional idea founded upon their belief that home is woman's true sphere. Between the three there are naturally many combinations. Giving the great majority of female schools over to the last-named

class, there remain the Victoria Lyceum as a type of the extreme advance that reform has made in Germany,—an almost isolated case,—and the female industrial schools of Nöggerath and Clement, in Brieg and Berlin, the cooking-school in Cassel, the domestic school in Neveges, and the public household school for factory girls at Pforzheim, as examples of the successes that have followed in the wake of the Lette Union. The latter school, which was called into life in 1865 by the personal efforts and writings of the statesman and economist, President Lette, enjoys the patronage of the Universal German Women's Union and its numerous branch unions. The Victoria Lyceum is a separate and independent institution, like Vassar or Wellesley.

My own experiences as a student were gathered at the Victoria Lyceum and at the Empress Augusta Seminary, in Charlottenburg, Berlin,—an advanced conservative school,—after my graduation from a New Jersey female college. The earliest stages of a German girl's education I have not gone through, therefore;

but the observation which I have given to the methods and ideas of instruction, as I have seen them applied in families, has been considerable, and, as a house-keeper, I have had opportunities for detecting the results of the German common-school education on the lower classes of society.

The cultivated middle class is said to be the best educated, and I am willing to believe it, although it was in the family of a Göttingen professor that my Greek and Latin text-books fell under the denunciation of the father of the house, and I was directed to look to the daughters — who knew nothing but French and English, some history and music, a great deal of religion, and a little botany — as models of what females should be. Your German girl is taught to knit at her mother's knee. Knitting and sewing, indeed, are the earliest and the latest lessons which she takes and practises. Lessons are given regularly twice a week in knitting and sewing, and much time goes in practising, especially in the long evenings of north German winters. At the Empress Augusta Seminary the pupils, who had Wednesday afternoon and Saturday afternoon, instead of the whole of Saturday, for a holiday, spent the time sewing and knitting; and in the evening, after study hour, each sat in her chair knitting, while a governess read aloud. I judge that we averaged nearly thirty hours a week in this employment, not counting Sunday afternoon and evening, when we sewed or knitted for ourselves. The result of the weight laid on sewing is a land full of skilful needlewomen — and likewise of debilitated girls.

Another principal factor in girls' education is held to be religion. Three hours a day are devoted to religious instruction during the eight years of education from the infant age of six years until confirmation. In the public, or state, schools priests instruct Catholic pupils, and rabbis teach Jewish girls, the instruction of the latter including the original Hebrew text of certain prayers and formulas. The American girl, who gets what she knows of religious history and dogmas from the Sunday-school, a course in Butler's "Analogy," and private reading, will wonder how so much time can be filled up, and what there is then to be learned. This religious course includes biblical history, the geography of Palestine, the histories of festivals, of the divisions of the canonical year, of church music, of the covenant, and of the Reformation, together with the committal to memory of a large number of hymns and psalms, of extracts from the Bible, Bible narratives, and Luther's catechism, which is explained. Confirmation is the closing act of a girl's schoolhood. The daughters of the poor are put through the catechism in herds. Often country girls walk long distances to the pastor, and, fasting, are catechized in the cold half-daylight of damp, stone vestries. Among the upper classes the mothers of families often accompany their children to the lessons of the pastor in order to talk the better with them on the subjects their minds are filled with. Very commonly, also, girls are sent for half a year or a year, or even two years, to a boarding school for completing the act in the society of congenial comrades. And pious natures often are stirred at this period with the profoundest and purest sentiments of their lives. Confirmation is the German revival — the only revival tolerated by opinion and conducted by the state.

After religion, the lessons which girls are taught most insistently are those in German. Since the political and military victories of 1866 and 1870, very great stress has been laid upon the German language in schools, and girls' seminaries include courses in German literature that are fuller than those in foreign literatures — an important advance over the old method, where French was more cultivated than the native tongue. In the prospectus of the Hirschberg Seminary, for instance, from four to eight hours per week are quoted as being devoted throughout the whole school course to German; that is, to reading, grammar, composition, and literary history. And here again a marked feature in opposition to the American method of literary instruction is the very considerable quantity of verse drilled into pupils' memories. During the course of a single year in Berlin we were examined on thirteen songs and odes, the long poem of the "Bells" by Schiller, and a portion of Goethe's "Hermann and Dorothea," besides forty or fifty other poems that had been committed in the lower classes. German girls do not quote more than American girls, — quoting has gone out of fashion here as elsewhere, — but they have a facility in writing verse that is astonishing. They also learn musical compositions by heart. And it is my opinion that the charm of family musical evenings in Germany is so complete chiefly because each member knows a full quantity of ballads, and knows them to the end. As I have never had a chambermaid who could not sew, so I have never found a nurse-girl, however low, who did not sing a modest stock of harmless songs. Indeed, among the lower classes, the hymns drilled into the memory in youth remain as a spiritual and sentimental solace to the end of life.

French is the branch that comes next in interest in the higher schools. Less time is devoted to English. But it is to be said of German instruction in the languages that, at the end, pupils are really practical masters of them. At the Empress Augusta Seminary a different language was spoken at each meal, and governesses saw to it that we spoke French during the hour of our daily promenade.

For the rest, however, German schools for girls offer little that is worth emulation. They cannot compare with most western models. The standard for attainment in mathematics and the sciences is low. Profit and loss and cube root are objects of instruction for the graduating class (see the catalogue of the normal school in Liegnitz). Algebra, geometry, and trigonometry are not taught, as a rule, even in their first elements. Botany is always a part of the plan of study; the elements of zoölogy and of chemistry are generally taught; philosophy rarely, geology extremely seldom, astronomy and philology almost never. Callisthenics are practised, and so are singing and drawing. The instruction in music is excellent.

The discipline in schools is severe, and in carrying it out several customs hold place that differ extremely from American ideas and ways.

The common school begins in winter at eight o'clock in the morning, in summer at seven, except in large cities and towns; and this rule is followed in families and in seminaries. A full hour of time is devoted to each lesson or exercise. In fact the German word *stunde* is identical for the two, lesson and hour. At

the Empress Augusta Seminary we rose in summer at six o'clock. Our beds stood in sections of large dormitories, and near them were iron washstands. A regulation existed as to how, and how much, we should be allowed to wash, and during the process a governess wandered constantly about to see that we followed it. We drew on our uniform dresses in silence, and at the next signal of the bell hurried into the main corridor. Here stood the directress. Each kissed her hand with a good-morning greeting,—according to the German code of manners the young must greet the old first,—and then took our given places in a file for marching down into the dining-hall. Here we stood at the back of our chairs at table while a morning prayer was read by the directress. This done, she seated herself; the governesses resumed their places, and finally we pupils took ours. I committed the mistake, I remember, of thinking the first morning that the butter before me was meant for the rolls; so that I took some. The matter created a stir down along the whole table. Nor did the governess venture to set me right of her own accord. It was left instead to a private interview between the directress and me for opening my eyes to the fact that butter was only eaten by our superiors. We pupils had to soak our rolls in our coffee and eat them so, two cups of coffee and two wheaten rolls composing our breakfast. After breakfast we had free time to put our wardrobes in order for inspection, to study, or to talk, until eight o'clock. School lasted from eight in the morning until six o'clock in the evening. At ten in the forenoon occurred a recess of fifteen minutes for eating a sandwich (without meat); at twelve we walked for an hour in the open air; at one we dined. After dinner we adjourned with a governess into the dormitories for washing our teeth and hands. At four in the afternoon we drank coffee, or, if it were the birthday of some one of us, delectated ourselves with chocolate and cake. We ate supper at seven. After supper came sewing until bedtime. The directress's hand was then kissed again, and a governess conducted us into the dormitories.

I remember that although the school was genteel, being founded especially for the daughters of officers, certain hygienic precautions were conscientiously carried out. Every newcomer, for instance, was examined by the doctor of the seminary, and at night one of the maids washed her head and combed it. The doctor, in truth, was a familiar figure. He was by even when the shoemaker's wife brought shoes for us to try on, and gave the decision as to which size should be retained and worn.

The governesses were resident teachers. There were four for every twenty pupils: one French governess, one English, and two German governesses.

No man was allowed to live in the establishment except the porter. And this personage owed the high preference which he enjoyed to his ugliness. May you live long, Herrmann, for your likeness will be hard to find—halt as you are, wanting in teeth, and one eye altogether, while the other eye is bleared. The pastor who preached Sundays in the little chapel came from the town, and the professors from other schools. The governesses gave few lessons; they sat by in the room while the professors taught. In ultra-conservative schools for daughters of the aristocracy female teachers are excluded from giving any lessons except in needle-

work. It is rare where they are employed anywhere except for languages and the elements of reading, grammar, and religion; except, of course, in convents, a national prejudice exists against female instruction in earnest studies. Nor will a consideration of the type of school where governesses and teachers are fitted out—and this of the Empress Augusta Seminary is one, and an advanced one at that—be likely to make a foreigner think the prejudice is without good ground. As a matter of fact the German woman is inferiorly trained. The tendency in all this teaching is towards strengthening a single faculty of the brain—memory. The logical faculty is as good as ignored. Drilling cannot be praised too much; but drilling, as it is carried forward in German girls' schools, relentlessly upon a minimum of topics, blunts all intellectual vigor and enterprise. The long sittings upon one theme—to go further into a single detail of discipline—is uncommendable. Consider the listlessness of half-grown girls when being held to the abstract subjects of the catechism for an hour at a time. Their minds necessarily lose tension, and the latter half of the hour is as good as lost. In the few years of a girl's school life these half hours make up an appalling quantum. Shorter lessons extended over longer terms would, I am persuaded, reach better results.

The physiological law of the refreshment that comes with variety and the need of repetitions of impressions upon the brain, especially in the young, certainly point to such a reform. The entire subordination which girls are taught, the want of rough-and-ready exercise, the lack of encouragement to act alone and to exercise their own wits—all these are minor deficiencies of the German method. They show themselves in the lower mettle of German girls.

An excellent trait that partly balances these deficiencies is the habit, which they are kept to, of industry.

Intellectual ambition, on the other hand, cannot be expected where the intellect is so little stimulated. The nation evidently considers this condition of intellectual deficiency in the daughters and wife at home as normal; witness the novels of the celebrated Gustav Freytag. The state and private female schools of the type I have described respond to the supposed needs of German home life.

But while the people generally cling with tenacity to the traditional educational standard, there is a growing desire for better teaching, which is bearing fruit in the establishment of various types of new schools. Of these the industrial schools that exist offer some novel traits, but in the main they resemble American schools of the same type. The Victoria Lyceum, however, differs too remarkably from Vassar, Wellesley, and similar colleges in America to be passed by quite undescribed. It has not the constitution, the dotation, or the stability of a university, but its original character resembled a piece broken off from such an institution more than a college or school. All lessons were given in the form of lectures; no examinations were held; the course followed was a matter of individual choice; the rooms in the building were arranged as lecture-rooms, and professors walked in, assumed their desks, and at the close of an hour or two hurried out, precisely as at the university. The themes lectured on were modern history, the history of Greek and Roman art, German literature, and the literature of

France. The pupils were mostly young ladies of the leisure classes, and numbered in my day (1873) about ninety or a hundred, the lyceum having opened in 1869 with seventy or less.

The originator of the idea of the lyceum, and its first directress, was Miss Archer. She broke loose from England, and came, as many of us have come, to Germany as the land of learning, only to find that if learning was here, it was not for girls. The instruction she found in the Lüneburger Seminary was no better than she had had at home. But she went through it, and passed a governess's examination, as is required by law, to enable her to teach. She then came to Berlin. Her means were very limited. To support herself she gave lessons in English; in the evenings, in pursuance of her object, she studied Latin, Greek, mathematics, physics — all, in short, that had been left out of the instruction in schools. If Miss Archer's experience had not been of a kind to make her respond passionately to the desire for higher education, the idea that formed itself in her mind of establishing a college must have collapsed in view of its extreme difficulty. And, in truth, it is to be added to the lists of wonders that this obscure little governess, unbefriended in a great foreign city, should have accomplished such a task. She succeeded in having herself introduced from one patroness to another, upward in the social scale, till she got acquainted at last with the governess of the royal children, and later, through the countess, with the Crown Princess Victoria. Miss Archer's plans were matured, and she laid them before her Highness. In spite of the difference in their ranks, the two countrywomen understood each other. Going to lectures was a popular fashion, and, as no great scheme was practicable, it was determined to begin by adopting the current usage, only seeing that the courses of lectures were exhaustive and systematically adapted to the stage of the pupils' mental development.

When Miss Archer died, in 1882, the lyceum had attained a form somewhat different from its early compass, and essentially that which it now presents. The courses of lectures are retained, and included, during the winter semester of 1888-89, history of painting among the peoples of the Occident, Grecian plastic art, ancient art, furniture of houses in ancient and modern times — the last three courses being held in the royal museums face to face with the objects of art described. A second group of lectures included, besides the early themes of history and literature, a course in logic. And, finally, a third group grapples with the natural sciences — physics, geology, botany, and geography. The prospectus gives the whole number of lectures read as nearly twelve hundred and fifty for the year 1888-89, and the number of listeners to them as over nine hundred. The price per lecture is thirty cents.

To the lectures are added regular and exhaustive courses of instruction, and it was in these courses that Miss Archer introduced the study of the Latin tongue. They include — besides the modern languages, history, literature, and art — botany, physics, and ethnography. It is worthy of note, perhaps, that the teacher of the latter science as well as that of art history is a woman.

Pupils of the courses of instruction bind themselves

to regular attendance for three years, and to fulfil whatever exercises may be set.

In 1885 their number reached two hundred, many of whom were common-school teachers and governesses.

A union, as it is, of school and university, the lyceum in Berlin embodies the highest advance which reform of female education has made in Germany.

Countess v. Krockow.

Gettysburg and Waterloo.

As the battles of Waterloo and Gettysburg, from their size, bloodiness, and decisive importance, have so often provoked comparison, it may be of interest to readers to compare the force and loss of the combatants in each. I take the figures for Waterloo from the official reports as given by Dorsey Gardner in his "Quatre Bras, Ligny, and Waterloo"; and the figures for Gettysburg from "Battles and Leaders of the Civil War," and from Captain William F. Fox's "Regimental Losses in the American Civil War."

Unlike Waterloo, Gettysburg was almost purely a fight of infantry and artillery; the cavalry, which did good work during the campaign, played no part in the battle itself, the bulk of the horse of the two contending armies being at the time engaged in a subsidiary but entirely distinct fight of their own. The troops thus engaged should not be included in the actual fighting forces employed at Gettysburg itself, any more than Grouchy's French and the Prussians against whom they were pitted at Wavre can be included in the armies actually engaged at Waterloo. The exclusion will be made in both cases, and the comparison thereby rendered more easy.

Even making these exclusions it is impossible wholly to reconcile the various authorities; but the following figures must be nearly accurate. At Gettysburg there were present in action 80,000 to 85,000 Union troops, and of the Confederates some 65,000. At Waterloo there were 120,000 soldiers of the Allies under Wellington and Blücher, and 72,000 French under Napoleon; or, there were about 150,000 combatants at Gettysburg and about 190,000 at Waterloo. In each case the weaker army made the attack and was defeated. Lee did not have to face such heavy odds as Napoleon; but, whereas Napoleon's defeat was a rout in which he lost all his guns and saw his soldiers become a disorganized rabble, Lee drew off his army in good order, his cannon uncaptured, and the morale of his formidable soldiers unshaken. The defeated Confederates lost in killed and wounded 15,530, and in captured 7467, some of whom were likewise wounded, or 23,000 in all; the defeated French lost from 25,000 to 30,000 — probably nearer the latter number. The Confederates thus lost in killed and wounded at least 25 per cent. of their force, and yet they preserved their artillery and their organization; while the French suffered an even heavier proportional loss and were turned into a fleeing mob.

Comparing the victors, we find that the forces of the Allies at Waterloo consisted of several different kinds of troops, and together with the losses can best be presented in tabulated form. Wellington had under him 68,000 English, Germans, and Dutch-Belgians, while Blücher had 52,000 Prussians.

	Number.	Killed and wounded.	Missing.	Engaged.	Per cent. of killed and wounded to force
Wellington's British.....	23,991 ..	6,344	592	26+	
" Germans ..	25,886 ..	4,006	478	15+	
" Dutch-Bel- gians.....	17,784 ..	1,000	3,000		
Blücher's Prussians	51,944 ..	5,612	1,386	11-	
	119,605	16,962	5,456	..	15

The figures for the Dutch-Belgians, who behaved very badly, are mere estimates; probably the missing numbered more than 3000, and it is very unlikely that the total killed and wounded went as high as 1000.

At Gettysburg the Northerners lost 17,555 killed and wounded and 5,435 missing; in other words, they suffered an actually greater loss than the much larger army of Wellington and Blücher; relatively, it was half as great again, being something like twenty-two per cent. in killed and wounded alone. This gives some idea of the comparative obstinacy of the fighting.

But in each case the brunt of the battle fell unequally on different organizations. At Waterloo the English did the heaviest fighting and suffered the heaviest loss; and though at Gettysburg no troops behaved badly, as did the Dutch-Belgians, yet one or two of the regiments composed of foreigners certainly failed to distinguish themselves. Meade had seven infantry corps, one of which was largely held in reserve. The six that did the actual fighting may be grouped in pairs. The Second and Third numbered nominally 23,610 (probably there were in reality several hundred less than this), and lost in killed and wounded 7586, or thirty-two per cent., and 974 missing; so that these two corps, whose aggregate force was smaller than that of Wellington's British regiments at Waterloo, nevertheless suffered a considerably heavier loss, and therefore must have done bloodier, and in all probability more obstinate, fighting. The First and Eleventh Corps, who were very roughly handled the first day, make a much worse showing in the "missing" column, but their death rolls are evidences of how bravely they fought. They had in all 18,600 men, of whom 6092, or thirty-two per cent., were killed and wounded, and 3733 missing. The Fifth and Twelfth Corps, of in the aggregate 20,147 men, lost 2990, or fifteen per cent., killed and wounded, and 278 missing.

Thus of the six Union corps which did the fighting at Gettysburg four suffered a relatively much heavier loss in killed and wounded than Wellington's British at Waterloo, and the other two a relatively much heavier loss than Blücher's Prussians.

In making any comparison between the two battles, it must of course be remembered that one occupied but a single day and the other very nearly three; and it is hard to compare the severity of the strain of a long and very bloody, with that caused by a short, and only less bloody, battle.

Gettysburg consisted of a series of more or less completely isolated conflicts; but owing to the loose way in which the armies marched into action many of the troops that did the heaviest fighting were engaged

for but a portion of the time. The Second and Third Corps were probably not heavily engaged for a very much longer period than the British regiments at Waterloo.

Both were soldiers' rather than generals' battles. Both were waged with extraordinary courage and obstinacy and at a fearful cost of life. Waterloo was settled by a single desperate and exhausting struggle; Gettysburg took longer, was less decisive, and was relatively much more bloody. According to Wellington the chief feature of Waterloo was the "hard pounding"; and at Gettysburg the pounding—or, as Grant called it, the "hammering"—was even harder.

Theodore Roosevelt.

Ernest L. Major.

SOMETIME in 1884 those art students of New York whose lack of resources forbade any hope of their ever completing their studies in Paris, read with much interest that a fund had been placed in the hands of trustees, the increase of which was to be devoted to the maintenance in Paris for three years of a student from the art schools of New York. Later this interest was somewhat abated when it was learned that some years must elapse before the increment of this fund would yield an amount large enough for the purpose. The same year one of the large publishing firms of New York announced that an art competition for which it had offered a prize had failed to bring out any work which its judges deemed worthy, and that it would add the amount of this prize to the fund, and so make it possible to send a student abroad that year. The judges and trustees of this combined Hallgarten and Harper prize were to be three well-known artists—Augustus St. Gaudens, T. W. Dewing, and William M. Chase.

The successful competitor was Ernest L. Major, a pupil of the Art Students' League—whose picture, "Springtime," exhibited at the National Academy of Design in the fall exhibition of 1890, is printed on page 229 of this number of THE CENTURY. Mr. Major was born in Washington in 1864. He began the study of art under E. C. Messer at the Corcoran Art Gallery. In 1882 he entered the Art Students' League of New York, and was a pupil of William M. Chase until his good fortune sent him to Paris in 1884. There he came under the criticism of Boulanger and Jules Lefebvre at the Académie Julien. His first *envoi* to the salon was in 1885, a landscape. His second, in 1888, was an important figure-subject, "St. Geneviève," since exhibited in America in the cities of Chicago, New York, and Boston.

It is yet too soon to predict Mr. Major's future,—he is still three years on the youthful side of thirty,—he is a good draftsman, his composition and technique are above the average, and his color is pleasant and harmonious. He is possessed of a good deal of artistic individuality, evidenced by the fact that the pictures he has painted since his return to America show little of the styles or mannerisms of his masters.

William Lewis Fraser.

THE POINT OF VIEW.

Tommy, the painter's boy, decorates old Sweigler's gate.

Old Sweigler appears and wonders at Tommy's hilarity.

De Bugle on de Hill.

Parnassus by Rail.

BALLADE.

It is proposed to build a railway like that on the Rigi up the hill of the Muses.—*Foreign News.*

I DOAN' like de noise, er de marchin' ob de boys,—
An' I 'low I doan' s'pose I evah will,—
Er de trampin' ob de feet to de drum's wild beat,
Er de blowin' ob de bugle on de hill.
Hit minds me ob de day when Gabe marched away
An' ole missus stood beside de cabin do';
Sumpin' whispahed in my eah 'bout my little volunteah,
An' sade he nevah will come back no mo'.

I 's thinkin' mos' to-day ob how he marched away,
Wid de bright sun a-climbin' up de sky;
Marched out an' down de street to de drum's wild beat,
An' den how dey fotched 'im home to die.
Oh, de sad, moanful way missus bowed her head to pray,
When Gabe said, "Hit 's gittin' mighty still,
But I 'll rise an' jine de boys when I heah de cannon's
noise,
Er de soun' ob de bugle on de hill!"

Dar 's a spot mighty deah to dis ole darky heah,
Whar de sunshine am peekin' frough de palms.
Wid his hands 'pon his breast dar my soldier 's gone to
rest

Jes peacefully a-sleepin' in de calms.
An' de drum's wild beat er de tread ob marchin' feet
I know can't disturb 'im now until
De Lo'd gibs command, den I know he 'll rise an' stan'
At de blowin' ob de bugle on de hill.

Hit 'peahs as ef I seen de ole plantation green,
An' sometimes I reckon dat I heah
De reg'ment pass by, an I 'low I hear a cry
Like de moan ob my little volunteah,
An' de sobbin' on de day po' ole missus kneeled to pray.
An' sometimes when all aroun' 's still,
I kin heah de tread ob feet, to de drum's wild beat,
An' de soun' ob de bugle on de hill.

Bow Hackley.

No more the wishèd height to gain
We climb Parnassus, laboring,
Or where Castalian airs sustain
The murmur of the Muses' spring
Bestride the steed of daring wing
To mount aloft: we take the train
Straight for the summit with a swing,
The cog-wheel click of verses vain.

Once wound the way through grape and grain,
By laurel groves where song was king,
And birds had caught the liquid strain,
The murmur of the Muses' spring:
"Next stop Parnassus." "Ding-a-ding!"
We hear to-day; within our brain,
Instead of songs the Muses sing,
The cog-wheel click of verses vain.

We meet, instead of nymph or swain,
Men bored like us with traveling.
Winds wait to us no soft refrain,
The murmur of the Muses' spring:
The breeze might bear with it a sting,
Dash of the critic's cinder-rain.
Sash down! and sit we fashioning
The cog-wheel click of verses vain.

Envoy.

Prince Populace, your praise will bring
The murmur of the Muses' spring,
You like it not? Then don't disdain
The cog-wheel click of verses vain.

Marion M. Miller.

The March of Company A.

"FORWARD, march!" was the captain's word,
And the tramp of a hundred men was heard.
As they formed into line, in the morning gray,
Shoulder to shoulder went Company A.

Out of the shadow into the sun,
A hundred men that moved as one;
Out of the dawning into the day,
A glittering file went Company A.

Marching along to the rendezvous
By grassy meadows the road ran through,
By springing cornfields and orchards gay,
Forward, forward, went Company A.

And the pink and white of the apple trees,
Falling fast on the fitful breeze,
Scattered its dewy, scented spray
Straight in the faces of Company A.

A breath like a sigh ran through the ranks
Treading those odorless blossom-banks,
For the orchard hillsides far away,
The northern hillsides of Company A.

Forward, march! — and the dream was sped;
Out of the pine wood straight ahead
Clattered a troop of the Southern gray
Face to face with Company A.

Forth with a flash in the Southern sun
A hundred bayonets leaped like one.
Sudden drum-beat and bugle-play
Sounded the charge for Company A.

Halt! What is here? A slumbering child,
Roused by the blast of the bugle wild,
Between the ranks of the blue and gray,
Right in the path of Company A.

Nothing knowing of North or South,
Her dimpled finger within her mouth,
Her gathered apron with blossoms gay,
She stared at the guns of Company A.

Straightway set for a sign of truce
Whitely a handkerchief fluttered loose,
As under the steel of the Southern gray
Galloped the captain of Company A.

To his saddle-bow he swung the child,
With a kiss on the baby lips that smiled,
While the boys in blue and the boys in gray
Cheered for the captain of Company A.

Forth from the ranks of his halted men,
While the wild hurrahs rang out again,
The Southern leader spurred his way
To meet the captain of Company A.

Out of the arms that held her safe
He took with a smile the little waif.
A grip of the hand 'twixt blue and gray,
And back rode the captain of Company A.

Up there, in the distant cottage door,
A mother, clasping her child once more,
Shuddered at sight of the smoke-cloud gray
Shrouding the path of Company A.

A little later, and all was done —
The battle over, the victory won.
Nothing left of the pitiless fray
That swept the ranks of Company A.

Nothing left — save the bloody stain
Darkening the orchard's rosy rain.
Dead the chief of the Southern gray,
And dead the captain of Company A.

Fallen together the gray and blue,
Gone to the final rendezvous.
A grave to cover, a prayer to say,
And — Forward, march! went Company A.

Kate Putnam Osgood.

A Day in June.

SEE the meadows white with daisies,
Hear the Bob o' Lincoln's song,
While he passes through the grasses,
While he sings the whole day long.
Daisies, daisies, daisies white,
Meadows white with daisies;
Bob o', Bob o', Bob o' bright,
Singing sweet June's praises.

See the meadows white with clover,
Hear our robin redbreast's song.
While he flashes through the ashes,
While he sings the boughs among.
Clover, clover, clover white,
Meadows white with clover;
Robin, robin, now it's night,
Day of June is over.

Charles H. Truax.

Observations from the Farm.

THE cat is always friendly at milking-time.

NEVER inform the calf which way you wish to drive him.

YOU can draw more milk from a cow than you can pound out.

A ROOSTER makes a pretty fair watch-dog — if you understand rooster talk.

THE old dog says, "Don't whip me; you can teach the puppies so much easier."

AN old boundary fence is often very effective in keeping happiness off the place.

THE devil left more than his horns and hoof to the average cow.

ONCE in a while it really pays better to go a-fishing than it does to plow.

A COLT is like a schoolboy — willing to wrestle with you if he can get the best hold.

THE angleworms must hear you when you speak of going for trout. They are as scarce as loafers in time of a draft.

IT is a melancholy fact, but the water you have hoisted out of the well for the last ten years will not do for the stock this morning.

C. H. Crandall.

To My Only Child.

WHEN Charlie is not here
The day is long,
And haunted by a fear
Of sudden wrong.

Could woman be more dear?
More lone a song? —
"When Charlie is not here
The day is long."

Douglas Sladen.

No. 3.

A DAY AT LAGUERRE'S.

By the Author of "Colonel Carter of Cartersville," etc.

washing, her head bound with a red handkerchief.

If you are quick, the miniature river will open just before you round the curve, disclosing in the distance groups of willows, and a rickety foot-bridge perched up on poles to keep it dry. All this you see in a flash.

But you must stop at the old-fashioned station, within ten minutes of the Harlem River, cross the road, round an old garden bound with a fence and bursting with flowers, and so pass on through a bare field to the water's edge, before you catch sight of the cozy little houses lining the banks, with garden fences cutting into the water, arbors covered with tangled vines, and boats crossing back and forth.

I have a love for the out-of-the-way places of the earth when they bristle all over with

the quaint and the old and the odd, and are moldy with the picturesque. But here is an in-the-way place, all sunshine and shimmer, with never a fringe of mold upon it, and yet you lose your heart at a glance. It is as charming in its boat life as an old Holland canal; it is as delightful in its shore life as the Seine; and it is as picturesque and entrancing in its sylvan beauty as the most exquisite of English streams.

The thousands of work-a-day souls who pass this spot daily in their whirl out and in the great city may catch all these glimpses of shade and sunlight over the edges of their journals, and any one of them living near the city's center, with a stout pair of legs in his knickerbockers and the breath of the morning in his heart, can reach it afoot any day before breakfast; and yet not one in a hundred knows that this ideal nook exists.

Even this small percentage would be apt to tell of the delights of Devonshire and of the charm of the upper Thames, with its tall rushes and low-thatched houses and quaint bridges, as if the picturesque ended there; forgetting that right here at home there wanders many a stream with its breast all silver that the trees courtesy to as it sings through meadows waist-high in lush grass, as exquisite a picture as can be found this beautiful world over.

So, this being an old tramping-ground of mine, I have left the station with its noise and dust behind me this lovely morning in June, have stopped long enough to twist a bunch of sweet peas through the garden fence, and am standing on the bank waiting for some sign of life at Madame Laguerre's. I discover that there is no boat on my side of the stream. But that is of no moment. On the other side, within a biscuit's toss, so narrow is it, there

Copyright, 1891, by THE CENTURY CO. All rights reserved.

are two boats; and on the landing-wharf, which is only a few planks wide, supporting a tumbledown flight of steps leading to a vine-covered terrace above, rest the oars.

I lay my traps down on the bank and begin at the top of my voice:

"Madame Laguerre! Madame Laguerre! Send Lucette with the boat."

For a long time there is no response. A young girl drawing water a short distance below, hearing my cries, says she will come; and some children above, who know me, begin paddling over. I decline them all. Experience tells me it is better to wait for madame.

In a few minutes she pushes aside the leaves, peers through, and calls out:

"Ah! it is that horrible painter. Go away! I have nothing for you. You are hungry again that you come?"

"Very, madame. Where is Lucette?"

"Lucette! Lucette! It is always Lucette.

Madame, her mother, begins again:

"Do you know that it is Saturday that you come again to bother? Now it will be a filet, of course, with mushrooms and tomato salad; and there are no mushrooms, and no tomatoes, and nothing. You are horrible. Then, when I get it ready, you say you will come at three. 'Yes, madame; at three,'—mimicking me,—'sure, very sure.' But it is four, five, o'clock—and then everything is burned up waiting. Ah! I know you."

This goes on always, and has for years. Presently she softens, for she is the most tender-hearted of women, and would do anything in the world to please me.

"But, then, you will be tired, and of course you must have something. I remember now there is a chicken. How will the chicken do? Oh, the chicken it is lovely, *charmant*. And some pease—fresh. Monsieur picked them himself this morning. And some Roquefort,

BOAT LIFE ON THE BRONX.

Luc-e-t-t-e!" This in a shrill key. "It is the painter. Come quick."

I have known Lucette for years, even when she was a barefooted little tangle-hair, peeping at me with her great brown eyes from beneath her ragged straw hat. She wears high-heeled slippers now, and sometimes on Sundays dainty silk stockings, and her hair is braided down her back, little French Marguerite that she is, and her hat is never ragged any more, nor her hair tangled. Her eyes, though, are still the same velvety, half-drooping eyes, always opening and shutting and never still.

As she springs into the boat and pulls towards me I note how round and trim she is, and before we have landed at Madame Laguerre's feet I have counted up Lucette's birthdays,—those that I know myself,—and find to my surprise that she must be eighteen. We have always been the best of friends, Lucette and I, ever since she looked over my shoulder years ago and watched me dot in the outlines of her boat, with her dog Mustif sitting demurely in the bow.

with an olive. Ah! You leave it to me; but at three—no later—not one minute. *Sacré! Vous êtes le diable!*"

As we walk under the arbor and by the great trees, towards the cottage, Lucette following with the oars, I inquire after monsieur, and find that he is in the city, and very well and very busy, and will return at sundown. He has a shop of his own in the upper part where he makes *passe-partouts*. Here, at his home, madame maintains a simple restaurant for tramps like me.

These delightful people are old friends of mine, François Laguerre and his wife and their only child Lucette. They have lived here for nearly a quarter of a century. He is a straight, silver-haired old Frenchman of sixty, who left Paris, between two suns, nearly forty years ago, with a gendarme close at his heels, a red cockade under his coat, and an intense hatred in his heart for that "little nobody," Napoleon III. His wife is a few years his junior, short and stout, and thoroughly French down to the very

toes of her felt slippers. She is devoted to François and Lucette, the best of cooks, and, in spite of her scoldings, good nature itself.

As soon as she hears me calling there arise before her the visions of many delightful dinners prepared for me by her own hand and ready to the minute—all spoiled by my belated sketches. So she begins to scold before I am out of the boat, or in it, for that matter.

Across the fence next to Laguerre's lives a *confrère*, a brother exile, Monsieur Marmosette, who also has a shop in the city, where he carves fine ivories. Monsieur Marmosette has only one son. He too is named François, after his father's old friend. Farther down on both sides of the narrow stream front the cottages of other friends, all Frenchmen; and near the propped-up bridge an Italian who knew Garibaldi burrows in a low, slanting cabin, which is covered with vines. I remember a dish of *spaghetti* under those vines, and a flask of Chianti from its cellar, all cobwebs and plaited straw, that left a taste of Venice in my mouth for days.

As there is only the great bridge above, which helps the country road across the little stream, and the little foot-bridge below, and as there is no path or road,—all the houses fronting the water,—the Bronx here is really the only highway, and so everybody must needs keep a boat. This is why the stream is crowded in the warm afternoons with all sorts of water crafts loaded with whole families, even to the babies, taking the air, or crossing from bank to bank in their daily pursuits.

There is a quality which one never sees in nature until she has been rough-handled by man and has outlived the hard usage. It is the picturesque. In the deep recesses of the primeval forest, along the mountain-slope, and away up the tumbling brook, nature may be majestic, beautiful, and even sublime; but she is never picturesque. This quality comes only after the ax and the saw have let the sunlight into the dense tangle and have scattered the falling timber, or the round of the water-wheel has divided the rush of the brook. It is so here. Some hundred years ago, along this quiet, silvery stream were encamped the troops of old "Put," and, later, the estates of the Dykemans, Van Cortlandts, Beekmans, and others stretched on each side as far west as the Harlem River and as far north as Yonkers. The willows that now fringe these banks were saplings then; and they and the great butter-nuts were only spared because their arching limbs shaded the cattle knee-deep along the shelving banks.

Then came the long interval that succeeds that deadly conversion of the once sweet farming lands, redolent with clover, into that barren

waste—suburban property. The struggle that had lasted since the days when the pioneer's ax first rang through the stillness of the forest was nearly over; nature saw her chance, took courage, and began that regeneration which is exclusively her own. The weeds ran riot; tall grasses shot up into the sunlight, concealing the once well-trimmed banks; and great tangles of underbrush and alders made lusty efforts

THE LANDING.

to hide the traces of man's unceasing cruelty. Lastly came this little group of poor people from the Seine and the Marne and lent a helping hand, bringing with them something of their old life at home,—their boats, rude landings, patched-up water-stairs, fences, arbors, and vine-covered cottages,—unconsciously completing the picture and adding the one thing needful—a human touch. So nature, having outlived the wrongs of a hundred years, has here with busy fingers so woven a web of weed, moss, trailing vine, and low-branching tree that there is seen a newer and more entrancing quality in her beauty, which, for want of a better term, we call the picturesque.

But madame is calling that the big boat

must be bailed out; that if I am ever coming back to dinner it is absolutely necessary that I should go away. This boat is not of extraordinary size. It is called the big boat from the fact that it has one more seat than the one in which Lucette rowed me over; and not being much in use except on Sunday, is generally

race, and the other spreading itself softly around the roots of leaning willows, oozing through beds of water-plants, and creeping under masses of wild grapes and underbrush. Below this is a broad pasture fringed with another and larger growth of willows. Here the weeds are breast-high, and in early autumn they burst into pur-

THE DINING ROOM.

half-full of water. Lucette insists on doing the bailing. She has very often performed this service, and I have always considered it as included in the curious scrawl of a bill which madame gravely presents at the end of each of my days here, beginning in small printed type with "François Laguerre, Restaurant Français," and ending with, "Coffee 10 cents."

But this time I resist, remarking that she will hurt her hands and soil her shoes, and that it is all right as it is.

To this François the younger, who is leaning over the fence, agrees, telling Lucette to wait until he gets a pail.

Lucette catches his eye, colors a little, and says she will fetch it.

There is a break in the palings through which they both disappear, but I am half-way out on the stream, with my traps and umbrella on the seat in front and my coat and waistcoat tucked under the bow, before they return.

For half a mile down-stream there is barely a current. Then comes a break of a dozen yards just below the perched-up bridge, and the stream divides, one part rushing like a mill-

ple asters, and white immortelles, and golden-rod, and flaming sumac.

If a painter had a lifetime to spare, and loved this sort of material,—the willows, hillsides, and winding stream,—he would grow old and weary before he could paint it all; and yet no two of his compositions need be alike. I have tied my boat under these same willows for ten years back, and I have not yet exhausted one corner of this neglected pasture.

There may be those who go a-fishing and enjoy it. The arranging and selecting of flies, the joining of rods, the prospective comfort in high water-boots, the creel with the leather strap,—every crease in it a reminder of some day without care or fret,—all this may bring the flush to the cheek and the eager kindling of the eye, and a certain sort of rest and happiness may come with it; but—they have never gone a-sketching! Hauled up on the wet bank in the long grass is your boat, with the frayed end of the painter tied around some willow that offers a helping root. Within a stone's throw, under a great branching of gnarled trees, is a nook where the curious sun, peeping at you

through the interlaced leaves, will stencil Japanese shadows on your white umbrella. Then the trap is unstrapped, the stool opened, the easel put up, and you set your palette. The critical eye with which you look over your brush-case and the care with which you try each feather point upon your thumb-nail are but an index of your enjoyment.

Now you are ready. You loosen your cravat, hang your coat to some rustic peg in the creviced bark of the tree behind you, seize a bit of charcoal from your bag, sweep your eye around, and dash in a few guiding strokes. Above is a turquoise sky filled with crisp white clouds; behind you the great trunks of the many-branched willows; and away off, under the hot sun, the yellow-green of the wasted pasture, dotted with patches of rock and weeds, and hemmed in by the low hills that slope to the curving stream.

It is high noon. There is a stillness in the air that impresses you, broken only by the low murmur of the brook behind and the ceaseless song of the grasshopper among the weeds in front. A tired bumblebee hums past, rolls lazily over a clover blossom at your feet, and has his midday luncheon. Under the maples near the river's bend stands a group of horses, their heads touching. In the brook below are the patient cattle, with patches of sunlight gilding and bronzing their backs and sides. Every now and then a breath of cool air starts out from some shaded retreat, plays around your forehead, and passes on. All nature rests. It is her noontime.

But you work on: an enthusiasm has taken possession of you; the paints mix too slowly; you use your thumb, smearing and blending with a bit of rag—anything for the effect. One moment you are glued to your seat, your eye riveted on your canvas, the next, you are up and backing away, taking it in as a whole, then pouncing down upon it quickly, belaboring it with your brush. Soon the trees take shape; the sky forms become definite; the meadow lies flat and loses itself in the fringe of willows.

When all of this begins to grow upon your once blank canvas, and some lucky pat matches the exact tone of blue-gray haze or shimmer of leaf, or some accidental blending of color delights you with its truth, a tingling goes down your backbone, and a rush surges through your veins that stirs you as nothing else in your whole life will ever do. The reaction comes the next day when, in the cold light of your studio, you see how far short you have come and how crude and false is your best touch compared with the glory of the landscape in your mind and heart. But the thrill that it gave you will linger forever.

But I hear a voice behind me calling out:

"Monsieur, mama says that dinner will be ready in half an hour. Please do not be late."

It is Lucette. She and François have come down in the other boat—the one with the little seat. They have moved so noiselessly that I have not even heard them. The sketch is nearly finished; and so, remembering the good madame, and the Roquefort, and the olives, and the many times I have kept her waiting, I wash my brushes at once, throw my traps into the boat, and pull back through the winding turn, François taking the mill-race, and in the swiftest part springing to the bank and towing Lucette, who sits in the stern, her white skirts tucked around her dainty slippers.

"*Sacré!* He is here. *C'est merveilleux!* Why did you come?"

"Because you sent for me, madame, and I am hungry."

"*Mon Dieu!* He is hungry, and no chicken!"

It is true. The chicken was served that morning to another tramp for breakfast, and madame had forgotten all about it, and had ransacked the settlement for its mate. She was too honest a cook to chase another into the frying-pan.

But there was a filet with mushrooms, and a most surprising salad of chicory fresh from the garden, and the pease were certain, and the Roquefort and the olives beyond question. All this she tells me as I walk past the table covered with a snow-white cloth and spread under the grape-vines overlooking the stream, with the trees standing against the sky, their long shadows wrinkling down into the water.

I enter the summer kitchen built out into the garden, which also covers the old well, let down the bucket, and then, taking the clean crash towel from its hook, place the basin on the bench in the sunlight, and plunge my head into the cool water. Madame regards me curiously, her arms akimbo, re-hangs the towel, and asks:

"Well, what about the wine? The same?"

"Yes; but I will get it myself."

The cellar is underneath the larger house. Outside is an old-fashioned, sloping double door. These doors are always open, and a cool smell of damp straw flavored with vinegar from a leaky keg greets you as you descend into its recesses. On the hard earthen floor rest eight or ten great casks. The walls are lined with bottles large and small, loaded on shelves to which little white cards are attached giving the vintage and brand. In one corner, under the small window, you will find dozens of boxes of French delicacies—truffles, pease, mushrooms, *pâté de foie gras*, mustard, and the like, and behind them rows of olive oil and olives. I carefully draw out a bottle from the row on the last shelf nearest the corner, mount

the steps, and place it on the table. Madame examines the cork, and puts down the bottle, remarking :

"Château Lamonte, '62 ! Monsieur has told you."

There may be ways of dining more delicious than out in the open air under the vines in the cool of the afternoon, with Lucette, in her whitest of aprons, flitting about, and madame garnishing the dishes each in turn, and there may be better bottles of honest red wine to be found up and down this world of care than "Château Lamonte, '62," but I have not yet discovered them.

Lucette serves the coffee in a little cup, and

mustache are silver-white now, and his figure, erect and muscular, shows no signs of breaking down. If you met him on the boulevard you would look for the decoration on his lapel, remarking to yourself, "Some retired officer on half pay." If you met him at the railway station opposite you would say, "A French professor returning to his school."

Both of these surmises are partly wrong, and both partly right.

When it is quite dark he joins me under the leaves, bringing a second bottle of '62, a little better corked he thinks, and the talk drifts into his early life.

"What year was that, monsieur ?" I asked.

UNDER THE WILLOWS.

leaves the Roquefort and the cigarettes on the table just as the sun is sinking behind the hill skirting the railroad. While I am blowing rings through the grape leaves over my head a quick noise is heard across the stream. Lucette runs past me through the garden, picking up her oars as she goes.

"Où, mon père. I am coming."

It is monsieur from his day's work in the city.

"Who is here?" I hear him say as he mounts the terrace steps. "Oh, the painter — good !"

"Ah, mon ami. So you must see the willows once more. Have you not tired of them yet ?" Then, seating himself, "I hope madame has taken good care of you. What, the '62 ? Ah, I remember I told you."

Monsieur Laguerre has a history. One can see by the deep lines in his forehead and by the firm set of his eyes and mouth that it has been an eventful one. His hair and closely trimmed

"In 1849. I was a young fellow just grown. I had learned my trade in Rheims, and I had come down to Paris to make my bread. Two years later came the little affair of December 2. That 'nobody,' Louis, had dissolved the National Assembly and the Council of State, and had issued his address to the army. Paris was in a ferment. By the help of his soldiers and police he had silenced every voice in Paris except his own. He had suppressed all the journals, and locked up everybody who had opposed him. Victor Hugo was in exile, Louis Blanc in London, Changarnier and Cavaignac in prison. At the moment I was working in a little shop near the Porte St. Martin decorating lacquer-work. We workmen all belonged to a secret society which met nightly in a back room over a wine-shop near the Rue Royale. We had but one thought — how to upset the little devil at the Élysée. Among my comrades was a big fellow from my own

city, one Cambier. He was the leader. On the ground floor of the shop was built a huge oven where the lacquer was baked. At night this was made hot with charcoal and allowed to cool off in the morning ready for the finished work of the previous day. It was Cambier's duty to attend to this oven.

"One night just after all but he and two others had left the shop a strange man was discovered in a closet where the men kept their working-clothes. He was seized, brought to the light, and instantly recognized as a member of the secret police. What happened I do not know, but the next morning his body was found in the oven.

"At daylight the next morning I was aroused from my bed, and, looking up, saw Chapot, an inspector of police, standing over me. He had known me from a boy, and was a friend of my father's.

"François, there is trouble at the shop. A police agent has been murdered. Cambier is under arrest. I know what you have been doing, but I also know that in this you have had no hand. Here are one hundred francs. Leave Paris in an hour."

"I put the money in my pocket, tied my clothes in a bundle, and that night was on my way to Havre, and the next week set sail for here."

"And what became of Cambier?" I asked.

"I have never heard from that day to this, so I think they must have snuffed him out."

Then he drifted into his early life here—the weary tramping of the streets day after day, the half-starving result, the language and the people unknown. Suddenly, somewhere in the lower part of the city, he espied a card tacked outside of a window bearing this inscription, "Decorator wanted." A man inside was painting one of the old-fashioned iron tea-trays common in those days. Monsieur took off his hat, pointed to the card, then to himself, seized the brush, and before the man could protest had covered the bottom with morning-glories so pink and fresh that his troubles ended on the spot. The first week he earned

six dollars; but then this was to be paid at the end of it. For these six days he subsisted on one meal a day. This he ate at a restaurant where at night he washed dishes. When Saturday came, and the money was counted out in his hand, he thrust it into his pocket, left the shop, and sat down on a doorstep outside to think.

"And, *mon ami*, what did I do first?"

"Got something to eat?"

"Never. I paid for a bath, had my hair cut and my face shaved, bought a shirt and a collar, and then went back to the restaurant where I had washed dishes the night before, and the head waiter served me. After that it was easy; the next week it was ten dollars; then in a few years I had a place of my own; then came madame and Lucette—and here we are."

The twilight had faded into a velvet blue, sprinkled with stars. The lantern which madame had hung against the arbor shed a yellow light, throwing into clear relief the sharply cut features of monsieur. Up and down the silent stream drifted here and there a phantom boat, the gleam of its bow light sinking below and following like a firefly. From some came no sound but the muffled plash of the oars. From others floated stray bits of song and laughter. Far up the stream I heard the distant whistle of the down train.

"It is mine, monsieur. Will you cross with me, and bring back the boat?"

Monsieur unhooked the lantern, and I followed through the garden and down the terrace steps.

At the water's edge was a small bench holding two figures.

Monsieur turned his lantern, and the light fell upon the faces of Lucette and young François.

When the bow grated on the opposite bank I shook his hand, and said, in parting, pointing to the lovers:

"The same old story, monsieur?"

"Yes; and always new. You must come to the church."

F. Hopkinson Smith.

PROVENÇAL BULL-FIGHTS.

A TRY FOR THE COCARDE.

"POOH!" said the publisher, who had seen it, "it's nothing at all. They just turn the bull loose in the arena. Then they turn the populace loose. First the bull chases the populace, then the populace chases the bull. It's nothing much. Nobody gets hurt."

"Oh, eet vill be no grand t'ings; ze common people, ze paysuns, le — le — le — ze — ze — ze — ze people run after ze bull," said the landlady's daughter in the English as she spoke it.

Now when I hear that anything belongs only to the people, I know that it is always worth looking up and nearly always worth seeing. The walls of Arles were placarded with great red posters proclaiming that never, never before had the historic walls of the arena seen such beautiful bulls; never, never had the fair Arlésiennes and the brave Arlésiens heard such horrid bellowings, grasped the unequal *cocarde*, or red rosette, struggled with the fierce beasts, and won the magnificent prize and the applause of the people.

Regard, noble Arlésiens! The five pure-blooded Spanish bulls and one cow! 500 francs of prizes of *cocardes* await you, and of the utmost honesty of the administration does not all the world know the renown? Descend then into the glorious arena stained with the blood of Christian martyrs, renowned through all the ages, and to-day the home of the *courses* of your beautiful Provence! Struggle with the fierce bull of Spain! Win the prize of 500 francs, the approbation of your fellow-citizens, and the smile of fair ladies!

(Signed) THE DIRECTION.

Wait for the small bills!

I could scarcely wait. I consulted Daudet, Miss Preston, "Les Courses aux Taureaux," Mistral, the daily papers, and at last I found a book, "Une Course," devoted to the subject.

What did they say?

Daudet? Nothing, except that "every year we have the *ferrade*." Miss Preston? "There was a giddy little sham bull-fight going on in

the place, but we did not stay to see it." "Les Courses aux Taureaux"? It was a bald description of a bull-fight, transported to Paris and held in the Hippodrome, eminently proper and therefore characterless. Mistral? Because these things are the common things of his country he gives no description of them. All facts are unreliable when you want information. "Une Course," of which I believe I was the first person to buy a copy, and I hope I may be the last, was an account of a Spanish bull-fight and the three years it took a certain individual to see it, and all told in the most stupid manner. But now came the small bills.

Descend, descend, brave Arlésiens! But parents must guard their infants; on no account must the little ones strive against the pure bloods of Spain. Nevertheless, the direction does not hold itself accountable for the accidents. And it is most expressively forbidden to insult the bulls, or to throw small sticks and stones at them. *Especially important*: it is absolutely forbidden to attack the bulls with the big pins. But, gentlemen, all this is free — a free fight in effect. But all the same, while remembering the terrible horns, think of the value of the prize, unheard of until to-day, bestowed by a generous direction to excite your zeal and audacity. Come then, ladies and gentlemen, after you have witnessed the grand procession through the streets of your beautiful city, remembering 500 francs in prizes.

Gentlemen, one franc; ladies, 50 centimes; soldiers and children, 30 centimes.

This was Friday night. Saturday noon, in the middle of this beautiful placard, appeared a small, white, and therefore official, bill.

Arrested. Owing to the fact that the direction is determined, contrary to the desires of the mayor, to introduce, for the benefit of the city, the pure bloods of Spain into Arles, therefore Mr. Jack — in — Office, the mayor, prohibits, and the fight is interdicted.

"Aha! they make the war among themselves," said the people.

"Zey have me vell told zey refuse, I t'ink, to gif of ze place free to ze mayor, and he vill have to stop eet," said the landlady's daughter. "No, I do not t'ink eet vill go on."

This was serious. To be in Provence and not to see a bull-fight! But the walls were still placarded with notices that in another week there would be one at Nîmes. At Arles it did not come off, but the people were indifferent. They really did seem to think it no great thing.

The following Sunday I went over to Nîmes. Although it had been clear for over a month, when I started it was dark and threatening. Passing through Tarascon, I had a glimpse of a fight in progress, and I might have stopped and assisted in the town of Tartarin; but I wanted to see one in a real Roman amphitheater. By the time the train drew up at Nîmes it was pouring, and I went very sadly to the arena, only to find a notice that the fight had been

past two,—the fight had been announced for three,—one gate opened, a small boy and I rushed to secure tickets, and we entered over the stones worn into grooves by Roman senators, American tourists, and Provençal lovers of bull-fights. When we emerged where Cæsar may have stood, and the arena yawned vacant before us, there was a momentary gleam of sunlight between two huge rain-clouds.

But the arena was not long vacant. An Eng-

THE ARENA AT ARLES.

postponed. Two Sundays gone, and the summer going!

Clear all the week, the vintage in full swing, scenes like pictures all over the country, fights announced for Saint-Remy, Aigues-Mortes, Tarascon, but nothing in the arena; Sunday, however, pouring rain, and useless to think of going anywhere.

On Monday fights were announced for the following Sunday in Arles and Nîmes and in all the country round; Sunday morning it was raining in torrents; Sunday noon, drizzling; Sunday afternoon there were gleams of sunshine, interspersed with showers. But four weeks without a bull-fight—that was too much for both the people and the direction, and there was no sign of postponement. I went to a café opposite the arena at twelve. The gates were to open at one. At one it was still drizzling. At half-past it had stopped, and the direction looked out of its box-office. At a quarter of two it despatched a very brazen band in a covered wagon to parade the town. When, at half-

lishman and his wife whom I had seen at the hotel entered, and, looking down at a stage where a *café chantant* is given on the Sunday nights when there are no bull-fights, they asked me what was going on. "A bull-fight! Ah! let's go away before the horrid thing commences. Do you know when it begins? Ah! ten minutes; we have ample time to see the arena. Come, George." And they slipped rapidly round the huge circle, clambering over the broken seats, and when the band entered they disappeared. It is like this that the average tourist sees the character of a country. And they were the only foreigners, save the publisher, in Arles.

Though the sun did not come out, the rain held off, and the people, following the band, really began to crowd in. In ten or fifteen minutes the place was fairly filled. This arena was built to hold 26,000 people, so of course I do not mean that it was full. But two or three thousand are a big crowd to-day for a little town like Arles. The arena was gay with

A RUN FOR SHELTER.

the uniforms of soldiers and the costumes of the Arlésiennes, about which one never hears, but which are really very effective, with the little lace handkerchief round the neck, the bright-colored shawl falling low on the shoulders, the low-combed hair, and the long, streaming ribbons. The women's faces are charming.

While the band has been playing, the arena has been filling with the brave amateurs. I am afraid, had Constantine been able to come down from his palace in a back alley, that he would have called the amateurs, who were now taking off their shoes and putting on slippers, coming out of their blouses and giving their hats to friends, the *ignobile vulgus*. Although there were one or two very superior young men in *toreador* hats, bright red jackets, white trousers, and gorgeous Spanish leather slippers, which they were kicking off all the time, running about in their stocking-feet, the majority had no particular costume except that of the country. Despite the direction, one small boy did leap into the arena. He was pursued by the police force of Arles, caught in the center, and well spanked, amidst the applause of the audience.

The band stopped playing. A trumpeter advanced and blew a blast, and a mighty yell rose from the people. Instead of the shout in honor of heroic action which might have

been expected, there came the howl: "Ye amateurs! Aha! Maria et Pierre la bas! Turn in the bull; go it, Arlésiens! Hé! hé! for the man in the white trousers! Look at gendarmes! Zou! it's only a lamb! Hé! taureau! Allons, amateurs!" A gate opened, and into the middle of the arena there almost flew a huge, black bull. "My God! isn't he ugly! Does n't he look peart!" the audience shouted.

He saw the amateurs; they saw him; they really flew. If you want to see one hundred men vault a six-foot fence at the same moment, go to Arles. Full tilt he circled round the whole arena, the brave amateurs tumbling back away from him as he passed, waving handkerchiefs at him; some, braver, sitting atop of the six-foot wooden fence which runs just outside the old Roman stone barrier, leaving a passage between. The bull stopped in the center of the arena, bellowing and snorting, kicking the sand about with his feet, and tossing his head. He was very mad, and apparently did not know what he was about. But he is now getting his head again. The bravest amateurs cautiously crawl over the fence as far as possible from him, and as directly at his back as they can; but he keeps wheeling round and round. One gentleman with an umbrella comes in, but at a glance from the bull he drops his umbrella and falls

CLEARING THE RING.

headlong over the barrier. Two or three men, however, have climbed over from different corners, and the bull does not know which one to make for first. He tosses his head, shaking the little red rosette fastened by wires between his horns, which is worth fifty francs to him who can pull it off. But it must be taken while the bull is running, and not only is it securely fastened, but the bull has two enormous horns with which to defend it, and the men have not even big pins.

In a minute one of the light, active young fellows who has kicked off his slippers starts running towards the bull from behind. But the bull sees him before he has gone twenty yards,

jacket, makes straight for him. The man leaves for the nearest barrier, which is between five and six feet high, and over it with one hand he lightly vaults; and the bull, seeing that he cannot stop himself without breaking his horns against it, goes over it too. This same afternoon I saw three bulls take the barrier like horses. The minute the bull lands in the passage the amateurs take to the arena, leaving their hats, shoes, coats, or any other loose possessions, and with these the bull amuses himself, scattering them among the audience, who yell with delight, while he tears madly round until he comes to a gate, which is opened for him, into the arena. At the same moment the

"COME ON, TAUREAU."

wheels around, and makes straight for him with his head down. At the same moment two or three other men run towards him from different directions, yelling with all their might, and again he pauses for a moment, but then, almost immediately, goes directly for one in particular. The men all rush across in front of him like boys playing cross-tag; the man he is after swerves a little to one side, and, as the bull lowers his head to toss him, stops dead, puts his hand rapidly down with a backward movement, and snatches at the rosette, no bigger than a half-penny, while the bull, carried by his momentum, goes by him for a few yards. He turns at once, and, as the man has on a red

amateurs are all forced back into the passage. If the gate is not opened in time, the bull, as I saw him do, jumps back again.

"Ils sont sauvages, ces choses là," says the Parisian.

"Vous avez raison, Mosseu," replies the Provençal.

By this time the bull and the people have been chasing each other about for some fifteen minutes. No one is the worse for it, though all are a little tired. The bull does not try to jump any more. He has got his head, and he knows what he is about, and is too well trained to try to knock down a thick plank wall with his horns. Again the trumpet sounds. A great

shout goes up from the whole amphitheater: "You could n't get it! You could n't get it! Bully for the bull!" A gate opens. A jingling cow-bell sounds, and a merry cow comes galloping in. The cow trots, in the graceful manner peculiar to that beast, up to the bull.

AFTER THE FIGHT.

She lows at him. He bellows, and becomes gentle as a sucking dove. They calmly run round the ring, and then walk out side by side, while the people applaud. The first fight is over.

Recently I saw in the "Animal World," the journal of the Society for the Prevention of Cruelty to Animals, a tirade about the cruelty of these fights. There could not be a more mistaken idea. There is no cruelty about the Provençal fight. It is true that the bulls are excited in a way which I shall presently describe. But so long as tame stags are kept at Windsor to be let out of a box and chased into coal cellars and the back yards of Windsor and Staines, and harried to death in the middle of a pond in the park; so long as the nobility of England rear pheasants, tamer than chickens, and shoot them in a much more brutal manner than any pigeon match, and call it sport; so long as the London city magnates go hunting deer in Epping Forest; so long as the gentry start off, accompanied by all the dogs and Scotch serfs they can find, with a basket of champagne and a jug of whisky, and endeavor to shoot deer driven under their very nose, sometimes killing one another; so long as intelligent statesmen hunt hares and rabbits, and call it coursing, and are only willing to go into what they call sport when they can pursue something much weaker than themselves and

defenseless — just so long one cannot but feel that there is a good deal more courage required in those bull fights, where the bull has every advantage, than in British sport, which means certain death to the hunted and no harm to the sportsman. But let us return to our bulls.

The bulls are all kept in the old wild-beast cages. Another has been decorated with the cocarde, this time worth one hundred francs — no small prize to a soldier or a peasant. He has been led through a series of cages, one beyond the other, and each a little larger and a little wider than himself. On each side of these cages, which have no tops and are connected by sliding doors, sit two men armed with ten-foot tridents having very blunt prongs at the end. These, as they talk about what they ate for dinner last night, or the prospects of the vintage, or any of the other topics about which the French or the Italian peasant is forever talking, they calmly drop into the bull's back. Although the prongs are blunt and do not run into him or in any way injure him, they come down with sufficient force to make him savage, and he resents this treatment by jumping and kicking and bellowing. When he has been sufficiently maddened in the first box, the door is pulled aside, and he pushes forward just six feet. By the time the last door of the series of boxes is opened and he reaches the arena, although he is not hurt, he is perfectly furious. With a wild bellow and with head down he blindly makes for the group of amateurs. They scatter, all but one poor man who, paralyzed with fear, stands shaking alone in the middle of the arena. He trembles and seems almost ready to drop. There is a yell from the people. The bull strikes him, tossing him into the air, and he descends a shower of old newspapers and brightly colored rags, while the stick which held the scarecrow together rattles against the bull's horns.

Mad? Don't mention it! He only gives up those rags when he sees two amateurs who have almost snatched his cocarde. They start to cross each other, there is a crash of colliding heads, and over they tumble in the dust. The bull, with a bellow of triumph, dances and comes down, digging his horns into the dirt, and just removing the entire seat of one gentleman's breeches. The audience shout with glee and disappointment. The bull turns a somersault. The three squirm round on the ground together. The men get up, and the rate at which they leave the arena is remarkable. For the rest of the fifteen minutes the bull is literally monarch of all he surveys, and no one comes near him. Handkerchiefs, hats, and blouses are waved to him from over the barrier, but he takes no notice, and the people do not think it worth their while to come to him. They know that a bull that has been trained and kept in the

best condition simply for goring people is not to be trifled with. When the trumpet again sounds, and the old cow again enters, the bull departs, almost bowing right and left, for he is conscious that he deserves the "Bravo, tau-reau! Bravo, Rosau!"—for he is known by his name—which comes to him from every side.

As another enters, the band and the audience are just in the middle of the chorus of the Boulanger March, and as the glory of the *brave Général* resounds and rolls round the arena, the bull, who is evidently of the same mind as Clémenceau, endeavors to get at that band, which is some twenty feet above his head, with two barriers between. A man all in white, except for a fisherman's red cap, comes dancing like a jumping-jack out into the middle of the arena. This is too much for any bull. The man leaves, but the bull is coming too fast for the man to vault the barrier, and he nimbly jumps up on the stage, five feet above the ground, which surrounds the boxes. On this stage stands the mayor of Arles talking to the direction; there are also the *sous-préfet*, in his official sash, much too superior to talk to any one, the brigadier of gendarmes, in *chapeau* and epaulets and sword, a choice collection of the gentlemen of Arles, an American illustrator, and the two men with tridents. With one thrust the bull's head and horns go clear through the flimsy proscenium boards in front of the stage; with a bound he lands on top of it. But before he is fairly landed the stage is empty. The *sous-préfet* flies into the box from which the bull was liberated; the mayor, brigadier, and the direction disappear with little grace but much speed over the barrier at the back. The men with tridents drop them, and make for the arena. I have not much idea how I got there, but I found myself at the other end of the amphitheater in time to see the bull demolishing two or three scenic towns. He looked around, saw a Roman triumphal arch, proved to his own satisfaction that it was made only of pasteboard, and then slowly and

lumberingly jumped down in disgust, bellowed a few times, asking any one to come on who wished to, and, as no one answered the challenge, proceeded to make a light lunch off some hay which had fallen from somewhere. This he found so much more attractive than fighting that he refused to do anything else, and had to be led away by his attendant cow.

In ordinary accounts of bull-fights you hear of the sickening sight of disemboweled horses, and bleeding men, and butchered bulls. This went on with ever-changing fun, shouts, and laughter, but no one was either hurt or got the cocardes. Whoever thinks it is merely a joke to go down into one of these enormous arenas and snatch the tiny rosette from between the horns of a beast who has been trained all his life to keep him from getting it, will find that he has a large piece of work cut out for him. For fun the Provençal bull-fight beats a pantomime. For danger and expertness it is far ahead of anything I ever saw. As it goes on every Sunday in the summertime all over Provence, Frenchmen regard it as too common an affair to be worth description. Foreigners, never going there at the proper season,—the summer and autumn,—never or scarcely ever see it. And even down in La Camargue, on the banks of the Rhone, in little towns, all of which save Aigues-Mortes are unknown, the courses, like base-ball matches, are held every fête-day. They are the sport of the people, and have much more character in the small towns.

I went to several of these, and, though I do not doubt that foreigners may have attended them, I never saw one present. The bulls come into the towns in a drove, for they are perfectly quiet so long as they are kept together, guarded by two or three of the fine herdsmen of La Camargue, wrapped in their large cloaks, and carrying tridents. The peasants, who have come to the fête in their enormous country carts, form these into a ring, side by side, filling up the spaces between the wheels with hurdles,

ARENA AT AIGUES-MORTES.

old planks, wine casks, or anything that comes handy. They put two or three rows of chairs on top, and, behind these, with piles of wine casks topped with chairs they make an amphitheater, which is soon crowded with people. Everything is perfectly free, and the authorities offer one or two hundred francs in prizes, which, however, I never saw any one take. The bulls are as fierce as those at Arles, but the people are much more active than the Arlésiens, and the ring is much smaller. Instead of over a safety-barrier, the men have to jump into the carts, which have no sides and are almost breast-high; and a clean jump must be made, because a clumsy climb with the assistance of a pair of sharp horns would not be very pleasant. The principal delight of the young peasants is to entice the bull in the direction of a party of pretty girls, and to spring among them, upsetting chairs, girls, and themselves in a laughing, rolling heap at the bottom of the cart, apparently to their own great delight, and certainly to that of all the rest of the ring. Peaches, grapes, and new

wine circulate all round; I never knew any one to be hurt, and the whole place is filled with the smell of wine from the wine-presses with which the streets of all the villages are lined.

At the end of the course all the bulls are let loose; a curious fact about these beasts, being that, while one bull by himself is a most savage animal, if two or three are put together they become as quiet as cows, and make a break for the open country, followed by the population of the village, shouting and screaming. After them come their keepers loaded down with huge baskets of grapes and new figs that the people have given them.

In the evening the whole population adjourns to the *place*: the town band plays in the center; the heroes over their sugar and water discuss their own bravery; the harvest moon of Provence hangs high in the sky; the scent of new wine is over everything; the song of the mosquito grows louder and louder, and before this untiring foe the Provençal at last beats a retreat.

Joseph Pennell.

AT THE CONCERT AFTER THE FIGHT.

RESTRAINT.

WOULD I might crown all joy and melody
 With one triumphant, flowering wreath of song,
 Woven with art and flung life's path along,
 To thrill a listening world with ecstasy.
 Would I might speak the thoughts that, like the sea
 Filling its hollow caves with murmurs long,
 Arise unbidden, musical, and strong —
 Flooding my stammering speech resistlessly.
 Would I might *act* and *live*, not dream and die;
 Move with the moving stars; glow with the sun;
 Fulfil my being's laws harmoniously:
 But ever are my noblest powers undone.
 An angel bars with flaming sword the gate
 Of life, and, at his stern command, I wait.

Margaret Crosby.

MR. CUTTING, THE NIGHT EDITOR.

WHEN Mr. Cutting, the night editor, sat at his desk you felt as if you were looking at a finely adjusted piece of mechanism. After he had seated himself his slender fingers flashed across manuscript pages for hours with scarcely a pause. They were wonderful in their swiftness and accuracy. With one stroke they swept through a page and left it nothing but a mass of blue marks, with here and there a word joined to some other by a line of blue where the energetic pencil had traced a dashing course. Mr. Cutting's nose was delicately cut and his smooth-shaven face was pale. His mouth was what many people called a good one. The lips were thin and sensitively fashioned, but they were too straight. A mocking smile seemed to lurk around the corners of them. When he was working rapidly his lips were pressed together and looked hard.

Mr. Cutting was considered to have the greatest capacity for work of all the men on "The Organ." When he stood up the energy and nervousness in his slight frame seemed to hang on a balance. It was like being near a powerful electric current. Although there was no contact, imagination was the swift conductor. When he became animated in conversation his words were like a shower of fire. His gray eyes brightened to a flash, and his quick hand had a way of running impatiently through his brown hair. Then, with his mobile face sparkling with life, he seemed young. It was generally believed, therefore, that nothing could tire him. But often after his night's work fine lines were traced beneath his eyes. His face looked haggard and whiter, and he was old. When the light fell on his hair as he leaned back to rest for a moment there was a shimmer there which comes from gray threads.

In the days of which this is written he was an almost intolerable cynic. The curve of his lip was a sneer, and his mocking manner frequently offended strangers. When he spoke quietly to young reporters they felt uneasy and were glad to get away from him. His nervousness disturbed the repose of others. One thing which always caused him to spring impatiently from his chair was the failure of a listener to catch his meaning, and he talked very rapidly. He disliked to repeat what he had once said. "The Organ," he would say with a sarcastic

smile to young offenders, "does not pay me to be a talking-machine." There was something in his voice when he spoke in this way which was almost brutal.

Mr. Cutting's disposition was certainly not lovable, and yet he never ceased to gain and to hold the admiration and respect of the younger members of the staff. His shafts were keen, and their hot sting seldom missed their mark; but the fire of his tremendous force gave him a magnetism which attracted even at the point that it repulsed. Perhaps this was why the members of the staff seemed to consider it his right to speak to them sharply or satirically. Afterward they told of it with a certain kind of pride.

A strange feature of Mr. Cutting's impetuous tyranny was that when his manner changed every one felt a melancholy disappointment — as if he had been cheated.

"But only wait," said the marine reporter, assuming the wise look of a veteran, "until he does let out. The presses will break down."

No one in the office quite understood what spirit of peace settled over Cutting so unexpectedly. It came like a rainbow under a frowning sky. It was heralded by scenes of confusion and uproar the like of which had never before, since Mr. Cutting became night editor, been known in the disciplined and smoothly running office of "The Organ."

It was on the night of a big railroad disaster that the transformation began.

"Mr. Cutting is a chained fiend," said the military reporter, sweetly, as he lighted a cigarette. "His matter is n't coming in fast enough. He has scorched the life out of Scott and is thrashing the correspondents over the wires. We shall have a fine paper in the morning. Mr. Cutting is on his mettle."

Mr. Scott was the assistant night editor. He had asked some irritating question of Cutting, and the night editor, throwing up his head, which was bending over a stack of telegraphic matter, curtly asked Mr. Scott if Mr. Scott thought that this was a newspaper kindergarten.

This was extremely unjust, for Scott seldom made a mistake, and the poor fellow went back to his desk with a burning face. In his confusion he tumbled against his chair, which carried him to the floor with a crash. Cutting leaped to his feet with a nervous agony on his face. The telegraphic editors, wheeling around

towards Scott's corner, did not see the white anger of Cutting. Scott, with his fiery face and his six feet of length sprawling on the floor, looked so foolish that every one laughed — every one but Cutting, who stood straight and rigid.

"What's the matter, Jack?" some one said, laughingly. "Did an idea strike you?"

There was a general good-natured shout at this, but it was suddenly checked by the metallic voice of Cutting.

"No," he said, with quiet but stinging sarcasm; "Mr. Scott saw an idea coming, and was so startled that he dodged it."

Every one was silent. Cutting sat down again, pulling his chair up quickly, and plunged into his work. Scott was trembling with indignation when he picked himself up from the floor.

"Cutting has been my best friend here," he said in an undertone, as he doggedly sharpened his pencil, "but I will not take gratuitous insults from him or the editor-in-chief."

It was shortly after this unfortunate outburst that Bolton, the cable editor, looking across the room, saw a child standing behind Cutting's chair. She was a queer-looking elf. On her shoulders was a boy's jacket, and in her hand she held a woolen cap. Her large eyes were dark and untamed. It was easy to see that she was bold, but her strange surroundings made her timid. Her lustrous eyes were fixed on Cutting as she waited for an opportunity to speak to him.

Bolton, good-natured and generous, waved his blue pencil frantically to warn the child off dangerous ground, but she saw his actions with indifference. Bolton got up noiselessly. The child, apprehensive of interference, touched Cutting on the arm. Her fluttering fingers were so light that he did not feel their appeal. She looked around quickly and caught Bolton's eye. His round face was drawn into a forced expression of coaxing. He motioned to her to come away, but she shook her little head firmly. He tiptoed towards her, holding up one big finger, and on his lips was an unspoken "Hush!" As he approached she defiantly backed away from him. Bolton's arms were now flying wildly. The look which her big eyes shot at him was strangely wild, like that of a young panther. In her backward movement she was making straight for Cutting, and the blundering rescuer did not have wits enough to stop his advance. On the contrary, as he saw her backing into Cutting he stepped forward eagerly to catch her by the arms, and she, springing back with a little cry of rage, came full against Cutting, sending his green eye-shade clattering to the floor. Bolton gasped for breath.

"It's my fault, Mr. Cutting," he said stu-

pily. "Don't give the child a tongue-lashing," he added, forgetting in his bewilderment how his words might anger Cutting. "She's frightened to death now."

But was she frightened? Child of the streets, she shrank away and hugged the wall, but in her dark eyes was the look of a wild animal that had been driven to fight. Their light was intense and fierce. They flashed defiance. They were angry, savage, and beautiful. Their flashing only dimmed when she looked at the white-faced man standing above her.

Cutting was silent, too amazed to speak. Angry tears leaped into the girl's eyes, but she would not cry.

"Go away!" she said vehemently to Bolton, who still stood silent, looking foolish.

"Come, come," said Cutting, peevishly, but not harshly; "little girls are n't allowed in here. No one is who doesn't belong here." He faced the others.

"How did she get here?" he asked sharply. Bolton began to stammer in a sheepish way.

"Some one must have let her in," said Cutting, flashing a keen glance over the room.

"I came in myself," said the child, passionately. Her eyes were blazing.

Cutting looked perplexed.

"Mr. Scott," he said shortly, "please see what the child wants, and then show her the way out. And pray," he continued, with a touch of appeal in his dry voice, "let's have no more of these annoying disturbances. This is a newspaper-office, not a bear-garden. Please try to remember that in future, Mr. Bolton," he added, his tones lingering in delicate irony over the "please."

It was at this point that the night city editor hurriedly entered the room, a sheet of copy in his hand. He stood stock still when he saw the situation. Every man in the room was on his feet. Mr. Cutting was white as usual and severe. The child still leaned against the wall. Her head was thrown up high, and her lips were quivering. The hot blood of indignation and childish anger was in her face, and her thin nostrils were white and rebellious.

"Well!" gasped the night city editor in surprise. "What is all this?" But a passionate outburst from the child stopped him.

"I came to see you," she said, turning her big eyes on Cutting, her voice tremulous and vibrating. "I don't want to see Mr.—Mr. Scott. I won't see him!" she cried in a choked voice.

She looked at Cutting with the scorn of a barbarian child queen.

"My mother told me to come to you when she was dead." Her young voice melted into a sudden sweetness. The softness of the tones were lost on the night city editor, for as he

looked at Cutting his mocking lips made a suggestive sound, half-laughing, half-whistling. Cutting's pale face flushed to the roots of his hair. There was a slight tremble in his words when he spoke. It was like a clear-sounding chord jarred by a harsh and vulgar voice.

"Mr. Seaver," he said, "I am too busy to see you now about that matter"; and his eye fell on the sheet in Seaver's hands. The night city editor left the room. The telegraph editors returned to their desks.

"And now," said Cutting, in so gentle and changed a voice that the child looked into his face with startled, wide-open eyes, "what is it you came to say to me?" His smile was friendly and encouraging.

"I'm hungry," said the child, turning her wonderful orbs on him. They were melting now.

Cutting shivered.

"Great God!" he said, a pang in his tones. "Why did n't you say so before?"

He had never been hungry in his life. He had fought his way through college on nothing. He had sat far into the night munching crackers and apples while he studied. But he had never been hungry. He leaned back in his chair, and his lids drooped. There was a slight fever tinge to them. They showed the strain of late hours and lack of sleep. They told of nervous wakefulness and the physical sacrifices which highly strung natures demand; but he had never been hungry. He had never before seen a hungry person to know him.

"I am hungry," said the child in his ear. He was on his feet, the sensitive lines of his face in a tremor. The telegraph matter from the scene of the railroad disaster had been heaping up before him. There were many pages of it. He looked around the room. The telegraph editors were sitting idly or drumming fretfully on their desks with their pencils. They were waiting.

"Mr. Scott," said Mr. Cutting, "will you kindly take charge of my desk and start these stories? I am going out for a few minutes."

There was a rustle of surprise in the room. Mr. Cutting had never been known to leave his desk before two o'clock.

"Certainly," said Mr. Scott, rising quickly with that energy which in newspaper offices is infused into the blood of men who are in authority.

"Come," said Cutting to the child; "we will go out."

In the dingy little restaurant where, for the lack of some better place, newspaper men got their late suppers, he sat and gazed wonderingly at the child as she ate. Her features began to soften, and when she finally looked at him over a large glass of milk, there

was a melancholy softness in her superb eyes which thrilled him. But behind the dark calm there was the reflection of slumbering fire, the quieted flame of hot blood and a flowing, tempestuous heart. He smiled sadly, and she gave him a look of childish faith, adoration, and submission. To him her fierceness was forever tamed.

"Now," he said, "who was your mother?" "She sold your papers," answered the child, lowly. "Don't you know?—in the afternoon."

Cutting did not even remember the woman.

"And you gave me pennies," she added proudly, as if to accept alms from him were a sweet honor.

"Oh, yes," said Cutting, faintly; but he did not remember. "And your name is—?"

"Louie; of course you did n't know my name."

"Louie—that's Louise; but Louise what?"

"Not Louise—Louie and only Louie; that's all. It's pretty, is n't it?" she queried suddenly, with a shade of anxiety in her voice.

"Yes; it is pretty," he answered, smiling at her eagerness. And Louie it remained.

He took her back to the office with him. She had no place to go to. She was quiet in a chair for a while, but afterward climbed up to a vacant desk and sat there dangling her sorry-looking shoes, which were not mates. Her great eyes were always turned towards Cutting. When he spoke sharply to any one a look of alarm would touch them with a fleeting swiftness. But she gazed at him always, unabashed before the others.

When Cutting prepared to ascend to the composing-room, when the time for going to press was near, she slid off her desk quietly; but as he started upstairs, leaving her unnoticed, she stopped. Her dark eyes wandered around the room, and she climbed back, gazing calmly at the door where he had disappeared.

Bolton, shortly afterward rushing down-stairs after consulting Cutting, stopped to say something pleasant to her.

"Go away!" she cried angrily, kicking her little heels impatiently together. As she again turned her eyes towards the door the fierce light in them died.

When Cutting returned to his desk to lock it after the paper was "out" he always gave a half sigh of weary relief, as if his nerve-tension then lessened. On this night the audible breath had not left his lips when there was a gentle sigh behind him. He turned quickly, and, seeing the child gazing at him intently, gave a little laugh. A smile broke over her face and flashed to her eyes and mouth and the dimples in her cheek. She was a beautiful child, with her mysterious eyes and proud mouth and unconquered hair.

Cutting had been night editor of "The Or-

gan" for six years. In that time, after locking his desk, dropping his keys into his pocket, and nervously thrusting himself into his coat, he had never failed to turn and to say, "Good-night, gentlemen." After that he would turn to see if he had left anything on his desk. Satisfied on this point, he walked hurriedly out the door, and the last heard of him was his quick, incisive step in the corridor. On this night, however, this monotonous program was varied. He locked his desk and then unlocked it. Again he locked it, the key clicking sharply as he turned it.

"Well," he said, turning to Louie, "are you ready?" His tone was a little brusque, and the child dropped to the floor from the desk like a shot.

"Yes, sir," she said breathlessly.

"Oh, Mr. Cutting," said Scott, looking up from some late matter which he was running over, "may I speak to you?"

"With pleasure," answered Cutting, pleasantly.

"I wanted to say," Scott jerked out uneasily, looking shamefaced, "that if you have no objection I should like to offer my resignation."

Cutting's brows came together sharply.

"What's the trouble?" he asked abruptly. Scott flushed and was silent.

"What's the trouble?" Cutting repeated. "See here, Scott," he said, putting his stick roughly on a table, "don't be rash."

Scott moved uneasily and looked as if he wished he were out of it. Cutting waited for an answer.

"When would you like to go?" he asked.

"As soon as convenient."

"Very well," said Cutting, coldly; but there was a hostile fire in his eye. "I will speak to Mr. Jackson about it to-morrow. Meanwhile send him your resignation. Mr. Freeling, will you kindly report early to-morrow?" And in this way Mr. Freeling became the assistant night editor.

Louie was trembling when Cutting turned to her. His voice frightened her. But she slipped her hand into his and silently walked down the stairs with him.

It was often said afterward that that night marked the death of the Cutting spirit. Scott received little sympathy. Yet it was admitted that he had some right on his side. But Cutting had helped him a great deal. He had picked him out and thrown his influence in Scott's favor to advance him again and again. Cutting had been harsh with every one. Indeed, if he ignored a man so much as not to spur him that was considered a mark of disfavor.

On the night on which Scott offered his res-

ignation Cutting startled his housekeeper by appearing at home with the child.

"Mary," he said shortly when she came forth frightened at the possibility of a dozen evils, "Louie is going to stay with us until she gets ready to go away to school. Put her to bed, please." And he went to his room.

But Louie was not so easily managed. The housekeeper was sleepy, and it made her cross to find that she had been awakened at three o'clock in the morning to look after a ragged street girl; and the child did not like her.

"Come to bed," said Mrs. Fisher, bluntly.

The young barbarian placed her arms behind her, and, backing against a bookcase, defied, with snapping eyes, the housekeeper to touch her. If there was one person in the world who struck inexpressible awe into the soul of the housekeeper it was the night editor of "The Organ." When this dilemma was before her, therefore, she became terrified, and said in a frightened whisper, "S—sh, child! don't disturb Mr. Cutting."

At this the young panther became a kitten, and held her breath lest Mr. Cutting might be awakened. She allowed herself to be undressed and put to bed, and although she did not close her strange eyes for hours, she lay silent and motionless, scarcely breathing.

Henceforth the change in Mr. Cutting's demeanor became more and more inexplicable to the staff of "The Organ." No one knew that he had adopted a child, but he was seen to go up to a new man and to spend fifteen minutes in explaining to him his faults. This sent a thrill through the various rooms, and the new reporter was at once hoisted to the chair of popularity.

Mr. Freeling, the new assistant night editor, had come to the office shaking with a violent trepidation on the night of his promotion. He went home with a perplexed feeling of doubt as to his own judgment. Mr. Cutting had been most considerate and kind.

If the truth had only been known the staff of "The Organ" would have been plunged into still deeper amazement. The truth of the matter was that a barbarian, civilized, polished, and refined, had been conquered by an untamed savage. There was something that linked in closest sympathy the two unbending spirits. His was a nature wild, passionate, and deep, filled with intensity, but governed by cold ferocity. Discipline had placed an iron check on him. The child had all his depth of fire and passion, strength and wild impetuosity, but she could brook no open restraint. When he spoke as his training had taught him to speak she was struck with a deadly fear. She closed within herself and was powerless to act as her inspiration urged her. She became stubborn

from paralysis of volition. But when he stifled his disciplined vigor and leaned only on the spark of savage magnetism the child was like a slender willow. She fought like a tiger against being taken to school, and when her shrieks of anger and defiance brought Cutting from his room, pale and with dark-circled eyes, she shut her eyes in a spasm of grief.

"Have n't you gone to school yet, Louie?" he said simply.

She stood up, catching at her breath.

"I am just going," she answered in a low voice.

She went away, and came back that night with a white face and wild eyes. She would not go to bed until Cutting came home. She sat up and would not speak. Her face was set and lifeless. Mrs. Fisher sat opposite her, stern and dignified for a while, and then sleepy. Finally she dozed. She even snored, and Louie's nostrils quivered with contempt. When Cutting's latch-key sounded, Louie was stricken with a terrible fear. She crouched in her chair, her eyes fever-bright. Cutting came in with a heavy step. He was fagged to the last point of endurance. The housekeeper awakened with a guilty start. Cutting looked at the two, running his hand through his hair — only wearily. Louie was shivering terribly. She got up and took his hand.

"I went to school, and I staid," she said.

He pressed his lips weakly on her dark hair.

"You shall not go again," he said.

After that a young woman came to struggle with the child every morning. There was a new one nearly every month. Louie was wild, rebellious, and terrible under the check of a strange hand. With Cutting she was so gentle and pliable that he wondered at the complaints made against her.

In the afternoons he went to walk with her. It stifled her to stay in the house, but she would not go out without him. She looked at the animals in the park with parted lips through which her breath came warmly. The color rushed over her brown cheeks in quick waves. She clenched the bars of the cages and glared fiercely into the eyes of the animals. She was the wildest creature in the park.

Once when she was walking ahead of Cutting he turned into a side path, his mind forgetting her in other thoughts. She came running after him, her eyes wide open like a hunted animal. Seizing him by the hand she stopped him as if her heart had failed her. The blood had left her face and lips, and she panted heavily.

"I thought I had lost you!" she panted.

Cutting watched the life come back to her face, smiling at her. The lonely man liked to have something cling to him.

In her red walking-jacket in the fall, with her wonderful eyes, the wild roses on her cheeks, the scarlet curve of her mouth, and her dark hair blowing in the wind, she attracted the eyes of every one. Women turned to catch another glimpse of her beauty. But she was unconscious of the closest stare.

If a woman in a car, struck with the child's face, spoke to her coaxingly, Louie gazed into the stranger's eyes indifferently or insolently turned her back.

Every evening for an hour after Cutting started for the editorial rooms of "The Organ" she was tortured with restlessness. Mrs. Fisher feared the child's outbursts of passionate temper. As for Louie, she treated the housekeeper with a cool contempt until she was crossed. Then she was a young tigress. Cutting had forbidden her to come to the office. One evening she slipped down-stairs, and was off with flying feet. When she stepped into the elevator of "The Organ" building her lips were trembling so that she could not tell the elevator-boy at what floor he was to stop. She walked slowly down the corridor with a quivering bosom. Cutting's clear voice, speaking to Mr. Freeling, sent a shiver over her little body. A smiling reporter came out, whistling a merry air. Catching sight of her, he said, "Hello, little one; whom do you want to see?" She was silent.

"Don't be afraid," he said kindly, laying his hand on her shoulder.

She flung it off fiercely, and turned her head. Then she pressed her face tightly against the wall and dug her nails into the white plaster.

"Don't touch me; don't look at me!" she cried, under her breath.

"What a Tartar this little Russian is!" said the reporter, good-naturedly, and went out laughing. Louie stole out after him. She sprang energetically into the elevator.

"Take me down!" she cried.

Mrs. Fisher was distracted with fear of Mr. Cutting's rebuke when Louie came home with flushed cheeks and dry lips.

"Where have you been?" cried the housekeeper, angrily. She had been sorely tried.

Louie's eyes were deep and fierce, and she was silent. She would not go to bed. When she had been at war with any one, no coaxing, pleading, or threats could drive her to bed. She sat silent and defiant, her strange eyes looking afar off. When Cutting came home she would stand up straight, her face pale at his look of reproach; then she would wait for him to kiss her on the forehead, and would go silently to her room.

He had some rare books. Among them was a cherished edition of Shakspeare. Louie had often seen him reading it. The house-

keeper caught her one day poring over one of the volumes. She was reading only Cutting's marginal notes and wondering at them. She was twelve years old then. When Mrs. Fisher saw her on the floor with Mr. Cutting's volume in her lap she screamed.

Louie sprang to her feet. Mrs. Fisher started towards the child, and Louie backed slowly into a corner.

"Put that book down!" cried the housekeeper. "Put it down!"

Louie clasped it closely to her and looked at Mrs. Fisher with a wild light in her eyes.

"Don't touch me," said the child in a hushed tone. "Don't. If you come near me I will do something terrible."

The housekeeper, frightened by the intensity of the child's voice, paused, palsied with fear. Her eye again fell on the volume.

"Put it down!" she cried again, and started towards Louie. The child was very white. She opened the volume and held it by the leaves.

"Don't touch me," she said in a hissing whisper. "If you do—" she placed her fingers at the edge of the leaves with a threatening look.

Mrs. Fisher, terror-stricken, dashed forward. She heard a sharp, crisp rip. She saw Louie madly tearing the pages into fragments. She heard the sound of rip after rip. Louie was in a frenzy. In terror Mrs. Fisher fell into a chair and threw her hand against her heart. Louie tore the pages into a thousand pieces. She separated them with her impassioned fingers over and over again. She hurled the last fragments on the floor and sprang upon them. She stamped upon them. She dropped upon her knees, and, clutching at the innocent bits of paper, wrenched them apart. She thrust them into her quivering mouth, tearing them with her little white teeth. She could not destroy them to suit her wild frenzy. And then she was fearfully calm. She dropped into a chair. Her eyes blazed forth defiance, hatred, and wickedness.

"Oh, I hate you!" she cried passionately. "You make me bad. I could tear your eyes."

Mrs. Fisher was too faint to think. She lay back in a half-stupor.

Louie was uncompromising in her anger. She made no sign of penitence. They both sat there hour after hour. Louie was silent and fierce. They heard Cutting's step. Mrs. Fisher shuddered, but Louie did not move. He came into the room quietly.

"Why, Louie," he said, "you should have been abed hours ago." His eye caught the fragments spread over the floor.

"Louie, have you been rebellious again?" he asked. Then he saw the covers of the volume hurled into two corners of the room. He shook

like a reed; he stooped and picked one up, then turned across the room to the other. He was dazed. He sent a questioning glance to Mrs. Fisher. She was sobbing in fright.

Louie was standing. She looked at him with a pitiful woe in her eyes. He fell on his knees gathering up the fragments.

"Louie," he cried in a hollow voice, "what is this? What have you been doing? Mary—"

But Louie was deathly white. She moved towards Cutting as if to throw herself into his arms. Her face was quivering with anguish. Cutting started back. There was an agony of grief and disappointment in his expression. Louie gave a little cry and, throwing out her arms wildly, fell to the floor.

"Poor child," said Cutting, as he lifted the limp little figure.

There were many such outbreaks, but as she became more tamed Cutting gradually reconciled her to going away to school. When he spoke of it her strong, young fingers clutched at her heart, and her eyes sought his in terror. Afterward she would go to her room and, locking the door, sob herself into a condition of exhaustion. But she never let Cutting know of this.

Meanwhile he became more and more reasonable at the office. At first it was feared that he was "running out," but his energy and vigor gave the lie to the fear.

Louie was fourteen when he took her to the Hills Seminary. In the train she held his hand tightly and looked steadily out of the window. She shivered when she saw the seminary buildings. She made no murmur, but her lips were pallid. Cutting smiled grimly. He was proud of her courage. He did not know how she was suffering. She was going into a cage. If she had permitted the cry that was in her heart to cross her pressed lips she would have wrung Cutting's heart and he would have taken her back to New York with him. But man could not have choked it from her. When it was time for Cutting to leave her his voice was tremulous. This discipline was costing him something too. At the door as they said good-by Louie was catching at her breath, but she said nothing. When he was gone, and the door of the cage was closed on her, there was a strained look on her white face and in her dark eyes which melted the heart of gentle Mrs. Moore, the head of the school.

"You are very lonely, are n't you, dear?" she said, pitying the child.

"I want to be alone in my room," Louie said in a dead voice.

Cutting went to the Hills once every week. When he entered the door he always found Louie there, her cheeks dyed with a crimson flush, her liquid eyes wonderful with the light

in them. She would seize his hand and drag him out of doors. Freedom and the air were her joy. How they walked! She almost dragged him along until she would stop suddenly, her fresh lips parted to let her eager lungs drink in the aerial elixir, and while his cheeks were pale with the exertion on hers was a deep red touch.

"Oh!" she would cry, clapping her palms together in her delight at freedom. And then she was all gentleness.

The reports of Louie's progress did not alarm Cutting.

"She works furiously, or she will not work at all," said Mrs. Moore, who loved the girl; "She is a strange, wild creature."

"No one understands her," Cutting said to himself after one of these talks. "She is greatly changed already." Louie was not changed. Discipline, as with Cutting himself, taught her to curb her passionate and impetuous nature. But at sixteen the intensity of her wildness was more fierce with her growing womanhood. Her feelings, once unchecked, were as fierce and uncontrollable as a whirlwind. She could imprison the tempest within her bosom, but she could not still it.

She was a magnificent creature then. She was tall and slight, so that her frame shook with every fierce impulse that flashed into her brain. Her great eyes had deepened, and only a blaze in her cheek could hide its bronze—the wild bronze of her blood. Impassioned with anger or scorn, she was a beautiful fury. Calm in her gentler moods, she was wonderful in her quiet submission.

It was at this time that Cutting began to fear when others were most confident. In her letters was a vehement energy which told him that she had not been tamed. It frightened him. Often he sat serious and silent, thinking of it.

There came a grave political campaign. Trouble was in the air. Something was wrong. Cutting was at his desk early, and the streaming sunlight fell on his grayish hair morning after morning. He missed going to the Hills for three successive weeks. He wrote that he would surely come next week. But a flash over the wires withered his plans. A strange thing was happening, an historical event which was to make a president when few people believed it possible, however great their hopes. There came out of the calm where the fever of politics did not rage a message from the heart—"This is killing me."

The night editor of "The Organ" loved only two things. He yielded to that which he loved least, and with an aching heart remained at his desk. The nation's decision and a summons to the editor-in-chief reached Cutting on the same night. There was to be a new night ed-

itor, and Mr. Cutting, managing editor, was to select him.

The night was crisp when Cutting came into the editorial rooms the next evening with his usual quick, nervous tread. The keen air had fanned a slight spark in his pale cheeks. The excitement of the last few days, the stimulant of near promotion, and the thought of seeing the impatient Louie added new energy to his great vigor. But after pulling his chair abruptly along the floor he sat down wearily. Some machinery runs down slowly and quietly. Some suddenly snaps when going at full speed.

There was a heap of mail before Cutting,—letters, telegrams, queries from correspondents,—the usual amount of matter on a night editor's desk when he goes to work. He ran his slender hand impatiently through them. His rapid blue pencil checked off a long list. Then he turned again to the mail. Mr. Freeling was standing behind him, holding a dozen pages of copy in his hand, waiting to speak with the night editor.

Cutting was slower than usual. He was reading a letter. Mr. Freeling rustled his copy and then scraped his feet gently on the floor to give warning that he was there. When Cutting finished his letter he sighed. It was a sigh of weary acquiescence, accepting fate. He refolded the letter slowly and placed it in the envelope. His fingers trembled.

"Oh, I beg your pardon, Mr. Freeling," he said, looking up in a dazed way from under the green shade on his forehead. His face was very white, and the corners of his mouth were drawn.

"Washington special?" His tones were lifeless. "Yes; that's about right. Thank you," he added gently.

Freeling looked at Cutting's face. "Better send one of the boys out for some brandy," he suggested. "You look faint."

"Yes; thank you," answered Cutting. "Please send one."

When Freeling had been at his desk for a minute or two he leaned towards the cable editor to ask for a match.

"Cutting is in a bad way," he said in a low voice, looking over to the night editor's desk where Cutting was at work, his head bent under the swinging electric light so that the fine gray in his hair glistened. His fingers to-night moved heavily across the written pages.

"He ought to go to the Bermudas," added Freeling, thoughtfully. "I wish we were n't so busy here all the time. I have been meaning to talk to him about it for weeks, and neither of us has had the time."

"He would n't go," said the other, whipping a blue pencil through a line. "Cutting thinks he has a constitution of iron. The constitution was never made that could stand the abuse which he gives his."

Meanwhile Cutting was bending over his work.

Freeling came up to him briskly late that night.

"Here's a good suicide," he said shortly — "first page; the Hills Seminary."

Cutting's fingers worked nervously, but he did not raise his eyes.

"Girl of sixteen," Freeling jerked out; "same name as yours; terrible young vixen; flew into a rage because they would n't let her go home. Locked herself in her room and strangled herself with a towel."

Cutting shivered slightly.

"Louie," continued Freeling, "I suppose that's Louise, eh?"

"I suppose so," answered Cutting, faintly. He turned slowly in his chair. A wan smile was on his thin lips.

"Never mind the suicide," he said quietly. "We will not use it to-night."

"Well," exclaimed Mr. Freeling in surprise, "it's the best story we have — Hills Seminary."

"Never mind it, Will," answered Cutting, looking at him with eyes of gentle authority. "I don't want it."

"Of course if you don't want it —" Freeling spoke curtly, and went back to his desk, leaving the sentence unfinished.

"I do not want it," said Cutting, sharply, flashing his eyes on Freeling that his assistant might feel that he was rebuked. Freeling was silent.

Before Cutting went up-stairs to the forms he looked over Freeling's shoulder. His hand rested lightly on his assistant's arm.

"Don't feel cut up about that story, Will," he said, hesitating, as if it hurt him to make an explanation.

"Not at all," said Freeling, stiffly.

"I want to say," Cutting went on, lowering his voice, and his fingers brushed lightly over Freeling's sleeve, "that there was no reflection on your judgment. I will tell you, Will, that I have recommended you to Mr. Jackson to take my place. This affair here — I — it was a personal matter."

Freeling shot a keen glance at him, but Cutting's eye turned swiftly, so that the look seemed to glance aside.

"Get up that late 'Chicago' as soon as possible," Cutting said. "I am going up to the forms. And say, Will," he added, retracing the steps which he had taken towards the door, "can you come down early to-morrow night? I am going out of town, and may be late. Thank you very much."

It was stifling in the composing-room. The air was hot and the men were suffering, but the breeze outside was so strong that the windows had to be closed on account of the fluttering copy. Cutting was oppressed by the closeness, and once he complained that the brilliant lights blinded him. His face as he leaned over the forms had changed to the lifeless white of chalk.

"Hurry up that last 'Chicago,'" he said to the foreman. "We are late now. Oh, here is the proof, Henry."

He took the proof to measure it on the form for space. His hand was unsteady.

"Measure it, Henry," he said in a dull voice, "I can't see it."

"Sha'n't I send for Mr. Freeling, sir? You are sick."

Cutting shook his head.

"Get the type," he said. "We are late."

He placed his head on the form, and ran his thin fingers through his gray locks, letting them rest there. The big hand of the clock was solemn in its warning that the paper was late. Henry came running back with the type. The foreman hurried along the big room with an oath on his lips.

"We'll miss the mails!" he cried angrily. "Here's the type, Mr. Cutting. Mr. Cutting! Mr. Cutting! Henry, run down for Mr. Freeling; Mr. Cutting is sick."

Freeling bounded up the steps three at a time.

"Look out, Cutting!" he cried, his eyes on the clock; "you'll miss the mails. Here, let me get at the form. That's right — 'Chicago B' there. What's the trouble, Cutting?"

Freeling's mouth was at Cutting's ear. He looked up with startled eyes.

"Help Mr. Cutting down-stairs," he said in awed tones.

Then gently, "Mr. Cutting is dead. Be quick," he added; "lock up that form," for the paper was late, and the presses were waiting.

Ervin Wardman.

ENGRAVED BY T. COLE, FROM THE ORIGINAL PICTURE IN THE PALAZZO PUBBLICO (FORMERLY IN THE CHURCH OF S. ROMANO), LUCCA.

MARY MAGDALENE, DETAIL FROM THE PAINTING BY BARTOLOMMEO.

FRA BARTOLOMMEO DELLA PORTA (1475-1517). MARIOTTO ALBERTINELLI (1474-1515).

(ITALIAN OLD MASTERS.)

THE relation between Fra Bartolommeo and Albertinelli was so intimate during the greater part of their not very eventful lives that they can hardly be considered apart. Fra Bartolommeo was born in a suburb of Florence and received his surname della Porta from the fact that his father lived near the gate of the city. At the age of nine, as he showed a precocious fondness for drawing, he was put in the studio of Cosimo Rosselli, having as one of his companions in work Albertinelli, a year his senior. A warm friendship arose between them, which lasted through life, though at times chilled by the utter difference between their natures,—Bartolommeo or Baccio, as he was called in his secular life, being of a gravity of character which accords with what we generally attribute to the painters of the religious epoch,¹ while Albertinelli was of a merry temperament and strained the limitations of religious art in his feeling for something more mundane. When they conceived that the instruction of Rosselli had given them all they could hope for from him they took a studio together and worked independently, Mariotto devoting himself mainly to the study of the antiques in the Medici gardens and Baccio to that of Masaccio, Filippino, and Leonardo. The deeper nature finally prevailed over the more vivacious, and later in life Mariotto took his friend as his model, and, with occasional departures due to his invincible love of pleasures which had nothing to do with art, they worked together at intervals through their lives, which, as they began nearly together, ended only two years apart. Their installation as painters and students on their own account took place when the elder was sixteen to eighteen, Vasari giving the latter date and Cavalcaselle the former.

The serious nature of Baccio was attracted by the preaching of Savonarola, who occupied the attention of all minds in Florence at the time when the painter was just entering into manhood, and he soon became one of his most earnest disciples. Mariotto on the contrary en-

rolled himself amongst the scoffers, and the friendship of the two had a short interruption, each taking part in the antagonism which distracted Florence. But the pious nature of Baccio could not hold rancor, and the shallower one of Mariotto could not dispense with the influence of his younger Mentor, and though they never agreed as to the reform or the reformer, they became reconciled in art. Baccio became one of the puritans and contributed his profane works to the bonfire which the Dominican kindled in the public place of Florence, abandoning thenceforward the practice of profane art. He went further in his enthusiasm than his gentle nature warranted, and was one of the defenders of the convent of San Marco when it was attacked by the mob to drag out Savonarola, and, terrified by the conflict, he vowed if he came out alive and safe to enter the order of St. Dominick. It was a year after the crisis of his spiritual master's fate that he took the vows. The sobriety of his temperament and his conscientious regard of his duties are shown even in his manner of paying obedience to his vow. He made the same preparations to enter the convent that he would have made for death. He had a younger half-brother who, not being of sound intellect or from some other cause not being responsible for himself, had been put under the tutorship of Baccio, and he had to arrange for the making over to him of the property which his father had left him; and he had also taken a commission for a fresco in the chapel which Gerozzo Dini had built for the hospital of Sta. Maria Nuova, on which he worked till 1499, when, having finished the upper portion and the cartoon for the whole, he left the finishing to his fellow worker Mariotto, who completed it from the designs of Baccio. On the 26th of July, 1500, the painter took the vows at Prato and a year later he returned to the convent of San Marco in Florence, the scene of the labors of his beloved master. Under his religious name, Fra Bartolommeo, he buried himself and his ambitions in the cloister, and it was only at the solicitations of his Prior and friend, Sante Pagnini, that he consented to take up again his pencils in the service of God. The "Last Judgment," which he had designed and in part painted for the hospital, had been recognized as a work which in some respects was an advance on all previous painters, and the

¹ The existence of certain drawings from antique motives, distinctly irreligious, does not disprove the general tendency. At that time there was a strong feeling in Florence for the worst forms of Hellenistic art, to which Baccio yielded for the moment only.

order of St. Dominick had had too much acquaintance with art in its ranks not to know that the new brother could in no other way so advance its interests as by his pencil. Vasari says of the fresco of the "Last Judgment" that it was considered by the artists of the time as the *ne plus ultra* of the art; it is said to have served as a lesson for contemporary painters, and even Raphael with all his genius for composition seems to have taken something from this artist. The first work which Fra Bartolommeo executed in his new life was the "Appearing of the Virgin to St. Bernard" for the church of the Badia, and now in the Academy of Fine Arts (Accademia) of Florence. As the price was not agreed on before the picture was executed, it became the subject of a dispute between the patron for whose order it was painted and the convent, Fra Bartolommeo's personal interests being merged in the rights of the order and the proceeds of his work going into the treasury of San Marco. The price put on the picture by the painter was 200 ducats; Bernardo del Bianco, the patron, offered 80, and the affair promised to be the subject of a suit at law when, by the intermediation of Francesco Magalotti, brother-in-law of Bernardo and a friend of the convent, it was compromised at 100 ducats.

The painter was not so easily rid of the world as he had imagined. His half-insane brother Piero came to break his peace again by his extravagances, which led the relatives to whom he had transferred his guardianship to withdraw from the charge, so that Fra Bartolommeo had again to become responsible. This time his friend Mariotto came to his relief and took charge of the brother, undertaking to teach him painting at the same time, administer his estate for five years, and take as payment the income of the property. The Prior of the convent and the father of Mariotto witnessed the contract, which was executed on the 1st of January, 1506. To aid in reawakening his devotion to his art came the arrival of Raphael in Florence, which took place at the time he resumed the pencil, and in 1506 the relations between the two painters took on the character of intimacy, which shows itself in the works of both executed during this period. Raphael caught the mellowness of tint which Fra Bartolommeo had attained in his use of oils, and which he finally carried to excess, thus sadly interfering with the stability of some of his later pictures. The friar learned the charm of Raphael's grace and the value of the Perugian treatment of landscape.

When in 1508 Raphael left Florence for Rome, Fra Bartolommeo went to Venice to study the school of color. He was welcomed by his brothers in St. Dominick with open arms,

and a commission was at once given him to paint a picture for their vicar. This he was wise enough to paint only after he had finished his studies at Venice and had returned to Florence, when he produced the picture from which Mr. Cole has engraved a portion — St. Mary Magdalen and St. Catherine of Siena in ecstasy at the sight of God. His stay in Venice must have been short, for this picture was painted in the same year. The monks of the convent at Venice made difficulties about the price of the picture, for which the painter asked seventy-eight ducats, having already received twenty-eight, and it was finally sent by the prior to Lucca where it still remains. In 1509, with the consent of the prior, Albertinelli was installed in the studio belonging to the convent as the official assistant of Fra Bartolommeo, and this time the partnership lasted till January 5, 1512, when it was dissolved for reasons unknown,¹ by mutual consent. In the division of the proceeds which was provided for by the act of association the money which came to each was 212 ducats, and the pictures were divided between them, the studio effects being the property of the friar for his life, to revert on his death to Albertinelli.

At this juncture Mariotto decided to give up painting and became an innkeeper, establishing himself outside the Porta San Gallo of Florence; but this new vocation was found to be a delusion, and he returned to his colors a year after. We have, however, no intimation of any later association with Fra Bartolommeo. The latter in 1514 made a visit of two months to Rome, and not long after Albertinelli also visited the then center of all art interest; and both seem to have found there the seeds of the disease which ended both lives prematurely. At any rate Mariotto came back in a litter and died in Florence November 5, 1515. Fra Bartolommeo was then in the hospital of Pian di Mugnone, and though he continued to paint during the next two years his health was never well established after his return from Rome, and he died of a new access of fever on the 6th of October, 1517.²

It is unlikely that we can justly estimate the relative position which was assigned to Fra Bartolommeo in his lifetime or immediately after his death. Something of his fame was due to the technical quality of oils in which there was then but little experimenting. The unwonted brilliancy of this quality in the Florentine school gave a fascination to the general effect which has now become lost through the loss of intensity of color which his pictures have sustained

¹ Possibly the change may have been due to the change of prior, coinciding as it did with the retirement of the friend of Fra Bartolommeo from the priory.

² Dohme says August 3d. Gruyer October 6th.

ENGRAVED BY T. COLE, FROM THE ORIGINAL PAINTING IN THE UFFIZI GALLERY, FLORENCE.

THE VISITATION, BY ALBERTINELLI.

in comparison with the tempera pictures and those in which oil was used only for glazings and to heighten the brilliancy of the tempera. The vehicle is so strong an element in the friar's work that the darker passages in some instances have quite lost all their value as color. The execution is thin and at times disagreeable in comparison with the contemporary work of the Venetians, and the types of his saints and sacred personages are wanting in robustness and vitality. His religious conceptions are, however, amongst the most dignified of his school, and the true rank of the artist is rather in his powers of design than in his color or his ideals of character. The strongly individual

types which we had in Botticelli and in Filippino are as far from the ideal of beauty and conventional grace as those of Fra Bartolomeo, but they impress us by their veracity and variety, while those of the Friar do not. He borrowed well and from many sources, but what he added is not always the best of his work. His personality strikes me as weak, and his work owes no doubt much of its dignity to the effect of his devotional feeling and to his sympathetic appropriation of the knowledge of his predecessors. Except for his carrying the quality of oil painting further than his contemporaries had done, I do not see any innovation or supremacy in his pictures which remain.

W. J. Stillman.

CHATTERTON IN HOLBORN.

FROM country fields I came, that hid
The harvest mice at play,
And followed care, whose summons bid
To London's troubled way.

And there, in wandering far and wide,
I chanced ere day was done
Where Holborn poured its civic tide
Beneath the autumn sun.

So hot the sun, so great the throng,
I gladly stayed my feet
To hear a linnet's captive song
Accuse the noisy street.

There heavily an old house bowed
Its gabled head, and made
Obeisance to the modern crowd
That swept athwart its shade:

Below, an open window kept
Old books in rare display,
Where critics drowsed and poets slept
Till Grub Street's judgment-day.

One book brought care again to me,—
The book of Rowley's rhyme,
That Chatterton, in seigneury
Of song, bore out of time.

The merchant of such ware, unseen,
Watched spider-like the street;
He came forth, gray, and spider-thin,
And talked with grave conceit.

Old books, old times,—he drew them nigh
At Chatterton's pale spell:
" 'T was Brook Street," said he, "saw him die,
Old Holborn knew him well."

The words brought back in sudden sway
That new-old tale of doom;
It seemed the boy but yesterday
Died in his lonely room.

Without, the press of men was heard;
I heard, as one who dreamed,
The hurrying throng, the singing bird,
And yesterday it seemed.

And as I turned to go, the tale
This pensive requiem made,
As though within the churchyard's pale
The boy was newly laid:

"Perhaps (who knows?) the hurrying throng
Gave hopeless thoughts to him;
I fancy how he wandered, long,
Until the light grew dim.

"The windows saw him come and pass
And come and go again,
And still the throng swept by—alas!
The barren face of men.

"And when the day was done, the way
Was lost in lethal deeps:
Sweet Life!—what requiem to say?—
'T is well, 't is well, he sleeps!"

Ernest Rhys.

GENERAL MILES'S INDIAN CAMPAIGNS.

ON THE STAKED PLAINS.

GENERAL Sherman has called the twenty years of constant Indian warfare following the war of the Rebellion, "The Battle of Civilization." That battle, on this continent, of course, began earlier, but certain facts made that period an epoch by itself. A chief fact to be noted is that the Indians during that time were always well armed, often much better than the troops. At the battle of Bear Paw, for instance, the Indians used magazine rifles of the best pattern, while even now, nearly fourteen years afterward, the army still has to do without them. The field of "The Battle of Civilization" was the vast trans-Missouri region, and civilization did not, during that period, satisfy itself with a gradual advance of its line, as formerly, but became aggressive, pierced the Indian country with three trans-continental railways and so ultimately abolished the frontier. A very large portion of the army (including nearly all of the cavalry and infantry and a small portion of the artillery) was at one time or another occupied with the task and many heroic deeds were done, but the conspicuously successful leaders were few.

General Nelson A. Miles as colonel of the 5th Infantry led his first command against hostile Indians in 1874. In the summer of that year small bands of southern Cheyennes, Kiowas, Arapahoes and Comanches made several raids in the Indian Territory, Texas, southern Kansas and southeastern Colorado, but es-

caped punishment by flying to their agencies. At last, on the 21st of July, the Department of the Interior gave the Secretary of War authority to punish these Indians wherever found, even to follow them upon their reservations. Under this authority General Miles was ordered into the field. He organized his command at Fort Dodge, Kansas, on the left bank of the Arkansas River. It consisted of eight troops of the 6th Cavalry, four companies of the 5th Infantry, and a section of artillery made up of details from cavalry and infantry. Later in the season four troops of the 8th Cavalry joined this command and some of the 6th Cavalry were withdrawn from the field.

In a summer of exceptional heat and drought even for that region, and through a section eaten bare by the invading army of grasshoppers whose flight was a "pillar of cloud by day" and whose encampment at night was as the devastation of fire, the command pressed rapidly southward from the Arkansas. Even prior to the inception of the movement, the scope of this Indian Territory Expedition, as it was called, differed from some of the notable Indian campaigns in the particular that General Miles waged Indian warfare according to the well-known principles of the art of war, so far as applicable. In too many cases expeditions against Indians had been like dogs fastened by a chain: within the length of the chain irresistible, beyond it powerless. The chain was its wagon train and supplies. A command with thirty days' supplies could inflict a terrible blow if only it could within thirty days come up with the Indians, deliver its blow, and get back to

GENERAL NELSON A. MILES. (FROM A PHOTOGRAPH BY TABER.)

more supplies — otherwise it repeated the historic campaign of “the king of France with forty thousand men.” Or if perchance it delivered its blow successfully, it could not, for lack of time, follow up its success and attain the only object of just war, which is peace.

Before leaving Fort Dodge, General Miles applied for supplies such as would be needed should the campaign continue into the winter; an act of foresight which contributed much to his success. As the command moved out the chief of scouts, First-Lieutenant F. D. Baldwin, 5th Infantry, of whom we shall hear more, was detached with scouts and Delaware Indians to move rapidly far from the right flank of the command, to prevent hostile Indians from devastating the settlements in its rear, and with instructions to reach the Canadian River near Adobe Walls, an abandoned trading post where a group of bold buffalo hunters had sustained a siege for several days and inflicted such loss on the besieging Indians that they withdrew. By vigorous and well-timed marches, the main command and its flankers reached the Canadian River about the same time, the scouts putting to flight a

party of hostiles near Adobe Walls, and then sweeping along the right bank of the Canadian and rejoining the command at its crossing-place near Antelope Hills. The results of this advance were two-fold: the General learned that there was no considerable body of hostiles in his rear, and the Indians were made aware that the troops were advancing against them.

On the first day's march south of the Canadian, large camps, recently and hastily abandoned, were found along the Washita River, and a broad trail made by the lodge poles, travois, and ponies led off to the south, crossing the numerous affluents of the great Red River and leading towards the “Llano Estacado,” or “Staked Plains,” so-called because their ocean-like expanse is so monotonous that stakes were formerly driven along the trails which could not otherwise be identified. As water would be found on the “Yarner” (as the scouts call the Llano) with great difficulty in the extreme drought of summer, the only chance of striking a blow at once was by overtaking the retreating hostiles before they reached that region. The cavalry pushed rapidly forward, and the sturdy infantry, just

from garrison, but well seasoned by drills and the gymnastic exercises that General Miles had instituted, marched patiently through heat and dust and "got there" every day. Indians never fight a considerable force while they can fly from it, and none but those who have experienced the hardship of the long pursuit, with its hunger, and thirst, and sleeplessness, can understand the feeling of restfulness and grim satisfaction with which a command sees that the race is over and the fight about to open.

August 30 was the day, and the "breaks" of the Red River, some thirteen miles from its bed, the place where the fight opened. Suddenly, from behind bluff and bush, as if they sprang from the bosom of the earth full armed, the hostiles came tearing down upon Baldwin's scouts and Indians, with the *crack, crack*, of their rifles, and the whoop of their war-cries. But Baldwin was the man for the place and Miles knew it; his sufficient discretion never had a touch of hesitancy or timidity, and he was fitly seconded by brave old "Fall Leaf" of the Delawares. Meantime Colonel Biddle, under the immediate command of General Miles, deployed his battalion of cavalry forward at the run; Colonel Compton, giving rein to his horses, swung his battalion out on the right; Lieutenant Pope's artillery, with infantry support, came rapidly up in the center, and there began a running fight over thirteen miles of sun-baked earth, glowing with a furnace heat, gashed in gullies and deep ravines by the flood-like rains which at times prevail there. Whenever the Indians made a stand the troops were hurled upon them, and the fight, which if it had opened timidly would have been a stoutly contested affair, soon became a rout and a chase. Col. Biddle threw forward Captain Chaffee with his troop as skirmishers, who there made his famous battle-field speech: "Forward! and if any man is killed I'll make him a corporal!"

Down through the jagged ravines the troops pursued across a half-mile of sand where at times a river flows, up the right bank and into the valley of the Tule, a branch of the Red River, where a burning camp, abandoned utensils, and a trail leading up a precipitous cliff told of the hasty flight of the Indians. The long chase before the fight, the rapid pursuit after through the intolerable heat of sun and earth, and the absence of water made it necessary to call a halt. Men and animals were famishing — some men drank the blood of a buffalo, and all the water found in Red River was a small pool of saturated gypsum and alkali, rendered indescribably vile from having been for a long time a buffalo wallow. With infinite labor the command, after resting, followed the trail over

which Pope, by devoting the night to it, had dragged up his Gatlings, and so climbed out of the valley of the Tule and followed the Indian trail for miles out on the Llano. It became evident that no pursuit could be successful without supplies, and that before a train could be brought through the ravines and breaks of the valley to the table-land on the right bank of the Red River the Indians could get beyond pursuit. Hence a recall was sounded.

The train with escort, commanded by Major W. Lyman of the 5th Infantry, was sent back to Camp Supply to replenish, and, on its return, was attacked near the Washita River by a large force of Comanches and Kiowas who had come up in rear of General Miles's command, fresh from their reservation. Stimulated with the hope of capturing rations and ammunition the Indians for five days laid siege to the train, which was most heroically and successfully defended.

Intent on conquering a peace and not merely beating the Indians in one engagement, General Miles overcame the greatest obstacles in the few weeks of comparative inactivity that ensued. Of these obstacles it must suffice, here, to say they ought never to have existed, yet they would have wrecked the expedition but for the indomitable persistence of its commander. On November 8, a detachment under Lieutenant F. D. Baldwin surprised a large camp of hostiles near the head of McClellan Creek in the early morning, and at once attacked with such vigor as to compel the Indians to abandon the protection of the ravines and retreat to the open country. Time and again they rallied and renewed the defense, but were finally driven by the troops and scattered in utter rout, leaving in their flight two little captive white girls — Adelaide and Julia Germaine — aged five and seven years. Their parents, brother, and one sister were all murdered by the Indians in Kansas, where their two older sisters were captured in the summer previous. The surrender, which crowned the expedition with success, included the older sisters. General Miles became guardian for the four, and upon his recommendation Congress authorized the stoppage from the annuities of the Cheyennes of an amount for their support. In the center of the vast section, including the Pan Handle of Texas and the adjacent portions of the Indian Territory which had been wrested by Miles from the hostiles, was erected a military post named for the gallant Major Elliott of the Seventh Cavalry, who had lost his life November 27, 1868, in Custer's Battle of the Washita.

• A CONFLICT WITH SITTING BULL.

THOSE familiar with the frontier twenty or twenty-five years ago will readily recall the

estimation in which the numbers and prowess of the Sioux were held; also the prestige that they had after the Fort Phil Kearny massacre in 1866, and the abandonment by the Government, at their dictation, of the Powder River route and of several military posts. More than once, in derogation of laurels won in warfare against other Indians, it was said, "Wait till you meet the Sioux."

Simultaneous with the arrival at Fort Leavenworth, Kansas, of the news of the Custer catastrophe on the Little Big Horn, Montana, came orders to General Miles and the 5th Infantry to proceed to the scene of hostilities to form a subordinate part of the large command already there. In the earlier service of the 7th Cavalry in Kansas most agreeable social relations had existed between many members of the two regiments, and the list of those slain on that fatal 25th of June, 1876, contained many names which were read with a pang of sorrow; and so, though the 5th marched gaily out of Fort Leavenworth, decked with bouquets, to the familiar strains of "The Girl I Left Behind Me," officers and men marched with sad hearts. The long journey up the Missouri and the Yellowstone was accomplished without noteworthy incidents. Summer drew to a close, and the objects of the campaign remained unattained. The two large commands then in the field were ordered to their stations early in the autumn, and General Miles was left on the Yellowstone with his own regiment (the 5th Infantry) and six companies of the 22d Infantry. The task assigned him was to build log huts for his troops and stores, bring forward the winter supplies, by wagon, from the mouth of the Yellowstone, and then the command was expected to hibernate, protecting themselves from attack and holding the ground for a basis of campaign in the following year. Two cantonments were built, one at the mouth of the Tongue River, and the other on the left bank of the Yellowstone, nearly opposite the present city of Glendive, but there was no hibernating, for the disposition of the commander did not favor it, and he was so isolated that action on his own judgment was necessary under the circumstances. Immediately on assuming command General Miles began, as in the Indian Territory Expedition, to plan for a systematic campaign.

The hostiles belonged on the large reservations far to the south and southeast of the Yellowstone, and the General took means of getting the earliest possible information of their absenting themselves therefrom. He became satisfied, early in October, that a very large number of the hostiles were in his vicinity, and this fact, added to a prolonged delay in the expected arrival at the cantonment on Tongue River of

a supply train coming up from the cantonment at Glendive, induced him to march out with the 5th Infantry and proceed down on the left bank of the Yellowstone. On the 18th of October he met the train under escort of a battalion of the 22d Infantry commanded by Lieutenant-Colonel E. S. Otis of that regiment. The train had been once obliged to return to Glendive by the strong force of Indians, its teamsters so demoralized that their places were filled by soldiers. When advancing the second time Otis received, October 16, the following note, left on a hilltop by an Indian runner:

YELLOWSTONE.

I want to know what you are doing traveling on this road. You scare all the buffalo away. I want to hunt in this place. I want you to turn back from here. If you don't I will fight you again. I want you to leave what you have got here and turn back from here.

I am your friend, SITTING BULL.

I mean all the rations you have got and some powder. Wish you would write as soon as you can.

Otis sent a firm reply by a scout and proceeded with the train surrounded by the Indians, who, for a considerable time, kept up firing but gradually fell to the rear. When General Miles learned the situation from Colonel Otis he started after Sitting Bull and overtook him near the head of Cedar Creek, a northern affluent of the Yellowstone. Sitting Bull sent a flag of truce to General Miles desiring to communicate, and General Miles met him with Chief Gall and several others between the lines. Sitting Bull shrewdly wished for an "old-fashioned peace" for the winter (when warfare is most difficult), with permission to hunt and trade for ammunition, on which conditions he agreed not to molest the troops. But General Miles's object was permanent peace and the security of the territory then and before dominated by the Sioux, and he told Sitting Bull plainly that peace could come only by absolute submission. When the interview closed the troops were moved with the intention of intercepting the Indians should they try to move northward, and on the 21st of October another similar interview between the lines occurred.

The Indians undoubtedly intended to emulate the act of bad faith by which General Canby lost his life at the hands of the Modocs, April 11, 1873. Several of their younger warriors, with affected carelessness, gradually moved forward in position to surround the party under the flag of truce. General Miles, observing this, moved back a step or two and told Sitting Bull very forcibly that those men were too young for the council, and that the "talk" would end just there unless they re-

turned to their lines. One of them had slipped a carbine up under his buffalo robe. Another muttered to Sitting Bull, "Why don't you talk strong?" and he replied, "When I say that, I am going to shoot him." Meantime the troops were held in readiness to attack, had any act of bad faith been attempted; even the accidental discharge of a firearm would have precipitated an attack in which all between the lines would have fallen. It became evident, at last, that only force could settle the question, and General Miles said to Sitting Bull, "I will either drive you out of this country or you will me. I will take no advantage of you under flag of truce and give you fifteen minutes to get back to your lines; then, if my terms are not accepted, I will open fire." With an angry grunt the old Medicine Man turned and ran back to his lines; the whole country was alive with Indians, not less than a thousand warriors swarmed all about the command, which, in a slender line extended to protect front and flanks and rear, pushed vigorously forward and drove the Indians from the deep valleys at the source of Cedar Creek, compelling them to leave some of their dead on the field, which they never willingly do, and then pursued them so hotly for forty-two miles to the Yellowstone that they abandoned food, lodge poles, camp equipage, and ponies.

On October 27, more than four hundred lodges, about two thousand Indians, surrendered to General Miles, and five chiefs were taken as hostages for the execution by the Indians of their terms of surrender, *i. e.*, to go to their various agencies. Sitting Bull and his immediate following, his family and connections by marriage, broke away from the main body during the pursuit and escaped northward, where he was later joined by Gall and other chiefs with some followers.

The estimated number of warriors in this engagement was one thousand. To General Miles and to the 5th Infantry, three hundred and ninety-eight rifles, is due the honor of this important victory, which had far-reaching consequences. Not since the battle of Little Big Horn had the followers of Sitting Bull been attacked by the troops in offensive battle. This was the first of a series of engagements in which the command of General Miles, or some detachment therefrom, vigorously assumed the offensive, and here began the successful battles and combats which resulted in breaking the power of the dreaded Sioux and bringing security and prosperity to a vast territory which is now penetrated by railways, occupied by hardy and prosperous settlers, dotted over with towns and cities, and already so developed and so permeated by the influences of our civiliza-

tion that, in the form of new States, or portions thereof, it augments the glory and dignity of the nation.

Returning to the cantonment at Tongue River, General Miles organized a force — four hundred and thirty-four rifles — made up of the 5th and a portion of the 22d Infantry and pushed northward in pursuit of Sitting Bull, but the trail was obliterated by snow near the Big Dry, the broad bed of that which at times becomes a southern affluent of the Missouri. A winter of great severity, even for that region, opened early, and the command suffered intensely but kept the field and scoured the country along the Missouri River above and below old Fort Peck.

On December 7, a detachment of the command, — Companies G, H, and I, 5th Infantry — one hundred officers and men, commanded by First Lieutenant F. D. Baldwin, 5th Infantry, overtook Sitting Bull's camp, one hundred and ninety lodges, and drove it across the Missouri, and on the 18th the same force surprised the camp near the head of Redwater, a southern affluent of the Missouri, and captured camp and contents with sixty animals, the Indians scattering out south of the Yellowstone.

As Sitting Bull did not for a considerable time thereafter enter as a factor into the campaign, it will be permitted to anticipate for a little and describe his subsequent movements. With a small following he shortly after moved northward and camped on the left bank of the Missouri; thence, near the end of the winter, poor and with scarcely any ammunition, he and his scanty following sought refuge north of the international boundary. As a war was raging of which he was an important factor — not so much from military prowess as from his position as a "Medicine Man" and an extreme and inveterate savage Indian, which made him the nucleus of all the disaffected and hostile Sioux — his band ought to have been either disarmed at the boundary or interned. General Miles made repeated and urgent appeals to the higher authorities that action to that end be taken, but unfortunately it was not taken.

Sitting Bull's position and character, as before indicated, and the freedom for a considerable time accorded him and his followers, north of the line, induced a large number of the hostile and disaffected to steal away to him, and so the Northwest Territory of the Dominion became the rendezvous and supply camp of a threatening force. But for the time Sitting Bull was eliminated from the problem of conquering a peace, and the closing months of 1876 saw the beginning of the end of the great Sioux war. The intense cold of a Montana winter did not chill the ardor nor lessen the

activity of Miles and his indomitable infantry, and the winter was to witness, on their part, almost incessant and markedly successful campaigning.

CRAZY HORSE BROUGHT TO TERMS.

A MONTANA winter, and so severe a one as that of 1876-77, might well be accounted a sufficient reason for the suspension of active operations. With thermometers rarely above zero, usually far below, and quite often so far that the mercury was solid and only spirit thermometers registered; with snow piled so deep in all the valleys that movement was laborious and tedious in the extreme, and with blizzards sweeping over the country, the thought of seriously attempting protracted expeditions would have entered most minds, if at all, only to be rejected. But General Miles took account of the fact that the difficulties for the troops, as briefly indicated, would be even greater for the Indians who do not voluntarily venture far from their camp in some sheltered valley in severe weather, and believed that if clothing, equipment, and transportation could be so increased as to meet the conditions presented there was promise of unusual successes.

Those who have seen only holiday soldiers or even troops on ordinary field service, would scarcely have recognized the four hundred and thirty-six officers and enlisted men of the 5th and 22d Infantry regiments who started up the valley of Tongue River, Montana, on the 29th of December, 1876. They might have been excused — these supposed spectators — had they concluded that a sportive band of buffaloes were trying to "evolute" into bipeds. Over the heavy woolen clothing supplied to the army for winter wear, the men were, many of them, fur-clad from head to foot; in lieu of a face there was presented to the observer a frost-covered woolen muffler frozen solidly upon an ice-clad beard, "trimmed with the same" in form of icicles, so that a long thaw had to precede disrobing. Enormous overshoes of rubber or of buffalo skin flesh side out, drawn on over German socks, gave warmth to the feet that they robbed of all nimbleness. Efficiency was the object aimed at, and to this end the army belts and cartridge boxes had given place to canvas belts made by the soldiers, looped with the same to hold a row or two rows of metallic cartridges. (The "prairie belt" since adopted for the army embodies the same principle.) General Miles, by stimulating emulation among the men, encouraged them to devise these improvements, and the men were intelligent and knew well by experience that "one more cartridge" for the modern soldier was like the "one step nearer" for the ancient who had a short sword

— it might mean all the difference between success and failure.

The incidents of camp and march illustrative of the effects of the intense cold are capable of most interesting elaboration and illustration: here a soldier hastily removes shoe and stocking and rubs with snow his rapidly freezing feet; there *seems* to be Mark Twain's lightning-rod man replenishing the fire with his wares, but really *is* a scout thawing a rigid rawhide lariat so that he can coil it, and now a teamster with a well-grounded doubt as to his future expresses the hope that St. Peter, when he learns that a man "was one of Miles's teamsters," will give him friendly welcome as one who "has suffered enough."

Already in the expedition northward to the Missouri — as before related — many of the difficulties of a winter campaign had been studied and overcome, and the later days of December, 1876, saw the command at the cantonment on Tongue River equipping itself for a blow at Crazy Horse. This Sioux chief was at the head of the Ogallalas, and had borne a prominent part, if indeed he was not the most prominent, in the repulse administered by the Indians, June 17, 1876, to Crook's command advancing from the department of the Platte toward the Yellowstone; he had also been one of the important chiefs in the battle of the Little Big Horn, where also were Sitting Bull's following, the Uncapapas, and many others.

Crazy Horse, with a large force of Sioux and Northern Cheyennes, was camped along Tongue River and other southern affluents of the Yellowstone, and it soon became evident that the Indians would dispute the passage of the Tongue. Sharp skirmishes took place on the 1st and 3d of January (1877), and on the 7th the advance made a capture of eight Indians, mostly women and children, but of importance, as was found later, because of their relationship to leading men. The Indians made a determined effort to rescue the captives. The scouts in the lead made a bold charge upon them at dark on the 7th and were surrounded. Lieutenant Casey of the 22d Infantry, in command of a detachment of mounted infantry, with great intrepidity dashed in to the rescue with a scanty half-score of brave followers and beat off the Indian rear guard. It was now evident that the contest was at hand and the Indians chose well their field. Near the southern boundary of Montana, where Tongue River breaks through Wolf Mountains and flows in a deep cañon, whose steep walls were then mantled with deep snow or glazed with ice, the Indians sought (January 8) not only to check the advancing troops but to hold them helpless at their mercy while, from the crests above, they should deliberately shoot them down and over-

whelm them. Whooping and yelling, as is their custom in battle, they shouted to the troops "You've had your last breakfast." Here again the quick discernment, rapid movements, and bold attack of General Miles changed the nature of the battle and snatched a victory from conditions that were more favorable to defeat. Instead of permitting himself to be cooped up within the narrow valley he determined at once to deploy boldly out, occupying the widely separated hilltops along a broad front with a thin line, and put every man and every rifle at once into the fight. Every man must be a hero, for there is no touch of elbow and no rear rank; every captain must be a capable commander, for the line to right and left is gashed by deep valleys between his and the adjacent companies. No one who has not participated in such an engagement, under like circumstances, can realize how short a line a score or two of men make, springing boldly out in single rank, flanks in air and no support. More than three hundred miles of wintry wilderness were at their backs, there was no reserve, retreat meant disaster, surrender was impossible; victory or death by torture were the alternatives.

Already the Indians held the sharp crests of the steep hills, and were delivering a plunging fire into the troops. Burdened with their heavy clothing, which the polar cold made necessary, stumbling and falling in the deep snow or slipping on the icy acclivities, the troops pressed forward and gained the crests where they could meet the enemy face to face. But now a new danger threatened. As the Indians largely outnumbered the troops, they could maintain the fight in front, while they seized heights which commanded the left flank and rear, and so get the troops into a circle of death-dealing rifles. The heights to the left must be wrested from them, and that speedily. Troops were designated, under command of Captains Butler and McDopald, for that duty, and Pope served his three-inch gun judiciously to aid them—Gunner McHugh of the 5th Infantry especially distinguishing himself. Every minute the crowd of Indians on that hill-top increased, and they could take in reverse the whole left flank. The General, keenly alive to every detail of the situation, decided on the instant to send a reinforcement. Sitting on his horse near the General was Lieutenant F. D. Baldwin, 5th Infantry, then on staff duty. Turning to him and pointing to the left, the General said: "Tell them to take that hill without failure and drive the Indians away." This was the reinforcement, and it was enough. Putting spurs to old "Red Water," Baldwin forced him at the run up the glassy hillside, and then, hat in hand, and with a ringing shout, he newly inspired the weary men, and, with the momen-

tum of his own brave onset, carried them to the coveted crests. The battle was by no means over yet; for hours it raged. Old Winter himself at last took a part and contributed a furious, blinding snow-storm. Disheartened by the death of a prominent medicine man, whom they thought invulnerable, the Indians were at last driven through Wolf Mountains and towards the Big Horn range. They were pursued until it became evident that they could not be overtaken by the command without replenishing its supplies. Polar cold makes extensive demands on the vitality of men and animals; it not only occasions exhaustion, but also impairs the will power. Campaigning on short rations where it prevails would be both cruel and hazardous. The weary, frost-bitten troops welcomed the shelter of the rude log huts and returned to the cantonment which their own labor had built, and while they were resting and recuperating their commander took means to reap the fruits of the important victory he and they had won, not only from armed enemies, but even from the very elements themselves.

Recognizing the ill effects upon the spirits and health of the command of the monotony and confinement at that remote point, to which the mail could be brought only rarely and by sending a strong detachment to Fort Buford, nearly two hundred miles away, General Miles had constructed a large canvas-covered building in which the band of the 5th Infantry furnished choice musical entertainments, interspersed with the well-intentioned efforts of the barn-storming dramatic talent of the command. It was the paradise of the stage-struck soldier, whose most gray-bearded pun or castaneous joke was sure of an encore from an always crowded house.

But work was the occupation of the commander and of those most closely associated with him. Serving as scout and interpreter with the command was John Bruguier, the son of a French trader and an Indian mother, a man whose fidelity and courage were unquestioned and whose knowledge of the customs and language of the Sioux was of great value. The General decided to make use of this man and of a portion of the Indians captured January 7 to communicate with Crazy Horse. Bruguier, although he believed that he would be killed by the Indians as a deserter, started February 1 with two of the captives. Taking up the trail beyond the scene of the battle of January 8, he found the camp on a tributary of the Little Big Horn and got into communication with Crazy Horse without the molestation from the subordinates which he had anticipated. He delivered the message of General Miles, which was: "Surrender at the cantonment on Tongue River, or at your agency, or I will attack you

again." The experience of the winter had taught Crazy Horse that this was no idle threat, and a delegation of chiefs came back with Bruguier to satisfy themselves that what he said was true. They arrived February 19. In councils repeated on many days the Indians put forward their orators and diplomats and sought to obtain a modification of the terms. There was probably a mutual fear of treachery in the councils. Officers had no arms in sight but wore their revolvers beneath their coats, and Indians drew their blankets close about their scowling faces, with Winchesters grasped within, their bright, beady eyes intent upon the officers. At one time it seemed that the theater might be the scene of a veritable tragedy, when Little Chief was understood, in his impassioned speech, to advise "the young men to put something in their guns." There was an involuntary start but no other demonstration. The Indian is human and respects the man who can overcome him. At last this delegation recognized that the conditions presented ("Surrender here, or surrender if you prefer at your agencies at the south, or fight") were an ultimatum and they returned to their camp, which was brought near to the forks of Powder River, and a much larger delegation of chiefs came in, March 18, still intent on securing better terms. The experiences of a month before were repeated and with like result. Of the larger delegation was Little Hawk, an uncle of Crazy Horse. He with others accepted the terms and submitted to the retention by General Miles of nine prominent leaders, Sioux and Northern Cheyennes, as hostages that the whole hostile camp would surrender in thirty days. Crazy Horse and Little Hawk led the bulk of the hostiles, more than two thousand, to the Red Cloud and Spotted Tail agencies, in the department of the Platte, where they surrendered. Three hundred, chiefly Cheyennes, led by White Bull, Two Moons, and Hump surrendered at the cantonment.

In six months, including a winter of polar cold, General Miles with his force of sixteen companies of hardy and well-commanded infantry, leaving at all times two garrisons to protect the cantonments, had subdued two powerful forces of Indians, wrested from their control a vast territory, opened the way for the advance of the Northern Pacific Railroad, which had long halted at Bismarck on the left bank of the Missouri, and so inaugurated all that has since become history in that region.

The surrender of the Sioux under their agreement with General Miles took out of the field not only the thousand who followed Crazy Horse, but that brave war chief also, and in a community so little organized as are the Indian tribes the hostility, or the reverse, of a few great leaders has vastly more weight than in a

highly organized state in which there is no essential man. Anticipating a little we may give the few additional facts of importance in Crazy Horse's career. After his surrender, he and his people were placed on the reservation near Camp Robinson in Northern Nebraska. For a time he was quiet but later was believed to be planning to lead away his people on the war-path again. It was thought best by the officers in authority there to arrest him, which was done, but while being conducted to the guard-house he made a desperate break for liberty and attempted to cut down with a knife all who opposed him. He was mortally wounded in the struggle, and died September 7, 1877.

THE SUBJUGATION OF LAME DEER'S BAND.

THE intention of the Government to assemble troops in the spring of 1877, to renew the contest, took shape in orders which brought to General Miles's command four troops of the 2d Cavalry from Fort Ellis, near Bozeman (in the Gallatin valley near the base of the Rockies) eleven troops of the 7th Cavalry and four companies of the 1st Infantry from posts along the Missouri in Dakota. The marked successes of the winter campaign had effected the greater part of the object for which this large command was assembled, but its presence during the summer, and the movements of its various detachments over all parts of the immense territory watered by the Yellowstone and its affluents, confirmed the conquest already achieved and assured the Indians that their sway therein was gone forever. By a singular conjunction of circumstances an important force of Indians was, in the late summer and autumn, imported into that region from the far Pacific slope and by its pursuit beyond the Missouri, and capture near the boundary line, added another hardly contested fight and conspicuous success to Miles's record; but of that later. The first of the reinforcements to arrive were the four troops of the 2d Cavalry, and General Miles speedily equipped a command of this battalion — whose readiness for any service well illustrated its regimental motto, "*Toujours prêt*," — and of six companies of his infantry, two of the 5th, four of the 22d, and marched out, May 1, against a band of Sioux, mostly Minneconjous, under Lame Deer, who had broken away from the main body and refused to surrender.

Having confidence in the sincerity of the Cheyennes and Sioux who had but just surrendered to him, General Miles selected from them a small party headed by White Bull, and took them as scouts. Neither on that occasion nor afterward did these Indians waver in their fidelity. The route of the command was for more than sixty miles up the valley of

the Tongue, but springing grass and a stream of limpid water had taken the place of the snowy hillsides and ice-bound river bed which had frowned on the January expedition. Leaving the train at this point to follow with the infantry commanded by Major Dickey of the 22d, the mounted force, chiefly 2d Cavalry but augmented by a detachment of mounted infantry, pushed rapidly out in search of the hostile camp. The minute knowledge of the country possessed by the Indian scouts enabled the command to march by night as well as by day, and so, up through the broken country along the Rosebud, following the same general approach as that pursued by General Custer in the preceding June, the force pressed on with scarcely a pause during two nights and one day, the patient pack-mules jogging along the trail in rear. The stealthy, keen-sighted Indians at last "located the camp," in frontier phrase, and then, giving a few hours for rest, the command was stripped for the fight. Everything not demanded for the rapid march and the vigorous fight was placed on the pack mules; canteens, arms and equipments carefully arranged to avoid noise. The weird half-light of the night, the commands in suppressed tones and the consciousness in all minds that this "meant business" all contributed to that tense frame of mind with which men face a danger that is certain, imminent, and of unknown dimensions. The hostile camp was on an affluent of the Rosebud, then called The Muddy, but since then Lane Deer Creek. Without loud command the force was urged rapidly down through the breaks on the left of the Rosebud, across the bed of that steep-banked stream. Just as the birds were twittering in the trees and the night began to yield to day (May 7), the head of the column turned into the valley of The Muddy. The tenseness of mind before mentioned increases its sensitiveness to small and indifferent objects. The twittering of birds in the trees, the wealth of grass which the Chinook winds spread soft over the sheltered valleys, in contrast with wasting snow-drifts still clinging to the northern sides of the hillcrests, and the Big Horn range, still thick-blanketed in its winter covering, to which haze gave an ecru tinge, all of these irrelevant things the words Lane Deer suggest and evoke from memory.

The Indian scouts reached the wooded hills above the camp at earliest dawn, and watched the unsuspecting hostiles as they untethered their ponies from among the lodges and turned them out to graze. And so, all unannounced, the little force burst upon them. Lieutenant Edward Casey, of the 22d, commanding the mounted infantry and the scouts, charged through the village, sweeping away the ponies and cutting off the hostiles from their herd.

Close in rear of him rode General Miles and staff, leading the cavalry, which was commanded by Captain Ball. It was the General's desire to secure the surrender of the Indians without a fight, and to this end he had instructed White Bull to call to them and explain to them that they could surrender and would be unharmed.

This overture was responded to by a rifle-ball which passed between the arm and the body of the plucky old chief, but the offer was still repeated, and Lane Deer and his head warrior, Iron Star, seemed disposed to accept, even shaking hands with the General and one of his staff, the latter dismounting for the purpose, while another staff officer dismounted to take the Indians' arms. Whether they intended treachery or feared it can never be known, for, hastily withdrawing a few yards, they sought cover behind a bank and opened fire. Parleying and peacemaking were plainly out of place thereafter. General Miles's orderly, just behind him, was killed by a shot plainly aimed at the General, and the troops, for a few moments held in check while the hand-shaking was going on, were now sent vigorously against the Indians. Lane Deer and Iron Star were among the first to fall; their following scattered on foot into the broken, pine-covered hills close to their camp, and were pursued, in small, scattered bands, for some eight miles, leaving their dead in the hands of the troops. The entire camp and its supplies were captured; also four hundred and fifty ponies and horses. These, with the animals of the surrendered Cheyennes, formed the nucleus of the mount of the "11th Cavalry,"¹ as the 5th Infantry, mounted on captured ponies, was called. And so this successful encounter contributed in itself and in that which it supplied very materially to the thorough subjection of the hostiles.

Major Dickey, in command of the infantry, received the merited commendation of the General for the "zeal and energy" with which he urged forward his command, and the sturdy pluck with which he disregarded a rumor of a great disaster which grew out of the fact that one or two pack-mules with their escort, getting separated from the command in the rapid night march, were cut off by the Indians. The change of aspect, from the disaster which he had been led to expect to the victory which he found to have taken place, roused his enthusiasm, and he called for "three cheers," to which his weary but enthusiastic command responded with a will.

Leaving the cavalry to occupy that section the remainder of the command, with captured

¹ The regular cavalry establishment of the army has ten regiments.—G. W. B.

ponies, returned to the cantonment. All active operations, nearly all movements, were interrupted by rain and flood such as have not since visited that region. Supply wagons sank to the hub and were immovable. Dry gullies became great streams and rivers overflowed their banks. Troops in mud-roofed huts found that the roofs were storage reservoirs. It became a serious question for the time whether supplies could be sent to the 2d Cavalry battalion, so many new and rapid rivers filled the ravines and gulches.

Utilizing this period of enforced quiet the General began the organization of the "11th Cavalry." Companies B, F, G and I, 5th Infantry, formed the first battalion of that most efficient corps, and under command of Captain Simon Snyder of the 5th it became a potent factor in the remainder of the campaign. By subsequent captures ponies to mount the remainder of the regiment were obtained, and the gallant 11th was not dismounted till after the need of its efficient service had passed and General Miles had, by promotion, been transferred to another field of duty.

The Indian pony lends himself to the niceties of drill and parade with even greater reluctance than his master adopts "the white man's road." In vain the irate sergeant ordered his rider to "dress up there on the left," with that vigor of speech which characterized "our army in Flanders"; if the storm came into his face he solemnly turned his haunches towards it and his attitude announced more graphically than even the French tongue could "*J'y suis, j'y reste*"; but no rattle of musketry could disturb the equanimity with which he seized the moment of the hottest fight to clip the scanty herbage while his rider, dismounted, was fighting a little in front of him; he was accustomed to long journeys and short rations, and, to adopt the slang of the region, "rest made him tired." He contributed very materially to subdue his former master, and, with the elk, the buffalo, the antelope, the free unconventional life of the plains and, alas, probably with his old master too, he will soon become only a picturesque reminiscence.

The long rain storm and the floods at last passed away. The remainder of the reinforcements before mentioned reported for duty, also a force of friendly Crow Indians led by First-Lieutenant G. C. Doane, 2d Cavalry. The scattered fragments of *Lame Deer's* band were so hotly pursued by different detachments of the command that they were forced to seek rest and sue for peace at the Red Cloud and Spotted Tail agencies. Before the close of summer peace and security reigned throughout Dakota and Montana. A large fleet of steamboats plied unmolested between Bismarck, then the Northern

Pacific terminus, and the upper Yellowstone, transporting supplies for the command and building material for the two new posts, Forts Keogh and Custer; the one near the mouth of the Tongue, the other at the junction of Little Big Horn with the Big Horn, in sight of the fatal hill which, like the Alamo, had no messenger to tell of the heroic deeds it had witnessed. These posts and a force at Fort Peck on the Missouri, an outpost towards Sitting Bull's camp in Canada, and the large territory over which they kept watch and ward became the garrisons and the territorial command known as the "District of the Yellowstone," under General Miles's command.

CHIEF JOSEPH AND THE NEZ PERCÉS.

THE summer of 1877 was an unusually attractive one in Montana, the spring rains having thickly carpeted hill and valley with verdure. General Sherman came to the cantonment on his river and wagon journey through to the Pacific, and General Miles took advantage of the visit to request him to present to the soldiers who had performed conspicuous acts of gallantry in the preceding campaigns the medals of honor which had been bestowed upon them by Congress. At a parade of all the troops present, each bronzed and hardy soldier thus honored stepped out as his name was called, and received at the hands of the general-in-chief the token which thereby had for him an added distinction.

The successes before recorded and the arrival of other troops made it possible, in the early summer, to relieve the six companies of the 22d Infantry, and return them to their stations along the great lakes. After a rough march of more than three hundred miles to Bismarck, they shipped their effects, including dress uniforms, to their stations and were just starting for Duluth when a telegraphic order called them to Chicago, then threatened with a riot. The quite unwonted sight of weather-beaten soldiers in campaign suits most essentially patched with bits of sacks that warranted the wearer to be "Best Family Flour," had a wholesome effect. And when in reply to a question from one of the crowd, "You would not fire on us, would you?" the prompt reply came, "Not unless the captain ordered it," the purport was unmistakable. The presence of this disciplined command obviated the need of its employment.

But the season was not destined to pass without another battle and important victory. Away beyond the Rockies dwelt the Nez Percés, a tribe quite advanced in civilization. As the occasion of their outbreak at this time, and the earlier acts of war on the part of both the troops and these Indians, had no relation to the com-

A RECONNAISSANCE.

mand of General Miles, no account of them need appear here. When hostilities had begun their really great and remarkable chief, Joseph, conceived the bold scheme of transporting his whole band, women, children and all, across the Rockies through leagues of rough forest and broken ravines, across deep and broad rivers to Dominion territory, pursued and harassed though he was by several commands. While these Indians were yet in Idaho and before it seemed probable that they could penetrate Montana, General Miles was gathering from every available source information as to their probable route and objective and discussing

and forming plans to capture them. On the 3d of August, six days before the battle of Big Hole in which General Gibbon's command inflicted and suffered much loss, General Miles instructed Lieutenant Doane to "intercept, capture, or destroy" this band. Lieutenant Doane, 2d Cavalry, was then en route to Judith Basin near the Upper Missouri, then abounding in game and believed to be the objective of Joseph.

On the 11th of August, but two days after the battle of Big Hole and while Joseph was yet among the Rockies, the General sent six troops of the 7th Cavalry under command of

ON THE MARCH—THE ADVANCE GUARD.

its colonel, General Sturgis, towards the Upper Yellowstone with orders to "intercept, or pursue and capture or destroy" this band. Lieutenant Doane's command, which included a troop of the 7th Cavalry and a large body of Crow allies, was also placed under General Sturgis's orders for this duty. The action above indicated anticipated instructions received August 21 to the same end. General Sturgis and Lieutenant Doane were instructed to keep General Miles fully informed of all important movements and events. At evening September 17, the General learned at the cantonment, Tongue River, Montana, that the Indians had outstripped their pursuers, evaded and passed General Sturgis's forces, had had an engagement with them in the valley of the Yellowstone near the present site of Billings, and had thus a practically unobstructed route to the boundary—more than two hundred miles. Hastily organizing, from that which was left of his command, its available force, he began to move at once. All through the night the ferry-boat was plying, transferring to the left bank of the Yellowstone troops, transportation, and supplies, and the early morning of the 18th saw the force striking rapidly out for the northwest, intending by a march along the hypothenuse of a triangle, to intercept a rapidly marching force which was following the perpendicular and had had five days the start. By small detachments and scouts the General kept himself informed of everything far out to the left and, thus marching, reached the Missouri, at the mouth of the Musselshell, September 23, with the main command, some of the detachments being farther up stream. Major Guido Ilges, from Fort Benton, had with a scanty detachment boldly followed up the Indians for a short distance from their place of crossing the Missouri but had not force enough to effect a decisive result. On the 25th, General Miles learned through Ilges that the Nez Percés had crossed on the 23d; he ferried his command across the Missouri and pushed out with his mounted force,—three troops of the 2d Cavalry commanded by Captain Tyler, three of the 7th Cavalry commanded by Captain Hale, and four companies of the 5th Infantry commanded by Captain Snyder,—leaving his train to follow, and carrying upon pack-mules supplies with which his command could eat sparingly and fight liberally. From early dawn to dark for four days along the grassy plains which border the Little Rockies, the troops were urged on, past tempting herds of buffaloes and flocks of inquisitive antelopes, and, on the 29th, in a snow-swept camp in the gap between the Little Rocky and the Bear Paw Mountains, tidings of the discovery of the trail came from the scouts at the left; Lieutenant Maus' 1st In-

fantry, commanding the scouts, had used his sleepless vigilance to good purpose. The earliest dawn of the 30th saw the command again crowding forward. Soon the small body of surrendered Cheyennes and Sioux accompanying the command roused from their usual immobility and stripped for a fray: saddles, blankets, and bridles were snatched from their ponies; now and again softly patting their hands together and pointing far down a foggy valley, they threw off blankets, beaded shirts, and leggings and, clad in a waist-cloth and a grim smile, they sprang on their ponies (guided by a lariat about neck and nose) and, rifle in hand, dashed away for the fog-obscured valley where the battle of Bear Paw was about to open. "Camp three miles away!" was shouted from mouth to mouth. General and staff, Tyler, Hale, and Snyder, with their battalions well in hand, started on the trail of the Indian scouts over the rolling hills and smooth grassy valleys which skirt the northern base of the Bear Paw. The three miles proved to be eight and the trot became a gallop. "Let Tyler sweep around to the left and cut off the camp from the herd," was the command communicated by a staff officer who led the 2d Cavalry to its position. This brought the 7th to the front of the charging column, and Hale, sitting his horse with his accustomed grace, his face lighted up with the debonair smile which his friends so well remember, dashed bravely forward to the heroic death that was awaiting him. The two battalions, 7th and 5th, under General Miles's lead charged direct upon the camp. The surprise was complete, Joseph had watched his own trail but had not scouted to his flank. But he was a soldier and a commander. His camp was a stronghold within the curve of a crescent-shaped bank, the bank itself cut by ravines heading in the open country.

The work of the scouts and Tyler's battalion was promptly done, and the Indians, seeing themselves cut off from their animals, turned at bay and met the onset of Hale and Snyder like the brave men they were. The 7th and 5th dismounted and vigorously pressed the attack, holding the Indians in a close-drawn circle; so close were the contestants that faces seen then were afterwards recognized. The Indians fired from cover and their number could not be estimated. The commanding officer, desiring to change the position of the 7th, sent one of his staff to convey the order. He rode to the position of Hale's battalion, all of whom, seeking such slight cover as inequalities of surface afforded, were hotly engaged, gave the customary salute to its commander, who was lying among his men, and began the familiar formula—"The General's compliments and he directs"—when observing that no response was given

LONG-TOM RIFLES ON THE SKIRMISH LINE.

he looked more intently and saw that he was saluting the dead. Near Hale lay his adjutant, Lieutenant J. W. Biddle, 7th Cavalry, worthy son of a brave sire who had given his life in the War for the Union.

Meantime with courage and good judgment Lieutenant McClermand, commanding a troop of the 2d Cavalry, had gathered in the herd of 800 ponies which the Indians who escaped at the first charge tried to rescue. The hot fire and the short range had wrought terrible havoc. Within the first half hour twenty per cent. of the attacking force was laid low, and an unusual percentage was killed outright, but neither party would yield. The Indians dug cellar-like pits which protected them from direct fire. Another charge was ordered and, led by Captain Carter of the 5th Infantry, a portion of that regiment sprang boldly forward, penetrated the village, and inflicted a severe loss, but thirty-five per cent. of the attacking party fell in less time than is required to describe its heroic action. It was evident that success at such a price would be too costly. The courageous and skilful defense and the excellent arms of the Indians, many of whom had magazine guns and

some of whom used explosive bullets, rendered it necessary to adopt the methods of a siege in subduing them. The skilful and brave conduct of Sergeant John McHugh, 5th Infantry, who commanded the artillery detachment and who had distinguished himself at Wolf Mountain, January 8, '77, deserves especial attention. The command was virtually a heavy skirmish line without reserves, and McHugh, regardless of personal exposure, crowded his artillery, one small Hotchkiss breech-loader and a 12-pounder, close upon the line, and deliberately loaded and fired. The exigencies of transportation permitted but few 12-pounder shells. Those few were so skilfully planted that every one of them told. On the 1st of October, the second day of the battle, some willingness to surrender appeared, but not till the 5th of October did the surrender occur. Joseph handed his rifle to General Miles and, with the dignity that well became his handsome figure and noble mien, pointed impressively to the sun and said: "From where the sun now stands I fight no more against the white man."¹

Four hundred and eighteen Indians surrendered; 57 were killed or wounded during the

¹ During the battle the besieged and besiegers alike looked, but with very different emotions, towards the northern horizon, and the solicitude of the commander hampered with a large number of wounded and the forebodings of those who were helpless from wounds may perhaps be faintly imagined as time and again large

forces of Indians were reported approaching, indeed apparently were close at hand, and the thick-falling snow driven by a howling wind made it impossible to determine, till the on-coming host had crowned the hills about the battle-field, that they were only a herd of buffaloes.— G. W. B.

fight and siege; 105 including Joseph's daughter escaped when the troops charged, and reached Dominion territory. The captives were taken first to Kansas and then to Indian territory. Nearly seven years later, when General Miles had received promotion and was commanding the department of Columbia, he at last succeeded in having Joseph and the remnant of his band returned to the vicinity of their old home.

The troops killed at the battle of Bear Paw lie side by side in the ceaseless comradeship of a soldier's grave on the field where they fought shoulder to shoulder; like so many other brave men who fell in the "Battle of Civilization," they are unknown or forgotten by those who profited by their victories. In his annual report for 1877, General Miles summarized thus the operations of his troops for the year ending with October: "Distance marched, over 4000 miles. Besides much property captured and destroyed, 1600 animals were taken. Upwards of 7000 Indians were killed, captured, forced to surrender, or driven out of the country."

DRIVING THE SIOUX UNDER THE YOKE.

HAVING been sent by General Miles on a peaceful mission to Dominion territory, in the spring of 1878, I heard that Sitting Bull, so far from coming to the rescue of the besieged Nez Percés, was so terrified by the proximity of the command of "Bear Coat," as the Indians called General Miles, because of a fur-trimmed coat that he wore, that he pulled up stakes and fled incontinently northward. In February, 1878, his following moved south of the boundary, and General Miles made preparations to attack him; he had already sent out his supply train with escort, when a telegram from Washington ordered him back. One of the conditions of the successes of 1876-1877 was the absence of speedy communication. That helpful lack had now been hurtfully supplied and the method adopted of conducting campaigns from a point so remote that prompt and intelligent use of the varying conditions at the scene of hostilities could not be made. But though the expedition north of the Missouri was suspended the entire section south of that river was tranquil and safe. As indicating this I may relate that on my return from the Dominion, in the summer of 1878, accompanied only by one scout, I journeyed across country from Fort Peck to Fort Keogh without seeing an Indian, and was assured of their absence by the quiet grazing of tens of thousands of buffalo among which we rode by day and camped at night. Taking advantage of this period of quiet General Miles started out with a party to visit Yellowstone Park, in

August, 1878, but, while on the way learned that another band of Indians from beyond the mountains was coming into his district, over the route followed by Joseph the year before.

These were the Bannocks from southern Idaho. Sending the ladies and guests of the pleasure party forward on their journey, he took twenty men of the 5th Infantry, and fifteen Crow scouts, and started up Clark's Fork to intercept the invaders. On September 4 he surprised the camp, and in the brief fight 11 Indians were killed and the remainder of the band captured, also their animals, numbering 250. The loss of the attacking party was small in numbers, but among the killed was Captain Andrew S. Bennett, 5th Infantry, a most meritorious officer.

The winter of 1878-9 passed without any general movement of the command, but, as was said of a President of the United States whose term of office covered a period of great excitement, it might be said of Sitting Bull on our northern border that "He sat there like a poultice, drawing all the bad humors to a head." The recalling of the expedition of February, 1878, was practically an abandonment to the hostiles of the valleys of Milk River and other northern affluents of the Missouri in Montana, and they became Sitting Bull's domain, with friendly territory to the north, and there were assembled not only the United States Indians who were hostile, but also Indians and

A WOUNDED WAR-PONY.

half-breeds from north of the line, making a total of some five thousand, with thousands of ponies. The half-breeds became a supply train of ammunition. It was evident at last, even at the seat of government thousands of miles away, that some stop must be put to the progress of affairs in that direction, and in June, 1879, the order came. In the spring the Indian's fancy lightly turns to thoughts of war. The buffaloes, in that olden time, roamed in great herds, "beef on the hoof" without limit, and the grass made the ponies fat, while the broad rivers were booming with the melting

COURIERS.

snows of the mountains, delaying the movement of troops and trains, whereas in the winter the frozen streams afforded smooth and easy roadway to troops and supplies, and the improvident enemy and their starved ponies were least prepared for activity. General Miles's force when assembled at Fort Peck consisted of seven companies of the 5th Infantry mounted on the ponies captured in earlier expeditions, seven troops of the 2d Cavalry, two companies of the 6th Infantry and an artillery detachment, besides surrendered Indian and white scouts, a total of about eight hundred, much the largest command that he ever led against Indians.

On July 17 the advance guard, two companies and Indian scouts, commanded by First-Lieutenant W. P. Clark ("Philo") 2d Cavalry, attacked a band of more than three hundred Indians near Frenchman's Creek, and after a sharp fight drove them back for twelve miles upon their main body which, issuing out, surrounded the advance. It is doubtful whether "Philo" ever felt a qualm of fear; he could not have been blamed if he had on this occasion experienced it, for the immense host was encircling him, and, but for the rapid advance of Miles and the main command he would probably not have survived to give his graphic account of the charge that came thundering to his rescue.

The charge was a splendid spectacle and a most efficient one; the hostiles abandoning their property fled precipitately from the field.

But the 49th parallel, which interposed no obstacle to the hostiles, whether advancing to depredate or retreating before the troops, was an insuperable barrier to those troops and prevented such pursuit as alone could result in success. The half-breeds, with their supply train of unique and indigenous carts, quaintly fashioned of wood and rawhide, without a scrap of iron, received the next attention, and more than eight hundred were arrested and a check put to their traffic.

While, for reasons already stated, this expedition could not achieve an immediate success, it yet so impressed the hostiles with the efficiency and ubiquity of the command that it largely contributed to produce the result desired. The succeeding months witnessed no general hostile movement; occasional raiding parties of Indians appeared and were hotly pursued, killed, captured, or dispersed by the troops that were kept ever alert and ready to start out in any direction at any time of day or night. In the summer and autumn of 1880 large and important surrenders to General Miles were made, the Indians breaking off from Sitting Bull's camp and coming under their own chiefs to Fort Keogh. In this way Spotted Eagle and Broad Trail or Big Road, Rain-in-the-Face, Kicking Bear, Short Bull, etc., and their followers came in and many others, but perhaps the most widely known of the Indians who thus surrendered was Rain-in-the-Face, whose

name Longfellow's poem first made familiar and whose story Mrs. Custer's graphic book "Boots and Saddle" relates somewhat at length. Whether from modesty, caution, or a passion for exact statement, is uncertain, but he did not, after his surrender, claim for himself so conspicuous and so ghastly a part in the battle of Little Big Horn as the poem assigns him. Fierce savage though he doubtless was he exhibited marked susceptibilities to the softer vanities of life, took especial pleasure in arraying himself in gaudy attire, and with face highly colored, and having on it a row of simulated raindrops, would "preserve that expression" and "look pleasant" over and over while the photographer "took" him. These Indians numbering some fifteen hundred, also a considerable part of those who had surrendered earlier, were sent in 1881 by a fleet of steamboats to their agencies on the Missouri in Dakota. General Miles had exhibited towards them those qualities which secured their loyalty and confidence. He had conquered them in battle, kept inviolate faith with them in council, treated them justly, trusted and protected them as captives, and during the months of '79 and '80, while keeping every trail hot with detachments in pursuit of the hostiles, had inaugurated a régime of peace and goodwill among those who were camped about Fort Keogh.

Dropping the implements of warfare they took hold of plow, hoe and shovel, made roads, broke the soil, and planted and so made a hopeful start on "the white man's road." When the order for their removal came they clustered about Captain E. P. Ewers, 5th Infantry, who had had immediate charge of them from the first and had ably seconded and executed General Miles's plans for their welfare, and, with tears streaming down their cheeks, besought him to take everything they owned and allow them to remain. Every member of the old campaigning force felt a keen and kindly interest in them. There was not alone the feeling of humanity but of comradeship; for many of them, as enlisted scouts, had marched and fought with the troops and some of them bear the scars of wounds received while fighting for the United States.

The surrender of those who had flocked to Sitting Bull's standard at last took from him the power to assert himself as a great chief. While proof cannot in the nature of the case be adduced, there is little room for doubt that the long tarry of those Indians north of the boundary was brought about by a corrupt alliance of one official with the traders in the Northwest Territory who profited greatly by trading with them. At last, deserted by all but his immediate family following, too weak and

ill-supplied to maintain a hostile attitude, too poor by the sale or robbery of his effects to tempt the cupidity of those who graphically describe themselves as "not on the frontier for their health," Sitting Bull surrendered at Fort Buford, at the mouth of the Yellowstone, July 20, 1881. The combination in his mien of the grandeur of the great prince in misfortune and the thriftiness of the showman was irresistibly funny. Holding himself in sorrowful reserve within his tepee, he stationed one of his young men at the entrance to collect a quarter of a dollar from each one of the throng of eager visitors.

General Miles was promoted in December, 1880, which severed his connection with the 5th Infantry. Of that relation, which existed for eleven and a half years, it falls quite within the truth to say, no command was ever more ably led; no commander was ever more loyally and bravely followed.

THE CAPTURE OF GERONIMO'S APACHES.

GENERAL MILES was now assigned to the command of the Department of the Columbia, including Alaska, Washington, and Oregon, and nearly all of Idaho. Before assuming it he was employed on a commission to the Indian Territory, and on other duty in the east. He went to his new headquarters, Vancouver Barracks, in the summer of 1881. He secured the return to their former home of Joseph's band of Nez Percés, who were unhappy in the Indian Territory. In the summer of 1885 there were indications of serious trouble in the Indian Territory, growing out of the conflict between the interests of the owners of immense herds of cattle grazing in that territory and of the Indians whose reservations were thus made a grazing ground, and the President summoned General Miles from the extreme northwest to the Department of the Missouri, with headquarters at Fort Leavenworth, Kansas, in which department the Indian Territory is situated. One-fourth of the army was assembled under his orders and, by its disposition in posts and camps near the scene of the difficulty, peace was maintained, and there opened before the General the prospect of a quiet residence at that most attractive post, Fort Leavenworth, which had been his army home for several years while he was colonel of the 5th Infantry. But, on April 2, 1886, he was sent to command the Department of Arizona to relieve General Crook. And so, a second time within nine months, the President had through the War Department assigned to him a new and most difficult task. The conditions of success were wholly unlike those which obtained in the Sioux war. In the northwest the great numbers of the enemy and the intensity of the cold were

Frederic Remington
1874

A TYPICAL TROOPER.

the two chief obstacles to be overcome, whereas in the southwest the hostile force was small and so easily eluded pursuers, and the temperature was torrid. Heat, barrenness, jagged mountain cliffs, steep walled cañons, scant water, or the utter absence of it, these multiplied a hundred fold the prowess of the wily Apaches who had been accustomed for generations to defy these obstacles, to sustain life under these hard conditions, and for years to prey upon the peaceful inhabitants who lived a pastoral or agricultural life on the open plains or along the rivers, or mined the rich ores of the mountains.

Devastating impartially on both sides of the boundary, Arizona, New Mexico, and Northern Mexico were laid under rude tribute by

these lithe and active savages, who moved so rapidly and stealthily that the fancied security growing out of a period of tranquillity was often the precursor of destruction, robbery, and death. This insecurity and alarm had terrorized the citizens of the territories and caused, on the part of many, an abandonment of their ordinary industrial pursuits. Two tasks confronted him; to capture or destroy the Indians who were actively hostile led by Geronimo and Natchez, and to repress and control those who, through sympathy and relationship with the hostiles, and through instinct and experience, were ready to take the warpath and swell the tide of devastation. The mountains and the sun—the first the strongholds of the savages and almost impassable obstacles to the troops, the latter the cause of the desert-like dryness and the intolerable heat which augmented the difficulties of campaigning almost to the point of impossibility—were made his allies, the eyes of his command, and the carriers of swift messages. By a system of heliograph signals, communications were sent with almost incredible swiftness; in one instance a message traveled seven hundred miles in four hours. The messages, flashed by mirrors from peak to peak of the

mountains, disheartened the Indians as they crept stealthily or rode swiftly through the valleys, assuring them that all their arts and craft had not availed to conceal their trails, that troops were pursuing them and others awaiting them. The telescopes of the vigilant members of the Signal Corps, who garrisoned the rudely built but impregnable works on the mountains, permitted no movement by day, no cloud of dust even in the valleys below, to escape attention. Little wonder that the Indians thought that the powers of the unseen world were confederated against them.

Fortunately there was a treaty which permitted our troops to pursue the Indians into Mexico, and so the international boundary did

not, as in the Northwest, interpose to protect them until they had refitted and recuperated. General Miles organized a special force of picked cavalry and infantry, scouts and guides, under Captain H. W. Lawton, 4th Cavalry, to pursue the hostiles whenever they should take to Mexican territory.

Geronimo did not permit this well-devised machine to rust from disuse. In truth, before it was fully in order, he put it to the test, making a blood-red trail from a point 150 miles within the Mexican Territory and invading ours on the 27th of April, just fifteen days after General Miles had taken command. The trail was taken up in succession, by twenty-five different commands or detachments, representing four regiments, each detachment inspired by the energy expressed in a paragraph of General Miles's order in which he said: "Commanding officers are expected to continue a pursuit until capture or until they are assured a fresh command is on the trail." This vigorous pursuit and the five encounters with different commands convinced the Indians that Arizona afforded them no place of security, and they hurried from its borders to the supposed inaccessible fastnesses of the Sierra Madre in Mexico. Though the contests of forces so small may not merit the name of battle, yet in no battle have the participants incurred greater risks or evinced a higher degree of heroism. Captain Lebo of the 10th Cavalry, after a hot pursuit of 200 miles, brought the Indians to bay and there ensued a spirited contest just within the Mexican Territory, in which Lieutenant Powhatan H. Clarke of the 10th Cavalry, then recently from the class-rooms and the drill ground of West Point, distinguished himself by rushing forward at the risk of his life and bearing to a place of safety a wounded veteran soldier who lay helpless under a sharp fire of the enemy. A like act of heroism was a few days later exhibited under similar circumstances by First-Sergeant Samuel Adams of the 4th Cavalry, of the command of Captain Hatfield of that regiment.

Lawton's command (with its sixty days' supplies on pack mules) now took up the trail. The rough nature of the country and the absence of grass and water made it impossible to employ cavalry in a long continued pursuit. Assistant-Surgeon Leonard Wood, who for a part of the time added to his professional duties the command of the infantry of Lawton's force, gives a graphic description of the country and of the chase. He writes:

Sonora, taken as a whole, is a continuous mass of mountains of the most rugged and broken character. Range follows range with hardly an excuse for a valley. It produces nothing save a few wild fruits, cactus, and more or less of game. Troops operating in these sections are dependent

for all supplies on pack trains. Such is the roughness of the country in some portions that even these cannot pass through. Water is scanty and often of poor quality. Grass almost wanting during the dry season. The heat is intense, often reaching 120 degrees Fahrenheit.

Of the Apaches of Geronimo's band he says:

Mountaineers from infancy, they found little difficulty in passing through the roughest country. The cactus and various roots furnished food; water or its equivalent was also furnished by the former plant; rats, mice, rabbits, and deer contributing the meat ration, also the horse when forced as far as he could carry his rider. During the latter part of June and July it was my good fortune to command the infantry. In the detachment of Companies D and K, 8th Infantry, were men who had served in India and South Africa, and, in their opinion, this was by far the hardest and roughest service they had ever seen. . . . Infantry on this expedition marched in drawers and undershirts. . . . I do not remember seeing a pair of blue trousers put on after once wearing the lighter articles mentioned above.

Through such a region and with such drafts upon the strength and fortitude of the men this force kept up the pursuit during the intolerable heat of that summer of '86, and with such steadfastness and skill that no craft or device of the savages could throw them off the trail or secure to the pursued an hour's respite. The extreme southern point of pursuit was three hundred miles south of the international boundary and its tortuous windings spread a network of intersecting trails over the mountains and cañons of Sonora. At last (September 4) the Indians, worn out, surrendered. This band was sent ultimately to Alabama. The conduct of Lieutenant C. B. Gatewood, 6th Cavalry, in going unattended by troops into the camp of the hostiles and demanding their surrender, must be recorded as a conspicuous instance of the fortitude which at the call of duty defies danger.

Simultaneously with the winding up of the Geronimo and Natchez campaign and the deporting of them and their followers, the four hundred Warm Spring and Chiricahua Indians at Fort Apache, who were thought to be ready for an outbreak, were also hurried from the territory which they had harried and devastated for years. The citizens of Arizona indicated their appreciation of General Miles's services by presenting to him a richly ornamented sword. For the first time in our history our temple of Janus had closed doors.

THE MESSIAH DISTURBANCE.

WHEN the foregoing was written, more than a year ago, the "Messiah Craze" was beginning to attract the attention of those who were intently observing Indian affairs. It was

asserted that Mormon influence was active in stirring up dissatisfaction. The craze took shape from what was, unfortunately, an always present feeling with the Indians — hunger. The Messiah was not only to annihilate the invading whites, but to bring back the boundless herds of buffalo which, but a decade ago, were the Indians' preferred food. The non-progressive, inveterately wild Indians, of whom Sitting Bull was the best known, saw in the disaffection and hallucination an opportunity to recover their fast-waning power; and the boys and young men, who had grown up in a period of peace and had listened to the recital of the deeds of their sires under the old régime, burned with zeal to emulate them.

At that time General Miles was in command of the military division which included our entire Pacific coast. Before the Indian trouble culminated, changes of command fortunately brought him from the West to the Interior, and placed him in command of the Division of the Missouri, in which are all of the Sioux, thousands of whom had surrendered to him during his campaigns of 1876-80, and among whom the craze was the most menacing. With his customary foresight, General Miles formed plans and issued orders, whose careful execution would have illustrated the beneficent work of a disciplined force, not only in preventing violence, but also in protecting non-combatants and their property. Even a partial execution of his plans afforded this protection; during the trouble, from November 15, 1890 to January 25, 1891, not a person was killed by Indians outside the boundaries of an Indian reservation, and the homes and property of adjacent settlers were unmolested.

Doubtless one of Sitting Bull's own race would call him an unbending patriot. "The Great Spirit made me an Indian and did not make me an Agency Indian," he proudly asserted to General Miles under a flag of truce, in the fall of 1876, when backed up by a thousand braves. There are, however, but two goals for the Indians — civilization or annihilation; Sitting Bull has the latter, as doubtless he would have preferred. He was killed December 15,

1890 by men of his own race who were enforcing against him the orders of the whites, whom he hated. Captain Fechet, of the 8th Cavalry, who brought a force to the support of the Agency police, took charge of the body, which was not mutilated nor scalped; he had it carried to Fort Yates, North Dakota, where it was decently buried in a coffin. Whatever the opinion entertained as to Sitting Bull and his taking off, inasmuch as his influence tended always to embroil his following with the dominant race his death will doubtless result in benefit to his own people.

For every Indian war there is a cause; too often that cause has been bad policy, bad faith, bad conduct, or blundering on the part of the whites. This sketch has simply recognized the fact of war and sought to give a true though necessarily an inadequate statement as to the means used by one commander to conduct his Indian campaigns to their uniformly successful issue. Given the fact of war, whatever the cause, the soldier must secure peace, even if he fights to win it. For the savage of to-day, as for civilized man not so many centuries ago, an enemy and his wife and children have no rights. The recognition of this fact would prevent much misconception as to the character of Indians. If I have not, in these sketches, indicated sufficiently the friendly feeling which, in common with nearly all army men, I feel for the Indians, not only friendly feeling but admiration for many of their qualities, I cannot hope to do so in a brief paragraph. The American people, those who really wish and hope to save the Indians from extinction or degradation, must be prepared to use great patience and summon all their wisdom. Indians (the men) naturally look upon the arts of peace very much as the knights of the past ages did. War is their pastime; by it come glory, honor, leadership. It is unlikely that the place of the Indians as peaceful citizens will approach their place as warriors. "Justice and judgment," the one to protect, the other justly to punish them, have been too greatly lacking. It remains yet to be seen whether the future will be better than the past.

G. W. Baird,
Major, U. S. A.

JULY.

STRANGE, at the full meridian of the year,
To see a leaf blown wild, untimely sere.
Oh, passing strange, borne on light laughter's breath
Through the rich house of life, the thought of death.

Henry Tyrrell.

GREELEY'S ESTIMATE OF LINCOLN.

AN UNPUBLISHED ADDRESS BY HORACE GREELEY.¹

HERE have been ten thousand attempts at the life of Abraham Lincoln, whereof that of Wilkes Booth was perhaps the most atrocious; yet it stands by no means alone. Orators have harangued, preachers have sermonized, editors have canted and descanted; forty or fifty full-fledged biographies have been inflicted on a much-enduring public; yet the man, Abraham Lincoln, as I saw and thought I knew him, is not clearly depicted in any of these, so far as I have seen. I do not say that most or all of these are not better than *my* Lincoln—I only say they are not mine. Bear with me an hour and I will show you the man as he appeared to me—as he seems not to have appeared to any of them; and if he shall be shown to you as by no means the angel that some, or the devil that others, have portrayed him, I think he will be brought nearer to your apprehension and your sympathies than the idealized Lincoln of his panegyrists or his defamers. Nay, I do sincerely hope to make the real Lincoln, with his thoroughly human good and ill, his virtues and his imperfections, more instructive and more helpful to ordinary humanity, than his unnatural, celestial apotheosized shadow ever was or could be.

I shall pass rapidly over what I may distinguish as the *rail-splitting* era of his life. Born in a rude portion of Kentucky in 1809; removed into the still more savage, unpeopled wilderness, then the Territory of Indiana, in 1811; losing his mother and only brother while yet a child, and his only sister in later youth, he grew up in poverty and obscurity on the rugged outskirts of civilization, or a little beyond it, where there were no schools, post-offices few and far between, newspapers in those days seldom seen in the new and narrow clearings, and scarce worth the eyesight they marred when they were seen; the occasional stump speech of a candidate for office, and the more frequent sermon of some Methodist or Baptist

itinerant—earnest and fervid, but grammatically imperfect, supplying most of the intellectual and spiritual element attainable. He did not attend school for the excellent reason that there *was* no school within reach—the poor whites from the Slave-States, who mainly settled Southern Indiana, being in no hurry to establish schools, and his widowed father being one of them. So he chopped timber, and split rails, and hoed corn, and pulled fodder, as did other boys around him (when they did anything); learning to read as he best might, and thenceforth, reading from time to time such few books, good, bad, and indifferent, as fell in his way, and so growing up to be six feet four inches high by the time he was twenty years old. As no one ever publicly denied that he was an obedient, docile son, a kind, indulgent brother, and a pleasant, companionable neighbor, I will take these points as conceded.

About the time he became of age his father made a fresh plunge into the wilderness—this time into the heart of Illinois, halting for a year near the present city of Springfield, and then striking eastward seventy miles to Coles County, whither his son did not see fit to follow him, but having once already when nineteen years of age made a voyage down the Mississippi to New Orleans on a flat boat, laden with produce, he now helped build such a boat and made his second journey thereon to the Crescent City; returning to serve a year as clerk in a store; then heading a company of volunteers for the Black Hawk War of 1832; and next becoming at once a law student and a candidate for the legislature; receiving an almost unanimous vote in the only precinct where he was known, but failing of an election in the county. He had already, since he became his own man, obtained some schooling, and the craft of a land surveyor; he was twenty-three years old when he in the same season became a captain of volunteers, a candidate for representative, and a student at law.

Let me pause here to consider the surprise often expressed when a citizen of limited schooling is chosen to be, or is presented for one of

¹ This interesting address by Horace Greeley was written either in 1868 or not far from that date; but for some reason it did not receive publication—and it is believed was never delivered. Mr. Greeley's manuscript, now in the possession of a former editor

of the "Tribune," has been lent to me to decipher. Its frequent and closely and minutely written interlineations, and its general illegibility have made its reproduction a somewhat appalling task.

Joel Benton.

the highest civil trusts. Has that argument any foundation in reason, any justification in history?

Of our country's great men, beginning with Ben Franklin, I estimate that a majority had little if anything more than a common school education, while many had less. Washington, Jefferson, and Madison had rather more; Clay and Jackson somewhat less; Van Buren perhaps a little more; Lincoln decidedly less. How great was his consequent loss? I raise the question; let others decide it. Having seen much of Henry Clay, I confidently assert that not one in ten of those who knew him late in life would have suspected from aught in his conversation or bearing, that his education had been inferior to that of the college graduates by whom he was surrounded. His knowledge was different from theirs; and the same is true of Lincoln's as well. Had the latter lived to be seventy years old, I judge that whatever of hesitation or *rawness* was observable in his manner would have vanished, and he would have met and mingled with educated gentlemen and statesmen on the same easy footing of equality with Henry Clay in his later prime of life. How far his two flatboat voyages to New Orleans are to be classed as educational exercises above or below a freshman's year in college, I will not say; doubtless some freshmen know more, others less, than those journeys taught him. Reared under the shadow of the primitive woods, which on every side hemmed in the petty clearings of the generally poor, and rarely energetic or diligent, pioneers of the Southern Indiana wilderness, his first introduction to the outside world from the deck of a "broad-horn" must have been wonderfully interesting and suggestive. To one whose utmost experience of civilization had been a county town, consisting of a dozen or twenty houses, mainly log, with a shabby little court-house, including jail, and a shabbier, ruder, little church, that must have been a marvelous spectacle which glowed in his face from the banks of the Ohio and the lower Mississippi. Though Cairo was then but a desolate swamp, Memphis a wood-landing and Vicksburgh a timbered ridge with a few stores at its base, even these were in striking contrast to the somber monotony of the great woods. The rivers were enlivened by countless swift-speeding steamboats, dispensing smoke by day and flame by night; while New Orleans, though scarcely one-fourth the city she now is, was the focus of a vast commerce, and of a civilization which (for America) might be deemed antique. I doubt not that our tall and green young backwoodsman needed only a piece of well-tanned sheepskin suitably (that is, learnedly) inscribed to have rendered those two boat trips memorable as his degrees in ca-

capacity to act well his part on that stage which has mankind for its audience.

He learned and practised land-surveying because he must somehow live—not ultimately but presently—and he had no idolatrous affection for the wholesome exercise of rail-splitting. He studied law, giving thereto all the time that he could spare from earning his daily bread, for he aspired to political life; and seven-eighths of all the desirable offices in this country are monopolized by the legal profession—I will not judge how wisely. He stood for the legislature, as an election would have enabled him to study regularly without running in debt; whereas, land surveying must take him away from his books. Beaten then, though he received the votes of nearly all his neighbors, he was again a candidate in 1834, and now, when twenty-five years old, and not yet admitted to the bar, he was elected and took his seat—the youngest but one, and probably the tallest member on the floor. He was reëlected in 1836, in 1838, and in 1840, receiving after his fourth election the vote of his fellow Whigs for Speaker. He had thus practically, when but thirty-one years old, attained the leadership of his party in Illinois; and that position was never henceforth contested while he lived. When the party had an electoral ticket to frame, he was placed at its head; when it had a chance to elect a United States Senator, it had no other candidate but Lincoln, though under his advice it waived its preference, and united with the anti-Nebraska Democrats in choosing their leader, Lyman Trumbull; it presented him to the first Republican National Convention as its choice for vice-president, and the next, as its choice for president, which prevailed. Meantime, when his second seat in the Senate became vacant in 1858, there was not one Republican in the State who suggested any other name than his for the post. What was it, in a State so large as Illinois, and a party that was justly proud of its Browning, its Yates, its Davis, its Washburne, and others, gave him this unquestioned ascendancy?

I would say, first, his unhesitating, uncalculating, self-sacrificing devotion to the principles and aims of his party. When a poor, unknown youth he first proclaimed himself a Whig, Jacksonism was dominant and rampant throughout the land, and especially in Illinois, where it seemed to have the strength of Gibraltar. In 1836, Ohio and Indiana went for Harrison, but Illinois was not moved to follow them. In 1840, the Whigs carried every other free State, New Hampshire excepted; yet Illinois despite her many veterans who had served under Harrison, or been under his rule, as Governor of the Northwest Territory, went

for Van Buren. Again, in 1844, Mr. Lincoln traveled far and wide, speaking long and well as a Clay elector, yet the State rolled up a largely increased majority for Polk, and she went heavily for Pierce in 1852, likewise for Buchanan in '56. She never cast an electoral vote for any other than the Democratic nominee, till she cast all she had for her own Lincoln. I apprehend that throughout his political career Mr. Lincoln was the most earnest partizan, the most industrious, effective canvasser of his party in the State. Having espoused the Whig cause when it was hopeless, and struggled unavailingly for it, through twenty years of adversity, his compatriots had learned to repose implicit faith in him beyond that which they accorded to any other man, Henry Clay alone excepted.

Our presidential and State canvasses are often improvidently conducted. People wander to distant counties to listen to favorite orators, and swell processions at mass-meetings. They compel speakers to strain and crack their voices in addressing acres of would-be auditors; when, in fact, more effect is usually produced, so far as conviction is concerned, by a quiet, protracted talk in a log school-house than by half-a-dozen tempestuous harangues to a gathering of excited thousands. I perceive and admit the faults, the vices of our system of electioneering; and yet I hold that an American presidential canvass, with all its imperfections on its head, is of immense value, of inestimable utility, as a popular political university, whence even the unlettered, the ragged, the penniless may graduate with profit if they will. In the absence of the stump, I doubt the feasibility of maintaining institutions more than nominally republican; but the stump brings the people face to face with their rulers and aspirants to rule; compels an exhibition and scrutiny of accounts and projects, and makes almost every citizen, however heedless and selfish, an arbiter in our political controversies, enlisting his interest and arousing his patriotism. The allowance of a monarch, exorbitant as it is, falls far below the cost of choosing a president; but the acquaintance with public affairs diffused through a canvass is worth far more than its cost. That falsehoods and distorted conceptions are also disseminated is unhappily true; but there was never yet a stirring presidential canvass which did not leave the people far better, and more generally, informed on public affairs than it found them. The American stump fills the place of the *coup d'état*, and the Spanish-American *pronunciamento*. It is, in an eminently practical sense, the conservator of American liberty, and the antidote to official tyranny and corruption.

The canvasser, if fit to be a canvasser, is

teaching his hearers; fit or unfit, he can hardly fail to be instructed himself. He is day by day presenting facts and arguments and reading in the faces of his hearers their relative pertinence and effectiveness. If his statement of his case does not seem to produce conviction, he varies, fortifies, reinforces it; giving it from day to day new shapes until he has hit upon that which seems to command the hearty, enthusiastic assent of the great body of his hearers; and this becomes henceforth his model. Such was the school in which Abraham Lincoln trained himself to be the foremost *convincer* of his day—the one who could do his cause more good and less harm by a speech than any other living man.

Every citizen has certain conceptions, recollections, convictions, notions, prejudices, which together make up what he terms his politics. The canvasser's art consists in making him believe and feel that an over-ruling majority of these preconceptions ally him to that side whereof said canvasser is the champion. In other words, he seeks to belittle those points whereon his auditor is at odds with him and emphasizes those wherein they two are in accord; thus persuading the hearer to sympathize, act and vote with the speaker. And with this conception in view, I do not hesitate to pronounce Mr. Lincoln's speech at Cooper Institute, New York, in the spring of 1860, the very best political address to which I ever listened—and I have heard some of Webster's grandest. As a literary effort, it would not of course, bear comparison with many of Webster's speeches; but regarded simply as an effort to convince the largest possible number that they ought to be on the speaker's side, not on the other, I do not hesitate to pronounce it unsurpassed.

I first met Mr. Lincoln late in 1848 at Washington, as a representative in the Thirtieth Congress—the only one to which he was ever elected. His was, as apportioned under the census of 1840, a Whig district; and he was elected from it in 1846 by the largest majority it ever gave any one. He was then not quite forty years old; a genial, cheerful, rather comely man, noticeably tall, and the only Whig from Illinois—not remarkable otherwise, to the best of my recollection. He was generally liked on our side of the House; he made two or three moderate and sensible speeches which attracted little attention; he voted generally to forbid the introduction of slavery into the still untainted Territories; but he did not vote for Mr. Galt's resolve looking to the immediate abolition of slavery in the Federal district, being deterred by the somewhat fiery preamble thereto. He introduced a counter-proposition of his own, looking to

abolition by a vote of the people—that is by the whites of the district—which seemed to me much like submitting to the votes of the inmates of a penitentiary a proposition to double the length of their respective terms of imprisonment. In short, he was one of the very mildest type of Wilmot Proviso Whigs from the free States—not nearly so pronounced as many who long since found a congenial rest in the ranks of the pro-slavery democracy. But as I had made most of the members my enemies at an early stage of that short session, by printing an elucidated exposé of the iniquities of Congressional mileage; and as he did not join the active cabal against me, though *his* mileage figured conspicuously and by no means flatteringly in that exposé, I parted from him at the close of the Congress with none but grateful recollections. There were men accounted abler on our side of the House—such as Collamer, of Vermont; Palfrey, and Mann, of Massachusetts, and perhaps Schenck and Root, of Ohio—yet I judge that no other was more generally liked and esteemed than he. And yet had each of us been required to name the man among us who would first attain the presidency, I doubt whether five of us would have designated Abraham Lincoln.

He went home to his law office after trying, I think, to be commissioner of the General Land Office under the incoming Taylor régime and finding the place bespoken; and thenceforth, little was heard of him out of Illinois until the Northern uprising consequent on the introduction and passage of what is known as the "Nebraska Bill." He had hitherto been known as rather conservative than otherwise; this act had the same effect on him as on many others. He was henceforth an open, determined opponent of any extension of slavery to territory previously free. Thus he bore his part in the Illinois contests of 1854 and 1856; and thus when unanimously proclaimed the standard bearer of the Republican party of the State in the senatorial struggle of 1858, he opened the canvass in a speech to the convention which nominated him, which embodied these memorable words:

If we could first know where we are and whither we are tending, we could better judge what to do and how to do it. We are now far into the fifth year since a policy was initiated, with the avowed object and confident promise of putting an end to slavery agitation. Under the operation of that policy, that agitation has not only not ceased, but has constantly augmented. In my opinion it will not cease until a crisis shall have been reached and passed. "A house divided against itself cannot stand." I believe this government cannot endure permanently, half slave and half free. I do not expect the Union to be dissolved—I do not ex-

pect the house to fall—but I do expect it will cease to be divided. It will become all one thing or all the other. Either the opponents of slavery will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in the course of ultimate extinction; or its advocates will push it forward till it shall become alike lawful in all the States, old as well as new, North as well as South.

Here is the famous doctrine of the "irrepressible conflict," which Governor Seward set forth four months later in his speech at Rochester, New York, which attracted even wider attention and fiercer denunciation than Mr. Lincoln's earlier avowal. "Shall I tell you what this collision means?" queried Governor S., with reference to the existing controversy respecting slavery in the Territory: "They who think that it is accidental, unnecessary, the work of interested or fanatical agitators, and, therefore, ephemeral, mistake the case altogether. It is an *irrepressible conflict* between opposing and enduring forces; and it means that the United States must and will, sooner or later, become either entirely a slave holding nation, or entirely a free labor nation. . . . It is the failure to apprehend this great truth that induces so many unsuccessful attempts at final compromise between the slave and the free States; and it is the existence of this great fact that renders all such pretended compromises when made, vain and ephemeral."

Finer reading of a national horoscope no statesman ever made—clearer glance into the dim-lit future has rarely been vouchsafed to holy prophet after long vigils of fasting and prayer at Sinai or Nebo. And yet what a stunning concert—or rather dissonance of shriek, and yell, and hostile brays these twin utterances evoked, from ten thousand groaning stumps, from a thousand truculent, shrewish journals! An open adhesion to atheism or anarchy could hardly have called forth fiercer or more scathing execrations. Yet looking back through an eventful interval of less than a decade we see that no truth is more manifest, and hardly one was at that moment more pertinent than that so clearly yet so inoffensively stated, first by the Western lawyer and candidate, then by the New York senator.

I invoke that truth to-day as a bar to harsh judgments and bitter denunciations—as a balm to the wounds of the nation. There *was* "an irrepressible conflict," the Union *could not* "endure half slave and half free." The interests of slave-holders and free labor *were* antagonistic, and it was by no contrivance of politicians, but in spite of their determined efforts that the slavery question was perpetually, with brief intervals, distracting Congress, and involving the North and the South in

fierce collision. Shallow talkers say "If it had not been for this or for that — if there had been no Calhoun or no Garrison, no Wendell Phillips or no Wise — if John Brown had died ten years sooner, or Jeff Davis had never been born there would have been no Nebraska question; no secession; no civil war." Idle, empty babble, dallying with surfaces and taking no account of the essential and inevitable! If none of the hundred best-known and most widely hated of our notables of the last twenty years had ever been born, the late struggle might have been postponed a few years or might have been hastened, but it could not have been averted. It broke out in God's good time because it had to be — because the elements of discord imbedded in our institutions could no longer be held passive, so far as its divine end had been fully accomplished. Such are the convictions which have impelled me to plead for amnesty, charity, and mercy, and oblivion, as I should have pleaded though with even less effect had the other party triumphed. Though there had never been a Missouri to admit, a Texas to annex, nor a Kansas to organize and colonize with free labor or with slaves, the "conflict between opposing and enduring forces" would, nevertheless, have wrought out its natural results.

I cannot help regarding that senatorial contest of 1858, between Lincoln and Douglas, as one of the most characteristic and at the same time most creditable incidents in our national history. There was an honest and earnest difference with regard to a most important and imminent public question; and Illinois was very equally divided thereon, with a United States senator for six years to be chosen by the legislature then to be elected. Henceforth each party selects its ablest and most trusted champion, nominates him for the coveted post, and sends him out as the authorized, indorsed, accredited champion of its principles and policy to canvass the State and secure a verdict for its cause. So the two champions traversed the prairies, speaking alternately to the same vast audiences at several central, accessible points, and speaking separately at others, until the day of election; when Douglas secured a small majority in either branch of the legislature, and was re-elected, though Lincoln had the larger popular vote. But while Lincoln had spent less than a thousand dollars in all, Douglas in the canvass had borrowed and dispensed no less than eighty thousand dollars; incurring a debt which weighed him down to the grave. I presume no dime of this was used to buy up his competitor's voters, but all to organize and draw out his own; still the debt so improvidently, if not culpably, incurred remained to harass him out of this mortal life.

Lincoln it was said was beaten; it was a hasty, erring judgment. This canvass made him stronger at home, stronger with the Republicans of the whole country, and when the next national convention of his party assembled, eighteen months thereafter, he became its nominee for President, and thus achieved the highest station in the gift of his country; which but for that misjudged feat of 1858 he would never have attained.

A great deal of knowing smartness has been lavished on that Chicago nomination. If A had not wanted this, or had B been satisfied with that, or C not been offended because he had missed or been refused something else, the result would have been different, says Shallowpate. But know, O Shallowpate! that Lincoln was nominated for the one sufficient reason that he could obtain more electoral votes than any of his competitors! And that reason rarely fails in a national convention. It nominated Harrison in '39; Polk in '44; Taylor in '48; Pierce in '56; and Lincoln in '60. Those who compose national conventions are generally at least shrewd politicians. They want to secure a triumph if for no better reason than that they hope thereby to gratify their own personal aspirations. So they consult and compare and balance popularities, and weigh probabilities; and at last the majority center upon that candidate who can poll most votes. This may not be our noblest test of statesmanship, but it is at least intelligible. And thus Abraham Lincoln became President, having every electoral vote from the free States, but three of the seven cast from New Jersey.

Then followed secession, and confederation, and civil war, whereof the first scenes had been enacted before Mr. Lincoln commenced his journey to Washington, taking leave of his fellow-citizens of Springfield with prophetic tenderness and solemnity, and thenceforward addressing at almost every stopping place vast crowds who would have kept silence; and so meandering to the national capital, everywhere cheered and welcomed, though nearly half his auditors had voted against him, until he neared the slave line; and now he was over-persuaded by the urgent representations of Senator Seward and General Scott, based upon the espials and discoveries of Police-Superintendent Kennedy, to break his engagement to traverse Baltimore, as he had traversed New York and other cities which had given heavy majorities against him, and take instead a sleeping-car which, passing through Baltimore in the dead of night, landed him in Washington hours before that wherein he was expected publicly to enter Baltimore.

I have no doubt that there was a plot to

assassinate him on his way through Baltimore—that the outbreak which cost the lives of six Massachusetts volunteers would have been anticipated by two weeks had he afforded the opportunity; but this peril of assassination is one of the inevitable attendants of conspicuous activity in public affairs in times of popular passion. I cannot say how many distinct, written notices that *my* life was forfeited, and the forfeit would soon be exacted, I have been honored with—certainly a dozen, possibly a hundred—and, arguing from the little to the great, I have no doubt that Mr. Lincoln's allotment of these seductive billets must have considerably exceeded ten thousand.

But what then? Must we sit up all night because so many people die in their beds? We cannot evade the assassin; we cannot fence him out, or Henry IV., of France, and ever so many more powerful and beloved monarchs would not have succumbed to the dagger, the pistol, or the bowl. The most powerful of living rulers is Alexander II., of Russia, and his life has twice within a few years past been saved by the inaccuracy of a regicide's aim.¹ The words of the mighty Julius, as rendered by Shakspeare, embody the truest and highest wisdom:

Cowards die many times before their deaths;
The valiant never taste of death but once.
Of all the wonders that I yet have heard,
It seems to me most strange that men should
fear;
Seeing that death, a necessary end,
Will come when it will come.

I am quite certain that this was also Mr. Lincoln's profound conviction, and that he acted on it whenever he was not overruled by a clamor too sudden and too weighty to allow his judgment fair play. "Hence his untimely death," you say. I do not believe it; you may renounce the sunlight and sit trembling in an inner dungeon surrounded by triple walls and triple guards and yet the assassin will steal in upon you unawares. There is no absolute safeguard against him; your only refuge is the assurance that

Man is immortal 'til his work is done.

Despite ten thousand menaces and warnings and offers to pay for his taking off, and to take him off for pay, Mr. Lincoln was inaugurated President. No crack of rifle or bark of revolver interrupted the reading of his inaugural, though I confidently expected and awaited it. Under a bright March sun, surrounded by a brilliant coterie of foreign ministers and home

dignitaries, the new President read the inaugural, which he had evidently prepared with care and anxious deliberation before leaving his distant home. That document will be lingered over and admired long after we shall all have passed away. It was a masterly effort at persuasion and conciliation by one whose command of logic was as perfect as his reliance on it was unqualified. The man evidently believed with all his soul that if he could but convince the South that he would arrest and return her fugitive slaves and offered to slavery every support required by comity, or by the letter of the Constitution, he would avert her hostility, dissolve the Confederacy, and restore throughout the Union the sway of the Federal authority and laws! There was never a wilder delusion. I doubt whether one single individual was recalled from meditated rebellion to loyalty by that overture, yet mark how solemnly, how touchingly he pleads that war may be averted:

[Here Mr. Greeley quotes the close of the inaugural.²—EDITOR.]

I apprehend that Mr. Lincoln was very nearly the last man in the country whether North or South to relinquish his rooted conviction, that the growing chasm might be closed and the Union fully restored without the shedding of blood. Inured to the ways of the Bar and the Stump, so long accustomed to hear of rebellions that never came to light, he long and obstinately refused to believe that reason and argument, fairly employed, could fail of their proper effect. Though Montgomery Blair, that member of his cabinet who best understood the Southern character, strenuously insisted from the outset that war was inevitable, that hard knocks must be given and taken before the authority of the Union could be restored, or would be recognized in the Cotton States, the President gave far greater heed to the counsel and anticipations of his Secretary of State, whose hopeful nature and optimistic views were in accordance with his own stubborn prepossessions.

I saw him for a short hour about a fortnight after his inauguration; and though the tidings of General Twiggs's treacherous surrender of the larger portion of our little army, hitherto employed in guarding our Mexican frontier, had been some days at hand, I saw and heard nothing that indicated or threatened belligerency on our part. On the contrary, the President sat listening to the endless whine of office-seekers, and doling out village post-offices to importunate or lucky partizans just as though we were sailing before land breezes on a smiling, summer sea; and to my inquiry, "Mr. President! do you know that you will have to *fight* for the place in which you sit?"

¹ Assassinated finally March 13, 1881.—EDITOR.

² See "Abraham Lincoln: A History," Vol. III, p. 319.—EDITOR.

he answered pleasantly, I will not say lightly—but in words which intimated his disbelief that any fighting would transpire or be needed; and I firmly believe that this dogged resolution not to believe that our country was about to be drenched in fraternal blood, is the solution of his obstinate calmness throughout the earlier stages of the war; and especially, his patient listening to the demand of a deputation from the Young Christians of Baltimore as well as of the mayor and of other city dignitaries, that he should stipulate while blockaded in Washington, and in imminent danger of expulsion, that no more Northern volunteers should cross the sacred soil of Maryland in hastening to his relief. We could not comprehend this at the North—many of us have not yet seen through it; most certainly if he had required a committee of ten thousand to kick the bearers of this preposterous, impudent demand back to Baltimore, the ranks of that committee would have been filled in an hour from any Northern city or county containing fifty thousand inhabitants.

And thus the precious early days of the conflict were surrendered because the President did not even yet believe that any serious conflict would be had. He still clung to the delusion that forbearance, and patience, and moderation, and soft words would yet obviate all necessity for deadly strife. Thus new volunteers were left for weeks to rot in idleness and dissipation in the outskirts and purlieus of Washington, because their commander-in-chief believed that it would never be necessary or advisable to load their muskets with ball cartridges. But when at length that heartless, halting, desolating, stumbling, staggering, fatally delayed advance to Bull Run was made by half the regiments that should have been sent forward, and had recoiled in ignominious disaster, as an advance so made against a compact, determined, decently handled force must, there came a decided change. The wanton rout of that black day cost the President but one night's sleep. It cost me a dozen, while good men died of it who had never been within two hundred miles of the so quickly deserted field. Henceforth Mr. Lincoln accepted war as a stern necessity, and stood ready to fight it out to the bitter end.

And yet while I judge that many were more eager than he to bring the struggle to an early if worthy close, no one would have welcomed an honorable and lasting pacification with a sincerer joy. No man was ever more grossly misrepresented or more widely misapprehended than he was on this point; and I deem the fault partly his own or that of his immediate counselors. Let me state distinctly how and why.

The rebellion, once fairly inaugurated, was

kept alive and aggravated by systematic and monstrous misrepresentation at the South of the spirit and purpose of the North. That our soldiers were sent down to kill, ravage, and destroy, with "Beauty and booty" on their standards, and rage and lust in their hearts; and that the North would be satisfied with nothing less than its utter spoliation, if not the absolute extirpation of the Southern people—such were the tales currently reported and widely believed in that vast region wherein no journal not avowedly Confederate existed or could exist for years, until the strength of the Rebellion lay in a widespread belief within its domain that nothing worse could possibly happen to its adherents or their families than subjugation to the Union. Hence I hold that our Government, whatever its hopes of a favorable issue, should not only have welcomed every overture looking to pacification from the other side but should have studied and planned to multiply opportunities for conference and negotiation. When Henry May, an anti-war representative of Baltimore, in Congress, sought permission to go to Richmond in quest of peace, Mr. Lincoln allowed him to slip clandestinely through our lines; but kept his mission quiet and disclaimed all responsibility for it. I would have publicly said: "Go in welcome, Mr. May; I only stipulate that you publish, and authenticate by your signature, the very best terms that are offered you at Richmond; and I agree if they be responsibly indorsed to give them a prompt unprejudiced consideration." And I would have repeated this to every Democrat who might at any time have solicited like permission. So, when in July, 1863, Mr. A. H. Stephens sought permission to visit Washington in a Confederate gunboat with some sort of overture, I would have responded: "Spare us your gunboat, Mr. S.; that would be superfluous here; but you will find a swift vessel and a safe-conduct awaiting you at Fort Monroe; so come to us at once, properly accredited, and you will find us not merely willing but anxious to stay this revolting effusion of human blood." And so to the last. I do firmly believe that the President's Niagara card, "To whom it may Concern," did much to disabuse the Southern mind with regard to Northern purposes, and might have been so framed and proffered as to have done very much more had it said directly, affirmatively, what it said inferentially, negatively. I believe it would have paralyzed thousands of arms then striking frenziedly at the best of their and our country. And I hold Mr. Lincoln's ultimate visit to Fort Monroe, there to confer with Stephens, Hunter, and Campbell, with a view to peace, one of the wisest and noblest acts of an eventful, illustrious

life, and one which contributed more than many a Union victory to the speedy disintegration and collapse of the Rebellion. Honored be the wisdom that comes late, if it be not indeed *too* late!

As to the slavery question I think Mr. Lincoln resolutely looked away from it so long as he could, because he feared that his recognizing slavery as the mainspring and driving wheel of the Rebellion was calculated to weaken the Union cause by detaching Maryland, Kentucky, and possibly Missouri also, from its support. "One war at a time" was his wise veto on every avoidable foreign complication; and in the same spirit he vetoed Fremont's and Phelps's, and Hunter's, and other early efforts to liberate the slaves of rebels, or to enlist negro troops. I am not arguing that he was right or wrong in any particular instance; I am only setting forth his way of looking at these grave questions, and the point of view from which he regarded them. To deal with each question as it arose and not be embarrassed in so dealing with it by preconceptions and premature committals, and never to widen needlessly the circle of our enemies, was his inflexible rule. Hence when Congress, in the summer of 1864, named and enacted an elaborate plan of reconstruction for the States then in revolt—which bill was presented to him during the last hour of the session—he withheld his signature and thereby caused its failure—not, as he explained, that he was adverse to the conditions proposed therein, but that he "refused to be inflexibly committed to *any* single plan of restoration"—while the Rebellion was still unsubdued, and while exigencies might arise in the progress of the conflict, which could not be foreseen. The document wherein Messrs. Wade and Winter Davis criticized and controverted this decision is far clearer and more caustic than any Mr. Lincoln ever wrote; and yet I believe, the judgment of posterity will be that he had the right side of the question.

I am not so clear that he had the better position in his discussion with Messrs. Corning and other Democrats of Albany and in his like correspondence with Democratic leaders in Ohio touching the arrest and punishment of Mr. Vallandigham. The essential question at issue was this: "How far may a citizen lawfully and with impunity oppose a war which his country is waging?" It is a question as old as human freedom, and its settlement has not yet been approximated. That there must be liberty to nominate and support candidates hostile to the further prosecution of the contest, and in favor of decisive efforts looking to and in favor of its speedy close by negotiation, is not contested: but where is the limit of this

liberty? May the Opposition proceed to arraign the President as a usurper, despot, anarchist, murderer, and eulogize the cause of the public enemy as righteous, patriotic, and entitled to every good man's sympathy and support? If not, where is the freedom of discussion in election? If yea, how is the national authority to be upheld and its right in extremity to the best services of the whole people enforced and maintained? Mr. Vallandigham was and had been an open, unqualifiedly consistent opponent of the War for the Union. He held that war to be unjust, unconstitutional, and wantonly aggressive. He held that the Union could only be restored through the discomfiture of the national forces and the consequent abandonment of all attempts to "coerce" the South. There was nothing equivocal in his attitude, nor in his utterances, whether in Congress or on the stump. And it cannot be fairly denied that his speeches were as clearly giving "aid and comfort" to the enemy as were the cavalry raids of John Morgan, J. E. B. Stuart, or Mosby. So General Burnside, commanding the military department, including Ohio, had him arrested, tried by a court-martial, convicted, and sentenced to imprisonment in a fortress; which sentence was commuted by the President into banishment to the Southern Confederacy—which sentence was duly executed. And thereupon Mr. V—— was nominated for Governor by the Democracy of Ohio, and a strong appeal made to the President by the Democrats of Albany and elsewhere, for an unconditional reversal of the sentence of banishment, assuming that Mr. V—— had been condemned and banished in violation of law and right—"for no other reason than words addressed to a public meeting in criticism of the course of the administration; and in condemnation of the military orders of" Burnside. I think Mr. V——'s friends have ground to stand upon so strong—or at least so plausible—that they might well have offered to set forth more broadly and forcibly the position and the action they controverted.

Mr. Lincoln answered them in what I consider the most masterly document that ever came from his pen. I doubt that Webster could have done better—I am sure he could not have so clearly and so forcibly appealed to the average apprehension of his countrymen; it is clear enough from his letter that the whole business was distasteful to him—that he thought Burnside had blundered in meddling at all with Vallandigham, or even recognizing his existence. Indeed, he intimates this part plainly in the course of his letter; yet he braces himself for his task and fully justifies therein the claim I set up for him, that he was the cleav-

erest logician for the masses that America has yet produced. Six years before he had crushed by a sentence the sophism that sought to cover the extension of slavery into the Territories with the mantle of "Popular Sovereignty": "It means," said he, "that if A chooses to make B his slave, C shall not interfere to prevent it," so, in answering Messrs. Corning and company, he treated their letter as covering a demand that the rebel cause might be served and promoted in the loyal States with impunity by any action that would not be unlawful in times of profound peace—a position that he stoutly contested. . . .

[Mr. Greeley here quotes from Mr. Lincoln's letter of June 12, 1863.—EDITOR.]

. . . I do not suppose this logic convinced Mr. Lincoln that the arrest, and trial, and conviction of Mr. V—— were wise and useful measures of repression—if it did it has had no kindred effect on *my* mind. Yet I hold that the bitterest opponent of the President and his policy must in fairness admit that the case is not entirely one-sided—that if government is to exist it must have power to suppress rebellion against its authority; and that it is neither reasonable nor possible to accord the same immunities and uniformly respect the same safeguards of free speech and personal liberty in the presence of a gigantic rebellion, as in times of public tranquillity and unbroken allegiance to order and law.

I have said that Mr. Lincoln when I first knew him was classed with the more conservative of Northern Whigs on the subject of slavery. On the 3d of March, 1837—the last day of General Jackson's rule—he submitted to the Legislature of Illinois a protest against certain pro-slavery resolves passed by the Democratic majority of that body, wherein on behalf of himself and his brethren he says:

They believe that the institution of slavery is founded on both injustice and bad policy, but that the promulgation of abolition doctrines tends rather to increase than abate its evils.

They believe that the Congress of the United States has no power under the Constitution to interfere with the institution of slavery in the different States.

They believe that the Congress of the United States has the power, under the Constitution, to abolish slavery in the District of Columbia, but that the power ought not to be exercised, unless at the request of the people of the District.

In 1848 he voted in Congress (as we have seen) to lay on the table Mr. Galt's resolve, proposing instructions to the Federal District Committee to report a bill abolishing slavery in said district; but submitted a substitute looking to compensated, gradual emancipation,

upon the express assent of a majority of the legal voters thereof. Ten years later, instructed by the Nebraska developments he had advanced, as we have seen, to the conception that "the Union could not permanently endure half slave and half free"—and that slavery, not the Union, would eventually have to succumb and disappear. This was a great stride; and he had hardly moved again when he wrote me on the 22d of August, 1862, in reply to an appeal from the pro-slavery policy which had thus far governed the practical conduct of the war, this exposition of his war policy:

I would save the Union. I would save it the shortest way under the Constitution. The sooner the national authority can be restored, the nearer the Union will be "the Union as it was." If there be those who would not save the Union unless they could at the same time save slavery, I do not agree with them. If there be those who would not save the Union unless they could at the same time *destroy* slavery, I do not agree with them. My paramount object in this struggle is to save the Union, and is not either to save or to destroy slavery. If I could save the Union without freeing any slave, I would do it; and if I could save it by freeing all the slaves I would do it; and if I could save it by freeing some and leaving others alone, I would also do that. What I do about slavery and the colored race, I do because I believe it helps to save the Union; and what I forbear, I forbear because I do not believe it would help to save the Union. I shall do less whenever I shall believe what I am doing hurts the cause, and I shall do more whenever I shall believe doing more will help the cause. I shall try to correct errors when shown to be errors, and I shall adopt new views so fast as they shall appear to be true views. I have here stated my purpose according to my view of official duty; and I intend no modification of my oft-expressed personal wish, that all men everywhere could be free.

Yours, A. LINCOLN.

This manifesto was exultingly hailed by the less radical portion of his supporters—I never could imagine why. It recognized the right to destroy slavery whenever that step should be deemed necessary to the national salvation—nay, it affirmed the *duty* of destroying in such contingency. And it proved that the President was meditating that grave step and clearly perceiving that it might—nay, probably *would*—become necessary, and that he wished to prepare the public mind for acquiescence therein whenever he should realize and announce that the time had come. I do not see how these points can have escaped the attention of any acute and careful observer.

It may well be noted here that this letter, though in form a response to my "Prayer of Twenty Millions," was not so in fact; I had not besought him to proclaim general eman-

cipation, I had only urged him to give full effect to the laws of the land, which prescribed that slaves employed with their master's acquiescence in support of the rebellion should thenceforth be treated as free by such employment, and by the general hostility of their owners to the national authority. I have no doubt that Mr. Lincoln's letter had been prepared before he ever saw my "Prayer," and that this was merely used by him as an opportunity, an occasion, an excuse, for setting his own altered position — changed not by his volition, but by circumstances — fairly before the country.

At the same time, I have no doubt that his letter expresses the exact literal truth, precisely as it lay in his mind. Assailed on the one hand as intent on upholding and preserving, on the other as subtly scheming and contriving to subvert and abolish slavery, he was really and truly obnoxious to neither of these charges, but solely, engrossingly intent in putting down the Rebellion, and preserving the Union by any and every means, and ready either to guarantee the perpetuity or proclaim the overthrow of human bondage, according as the one step or the other should seem likely to subserve and secure that end. Hence the first proclamation of freedom, which was issued but a few weeks after the appearance of this letter, seemed to me but the fulfilment of a promise implied in its fore-runner.

I did not see the President between the issue of his first and that of his second Proclamation of Freedom — in fact, not from January, 1862, till about February 1, 1863. He then spoke of the Emancipation policy as not having yet effected so much good here at home as had been promised or predicted, but added that it had helped us decidedly in our foreign relations. He intimated no regret that it had been adopted, and, I presume, never felt any. In fact, as he was habitually and constitutionally cautious as to making advances, he seldom or never felt impelled or required to take a step backward. Never putting down his foot till he felt sure there was firm ground beneath it, he never feared to lay his whole weight on it when once fairly down. And, having committed himself to the policy of Emancipation, he proclaimed and justified it in letters to sympathizing British workmen, and to friends and foes on every side. His proposal of gradual and compensated Emancipation in the loyal slave States and districts, his postponed but hearty sanction of the enlistment of Black soldiers, and his persistent and thorough recognition and assertion of the Inalienable Rights of Man, were links in one chain which he wove skilfully, if not nimbly, around the writhing form of the over-mastered, fainting Rebellion. I am no admirer of the style of his more elaborate and pretentious

state papers, especially his messages to Congress. They lack the fire and force that an Andrew, a Chase, or even a Stanton would have given them; they are not electric — not calculated to touch the chords of the national heart, and thrill them with patriotic ardor; yet I doubt that our national literature contains a finer gem than that little speech at the Gettysburg celebration, November 19, 1863, . . . after the close of Mr. Everett's classic but frigid oration. . . .

One more citation, and what seems to me the essential characteristics of a man as truly, unconsciously portrayed in his own acts and words, will have been set fairly before you:

Kentucky had been a chief obstacle to the early adoption of an Emancipation policy. As the President's native State, as the most central and weighty of the so-called border States, and as preponderantly favorable to the Union, though very largely represented in the rebel armies, the President had long hesitated and yielded to his natural reluctance to offend his loyal Whites, as it was clear that any act looking to general Emancipation would surely do.

When the die had at length been cast, and the attitude of the government had become unequivocal, her governor, Bramlett, with ex-Senator Dickson and Editor A. G. Hodges, appeared in Washington as bearers of her solemn protest against that policy. The President met them cordially, and they discussed their difference freely and amicably, but neither party seems to have made much headway in convincing and converting the other. After the Kentuckians had left, Mr. Hodges asked the President to give in writing the substance of the views he had set forth during their interview, and he did it in a letter of remarkable terseness and cogency even for him. I will cite but two passages which illustrate phases of Mr. Lincoln's character and of his mode of viewing the great questions at issue, which I have not clearly presented. In the former he says:

I am naturally antislavery. If slavery is not wrong, nothing is wrong. I cannot remember when I did not so think and feel. And yet, I have never understood that the Presidency conferred upon me an unrestricted right to act officially upon this judgment and feeling. It was in the oath I took, that I would to the best of my ability preserve, protect, and defend the Constitution of the United States. I could not take the office without taking the oath. Nor was it my view, that I might take an oath to get power, and break the oath in using the power. I understood, too, that in ordinary civil administration this oath even forbade me to practically indulge my primary, abstract judgment, on the moral question of slavery. I had publicly declared this many times, and in many ways. And I aver that, to this day, I have

done no official act in mere deference to my abstract judgment and feeling on slavery.

I did understand, however, that my oath to preserve the Constitution to the best of my ability imposed upon me the duty of preserving, by every indispensable means, that government—that nation of which that Constitution was the organic law. Was it possible to lose the nation, and yet preserve the Constitution?

By general law, life and limb must be protected; yet often a limb must be amputated to save a life; but a life is never wisely given to save a limb. I felt that measures otherwise unconstitutional might become lawful by becoming indispensable to the preservation of the Constitution through the preservation of the nation. Right or wrong, I assume this ground, and now avow it. I could not feel that, to the best of my ability, I had even tried to preserve the Constitution, if, to save slavery or any minor matter, I should permit the wreck of the government, country, and Constitution, all together.

Having briefly set forth how and why he was driven by the difficulty of subduing the Rebellion first to proclaim Emancipation, and then to summon Blacks as well as Whites to the defense of the country, and barely glancing at the advantages thus secured, he closes with these words:

And now let any Union man who complains of the measure, test himself by writing down in one line that he is for subduing the Rebellion by force of arms and in the next; that he is for taking these hundred and thirty thousand men from the Union side, and placing them where they would be but for the measure he condemns. If he cannot face his case so stated, it is only because he cannot face the truth.

I add a word which was not in the verbal conversation. In telling this tale I attempt no compliment to my own sagacity. I claim not to have controlled events, but confess plainly that events have controlled me. Now, at the end of three years' struggle, the nation's condition is not what either party or any man devised, or expected. God alone can claim it. Whither it is tending seems plain. If God now wills the removal of a great wrong, and wills also that we of the North as well as you of the South, shall pay fairly for our complicity in that wrong, impartial history will find therein new cause to attest and revere the justice and goodness of God.

Yours truly,

A. LINCOLN.

Those few words: "I attempt no compliment to my own sagacity; I claim not to have controlled events, but confess plainly that events have controlled me," furnish a key to the whole character and career of the man. He was no inspired Elijah or John Baptist, emerging from the awful desert sanctified by lonely fastings and wrestlings with Satan in prayer, to thrill a loving, suppliant multitude

with unwonted fires of penitence and devotion. He was no loyal singer of Israel touching at will his heart and sweeping all the chords of emotion and inspiration in the general heart—he was simply a plain, true, earnest, patriotic man, gifted with eminent commonsense, which, in its wide range, gave a hand to shrewdness on the one hand, humor on the other, and which allied him intimately, warmly with the masses of mankind. I doubt whether any woman or child, White or Black, bond or free, virtuous or vicious, accosted or reached forth a hand to Abraham Lincoln, and detected in his countenance or manner any repugnance or shrinking from the proffered contact, any assumption of superiority or betrayal of disdain. No one was ever more steeped in the spirit of that glorious lyric of the inspired Scotch plowman—

A man 's a man, for a' that;

and no one was ever acquainted and on terms of friendly intimacy with a greater number of human beings of all ranks and conditions than was he whom the bullet of Wilkes Booth claimed for its victim.

I pass over his reflection, his second inaugural, his final visit to the army of the Potomac, and his entry into Richmond, hard on the heels of a prolonged, postponed capture; I say nothing of his manifest determination to treat the prostrate insurgents with unexampled magnanimity, and the terrible crime which with singular madness quenched, under the impulse of intense sympathy with the Rebellion, the life which was at that moment of greater importance and value to the rebels than that of any other living man. All these have added nothing to the symmetry of a character which was already rounded and complete. Never before did one so constantly and visibly *grow* under the discipline of incessant cares, anxieties, and trials. The Lincoln of '62 was plainly a larger, broader, better man than he had been in '61; while '63 and '64 worked his continued and unabated growth in mental and moral stature. Few have been more receptive, more sympathetic, and (within reasonable limits) more plastic than he. Had he lived twenty years longer, I believe he would have steadily increased in ability to counsel his countrymen, and in the estimation of the wise and good.

But he could in no case have lived so long. "Perfect through suffering" is the divine law; and the tension of mind and body through his four years of eventful rule had told powerfully upon his physical frame. When I last saw him, some five or six weeks before his death, his face was haggard with care, and

seamed with thought and trouble. It looked care-plowed, tempest-tossed, and weather-beaten, as if he were some tough old mariner, who had for years been beating up against wind and tide, unable to make his port or find safe anchorage. Judging from that scathed, rugged countenance, I do not believe he could have lived out his second term had no felon hand been lifted against his priceless life.

The chief moral I deduce from his eventful career asserts

The might that slumbers in a peasant's arm !

the majestic heritage, the measureless opportunity of the humblest American youth. Here was an heir of poverty and insignificance, obscure, untaught, buried throughout his childhood in the primitive forests, with no transcendent, dazzling abilities, such as make their way in any country, under any institution, but emphatically in intellect, as in station, one of the millions of strivers for a rude livelihood who, though attaching himself stubbornly to the less popular party, and especially so in the State which he had chosen as his home, did nevertheless become a central figure of the Western Hemisphere, and an object of honor, love, and reverence throughout the civilized world. Had he been a genius, an intellectual prodigy, like Julius Cæsar, or Shakspeare, or Mirabeau, or Webster, we might say: "This lesson is not for us—with such faculties any one could achieve and succeed"; but he was not a born king of men, ruling by the resistless might of his natural superiority, but a child of the people, who made himself a great persuader, therefore a leader, by dint of firm resolve, and patient effort, and dogged perseverance. He slowly won his way to eminence and renown by ever doing the work that lay next to him—doing it with all his growing might—doing it as well as he could, and learning by his failure, when failure was encountered, how to do it better. Wendell Phillips once coarsely said: "He grew because we watered him," which was only true in so far as this—he was open to all impressions and influences, and gladly profited by all the teachings of events and circumstances, no matter how adverse or unwelcome. There was probably no year of his life in which he was not a wiser, cooler, better man than he had been the year preced-

ing. It was of such a nature—patient, plodding, sometimes groping, but ever towards the light—that Tennyson sings:

Perplex in faith, but pure in deeds,
At last he beat his music out.

There lives more faith in honest doubt,
Believe me, than in half the creeds.

There are those who profess to have been always satisfied with his conduct of the war, deeming it prompt, energetic, vigorous, masterly. I did not, and could not, so regard it. I believed then—I believe this hour—that a Napoleon I., a Jackson, would have crushed secession out in a single short campaign—almost in a single victory. I believed that an advance to Richmond 100,000 strong might have been made by the end of June, 1861; that would have insured a counter-revolution throughout the South, and the voluntary return of every State, through a dispersion and disavowal of its rebel chiefs, to the counsels and the flag of the Union. But such a return would have not merely left slavery intact—it would have established it on firmer foundations than ever before. The momentarily alienated North and South would have fallen on each other's necks, and, amid tears and kisses, have sealed their Union by ignominiously making the Blacks the scapegoat of their bygone quarrel; and wreaking on them the spite which they had purposed to expend on each other. But God had higher ends to which a Bull Run, a Ball's Bluff, a Gaines's Mill, a Groveton, were indispensable; and so they came to pass, and were endured and profited by. The Republic needed to be passed through chastening, purifying fires of adversity and suffering; so these came and did their work, and the verdure of a new national life springs greenly from their ashes. Other men were helpful to the great renovation, and nobly did their part in it; yet, looking back through the lifting mists of seven eventful, tragic, trying, glorious years, I clearly discern that the one providential leader, the indispensable hero of the great drama—faithfully reflecting even in his hesitations and seeming vacillations the sentiment of the masses—fitted by his very defects and shortcomings for the burden laid upon him, the good to be wrought out through him, was Abraham Lincoln.

Horace Greeley.

THE SQUIRREL INN.—III.

BY FRANK R. STOCKTON.

XIII.

DECREES OF EXILE.

TOWARDS the end of the afternoon of the day after Mr. Lanigan Beam had been installed as an outside guest of the Squirrel Inn, Miss Calthea Rose sat by the window at the back of her shop. This shop was a small one, but it differed from most other places of business in that it contained very few goods and was often locked up. When there is reason to suppose that when you go to a shop you will not be able to get in, and that, should it be open, you will not be apt to find therein anything you want, it is not likely that such a shop will have a very good run of custom.

This was the case with Miss Calthea's establishment. It had become rare for any one even to propose custom, but she did not in the least waver in regard to her plan of closing up the business left to her by her father. As has been said, she did not wish to continue this business, so she laid in no new stock, and as she had gradually sold off a great deal, she expected to be able in time to sell off everything. She did not adopt the usual methods of clearing out a stock of goods, because these would involve sacrifices, and, as Miss Calthea very freely said to those who spoke to her on the subject, there was no need whatever for her to make sacrifices. She was good at waiting, and she could wait. When she sold the few things which remained on the shelves—and she, as well as nearly every one in the village, knew exactly what these things were without the trouble of looking—she would retire from business, and have the shop altered into a front parlor. Until then the articles which remained on hand were for sale.

Miss Calthea was busily sewing, but she was much more busily engaged in thinking. So earnestly was her mind set upon the latter occupation that she never raised her head to look out at the special varieties of hollyhocks, dahlias, and marigolds which had lately begun to show their beauties in the beds beneath her window, nor did she glance towards the door to see if any one was coming in. She had much more important things to think about than flowers or customers.

Mrs. Petter had driven over to Lethbury that morning, and had told Calthea all the news of the Squirrel Inn. She had told her of the unexpected arrival of Lanigan Beam; of his unwillingness to go to Lethbury, as he had originally intended, and of the quarters that had been assigned to him in the ladder-room. She also told how Lanigan, who now wished to be called Mr. Beam, had a wonderful plan in his mind for the improvement of Lethbury, but whether it was electric lights, or gas, or water, or street railroads, or a public library, he would not tell anybody. He was going to work in his own way, and all he would say about the scheme was that he did not want anybody to give him money for it. And this, Mrs. Petter had remarked, had helped Mr. Petter and herself to believe what Lanigan had said about his amendment, for if anything could show a change in him it would be his not wanting people to give him money.

Mrs. Petter had said a great deal about the newcomer, and had declared that whatever alterations had gone on in his mind, soul, and character, he certainly had improved in appearance, and was a very good-looking young man, with becoming clothes. In one way, however, he had not changed, for in a surprisingly short time he had made friends with everybody on the place. He talked to Mr. Lodloe as if he had been an old chum; he had renewed his acquaintance with Mrs. Cristie, and was very gallant to her; he was hand-in-glove with Mr. Tippetgray, both of them laughing together and making jokes as if they had always known each other; and, more than that, it was n't an hour after breakfast when he and Mrs. Cristie's nurse-maid were sitting on a bench under the trees, reading out of the same book, while Mr. Tippetgray was pushing the baby-carriage up and down on the grass, and Mrs. Cristie and Mr. Lodloe were putting up the lawn-tennis net.

"I could see for myself," Mrs. Petter had remarked at this point, "that you were right in saying that there was no use in my talking about the boarders associating with servants, for when they made up the lawn-tennis game it turned out that Mr. Tippetgray did n't play, and so that girl Ida had to take a hand while he kept on neglecting his Greek for the baby."

At last Miss Calthea let her sewing drop into

her lap, and sat looking at an empty shelf opposite to her.

"Yes," she said to herself, her lips moving, although no sound was audible, "the first thing to do is to get Lanigan away. As long as he is here I might as well not lift a finger, and it looks as if that impertinent minx of a child's nurse would be my best help. If he does n't have one of his changeable fits, he will be ready in three days to follow her anywhere, but I must look sharp, for at this very minute he may be making love to the widow. Of course he has n't any chance with her, but it would be just like Lanigan to go in strongest where he knew he had n't any chance. However, I shall see for myself how matters stand, and one thing is certain—Lanigan has got to go."

About this time Mr. Lanigan Beam, finding himself with a solitary quarter of an hour on his hands, was reflecting on a bench upon the lawn of the Squirrel Inn. "Yes," he thought, "it is a great plan. It will elevate the social tone of Lethbury, it will purify the moral atmosphere of the surrounding country, and, above all, it will make it possible for me to live here. It will give me an opportunity to become a man among men in the place where I was born. Until this thing is done, I can have no chance to better myself here, and, more than that, the community has no chance to better itself. Yes, it must be done; *Caltha Rose* must go."

At this moment Mr. Petter came along, on his way to supper.

"Well, Lanigan," said he, "are you thinking about your great enterprise?"

"Yes," said the other, rising and walking with him; "that is exactly what my mind was working on."

"And you are going to do it all yourself?" said Mr. Petter.

"Not exactly," said Beam. "I shall not require any pecuniary assistance, but I shall want some one to help me."

"Is there anybody about here who can do it?"

"Yes; I hope so," said Lanigan. "At present I am thinking of Mr. Tippengray."

"A very good choice," said Mr. Petter; "he is a man of fine mind, and it will certainly be to your advantage if you can get him to work with you."

"Indeed it will be," said Lanigan Beam, with much earnestness.

XIV.

BACKING OUT.

IDA MAYBERRY was walking on the narrow road which led through the woods from the Squirrel Inn to the public highway. She had

been much interested in the road when she had been driven through it on the day of her arrival, and had availed herself of the opportunity given her this pleasant afternoon, by the prolonged slumbers of Master Douglas Cristie, to make a close acquaintance with its attractions.

It was indeed a pleasant road, where there were tall trees that often met overhead, and on each side there were bushes, and vines, and wild flowers, and little vistas opening into the woods, and rabbits running across the roadway; a shallow stream tumbling along its stony bed, sometimes to be seen and sometimes only heard; yellow butterflies in the air; and glimpses above, that afternoon, of blue sky and white clouds.

When she had walked about half the length of the road Miss Mayberry came to a tree with a large branch running horizontally about three feet from the ground and then turning up again, so as to make a very good seat for young people who like that sort of thing. Ida was a young person who liked that sort of thing, and she speedily clambered upon the broad horizontal branch and bestowed herself quite comfortably there. Taking off her hat and leaning her head against the upright portion of the branch, she continued the reflections she had been making while walking.

"Yes," she said to herself, "it will be wise in me not only to make up my mind that I will not grow to be an old maid but to prevent people from thinking I am going to grow to be one. I believe that people are very apt to think that way about teachers. Perhaps it is because they are always contrasted with younger persons. There is no reason why girl teachers should be different from other girls. Marriage should be as practically advantageous to them as to any others, only they should be more than usually circumspect in regard to their partners; that is, if they care for careers, which I am sure I do.

"Now the situation in this place seems to me to be one which I ought seriously to consider. It is generally agreed that propinquity is the cause of most marriages, but I think that a girl ought to be very careful not to let propinquity get the better of her. She should regulate and control propinquinities.

"Here, now, is Mr. Lodloe. He seems to be a very suitable sort of man, young and good-looking, and, I think, endowed with brains; but I have read two of his stories, and I see no promise in them, and I doubt if he would sympathize with good, hard study; besides, he is devoting himself to Mrs. Cristie, and he is out of the question. Mr. Tippengray is an exceedingly agreeable man and a true student. To marry him would be in itself a higher education; but he is not a bit young. I think he is at least fifty, perhaps more, and then, supposing that he should retain his mental vigor until he is sev-

enty, that would give only twenty years of satisfactory intellectual companionship. That is a point that ought to be very carefully weighed.

"As to Mr. Beam, he is older than I am, but he is young enough. Upon the probable duration of his life one might predicate forty years of mental activity, and from what I have seen of him he appears to have a good intellect. They talk about an aqueduct and waterworks he is about to construct. That indicates the study of geology, and engineering capacity, and such a bias of mind would suit me very well. Mrs. Petter tells me that he is really and truly engaged to that old thing from Lethbury; but as she also said that he is heartily tired of the engagement, I don't see why it should be considered. He is as likely to correct his errors of matrimonial inclination as he is those of mathematical computation, and as for her, I should not let her stand in my way for one minute. Any woman who is as jealous about a man as she is about Mr. Tippetgray has waived her right in all other men."

About this time a phaeton, drawn by a stout sorrel horse, and containing Miss Calthea Rose, was turning from the highroad into this lane. As a rule, Miss Calthea greatly preferred walking to driving, and although her father had left her a horse and several vehicles, she seldom made personal use of them; but to-day she was going to Romney, which was too far away for walking, and she had planned to stop at the Squirrel Inn and ask Mrs. Cristie to go with her.

It was necessary, for the furtherance of Miss Calthea's plans, that she should be on good terms with Mrs. Cristie. She ought, in fact, to be intimate with her, so that when the time came she could talk to her freely and plainly. It was desirable, indeed, that she should maintain a friendly connection with everybody at the Squirrel Inn. She had not yet met Langan Beam, and it would be well if he should be made to feel that she looked upon him merely as an old companion, and cared for him neither more nor less than one cares for ordinary old companions. Thus he would feel perfectly free to carry out his own impulses and her desires.

Towards Mr. Tippetgray she had decided to soften. She was still very angry with him, but it would not do to repel him from herself, for that might impel him towards another,

and spoil two of her plans. Even to that impertinent child's nurse she would be civil. She need have but little to do with the creature, but she must not let any one suppose that she harbored ill feeling towards her, and, with the exception of Mrs. Petter, no one would suppose she had any reason for such feelings. In fact, as Miss Calthea's mind dwelt upon this

IDA MAKES HERSELF COMFORTABLE.

subject, she came to think that it would be a very good thing if she could do some kindness or service to this girl. This would give effect to what she might afterward be obliged to say about her.

Having reached this point in her cogitations, she also reached the point in the road where Ida Mayberry still sat making her plans, and concealed from the view of those coming from the direction of the highroad by a mass of projecting elderberry bushes. Hearing an approaching vehicle, the young woman on the horizontal limb, not wishing to be seen perched upon this elevated seat, sprang to the ground, which she touched about four feet from the nose of the sorrel horse.

This animal, which was trotting along in a quiet and reflective way, as if he also was making plans, was greatly startled by this sudden flash of a light-colored mass, this rustle, this waving, this thud upon the ground, and

he bounded sidewise entirely across the road, stopping with his head in the bushes on the other side.

Miss Calthea, who was nearly thrown from her seat, could not repress a scream, and, turning, perceived Ida Mayberry.

"Did you do that?" she cried.

"I am sorry that I made your horse shy," said Ida, approaching the vehicle; "but he seems to be perfectly quiet now, and I hope nothing is broken. Horses ought to be taught not to shy, but I suppose that would be difficult, considering the small size of their brain cavities."

"If some people had as much brains as a horse," muttered Miss Calthea, "it would be better for them. Back, Sultan! Do you hear

"I am afraid you are not strong enough to back him out of that," said Ida; "and if there were not so much water all around him I would go and take him by the head."

"Let him alone," cried Miss Calthea. "Back, Sultan! Back, I say!" And she pulled and pulled, tiring herself greatly, but making no impression upon the horse.

Now appeared upon the scene Mrs. Cristie, pushing her baby-carriage. She had come to look for Ida. She was full of sympathy when she heard what had happened, and, pushing Douglas into a safe place behind a tree, came forward and proposed that some one go for a man. But Calthea Rose did not want a man. She was very proud of her abilities as a horse-woman, and she did not wish a man to behold

"BACK!"

me? Back!" And she tugged with all her strength upon the reins.

But the sorrel horse did not move; he had two reasons for refusing to obey his mistress. In the first place, on general principles he disliked to back, and was fully conscious that Miss Calthea could not make him do it, and, in the second place, he wanted a drink, and did not intend to move until he got it. Just here the brook was at its widest and deepest, and it came so near the road that in shying Sultan had entered it so far that the front wheels of the phaeton nearly touched the water. Standing more than fetlock deep in this cool stream, it is no wonder that Sultan wanted some one to loosen his check-rein and let him drink.

her inferiority in emergencies of this sort. She therefore opposed the suggestion, and continued to pull and tug.

"That will never do," said Ida Mayberry, who had been earnestly regarding the situation. "You cannot make him move, and even if we did go into the water, he might jump about and tread on us; but I have thought of a way in which I think we can make him back. You are pretty heavy, Miss Rose, and Mrs. Cristie is lighter than I am, so she ought to get into the phaëton and take the reins, and you and I ought to help back the phaëton. I have seen it done, and I can tell you how to do it."

To this Miss Calthea paid no immediate attention; but as Mrs. Cristie urged that if Ida

knew about such things it would be well to let her try what she could do, and as Miss Calthea found that tugging at Sultan's bit amounted to nothing, she stepped out of the low vehicle and demanded to know what the child's nurse proposed to do.

"Now jump in, Mrs. Cristie," said Ida,

"HE BEGAN SLOWLY TO PUSH IT TOWARDS THE SQUIRREL INN."

"and when I give the word you pull the reins with all your might, and shout, 'Back!' at him. Miss Rose, you go to that hind wheel, and I will go to this one. Now put one foot on a spoke, so, and take hold of the wheel, and

when I say, 'Now!' we will both raise ourselves up and put our whole weight on the spoke, and Mrs. Cristie will pull on him at the same instant."

Somewhat doggedly, but anxious to get out of her predicament, Miss Calthea took her position at the wheel and put one foot upon an almost horizontal spoke. Ida did the same, and then, giving the word, both women raised themselves from the ground; Mrs. Cristie gave a great pull, and shouted, "Back!" and as the hind wheels began slowly to revolve, the astonished horse, involuntarily obeying the double impulse thus given him, backed a step or two.

"Now! Again!" cried Ida, and the process was repeated, this time the horse backing himself out of the water.

"Bravo!" cried Lanigan Beam, who, with Walter Lodloe, had arrived on the scene just as Calthea Rose and Ida Mayberry had made their second graceful descent from an elevated spoke to the ground.

XV.

THE BABY IS PASSED AROUND.

"Good for you, Calthy," cried Lanigan Beam, advancing with outstretched hands. "How do you do? Old Sultan is at his tricks again, is he, declining to back? But you got the better of him that time, and did it well, too."

In his admiration of the feat he had witnessed, the credit of which he gave entirely to his old and well-tried fiancée, Lanigan forgot for the moment his plan for the benefit of Lethbury.

Irritated and embarrassed as she was, Miss Calthea did not forget her intention of treating

Lanigan Beam as a person between whom and herself there could be nothing of a connecting order which could be set up as something of an obstructing order between herself and anyone else. She therefore took his hand, made a few commonplace remarks about his return, and then, excusing herself, approached Mrs. Cristie, who was just about to alight from the phaëton, and gave her the invitation to drive to Romney. That lady hesitated a few moments, and then, remembering some shopping she would like to do, accepted; and the attention of Miss Mayberry having been called to the baby-carriage behind the tree, the two ladies drove off.

Ida Mayberry gazed for a moment at the parting vehicle, and then, turning to Mr. Beam, she said:

"She might at least have thanked me for getting her out of that scrape."

"Was that your idea?" said Lanigan.

"Of course it was," said the young woman; "if I had n't shown her how to make the horse back, she would have pulled her arms out for nothing. It is easy to see that she does not know anything about managing horses."

Lanigan laughed outright.

"I would advise you not to say that to her," he said.

"I would as soon say it to her as not," said Ida; "somebody ought to do it. Why, if that horse had shied towards me instead of away from me when I jumped from that tree, I might have been very much hurt."

Lanigan laughed again, but this time inwardly.

"Do you like yellow flowers, Miss Mayberry?" said he. "The largest wild coreopsis I ever saw grows in this region. I noticed some in a field we just passed. Shall I gather a few for you?"

"I am very fond of that flower," said Ida; and Mr. Beam declaring that if she would step a little way with him he would show her a whole field of them, the two walked up the road.

Walter Lodloe had been gazing with some dissatisfaction at the departing phaëton. His mind was getting into a condition which made it unpleasant for him to see people take Mrs. Cristie away from him. He now turned and looked at the baby-carriage, in which the infant Douglas was sitting up, endeavoring by various noises to attract attention to himself. Lodloe pulled the vehicle into the road, and, finding that the motion quieted its occupant, he began slowly to push it towards the Squirrel Inn. When Walter Lodloe turned into the open space about the inn he met Mr. Tippengray with a book in his hand.

"Really," said the latter, elevating his eye-

brows, "I heard the creaking of those little wheels, and I —"

"Thought Miss Mayberry was making them creak," said Lodloe. "But she is not, and you may as well postpone the lesson I suppose you want to give her. She is at present taking lessons in botany from another professor"; and he hereupon stated in brief the facts of the desertion of the infant Douglas. "Now what am I going to do with the little chap?" he continued; "I must search for Mrs. Petter."

"Don't do that," said the Greek scholar, quickly; "it would look badly for the youngwoman. Let me have the child; I will take care of it until she comes. I will wheel it down to my summer-house, where it is cool and shady."

"And an excellent spot to teach Greek," said Lodloe, laughing.

"A capital place," gaily replied Mr. Tippetgray, putting his book into his pocket, and taking hold of the handle of the little carriage, elated by the feeling that in so doing he was also, for a time, getting a hold upon Miss Mayberry.

"Yes," he continued, "it is just the place for me; it suits me in all sorts of ways, and I have a mind to tell you of a most capital joke connected with it. It is too good a thing to keep to myself any longer, and now that I know you so well, I am perfectly willing to trust you. Would you believe it? I know the Rockmores of Germantown. I know them very well, and hate them for a lot of prigs. But I never told Stephen Petter. Not I. In some way or other he took it for granted that I did not possess the valuable acquaintanceship, and I let him think so. Ha! ha! That's the way I got the summer-house, don't you see? Ha! ha! ha!"

Lodloe laughed. "Your secret is safe with me," said he; and the two having reached the little garden, he left the Greek scholar and went to his room.

When Ida Mayberry had her arms full of the great yellow flowers she suddenly appreciated the fact that she must be a long way from the baby, and ought immediately to return to it. She thereupon hastened back across the uneven surface of the field. When she reached the spot where the baby had been left, no baby was there.

"My goodness!" she exclaimed, "Mr. Lodloe has taken the child away, and there is no knowing which way he has gone."

"Oh, the youngster's all right," said Lanigan. "Sit down and rest yourself, and then we will walk to the inn."

"Not a bit of it!" exclaimed Ida. "You go that way, and I will go this, and if you see him, call out as loud as you can."

Very reluctantly Mr. Beam obeyed orders, and hurried in the direction of the highroad.

As he sat down by his open window Walter Lodloe looked out and saw Ida Mayberry running. Instantly there was a shout from the summer-house and the wave of a handkerchief. Then the nurse-maid ceased to run, but walked rapidly in the direction of the handkerchief-waver, who stood triumphantly pointing to the baby-carriage. After a glance at the baby to see that he was all right, Miss Mayberry seated herself on a bench in the shade, and took off her hat. In a few moments the Greek scholar was seated by her, the book was opened, and two heads were together in earnest study.

About ten minutes later Lodloe saw Lanigan Beam appear upon the lawn, walking rapidly. In a moment he caught sight of the group at the summer-house, and stopped short. He clenched his fists and slightly stamped one foot.

Lodloe now gave a low whistle, and Lanigan glancing upward at the sound, he beckoned to him to come to his tower-room. The young man at first hesitated, and then walked slowly towards the little garden, and ascended the outside stairway.

Lodloe greeted him with a smile.

"As you seem doubtful about joining the little company down there, I thought I would ask you up here," he said.

Lanigan walked to the window and gazed out at the summer-house.

"They are having a good, cozy time of it," said he, "but that won't do. That sort of thing has got to be stopped."

"Why won't it do?" asked Lodloe. "What is the matter with it, and who is going to stop it?"

"It's sheer nonsense," said Beam, turning away from the window and throwing himself into a chair; "why should an old fellow like Tippetgray take up all the spare time of that girl? She does n't need to learn anything. From what she has said to me I judge that she knows too much already."

"It strikes me," said Lodloe, "that if he likes to teach her, and she likes to learn, it is nobody's business but their own, unless Mrs. Cristie should think that her interests were being neglected." He spoke quietly, although

"I WILL WHEEL IT DOWN TO MY SUMMER-HOUSE, WHERE IT IS COOL AND SHADY."

he was a little provoked at the tone of his companion.

"Well," said Mr. Beam, stretching his legs upon a neighboring chair, "I object to that intimacy for two reasons. In the first place, it keeps me away from Miss Mayberry, and I am the sort of person she ought to associate with, especially in her vacation; and in the second place, it keeps old Tippengray away from Calthea Rose. That is bad, very bad. Mrs. Petter tells me that before Miss Mayberry arrived Calthea and the Greek were as chummy and as happy together as any two people could be. It is easy to see that Calthea is dead in love with him, and if she had been let alone I am confident she would have married him before the summer was over."

"And you think that desirable?" asked Lodloe.

"Of course I do," cried Lanigan, sitting up straight in his chair and speaking earnestly; "it would be the best thing in the world. Calthea has had a hard time with her various engagements,—all of them with me,—and now that she has found the man she likes she ought to have him. It would be a splendid match; he might travel where he pleased, and Calthea would be an honor to him. She could hold her own with the nobility and gentry, and the crowned heads, for that matter. By George! it would make him two inches taller to walk through a swell crowd with Calthea on his arm, dressed as she would dress, and carrying her head as she would carry it."

"You seem to be a matchmaker," said Lodloe; "but I don't meddle in that sort of thing. I greatly prefer to let people take care of their own affairs; but I feel bound to say to you that after Ida Mayberry neglected her duty to go off with you, I determined to advise Mrs. Cristie to dispense with the services of such a very untrustworthy nurse-maid."

Lanigan Beam sprang to his feet. "Don't you do that!" he cried. "I beg of you not to do that."

"Why not?" said Lodloe. "That would aid your philanthropic plan in regard to Miss Rose and Mr. Tippengray. The maid away, there is no reason why they should not come together again."

"Now I am a straightforward, honest man," said Lanigan, "and I tell you plainly that that would be very hard on me. I've come here to my native place to settle down, and if I settle I've got to marry, and I have never seen a girl whom I would rather marry and settle with than Miss Mayberry. She may be a little slack about taking care of the baby, but I'll talk to her about that, and I know she will keep a closer eye on him. Now if you want to see

everybody happy, don't prejudice Mrs. Cristie against that girl. Give me a chance, and I'll win her into the right way, and I'll do it easily and naturally, without making hard blood or hurting anybody. Then old Tip and Calthea will come together again, and everything will be jolly. Now don't you go and blast the happiness of all of us, and get that poor girl turned off like a drunken cook. And as for taking good care of the baby, just look at her now."

Lodloe looked out of the window. Ida Mayberry was leaning forward on the bench, twirling a great yellow flower before the child, who was laughing and making snatches at it. In a moment appeared Mr. Tippengray with a large white daisy; he leaned over the other side of

"HE LEANED OVER THE OTHER SIDE OF THE CARRIAGE."

the carriage and twirled his flower in front of the baby. The little fellow was in great glee, first clutching at one blossom and then at the other, and Mr. Tippengray laughed, and Miss Mayberry laughed, and the three laughed together.

"Confound it!" said Lanigan Beam, with a frown, "this thing must be stopped."

Lodloe smiled. "Work matters your own way," he said; "I shall not interfere."

An hour later, when Calthea Rose and Mrs. Cristie returned from Romney, Ida Mayberry was walking by the side of the baby-carriage, which Lanigan Beam was pushing towards the spot from which there was the best view of the western sky, while Mr. Lodloe and Mr. Tippengray were engaged in a game of quoits on the other side of the summer-house.

Mrs. Cristie looked at the couple in charge of the baby, and said to herself:

"I don't altogether like that sort of thing, and I think it must be stopped."

Calthea Rose appeared to have recovered her good humor. She looked about her apparently satisfied with the world and its ways, and readily accepted Mrs. Petter's invitation to stay to tea.

XVI.

MESSRS. BEAM AND LODLOE DECLINE TO
WAIT FOR THE SECOND TABLE.

As has been before mentioned, Walter Lodloe had grown into a condition of mind which made it unpleasant for him when people took Mrs. Cristie away or occupied her time and attention to the exclusion of his occupancy of the same. As a literary man he had taken an interest in studying the character of Mrs. Cristie, and he had now come to like the character even better than he liked the study.

A pretty woman, of a lively and independent disposition, and quick wit, and yet with certain matronly and practical points in her character which always surprised as well as pleased him when they showed themselves, Mrs. Cristie could not fail to charm such a man as Lodloe, if the two remained long enough together. She had charmed him, and he knew it and liked it, and was naturally anxious to know whether, in the slightest degree, she thought of him as he thought of her. But he had never been able to perceive any indication of this. The young widow was kind, gracious, and at times delightfully intimate with him, but he knew enough of the world to understand that this sort of thing in this sort of place might not in the least indicate that what was growing up in him was growing up in her.

On the afternoon of the day after Miss Calthea Rose had taken tea at the Squirrel Inn Walter Lodloe came down from his room in the tower with no other object in life than to find Mrs. Cristie. It was about the hour that she usually appeared on the lawn, and if there should follow tennis, or talking, or walking, or anything else, one thing would be the same as another to Lodloe, provided he and she took part. But when he saw Mrs. Cristie her avocation was one in which he could not take part.

She was sitting on a bench by Mr. Tippetgray, Ida Mayberry was sitting at his other side, and the everlasting baby-carriage was standing near by. The Greek scholar and the nurse-maid each had a book, but these were closed, and Mr. Tippetgray was talking with great earnestness and animation, while the young women appeared to be listening with eager interest. It was plain that the two were taking a lesson in something or other.

As Lodloe walked slowly from the gate of the little garden Mrs. Cristie looked up for a moment, saw him, but instantly resumed her attentive listening. This was enough; he perceived that for the present, at least, he was not wanted. He strolled on towards the field, and just below the edge of the bluff he saw Lanigan Beam sitting under a tree.

"Hello!" said the latter, looking up, "are they at that stupid business yet?"

Lodloe smiled. "Are you waiting for Miss Mayberry to get through with her lesson?" he asked.

"Yes, I am," said Lanigan. "I have been hanging around here for half an hour. I never saw such a selfish old codger as that Tippetgray. I suppose he will stick there with them the whole afternoon."

"And you want him?" said Lodloe.

"Want him!" exclaimed Lanigan; "not much. But I want her. If there were only two together I would do as I did yesterday. I would join them, take a part, and before long carry her off; but I can't do that with Mrs. Cristie there. I have n't the cheek to break up her studies."

Lodloe laughed. "Don't let us wait for the second table," he said; "come and take a walk to Lethbury."

It was now Lanigan's turn to smile.

"You think you would better not wait for the second table," he said; "very well, then; come on."

The lesson on the bench had been deliberately planned by Mrs. Cristie. She had been considering the subject of her nurse-maid and Lanigan Beam, and had decided that it was her duty to interfere with the growth of that intimacy. She felt that it was her duty to exercise some personal supervision over the interests of the young person in her service, and had given her some guarded advice in regard to country-resort intimacies.

Having given this advice to Ida Mayberry, it struck Mrs. Cristie that it would apply very well to herself. She remembered that she was also a young person, and she resolved to take to herself all the advice she had given to her nurse-maid, and thus it was that she was sitting on the bench by Mr. Tippetgray, listening to his very interesting discourse upon some of the domestic manners and customs of the ancients, and their surprising resemblance in many points to those of the present day. Therefore it was, also, that she allowed Walter Lodloe to pass on his way without inviting him to join the party.

When Lodloe and Beam reached Lethbury, the latter proposed that they should go and worry Calthea Rose; and to his companion's surprised exclamation at being asked to join in this diversion Lanigan answered, that having been used to that sort of thing all his life, it seemed the most natural sport in which to indulge now that he found himself in Lethbury again.

"Very good," said Lodloe, as they approached Miss Rose's place of business; "I shall not interfere with your native sports, but

I do not care to join them. I shall continue my walk, and stop for you on my way back."

When Lanigan Beam entered Miss Rose's shop she was sitting, as was her custom, by the back window, sewing. A neighbor had dropped in to chat with her a half-hour before, but had gone away very soon. The people of Lethbury had learned to understand when Calthea Rose did not wish to chat.

Miss Calthea was not happy; she was disappointed. Things had not gone as she hoped they would go, and as she had believed they would go when she accepted Mrs. Petter's invitation to tea. That meal had been a very pleasant one; even the presence of Ida Mayberry, who came to table with the family when the baby happened to be asleep, did not disturb her. On the contrary, it gratified her, for Lanigan Beam sat by that young person and was very attentive to her. She carefully watched Mr. Tippengray, and perceived that this attention, and the interest of the child's nurse in Lanigan's remarks, did not appear to give him the least uneasiness. Thereupon she began gradually, and she hoped imperceptibly, to resume her former method of intercourse with the Greek scholar, and to do so without any show of restoring him to favor. She did this so deftly that Mrs. Cristie was greatly interested in the performance, and an outside observer could have had no reason to suppose that there had been any break in the friendly intercourse between Miss Rose and Mr. Tippengray.

But this satisfactory state of things soon came to an end. When the daylight began to wane, and Miss Calthea's phaëton had been brought to the door, she went to it with her plans fully formed. As Mr. Tippengray assisted her into the vehicle, she intended to accept his proposition to drive her to Lethbury. She had slightly deferred her departure in order that the growing duskness might give greater reason for the proposition. There would be a moon about nine o'clock, and his walk back would be pleasant.

But when she reached the phaëton Mr. Tippengray was not there. Ida Mayberry, eager to submit to his critical eye two lines of Browning which she had put into a sort of Greek resembling the partly cremated corpse of a dead language, and who for the past ten minutes had been nervously waiting for Master Douglas to close his eyes in sleep that she might rush down to Mr. Tippengray while he was yet strolling on the lawn by himself, had rushed down to him, and had made him forget everything else in the world in his instinctive effort to conceal from his pupil the shock given him by the sight of her lines. He had been waiting for Miss Calthea to come out, had been intending to hand her to her vehicle, and had thought of proposing to accompany

her to the village; but he had not heard the phaëton roll to the door, the leave-taking on the porch did not reach his ear, and his mind took no note whatever of the fact that Miss Rose was on the point of departure.

As that lady, stepping out upon the piazza, swept her eyes over the scene and beheld the couple on the lawn, she gave a jerk to the glove she was drawing on her hand that tore in it a slit three inches long. She then turned her eyes upon her phaëton, declined the offer of Mr. Petter to see her home, and, after a leave-taking which was a little more effusive than was usual with her, drove herself to Lethbury. If the sorrel horse had behaved badly in the early part of that afternoon, he was punished for it in the early part of that evening, for he completely broke all previous records of time made between the Squirrel Inn and Lethbury.

Thus the hopes of Miss Calthea had been doubly darkened; the pariah with the brimstone blossoms had not only treacherously deserted Lanigan, but had made Mr. Tippengray treacherously desert her. She had been furiously angry; now she was low-spirited and cross. But one thing in the world could have then cheered her spirits, and that would have been the sight of her bitterest enemy and Lanigan Beam driving or walking together past her shop door; but when Lanigan alone entered that shop door she was not cheered at all.

Mr. Beam's greeting was very free and unceremonious, and without being asked to do so he took a seat near the proprietress of the establishment.

"Well, well," he said, "this looks like old times. Why, Calthy, I don't believe you have sold a thing since I was here last."

"If you had any eyes in your head," said Miss Calthea, severely, "you would see that I have sold a great deal. Nearly everything, in fact."

"That proves my point," said Lanigan; "for nearly everything was gone when I left."

"And some of the things that are gone," said she, "you still owe me for."

"Well put, Calthy," said Lanigan, laughing; "and after that, let's drop the business. What's new and what's stale in Lethbury?"

"You are about the newest as well as the stalest thing here," said she.

Lanigan whistled. "Calthy," said he, "would you mind my smoking a cigar here? There will be no customers coming in."

"You know very well you cannot smoke here," she said; "what is the matter with you? Has that pincushion-faced child's nurse driven you from the inn?"

A pang went through Lanigan. Was Calthea jealous of Miss Mayberry on his account? The thought frightened him. If he could

have said anything which would have convinced Calthea that he was on the point of marrying Miss Mayberry, and that therefore she might as well consider everything at an end between herself and him, he would have said it. But he merely replied:

"She is a nice girl, and very much given to learning."

Now Miss Calthea could restrain herself no longer.

"Learning!" she exclaimed. "Stuff and deception! Impudent flirting is what she is fond of, as long as she can get a good-for-naught like you, or an old numskull like that Tippengray, to play her tricks on."

Now Lanigan Beam braced himself for ac-

treating Mr. Tippengray with your usual impartiality and fairness. From what I have seen of him, I am sure that the great object of his life is to teach, and when he gets a chance to do that, he does it, and for the moment forgets everything else. You may be right in thinking that he prefers to teach young persons, and this is natural enough, for young people are much more likely than older ones to want to learn. Now, to prove that he does n't care to teach young girls just because they are girls, I will tell you that I saw him, this very afternoon, hard at work teaching Mrs. Cristie and Ida Mayberry at the same time, and he looked twice as happy as when he was instructing only one of them. If there were enough people

"CALTHY, THIS TRULY IS LIKE OLD TIMES."

tion. This sort of thing would not do; whatever she might say or think about the rest of the world, Calthea must not look with disfavor on the Greek scholar.

"Numskull!" said he. "You 're off the track there, Calthy. I never knew a man with a better skull than Mr. Tippengray, and as to his being old—there is a little gray in his hair, to be sure, but it 's my opinion that that comes more from study than from years."

"Nonsense!" said Calthea; "I don't believe he cares a snap for study unless he can do it with some girl. I expect he has been at that all his life."

Now Lanigan's spirits rose; he saw that it was not on his account that Calthea was jealous of Ida Mayberry. His face put on an expression of serious interest, and he strove to speak impressively, but not so much so as to excite suspicion.

"Calthea," said he, "I think you are not

here so that he could make up a class, and could have a sort of summer school, I expect he would be the happiest man on earth.

"I am afraid that is Mr. Tippengray's fault," continued Lanigan, folding his hands in his lap and gazing reflectively at his outstretched legs. "I am afraid that he gives too much of his mind to teaching, and neglects other things. He is carried away by his love of teaching, and when he finds one person, or a dozen persons, who want to learn, he neglects his best friends for that one person, or those dozen persons. He ought n't to do it; it is n't right—but then, after all, no man is perfect, and I suppose the easiest way for us to get along is to stop looking for perfection."

Miss Calthea made no answer. She gazed out of the window as if she was mildly impressed with a solicitude for the welfare of her garden. There flitted into her mind a wavering, indeterminate sort of notion that perhaps

Lanigan was a better fellow than he used to be, and that if she should succeed in her great purpose it might not be necessary that he should go away. But still,—and here prudence stepped in front of kindness,—if that child's nurse remained in the neighborhood, it would be safer if Lanigan kept up his interest in her; and if she ultimately carried him off, that was his affair.

Leaning forward, Miss Calthea took a match from a box on a shelf, and handed it to Lanigan.

"You may as well smoke if you want to," she said; "it's not likely any one will be coming in, and I don't object when the window is open."

Gratefully Lanigan lighted his cigar.

"Cathy, this truly is like old times," he said. "And to finish up with Tippengray, I'll say that if Lodloe and I had not our minds so filled with our own businesses and projects, I'd get him to go in with me, and help make up a class; but if I were to do that, perhaps people might say that all I wanted was to get in with the girls."

Here was a chance for Calthea to give her schemes a little push.

"There is only one girl," she said, "who would be likely to take part in that sort of thing, and that is the child's nurse at the Squirrel Inn; but if she really is given to study, I suppose she might help you to improve your mind, and if you are what you used to be, it will stand a good deal of improving."

"That's so, Cathy," said Lanigan; "that's so." He was in high good humor at the turn the conversation had taken, but did his best to repress his inclination to show it. "It might be well to go in for improvement. I'll do that, anyway." Lanigan blew out a long whiff of purple smoke. "Cathy is a deep one," he said to himself; "she wants me to draw off that girl from the old man. But all right, my lady; you tackle him and I will tackle her. That suits me beautifully."

At this moment Lodloe entered the shop, and Miss Calthea Rose greeted him with much graciousness.

"You must have taken a short walk," said Lanigan. "Don't you want to wait until I finish my cigar? It's so much pleasanter to smoke here than in the open air. Perhaps Miss Calthea will let you join me."

Lodloe was perfectly willing to wait, but did not wish to smoke. He was interested in what he had heard of the stock of goods which was being sold off about as fast as a glacier moves, and was glad to have the opportunity to look about him.

"Do you know, Cathy," said Lanigan, "that you ought to sell Mr. Lodloe a bill of goods." He said this partly because of his own love of teasing, but partly in earnest. To help

Calthea sell off her stock was an important feature of his project.

"Mr. Lodloe shall not buy a thing," said Calthea Rose. "If he is ever in want of anything, and stops in here to see if I have it in stock, I shall be glad to sell it to him if it is here, for I am still in business; but I know very well that Mr. Lodloe came in now as an acquaintance and not as a customer."

"Beg your pardons, both of you," cried Lanigan, springing to his feet, and throwing the end of his cigar out of the window; "but I say, Cathy, have you any of that fire-blaze calico with the rocket sparks that's been on hand ever since I can remember?"

"Your memory is pretty short sometimes," said Calthea, "but I think I know the goods you mean, and I have seven yards of it left. Why do you ask about it?"

"I want to see it," said Lanigan. "There it is on that shelf; it's the same-sized parcel that it used to be. Would you mind handing it down to me?"

Lanigan unrolled the calico upon the counter, and gazed upon it with delight. "Is n't that glorious!" he cried to Lodloe; "is n't that like a town on fire! By George! Calthea, I will take the whole seven yards."

"Now, Lanigan," said Miss Calthea, "you know you have n't the least use in the world for this calico."

"I know nothing of the sort," said Lanigan; "I have a use for it. I want to make Mrs. Petter a present, and I have been thinking of a fire-screen, and this is just the thing for it. I'll build the frame myself, and I'll nail on this calico, front and back the same. It'll want a piece of binding, or gimp, tacked around the edges. Have you any binding, or gimp, Cathy, that would suit?"

Miss Calthea laughed. "You'd better wait until you are ready for it," she said, "and then come and see."

"Anyway, I want the calico," said he. "Please put it aside for me, and I'll come in to-morrow and settle for it. And now it seems to me that if we want any supper we had better be getting back to the inn."

"It's not a bad idea," said Miss Calthea Rose, when she was left to herself; "but it shall not be in a class. No, indeed! I will take good care that it shall not be in a class."

XVII.

BANANAS AND OATS.

WHEN Walter Lodloe walked to Lethbury because he could not talk to Mrs. Cristie, it could not have been reasonably supposed that his walk would have had more practical influence on his feelings towards that lady than a

conversation with her would have had; but such was the case.

It would have been very pleasant to talk, or walk, or chat, or stroll, or play tennis, with her, but when he reached the quiet little village, and wandered by himself along the shaded streets, and looked into the pretty yards and gardens, on the profusion of old-fashioned flowers and the cool green grass under the trees, and here and there a stone well-curb with a great sweep and an oaken bucket, and the air of quaint comfort which seemed to invade the interiors of those houses that were partly opened to his view, it struck him, as no idea of the sort had ever struck him before, what a charming and all satisfying thing it would be to marry Mrs. Cristie and live in Lethbury in one of these cool, quaint houses with the quiet and the shade and the flowers — at least for a few years until his fortunes should improve.

He had a notion that Mrs. Cristie would like that sort of thing. She seemed so fond of country life. He would write, and she would help him. He would work in the vegetable garden, and she among the flowers. It would be Arcadia, and it would be cheap. Even with his present income every rural want could be satisfied.

An infusion of feasibility — or what he looked upon as such — into the sentimentality of such a man as Walter Lodloe generally acts as a stiffener to his purposes. He was no more in love with Mrs. Cristie than he had been when he left the Squirrel Inn, but he now determined, if he saw any reason to suppose that she would accept them, to offer himself and a Lethbury cottage to Mrs. Cristie.

He had a good opportunity to think over this matter and to come to decisions, for his companion walked half the way home without saying a word.

Suddenly Lanigan spoke.

"Do you know," said he, "that I have about made up my mind to marry the governess?"

"She is n't a governess," said Lodloe; "she is a nurse-maid."

"I prefer to invest her with a higher grade," said Lanigan; "and it is pretty much the same thing, after all. Anyway, I want to marry her, and I believe I can do it if nobody steps in to interfere."

"Who do you suppose would do that?" asked Lodloe.

"Well," said Lanigan, "if the Lethbury people knew about it, and had a chance, every man jack of them, and every woman jack, too, would interfere, and under ordinary circumstances Calthea Rose would take the lead; but just now I think she intends to lend me a hand — not for my good, but for her own. If she does that, I am not afraid of all Lethbury

and the Petters besides. The only person I am afraid of is Mrs. Cristie."

"Why do you fear her?" asked Lodloe.

"Well," said Lanigan, "when she was at the inn some years ago I was at my wildest, and her husband did not like me. He was in bad health, very touchy, and I suppose I gave him reason enough to consider me an extremely black sheep. Of course Mrs. Cristie naturally thought pretty much as he did, and from what you told me of the conference over my advent, I suppose her opinions have n't changed much. She has treated me very well since I have been here, but I have no doubt that she would consider it her duty to let Miss Mayberry know just the sort of fellow she thinks I am."

"Of course she would do that," said Lodloe; "and she ought to do it."

"No, sir," said Lanigan; "you are wrong, and I am going to prove it to you, and you shall see that I trust you as if I had known you years instead of days. I want you to understand that I am not the same sort of fellow that I used to be, not by any means. I told old Petter that so that he might have a little practice in treating me with respect, but I did n't give him any reasons for it, because Calthea Rose would be sure to suspect that he knew something, and she'd worm it out of him; but I don't believe she could worm anything out of you. When I left this place some eighteen months ago I went down to Central America and bought a banana farm, paying very little money down. In less than three months I sold my land to a company, and made a very good thing out of it. Then, thinking the company after a while might want more land, I bought another large tract, and before the end of the year I sold that to them, doubling my money. Then I left the tropics, fearing I might go too deep into that sort of speculation and lose every cent I had. I traveled around, and at last landed in Chicago, and here the money-making fever seized me again. It is a new thing to me, and a lot more intoxicating, I can tell you. I invested in oats, and before I knew it that blessed grain went up until, if its stalks had been as high as its price, it would have been over my head. I sold out, and then I said to myself: 'Now, Lanigan, my boy, if you don't want to be a beastly pauper for the rest of your life, you had better go home.' Honestly, I was frightened, and it seemed to me I should never be safe until I was back in Lethbury. Look here," he said, taking from a pocket a wallet filled with a mass of papers and a bank-book; "look at those certificates, and here is my New York bank-book, so you can see that I am not telling you lies.

"Now you may say that the fact of my

having money does n't prove that I am any better than I used to be, but if you think that, you are wrong. There is no better way to reform a fellow than to give him something to take care of, and take an interest in. That's my case now, and all I've got I've given myself, which makes it better, of course. I'm not rich, but I've got enough to buy out any business in Lethbury. And to go into business and to live here are what will suit me better than anything else, and that's not counting in Ida Mayberry at all. To live here with her would be better luck than the biggest rise in oats the world ever saw. Now you see where I stand. If Mrs. Cristie goes against me, she does a cruel thing to me, and to Ida Mayberry besides."

"Why don't you tell her the facts?" said Lodloe. "That would be the straightforward and sensible thing to do."

"My dear boy," said Lanigan, "I cannot put the facts into the hands of a woman. No matter how noble or honorable she may be, without the least intention on her part they would leak out, and if Calthea Rose should get hold of them I should be lost. She'd drop old Tippengray like a hot potato and stick to me like one of those adhesive plasters that have holes in them. No, sir; I don't want Calthea Rose to think well of me. I want her to keep

on considering me as a good-for-nothing scapegrace, and, by George! it's easy enough to make her do that. It's all in her line of business. But I want other people to think well of me in a general way, and when Calthy and Tippengray have settled things between them, and are traveling on the Continent, which they certainly ought to do, I'll start in business, and take my place as one of the leading citizens of Lethbury; and, as things look now, all will be plain sailing if Mrs. Cristie thinks well enough of me not to interfere between me and Ida Mayberry. Now all I ask of you is to say a good word for me if you can get a chance."

"After what you have told me," said Lodloe, "I think I shall say it."

"Good for you!" cried Lanigan. "And if I go to Calthy and ask her to lend me the money to get a frame made for Mrs. Petter's fire-screen, don't you be surprised. What I'm doing is just as much for her good as for mine. In this whole world there could n't be a better match for her than old Tippengray, and she knows it, and wants him."

"If there was a society for the prevention of cruelty to Greek scholars, I don't know but that it might interfere in this case," said Lodloe.

(To be continued.)

Frank R. Stockton.

LOVE LETTERS.

HOW easily they burn! And yet they cost
 Thought deep as life, that even now, methinks,
 Might struggle 'gainst destruction, though the links
 Of past and present long ago were lost.
 Ah, records of a time when fiercely tost
 From hopes to fears, from rapture to the brinks
 Of doubt and pain, the lover soars or sinks,
 Calm now long since! What then was prized the most
 Of life's rich flavors dead! Quick heats devoured
 By quicker, cheaper flames,—to ashes turned
 The glory of the precious past,—deflowered
 Of all the ideal charms therein inured,
 Of all the entrancing Spring therein embowered.
 Gone, gone! Alas, how easily they burned!

C. P. Cranch.

THE FAITH DOCTOR.¹

BY EDWARD EGGLESTON,

Author of "Roxy," "The Circuit Rider," "The Hoosier Schoolmaster," "The Graysons," etc.

XXIII.

A SHINING EXAMPLE.

RS. HILBROUGH and Phillida Callender sat together that day at Mrs. Frankland's readings and heard her with very different feelings dis-

course of discipleship, culling texts from various parts of the four gospels to set forth the courage and self-denial requisite and the consolation and splendid rewards that awaited such as were really disciples. Now that she had undertaken to look after Phillida in the interest of Millard, Mrs. Hilbrough trembled at the extreme statements that Mrs. Frankland allowed herself to make in speaking of self-denial as the crowning glory of the highest type of discipleship. The speaker was incapable of making allowance for oriental excess in Bible language; it suited her position as an advocate to take the hyperbolic words of Jesus in an occidental literalness. But Mrs. Hilbrough thought her most dangerous when she came to cite instances of almost inconceivable self-sacrifice from Christian biography. The story of Francis of Assisi defending himself against the complaint of his father by disrobing in the presence of the judge and returning into his father's hands the last thread of raiment bought with the father's money that he might free himself from the parental claim, was likely to excite a Platonic admiration in the minds of Mrs. Van Horne's friends, but such sublime self-sacrifice is too far removed from prevailing standards to be dangerous in New York. Mrs. Frankland no more expected her hearers to emulate St. Francis than she dreamed of refusing anything beautiful herself. But Mrs. Hilbrough knew Phillida, and, having known the spirit that was in her father, she was able to measure pretty accurately the tremendous effect of this mode of speech upon her in her present state of mind. While the address went on Mrs. Hilbrough planned, She reflected that Mrs. Frankland's influence could only be counteracted by the orator herself. Could she not talk confidentially with

Mrs. Frankland and make her see the necessity for moderating Phillida's tendency to extreme courses of action? But when she tried to fancy Mrs. Frankland counseling moderation in an address, she saw the impossibility of it. Prudence makes poor woof for oratory. It would "throw a coldness over the meeting," as the negroes express it, for her to attempt to moderate the zeal of her disciples; the more that exhortations to moderation were what they seemed least to require. Another alternative presented itself. She would appeal from Mrs. Frankland public to Mrs. Frankland private, from the orator aflame to the woman cool. If Mrs. Frankland could be rightly coached and guided, she might by private conversation with Phillida counteract the evil wrought by her public speech.

Mrs. Hilbrough continued in a state of antagonism to the words of the speaker to the very close of the address, and then while many were thanking and congratulating the speaker, and receiving the greetings she gave with ever-fresh effusiveness, Mrs. Hilbrough came in her turn, and Mrs. Frankland extended both hands to her, saying, "My dear Mrs. Hilbrough, how are you?" But Mrs. Hilbrough did not offer her any congratulations. She only begged Mrs. Frankland to make an appointment with her at which she might consult with her on a matter of importance.

"Certainly, certainly, dear friend," said Mrs. Frankland, beaming; "*whenever* you wish and *wherever* you say."

"Perhaps you could drive with me in the Park to-morrow, if the weather is fine," said Mrs. Hilbrough. "Shall I call for you about half-past three?"

"With pleasure, Mrs. Hilbrough"; and Mrs. Frankland made an affectionate farewell nod backward at Mrs. Hilbrough as she stretched out her hand to one of her hearers who was waiting on the other side for a share of her sunshine.

Mrs. Hilbrough turned about at this moment to find Phillida, meaning to take her home in the carriage, but Phillida, engrossed with thoughts and feelings excited by the address, had slipped away and taken the Madison Avenue car.

¹ Copyright, 1891, by EDWARD EGGLESTON. All rights reserved.

She had counted that this address should give her personal guidance; she had prayed that it might throw light on her path. Its whole tenor brought to her conscience the sharpest demand that she should hold to the rigor of her vocation at every cost. All the way home the text about leaving "father, or mother, or wife, or children, or lands, for my sake," was ringing in her memory. Even Mrs. Frankland, in the rush of oratorical extravagance, had not dared to give this its literal sense. But she had left in it strenuousness enough to make it a powerful stimulant to Phillida's native impulse towards self-sacrifice.

Once at home, Phillida could not remain there. She felt that a crisis in her affairs had arrived, and in her present state of religious exaltation she was equal to the task of giving up her lover if necessary. But the questions before her were not simple, and before deciding she thought to go and privately consult Mrs. Frankland, who lived less than half a mile away in one of those habitable, small high-stoop houses in East Fifteenth street which one is surprised to find lingering so far down as this into the epoch of complicated flats and elevated apartments.

Phillida was begged to come without ceremony up to the front room on the second floor. Here she found Mrs. Frankland in a wrapper, lying on a lounge, her face still flushed by the excitement of her speech.

"Dear child, how are you?" said Mrs. Frankland in a tone of semi-exhaustion, reaching out her hand, without rising. "Sit here by me. It is a benediction to see you. To you is given the gift of faith. The gift of healing and such like ministration is not mine. I cannot do the work you do. But if I can comfort and strengthen those chosen ones who have these gifts, it is enough. I will not complain." Saying this last plaintively, she pressed Phillida's hand in both of hers.

If her profession of humility was not quite sincere, Mrs. Frankland at least believed that it was.

"Mrs. Frankland, I am in trouble, in a great deal of trouble," said Phillida in a voice evidently steadied by effort.

"In trouble? I am *so* sorry." Saying this she laid her right hand on Phillida's lap caressingly. "Tell me, beloved, what it is all about?" Mrs. Frankland was still in a state of stimulation from public speaking, and her words were pitched in the key of a peroration. At this moment she would probably have spoken with pathos if she had been merely giving directions for cooking the dinner spinach.

The barriers of Phillida's natural reserve were melted away by her friend's effusive sympathy, and the weary heart lightened its burdens,

as many another had done before, by confessing them to the all-motherly Mrs. Frankland. Phillida told the story of her lover, of his dislike to the notoriety of her faith-cures. She told of her own struggles and of the grave questions she might soon have to settle. Should she yield, if ever so little, to the demands of one who was to be her husband? Or should she maintain her course as she had begun? And what if it should ever come to be a question of breaking her engagement? This last was spoken with faltering, for at the very suggestion Phillida saw the abyss open before her.

A person of Mrs. Frankland's temperament is rarely a good counselor in practical affairs, but if she had been entirely at herself she would perhaps have advised with caution, if not with wisdom, in a matter so vital and delicate. But the exhilaration of oratorical inebriety still lingered with her, and she heard Phillida professionally rather than personally. She was hardly conscious, indeed, of the personality of the suffering soul before her. What she perceived was that here was a new and beautiful instance of the victory of faith and a consecrated spirit. In her present state of mind she listened to Phillida's experience with much the feeling she would have had if some one had brought her a story of martyrdom in the days of Nero. St. Francis himself was hardly finer than this, and the glory of this instance was that it was so modern and withal so romantic in its elements. She exulted in the struggle, without realizing, as she might have done in a calmer mood, the vast perspective of present and future sorrow which it presented to Phillida. The disclosure of Phillida's position opened up not the modicum of practical wisdom which she possessed but the floodgates of her eloquence.

"You will stand fast, my dear," she said, rising to a sitting posture and flushing with fresh interest. "You will be firm. You will not shrink from your duty."

"But what is my duty?" asked Phillida.

"To give the Lord and his work no second place in your affections. He has honored your faith and works above those of other people. Therefore stand unflinchingly faithful, my dear Phillida. It is a hard saying, that of Christ: 'If any man come to me, and hate not his father, and mother, and wife, and children, and brethren, and sisters, yea, and his own life also, he cannot be my disciple.' But you are one of those able to receive the hard words of Christ."

All this was said as it might have been in an address, with little realization of its application to the individual case before her. Mrs. Frankland would have been the last person to advise an extreme course of action. She admired the extravagance of religious devotion for its

artistic effect when used in oratory. It was the artistic effect she was dreaming of now. Phillida got little from her but such generalities, pitched in the key of her recent address; but what she got tended to push her to yet greater extremes.

In the hour that followed, Phillida's habitually strenuous spirit resolved and held itself ready for any surrender that might be demanded of it. Is the mistaken soul that makes sacrifice needlessly through false perceptions of duty intrinsically less heroic than the wiser martyr for a worthy cause?

XXIV.

THE PARTING.

On that Thursday evening Millard dined at his club. Instead of signing a joint order with a friend for a partnership dinner, he ordered and ate alone. He chose a table in a deep window from which he could look out on the passers-by. A rain had set in, and he watched the dripping umbrellas that glistened in the lamplight as they moved under the windows, and took note of the swift emergence of vehicles and their disappearance. His interest in the familiar street-world was insipid enough, but even an insipid interest in external affairs he found better than giving his mind up wholly to the internal drizzle of melancholy thoughts.

Presently Millard became dimly conscious of a familiar voice in conversation at the table in the next window. Though familiar, the voice was not associated with the club-restaurant; it must be that of some non-member brought in as the dinner-guest of a member. He could not make out at first whose it was without changing his position, which he disliked to do, the more that the voice excited disagreeable feelings, and by some association not sufficiently distinct to enable him to make out the person. But when the visitor, instead of leaving the direction of the meal to his host, called out an exasperatingly imperative, "Hist! waitah!" Millard was able to recognize his invisible neighbor. Why should any member of a club so proper as the Terrapin ask Meadows? But there he was with his inborn relish for bulldozing whatever bulldozable creature came in his way. Once he had made him out, Millard engaged in a tolerably successful effort to ignore his conversation, returning again to his poor diversion of studying the people plashing disconsolately along the wet street. It was only when he heard Meadows say, "You know I am a director of that bank," that his attention was sharply arrested.

"Farnsworth is cashier," continued Meadows. "He ought to have resigned long ago, but he is n't that sort of a man. So he 's at

last taken to bed, has he? Some complication of the heart, I believe. Won't live long and—well, I'll have on hand a hard fight about the filling of his place. But I did n't hear of that faith-doctor plan before."

"I don't believe they 've carried it out," said the club man who had invited Meadows and who was a stranger to Millard. "Farnsworth would n't agree. I used to dine with Farnsworth often, and my sister knows Mrs. Farnsworth; they go to the same church. Mrs. Farnsworth has heard of a Miss Callender that can pray a person up out of the grave almost, and she 's nearly persuaded Farnsworth to send for her. His mind is weakening a little, and I should n't wonder if he did consent to have her pray over him. The doctors have given him up, and—"

"Who is this Miss Callender?" interrupted Meadows; and though Millard could not see him he knew that in the very nature of things Meadows's pugnacious chin must be shoved forward as he asked this.

"She 's a young woman that won't take any money for her services. That 's the greatest miracle of all," said the other. "If anything could make me believe her mission supernatural, it would be that."

"Don't you believe it," said Meadows; "don't you believe a word of it. The dead may be raised, but not for nothing. There 's money below it all. Money makes the mare go"; and Meadows laughed complacently at the proverb, giving himself credit for it with a notion that adopted wit was as good as the native born.

"No; she won't have it. I heard that Mrs. Maginnis sent her a check for curing her little girl, and that she sent it back."

"Was n't enough," sneered Meadows.

"Well, I believe they tried a larger check with the same result. She does n't seem to be an impostor; only a crank."

"These people that refuse money when it 's pushed under their noses are the worst knaves of all," said Meadows. "She knows that Maginnis is very rich. She 's laying for something bigger. She 'll get into Mrs. Maginnis for something handsome. More fool if she does n't, I say"; and Meadows laughed in an unscrupulous, under-breath fashion, as of a man who thought a well-played trick essentially meritorious.

Millard was debating. Should he protest against these words? Or should he knock Meadows down? That is not just the form it took in his mind. Any rowdy or a policeman may knock a man down. Your man of fashion, when he wishes to punish an enemy or have an affray with a friend, only "punches his head." It is a more precise phrase, and has no

boast in it. No one knows which may go down, but the aggressor feels sure that he can begin by punching his enemy's head. Millard was on the point of rising and punching Meadows's head in the most gentlemanly fashion. But he reflected that a head-punching affray with Meadows in the club-room would make Phillida and her cures the talk of the town, and in imagination he saw a horrible vision of a group of newspaper reporters hovering about Mrs. Callender's house, and trying to gain some information about the family from the servant girl and the butcher boy. To protest, to argue, to say anything at all, would be but an awful aggravation. Having concluded not to punch the head of a bank director, he rose from the table himself, and, avoiding Meadow's notice, beckoned the waiter to serve his coffee in the reading-room. When he had swallowed the coffee, he rose and went out. As he stood in the door of the club-house and buttoned up his coat, a cabman from the street called, "Kerrige, sir?" but not knowing where he should go, Millard raised his umbrella and walked. Mechanically he went towards Mrs. Callender's. He had formed no deliberate resolution, but he became aware that a certain purpose had taken possession of him all uninvited and without any approval of its wisdom on his part. Right or wrong, wise or unwise, there was that which impelled him to lay the condition of things before Phillida in all its repulsiveness and have it out with her. He could not think but that she would recoil if she knew how her course was regarded. He fancied that his own influence with her would be dominant if the matter were brought to an issue. But these considerations aside, there was that which impelled him to the step he was about to take. In crises of long suppressed excitement the sanest man sometimes finds himself bereft of the power of choosing his line of action; the directing will seems to lie outside of him. It is not strange that a Greek, not being a psychologist, should say that a Fate was driving him to his destiny, or that his Dæmon had taken the helm and was directing affairs as a sort of *alter ego*.

When at length Millard found himself in front of Mrs. Callender's, and saw by the light that the family were sitting together in the front basement, his heart failed him, and he walked past the house and as far as the next corner, where his Fate, his Dæmon, his blind impulsion, turned him back, and he did not falter again until he had rung the door-bell; and then it was too late to withdraw.

"You are wet, Charley; sit nearer the register," said Phillida, when she saw how the rain had beaten upon his trousers and how recklessly he had punched his patent-leather

shoes into the street puddles. This little attention to his comfort softened Millard's mood, but it was impossible long to keep back the torrent of feeling. Phillida was alarmed at his ominous abstraction.

"I don't care for the rain," he said.

"But you know there is a good deal of pneumonia about."

"I—I am not afraid of pneumonia," he said. "I might as well die as to suffer what I do."

"What is the matter, Charley?" demanded Phillida, alarmed.

"Matter? Why, I have to sit in the club and hear you called a crank and an impostor."

Phillida turned pale.

"Vulgar cads like Meadows," he gasped, "not fit for association with gentlemen, call you a quack seeking after money, and will not be set right. I came awfully near to punching his head."

"Why, Charley!"

"I should have done it, only I reflected that such an affray might drag you into the newspapers. I tell you, Phillida, it is unendurable that you should go on in this way."

Phillida's face was pale as death. She had been praying all the afternoon that the bitterness of this cup might not be pressed to her lips. She now saw that the issue was joined. She had vowed that not even her love for the man dearest to her should swerve her from her course. The abyss was under her feet, and she longed to draw back. She heard the voice of duty in the tones of Mrs. Frankland saying: "If any man come to me, and hate not his father, and mother, and wife, and children, and brethren, and sisters, yea, and his own life also, he cannot be my disciple." It was a cruel alternative that was set before her, and she trembled visibly.

"I—I can't neglect what I believe to be duty," she said. She wished she could have softened the words that she spoke by some circumlocution or some tenderness in the tone, but all her forces had to be rallied to utter the decision, and there was no power left to qualify the bare words which sounded to Millard hard and cruel. A suspicion crossed his mind that Phillida wished to be released from the engagement.

"You do not consider that you owe any duty to me at all," he said in a voice smothered by feeling.

Phillida tried to reply, but she could not speak.

Millard was now pacing the floor. "It is all that Mrs. Frankland's work. She is n't worthy to tie your shoes. She never fed the hungry, or clothed the naked, or visited the sick. It's all talk, talk, with her. She talks beauti-

fully, and she knows it. She loves to talk and to have people crowd around her and tell her how much good she is doing. She denies herself nothing; she feeds her vanity on the flattery she gets, and then thinks herself a saint besides. She exhorts people to a self-sacrifice she would n't practise for the world. She's making more money out of her piety than her husband can out of law. And now she comes with her foolish talk and breaks up the happiness you and I have had." This was spoken with bitterness. "We cannot go on in this way," he said, sitting down exhausted, and looking at her.

Phyllida had listened in silence and anguish to his words, spoken hurriedly but not loudly. What he said had an effect the opposite of what he had expected. The first impression produced by his words was that the engagement had become a source of misery to Millard; the second thought was that, considering only her duty to him, she ought to release him from bonds that had proved so painful. His last words seemed to indicate that he wished the engagement broken, and after what he had said it was evident that she must break with him or swerve from the duty she had vowed never to desert. Taking up the word where he had left off, she said in a low, faltering voice:

"We certainly cannot go on in this way."

Then, rising, she turned to the antique desk in the corner of the parlor. With a key from her pocket she unlocked a drawer, and from it took hurriedly every keepsake she had had from her lover, not allowing herself to contemplate them, but laying them all at last on the ancient center-table in the middle of the room. With a twinge of regret, visible to Millard, she drew her engagement ring from her finger, and with an unsteady hand laid it softly down with the rest.

Millard was too much startled at first to know what to say. Had she misunderstood the intent of his last remark? Or did she wish to be released?

"It is all over, Mr. Millard. Take them, please."

"I—I have not—asked you to release me, Phyllida."

"You have said that we cannot go on in this way. I say the same. It—" she could not speak for a quarter of a minute; then she slowly finished her sentence with an effort of desperation and without raising her eyes to his—"it is better that it is over."

"Is it over?" he asked, stunned. "Think what you say."

"We have agreed that we cannot go on," she answered. "You must take these. I cannot keep them."

"Don't make me take them. Why not keep them?"

"I will send them to-morrow. I cannot retain them."

Millard could not take them. He would have felt much as he might in rifling a grave of its treasures had he lifted those tokens from the table. But he saw, or thought he saw, that remonstrances might make Phyllida more unhappy, but that it would be perfectly useless. It was better to accept his fate, and forbear. He tried to say something to soften the harshness of parting, but his powers of thought and speech deserted him, and he knew that whatever he should say must be put into one or two words. He looked up, hesitatingly stretched out his hand, and asked huskily:

"Part friends?"

Phyllida, pale and speechless, took his hand a moment, and then he went out. She leaned her head against the window-jamb, lifted the shade, and watched his form retreating through the drizzly night until he disappeared from view, and then she turned out the lights. But instead of returning to her mother and Agatha in the basement, she threw herself on the floor, resting her arms on the sofa while she sobbed in utter wretchedness. All her courage was spent; all her faith had fled: helpless, wounded, wretched as a soul in bottomless perdition, she could see neither life nor hope in any future before her. She had believed herself able to go on alone and to bear any sacrifice. But in losing him she had lost even the power to pray.

About an hour after Millard's departure, Mrs. Callender came up the stairs and called gently:

"Phyllida!"

Then she entered the parlor. The shutters were not closed, and the room was faintly lighted by rays that came through the shades from the lamp on the other side of the street.

"I'm here, mother," said Phyllida, rising and coming towards her. Then, embracing her mother, she said, "And I'm so unhappy, mother, so utterly wretched."

Such an appeal for sympathy on the part of the daughter was an occurrence almost unknown. She had been the self-reliant head of the family, but now she leaned helplessly upon her mother and whispered, "It's all over between Charley and me."

XXV.

MRS. FRANKLAND'S REPENTANCE.

FOR some time after Phyllida had left Mrs. Frankland resting on the lounge that lady had felt an additional exaltation in contemplating this new and admirable instance of faith and devotion—an instance that seemed to owe

much to the influence of her own teachings. Her mind had toyed with it as a brilliant jewel having many faces. She had unconsciously reduced it to words; she could only get the virtue out of anything when she had phrased it. Phillida she had abstracted into a "young woman of a distinguished family," "beautiful as the day," "who had all the advantages of high associations," and "who might have filled to the brim the cup of social enjoyment." The lover, whose name and circumstances she did not know, she yet set up in her mind as "an accomplished young man of brilliant gifts and large worldly expectations." It would have been a serious delinquency in him had he failed to answer to this personal description, for how else could this glorious instance be rounded into completeness. Incapable of intentional misrepresentation, Mrs. Frankland could never help believing that the undisclosed portion of any narrative conformed to the exigencies of artistic symmetry and picturesque effect. She set the story of Phillida's sacrifice before her now in one and now in another light, and found much exhilaration—spiritual joy and gratitude in her phraseology—in contemplating it. How beautifully it would fit into an address!

But as the hours wore on the excitement of her oratorical effort subsided and a natural physical reaction set in. Her pulses, which had been beating so strenuously as to keep her brain in a state of combustion, were now correspondingly below their normal fullness and rapidity, and the exhausted nerves demanded repose. It was at such times as these that Mrs. Frankland's constitutional buoyancy of spirit sank down on an ebb tide; it was at such times that her usually sunny temper chafed under the irritations of domestic affairs. On this evening, when the period of depression set in, Mrs. Frankland's view of Phillida's case suffered a change. She no longer saw it through the iridescent haze of excited fancy. She began to doubt whether it was best that Phillida should break with her lover for the mere sake of being a shining example. In this mood Mrs. Frankland appreciated for the first time the fact that Phillida could hardly feel the same exultation in slaughtering her affections and hopes that Mrs. Frankland had felt in advising such a course of spiritual discipline. Just a little ripple of remorse flecked the surface of her mind, but she found consolation in a purpose to make the matter right by seeing Phillida the next day and inquiring more fully into the matter. Her natural hopefulness came to her rescue, and Mrs. Frankland slept without disturbance from regrets.

When she awaked in the morning it was with a dull sense that there was something which needed to be righted. She had to rum-

mage her memory awhile to discover just what it was. Having placed it at length in Phillida's affair, she suddenly reflected that perhaps Mrs. Hilbrough could throw light on it, and she would postpone seeing Phillida until after her drive with Mrs. Hilbrough in the afternoon. "It is better to give counsel advisedly," was the phrase with which she ticketed this decision and sustained it.

The day was fine, and the drive in Mrs. Hilbrough's easy-rolling open carriage was exhilarating, and in that sort of bird-chatter about nothing in particular that two people enjoying motion are prone to engage in Mrs. Frankland was in danger of forgetting her purpose to inquire about Phillida Callender, until at length, when the carriage was fairly within the Park, Mrs. Hilbrough, whose businesslike brain never let go its grasp on a main purpose, said:

"Mrs. Frankland, I wanted to speak to you about Miss Callender."

"The very person I wished to ask your advice about," said Mrs. Frankland. "She called on me yesterday late in the afternoon."

"Did she?" Mrs. Hilbrough asked this with internal alarm. "Did she say anything to you about her love affair?"

"Yes," said Mrs. Frankland; "I suppose I ought not to repeat what she said, but you are her friend and you will be able to advise me in the matter. I'm afraid I did n't say just the right thing—I mean that I did n't advise her as fully as I should have done. It's hard to know what to say about other people's affairs. I felt worried about her, and I came near going to see her this morning. But I remembered that you were her friend, and I thought it best to see what you would say. It's always best to give counsel advisedly, I think."

"May I ask what you said to her?" said Mrs. Hilbrough, characteristically refusing to be shunted from the main line of her purpose.

Mrs. Frankland winced at the question, and especially at the straightforward thrust with which it was asked. But she said: "I only advised her in a very general way. It was just after I had finished speaking, and I was n't able to take up the matter as carefully as I should have liked to have done, you know, until after I had rested."

"Did you advise her to break her engagement?" The steadiness with which Mrs. Hilbrough pushed her inquiry was disagreeable to her companion, who liked to find refuge from an unpleasant subject in vagueness of statement. But at least she was not driven to bay yet; she had not definitely advised Phillida to break with her lover.

"No; not that. I only gave her general advice to be faithful to her convictions."

Mrs. Frankland's avoidance of the explicit confirmed Mrs. Hilbrough's suspicion as to the tenor of the advice given. The latter blamed herself for having moved too slowly, and she was impatient, moreover, with Mrs. Frankland; for one is apt to be vexed when a person very clever in one way is conspicuously stupid in other regards. When Mrs. Hilbrough spoke again a trace of irritation showed itself.

"Phyllida is the only person I know to whom I think your Bible readings may do harm."

"My Bible readings?" queried Mrs. Frankland. She had been used so long to hear her readings spoken of in terms not of praise but rather of rapture, as though they were the result of a demi-divine inspiration, that this implied censure or qualification of the universality of their virtue and application came to her, not exactly as a personal offense, but with the shock of something like profanation; and she reddened with suppressed annoyance.

"I don't mean that it is your fault," said Mrs. Hilbrough, seeking to get on a more diplomatic footing with her companion. "Phyllida is very peculiar and enthusiastic in her nature, and she knows nothing of the world. She is prone to take all exhortations rather too literally."

"But my words have often encouraged Phyllida," said Mrs. Frankland, who had been touched to the quick. "You would rob me of one of the solid comforts of my life if you took from me the belief that I have been able to strengthen her for her great work."

"I am sure you have encouraged her to go on," said Mrs. Hilbrough, desirous not to antagonize Mrs. Frankland. "But she also needs moderating. She is engaged to an admirable man, a man getting to be very well off, and who will be made cashier of our bank very soon. He is kind-hearted, liberal with his money, and universally beloved and admired in society."

Mrs. Frankland was not the person to undervalue such a catalogue of qualities when presented to her in the concrete. True, on her theory, a Christian young woman ought to be ready in certain circumstances to throw such a lover over the gunwale as ruthlessly as the sailors pitched Jonah headlong. That is to say, a Christian young woman in the abstract ought to be abstractly willing to discard a rich lover in the abstract. But presented in this concrete and individual way the case was different. She was a little dazzled at the brightness of Phyllida's worldly prospects, now that they were no longer merely rhetorical, but real, tangible, and, in commercial phrase, convertible.

"True, true," she answered reflectively. "She would be so eminently useful if she had money." This was the way Mrs. Frankland phrased

her sense of the attractiveness of such a man. "She might exert an excellent influence in society. We do need more such people as the heaven of the kingdom of heaven in wealthy circles."

"Indeed we do," said Mrs. Hilbrough, "and for Phyllida to throw away such prospects, and such opportunities for usefulness,"—she added this last as an afterthought, taking her cue from Mrs. Frankland,—"*seems to me positively wrong.*"

"It would certainly be a mistake," said Mrs. Frankland. Mrs. Hilbrough thought she detected just a quiver of regret in her companion's voice. "Does he object strongly to her mission work?"

"No; he does not object to her work, I am sure, for she was already absorbed in it when he first met her at my house, and if he had objected there would have been no beginning of their attachment. But he is greatly annoyed that she should be talked about and ridiculed as a faith-doctor. He is a man of society, and he feels such things. Now, considering how much danger of mistake and of enthusiasm there is in such matters, Phyllida might yield a little to so good a man."

"Perhaps I had better see her, Mrs. Hilbrough," was Mrs. Frankland's non-committal reply.

"It would be necessary to see her at once, I fear. She is very resolute, and he is greatly distressed by what people are saying about her, and a little provoked, no doubt, at what he thinks her obstinacy."

"Perhaps I had better see her this evening," said Mrs. Frankland, with a twinge of regret that she had not spoken with more caution the day before.

"I do wish you would," said Mrs. Hilbrough. Just then the driver sent the horses into a swift trot on a down grade, and the conversation was broken off. When talk began again it was on commonplace themes, and therefore less strenuous. Mrs. Frankland was glad to get away from an affair that put her into an attitude of apology.

Phyllida had passed the day miserably. She had tried to bolster herself with the consciousness of having acted from the sincerest motives, and from having only done what was right. But consciousness of rectitude, whatever the moralists may say, is an inadequate balm for a heart that is breaking. Phyllida had not dared to enter the parlor to gather up the little presents Millard had given her and despatch them to him until after supper, when she made them all into a bundle and sent them away. The messenger boy had hardly left the door when Mrs. Frankland rang. Her husband had accompanied her, and she dismissed him at the

steps with instructions to call for her in about an hour.

Phillida was glad to see Mrs. Frankland. A cruel doubt had been knocking at her door the livelong day. It had demanded over and over whether her tremendous sacrifice was necessary after all. She had succeeded indifferently well in barring out this painful skepticism by two considerations. The one was, that Millard, who had almost asked to be released, would hereafter be saved from mortification on her account. The other was, that Mrs. Frankland's authority was all on the side of the surrender she had made. And now here was Mrs. Frankland, sent like a messenger to confirm her faith and to console her in her sorrow.

"You are looking troubled," said Mrs. Frankland, kissing her now on this cheek and now on the other. "Dear child, if I could only bring you some comfort!"

"Thank you, Mrs. Frankland," said Phillida; "I am so glad that you have come. I have wished for you all day."

"Maybe I am sent to console you. Who knows? Perhaps, after all, things may turn out better than you think." This was said in a full round voice and an under manifestation of buoyant hopefulness and self-reliance characteristic of Mrs. Frankland; but Phillida shook her head despondently.

"Since I saw you I have heard a good deal about your Mr. Millard; I get the most favorable accounts of him; they say he is good, and every way a worthy, liberal, and charming man."

Phillida sat up straight in her chair with eyes averted, and made no reply.

"I have been thinking that, after all, perhaps you ought to make some concessions to such a man."

Phillida trembled visibly. This was not what she had expected.

"You would n't wish me to be unfaithful to my duty, would you?" she asked in a low voice.

"No, dear; I don't say you ought to sacrifice anything that is *clearly* your duty. Some duties are so clear that they shine like the polestar which guides the mariner. But there are many duties that are not quite clear. We should be careful not to insist too strongly on things in which we may be mistaken. There would be no such thing as marriage if there was not some yielding on both sides; I mean in matters not certainly essential to a Christian life."

Phillida was now looking directly at her visitor with a fixed and hopeless melancholy which puzzled Mrs. Frankland, who had expected that she would seize gratefully upon any advice tending to relax the rigor of her self-sacrifice. Phillida's attitude was incom-

prehensible to her visitor. Could it be that she had resolved to break with her lover at all hazards?

"You know, dear," said Mrs. Frankland, sailing on a new tack now, as was her wont when her audience proved unresponsive, "I think, as the wife of a man with increasing wealth and of excellent social position, like Mr. Millard, you would be very useful. We need such devoted and faithful people as you are in society. And, after all, your gift of healing might be exercised without publicity—you might, I think, defer a good deal to one whom you have promised to love. Love is also a gift of God and a divine ordinance. In fact, considering how ample your opportunities would be as the wife of a man of wealth and position, such as Mr. Millard, it seems to be your duty to examine carefully and prayerfully whether there is not some reasonable ground on which you can meet him. At least, my dear, do not act too hastily in a matter of so much moment."

Advice pitched in this key did not weigh much at any time with Phillida. A thin veil of religious sentiment served a purpose of self-deception with Mrs. Frankland, but such disguises could not conceal from Phillida's utterly sincere spirit the thoroughly worldly standpoint of Mrs. Frankland's suggestions. The effect of this line of talk upon her mind was very marked, nevertheless. It produced a disenchantment, rapid, sudden, abrupt, terrible. Mrs. Frankland, the oracle upon whose trustworthiness she had ventured her all, had proven herself one of the most fallible of guides. The advice given yesterday with an assurance that only a settled and undoubting conviction could possibly excuse, was today pettified away mainly on the ground of Charley's worldly prosperity. Phillida had revered Mrs. Frankland as a sort of divine messenger, had defended her against Millard's aspersions, had followed her counsel at the most critical moment of her life in opposition to the judgment of her family and of the man she loved. And now, too late, the strenuous exhortation was retracted, not so much in the interest of a breaking heart as in that of a good settlement in life.

When, after a pause, Phillida spoke, the abrupt and profound change in the relations of the two became manifest. Her voice was broken and reproachful as she said, "You come this evening to take back what you said yesterday."

"I spoke without time to think yesterday," said Mrs. Frankland, making a movement of uneasiness. One accustomed to adulation does not receive reproach gratefully.

"You spoke very strongly," said Phillida.

"I thought you must feel very sure that you were right, for you knew how critical my position was." The words were uttered slowly and by starts. Mrs. Frankland did not reply. Phillida presently went on: "I don't care anything about the worldly prospects you think so much of to-day. But God knows what an awful sacrifice I have made. In following your advice, which was very solemnly given, I have thrown away the love and devotion of one of the best men in the world." She lifted her hands from her lap as she spoke and let them fall when she had finished.

"Have you broken your engagement already?" said Mrs. Frankland, with a start.

"What else could I do? You told me to stand by my work of healing. I hope you were right, for it has cost me everything—everything. I thought you had come to comfort me to-night and to strengthen my faith. Instead of that you have taken back all that you said before."

"I only spoke generally before. I did n't know the circumstances. I did not know anything about Mr. Millard, or—" Here she paused.

"You did n't know about Mr. Millard's property or social position, I suppose. These are what you have talked to me about this evening. They are not bad things to have, perhaps, but, if they were all, I could give them up—trample them under foot, and be glad."

"Don't be provoked with me, Phillida dear. Indeed, I hardly realized what I said yesterday. I had just got through with speaking, I was very much exhausted, and I did not quite understand."

"You may have been right yesterday," said Phillida; "I hope you were. If you were wrong, it was a dreadful mistake." She made a long pause, and then went on. "I thought the course you advised yesterday a brave course at least. But what you have said to-day, about social position and so on, I hate. And it makes me doubt it all."

Phillida thrust out the toe of her boot, unconsciously giving expression to her disposition to spurn Mrs. Frankland's worldly-wise counsel.

"You're excited, my dear," said Mrs. Frankland. "Your break with Mr. Millard may not be so irretrievable as you think it. Providence will direct. If, on the whole, it is thought best, I have no doubt things may be replaced on their old footing. I am sure Mrs. Hilbrough and I could manage that. You ought not to be unreasonable."

"I sent him in agony out into the rainy night, forsaken and discarded." Phillida could not quite suppress a little sob as she stretched her hand a moment in the direction in which Millard had gone. "God knows I thought I was doing right. Now because you have heard

that he has money and moves in fashionable circles you wish me to intrigue with you and Mrs. Hilbrough to bring him back."

Phillida rose to her feet, excitement breaking through the habitual reserve with which her emotional nature was overlaid. "I tell you, Mrs. Frankland," she went on with a directness verging on vehemence, "that I will have none of your interference, nor any of Mrs. Hilbrough's. What I have done, is done, and can never be recalled."

"Indeed, Phillida, you are excited," said Mrs. Frankland. "You reject the advice and assistance of your best friends. You have quite misunderstood what I have said. I only wished to repair my error."

Phillida remained silent, but she resumed her seat.

"Think the matter over. Take time to make your decision. I have acted only in your interest, and yet you blame me." Mrs. Frankland said this with persuasive plaintiveness of tone.

But Phillida said nothing. Not seeing anything else to do, Mrs. Frankland rose and said: "Good-by, Phillida. When you have had time to think you will see things differently." She did not extend her hand, and Phillida felt that her own was too chill and limp to offer. She contrived, however, to utter a "Good-by."

When she had shut the door after Mrs. Frankland one swift thought and bitter came into her mind. "Charley was not wholly wrong as to Mrs. Frankland. Perhaps he was nearer right in other regards than I thought him."

Half an hour later the door-bell rang, and Agatha answered the call. Then she put her head into the parlor where Phillida sat, back to the door, gazing into the street.

"I say, Philly, what do you think? Mr. Frankland came to the door just now for his wife, and seemed quite crestfallen that she had forgotten him, and left him to go home alone. Did n't like to be out so late without an escort, I suppose."

It was one of a hundred devices to which Agatha had resorted during this day to cheer her sister. But seeing that this one served its purpose no better than the rest, Agatha went over and put her arms about her sister's neck and kissed her.

"You dear, dear Philly! You are the best in the world," she said, and the speech roused Phillida from her despair and brought her the balm of tears.

XXVI.

ELEANOR ARABELLA BOWYER.

It is a truth deep and wide, that a brother is born for adversity. The spirit of kin and clan, rooted in remote heredity, outlives other and

livelier attachments. It not only survives rude blows, but its true virtue is only extracted by the pestle of tribulation. Having broken with her lover, and turned utterly away from her spiritual guide and adviser, Phillida found herself drawn more closely to her mother and her sister. It mattered little that they differed from her in regard to many things. She could at least count on their affection, and that sympathy which grows out of a certain entanglement of the rootlets of memory and consciousness, out of common interest and long and intimate association.

Mrs. Callender had been habituated when she was a little girl at home to leave the leadership to her sister Harriet, now Mrs. Gouverneur, and to keep her dissents to herself. Her relation with her husband was similar; she had rarely tried to influence a man whose convictions of duty were so pronounced, though the reasons for these convictions were often quite beyond the comprehension of his domestically minded wife. Towards Phillida she had early assumed the same diffident attitude; it was enough for her to say that Phillida was her father over again. That settled it once for all. Phillida was to be treated as her father had been; to be trusted with her own destiny without impertinent inquiries from one who never could understand, though she deeply respected, the mysterious impulses which urged these superior beings to philanthropic toil. For her own part she would have preferred to take the universe less broadly.

A second effect of this crisis in Phillida's life was to drive her back upon the example and teaching of her father. Having utterly abandoned the leadership of Mrs. Frankland, she naturally sought support for her self-sacrificing course of action outside of her own authority. All her father's old letters, written to her when she was a child, were unbundled and read over again, and some of his manuscript sermons had the dust of years shaken from their leaves that she might con their pages written in the dear, familiar hand.

If she had had her decision to make over again without any bolstering from Mrs. Frankland she would have sought, for a while at least, to establish a *modus vivendi* between her love for Millard and the ultra form of her religious work. But the more she thought of it the more she considered it unlikely that her decision regarding her lover would ever come up for revision. She accepted it now as something providential, because inevitable, to which she must grow accustomed, an ugly fact with which she must learn to live in peace. She had a knack of judging of herself and her own affairs in an objective way. She would not refuse to see merely because it was painful to her that

a woman of her tastes and pursuits was an unsuitable mate for a man of society. She admitted the incongruity; she even tried to console herself with it. For if the break had not come so soon, it might have come after marriage in forms more dreadful. There was not much comfort in this — might have been worse is but the skim-milk of consolation.

To a nature like Phillida's one door of comfort, or at least of blessed forgetfulness, is hardly ever shut. After the first bitter week she found hours of relief from an aching memory in her labors among the suffering poor. Work of any kind is a sedative; sympathy with the sorrows of others is a positive balm. Her visits to the Schulenberg tenement were always an alleviation to her unhappiness. There she was greeted as a beneficent angel. The happiness of Wilhelmina, of her mother, and of her brother, for a time put Phillida almost at peace with her destiny.

Her visits to and her prayers for other sufferers were attended with varying success as to their ailments. The confidence in the healing power of her prayers among the tenement people was not based altogether on the betterment of some of those for whom she prayed. Knowing her patient long-suffering with the evil she contended against, they reasoned, in advance of proof, that her prayers ought to have virtue in them. The reverence for her was enhanced by a report, which began to circulate about this time, that she had refused to marry a rich man in order to keep up her labor among the poor. Rumor is always an artist, and tradition, which is but fossil rumor, is the great saint-maker. The nature and extent of Phillida's sacrifice were amplified and adapted until people came to say that Miss Callender had refused a young millionaire because he wished her not to continue her work in Mackerelville. This pretty story did not mitigate the notoriety which was an ingredient of her pain.

In spite of the sedative of labor and the consolation of altruism, Poe's raven would croak in her ears through hours spent in solitude. In the evenings she found herself from habit and longing listening for the door-bell, and its alarm would always give her a moment of fluttering expectation, followed by a period of revulsion. Once the bell rang at about the hour of Millard's habitual coming, and Phillida sat in that state in which one expects without having reason to expect anything in particular until the servant brought her a card bearing the legend, "Eleanor Arabella Bowyer, Christian Scientist and Metaphysical Practitioner."

"Eleanor Arabella Bowyer," she said, reading it to her mother as they sat in the front basement below the parlor. "Who is she? I've never heard of her."

"I don't know, Phillida. I don't seem to remember any Bowyers."

"Where is the lady, Sarah?" asked Phillida of the servant.

"She is in the parlor, Miss."

Phillida rose and went up-stairs. She found awaiting her a woman rather above medium height. Phillida noted a certain obtrusiveness about the bony substructure of her figure, a length and breadth of framework never quite filled out as it was meant to be, so that the joints and angles of her body showed themselves with the effect of headlands and rocky promontories. She had a sallow complexion and a nose that was retroussé, with a prompt outward and upward thrust about the lower half of it, accompanied by a tendency to thinness as it approached its termination, quite out of agreement with the prominent cheek-bones. The whole face had a certain air of tough endurance, of determination, of resolute go-forwardness untempered by the recoil of sensitiveness. Miss Bowyer was clad in good clothes without being well-dressed.

"Miss Callender, I suppose," said the visitor, rising, and extending her hand with confidence. Her voice was without softness or resonance, but it was not nasal—a voice admirably suited, one would think, for calling cows. Her grasp of the hand was positive, square, unreserved, but as destitute of sympathetic expression as her vowels. "I've heard a good deal about you, one way and another," she said. "You've been remarkably successful in your faith-cures, I am told. It's a great gift, and you must be proud of it—grateful for it, I should think." She closed this speech with a smile which seemed not exactly spontaneous but, rather, habitual, as though it were a fixed principle with her to smile at about this stage of every conversation.

Phillida was puzzled to reply to this speech. She did not feel proud of her gift of faith-healing; hardly was she grateful for it. It was rather a burden laid on her, which had been mainly a source of pain and suffering. But she could not bring herself to enter on a subject so personal with a stranger.

"I don't know that I am," was all she said.

"Well, there's a great deal in it," said Miss Bowyer. "I have had a good deal of experience. There's a great deal more in it than you think."

"I don't quite understand you," said Phillida.

"No; of course not. I am a faith-healer myself."

"Are you?" said Phillida, mechanically, with a slight mental shudder at finding herself thus classified with one for whom she did not feel any affinity.

"Yes; that is, I *was*. I began as a faith-

doctor but I found there was a great deal more in it, don't you know?"

"A great deal more in it?" queried Phillida. "A great deal more of what, may I ask?"

"Oh, everything, you know."

This was not clarifying, and Phillida waited without responding until the metaphysical practitioner should deign to explain.

"I mean there's a great deal more science in it, as well as a great deal more success, usefulness, and—and—and remuneration to be had out of it than you think."

"Oh," said Phillida, not knowing what else to say.

"Yes," said Eleanor Arabella Bowyer with a smile. She had a way of waiting for the sense of her words to soak into the mind of her hearers, and she now watched Phillida for a moment before proceeding. "You see when I began I did not know anything about Christian Science,—the new science of mental healing, faith-cure, psychopathy,—by which you act on the spirit and through the spirit upon the body. Matter is subject to mind. Matter is unreal. All merely physical treatment of disease is on the mortal plane." Miss Bowyer paused here, waiting for this great truth to produce its effect; then she said, "Don't you think so?" and looked straight at Phillida.

"I have not thought a great deal about it," said Phillida.

"No?" This was said with the rising inflection. "I thought not; mere faith-healing does not require much thought. I know, you see, having been a faith-healer at first. But we must go deeper. We must always go deeper. Don't you think so?"

"I don't understand just what you mean," said Phillida.

"You see," said Miss Bowyer, "faith-healing is a primitive and apostolic mode of healing the sick."

Miss Bowyer paused, and Phillida said, "Yes," in a hesitant way; for even the things she believed seemed false when uttered by Eleanor Bowyer.

"Well, ours is a scientific age. Now we practise—we revive this mode of healing, but in a scientific spirit, in the spirit of our age, and with a great deal more of knowledge than people had in ancient times. We reject the belief in evil; we call it unreal. Disease is a mistake. We teach faith in the unity of God the All-good."

Miss Bowyer evidently expected Phillida to say something at this point, but as she did not, Miss Bowyer was forced to proceed without encouragement.

"When I found that there was a great deal in it, I took the subject up and studied it. I studied mind-cure, or metaphysical healing, which

strikes at the root of disease ; I went into hypnotism, mesmerism, and phreno-magnetism, and the od force — I don't suppose you know about the *od* which Reichenbach discovered."

"No."

"Well, it's wonderful, but mysterious. Blue blazes seen by the sensitive, and all that. I studied that, and theosophy a little too, and I took up Swedenborg ; but he was rather too much for me. You can't quite understand him, and then life is too short to ever get through him. So I only read what somebody else had printed about Swedenborgianism, and I understand him a good deal better that way. That's the best way to tackle him, you know. Well, now, all of these go to explain the unity of truth, and how the miracles of the Bible were worked."

Phyllida said nothing, though her interlocutor gave her an opportunity.

"Well," proceeded Miss Bowyer, "this is what we call Christian Science. It's the science of sciences. It's as much above the rude method of primitive faith-cure practised by the apostles as the heavens are above the earth. We understand from knowing the philosophy of miracles the reason why we do not always succeed. We cannot always secure the impressive condition by producing the quiescence of the large brain. But if we understand the theory of hypnotism we shall be able to put the cerebrum at rest and secure the passive impressive state of the cerebellum ; that is, an inverted condition of the mind. This securing of interior perception is the basis of all success."

"Then you do not believe that God does it all," said Phyllida, with a twitch of the shoulder expressing the repulsion she felt from this incomprehensible explication.

"Oh, yes. Faith in God the All-good is at the root of it all. It is one of the things that induces passive receptivity. We must convince the patient that the unity of God excludes the real existence of evil."

"But still you do not admit the direct action of God ?" queried Phyllida.

"God works through the forces in nature, according to law," said Miss Bowyer, glibly.

"That is just as true of the action of medicine," said Phyllida. "I don't like this affecting to put God in while you leave him out of your mixture. Besides, I don't pretend that I understand your explanation."

"It is somewhat fine ; all philosophy of man's internal nature is so. It's not a thing to argue about. Intellect argues ; spirit perceives. But if you would give your mind to Truth in a receptive way, Truth would set you free. I am sure you would be convinced after reading the books on the question."

Phyllida made no offer to read the books,

and this seemed to disappoint Miss Bowyer. After a pause she began again.

"You might as well know, Miss Callender, that I had a business object in view in coming to see you. Some of our Christian Science people are all enthusiasm, but I am trained to business, and I carry on my practice on business principles. There is no reason why a doctor who treats diseases on the mortal plane by medication should be paid for his time, and you and I not be. Is there ?"

"I don't know," said Phyllida, mechanically.

"Well, now, I have given my time to the beautiful work of Christian Science healing. I have an office in East Fourteenth street. It is a blessed religious work. But I can't work without pay ; I follow it as a business, and it's got to support me. I have as much right to get on in the world as anybody else. Now I've cleared over and above my office-rent, including what I get for teaching a class in Christian Science, almost eighteen hundred dollars in the very first year since I set up. That's pretty good for a lone woman ; don't you think so ?"

Phyllida slightly inclined her head to avoid speaking.

"Well, now, I have n't got many advantages. My brother kept a health-lift a few years ago when everything was cured by condensed exercise. But people got tired of condensed exercise, and then he had a blue-glass solarium until that somehow went out of fashion. I helped run the female side of his business, you know, for part of the profits. My education is all business. I did n't have any time to learn painting or fine manners, or any music except to play Moody and Sankey on the melodeon. My practice is mostly among the poor or the people that are only so-so. I have n't got the ways that go down with rich people, nor anybody to give me a start among them. Well, now, I say to myself, science is all very well, and faith is all very well, but you want something more than that to get on in a large way. I would rather get on in a large way. Would n't you ?"

Here she paused, but Phyllida sat motionless and stoically attentive. She only answered, "Well, I don't know."

"Now when I heard that you'd been sent for to the Maginnis child, and that you have got relations that go among rich people, I say to myself, she's my partner. I'll furnish the science, and I'll do the talking, and the drumming-up business, and the collecting bills, and all that ; and you, with your stylish ways, don't you know ? and your good looks, and your family connections, and all that, will help me to get in where I want to get in. Once in, we're sure to win. There's no reason, Miss Callender, why we should n't get rich. I will give you

half of my practice already established, and I'll teach you the science and how to manage, you know; the great thing is to know how to manage your patients, you see. I learned that in the health-lift and the blue-glass solarium. We'll move farther up town, say to West Thirty-fourth street. Then you can, no doubt, write a beautiful letter—that'll qualify us to go into what is called "absent treatment." We'll advertise, "Absent treatment a specialty," and altogether we can make ten thousand or even twenty thousand, maybe, a year in a little while. Keep our own carriage, and so on. What do you say to that?" Miss Bowyer's uplifted nose was now turned towards Phillida in triumphant expectation. She had not long to wait for a reply. Phillida's feelings had gathered head enough to break through. She answered promptly:

"I do not believe in your science, and would n't for the world take money from those that I am able to help with my prayers." Phillida said this with a sudden fire that dismayed Miss Bowyer.

"But you'll look into the matter maybe, Miss Callender?"

"No; I will not. I hate the whole business." Phillida wanted to add, "and you besides"; however, she only said: "Don't say any more, please. I won't have anything at all to do with it." Phillida rose, but Miss Bowyer did not take the hint.

"You're pretty high-toned, it seems to me," said the Scientist, smiling, and speaking without irritation. "You're going to throw away the great chance of your life. Perhaps you'll read some books that set forth the mighty truths of Christian Science if I send them. You ought to be open to conviction. If you could only know some of the cases I myself have lately cured—a case of belief in rheumatism of three years' standing, and a case of belief in mental prostration of six years' duration. If you could only have seen the joyful results. I cured lately an obstinate case of belief in neuralgia, and another of cancer—advanced stage. A case of belief in consumption with goitre was lately cured in the West. Perhaps you'll look over some numbers of the 'International Magazine of Christian Science' if I send them to you; under the head of 'Sheaves from the Harvest Field,' it gives many remarkable cases."

"I have no time to read anything of the sort," said Phillida, still standing.

"Oh, well, then, I'll just come in now and then and explain the different parts of the science to you. It's a great subject, and we may get mutual benefit by comparing notes."

The prospect of repeated calls from Eleanor Arabella Bowyer put Phillida's already excited nerves into something like a panic. She had reached the utmost point of endurance.

"No," she said; "I will have nothing at all to do with it. You must excuse me; positively, I must be excused. I am very busy, and I cannot pursue the subject further."

"Certainly," said the Metaphysical Practitioner, rising reluctantly; "but I think I'll take the liberty of calling again when you're more at leisure. You won't object, I'm sure, to my coming in next week?"

"Yes," said Phillida; "I will not have anything to do with the matter you propose, and I cannot see you again. You must excuse me."

"Well, we never get offended, Miss Callender. Christian Science does not argue. We never resent an affront, but live in love and charity with all. That is Christian Science. Our success depends on purity and a Christian spirit. I think I'll send you a little book," added Miss Bowyer, as reluctantly she felt herself propelled towards the door by the sheer force of Phillida's manner. "Just a little book; it won't take long to read."

As Miss Bowyer said this she paused in the vestibule with her back to Phillida. She was looking into the street, trying to think of some new device for gaining her end.

"I won't read a book if you send it. Save yourself the trouble," said Phillida, softly closing the inner door behind Miss Bowyer, leaving her standing face outwards in the vestibule.

"You had a hard time shaking her off, didn't you, Philly?" said Agatha, issuing from the back part of the dark hall, having come out of the back room just in time to catch a glimpse of Eleanor Bowyer. "I declare, the way you closed the door on her at the last was too good."

"Sh-h!" said Phillida, pointing to the shadow cast against the ground glass of the inner door by the tall form of the Christian Scientist and Metaphysical Practitioner in the light of the street lamp.

"I don't care whether she hears or not," said Agatha, dropping her voice, nevertheless; "she ought to be snubbed. You're a little too easy. That woman is meditating whether she sha'n't break into the house to preach Christian Science. There, she's going at last; she won't commit Christian burglary this time. I suppose she thinks burglary does n't really exist, since it's contrary to the unity of God. Anyhow, she would n't commit burglary, because housebreaking is a physical thing that's transacted on the mortal plane."

Agatha said this in Miss Bowyer's tone, and Phillida's vexation gave way to laughter.

(To be continued.)

"A PIONEER PALACE CAR."

ADAPTED FROM A SKETCH BY A. P. HILL.

ACROSS THE PLAINS IN THE DONNER PARTY (1846).

A PERSONAL NARRATIVE OF THE OVERLAND TRIP TO CALIFORNIA.

I WAS a child when we started to California, yet I remember the journey well and I have cause to remember it, as our little band of emigrants who drove out of Springfield, Illinois, that spring morning of 1846 have since been known in history as the "Ill-fated Donner party" of "Martyr Pioneers." My father, James F. Reed, was the originator of the party, and the Donner brothers, George and Jacob, who lived just a little way out of Springfield, decided to join him.

All the previous winter we were preparing for the journey—and right here let me say that we suffered vastly more from fear of the Indians before starting than we did on the plains; at least this was my case. In the long winter evenings Grandma Keyes used to tell me Indian stories. She had an aunt who had been taken prisoner by the savages in the early settlement of Virginia and Kentucky and had remained a captive in their hands five years before she made her escape. I was fond of these stories and evening after evening would go into grandma's room, sitting with my back close against the wall so that no warrior could slip behind me with a tomahawk. I would coax her to tell me more about her aunt, and would sit listening to the recital of the fearful deeds of the savages, until it seemed to me that everything in the room, from the high old-fashioned bedposts down even to the shovel and tongs in the chimney corner, was transformed into the dusky tribe in paint and feathers, all ready for the war dance. So when I was told that we were going to California and would have to pass through a region peopled by Indians, you can imagine how I felt.

Our wagons, or the "Reed wagons," as they

were called, were all made to order and I can say without fear of contradiction that nothing like our family wagon ever started across the plains. It was what might be called a two-story wagon or "Pioneer palace car," attached to a regular immigrant train. My mother, though a young woman, was not strong and had been in delicate health for many years, yet when sorrows and dangers came upon her she was the bravest of the brave. Grandma Keyes, who was seventy-five years of age, was an invalid, confined to her bed. Her sons in Springfield, Gersham and James W. Keyes, tried to dissuade her from the long and fatiguing journey, but in vain; she would not be parted from my mother, who was her only daughter. So the car in which she was to ride was planned to give comfort. The entrance was on the side, like that of an old-fashioned stage coach, and one stepped into a small room, as it were, in the centre of the wagon. At the right and left were spring seats with comfortable high backs, where one could sit and ride with as much ease as on the seats of a Concord coach. In this little room was placed a tiny sheet-iron stove, whose pipe, running through the top of the wagon, was prevented by a circle of tin from setting fire to the canvas cover. A board about a foot wide extended over the wheels on either side the full length of the wagon, thus forming the foundation for a large and roomy second story in which were placed our beds. Under the spring seats were compartments in which were stored many articles useful for the journey, such as a well filled work basket and a full assortment of medicines, with lint and bandages for dressing wounds. Our clothing was packed—not in Saratoga trunks—but in strong canvas bags plainly marked. Some of mama's young friends

added a looking-glass, hung directly opposite the door, in order, as they said, that my mother might not forget to keep her good looks, and strange to say, when we had to leave this wagon, standing like a monument on the Salt Lake desert, the glass was still unbroken. I have often thought how pleased the Indians must have been when they found this mirror which gave them back the picture of their own dusky faces.

ever started across the plains with more provisions or a better outfit for the journey; and yet we reached California almost destitute and nearly out of clothing.

The family wagon was drawn by four yoke of oxen, large Durham steers at the wheel. The other wagons were drawn by three yoke each. We had saddle horses and cows, and last but not least my pony. He was a beauty and his name was Billy. I can scarcely remember

THIRSTY OXEN STAMPEDING FOR WATER.

We had two wagons loaded with provisions. Everything in that line was bought that could be thought of. My father started with supplies enough to last us through the first winter in California, had we made the journey in the usual time of six months. Knowing that books were always scarce in a new country, we also took a good library of standard works. We even took a cooking stove which never had had a fire in it, and was destined never to have, as we cached it in the desert. Certainly no family

when I was taught to sit a horse. I only know that when a child of seven I was the proud owner of a pony and used to go riding with papa. That was the chief pleasure to which I looked forward in crossing the plains, to ride my pony every day. But a day came when I had no pony to ride, the poor little fellow gave out. He could not endure the hardships of ceaseless travel. When I was forced to part with him I cried until I was ill, and sat in the back of the wagon watching him be-

CROSSING WATER TO ESCAPE A PRAIRIE FIRE.

come smaller and smaller as we drove on, until I could see him no more.

Never can I forget the morning when we bade farewell to kindred and friends. The Donners were there, having driven in the evening before with their families, so that we might get an early start. Grandma Keyes was carried out of the house and placed in the wagon on a large feather bed, propped up with pillows. Her sons implored her to remain and end her days with them, but she could not be separated from her only daughter. We were surrounded by loved ones, and there stood all my little schoolmates who had come to kiss me good-by. My father with tears in his eyes tried to smile as one friend after another grasped his hand in a last farewell. Mama was overcome with grief. At last we were all in the wagons, the drivers cracked their whips, the oxen moved slowly forward and the long journey had begun.

Could we have looked into the future and have seen the misery before us, these lines would never have been written. But we were full of hope and did not dream of sorrow. I can now see our little caravan of ten or twelve wagons as we drove out of old Springfield, my little black-eyed sister Patty sitting upon the bed, holding up the wagon cover so that Grandma might have a last look at her old home.

That was the 14th day of April, 1846. Our party numbered thirty-one, and consisted chiefly of three families, the other members being young men, some of whom came as drivers.

The Donner family were George and Tamsen Donner and their five children, and Jacob and Elizabeth Donner and their seven children. Our family numbered nine, not counting three drivers—my father and mother, James Frazier and Margaret W. Reed, Grandma Keyes, my little sister Patty (now Mrs. Frank Lewis, of Capitola), and two little brothers, James F. Reed, Jr., and Thomas K. Reed, Eliza Williams and her brother Baylis, and lastly myself. Eliza had been a domestic in our family for many years, and was anxious to see California.

Many friends camped with us the first night out and my uncles traveled on for several days before bidding us a final farewell. It seemed strange to be riding in ox-teams, and we children were afraid of the oxen, thinking they could go wherever they pleased as they had no bridles. Milt Elliott, a knight of the whip, drove our family wagon. He had worked for years in my father's large saw-mill on the Sangamon River. The first bridge we came to, Milt had to stop the wagon and let us out. I remember that I called to him to be sure to make the oxen hit the bridge, and not to forget that grandma was in the wagon. How he laughed at the idea of the oxen missing the bridge! I soon found that Milt, with his "whoa," "haw," and "gee," could make the oxen do just as he pleased.

Nothing of much interest happened until we reached what is now Kansas. The first Indians we met were the Caws, who kept the ferry, and had to take us over the Caw River. I watched

them closely, hardly daring to draw my breath, and feeling sure they would sink the boat in the middle of the stream, and was very thankful when I found they were not like grandma's Indians. Every morning, when the wagons were ready to start, papa and I would jump on our horses, and go ahead to pick out a camping-ground. In our party were many who rode on horseback, but mama seldom did; she preferred the wagon, and did not like to leave grandma, although Patty took upon herself this charge, and could hardly be persuaded to leave grandma's side. Our little home was so comfortable, that mama could sit reading and chatting with the little ones, and almost forget that she was really crossing the plains.

Grandma Keyes improved in health and spirits every day until we came to the Big Blue River, which was so swollen that we could not cross, but had to lie by and make rafts on which to take the wagons over. As soon as we stopped traveling, grandma began to fail, and on the 29th day of May she died. It seemed hard to bury her in the wilderness, and travel on, and we were afraid that the Indians would de-

stroy her grave, but her death here, before our troubles began, was providential, and nowhere on the whole road could we have found so beautiful a resting place. By this time many emigrants had joined our company, and all turned out to assist at the funeral. A coffin was hewn out of a cottonwood tree, and John Denton, a young man from Springfield, found a large gray stone on which he carved with deep letters the name of "Sarah Keyes; born in Virginia," giving age and date of birth. She was buried under the shade of an oak, the slab being placed at the foot of the grave, on which were planted wild flowers growing in the sod. A minister in our party, the Rev. J. A. Cornwall, tried to give words of comfort as we stood about this lonely grave. Strange to say, that grave has never been disturbed; the wilderness blossomed into the city of Manhattan, Kansas, and we have been told that the city cemetery surrounds the grave of Sarah Keyes.

As the river remained high and there was no prospect of fording it, the men went to work cutting down trees, hollowing out logs and making rafts on which to take the wagons over. These logs, about twenty-five feet in length, were united by cross timbers, forming rafts, which were firmly lashed to stakes driven into the bank. Ropes were attached to both ends, by which the rafts were pulled back and forth across the river. The banks of this stream

SCOTT'S BLUFFS (FROM NATURE, 1890).

CHIMNEY ROCK, ON THE NORTH PLATTE (1890).

being steep, our heavily laden wagons had to be let down carefully with ropes, so that the wheels might run into the hollowed logs. This was no easy task when you take into consideration that in these wagons were women and children, who could cross the rapid river in no other way. Finally the dangerous work was accomplished and we resumed our journey.

The road at first was rough and led through a timbered country, but after striking the great valley of the Platte the road was good and the country beautiful. Stretching out before us as far as the eye could reach was a valley as green as emerald, dotted here and there with

Traveling up the smooth valley of the Platte, we passed Court House Rock, Chimney Rock and Scott's Bluffs, and made from fifteen to twenty miles a day, shortening or lengthening the distance in order to secure a good camping ground. At night when we drove into camp, our wagons were placed so as to form a circle or corral, into which our cattle were driven, after grazing, to prevent the Indians from stealing them, the camp-fires and tents being on the outside. There were many expert riflemen in the party and we never lacked for game. The plains were alive with buffalo, and herds could be seen every day coming to the Platte

AN EMIGRANT ENCAMPMENT.

flowers of every imaginable color, and through this valley flowed the grand old Platte, a wide, rapid, shallow stream. Our company now numbered about forty wagons, and, for a time, we were commanded by Col. William H. Russell, then by George Donner. Exercise in the open air under bright skies, and freedom from peril combined to make this part of our journey an ideal pleasure trip. How I enjoyed riding my pony, galloping over the plain, gathering wild flowers! At night the young folks would gather about the camp fire chatting merrily, and often a song would be heard, or some clever dancer would give us a barn-door jig on the hind gate of a wagon.

to drink. The meat of the young buffalo is excellent and so is that of the antelope, but the antelope are so fleet of foot it is difficult to get a shot at one. I witnessed many a buffalo hunt and more than once was in the chase close beside my father. A buffalo will not attack one unless wounded. When he sees the hunter he raises his shaggy head, gazes at him for a moment, then turns and runs; but when he is wounded he will face his pursuer. The only danger lay in a stampede, for nothing could withstand the onward rush of these massive creatures, whose tread seemed to shake the prairie.

Antelope and buffalo steaks were the main

OLD TRAIL CROSSING HORSESHOE CREEK, A TRIBUTARY OF THE PLATTE.

article on our bill-of-fare for weeks, and no tonic was needed to give zest for the food; our appetites were a marvel. Eliza soon discovered that cooking over a camp fire was far different from cooking on a stove or range, but all hands assisted her. I remember that she had the cream all ready for the churn as we drove into the South Fork of the Platte, and while we were fording the grand old stream she went on with her work, and made several pounds of butter. We found no trouble in crossing the Platte, the only danger being in quicksand. The stream being wide, we had to stop the wagon now and then to give the oxen a few moments' rest. At Fort Laramie, two hundred miles farther on, we celebrated the fourth of July in fine style. Camp was pitched earlier than usual and we prepared a grand dinner. Some of my father's friends in Springfield had given him a bottle of good old brandy, which he agreed to drink at a certain hour of this day looking to the east, while his friends in Illinois were to drink a toast to his success from a companion bottle with their faces turned west, the difference in time being carefully estimated; and at the hour agreed upon, the health of our friends in Springfield was drunk with great enthusiasm. At Fort Laramie was a party of Sioux, who were on the war path going to fight the Crows or Blackfeet. The Sioux are fine-looking Indians and I was not in the least afraid of them. They fell in love with my pony and set about bargaining to buy him. They brought buffalo robes and beautifully tanned buckskin, pretty beaded moccasins, and ropes made of grass, and placing these articles in a heap alongside several of their ponies, they made my father understand by signs that they would give them all for Billy and his rider. Papa smiled and shook his head; then the number of ponies was increased and, as a last tempting inducement, they brought an old coat, that had been worn by some poor soldier, thinking my father could not withstand the brass buttons!

On the sixth of July we were again on the march. The Sioux were several days in passing our caravan, not on account of the length of our train, but because there were so many Sioux. Owing to the fact that our wagons were strung so far apart, they could have massacred our whole party without much loss to themselves. Some of our company became alarmed, and the rifles were cleaned out and loaded, to let the warriors see that we were prepared to fight; but the Sioux never showed any inclination to disturb us. Their curiosity was annoying, however, and our wagon with its conspicuous stove-pipe and looking-glass attracted their attention. They were continually swarming about trying to get a look at themselves in the mirror, and their desire to possess my pony was so strong that at last I had to ride in the wagon and let one of the drivers take charge of Billy. This I did not like, and in order to see how far back the line of warriors extended, I picked up a large field-glass which hung on a rack, and as I pulled it out with a click, the warriors jumped back, wheeled their ponies and scattered. This pleased me greatly, and I told my mother I could fight the whole Sioux tribe with a spy-glass, and as revenge for forcing me to ride in the wagon, whenever they came near trying to get a peep at their war-paint and feathers, I would raise the glass and laugh to see them dart away in terror.

A new route had just been opened by Lansford W. Hastings, called the "Hastings Cut-off,"¹ which passed along the southern shore of the Great Salt Lake rejoining the old "Fort Hall Emigrant" road on the Humboldt. It was said to shorten the distance three hundred miles. Much time was lost in debating which course to pursue; Bridger and Vasques, who were in charge of the fort, sounded the praises of the new road. My father was so eager to reach California that he was quick to take ad-

¹ For an account of Hastings, see *THE CENTURY* for December 1890, p. 176. — Ed.

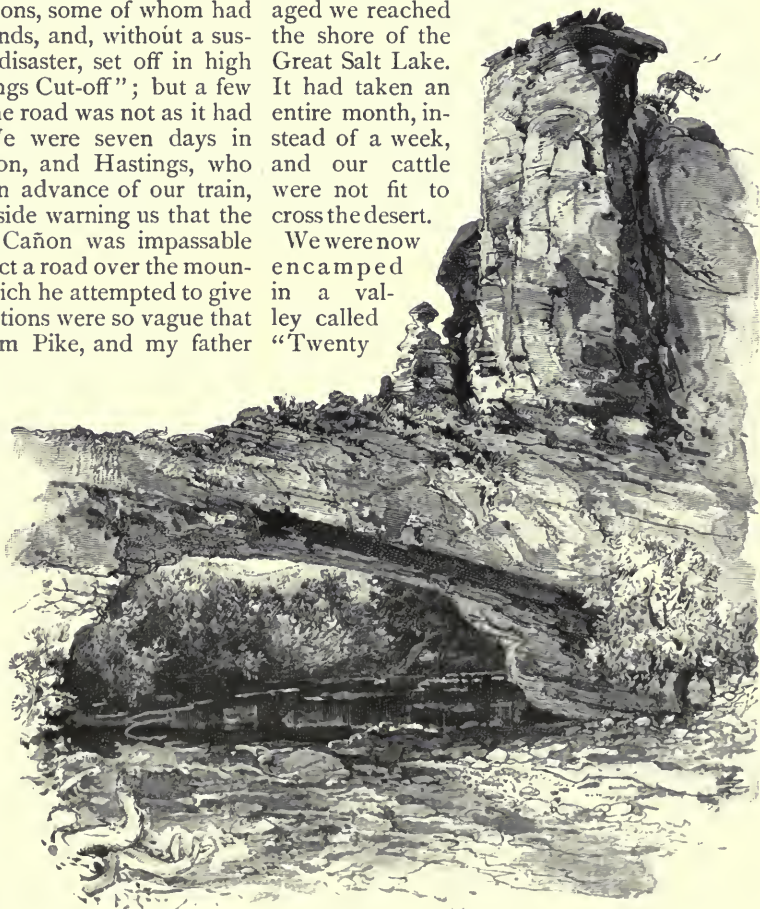

vantage of any means to shorten the distance, and we were assured by Hastings and his party that the only bad part was the forty-mile drive through the desert by the shore of the lake. None of our party knew then, as we learned afterwards, that these men had an interest in the road, being employed by Hastings. But for the advice of these parties we should have continued on the old Fort Hall road. Our company had increased in numbers all along the line, and was now composed of some of the very best people and some of the worst. The greater portion of our company went by the old road and reached California in safety. Eighty-seven persons took the "Hastings Cut-off," including the Donners, Breens, Reeds, Murphys (not the Murphys of Santa Clara County), C. T. Stanton, John Denton, Wm. McClutchen, Wm. Eddy, Louis Keseburg, and many others too numerous to mention in a short article like this. And these are the unfortunates who have since been known as the "Donner Party."

On the morning of July 31 we parted with our traveling companions, some of whom had become very dear friends, and, without a suspicion of impending disaster, set off in high spirits on the "Hastings Cut-off"; but a few days showed us that the road was not as it had been represented. We were seven days in reaching Weber Cañon, and Hastings, who was guiding a party in advance of our train, left a note by the wayside warning us that the road through Weber Cañon was impassable and advising us to select a road over the mountains, the outline of which he attempted to give on paper. These directions were so vague that C. T. Stanton, William Pike, and my father rode on in advance and overtook Hastings and tried to induce him to return and guide our party. He refused, but came back over a portion of the road, and from a high mountain endeavored to point out the general course. Over this road my father traveled alone, taking notes, and blazing trees, to assist him in retracing his course, and reaching camp after an absence of four days. Learning of the hardships of the advance train, the party decided

to cross towards the lake. Only those who have passed through this country on horseback can appreciate the situation. There was absolutely no road, not even a trail. The cañon wound around among the hills. Heavy underbrush had to be cut away and used for making a road bed. While cutting our way step by step through the "Hastings Cut-off," we were overtaken and joined by the Graves family, consisting of W. F. Graves, his wife and eight children, his son-in-law Jay Fosdick, and a young man by the name of John Snyder. Finally we reached the end of the cañon where it looked as though our wagons would have to be abandoned. It seemed impossible for the oxen to pull them up the steep hill and the bluffs beyond, but we doubled teams and the work was, at last, accomplished, almost every yoke in the train being required to pull up each wagon. While in this cañon Stanton and Pike came into camp; they had suffered greatly on account of the exhaustion of their horses and had come near perishing. Worn with travel and

greatly discouraged we reached the shore of the Great Salt Lake. It had taken an entire month, instead of a week, and our cattle were not fit to cross the desert.

We were now encamped in a valley called "Twenty

NATURAL BRIDGE ON LA PRÉE RIVER.

THE EMIGRANT TRAIL THROUGH THE BAD LANDS, WYOMING.

Wells." The water in these wells was pure and cold, welcome enough after the alkaline pools from which we had been forced to drink. We prepared for the long drive across the desert and laid in, as we supposed, an ample supply of water and grass. This desert had been represented to us as only forty miles wide but we found it nearer eighty. It was a dreary, desolate, alkali waste; not a living thing could be seen; it seemed as though the hand of death had been laid upon the country. We started in the evening, traveled all that night, and the following day and night — two nights and one day of suffering from thirst and heat by day and piercing cold by night. When the third night fell and we saw the barren waste stretching away apparently as boundless as

when we started, my father determined to go ahead in search of water. Before starting he instructed the drivers, if the cattle showed signs of giving out to take them from the wagons and follow him. He had not been gone long before the oxen began to fall to the ground from thirst and exhaustion. They were unhitched at once and driven ahead. My father coming back met the drivers with the cattle within ten miles of water and instructed them to return as soon as the animals had satisfied their thirst. He reached us about daylight. We waited all that day in the desert looking for the return of our drivers, the other wagons going on out of sight. Towards night the situation became desperate and we had only a few drops of water left; another night there meant death. We

GREAT DESERT TO THE WEST OF SALT LAKE.

must set out on foot and try to reach some of the wagons. Can I ever forget that night in the desert, when we walked mile after mile in the darkness, every step seeming to be the very last we could take! Suddenly all fatigue was banished by fear; through the night came a swift rushing sound of one of the young steers crazed

oxen before reaching Bridger's Fort from drinking poisoned water found standing in pools, and had bought at the fort two yoke of young steers, but now all were gone, and my father and his family were left in the desert, eight hundred miles from California, seemingly helpless. We realized that our wagons must be abandoned.

REGISTER ROCK, IDAHO, A LANDMARK OF WESTERN EMIGRATION.

by thirst and apparently bent upon our destruction. My father, holding his youngest child in his arms and keeping us all close behind him, drew his pistol, but finally the maddened beast turned and dashed off into the darkness. Dragging ourselves along about ten miles, we reached the wagon of Jacob Donner. The family were all asleep, so we children lay down on the ground. A bitter wind swept over the desert, chilling us through and through. We crept closer together, and, when we complained of the cold, papa placed all five of our dogs around us, and only for the warmth of these faithful creatures we should doubtless have perished.

At daylight papa was off to learn the fate of his cattle, and was told that all were lost, except one cow and an ox. The stock, scenting the water, had rushed on ahead of the men, and had probably been stolen by the Indians, and driven into the mountains, where all traces of them were lost. A week was spent here on the edge of the desert in a fruitless search. Almost every man in the company turned out, hunting in all directions, but our eighteen head of cattle were never found. We had lost our best yoke of

The company kindly let us have two yoke of oxen, so with our ox and cow yoked together we could bring one wagon, but, alas! not the one which seemed so much like a home to us, and in which grandma had died. Some of the company went back with papa and assisted him in cacheing everything that could not be packed in one wagon. A cache was made by digging a hole in the ground, in which a box or the bed of a wagon was placed. Articles to be buried were packed into this box, covered with boards, and the earth thrown in upon them, and thus they were hidden from sight. Our provisions were divided among the company. Before leaving the desert camp, an inventory of provisions on hand was taken, and it was found that the supply was not sufficient to last us through to California, and as if to render the situation more terrible, a storm came on during the night and the hill-tops became white with snow. Some one must go on to Sutter's Fort after provisions. A call was made for volunteers. C. T. Stanton and Wm. McClutchen bravely offered their services and started on bearing letters from the company to Captain Sutter asking for relief. We resumed our journey

and soon reached Gravelly Ford on the Humboldt.

I now come to that part of my narrative which delicacy of feeling for both the dead and the living would induce me to pass over in silence, but which a correct and lucid chronicle of subsequent events of historical importance will not suffer to be omitted. On the 5th day of October, 1846, at Gravelly Ford, a tragedy was enacted which affected the subsequent

father a violent blow over the head with his heavy whip-stock. One blow followed another. Father was stunned for a moment and blinded by the blood streaming from the gashes in his head. Another blow was descending when my mother ran in between the men. Father saw the uplifted whip, but had only time to cry: "John, John," when down came the stroke upon mother. Quick as a thought my father's hunting knife was out and Snyder fell, fa-

OLD CALIFORNIA TRAIL TO THE NORTH OF SALT LAKE.

lives and fortunes of more than one member of our company. At this point in our journey we were compelled to double our teams in order to ascend a steep, sandy hill. Milton Elliott, who was driving our wagon, and John Snyder, who was driving one of Mr. Graves's, became involved in a quarrel over the management of their oxen. Snyder was beating his cattle over the head with the butt end of his whip, when my father, returning on horse-back from a hunting trip, arrived and, appreciating the great importance of saving the remainder of the oxen, remonstrated with Snyder, telling him that they were our main dependence, and at the same time offering the assistance of our team. Snyder having taken offense at something Elliott had said declared that his team could pull up alone, and kept on using abusive language. Father tried to quiet the enraged man. Hard words followed. Then my father said: "We can settle this, John, when we get up the hill." "No," replied Snyder with an oath, "we will settle it now," and springing upon the tongue of a wagon, he struck my

tally wounded. He was caught in the arms of W. C. Graves, carried up the hill-side, and laid on the ground. My father regretted the act, and dashing the blood from his eyes went quickly to the assistance of the dying man. I can see him now, as he knelt over Snyder, trying to stanch the wound, while the blood from the gashes in his own head, trickling down his face, mingled with that of the dying man. In a few moments Snyder expired. Camp was pitched immediately, our wagon being some distance from the others. My father, anxious to do what he could for the dead, offered the boards of our wagon, from which to make a coffin. Then, coming to me, he said: "Daughter, do you think you can dress these wounds in my head? Your mother is not able, and they must be attended to." I answered by saying: "Yes, if you will tell me what to do." I brought a basin of water and sponge, and we went into the wagon, so that we might not be disturbed. When my work was at last finished, I burst out crying. Papa clasped me in his arms, saying: "I should not have asked so much of you," and

talked to me until I controlled my feelings, so that we could go to the tent where mama was lying.

We then learned that trouble was brewing in the camp where Snyder's body lay. At the funeral my father stood sorrowfully by until the last clod was placed upon the grave. He and John Snyder had been good friends, and no one could have regretted the taking of that young life more than my father.

The members of the Donner party then held a council to decide upon the fate of my father, while we anxiously awaited the verdict. They refused to accept the plea of self-defense and decided that my father should be banished from the company and sent into the wilderness alone. It was a cruel sentence. And all this animosity towards my father was caused by Louis Keseburg, a German who had joined our company away back on the plains. Keseburg was married to a young and pretty German girl, and used to abuse her, and was in the habit of beating her till she was black and blue. This aroused all the manhood in my father and he took Keseburg to task — telling him it must be stopped or measures would be

tell. I have thought the subject over for hours but failed to arrive at a conclusion. The feeling against my father at one time was so strong that lynching was proposed. He was no coward and he bared his neck, saying, "Come on, gentlemen," but no one moved. It was thought more humane, perhaps, to send him into the wilderness to die of slow starvation or be murdered by the Indians; but my father did not die. God took care of him and his family, and at Donner Lake we seemed especially favored by the Almighty as not one of our family perished, and we were the only family no one member of which was forced to eat of human flesh to keep body and soul together. When the sentence of banishment was communicated to my father, he refused to go, feeling that he was justified before God and man, as he had only acted in self-defense.

Then came a sacrifice on the part of my mother. Knowing only too well what her life would be without him, yet fearful that if he remained he would meet with violence at the hands of his enemies, she implored him to go, but all to no avail until she urged him to re-

SALT LAKE, LOOKING SOUTH FROM PROMONTORY.

taken to that effect. Keseburg did not dare to strike his wife again, but he hated my father and nursed his wrath until papa was so unfortunate as to have to take the life of a fellow-creature in self-defense. Then Keseburg's hour for revenge had come. But how a man like Keseburg, brutal and overbearing by nature, although highly educated, could have such influence over the company is more than I can

member the destitution of the company, saying that if he remained and escaped violence at their hands, he might nevertheless see his children starving and be helpless to aid them, while if he went on he could return and meet them with food. It was a fearful struggle; at last he consented, but not before he had secured a promise from the company to care for his wife and little ones.

My father was sent out into an unknown country without provisions or arms—even his horse was at first denied him. When we learned of this decision, I followed him through the darkness, taking Elliott with me, and carried him his rifle, pistols, ammunition and some food. I had determined to stay with him, and begged him to let me stay, but he would listen

My mother's despair was pitiful. Patty and I thought we would be bereft of her also. But life and energy were again aroused by the danger that her children would starve. It was apparent that the whole company would soon be put on a short allowance of food, and the snow-capped mountains gave an ominous hint of the fate that really befell us in the Sierra. Our wagon

A DESPERATE SITUATION. (DRAWN BY CHARLES NAHL.)

to no argument, saying that it was impossible. Finally, unclasping my arms from around him, he placed me in charge of Elliott, who started back to camp with me—and papa was left alone. I had cried until I had hardly strength to walk, but when we reached camp and I saw the distress of my mother, with the little ones clinging around her and no arm to lean upon, it seemed suddenly to make a woman of me. I realized that I must be strong and help mama bear her sorrows.

We traveled on, but all life seemed to have left the party, and the hours dragged slowly along. Every day we would search for some sign of papa, who would leave a letter by the way-side in the top of a bush or in a split stick, and when he succeeded in killing geese or birds would scatter the feathers about so that we might know that he was not suffering for food. When possible, our fire would always be kindled on the spot where his had been. But a time came when we found no letter, and no trace of him. Had he starved by the way-side, or been murdered by the Indians?

was found to be too heavy, and was abandoned with everything we could spare, and the remaining things were packed in part of another wagon. We had two horses left from the wreck, which could hardly drag themselves along, but they managed to carry my two little brothers. The rest of us had to walk, one going beside the horse to hold on my youngest brother who was only two and a half years of age. The Donners were not with us when my father was banished, but were several days in advance of our train. Walter Herron, one of our drivers, who was traveling with the Donners, left the wagons and joined my father.

On the 19th of October, while traveling along the Truckee, our hearts were gladdened by the return of Stanton, with seven mules loaded with provisions. Mr. McClutchen was ill and could not travel, but Captain Sutter had sent two of his Indian vaqueros, Luis and Salvador with Stanton. Hungry as we were, Stanton brought us something better than food—news that my father was alive. Stanton had met him not far from Sutter's Fort; he had been three days with-

out food, and his horse was not able to carry him. Stanton had given him a horse and some provisions and he had gone on. We now packed what little we had left on one mule and started with Stanton. My mother rode on a mule, carrying Tommy in her lap; Patty and Jim rode behind the two Indians, and I behind Mr. Stanton, and in this way we journeyed on through the rain, looking up with fear towards the mountains, where snow was already falling although it was only the last week in October. Winter had set in a month earlier than usual. All trails and roads were covered; and our only guide was the summit which it seemed we would never reach. Despair drove many nearly frantic. Each family tried to cross the mountains but found it impossible. When it was seen that the wagons could not be dragged through the snow, their goods and provisions were packed on oxen and another start was made, men and

might bring yielded to the many, and we camped within three miles of the summit.

That night came the dreaded snow. Around the camp-fires under the trees great feathery flakes came whirling down. The air was so full of them that one could see objects only a few feet away. The Indians knew we were doomed, and one of them wrapped his blanket about him and stood all night under a tree. We children slept soundly on our cold bed of snow with a soft white mantle falling over us so thickly that every few moments my mother would have to shake the shawl — our only covering — to keep us from being buried alive. In the morning the snow lay deep on mountain and valley. With heavy hearts we turned back to a cabin that had been built by the Murphy-Schallenberger party two years before. We built more cabins and prepared as best we could for the winter. That camp, which proved

TRUCKEE CAÑON.

women walking in the snow up to their waists, carrying their children in their arms and trying to drive their cattle. The Indians said they could find no road, so a halt was called, and Stanton went ahead with the guides, and came back and reported that we could get across if we kept right on, but that it would be impossible if snow fell. He was in favor of a forced march until the other side of the summit should be reached, but some of our party were so tired and exhausted with the day's labor that they declared they could not take another step; so the few who knew the danger that the night

the camp of death to many in our company, was made on the shore of a lake, since known as "Donner Lake." The Donners were camped in Alder Creek Valley below the lake, and were, if possible, in a worse condition than ourselves. The snow came on so suddenly that they had no time to build cabins, but hastily put up brush sheds, covering them with pine boughs.

Three double cabins were built at Donner Lake, which were known as the "Breen Cabin," the "Murphy Cabin," and the "Reed-Graves Cabin." The cattle were all killed, and the meat was placed in snow for preservation. My

mother had no cattle to kill, but she made arrangements for some, promising to give two for one in California. Stanton and the Indians made their home in my mother's cabin.

Many attempts were made to cross the mountains, but all who tried were driven back by the

ples, some beans, a bit of tripe, and a small piece of bacon. When this hoarded store was brought out, the delight of the little ones knew no bounds. The cooking was watched carefully, and when we sat down to our Christmas dinner mother said, "Children, eat slowly, for

DONNER LAKE, FROM THE OLD SACRAMENTO TRAIL.

pitiless storms. Finally a party was organized, since known as the "Forlorn Hope." They made snow-shoes, and fifteen started, ten men and five women, but only seven lived to reach California; eight men perished. They were over a month on the way, and the horrors endured by that Forlorn Hope no pen can describe nor imagination conceive. The noble Stanton was one of the party, and perished the sixth day out, thus sacrificing his life for strangers. I can find no words in which to express a fitting tribute to the memory of Stanton.

The misery endured during those four months at Donner Lake in our little dark cabins under the snow would fill pages and make the coldest heart ache. Christmas was near, but to the starving its memory gave no comfort. It came and passed without observance, but my mother had determined weeks before that her children should have a treat on this one day. She had laid away a few dried ap-

ples, some beans, a bit of tripe, and a small piece of bacon. When this hoarded store was brought out, the delight of the little ones knew no bounds. The cooking was watched carefully, and when we sat down to our Christmas dinner mother said, "Children, eat slowly, for

this one day you can have all you wish." So bitter was the misery relieved by that one bright day, that I have never since sat down to a Christmas dinner without my thoughts going back to Donner Lake. The storms would often last ten days at a time, and we would have to cut chips from the logs inside which formed our cabins, in order to start a fire. We could scarcely walk, and the men had hardly strength to procure wood. We would drag ourselves through the snow from one cabin to another, and some mornings snow would have to be shoveled out of the fireplace before a fire could be made. Poor little children were crying with hunger, and mothers were crying because they had so little to give their children. We seldom thought of bread, we had been without it so long. Four months of such suffering would fill the bravest hearts with despair.

During the closing days of December, 1846, gold was found in my mother's cabin at Don-

ner Lake by John Denton. I remember the night well. The storm fiends were shrieking in their wild mirth, we were sitting about the fire in our little dark home, busy with our thoughts. Denton with his cane kept knocking pieces off the large rocks used as fire-irons on which to place the wood. Something bright attracted his attention, and picking up pieces of the rock he examined them closely; then turning to my mother he said, "Mrs. Reed, this is gold." My mother replied that she wished it were bread. Denton knocked more chips from the rocks, and he hunted in the ashes for the shining particles until he had gathered about a teaspoonful. This he tied in a small piece of buckskin and placed in his pocket, saying, "If we ever get away from here I am coming back for more." Denton started out with the first relief party but perished on the way, and no one thought of the gold in his pocket. Denton was about thirty years of age; he was born in Sheffield, England, and was a gunsmith and gold-beater by trade. Gold has never been found on the shore of the lake, but a few miles from there in the mountain cañons, from which this rock possibly came, rich mines have been discovered.

Time dragged slowly along till we were no longer on short allowance but were simply starving. My mother determined to make an effort to cross the mountains. She could not see her children die without trying to get them food. It was hard to leave them but she felt that it must be done. She told them she would bring them bread, so they were willing to stay, and with no guide but a compass we started—my mother, Eliza, Milt Elliott and myself. Milt wore snow shoes and we followed in his tracks. We were five days in the mountains; Eliza gave out the first day and had to return, but we kept on and climbed one high mountain after another only to see others higher still ahead. Often I would have to crawl up the mountains, being too tired to walk. The nights were made hideous by the screams of wild beasts heard in the distance. Again, we would be lulled to sleep by the moan of the pine trees, which seemed to sympathize with our loneliness. One morning we awoke to find ourselves in a well of snow. During the night, while in the deep sleep of exhaustion, the heat of the fire had melted the snow and our little camp had gradually sunk many feet below the surface until we were literally buried in a well of snow. The danger was that any attempt to get out might bring an avalanche upon us, but finally steps were carefully made and we reached the surface. My foot was badly frozen, so we were compelled to return, and just in time, for that night a storm came on, the most fearful of the winter, and we should have perished had we not been in the cabins.

We now had nothing to eat but raw hides and they were on the roof of the cabin to keep out the snow; when prepared for cooking and boiled they were simply a pot of glue. When the hides were taken off our cabin and we were left without shelter Mr. Breen gave us a home with his family, and Mrs. Breen prolonged my life by slipping me little bits of meat now and then when she discovered that I could not eat the hide. Death had already claimed many in our party and it seemed as though relief never would reach us. Baylis Williams, who had been in delicate health before we left Springfield, was the first to die; he passed away before starvation had really set in.

I am a Catholic although my parents were not. I often went to the Catholic church before leaving home, but it was at Donner Lake that I made the vow to be a Catholic. The Breens were the only Catholic family in the Donner party and prayers were said aloud regularly in that cabin night and morning. Our only light was from little pine sticks split up like kindling wood and kept constantly on the hearth. I was very fond of kneeling by the side of Mr. Breen and holding these little torches so that he might see to read. One night we had all gone to bed—I was with my mother and the little ones, all huddled together to keep from freezing—but I could not sleep. It was a fearful night and I felt that the hour was not far distant when we would go to sleep—never to wake again in this world. All at once I found myself on my knees with my hands clasped, looking up through the darkness, making a vow that if God would send us relief and let me see my father again I would be a Catholic. That prayer was answered.

On his arrival at Sutter's Fort, my father made known the situation of the emigrants, and Captain Sutter offered at once to do everything possible for their relief. He furnished horses and provisions and my father and Mr. McClutchen started for the mountains, coming as far as possible with horses and then with packs on their backs proceeding on foot; but they were finally compelled to return. Captain Sutter was not surprised at their defeat. He stated that there were no able-bodied men in that vicinity, all having gone down the country with Frémont to fight the Mexicans. He advised my father to go to Yerba Buena, now San Francisco, and make his case known to the naval officer in command. My father was in fact conducting parties there—when the seven members of the Forlorn Hope arrived from across the mountains. Their famished faces told the story. Cattle were killed and men were up all night drying beef and making flour by hand mills, nearly 200 pounds being made in one night, and a party of seven,

ON THE WAY TO THE SUMMIT.

commanded by Captain Reasen P. Tucker, were sent to our relief by Captain Sutter and the alcalde, Mr. Sinclair. On the evening of February 19th, 1847, they reached our cabins, where all were starving. They shouted to attract attention. Mr. Breen, clambered up the icy steps from our cabin, and soon we heard the blessed words, "Relief, thank God, relief!" There was joy at Donner Lake that night, for we did not know the fate of the

Forlorn Hope and we were told that relief parties would come and go until all were across the mountains. But with the joy sorrow was strangely blended. There were tears in other eyes than those of children; strong men sat down and wept. For the dead were lying about on the snow, some even unburied, since the living had not had strength to bury their dead. When Milt Elliott died,—our faithful friend, who seemed so like a brother,—my

mother and I dragged him up out of the cabin and covered him with snow. Commencing at his feet, I patted the pure white snow down softly until I reached his face. Poor Milt! it was hard to cover that face from sight forever, for with his death our best friend was gone.

On the 22d of February the first relief started with a party of twenty-three—men, women and children. My mother and her family were among the number. It was a bright sunny morning and we felt happy, but we had not gone far when Patty and Tommy gave out. They were not able to stand the fatigue and it was not thought safe to allow them to proceed, so Mr. Glover informed mama that they would have to be sent back to the cabins to await the next expedition. What language can express our feelings? My mother said that she would go back with her children—that we would all go back together. This the relief party would not permit, and Mr. Glover promised mama that as soon as they reached Bear Valley he himself would return for her children. Finally my mother, turning to Mr. Glover said, "Are you a Mason?" He replied that he was. "Will you promise me on the word of a Mason that if we do not meet their father you will return and save my children?" He pledged himself that he would. My father was a member of the Mystic Tie and mama had great faith in the word of a Mason. It was a sad parting—a fearful struggle. The men turned aside, not being able to hide their tears. Patty said, "I want to see papa, but I will take good care of Tommy and I do not want you to come back." Mr. Glover returned with the children and, providing them with food, left them in the care of Mr. Breen.

With sorrowful hearts we traveled on, walking through the snow in single file. The men wearing snow-shoes broke the way and we followed in their tracks. At night we lay down on the snow to sleep, to awake to find our clothing all frozen, even to our shoe-strings. At break of day we were again on the road, owing to the fact that we could make better time over the frozen snow. The sunshine, which it would seem would have been welcome, only added to our misery. The dazzling reflection of the snow was very trying to the eyes, while its heat melted our frozen clothing, making them cling to our bodies. My brother was too small to step in the tracks made by the men, and in order to travel he had to place his knee on the little hill of snow after each step and climb over. Mother coaxed him along, telling him that every step he took he was getting nearer papa and nearer something to eat. He was the youngest child that walked over the Sierra Nevada. On our second day's journey John Denton gave out and declared it would be im-

possible for him to travel, but he begged his companions to continue their journey. A fire was built and he was left lying on a bed of freshly cut pine boughs, peacefully smoking. He looked so comfortable that my little brother wanted to stay with him; but when the second relief party reached him poor Denton was past waking. His last thoughts seemed to have gone back to his childhood's home, as a little poem was found by his side, the pencil apparently just dropped from his hand.

Captain Tucker's party on their way to the cabins had lightened their packs of a sufficient quantity of provisions to supply the sufferers on their way out. But when we reached the place where the cache had been made by hanging the food on a tree, we were horrified to find that wild animals had destroyed it, and again starvation stared us in the face. But my father was hurrying over the mountains, and met us in our hour of need with his hands full of bread. He had expected to meet us on this day, and had stayed up all night baking bread to give us. He brought with him fourteen men. Some of his party were ahead, and when they saw us coming they called out, "Is Mrs. Reed with you? If she is, tell her Mr. Reed is here." We heard the call; mother knelt on the snow, while I tried to run to meet papa.

When my father learned that two of his children were still at the cabins, he hurried on, so fearful was he that they might perish before he reached them. He seemed to fly over the snow, and made in two days the distance we had been five in traveling, and was overjoyed to find Patty and Tommy alive. He reached Donner Lake on the first of March, and what a sight met his gaze! The famished little children and the death-like look of all made his heart ache. He filled Patty's apron with biscuits, which she carried around, giving one to each person. He had soup made for the infirm, and rendered every assistance possible to the sufferers. Leaving them with about seven days' provisions, he started out with a party of seventeen, all that were able to travel. Three of his men were left at the cabins to procure wood and assist the helpless. My father's party (the second relief) had not traveled many miles when a storm broke upon them. With the snow came a perfect hurricane. The crying of half-frozen children, the lamenting of the mothers, and the suffering of the whole party was heart-rending; and above all could be heard the shrieking of the storm King. One who has never witnessed a blizzard in the Sierra can form no idea of the situation. All night my father and his men worked unceasingly through the raging storm, trying to erect shelter for the dying women and children. At times the hurricane would

burst forth with such violence that he felt alarmed on account of the tall timber surrounding the camp. The party were destitute of food, all supplies that could be spared having been left with those at the cabins. The relief party had cached provisions on their way over to the cabins, and my father had sent three of the men forward for food before the storm set in; but they could not return. Thus, again, death stared all in the face. At one time the fire was nearly gone; had it been lost, all would have perished. Three days and nights they were exposed to the fury of the elements. Finally my father became snow-blind and could do no more, and he would have died but for the exertions of William McClutchen and Hiram Miller, who worked over him all night. From this time forward, the toil and responsibility rested upon McClutchen and Miller.

The storm at last ceased, and these two determined to set out over the snow and send back relief to those not able to travel. Hiram Miller picked up Tommy and started. Patty thought she could walk, but gradually everything faded from her sight, and she too seemed to be dying. All other sufferings were now forgotten, and everything was done to revive the child. My father found some crumbs in the thumb of his woolen mitten; warming and moistening them between his own lips, he gave them to her and thus saved her life, and afterward she was carried along by different ones in the company. Patty was not alone in her travels. Hidden away in her bosom was a tiny doll, which she had carried day and night through all of our trials. Sitting before a nice, bright fire at Woodworth's Camp, she took dolly out to have a talk, and told her of all her new happiness.

There was untold suffering at that "Starved Camp," as the place has since been called. When my father reached Woodworth's Camp, a third relief started in at once and rescued the living. A fourth relief went on to Donner Lake, as many were still there—and many remain there still, including George Donner and wife, Jacob Donner and wife and four of their children. George Donner had met with an accident which rendered him unable to travel; and his wife would not leave him to die alone. It would take pages to tell of the heroic acts and noble deeds of those who lie sleeping about Donner Lake.

Most of the survivors, when brought in from the mountains, were taken by the different relief parties to Sutter's Fort, and the generous hearted captain did everything possible for the sufferers. Out of the eighty-three persons who were snowed in at Donner Lake, forty-two perished, and of the thirty-one emigrants who left Springfield, Illinois, that spring morning, only eighteen lived to reach California. Alcalde Sinclair took my mother and her family to his own home, and we were surrounded with every comfort. Mrs. Sinclair was the dearest of women. Never can I forget their kindness. But our anxiety was not over, for we knew that my father's party had been caught in the storm. I can see my mother now, as she stood leaning against the door for hours at a time, looking towards the mountains. At last my father arrived at Mr. Sinclair's with the little ones, and our family were again united. That day's happiness repaid us for much that we had suffered; and it was spring in California.

Words cannot tell how beautiful the spring appeared to us coming out of the mountains from that long winter at Donner Lake in our little dark cabins under the snow. Before us now lay, in all its beauty, the broad valley of the Sacramento. I remember one day, when traveling down Napa Valley, we stopped at noon to have lunch under the shade of an oak; but I was not hungry; I was too full of the beautiful around me to think of eating. So I wandered off by myself to a lovely little knoll and stood there in a bed of wild flowers, looking up and down the green valley, all dotted with trees. The birds were singing with very joy in the branches over my head, and the blessed sun was smiling down upon all as though in benediction. I drank it in for a moment, and then began kissing my hand and wafting kisses to Heaven in thanksgiving to the Almighty for creating a world so beautiful. I felt so near God at that moment that it seemed to me I could feel His breath warm on my cheek. By and by I heard papa calling, "Daughter, where are you? Come, child, we are ready to start, and you have had no lunch," I ran and caught him by the hand, saying, "Buy this place, please, and let us make our home here." He stood looking around for a moment, and said, "It is a lovely spot," and then we passed on.

SAN JOSE, CAL.

Virginia Reed Murphy.

AT THE HARBOR'S MOUTH.

WHITE shell road runs out from the town and, skirting the river, sweeps along the shore of the sound for about a quarter of a mile at the harbor's mouth, and then turns and comes back to the town again by a higher ridge of land about a half-mile from the river. Near the harbor's mouth the road is lined on the shore side by summer cottages; it passes a large summer hotel, and reaches a white lighthouse before it makes its turn. In summer it is filled with the carriages of the cottage residents, the teams of the dwellers in the city, and long, yellow beach-wagons carrying young people and children to the bathing-beach on the sound. The cool sea-breeze powders the grass and bushes on the west side of the road with the fine white dust of the shells, pulverized under many wheels and hoofs.

And it is by no means deserted in winter. The beach-wagons are covered in with glass windows that rattle and shake as the vehicles jolt along, and though they run at longer intervals, and carry less hilarious passengers than the shouting, laughing loads of summer, they are seldom empty, and late in the day they are crowded with workingmen carrying their tin dinner-pails and returning to their homes. The city itself is not a large one. In fact it is a very small one, and if one compares it with Tyre and Sidon, which were also seaports, it is a very new one. But it is old in the history of the country, a fact of which its inhabitants are justly proud. It was a place of considerable importance in colonial days. It was the center of importing for the surrounding country. Vessels from foreign ports lay at its wharfs, and as late as the beginning of the century merchants advertised their own importations of calamancoes, bombazine, Irish and tandem holland, shalloons, damasks, and other stuffs, the names of which have an odd sound to the modern ear. In its old graveyard lies buried Lyon Gardiner, Lord of the Isle of Wight (Gardiner's Island), the only entailed and titled estate in America, and the small building is still standing where Nathan Hale taught children to read before he taught how a brave man could die. In whaling days the city's wharfs were busy with riggers and gaugers and filled with great barrels of whale oil. It was from the profits of these ventures that the captains and agents built the square white houses with

Grecian columns, some of which still remain standing on the main street, and which mark a certain epoch in the domestic architecture of New England. It has its past and its history, and it has, like every well-regulated New England city with a history and a past, its house where Washington slept.

Long before the city had, as it has now, its mayor, aldermen, common councilmen, board of trade, and all that innumerable host of public officials happily numerous enough in small New England cities to give every citizen a reasonable hope of holding public office before he dies; while its ruler was that Georgius Secundus whom Dr. Holmes irreverently calls a "snuffy old drone from a German hive," the road which runs down by the riverside had only started on the journey which it has since completed. It started out ambitiously enough, but after passing one or two houses it became a cart-path, which struggled on in a winding and desultory way until the last house was passed only a few rods from where the railroad now crosses; then giving up the effort to be even a cart-path, it wandered as a foot-path through the coarse salt grass, and finally lost itself in the sand long before the harbor's mouth was reached.

The same white, sandy beach, however, stretched along the shore where the river flows into the sound, and the gray granite rocks where the lighthouse stands even then pushed their way out into the water. It was then, as now, a fair and inviting spot on a hot summer's afternoon. And it was down this path through the salt grasses on a hot summer's afternoon that Ezra Hempstead and two young men walked on their way to the beach for a dip in the sea. The Hempsteads were people of considerable local importance. The Hempstead house was a large gambrel-roof house which stood some distance back from the road, and under the eaves it was pierced with embrasures through which the muzzles of the flint-lock muskets could be pushed to defend the garrison within. For when the house was built Pequot and Mohegan Indians had not always been pacific, though the danger of Indian warfare was now over. The Hempstead acres were broad, and Stephen Hempstead himself was perhaps next to the minister in the councils of church and state. A Puritan of the Puritans was Stephen Hempstead, much distressed by the heresies of the Rogereens, a small sect who greatly annoyed the church by their outlandish beliefs, and bitter against the Quakers.

It was Stephen Hempstead who only a week before had whipped and driven away a foreign-looking woman who had wandered about the town and endeavored to ply her heathenish fortune-telling arts on some of the younger people, and had shrugged his shoulders contemptuously when the woman fiercely cursed him. A man of parts and property, and Ezra was a young man for whom the prudent maiden might well set her cap.

Along the path through the coarse sea-grass the young men walked. "Well, Ezra," said the oldest of the three, who was of a somewhat more thoughtful type than his companions, being indeed a student at Yale, of whom much was expected, "has the harvest been blighted or have the cows gone dry since the old woman's curse?"

"If every curse of a whipped rogue blighted the harvest we should all starve," replied Ezra.

"And yet," added the student, musingly, "there are many odd tales concerning the curses of the aged. England is full of such legends, and surely we in this country have had our fill of them."

"Old wives' tales, fit to be told in evening before the fire. Winter tales, not meet for such a glorious summer day," said Ezra.

"Then you do not believe in witchcraft," said the student.

"No, indeed; a baleful superstition, as our neighbors in Massachusetts found to their cost."

"It is in young eyes that Ezra finds witchcraft, I warrant you," said the third member of the trio. "I have seen him hipped for a whole day long when they looked less kindly on him."

"They blight no harvest, though," said Ezra, "and have but to smile again and the clouds have passed."

"There is sometimes a worse undoing than the blighting of harvests," said the student.

"Nay; if you speak of such witches, I believe in them," said Ezra. "Surely it was witchcraft that made you plow through the cold and snow last winter to a fire no warmer than you left at home. And talk of being hipped, man! It was a whole week that you went without smiling when the young lawyer from Hartford was here at court."

"A conceited upstart," said the other, sharply.

"A clear case of witchcraft," laughed Ezra. "Come," he added to the student, "have you no such witches at New Haven?"

"I am too busy with my books to note them," said the student. But he colored as he spoke, and Ezra laughed softly.

It was late in the afternoon of an August day. There was hardly a ripple on the water. Distorted by a mirage, the low shore of Fisher's Island loomed up in high cliffs, and distant Long Island hung quivering far above the ho-

zizon. As the currents of heated air moved slowly up the sound they lifted the farthest shores into sight, suspended them in the air, twisted and contorted, only to let them drop again below the horizon in a few minutes. The incoming tide plashed lazily against the rocks and broke in small waves on the white beach. Drawn up on the beach by the rocks was the boat of some fisherman, who had perhaps that morning set the white buoys that marked his lobster-pots. Ezra and his friends sat on its gunwale. As they stood up to take off their coats they saw on the other side of the ledge farther up the beach at no great distance from them a dingy tent. In front of it an iron pot rested on a few stones over some blackened embers.

"What have we here?" said the student.

"Some strollers who shall be turned out of town to-morrow, I promise you," said Ezra.

"And whipped before they go?" queried the student.

"Aye, if they play any outlandish tricks," answered Ezra.

While they were looking a young girl stepped to the door of the tent and, shading her eyes with her hand, looked off on the water and then, turning slowly, looked at the young men, whose heads she could see over the ledge of rocks; a slight, straight, well-poised figure, with black hair, dark skin, and flashing black eyes.

"Too fair a figure for the whipping-post," said the student.

Ezra leaned against the rock and looked at the girl. She half smiled, turned her head coquettishly, and went back into the tent.

"Too fair a figure for the whipping-post," repeated the student.

"What flashing eyes she had!" said Ezra.

"Come," said the third, "let us take our bath, and Ezra can have the gipsy whipped to-morrow if he wishes."

They threw off their clothes behind the rocks and swam out some hundred feet beyond the ledge. As they floated there in the calm sea the student called their attention to the tent again, and out from the door stepped the girl, a red kerchief twisted round her head, a jacket on her shoulders, and a short skirt which showed her bare, brown feet and ankles.

As they watched her she ran down into the water to her waist, and then, making her jacket and skirt into a small bundle, she threw them back on the shore.

They could see her wet shoulders glisten in the rays of the setting sun as she easily and gracefully swam out from the shore. She passed them, and still swam slowly and easily out towards the sound. They were all good swimmers,—Ezra had swum from point to point, a distance of some three miles,—and without a

word they followed her. So they swam on in silence, following the girl, Ezra slightly in the lead, until they were some distance out from the shore. They had been swimming rapidly, but in spite of their exertions the girl had easily kept her lead and had now and then glanced over her shoulder and half smiled as if to challenge them to a race. The student stopped first. The pace was telling on him.

"Wait, Ezra," he said. As they all stopped the girl stopped too, and, floating in the water, watched them.

"How far are you going?" said the student. "This is swim enough for me. I am going to the shore again."

"And I," said the third. "Come, Ezra; let us go back."

"Swim back if you want to," said Ezra. "This is no swim for me; I will join you presently."

"Come back with us," said the student. "The sun is setting, and it will be late before we get back to town."

"Go back," said Ezra, shortly. "I'm not keeping you; I tell you I will join you presently."

"Come with us now," said the other. As he spoke the girl half lifted herself in the water, smiled towards Ezra, and took a few strokes forward.

Without replying, Ezra swam towards her, and the other two swam slowly shoreward.

The sun was just sinking as they stepped upon the sand. Half the disk was already below the horizon. Far off in the crimson sea they could see Ezra and the girl somewhat nearer together and still swimming outward.

"Ezra! Ezra!" they called.

He stopped and threw up an arm to show them that he heard them, and the girl waved her arm too and seemed to beckon him on. Then they both swam still outward.

"A plague on the gipsy!" said the student, testily. "We shall have to wait till the hot-brained fool is ready to come back."

When they had finished dressing they called again, "Ezra! Ezra!" This time he made no sign, and in the growing dusk they could just see two heads black upon the water and now apparently quite near together.

"Let us take the boat and go after him," said the other.

"Aye," said the student; "and drag him

back by force of arms. Let the gipsy swim to the underworld if she will. You scull, and I will watch them."

So they pushed the boat off from the shore and got into her, and while the student watched in the bow the other sculled the boat out towards the two swimmers as rapidly as he could.

It was growing steadily darker, and it was only by careful watching that the student could see the two black spots far out on the water. He directed the course of the boat now to the right, now to the left. Presently he called for the other to stop.

"I have lost sight of them," he said.

They both stood up and looked out over the water in the direction in which the student had been watching.

"I see them," said the other, presently. And he pointed out over the water.

Surely there were the two black spots, now close together, and he took the oar again. Closer they came to them. It was dusk, and they must be quite near before they could recognize Ezra. Slowly now, for it would not do to lose sight of them again. They were over a mile from the shore, and the water, no longer golden, was fast growing black. Closer — when a wild, mocking laugh startled them both, and two loons flew up from the water and winged their way heavily out towards the sea.

They stopped and looked at each other with pale faces.

"Those were loons," said the student, "those black spots that we saw."

"But where are Ezra and the girl?" said the other.

It was in vain that they scanned the broad water. Not a spot was to be seen on its surface, and they slowly went back to the shore. When they reached it the tent was gone too, and only a few blackened embers showed where it had been.

There on that ledge of rocks stands the lighthouse to-day, and the wife of the lighthouse-keeper, brown and tanned, says that sometimes in the dusk of a summer's evening one can see two heads as of two swimmers far out on the water, and that over the waves comes a sound of mocking laughter.

But the lighthouse-keeper, a grizzled veteran of the war, says that they are only loons swimming on the water and calling to each other.

Walter Learned.

THE FORCE OF EXAMPLE.

T was in the old time, and it was the old story. A man and a maid sat under a tree, a little stream at their feet, and the lush summer all around. The land was wild and beautiful; the cultivated fields to be seen

by a bird above their heads were only little, irregular islands grouped through the sea of forest. Near the pair—that is, not half a mile away—stood the largest and best farmhouse within many miles; it had a “frame” addition built in front of the older log structure, a big, rough, grassy yard, and at one side a garden equally divided between flowers and vegetables.

Two stout dames sat on the back gallery, one knitting, one with folded hands.

“I tell you, Betty,” said the idle one, “I don’t give my approval to the way you’re a-lettin’ Lucindy carry on. That gal is the talk of the county.”

“Now, Sist’ Emmy,” replied the other in an aggrieved, long-suffering tone, “that’s a terrible way to talk; it’s onjust. ‘The talk of the county,’” she repeated, flaring into a little unusual vigor of utterance, “sounds as if the poor child had done something disrespectful, and Lord knows I don’t know sense when there’s a law in the land that a gyrl’s got to marry afore she’s ready.”

“The trouble with that gal,” said Sist’ Emmy, “’pears to be that she won’t git married when she is ready.”

It was the belief of her relatives that Mrs. Emmeline Simms persisted in saying “gal” for the express purpose of mortifying and irritating them, and that she particularly loved to designate Lucinda so, Lucinda being the source of certain innovations in the family English.

“There she sits out there,” said Mrs. Simms, pointing to the pair visible as small blots under the distant, feathery walnut tree, “a-lettin’ that poor fool spark her, and as like as not a-lettin’ him ’p’int the day ag’in, and then she’ll go kick over the traces onct more at the last minute, and—talk about bein’ the talk of the county, do you reckon, Betsey Ann, that anythin’ is a-goin’ to be more talked about on the footstool than a gal breakin’ off her weddin’ after they’ve begun to bake the cake? Do you?”

“Now, Sist’ Emmy,” began Lucinda’s mother,

exactly as before, “you know there was mighty little cake baked; you’d jest come, and had n’t fairly got into the fruit cake, and Lucindy never let it get that far afore, and she won’t ag’in, ’cept she’s goin’ through with it. You forgit the feelin’s of a gyrl. They don’t alluz know their own minds. Ethan Simms is only your nephew by marriage, and Lucindy’s your own blood niece, and my feelin’s is hurt, Sist’ Emmy—”

“Betty Ann, don’t begin like that. You know I’m as fond of Lucindy as if she was my own child; but you never did have no goyer’m^{ent}, and I do say that to have all this courtin’ startin’ up ag’in with that eejet—I think the man’s bewitched—when it was scan’al enough to have the weddin’ broke off after the invites was out”—Mrs. Simms stopped an instant, then escaped the labyrinth of her own sentences by cutting through them directly to the main matter—“The gal ought to be made to drop him or take him.”

“Seems as ef it’s more Ethan’s business than you—than anybody’s else’s, and he ’pears mighty anxious not to be dropped, whether he’s taken or not.”

“Humph! Ethan’s a plumb eejet—far be any denyin’ of that from me; but Lucindy is full as eager about keepin’ him danglin’ as he is, and you don’t lift your finger about it. I don’t know why the Lord sends fam’blies to women with no goyer’m^{ent}, but he most certainly do.”

Of course her own caprices were also being discussed by Lucinda and her lover under the walnut tree. Truth to tell, these caprices had always furnished them with conversational material, a commodity which otherwise they often must have lacked.

For four years they had been “courtin’,” and three times a wedding-day had been set. The last time, only three months before, the usual retreat by the unstable Lucinda had been delayed, as we have already learned, until publicity and general condemnation were its well-merited portion.

Lucinda now stood under the walnut tree a lamentably attractive and appealing figure of a culprit. She was only a slip of a thing, though her nineteen years were quoted warningly to her; there were few unmarried girls in the settlement so old.

Little, tricky brown curls had slipped from the bands and knots she tried so hard to keep smooth; her brown eyes were swimming in

tears, which were falling one by one over brown cheeks as round as a child's; she knotted her hands in her apron, though it was her best one, and just ironed, as she said:

"I do care about you, Ethan; you know I do. I want to marry you some time, you know I do; but — but I don't seem ready to settle down right off. It looks sort o' dreadful — everything all fixed one way then for the rest of your life. I like being a gyrl." On this last word this frivolous young person caught her breath and began to sob.

"You would n't think that a-way ef you cared for me," said the seated Ethan, gloomily, prudently keeping his honest, dust-colored head turned from the melting sight beside him.

"I would too-oo; a gyrl ain't like a man."

"No, 'm; yer right, they ain't. It says in all the books that women is withouten no heart, and man's destroyer. That 's the 'pinion of the wise men."

It was sunset before the two could abandon the delights of quarreling and return to the house. There the stir of getting a company supper made a picture of kaleidoscopic activity, half-homely, half-weird, against the soft twilight of the woods and fields; from the kitchen a broad, shifting flare of firelight shone forth, through which dark, turbaned figures flitted deftly back and forth carrying covered dishes, while children and dogs of all colors and sizes appeared and disappeared on every side. Mrs. Todd, Lucinda's mother, treated Ethan with an effusive hospitality intended to atone for what we might call the heated indifference shown by her sister.

It shows how absorbing and delightful a topic was Lucinda's misconduct that this afternoon it had displaced the natural theme of the hour, and that a good one too. Mrs. Simms and Ethan were stopping overnight with the Todds on their way to a wedding. Lucinda was to go with them, and on the morrow the three were to set out. A horseback journey of thirty-five miles was the price—or the premium—for this social experience.

"Ef you had any proper shame," said Mrs. Simms that night after the candle was out, taking an unfair advantage of the fact that she was sharing Lucinda's bed, "you 'd be too humbled to show your face at a weddin' — and with Ethan too! I 'd never show my face with you if Milly Anson warn't my own cousin's step-daughter, and her mammy's fam'bly all bein' so dreadful thin-skinned about the way Sarah's kin treats her. Now, praise the Lord, this is the last upsettin' botheration Sarah 'll have to have with Milly, and she's been trial enough, for a more addlepated fly-up-the-creek than that pasty-faced gal this settlement ain't never seed. Howsomever," Mrs. Simms quickly added, re-

membering her text, "'t ain't becomin' in me to talk, long 's she ain't never done nothin' to ekal my own flesh and blood niece. I tried hard enough yesterday to get that fool of a boy to go on with me to old Squire Hunt's for the night, but he jest vowed that he 'd come here or nary a step to no weddin' would he stir. He ain't no respect for hisself. I can't see what use a woman's got for sich a sowf mush of a man."

This bait failed of a bite. Mindful of the morning's early start, Lucinda was successfully giving her exclusive attention to the business of getting to sleep. She was not going to disturb herself. She might shed tears of repentance when with Ethan; she had none to spend for Aunt Emmy's delectation. Probably she comprehended that Aunt Emmy was well pleased at the worst. She adored Lucinda, and loved dearly to see her have her own way; her vanity was gratified for the whole sex at the daring with which the girl risked the loss of a lover, and kept him, and she had an unsurpassed opportunity for the dear joy of hectoring her youngersister — the poor lady without "government." In fact she was never better pleased in her life.

The next day's sun was just rising when the three horses were brought up to the great wooden block by the front gate; and such a day as it was, all gold-lighted blue and gold-steeped dewy greenness.

"What 's keepin' Lucindy? Does the gal think we 're jest a-goin' to the fork of the road, and that she 's got halfen the day to spend puttin' a ridin'-skyert over her head?" fussed Mrs. Simms, as she gathered up the copperas-dyed cotton folds of her own traveling costume and gave a final adjusting punch to the saddlebags.

"Lucindy! Lucindy! come out here," called her mother, sharply, desiring to demonstrate her denied powers of family discipline. "What air you doin' keepin' everybody waitin'? Put down that baby; you 're only gettin' him ready to cry when he sees you 're a-goin'. You, Rose, take that baby roun' to the kitchen; now pick up that snack-basket and come along."

"She ought to be goin' to her own weddin', ought n't she?" said Ethan to the sympathetic mother, as he lifted his bright-faced, springing sweetheart into the saddle. No horse-blocks for them, if you please.

"I would n't be goin' ef it was my own; I 'd be stayin', and I 'd have to lose all this yer blessed ridin'," said she. That small saying was afterward remembered, and was quoted for years among the Todds as if it were a witicism; but now it passed without more notice than an irrelevant speech.

"Well, bless you, honey," said her mother, as she settled her skirts for her. Surely it was

not to be expected that government should always prevail, and crossness be the rule of life.

Lucinda was not without a show of reason in reckoning this ride as a pleasure overbalancing the pomp and pride of matrimony. All day they ambled on, with only woods and fields about them, and were oftenest and longest in the depths of the sun-threaded, fragrant forest twilight, everything but the road beneath their feet untouched, pristine, primal, as if man had never been. Ah, who has such journeys now!

Aunt Emmy was as softly accommodating as poor Mrs. Todd herself could have been, and often covered mile after mile, riding on ahead, without once directing her tunnel of a sun-bonnet behind her. Lucinda's bonnet was generally hanging backward over her shoulders. Poor Lucinda's reputation for beauty was sadly injured by her brown skin,—milky whiteness was of all things most admired in her world,—but she took the sweet with the bitter, and absolved herself from the elaborate swathings and bleachings which were the community's chief tribute to esthetic interests.

"A little more or a little less don't matter when one dip more would have sent me to the kitchen anyhow," she declared, when entreated to return from the light of heaven into the cavernous depths of the prevailing sun-bonnet. Even Ethan did not know she was a beauty, but thought it was by some special warping of perception that she seemed so to him.

It was not only in the matter of complexion that Lucinda was out of joint with her lot in life. She had a touch of imagination; had vague desires to see something beyond her world, to try something beyond, to have some chance at the unknown—desires which seemed all unshared by any other being. She was a world away from unhappiness; it was only by some obscure movement of soul that she was frightened when she saw the opportunities of the future about to narrow down to the familiar lot of Ethan's wife. That was the root of all this extravagant coquetry that looked so haughty; she could not have told why, but she was frightened.

Certainly she did not much consider Ethan. As Mrs. Simms complained, she would not leave him any more than she would take him; but, truly, with the world as it is, and a bit of a girl with her life to shape with such a load of biddings and forbiddings upon her, who is going to expect her to rise to fair dealing with free and sovereign man? Certainly Lucinda did not expect it of herself. She never dreamed of such a thing. She vaguely intended to marry Ethan sometime, if—maybe—but—in the mean time she had no notion of permitting him to discover that there was any other woman in the world—not while she had eyes, and

such long lashes as well, and was really very fond of the good Ethan. Pity him? What affectation! He was the most entertained man in seven counties! Moreover, he won the game; but this is anticipating.

The travelers went twenty-five miles the first day, and then, all unannounced, descended upon a "neighbor" for the night. Returned prodigals could not have been more heartily welcomed; much squawking and fluttering among the chickens roosting in the apple trees in the back yard followed their arrival, and testified eloquently as to the supper that they were to enjoy; but our business lies now at the end of the journey.

Truly Mrs. Simms had expressed herself with her customary insight and exactness when she called Milly Anson a pasty-faced, addleheaded fly-up-the-creek.

On all sides it was felt as an especial evidence of providential consideration that Milly had gotten a husband—or the promise of one. Here again I see strange evidence of the absence of just consideration for the masculine part of the race. No one could regard it as good fortune for a man to have Milly Anson as a wife, but his immediate female relatives alone were occupied with his fate.

Milly was now swimming in all the importance of the occasion, an importance which too often unduly elates the most pleasing woman, and which affected Milly in a way and degree well-fitted to madden any observer—especially if she was an unmarried woman.

The most famous cake-maker of the county, who had been lording it in the kitchen for a week, was by no means unmarried, and she had the toleration born of a large experience of brides elect; yet even she found Milly unendurable.

"I have been asked to bake the cake at eleben weddin's sence I was married," said she, afterward, "not only for my own kin but among the Gileses and Simmonses and down to Strathboro' and over the Ridge, and I've seen a heap of fool gyrls, but I'll gin up that Milly Anson that week was a notch beyond any on 'em. I stood her jest as long as I could, and at last I broke out on her. It was jest the day before the thing was to come off, and she kep' teeterin' and titterin' in and out, a-jarrin' the floor and makin' my heart come in my mouth for fear my last big pound cake in the oven would fall, and I'd told her more 'n a dozen times that very day to stay in the house; but no, sir, she would keep comin' to say how strange her feelin' was, and that she knew she never could l'arn Tummas's ways, and she never would 'd done it ef Tummas had n't pestered her into it,—Tom Simmons! Lor'!—and lastly she bounced in on to me, catchin'

"HE GAZED AT THAT LONG-TAILED, BRASS-BUTTONED BLUE COAT WITH HEAVY-HEARTED ENVY."

hold o' me, and me with my hands all in the flour, and says she, 'O Cousin Liz, I 'm so skeered! I 'm gittin' so skeered!' says she. Now it 's my conviction that she 'd made up her mind then as to what she was goin' to do, and was sure enough gettin' a little fidgety; but in course I never had no such reflection then, and I 'd had all I could stomach. 'Milly Anson,' says I, 'there 's no need of your bein' any bigger eejit then the Lord made you; stop a-clutchin' on to me. I 'm wore out with your pertenses. Ef Tom Simmons 'll marry you, more fool he; but you better have a thankful heart, and I reckon you have. As for bein' skeered, I wish you was skeered enough to break your appetite, and stop you from eatin' them snowballs fast as I git the frostin' on 'em. You 're a livin' illustration of the truth of the Bible and the wisdom of King Solomon,' says I; 'for he tells how the yearth is disquieted for three things, yea, four which it cannot bear,' says I,—for I seen that quotin' the Bible ag'in' her was strikin' her more 'n anythin' else,—'a servant when he reigneth,' I went on, 'a fool when he 's filled with meat, an handmaiden that 's heir to her mistress, and an ojeous women when she 's married, or thinks she 's goin' to be. It 's the same thing. And now ef you think I made that up out 'n my own head, you go 'n' read your Bible long enough and you 'll l'arn better. 'T any rate, git back to the house, and don't you step your foot into this kitchen ag'in,' says I, 'for,' says I, hollerin' after her,—she 'd done started, tryin' to keep laughin', like 't was a joke,—'ef you does,' says I, 'nary a table will I set for you. I 'm tellin' you the truth, and you know what things is likely to be withouten me,' says I."

VOL. XLII.—56.

The famous cake-maker had relieved herself, but truth and scripture still failed to make a new Milly, as a little time was to show. It was the afternoon of the wedding-day when Lucinda arrived; the ceremony was to be performed that evening. The house was already full of guests, and was like a hive of swarming bees, such a buzzing, and hurrying, and scurrying was there, for toilets were in the making, and many a white dress, brought, like Lucinda's own, in saddlebags, must now be ironed out, be the kitchen-quarters filled with never so much anxiety and turmoil of their own.

The men, more or less unhappy and stranded, tried to keep out of the way, and staid chiefly out of doors. Despite intermittent, decorous efforts to save himself for the great moment, the bridegroom was painfully conspicuous among them, being a marked and solitary man by reason of his "store" clothes.

Ethan Simms was exactly the sort of male creature that looks upon such eminence as a thing hard to bear; but now, as the common fate of bridegrooms, he gazed at that long-tailed, brass-buttoned blue coat with heavy-hearted envy. He was sadly depressed about his love-affair. He was an excellent fellow, and there is evidence of it in the fact that he had moments of sympathizing with Lucinda's reluctance to marry him.

"Marvel is that she ever thinks she will," he would say to himself. But final reflections always supported him in his desires, as is the way with final reflections, and he would conclude that nothing better than wedding him was likely to come to her. That he argued it out with his passion shows the reasonable temper of the man, and who would have liked him better for

arriving at any other conclusion? Certainly no woman.

Twilight found him sitting alone on the fence, smoking, and meditating means for bringing Lucinda to the altar.

"Ef it ware once done," he said to himself, as he brought his long legs to the ground, knocked the ashes out of his pipe, and returned it to his pocket, "she'd be better content nor

She had long dreamed of following in Lucinda's footsteps. The notoriety which had been thrust upon Lucinda by the gossip-starved community shone before her as a prize to be achieved; and moreover, there was a half-covert and most reprehensible relish in the men's talk about that young damsel's frowardness that acted as a bellows upon the flame of folly in Milly's bosom. At last she had seized her opportunity, she was

"THREATS OF IMMEDIATE DEATH FROM HER FATHER."

she is now; but she is that skittish, and she sees through me that quick, that I don't know to the Lawd what sort o' devices to fall upon!"

In the house the candles were now lighted. Sleek-ringleted young women came forth in groups, family potentates disappeared, the store-clothed bridegroom was fellowed a moment by the arriving parson, and then he too became invisible. The air was tense with expectation. Low, eager talk about tucks and embroidery, "fineswiss" and "clocked stockings," was drawing the women's heads together. Finally this died out. The parson was spirited away to the fateful upper regions. Still no bride and bridegroom; the delay was extraordinary. Opinions that it was outrageous were brewing; for supper, you see, was still to come. An odd uneasiness was in the air. In fact, to make a long story short, Milly Anson had chosen this hour to declare that she would not be married to Thomas Simmons, not she!

Tears, revilings, corporal shakings, threats of immediate death from her father, given with a truly awful sincerity of mien, all availed nothing. Milly was a weak creature, and had capacities for stubbornness to be found in no other.

capping all that had ever been heard of reluctant maidens. When the storm broke over her she was frightened; things did not seem exactly as she had forecast. "Tummas," for instance, was unbecomingly inexpressive and inactive amid all these violent energies; but, partly because she was frightened, she clung immovably to the one thing that in all the confusion she seemed able to grasp — the course of conduct marked out in happier moments. Her poor little aborted powers of reasoning had of course left her at the first onslaught, and now to give way seemed to her darkened consciousness to be abandoning her only plank amid the whirling waters.

Imagine Lucinda's feelings. A well of bitterness were they within her, as she sat trying to look unconscious of any special relation to the catastrophe, while the company ebbed and surged about her in suppressed but delicious excitement. But even now, from all sides, she felt eyes turning upon her; to be forever bracketed with this fool was sickening. And peppering her other emotions was undeniably a sense of infringement — Milly Anson of all people to imitate her!

At last such guests as could leave that night tore themselves away. Our trio were not among them. Till morning they must spend the weary, broken, dream-haunted hours in the midst of the shattered household. They kept apart, and spoke little. Lucinda writhed to see how plainly her aunt and Ethan recognized the special shame for their little party in this bigger shame, and how plainly they showed their recognition. She denied to herself first its existence, and then its justice, and denounced Aunt Emmy and Ethan for a "pair of ninnies, goin' round with their heads hangin' 'bout somethin' they had nothin' in this mortal world to do with." Yes, it was true; for once other considerations outweighed Aunt Emmy's appetite for sensation, and she was humbled.

Lucinda got up at dawn; she was pale, and her mouth was shut with a firmness quite absurd on such a becurved little face. Before the sun rose she succeeded in getting hold of Ethan; she dragged him out of doors and into the dewy grass for private converse. The sleepiness left his eyes when she faced him and said fiercely, "I want to go to Strathboro' and git married—just as soon as you can saddle up."

The poor man's head whirled; a hundred things seeming to demand consideration and time sprang to his mind, and withal his arms ached to catch this small Amazon off the ground and to his breast. But he was a wise one, was Ethan; he held himself quite still—as he might if a bird had lighted on his head—until he could answer quietly that he 'd go right off and see about the horses.

"You tell Aunt Emmy," said Lucinda, airily. "Lord a'mighty!" broke forth Aunt Emmy in tones of real irritation, dropping into a chair in the deserted best room, "I never hearn of anythin' so outdacious in all my days. Let her come home and be married like a Christian. I should think we 'd had enough crazy Janein' to do us the rest of our born lives. I ain't goin' to have her mammy sayin' I"—

"Good Gawd!" broke in Ethan, "have I got to go and co'te you as long as I been co'tin' Lucindy 'fore I kin git married? Can't you see, Aunt Em, that I dasn't stand foolin' and argufyin' with that gyrl? Don't you know I 've got to take her when I can git her? An' ef it ain't now, there 's no sayin' on the wide yearth when 't will be. Lawd! Lawd!"

Ethan mopped his brow on his sleeve. "Shorely, shorely, Aunt Em, 't ain't goin' to be you as 'll knock over the bucket altogether? There 's no tellin' what Lucindy 'll do next, ef she 's riled. Bless you; thanky, thanky! Don't say nothin' to her; don't say nothin' no way; jest help her to git ready as ef she got married at Strathboro' every day in the week."

It is pleasant to know that in this case too the impossible became possible, and that, 'twixt nature, use, and honest purposes, Lucinda's marriage was not a failure, and that she, selfish human that she was, never regretted an experiment which cost poor Milly Anson dear indeed; for only after years of obloquy and sorrow, vain efforts and journeyings to the "Eelynoio,"—a far country,—was a husband for her at last secured.

Viola Roseboro'.

FOR HELEN.

MY thoughts are like the little birds,
Your heart is like the nest;
They rove the sky on fearless wings,
To you they come for rest,
Well-knowing, though the world be fair,
Your tender love is best.

My songs are like the little streams,
Your heart is like the sea;
Though through the woods they wander on
So careless, glad, and free,
They seek at last the silent deep—
They come at last to thee.

Grace H. Duffield.

A LUNAR LANDSCAPE.

CONTRIBUTIONS FROM THE LICK OBSERVATORY.

South

A LUNAR LANDSCAPE.

Enlarged copy of a part of the negative reproduced on the next page, showing Mare Crisium, Mare Fœcunditatis, the Crater Langrenus, etc.

WITH the coöperation of THE CENTURY, it is hoped to present from time to time some of the results of observations at the Lick Observatory — such as drawings and photographs of the Moon and planets, nebulae, star-clusters, etc. The original pictures accompanied by a word of explanation will put the reader almost in the position of an observer with the great telescope. He can at least see what an observer sees, and what he sees needs only to be correctly interpreted.

We may begin the series by showing (on this page) a typical lunar landscape. The negative from which this was copied represented the whole Moon (see next page), and was some five and a half inches in diameter. It was taken at 2:27 A. M. on the 31st of August, 1890. As the Moon is an excessively bright object the exposure-time has to be very short (something like two-tenths of a second) if the full aperture of thirty-three inches is employed.¹

It is extremely difficult to give such short exposures accurately, and for this and other reasons the aperture of the telescope was reduced to a circle of eight inches in diameter, and an exposure-time of exactly three seconds was given. The negative was developed by one of the astronomers precisely as an ordinary landscape, only with unusual care, and the

¹ The visual object-glass is thirty-six inches in aperture, while the photographic is but thirty-three.

result was a representation of the whole of the nearly full Moon. The Moon is full when its age is about fourteen days and eighteen hours. The Moon of our picture was exactly two days older, so that the western limb or border was incomplete and in shadow. The sun was setting to the western regions of the Moon's surface. The original picture was very carefully enlarged in an ordinary camera about three times, so that the Moon's diameter would be nearly eighteen inches or 115 miles to one inch, approximately. The longest diameter of the crater near the top of the plate (page 436) is approximately 90 miles, therefore. The great walled plain at the bottom — *Mare Crisium* —

is about 281 miles from north to south and 355 miles from east to west. So much for the *scale* of the picture. The cardinal points are shown as they would be seen in an astronomical telescope. The top is south, the left-hand side west, the bottom north. The part of the original picture that is shown on a larger scale as a lunar landscape has representatives of all the marked lunar features. Let us begin with the *Mare Crisium* — the "Sea of Crises" — which is foreshortened in the picture, and whose western edge does not show. This spot is larger than Ohio and Indiana together (its area is some 78,000 square miles) and it is even visible to the naked eye. It was called by

North.

PHOTOGRAPH OF THE MOON.

From a negative taken at the Lick Observatory August 31, 1890, at 14 hours, 27 minutes. Moon's age 16 days, 18 hours.

the ancients a "sea," but it is in fact a great walled plain, and attentive looking will show the rims of ruined craters on its surface, as well as systems of ridges and streaks across the floor. These have been called sand ridges, such as might be at the bottom of an ocean, but it is not certain that the surface is not that of a lava flow. On a grand scale it looks very much as parts of the Island of Hawaii would look if we could see them from above, and if we could clear away the luxuriant tropical forests and the great sugar plantations. A field of the lava which is called *pa-hoe-hoe* in Hawaii looks at least like a miniature of this sea bottom. We must always recollect that the volcanic energy of the earth is a mere trifle to that which has formed the surface of the Moon. The sea is surrounded by very steep mountains and high plateaux. The spur or finger which bounds it on the southwest is the *Promontorium Agarum*, which rises 11,000 feet above the plain. One of the mountains diametrically opposite is as high as Mt. Blanc. The two largest craters on the floor of *Mare Crisium* are *Picard* and *Peirce*. *Picard* is the larger and the further south, and we can fix the scale of the plate in our minds once more by recollecting its diameter, which is a trifle over twenty-one miles. Its walls rise some 3000 feet above the plain, and the cup is more than a mile deep. As a rule, the bottoms of such craters are lower than the general surface of the Moon. The sun is towards the east in our picture, and the eastern and outer wall of *Picard* is bright. This wall casts its shadow into the depths, and beyond the shadow is the bright inner and western wall. This again casts a shadow on the plain which is not well seen in the picture.

The highlands which border the *Mare* terminate in steep and broken cliffs and include great chasms and valleys. If the plate is examined with a common hand magnifier their structure is even better seen. Does this wilderness of mountains (many of them 10,000 to 12,000 feet high) and valleys show any signs of having been carved by water erosion? This is a very important question. I have examined this region many times with the telescope, and have always left it with the impression that the effect of erosion, as we see it on the earth, must have been exceedingly slight to have preserved such abruptness in the cliffs and such acuteness in the angles.

The two craters in the southern edge of the highlands are *Firmicus* and *Apollonius*, the one thirty-nine and the other thirty miles in diameter. From *Firmicus* (the furthest south) a bold ridge of mountains in high relief stretches southward and ends in the small crater *Webb* (fourteen miles in diameter). Southward again, there is a group of three craters, acolytes to

Langrenus. The upper two of these have their walls almost touching. Notice that just where they join, the walls must be low, for in the shadow which lies in the crater to the left hand there is a small break of sunlight which slips through the gap. These craters lie in the *Mare Fecunditatis*. Notice again the similarity of the floors of the two seas, with their variations of color, their ruined crater forms, their sinuous ridges and the crater-pits scattered over them. Notice, too, that the crater-pits are very frequently situated on one of the ridges or streaks, and that where two ridges cross there is nearly always a crater. This is very like what we see on the earth in a region of volcanoes. Craters are usually found at the intersection of two faults. Finally, we come to the magnificent ring-crater *Langrenus*. It is just barely within the terminator. All the eastern half is in the shadow—the sun has set—hidden by walls which are some 9000 feet high. The twin peaks in the center cast their own shadows to the west all across the rugged floor of the crater and even up on the lower steps of the interior terraces. A measure of the length of these shadows has determined the height of the peaks which cast them to be some 3300 feet. Here again, the use of a hand magnifier will show some of the features a little more plainly. There are scores of interesting features which deserve attention but which must be left to the reader to select for himself. One only must not be neglected, as it relates to the vexed question of changes on the Moon's surface. It is absolutely certain that changes *must* take place there, but it is very difficult to be sure that any particular feature has actually changed. One of the chief objects of the lunar photographs which we are making at the Lick Observatory is to settle such points. We shall shortly have photographs of the Moon taken at intervals of a few hours throughout a whole lunation (twenty-nine days), so that each crater will be shown under every variety of illumination. These photographs will tell us exactly how the Moon is *now*. A comparison with similar photographs to be taken in the future will settle all questions of reported changes. We shall not be obliged to trust the verbal descriptions or the imperfect sketches of previous observers.

If the reader will draw an imaginary line two inches below the top of the landscape and parallel to it, and another line one inch from the right-hand border and parallel to this border, the two lines will intersect in two small crater pits which are known as *Messier* and *Messier A* (the latter is towards the right). Between the years 1829 and 1837 Maedler, who was then making his lunar map, examined these two craters more than 300 times, and he describes them as in

every way exactly alike, in diameter, form, height, depth, and color. The merest glance at the picture will show that the left-hand crater (*Messier*) is now oval, while its companion, *Messier A*, is round. There is a whole history connected with these craters and with the changes reported in them. The history is too long and too special to be given here, and it must suffice to say that some very competent authorities conclude that the craters have progressively changed in shape since 1829. Without going into particularities and without reflecting upon the skill of Maedler (who however used a comparatively small telescope), I must record my own conviction that the case is not yet conclusively proved. It was this case and others like it that inspired the plan which we are following at the Lick Observatory to-day, of securing a series of photographs so complete as to settle all such doubts in the future.

Veritable changes on the Moon's surface will be a most important discovery. It will be

equally important, though less interesting, to show that no great changes take place. Topographical alterations on the earth are largely due to the force of gravity aided by the destructive and leveling power of frost (alternate melting and freezing rather) and of running water. It is more than likely that the temperature of the Moon never rises above the freezing point, so that these agents are there bound in chains of ice. Gravity will act to pull down and level, but it lacks the aid of the forces which disintegrate and loosen.

We say that the Moon is a dead planet because it is certain that nothing like human life exists upon it; but it is doubly dead, for even topographical change must take place there far more slowly than it does upon the earth. It is almost impossible to conceive the immense step between the paroxysmal activity of the volcanoes which originally shaped its topography and the icy calm which now preserves its surface almost absolutely unchanged from century to century.

Edward S. Holden.

THE DRUMMER.

AWAY back in those happy times
 When we had little left to vex us,
 On sea or land, save poets' rhymes
 And talk about annexing Texas;
 While yet with all our men and boys
 "Forward, march!" was quite the fashion,
 And the liveliest of our joys —
 The old military passion —
 Was not yet grown cold and numb;

While still full many a household niche
 Enshrined the old-time regimentals,
 And town and country were yet rich
 With relics of the Continentals;
 While still in splendid motley dressed,
 Wonderful to all beholders,
 Men were glad to march abreast
 With their muskets on their shoulders,
 To the sound of fife and drum —

DRAWN BY GILBERT GAUL.

ENGRAVED BY J. W. EVANS.

"It was a beat that would have stirred
The pulses of the very coldest."

In one of those far distant years,
About the time of early tillage,
The proud Bandana Fusileers
Were forming just above the village,
Full fifty and two hundred strong,
For their usual march of glory
Down the turnpike wide and long,
Little dreaming the whole story
Would be told in days to come,

When suddenly the old snare-drum
Pealed out so sharp and rang so cheery
That every man was on the plumb,
However old, however weary;
And lo, as down the lines they gazed,
Wondering what could ail the drummer,
In his place they saw, amazed,
The most curious newcomer
Who had ever drummed a drum.

For all the world as big around
And jolly as a Punchinello,
His white hat with bright scarlet bound,
His old green jacket faced with yellow;
But who he was, or whence had fared
That most iridescent figure,
No one knew, and no one cared,
While with such immortal vigor
He discoursed upon the drum.

It was a beat that would have stirred
The pulses of the very coldest,
And such a stroke had not been heard
Within the memory of the oldest.
Down on the drum's defenseless head
Fell the sticks with such a clatter
As few men, alive or dead,
Ever dreamed of, for that matter—
Drum, drum, drum, der-um, drum, drum!

And now from every side uprose,
Responsive to that roll and rattle,
Great rounds of cheers resembling those
Which rang along the Concord battle,
When, pale as death with patriot ire,
The undaunted Buttrick shouted,
"Soldiers, fire! For God's sake, fire!"
And the British troops were routed,
And at last the war was come.

And so the glorious march began
With here an opening, there a wheeling,
As if it were a living fan,
In part concealing, part revealing,
The secret of those fine displays

So bewildering to the senses
Of the truant village boys
Who now lined the walls and fences,
Thinking of the day to come.

Ah, nevermore along that street
Will martial music more ecstatic
Sweethearts and wives and children greet
In parlor, oriel, or attic;
Ah, nevermore to cheer and shout
Down that turnpike long and sandy
Will such wizard notes ring out
Of our "Yankee Doodle Dandy,"
From that old colonial drum.

Ah me! ah me! to hear again
That ruddy and gray-headed scornee
Of all the woes that time can rain
As down he swept round Tanyard Corner,
Or when he drummed his very best
Near the elm tree by the Prestons,
Or with very special zest
At the halt in front of Weston's,
Known so well in times to come!

For here it was upon that day
The drummer gave his final touches;
And here it was that, strange to say,
While creeping by upon his crutches,
The oldest man the country round
Suddenly before the drummer
Stopped and gazed as one spellbound.
"No man," sighed he, "but young Plummer
Could so play upon a drum."

"But he is dead, no doubt, no doubt."
And while he stood there marveling greatly,
The other in his turn spoke out,
"It 's Boynton, whom we called 'The
Stately.'"

Ah, what a meeting! Gracious heaven!"
While in tears they kept repeating
"Bennington" and "seventy-seven."
"What a meeting! what a meeting!"
Till it seemed no end would come.

Of all that saw no eye was dry;
And nothing then would do but straightway
To seize a carriage that stood by,
Magnificent, in Barret's gateway,
And carry both to Boynton's door.
"Piny Farm," from that same summer,
Was the hospitable shore
Where the old and world-tossed drummer
Lived for many years to come.

Henry Ames Blood.

TAO: THE WAY.

AN ARTIST'S LETTERS FROM JAPAN.

NIKKO, July 28.—Osomi and Tategawa were the architects of Nikko; Osomi planned the lovely pagoda,—so I am told,—and I hasten to put down their names. At that time the great Tenkai was abbot. He was a friend and adviser of Iyéyasū, as he was the teacher of Iyémitsū, the grandson, and of Hidetada, the less illustrious son. It may be with him that Iyéyasū arranged the plan of fixed endowment for the church; an endowment not to be added to or diminished, so that it should be an element of stability and no longer a fluctuating danger.

With this seems to have ended the possible reasons for military dependents in the service of the church. Tenkai is said to have planned or prepared beforehand the temples of Iyéyasū, which might explain the extremely short time given in the record for their building; so that, begun in 1616, the stable, the surrounding edifices, and the shrine were completed in the third month of 1617.

I have been careful to give you some account of the temples of Iyéyasū and Iyémitsū, because I regret having said so little of those temples of Shiba in Tokio, where the remainder of the Tokugawa rulers repose in a state adorned by similar splendors. But these temples of the founders are of a more complete type, and with one exception seem to me more impressive. Yet even with the beauties that I have tried to describe, I am still not quite so carried away as I might have been by such complete works of art. There is a something, a seeming of pretense or effort or ingeniousness, which I cannot seize, but which seems to me to belong to a splendor not quite secure, or perhaps only just secured, something like what I might call the mark of the parvenu.

Yes; I think that is it. It is still, after all this time, just a little new. But what thorough adaptation of means to ends; how delicately subtle the arrangements, and simple; and how impossible to describe through words or drawings. How the result alone is aimed at, and what little parade is made of the intention and preparation. This work, which seems to betray an inferiority to its own ideal—this work, which has even a touch of the vulgar, is charming enough to look like a fairyland. It displays a capacity for arrangement which

none of us to-day could hope to control; has a charm that any passer-by could feel; has more details of beauty than all our architects now living, all together, could dream of accomplishing in the longest life. When I began to reflect how this wood and plaster had more of the dignity of art and of its accessible beauty than all that we have at home, if melted together, would result in, that these frail materials conveyed to the mind more of the eternal than our granite, it seemed to me that something was absolutely wrong with us.

And the cause of this result was not the splendor of line and color; it was not the refinement. The last time I could recall a similar sensation had been before some little church tower of England; it was certainly the subordination of all means to a single end, and their disappearance in one impression.

Since my first visit to the temples my mind has been dwelling more and more in an involuntary manner upon the contrast with all modern art, and I venture to note down for you some of the thoughts forced upon me. It seems as if I were merely reminded of what I always knew, or ought to have known; and perhaps what I may say about ourselves is as good a way as any other of giving an opinion upon what I see here. For, indeed, what I see here that I admire I feel as though I had always known, had already seen; it is rather most of our own that seems queer, strange, and often unreasonable.

I can make no set and orderly arrangement of my rather confused thinking, but can only trace it out as it occurred to me—as if it were from outside; as if something whispered to me now and then out of small occurrences, and said, “Don’t you understand more clearly?”

On leaving the temples we went back to our friends’ house, which was once the residence of the regent of Japan—a large, low wooden building of the kind so carefully described by Mr. Morse in his book. All is extremely simple; there is nothing to call any attention. The woodwork is merely put together with great care; some little panels of the closets are nicely trimmed with metal and highly ornamented. This, with metal nail-heads and a pretty wall-paper, is all the decoration.

Here we found the mail and papers, and

enjoyed the watering-place feeling of news from town. There were copies of "Life" and of the London "Punch," many of whose drawings did not look out of place in this land of clever sketchers. Indeed, that in them which once seemed good across the seas still held its own in presence of the little prodigies of technique that one meets in Japanese drawings.

Indeed, they recalled one another. Both call out one's sudden recollection of some facts in nature; and besides, all good sketches resemble one another as being the nearest approach to the highest finished work. They have in common with it the essential merit of being better than they appear, of indicating more than is necessary to tell the tale, of not being strictly measurable quantities. We grow so ungrateful when too well treated that we forget how Mr. Du Maurier throws in, over and above the social epigram in lines, an elegance and grace that might belong to a poetic picture; that Mr. Keene tells his story over and over again in the very folds of each individual's dress; that he will, unconcernedly, present us with a landscape as full of nature as his human figures, instead of the indifferent background which would have been sufficient for the story of the caricaturist. Now the feeling of disenchantment, of having "found out" appearances, of having gotten to the end of a thing, is never forgiven by the average healthy mind. In greater things one turns, some day, to those which are always richer and fuller of meaning with time,—as one looks to-day at a Corot or a Delacroix or a Millet once uncared-for,—and that means that at length our eyes are opened. The sketch, like the great work of art, is better than it appears, and recalls to me the emperor in the story, whom the old woman could not recognize in the presence of the big drum-major. We can appreciate what suffering the little old woman underwent when she discovered her mistake, and how she never forgave the big drum-major. For mankind has never believed at heart that the work itself is to be judged, but has always (at least in the case of one's neighbor) acknowledged that it is the *work of art which judges us*.

So says a Japanese friend, and I think that he has it exactly. Hence an importance attaches to criticism which otherwise would be inexplicable,—the importance there is in being right,—because we shall be judged ourselves if we are wrong, and often by ourselves as judges.

. . . . And late numbers of the magazines had come, pleasant to look over before dinner,—while the noiseless servants glided over the matting, and our hostess put on her Japanese costume,—serving to make the distance

greater, as we feel that all goes on at home with the usual regularity.

Some architectural sketches in facsimile in a magazine became entangled with the thread of my thinking and brought to my mind an inevitable lesson.

They were charming, and so different from the realities which they were meant to embody. One I dwelt upon, bright and clever, where every dark of window or of shadow intensified the joyfulness of the white wall of a residence at home, which you daily pass—while I am here. In the reality, alas! its Fifth Avenue monotony is unrelieved. The wall is not bright, the windows are paler than the walls, and the projections and adornment are duller yet. The drawing was an abstraction, probably meant for the sweet enticement of the client, and was what the building *should have been*. The draughtsman "knew better than he builded." As my mind analyzed this curious professional misstatement of truth, it seemed to me that I could see how the art of architecture in Japan was real compared to ours, even though none of their architects, any more than those of the great past of the world, could have made such a drawing—such a brilliant promise of a performance not to be, such a beautifully engraved check upon a bank where there were no funds. Not knowing the science and art of perspective drawing, nor the power of representing shadows according to rule, nor having the habit of ruling lines with a ruler to give interest, nor of throwing little witty accents of dark to fill up blanks, they were perhaps the more obliged to concentrate their powers upon the end of the work; and their real motive was the work itself.

This may seem strange and contradictory to the modern western mind, gradually accustomed to polished cartoons for bad paintings and worse glass, to remarkable designs for decoration and architecture which look their best in woodcuts, to great decorative paintings which are carried out so that they may be photographed without any injury to their color, nay, to its vast improvement. Do you remember how B——, the famous sculptor, used to preach to me that to-day no one looked at a thing itself, no one expected to, and that the fame of the artist was for those whose work could be adequately represented in the newspapers. That an excellence which could not be duplicated, that a tone which could not be matched, that a line which could not be copied, was not to be appreciated and could not be cared for. In fact, that such refinements were only worthy of the mind of an Oriental, "of a man accustomed to wear the moon embroidered on his back." Why spend

days in obtaining the color of a wall which any architect will think can be adequately replaced by his description of something like it to the painting firm around the corner? Why make the thing itself, if something like it will do as well? Why strike the note exactly, if any sound near it satisfies the average ear? For us, to-day, things and realities no longer exist. It is in their descriptions that we believe. Even in most cultivated France an architect or designer like Viollet-le-Duc will seriously undertake to restore old work, every square inch of which has had the patient toil of souls full of love and desire of the best, by rubbing it all out, and making a paper drawing or literary description for others to restore again in a few modern weeks the value of ancient years of ineffably intelligent care. Consider this impossibility of getting a decent restoration carried out by our best intelligence, and note that while they are unable with all money and talk and book-learning to replace the past in a way that can deceive us, there exist patient, obscure workmen who, beginning at the other end of the work, produce little marvels of deception in false antiquities — purchased by museums and amateurs for sums their authors never could get in their proper name. But these latter have only one object, the thing itself, and are judged by the result; while we, the arbiters and directors better known, who never employ them, are satisfied, and satisfy others, by our having filed in the archives of to-day notices that we are going to do something in the utterly correct way. I took as an example our friend Viollet-le-Duc, the remarkable architect whose works we have both studied, because he has written well,—in some ways, no one more acutely and more wisely,—because of his real learning, and on account of his very great experience. Is all that this man and his pupils did in their own art of making, worth, as art, the broken carving that I kick to-day out of my path?

Has such a risible calamity ever occurred before in any age? Destruction there has been, replacing of old, good work with better or with worse by people who did not understand, or care, or pretend to care; but the replacing of good with bad by people who do understand, and who claim to care, has never been a curse until to-day. This failure in all restoration, in all doing of the thing itself, must be directly connected with our pedantic education and with our belief in convenient appliances, in propositions, in labor-saving classifications, in action on paper, in projects for future work, in soul-saving theories and beliefs—in anything except being saved by the work itself.

Indeed I have always felt that perhaps in

the case of poor Richardson, just dead, we may begin to see the shape of an exception, and can realize what can be accomplished through what we called deficiencies. He was obliged, in the first place, to throw overboard in dealing with new problems all his educational recipes learned in other countries. Then, do you think that if he had drawn charming drawings beforehand he would have been able to change them, to keep his building in hand, as so much plastic material? No; the very tenacity needed for carrying out anything large would have forced him to respect his own wish once finally expressed, while the careful studies of his assistants were only a ground to inquire into, and, lastly, to choose from.

For many little prettinesses and perfections do not make a great unity. Through my mind passes the reminiscence of something I have just been reading, the words of an old Chinese writer, an expounder of Tao (the Way), who said what he thought of such matters some twenty-five centuries ago. What he said runs somewhat in this way:

The snake hissed at the wind, saying: "I at least have a form, but you are neither this nor that, and you blow roughly through the world, blustering from the seas of the north to the seas of the south."

"It is true," replied the wind, "that I blow roughly, as you say, and that I am inferior to those that point or kick at me, in that I cannot do the same to them. On the other hand, I blow strongly and fill the air, and I can break huge trees and destroy large buildings. *Out of many small things in which I do not excel I make ONE GREAT ONE in which I do excel.*"

In the domains of the one there may not be managing.

Hence, also, the difficulty, I had almost said the impossibility, of finding a designer to-day capable of making a *monument*: say, for instance, a tomb, or a commemorative, ideal building—a cathedral, or a little memorial. There is no *necessity* in such forms of art, nothing to call into play the energies devoted to usefulness, to getting on, to adaptation, to cleverness, which the same Taoist says is the way of man, while integrity is the way of God.

Art alone, pure, by itself, can be here the object of the maker's contemplation; the laws of the universe that men call beauty are the true and only sufficient materials of construction.

With what preparation does a designer of humbugs come to such work, failure in which cannot be excused because of any practical reasons, because of any pressing necessities. That really belongs to the public, to everybody more than to its possessor, or to its owner, or to those who have paid for it—that, finally, can

only be saved from adverse criticism for a short time, while passing interests are concerned in it.

Who knows this better than yourself? Where on earth to-day can you find a thing done by us designers that an artist will go to look at for love, for the deep desire of enjoyment that makes us visit so many little things of the past, and go far for them? If you can, imagine any painter desiring to note, so as to make them his own by copy, a modern set of moldings, the corner of a modern building.

And yet what a rush of delight comes upon us with a few Greek moldings, with a fragment of Greek or Gothic ornament, with the mere look of the walls of some good old building. How the pleasure and the emotions of those who made them have been built into them, and are reflected back to us, like the smile from a human face. I know that I have told you often how the fragment of a Gothic window from old English Boston set into the cloister of Trinity of the new Boston always seemed to me to outweigh the entire building in which it rests. And yet it is only a poor fragment of no great period. But then the makers thought and felt in the materials that they worked in, even if their drawings were rude and incomplete and often incorrect. And no architect seems to realize to-day that his walls could give us the same emotions that we receive from a Rembrandt, or a Van Eyck, or a Veronese, and for the same reasons, and through a similar use of a real technique.

You draw well; you can make a sketch, I am sure, which, like many others, would have spots of light on a black surface, or a pretty wash of sky above it, or little patches of shadow, like clever lichens, spread over it, and that would be correct in artificial perspective, and recall something of older design, and have no great blemishes to take hold of. How far would it help you to have made a million such if you seriously wished to do a thing for itself, not for its effects upon a client, nor for a claim upon the public, nor for a salve to your own vanity?

And now do you see how, as we architects and designers gradually work more and more on paper and not in the real, our energies are worked out in accomplishing before we get to our real work,—that of *building a work of art*,—and the result of our drawings grows feebler and feebler and tamer as it presses to its end. Then, for this weak frame of conception, the men who have come in to help (and that only because the director's time would not admit of his doing all himself, otherwise he would, in his jealous weakness, adorn as poorly as he imagines)—then, I say, if the painter, the sculptor, the decorator, shows any strength or power, there is another danger. There is danger that the sculptor's relief will be more

powerful than the weak projections of solid masonry, that the lines of the painter will be grander and more ample than those which were meant to guide and confine them—that the paint of the decorator will appear more massive and more supporting than the walls of the architect. Whence all will be tamed, all annulled and made worthless and paltry, so as not to disturb the weak efforts of the master directing. And for the first time in the history of art we shall have buildings which the Greek or the Roman, the Medieval or the Oriental, would have been unable to adorn, while in their times the masters who were architects, great and small, found no trouble in placing within their buildings, made famous to all time by this choice, the sculptures of the Parthenon or of Olympia, the glass or the statues of Christian cathedrals, or the carvings of India or of Japan.

So that when the greatest painter of the century left instructions for his tomb, he asked that it should be copied from some former one of antiquity or renaissance, so that it might have—to typify his love and his dislikes—masculine moldings and a manly character, contrary, as he said, “to all that is done to-day in architecture.”

You may say that through all this wandering of thought I am telling you little about Japanese art. Wait; perhaps I may be merely preparing your mind and mine for what I shall have to say later. Or, rather, let us think that I am carried away by the spirit, and that I am certainly talking of what I do not find here; and if there is no novelty in what I say, and that you know it, and have always known it, we shall come back to what you also know, that art is the same everywhere and always, and that I need not come this distance to learn its principles. If there is anything good here, it must resemble some of the good that we have with us. But here at least I am freer, delivered from a world of canting phrases, of perverted thought, which I am obliged to breathe in at home so as to be stained by them. Whatever pedantry they may have here, I have not had to live with it, and I bear no responsibility in its existence. And then again, art here seems to be a common possession, has not been apparently separated from the masses, from the original feeling of mankind.

To-day at dinner, Kato, who was waiting upon us, could give his opinion upon the authenticity of some old master's work, at the request of our host, himself a great authority. So that I could continue my dreaming through the conversation and the semi-European courses,—marked by my first acquaintance with the taste of bamboo shoots—a little delicacy sent in by A-chin, the children's nurse.

Much was talked of the Tokugawa race, and some cruelty was shown to their memory as a family of parvenus who had usurped the power theoretically invested in the mikados—an usurpation practised over and over again by every successful shogun, as by Yoritomo, Taikōsama. Indeed, the Ashikaga move through Japanese history against a background of mikados. And when O—— comes in later he talks of Masashigi, and of others, who during centuries, at long intervals, attempted to realize what has now been accomplished, the restoration of the mikado to his ancient powers and rulership of twenty centuries ago.

Yes, the Tokugawa splendor was that of parvenus. Their half-divine masters lie in no gilded shrines nor under monumental bronze, but buried beneath the elements, their graves marked only by mounds or trees, as it might have been with their earliest ancestors, the peaceful chieftains of a primitive family; a simplicity recalled to-day by the little fragment of dried fish that accompanies presents, in memory of the original humility of the fishing tribes, the ancestors of this almost over-cultivated race.

These Tokugawa, then, were parvenus, and naturally asked of art, which lasts and has lasted and is to last, an affirmation of their new departure. This splendor was made for them, and its delicious refinement has not quite escaped that something which troubled me at Shiba—an anxiety that all should be splendid and perfect, an unwillingness to take anything for granted. And yet, by comparison, this looks like a fairyland of refinement. What should we do when called to help a new man to assist or to sweeten his acquired position? What vulgarity of vulgarities should we produce? Think of the preposterous dwellings, the vulgar adornments given to the rich; the second-hand clothing in which newly acquired power is wrapped. The English cad and the Frenchman not good enough for home put the finishing touch upon the proofs of culture which are to represent them to their children.

I need not refer to what is seen in San Francisco as an example. At home in New York we have more than are pleasant to think of. I know that some may say that we have only what we deserve for thinking that we can escape, in the laws that govern art, the rules that we have found to hold in everything else.

Some years ago I told you how once a purveyor of decorations for the millionaire, a great man in his line, explained to me how and why he had met his clients half-way. "You despise my work," he said, "though you are too polite to say so,"—for we were friendly in a manner,—“and yet I can say that I am more thoroughly in the right than

those who would seek to give these men an artistic clothing fit for princes. Is there anything more certain than that the artist represents his age, and is all the greater for embodying it. Now, that is what I do. You will say, that my work is not deeply considered, though it is extremely careful in execution; that its aims are not high; that it is not sober; that it is showy, perhaps even more; that it is loud occasionally—when it is not tame; that it shows for all it is worth, and is never better than it looks. And who, pray, are the people that live surrounded by what I make? Are they not represented by what I do? Do they not want show of such a kind as can be easily understood, refinement that shall not remind others of a refinement greater than theirs, money spent largely, but showing for every dollar? They want everything quick, because they have always been in a hurry; they want it on time, whatever happens, because they are accustomed to time bargains; they want it advertisable, because they live by advertising; and they gradually believe in the value of the pretences they have made to others. They are not troubled by what they feel is transient, because their experience has been to pass on to others the things they preferred not to keep. They feel suspicious of anything that claims or seems to be better than it looks; is not their business to sell dearer than they buy? They must not be singular, because they must fit into some place already occupied.

"I claim to have fully expressed all this of them in what I do, and I care little for the envious contempt of the architects who have to employ me and who would like to have my place and wield my influence. And so I reflect my clients, and my art will have given what they are."

Thus the great German rolled out his mind with the Teutonic delight at giving an appearance of pure intellect to the interested working of his will—incidentally sneering at the peacock feathers, the sad-eyed dados, the poverty-stricken sentimentality, half esthetic, half shopkeeper, of his English rivals, or at the blunders in art which Mr. Stanford White once called our "native Hottentot style."

Of course my German was merely using a current sophistry that is only worth quoting to emphasize the truth.

Augustus, the greatest of all parvenus, did not ask of Virgil to recall in verse the cruelties of civil war. No true artist has ever sought to be degraded; no worker of the Middle Ages has reflected the brutality of the world around him. On the contrary, he has appealed to its chivalry and its religion. No treacherous adventurer of the Renaissance is pictured

in the sunny, refined architecture that was made for him. You and I know that art is not the attempt at reflecting others, at taking possession of others, who belong to themselves, but that it is an attempt at keeping possession of one's self. It is often a protest at what is displeasing and mean about us; it is an appeal to what is better. That is its most real value. It is an appeal to peace in time of brutal war, an appeal to courageous war in time of ignoble peace; it is an appeal to the permanent reality in presence of the transient; it is an attempt to rest for a moment in the true way.

We are augurs conversing together, and we can afford to laugh at any respected absurdity. We know that cleverness is not *the way* to the reality; cleverness is only man's weak substitute for integrity, which is from God.

All these words—miscalled ideas—poured out by my German friend and his congeners are merely records of merchants' ways of looking at the use of a thing, not at the thing itself. Such people are persuaded that they must surely know about the thing they sell or furnish. If not they, then who? For none can be so impartial, as none are so disinterested, in the use of the thing sold.

It is too far back for you to remember the charming Blanco, the great slave-dealer, but you may have heard of his saying, which covers the side of the dealer. He had been asked why he felt so secure in his judgment of his fellow creatures, and especially of women. "Because," said he, "I have traded in so many"—*J'en ai tant vendu*. I have sometimes quoted this saying to dealers in works of art, to dealers in knowledge about art, without, however, any success in pleasing them. In fact one has no judgment of one's own in regard to anything sold that is not a matter of utility until one feels quite thoroughly, as if it were one's own, the sense of Talleyrand's treatment of the persuasive dealer. I am sure that you do not know the story. Two friends of his, ladies of rank, had chosen his study as a place of meeting. They wished to select some ring, some bracelet, for a gift, and the great jeweler of Paris was to send one of his salesmen with sufficient to choose from. Of course the choice was soon limited to two, and there paused, until Talleyrand, sitting at the farther end of the long library, called out, "Let me undertake to help you to make your decision. Young man, of these two trinkets tell me which you prefer." "This one, certainly, your Excellency." "Then," ended the experienced cynic, "please accept it for your sweetheart, and I think, ladies, that you had better take the other." I tell you anecdotes; are they not as good as reasons?

Listen to what my Chinese writer says:

"Of language put into other people's mouths, nine-tenths will succeed. Of language based upon weighty authority, seven-tenths. But language which flows constantly over, as from a full goblet, is in accord with God. When language is put into other people's mouths, outside support is sought. Just as a father does not negotiate his son's marriage, for any praise he could bestow would not have the same value as praise by an outsider. Thus the fault is not mine, but that of others, who would not believe me as the original speaker." Again a story of China comes back to me, told by the same writer, who lived before our purer era, and who was, as a Japanese friend remarks, a strategist in thought, fond of side attacks, of presenting some point apparently anecdotic and unimportant, which once listened to turns the truthful mind into channels of fresh inquiry. The anecdote is old, told by the old writer many centuries before Christ, and before any reflections about art troubled our barbarian minds.

It is about a court architect who flourished in celebrity some twenty-seven centuries ago and who answered admiring queries as to how he did such wonderful things. "There is nothing supernatural about it," he said. "I first free my mind and preserve my vitality—my dependence upon God. Then, after a few days, the question of how much money I shall make disappears; a few more days, and I forget fame and the court whose architect I am; another day or so, and I think only of THE THING ITSELF. Then I am ready to go into the forest—the architect and the carpenter were one then—whose wood must contain the form I shall seek. As you see, there is nothing supernatural about it."

Twenty-seven centuries ago the formula of all good work was the same as it has been since. This looking for "the thing itself," not for the formula to control it, enabled men who were great and men who were little, far down towards us, far down into the times of the Renaissance (until pedantry and night covered human freedom and integrity), to be painters or poets, sculptors or architects, as the occasion required, to the astonishment of our narrowed, specialized vision of the last two hundred years.

Again, if I have not put it clearly enough in this story of the far East, let me add another, which includes the meaning of the first. You will forgive it in honor of the *genius loci*, for these writings of the Chinese philosophers form a staple of conversation and discussion in social gatherings of cultivated people here. The story is of the greatest of Chinese rulers, the "Yellow Emperor" of some forty-seven centuries ago. He was in pursuit of that law

of things, that sufficient ideal which is called "Tao" ("the Way"), and he sought it in the wilds beyond the world known of China, in the fabulous mountains of Chu-tzu. He was accompanied by Ch'ang Yu and Chang Jo, and others of whom I know nothing; and Fang Ming, of whom I know nothing also, was their charioteer. When they had reached the outside wilderness these seven sages lost their way. By and by they fell in with a boy who was tending horses, and they asked him if he knew the Chu-tzu Mountains. "I do," said the boy. "And can you tell us," said the sages, "where Tao, the law, abides?" "I can," replied the boy. "This is strange," said the Yellow Emperor. "Pray tell me how would you govern the empire?"

"I should govern the empire," replied the boy, "in the same way that I tend my horses. What else should I do? When I was a little boy and lived within the points of the compass my eyes grew dim. An old man advised me to visit the wilderness outside of the world. My sight is now better, and I continue to dwell outside of the points of the compass. I should govern the empire in the same way. What else should I do?"

Said the Yellow Emperor, "Government is not your trade, but I should be glad to learn what you would do." The boy refused to answer, but being urged again, said: "What difference is there between governing the empire and looking after horses? See that no harm comes to the horses; that is all."

Thereupon the emperor prostrated himself before the boy; and calling him divine teacher, took his leave.

I am writing these vagaries by the sound of the waterfall in our garden; half of the *amados* are closed; the paper screens near me I have left open, and the moths and insects of the night flutter around my lamp in orbits as uncertain as the direction of my thoughts. I have given up my drawing; it is too hot to work. And I have already tired myself with looking over prints and designs. Among them there is a sketch by Hokusai which reminds me of the way in which my mind bestrides stray fancies that float past. The picture is that of Tekkai (the beggar), the Sennin exhaling his spiritual essence in a shadowy form, which shadow itself often rides away upon the spirit horse that Chokwaro or Tsuga evokes occasionally from his traveling-gourd.

To-day we talked of the legends of these

Rishi or Sennin, whose pictures so often come up in the works of Japanese artists.

Rishi or Sennin are beings who enjoy rest,—that is to say, are exempt from transmigration,—often in the solitude of mountains for thousands of years, after which delay they again enter the circle of change. If they are merely human, as many of them are, they have obtained this charm of immortality, which forms an important point in the superstitious beliefs and practices of modern Taoism. These appear to have no hold in Japan, as they have in China, but these personages, evolutions of Taoist thought, live here at least in legend and in art.

The original mysticism from which they sprung is full of beauty and of power. General Tch'eng-ki-tong has recently stated it well, when he says that Lao Tzu, its great antique propounder, speaks with something of the tone of a prophet. He neither preached nor discussed, yet those who went to him empty departed full. He taught the doctrine which does not find expression in words, the doctrine of Tao, or the Way—a doctrine that becomes untrue and unprofitable when placed in set forms and bound in by pedantry, but which allows teaching by parables and side glimpses and innuendos as long as they are illuminated by that light which exists in the natural heart of man. And I too am pleased to let myself be guided by this light. After many years of wilful energy, of forced battle that I have not shunned, I like to try the freshness of the springs, to see if new impressions come as they once did in childhood. With you I am safe in stating what has come to me from outside. It has come; hence it is true: I did not make it. I can say with the Shadow, personified by my expounder of the Way,¹ that when the light of the fire or the sun appears, then I come forth; when the night comes, I lie still: I wait indeed, even as they wait. They come and I come, they go and I go too. The shade waits for the body and for the light to appear, and all things which rise and wait wait upon the Lord, who alone waits for nothing, needs nothing, and without whom things can neither rise nor set. The radiance of the landscape illuminates my room; the landscape does not come within. I have become as a blank to be filled. I employ my mind as a mirror; it grasps nothing, it refuses nothing; it receives, but does not keep. And thus I can triumph over things without injury to myself—I am safe in Tao.

John La Farge.

¹ Prémare's "Notitia Linguae Sinicae," "4 um exemplum. Sic inducit Tchouang-isee umbram loquentem: Ego quidem existo, sed nescio qua ratione. Ego sum veluti cicadarum tunicæ et Serpentis spolia," etc.

If what I have written is ever seen by H. B. M.'s consul at Tamsui, he will perceive my indebtedness to his most admirable translations.

PARIS.

THE TYPICAL MODERN CITY.

INTRODUCTION.

PARIS is the typical modern city. In the work of transforming the labyrinthine tangle of narrow, dark, and foul medieval alleys into broad modern thoroughfares, and of providing those appointments and conveniences that distinguish the well-ordered city of our day from the old-time cities which had grown up formless and organless by centuries of accretion—in this brilliant nineteenth century task of reconstructing cities in their physical characters, dealing with them as organic entities, and endeavoring to give such form to the visible body as will best accommodate the expanding life within, Paris has been the unrivaled leader. Berlin and Vienna have accomplished magnificent results in city-making, and great British towns—Glasgow, Birmingham, Manchester, and others—have in a less ambitious way wrought no less useful reforms; but Paris was the pioneer. French public authorities, architects, and engineers were the first to conceive effectually the ideas of symmetry and spaciousness, of order and convenience, of wholesomeness and cleanliness, in urban arrangements.

There has been some disposition, however slight, among English-speaking people, to undervalue French civilization and to minimize the importance of French services to the world. The attainments of German scholarship in many directions are so colossal, and German energy and prestige are now so dominant, that, in our admiration for the progress and achievements of this younger people, we are in danger, perhaps, of giving the French less than their due. All countries are under lasting obligations for the clear political philosophy that furnished the French Revolution with its principles. And is it a trivial thing that we are indebted to the refined and artistic instincts of the French people for so many of the amenities and comforts of latter-day existence? When they began to show us how to build cities we were far from appreciating the fact that the twentieth century was to dawn upon a race that had, for the majority, adopted city life; and that the difference between good and bad municipal arrangements would mean either the conservation of the race in bodily vigor, and in the education of mind

and hand, or else its rapid physical and mental deterioration. But for urban improvements of the sort that the French people instituted the death-rate would be higher than the birth-rate in all large population centers.

In the past decade or two there are other cities, outside of France, that have adopted appointments that are in some respects more scientific and effective than those of Paris; but it remains true that the French capital is the most conspicuous type of the thoroughly modernized city. Considered as such it would require at least a volume to enter with any fullness of description and analysis into the municipal history and life, the public arrangements and administrative methods, of Paris. Maxime Du Camp, a worthy Parisian author, has recently attempted to cover this subject in a work of six large volumes entitled, "Paris, its Organs, its Functions, and its Life in the Second Half of the Nineteenth Century" ("Paris, ses organes, ses fonctions, et sa vie dans la seconde moitié du dix-neuvième siècle"). It is a monumental work, valuable for reference, but of course too voluminous for the ordinary reader. And now there has appeared another work, also of the highest importance, that should stand next to Du Camp's on the library shelf. It is upon the condition of Paris in 1789—"L'État de Paris en 1789; études et documents sur l'ancien régime à Paris." It is the work of a public commission of historians who have searched old records and official archives. Du Camp describes the new Paris of our time, while the other work reconstructs for our edification the Paris that existed up to the very eve of the cataclysm. The contrast is startling. It is obviously important that there should be placed on record everything that can be known about the Paris of a hundred years ago, the outlines and remains of which have so nearly disappeared.

It is marvelous to note the ceaseless operations of the transforming energy derived from the Revolution. Rather inconspicuously placed in a hallway of one of the buildings in which the municipal authorities of the capital made their extraordinary display at the recent exposition was a map that had a fascinating interest for me. It was a street map of Paris, showing by different colors the periods in which the great boulevards, avenues, squares, and other visible improvements had been constructed. No change in the higher government

had seemed to check the mighty impulse. Everything that lay in the way of the broad, straight swath of a new avenue was razed unmercifully, and the street system of the old inner metropolis was made to conform to the systems of the splendid new quarters that were springing into existence, especially towards the west.

In the days of the Revolution the site of the present Place de la Concorde, where the guillotine was then so active, was upon the very western outskirts of Paris, while the prison of the Bastille — whose destruction in July, 1789, opened most significantly that long course of wholesale Parisian demolition, in order that freedom, science, and sunlight might replace the oppression, ignorance, and gloom of the old régime — was then on the eastern limits, and beyond it lay the open country. North of the inner line of boulevards, which had been already laid out, there was practically no Paris; and south of the Hôtel des Invalides and the Luxembourg, beyond which the vast city now stretches so far, there were in those days fields and a farming population. It should not be inferred, however, that these new parts have since arisen upon a ground plan wisely provided in advance. To some extent, it is true, such has been the case, and in the newest quarters of Paris — for instance, in Passy, Neuilly, and other suburbs beyond the gates on the west — the magnificent avenues have been laid down upon the open fields, and the exercise of forethought will have saved all the cost and trouble of subsequent reconstruction. But even in Paris since the Revolution there has been some of the improvidence that prevails elsewhere; and while the inevitable municipal plow has been cutting its stupendous furrows in one direction, new quarters have been allowed to form themselves improperly somewhere else, with the result of costly reconstruction when the time comes for extending to them the main arterial system of the metropolis.

Perhaps if parts of this Parisian transformation had been delayed until a later period, certain causes would have operated to make it less thorough. At the close of the French Revolution, and for some decades thereafter, there was in Europe no sentiment for old architectural monuments, and especially none for medieval churches. This sentiment now pervades all Europe; and the most affectionate preservation, with cautious, faithful restorations, is the order everywhere.

Such a spirit of appreciation was lacking in the generations immediately preceding our own, and nowhere was its absence more complete than in the French capital. The religious orders had built their great monastic houses and their splendid churches everywhere in

Paris. They were a privileged caste and a heavy burden. The Revolution had no mercy upon them or their beautiful architecture, and the new street system plowed through their churches as relentlessly as through shabby tenement rows. Scores of examples of the most beautiful ecclesiastical structures of the middle ages were obliterated to make room for broad, straight avenues, open squares, and new, regular buildings. Nowadays such sacrilege would not be tolerated.

It is fortunate, therefore, for the Parisians that their central street reforms were chiefly accomplished before the rise of the new appreciation of church architecture. There are enough old churches remaining throughout France, if not in Paris itself, to represent adequately the beautiful art and work of the thirteenth and fourteenth centuries. The narrow old Parisian streets of the last century wound in and out among these venerable piles in a manner that modern traffic could not have endured. To have spared them would have been to deprive Paris forever of an adequate street system. It was far better to sacrifice them and to make the city uncompromisingly modern. The population in 1789 was about 600,000, and in 1889 it was 2,500,000, including that of the immediate suburbs. And with the fourfold increase of population there has been at least a tenfold increase of traffic and of daily pressure upon the accommodations of the main street system. These facts, to my mind, fully vindicate the wisdom, redeem the "vandalism," and justify the immense cost of the modernization of Paris. It was the mission of France to teach the world a lesson of order, system, and logic, of emancipation and iconoclasm. Paris was made the visible embodiment of the revolt against the iniquities of the old régime, and of the creative vigor of the new era. We would not wish to see Rome modernized in any such spirit; and, indeed, the great reforms now progressing there, of which I shall write in a subsequent article, proceed upon the principle of preserving with the greatest veneration and care all important archæological remains and all worthy specimens of ecclesiastical architecture. But it was for Paris to sacrifice everything to the modern ideas of symmetry, spaciousness, and regularity, and to build the great opera house as a central feature, and as a suggestive symbol of the new spirit.

Louis XIV. and Louis XV. had not been without magnificent ideas for Paris, and they had left improvements — palaces, royal pleasure-grounds, boulevards, churches — that make a considerable array when put into a list; but these things, done to gratify the royal pride, had been of almost no benefit to the people, and

had not affected materially the mediæval conditions. The absolutism of these monarchs could never have availed to cut the Gordian knots of a thousand claims, prescriptive rights, and intolerable immunities that the nobles, the religious orders, the old gilds, and various other corporate and private interests tenaciously held in the metropolis. Nothing but a revolution, sweeping everything away and beginning anew upon simple principles, could have effected any radical improvement.

The work of remaking Paris after the Revolution was begun upon the lines of a general plan for the cutting of new streets, prepared by a so-called "Commission des Artistes." The plan included 108 distinct projects. Although political changes interfered with the full execution of this particular plan, the work of reconstruction did not cease. Under the great Napoleon the *rues de Rivoli*, *Castiglione*, *des Pyramides*, and various other modern thoroughfares were created. To the fifteen years of the Restoration another considerable list must be credited, including, among others, the *rues de Chabrol*, *du 29 Juillet*, *Lafitte*, and those of the *Quartier de l'Europe*. And under Louis Philippe (1830-48) the *rues de Rambuteau*, *de la Bourse*, *de Lyon*, *de Havre*, and others were opened.

But it was in the period from 1852 to 1871, under Louis Napoleon, that the most comprehensive and magnificent work was done. A huge scheme was laid out, under the supervision of Baron Haussmann as prefect of the Seine, for the binding together of all the quarters of Paris by a system of grand avenues of general communication.

The plan of the new Paris is by no means so geometrical and easily understood as that of Washington, but it is none the less a philosophical and practical arrangement. Originally the narrow streets and lanes of Paris were either parallel with the Seine in general direction or were at right angles with the river. It became necessary to give the new Paris main thoroughfares broad enough and straight enough to accommodate traffic through the heart of the city along these original lines. Further, it was deemed necessary to construct a great number of diagonal avenues and boulevards directly connecting important localities. Still further, new lines of engirdling boulevards were found desirable; and finally, there were important reforms to be instituted in the suburban street systems. The net public expenditure incurred between 1852 and 1870 in carrying out the Haussmann-Napoleon project of new boulevards and avenues was in excess of 1,200,000,000 francs. The gross outlay was much greater, but large amounts of the original investment were recovered from time to time

by the sale of building sites, the municipality having, by condemnation proceedings in every case, acquired the properties through which in part a new street would pass. Since 1870 the work has gone on with less energy, the proposed reforms having been mainly effected. But a number of important new projects have been carried out since 1875, and each year sees some addition to the main street system. Private individuals have been obliged to conform strictly to the plans and regulations of the municipality in building up the new frontage, and thus there has resulted that marvelous regularity—elegant and impressive rather than monotonous—which is the characteristic of Parisian street architecture.

THE FRENCH MUNICIPAL SYSTEM.

To study the governing organs of Paris before the Revolution would be a complicated task, interesting, certainly, but no part of our present purpose. There was, as Mr. Frederic Harrison has recently said, "a chaos of competing authorities, a tangle of obsolete privileges, and a nest of scandalous abuses. Anomalous courts jostled and scrambled for jurisdiction; ancient gilds and corporations blocked every reform; atrocious injustice and inveterate corruption reigned high-handed in the name of king, noble, or church." This, indeed, does not tell us what the mechanism of the municipal government was, but it shows us well enough its spirit and its results. For our purpose it suffices to add that the city, so far as it was centrally governed, was administered by a provost, or mayor, deriving authority directly from the king, and that various old, surviving local bodies shared, in an anomalous way, in the minor affairs of the city. The communes of France, of which Paris was the chief, had in earlier centuries won a high degree of local autonomy, and played a conspicuous rôle in history; but they had now been reduced to the condition of the mere territorial administrative units of the centralized authority.

The Revolution instantly changed all this. The ancient communes, which lay as a complete network over the whole territory of France,—some of them urban entities, most of them simply small rural townships, but each of them a natural and traditional unit of government,—recovered their dignity, and obtained a system of local representative administration. The old privileges were abolished, and the modern elective principle was introduced. The people of each commune were empowered to elect a mayor and several other executive officers, who formed a "corps municipal." They also elected "notables," so-called, to the number of twice the corps municipal; and the two

groups, sitting together, formed a "council general" of the commune, while the mayor and the executive officers were in charge of active administration. It was a clear, logical system. The number of officers varied in the ratio of the population of the communes, and the arrangement was thus adapted to the large municipalities on the one hand and to the petty townships on the other. It was a masterly piece of legislation, sweeping away all the fogs and mysteries of the traditional system, and putting in its place a complete and uniform, while simple and elastic, scheme of local organization and government.

With various changes and fluctuations that system of 1789-90 has survived to this day. It drew a logical line between the functions to be intrusted to the communes and those that belonged to the higher authority, and it made the local government absolutely independent and autonomous within the range of its powers and duties. The system was in many respects similar to that now employed in some of our American States, as, for example, Illinois and Iowa. In 1795 the Directory made novel experiments and changes, consolidating the smaller communes, and forming larger divisions called "cantons." But this system was unduly arbitrary, and in 1800 the Consulate restored to each commune its individuality. Freedom, however, was wholly lost, for the communes now became parts of Napoleon's great centralized machine. Napoleon's maxim, as exemplified in his administrative laws of the year 1800, was: "*Agir est le fait d'un seul; délibérer est le fait de plusieurs*" ("To execute is the business of one; to deliberate is the business of many"). France had been divided in 1789 into departments, districts, and communes. The departments, having a sort of provincial business to do, were at that time given popularly elected representative councils, and the executive work was performed by a standing committee selected from the membership of the council. The district—a subdivision—was governed similarly; and I have already explained how the communes or municipalities were organized. All was free and popular.

But the Directory, in 1795, leaving the deliberative councils to be elected as before, chose to empower the central government of the country to name the executive commissions in the departments, and to tighten the reins of the higher authority. And in 1800 the Napoleonic idea went infinitely farther in the same direction. Each department, by the law of 1800, was to be actively administered by a prefect, named by the "premier consul," *i. e.*, by Napoleon himself; and the deliberative councils of the departments, varying in membership from sixteen to twenty-four members,

were now also to be selected by the premier consul. Then there was to be a "council of prefecture," of from three to five members, to deal judicially with disputes arising in the administration of the department or of its subdivisions, and this council was to be appointed by the premier consul. The districts, or departmental subdivisions,—called in the law of 1800 by the name of "arrondissements," which they still retain,—were governed by an under-prefect and a council of eleven members, all named by the premier consul. Coming down to the communes and municipalities great and small, thousands of them altogether, we find them governed by a mayor and several "adjuncts," or assistant executive officers, and by deliberative councils; and we find that all the mayors, officers, and councilors were named by the premier consul, except as in the small communes he delegated the task to his agent, the prefect of the department.

Here was centralization absolute and complete. It shocks our ideas, yet we must remember that it bore no relation to the absolutism of the old régime. The new centralization was founded upon equality, justice, and the reign of law. It was a wrong system, but it was symmetrical and logical. Possibly it was for a time a better system for the French people, just emerging from the old tyranny of local lords and church dignitaries, than the free, popular system of 1789 would have proved. We can, however, but prefer infinitely the laws of 1789, based upon trust in the people and the natural right of local autonomy, to the huge centralized machine constructed by Napoleon as the instrument of imperialism.

The system of 1800 was maintained for thirty years; but it was much liberalized in 1831 as one of the results of the revolution of 1830, which unseated the Bourbon successors of Napoleon and placed Louis Philippe upon "a throne surrounded by republican institutions." The revolution of 1848 did still more to free the municipalities and communes; but another Napoleon was destined to restore the centralized system.

The third republic, which has now weathered the storms of twenty years, at the outset adopted a less liberal policy than that of the first and second republics. It was menaced from without by foreign complications and threatened from within by powerful monarchical factions, and its leading spirits were afraid to relinquish a firm central hold upon local administration throughout the country. Their policy in this regard was a complete mistake; but the third republic has been disposed to feel its way, and its system of administration has been more monarchical than that of most monarchies—notably more so, for instance, than Belgium's, Italy's, or Austria's.

At length the smaller communes were allowed to choose, through their councils, their own mayors and executive officers; but the larger municipalities were obliged to submit to mayors chosen by the central authorities. And in all their deliberations and activities the municipal councils and officers were subject to the departmental prefect named by the central power.

Great improvements were made by the consolidated municipal government act of 1884, which remains in force. This law gives the communes universal manhood suffrage in electing their municipal councils. It gives the councils of great as well as of small communes — excepting Paris, of which we shall subsequently speak — the right to elect from their own membership the mayors and adjuncts. It prescribes a considerable range of local affairs in which the communes are competent to act finally, without waiting in every instance, as was previously necessary, for the sanction of the prefect of the department. It also puts limitations upon the power of the prefect to suspend a mayor or a whole municipal council, and upon the right of the higher authorities to order a dissolution and a new election. There is still a needless and humiliating centralization, and an altogether objectionable amount of administrative authority in the hands of the prefects and sub-prefects, who emanate from the central government, and do its bidding. But the system is otherwise a fairly good one.

In summing up, let me commend the simplicity of the organization of French municipal government. The people elect a council, varying in numbers according to population upon a scale fixed by general law. In all but the large places the council is elected upon a general ticket. The important cities are usually divided into sections, or large wards, to each of which several councilors are assigned, and the ward chooses its councilors upon a general ticket. The councilors hold office for four years, and all retire together — being, of course, eligible for re-election. The English and American system of partial renewal annually or biennially is contrary to French habits and ideas. The council names the mayor, and also his executive assistants, from its own membership. The mayor is the presiding officer of the council, as well as the executive head of the municipality. His adjuncts, or executive assistants, are designated by their fellow councilors. In large places these number ten or twelve, and they have no executive duties except such as are specifically assigned to them by the mayor. The council holds four ordinary sessions every year, each of which may last for fifteen days, while the one in which the annual budget is discussed may last for six weeks. But the mayor may call extra sessions at any time, and he is

obliged to convene the body upon request of a majority of the councilors. The council appoints consultative committees which meet *ad libitum* between sessions, with the mayor as nominal chairman of each, while one of his adjuncts is more usually the actual chairman. The mayor has the appointing power, and names the minor officials of the commune, subject in some cases, however, to the approval of the prefect of the department. With the advice of the council, and under the surveillance of the departmental authorities, the mayor executes the business of the commune. The council has a large authority in the levying of taxes, authorization of public works, provision for education, etc., but in most of these things its decisions must be approved by the higher authorities.

Such is the French system. It differs from the English in making the mayor a fully empowered executive officer, while limiting the council chiefly to deliberation. But the mayor is the creature of the council, his adjuncts are councilors, and the system is therefore logical and unified; and with all its differences, it seems to suit the French people as well as the English system suits the needs of British municipalities. The English system is that of administration by the municipal council. The French system is that of administration by a mayor and his adjuncts, forming a "*corps exécutif*." The American system is an absurd and futile attempt at combining the two systems. We attempt the hopeless feat of a government by the council and a government by the mayor at the same time. The result is conflict, dissipation of authority, and degradation of municipal life.

THE MECHANISM OF PARIS GOVERNMENT.

THE liberal legislation of 1789-90 gave Paris, with the other communes of France, a fully constituted, autonomous municipal government. The city was divided into forty-eight sections, each of which elected two common councilors, or notables, in addition to which a body of thirty-two councilors of higher rank, or aldermen, were elected, while the executive work was entrusted to a popularly elected mayor and sixteen administrators, so-called. The whole body of 145 governed the city, the mayor presiding over the council and directing the active administration of the city. In the fact of the popular election of the mayor this constitution resembled those of our American cities. The councilors and administrators were elected for two-year terms, and half of them were renewed annually. It was a fairly acceptable form of municipal government. But the Directory, in 1795, with its theory of cantonal

administration, consolidated the smaller communes of France and cut up the larger ones. Paris was divided into a dozen municipalities, with some sort of central administrative bureau, which the Directory constituted and managed in its own interest. The work that the Directory began Napoleon completed. He abolished absolutely the central mayoralty, and created the semblance of a central communal council, all the members of which were his own appointees. In each of the twelve sections, or *arrondissements*, as they have since that time been called, he established a so-called mayor, with assistants. But these officers were simply the local agents of the prefect, and were in no true sense municipal authorities. The real governor of Paris was the prefect of the department of the Seine—a department including Paris and some suburban communes. All administration was in his hands. In the levying of taxes and the planning of public works he had the advice of the municipal council of Paris and of the council-general of the department, all the members of which were the appointees of the central power. The revolution of 1830 improved matters to the extent of giving Parisians of certain electoral qualifications the right to choose the municipal council. But the central mayoralty was not revived, and the prefect, with his subordinates, and with the appointive officers of the *arrondissements*, governed the city still.

As in the country at large, so in Paris the brilliant revolution of 1848 restored for a brief interval the autonomy of communities. Paris again had its own municipal government, its own chosen mayor and executive staff. But the empire of Louis Napoleon took the city completely out of the hands of its inhabitants and restored the system of the first empire. The national assembly of 1871, after the downfall of the empire, gave back to Paris its elective council, but stopped there, promising that further concessions to the principle of self-government should be made at some subsequent time. Since then the suffrage, which was virtually universal, has been made entirely so. But Paris is still actively governed, as under Louis Napoleon, by the prefect of the Seine and his colleague, the prefect of police, both of whom are appointed by the general government and are amenable directly to the Minister of the Interior. In the smaller communes of France the police power is now confided to the municipal authorities, and is exercised actively by the mayors. In the larger ones a purely domestic police authority is exercised by the municipal officers, while a general control of police is vested in the prefect and his sub-prefects. But Paris is deemed too vast for the union of ordinary business administration and

police administration in the hands of the one prefect of the department, and the police authority, covering a wider range of functions than the simple organization of the police force and the management of the police courts and station-houses, is put in the hands of a separate chief, the prefect of police.

Paris has now for many years been subdivided into twenty *arrondissements*, and in each of them there is a central building called the "*mairie*," in which is the bureau of an officer called the "*maire*" (mayor). He is assisted by three adjuncts. These men, who are appointed officers of the general government, and are, in fact, simply the agents or delegates of the prefect of the Seine, with a staff of clerks and assistants attend to a vast amount of routine business for the higher authorities and for the city, so far as the population of their several *arrondissements* is concerned. They make the registration-lists for elections. They record births, deaths, and weddings, and perform the civil ceremony of marriage. They receive taxes, have to do with matters of elementary education, render "*assistance publique*,"—*i. e.* administer the poor laws in their respective districts,—enroll under the army-service acts those liable to military duty, and perform various other routine functions. These twenty Parisian centers of local administration are admirably organized and conducted, and under any scheme whatsoever of a reconstructed municipal government they would be allowed to remain.

The municipal council of Paris consists of eighty members, four from each of the twenty *arrondissements*. Each *arrondissement* is subdivided into four quarters, and each quarter elects a municipal councilor. They are elected for three years, and all retire together. The municipal council of Paris, plus a few representatives of the outlying communes of the department of the Seine, constitutes the council-general of the department. Since these outlying communes are, in fact, the immediate suburbs of Paris, there seems to be no good reason why the city's jurisdiction should not be made coextensive with that of the department, so that the business of the municipal council and that of the council-general might be merged. These communes outside the fortifications of Paris have their elective councils and distinct municipal organizations, but all come under the common executive control of the two prefects.

SOME PROPOSED REFORMS.

EVER since 1871 there has been a constant demand upon the part of Paris, as represented by its municipal council, for a restoration of its

central mayoralty and a release from its position of tutelage. The situation of the council is certainly humiliating and unsatisfactory. It is dominated by the prefect, who has the right to attend its sessions and to take the floor whenever he pleases, and who is absolutely unaccountable to it for his management of the city's business. The council has, it is true, large discretionary power over finances and taxation, and indirectly it controls the departments of administration and the construction of public works through its hold upon the purse-strings. But it is, at best, hampered and restricted. The prefect is in theory accountable to the Minister of the Interior: but the prefect has not only to administer the affairs of the city, but also to act as the political representative of the government of the day; and in fact it is in his character as the political agent of the government that he is held accountable. French ministries are too short-lived, and too busy with interests more vitally affecting themselves, to permit the Minister of the Interior to hold the prefect of the Seine to a frequent and careful accounting for the ordinary administration of the affairs of Paris.

There is some reason to believe that the time may not be far distant when Paris will be given back to its citizens by the general government. The question has been much considered by the municipal council. A few years ago a council committee of which Sigismund Lacroix was chairman reported an interesting scheme of municipal organization for Paris. It provided for a council consisting, as at present, of at least four members from each *arrondissement*, but with additional representation for the larger ones, increasing the total body from 80 to 109 members. The councilors were to be elected for three years, one-third retiring annually, as in England, and the elections were to be upon general *arrondissement* ticket — a great improvement upon the present plan of "uninominal" election in quarters, which necessarily tends to fill the council with obscure men. It was provided that this council should be free from the present possibilities of suspension and dissolution by the higher authorities. Paris is the only French city that is without its own mayor, Lyons having, two or three years ago, been allowed to resume a full-fledged municipal government after years of tutelage similar to that of Paris. The proposition to which I refer authorized the council to elect from its own membership a mayor and eight adjuncts, forming an executive corps. Each of the adjuncts was to be assigned to the headship of a municipal department, for which he should be responsible to the council, while the mayor was made accountable in a general way as chairman of the executive corps. The mayor and the

adjuncts were to keep their seats in the municipal council with power to speak and to vote. In all the other French cities the mayor is also the presiding officer of the council; but Lacroix's committee held that in the case of Paris it would be advisable for the council to relieve that functionary of the routine duty of the presidency, and to name another member of the council for the task of the speakership of the municipal parliament. The executive corps, *i. e.* the mayor and his eight adjuncts, were invested with the appointing and removing power for all employees and agents of the municipal administration, upon the initiative of the adjunct at the head of any particular department. To do the routine work now done in the *mairie* buildings of the *arrondissements*, it was provided that four or five officials should be appointed by the mayor's corps as "delegates of the *mairie*" to render the services now performed by the agents of the prefect. The council was to have full control of taxation and finance, but could not borrow money without the direct ratification of the voters at a popular election. The municipal authorities were to have entire management of the education system, primary, secondary, and higher.

These propositions, as it seems to me, embodied a most excellent municipal constitution. Its harmony and simplicity are not the least of its merits. Although it was an unrealized project, it is worthy of notice as an indication of what current European judgment and experience would pronounce a good framework of municipal organization.

It must not be supposed that all elements in Paris are clamorous for a larger degree of municipal autonomy. The educated and propertied classes, as a rule, prefer that the general government should keep its strong hand upon Parisian administration. They are somewhat distrustful of the municipal council, which they regard as radical and socialistic in its tendencies. There is very much to be said upon both sides. Paris has always, except for the brief intervals of the first and second republics, been administered by the central authorities. The change of prefects has at times been very frequent as ministries have risen and fallen; but the skilled administrative heads of the various municipal services, together with their corps of trained civil servants, have been practically permanent. It has been possible to carry out great policies of public improvement, and there has been a high and well-ordered efficiency in the execution of all kinds of municipal functions. If the municipal council had been all-powerful, it is possible that public business would have been less effectively prosecuted, and also that public works would have been upon a less

magnificent scale. Upon the other hand, it is possible that the real welfare of the masses of the Parisian people would have been more carefully guarded, and that the burdens of taxation would have been lighter.

The municipal council certainly contains a number of able and honest men; but as a whole it is open to the charge of being a body of men mediocre and unknown, and the primary reason for this is plain enough. Each member is elected in a separate district, eighty in all. The opportunity for what we in America call "ward politics" is altogether too favorable. It is not, of course, legally requisite that the councilor should be a resident of the quarter he represents, but in practice he is likely to be. Candidate A placards the quarter with gaudy posters declaring that as a resident he can represent the people far more satisfactorily than candidate B, who lives in an arrondissement at the opposite end of the city. Whereupon candidate B issues a manifesto in which he promises to obviate the difficulty by moving into the quarter if he is elected.

Such a system does not tend to fill the council with men known to Paris at large. Election upon a general arrondissement ticket, as proposed in the Lacroix draft, would result in greatly improving the average quality of the council. I am inclined to the opinion that it would be still better to elect a portion of the council upon a general ticket for the whole city, with the idea of securing men of acknowledged note and standing for candidates. While, then, I must confess my sympathy with the idea of greater municipal autonomy for Paris, I can also appreciate the reasons which actuate conservative Parisians, remembering the horrors of the commune of 1871, in clinging to the strong arm of France. Yet Paris will never have the government that is best for all its people until it intrusts itself to the people.

I would not for a moment have it inferred that the present council of Paris is not a far more intelligent, upright, and efficient body of men than the average council of a large American city. If it had full control over the executive administration, and if it were elected upon a less minutely local plan, I believe that it would soon become a magnificent body, to which it would be a great honor to belong, superior, possibly, in distinction to the councils of Berlin and Vienna, and equal to the new council of metropolitan London. Such positions should have no emoluments, or else should have large ones. A Paris councilor is not supposed to draw a salary, but he has been accustomed to allow himself 4000 francs a year for expenses. In view of exceptional demands, he increased this allowance for

the recent exposition year to 6000 francs (\$1200), and he has since neglected to reduce it. This transaction has an unpleasant savor about it, and seems to indicate a rather petty type of man. The movement for greater municipal autonomy is at present led with much vigor by M. Richard, president of the council, who, on December 15, 1890, issued the first number of his new daily newspaper, "La Cité," which is devoted to the advocacy of the claims and municipal interests of the commune of Paris.¹

THE POLICE ADMINISTRATION.

BUT more important than anything else in the scheme of Lacroix and his colleagues, it was proposed that the odious prefecture of police should be abolished and that the police authority should be invested in the municipal government, as was the case in the law of 1790. The prefecture of police for the department of the Seine was the masterpiece of Bonaparte's administrative system. This police prefect was reconstituted in 1853 by Louis Napoleon as an indispensable part of his centralized government, and it was characteristic of the third republic, with its centralizing and monarchical instincts, that it chose for its own ends to retain the police prefect.

He is to-day the most unaccountable and the most powerful man in France. His functions are highly varied. He controls not only the ordinary police that patrol the streets and keep order, but also the detectives and officers who constitute the "police judiciaire," and who work up criminal cases. Besides these, he is master of the political police,—the government's secret agents,—and he has in his hands a secret-service fund to spend unaccountably except as regards his immediate superior, the Minister of the Interior. His department covers the maintenance of order everywhere in streets and public places, the punishment of misdemeanors, the inspection of weights and measures, the organization of important life-saving and sanitary services, authority to permit or to forbid public spectacles, licenses of numerous sorts,—such as omnibuses and cabs and river steamers,—the regulation of certain trades and callings, and, in general, the control of a great number of services that affect the security of life and property, the public health, and the convenience of a great community.

In all this varied array of business the prefect of police has practically nobody to please but himself. His budget goes to the municipal council, and it is obligatory upon that body to

¹ M. Richard died suddenly in January, just after the references above were written.

allow it and to appropriate the funds demanded. He is accountable nowhere for the expenditure of the vast sum that he draws from the municipal treasury every year. Thus his function seems to be one of darkness and mystery. He was a fit creation of such rulers as the Napoleons, but he has no proper place in a republican form of government. Engaged as he must be in the secret service of politics, he is not the suitable person to administer the ordinary police government of a great city. It would certainly seem feasible and reasonable that the central authorities, retaining the control of the "police judiciaire" and of such other police agents for the general service of the state as might be deemed desirable, should confer upon the people of the city, to be exercised by their responsible elective servants, the ordinary municipal police authority.

But it would be a great mistake to jump at the conclusion that the existing police administration is not orderly and efficient. The real protection that the people have against the theoretical absolutism of the prefect of police lies in the magnificent organization of the great machine that the prefect superintends. Every one of the numerous bureaux is manned with permanent officials, who have entered the service upon examination and who are promoted for merit. The ten or twelve thousand officials who are upon the pay-rolls of the prefecture of police constitute a body of men who are as methodically organized as an army; and nothing could be much farther from the truth than to assume that the excessive power vested in the prefect means looseness or corruption in the ordinary administration of the police system.

"THE BEST-LIGHTED CITY IN THE
WORLD."

LIKE American cities, and in this respect wholly unlike those of England and Germany, French cities have been in the past, and still are, wholly disposed to leave the manufacture and sale of illuminants to private companies. But the resemblance between French and American cities as regards their management of this important service ends abruptly with the simple fact that they have chosen to employ private instead of public initiative. Municipal Paris has always fully protected public and private interests in its dealing with lighting companies. Even yet American cities have not thoroughly learned the simple lesson that there can be no real competition between gas companies in the same area, and that it is the height of foolish stupidity to attempt to regulate by competition a business that is monopolistic in its very nature. Paris, forty

or fifty years ago, in the experimental period of public gas-lighting, had seven or eight different gas companies. But each was restricted to its own district; each was chartered upon terms that gave the city authorities large control; each furnished its quota of gas for street lights and public buildings at a price fixed by charter contract and approximating actual cost of manufacture; each paid a moderate street rental for the privilege of laying pipes under the sidewalks; each submitted to a scale of prices for private consumers, arranged by agreement with the city upon the basis of reports made by commissions composed of scientific authorities and experts; each submitted to a daily official examination of the quality of its gas and to penalties for failure to reach the standard, and each laid its pipes in its respective territory under strict regulations respecting injury to the pavement and the disturbance of traffic. All these matters involved very much discussion and no small difference of opinion, but all were from time to time adjusted in an equitable and enlightened way. I might easily write a small book upon the history of the Paris gas-supply; but simply to have known and appreciated the main facts in that history, accessible as they have been, might have saved our American municipalities many millions of dollars in the aggregate. But our municipalities have contemptuously refused to learn anything from foreign experience.

The six companies which for some years had been engaged in the distribution of gas to Paris were fused into one great company in 1855. Some of our American cities have in recent years been well-nigh convulsed with excitement and indignation because their local gas companies had been consolidated or brought under a unitary management. And yet it ought to be perfectly obvious that a consolidated-gas supply can be more economically produced and sold. The fusion of the Paris companies in 1855 was effected only after several years of negotiations between the companies and the government, and it rested upon a basis carefully prescribed. The results were highly beneficial to all parties concerned. In 1861 a fusion was accomplished between the Parisian gas company and the smaller companies that had supplied the suburban districts, Paris having meanwhile annexed the outer belt of arrondissements and given the city its present area, with the engirdling fortifications as the municipal limits.

In 1870 the charter of the gas company was renewed and revised, and was placed upon a basis that still exists, and that will hold good until 1910. The contract might have been studied with great advantage in this country; and even now, after the lapse of twenty years, it is a more

enlightened and satisfactory arrangement than any that has been made by large American cities. The capitalization of the company was fixed at 84,000,000 francs. The quality of the gas and the method of testing are prescribed. Pipes must be laid each year wherever the public authorities determine, and their removal, alteration, replacement, etc. are all subject to the order of the authorities at the expense of the gas company. There must be two lines of piping along each street that is fourteen meters or more in width, and along each street that is paved with asphalt, no matter how narrow. It is arranged that the company shall pay the city 200,000 francs each year for the right to lay its pipes under the sidewalks. In lieu of an octroi tax upon the coal consumed in making gas, the city receives .02 francs for every cubic meter of gas consumed in Paris. The price of gas per cubic meter to private consumers is fixed by agreement, and the price to the city for public purposes is fixed at about half that which private consumers pay. The company is allowed, after paying fixed charges and placing a certain lawful sum in its reserve fund, to devote 11,200,000 francs of net profits to paying dividends and interest upon its 84,000,000 francs of capital stock. All surplus dividends must be equally divided between the company and the municipal treasury.

The financial aspects of this charter can be briefly summed up. The company must furnish gas to individuals at a price not exceeding a fixed maximum. It must supply gas for public uses at what is practically the cost of manufacture. It must pay the city 200,000 (ultimately 250,000) francs a year for the right to pipe the streets. It must pay a tax of .02 francs on each cubic meter of gas supplied to Paris. Finally, it must not "water" its stock, but must keep its capitalization at 84,000,000 francs, and after paying 13⅓ per cent. out of net profits as dividends to the shareholders it must divide the surplus profits with the city. Finally, at the expiration of the charter, all rights revert to the city, which becomes also the owner of all the subways, piping, etc. that pertain to the plant. The city's share in the profits has steadily increased until the receipts from the gas company have become a large item of revenue. In 1870 about 5,000,000 francs were received from the company. For the year 1875 the amount exceeded 8,000,000 francs. In 1880, 12,400,000 francs were received, and in 1882 more than 15,000,000. For several years past the annual payment of the gas company to the city has been approximately 20,000,000 francs. As compared with American cities, this large sum is clear profit; for we do not in this country ordinarily obtain any public revenue from gas companies. On the other hand, moreover, it is

to be noted that Paris enjoys the further advantage of obtaining gas for public lighting at rates approximating the lowest actual cost of manufacture. Most American cities would congratulate themselves that they had made an extraordinary bargain if, in return for the privileges they accord to the gas companies, they should have the streets and public buildings lighted at cost. But Paris obtains that concession, and 20,000,000 francs a year in addition to it. Inasmuch as street lamps and various public establishments consume nearly one-fifth of the total supply of gas in Paris, it is obvious that there is very substantial advantage in obtaining the public supply at cost. I would suggest that American municipal authorities might profitably take to heart the fact that in the past ten years the Paris gas company has paid into the city treasury 200,000,000 francs, or \$40,000,000.

The inspection of gas manufacture, the testing of the quality of gas, the supervision of gas fittings in all kinds of buildings, and the management of the public lighting, belong to one of the bureaus of the department of public works, and come under general charge of an engineer-in-chief, who has under him a staff of nearly one hundred ordinary and assistant engineers. It is needless to say that this, like all other bureaus of the executive municipal government, is a model of efficiency. Paris, under its intelligent operations, has been, and remains, the most beautifully illumined of all large cities. Every detail of the service is brought under strict regulation, and there is the least possible ground for complaint against the gas company as a private monopoly. The question naturally arises whether the Paris plan is a wiser one than that of many great cities elsewhere in Europe which have assumed the gas manufacture as a public monopoly. Frenchmen decidedly prefer their own system. But I am inclined to the opinion that the largest possible use of gas, like that of water, is to be obtained under a system of public ownership, and that this large use is so eminently desirable in a city as to justify direct municipal administration. That the poor people of Paris could be provided with gas, both for light and for fuel, at a lower rate than they are now obliged to pay, if the municipal government were to supersede the existing company, seems to me to be indisputable. However, the present system is so good that there is comparatively little reason to desire a radical change.

But, satisfactory as are these arrangements, Paris is now on the eve of a revolution in her lighting system. Gas-lighting was first introduced in England, but Paris followed in good time and with a splendor unequaled elsewhere. In like manner America, Germany, and some

other countries have been earlier in the use of electric-lighting; but the Parisians, with their superior taste and skill in all matters of municipal arrangements and appointments, are destined to make by far the most brilliant use of the new illuminant. Within one year, or within two years at the farthest, it is confidently claimed that Paris will be incomparably the best-lighted city in the world and that electricity will have superseded gas in public use. In 1878, at the time of the universal exposition, the municipal government ordered the experimental illumination of the Avenue de l'Opera and several open spaces with electricity; but the new system was not ripe for large use, and the experiment was soon abandoned. Its principal effect was the stimulus it gave to the gas company, which invented and put into use certain large compound burners using 1400 liters per hour, and giving a most brilliant light. The great electrical improvements of the past decade were exhibited in the French exposition of 1889, and were studied with the utmost care by the Parisian authorities and municipal engineers. Undoubtedly the displays at the exposition had the most pronounced effect in stimulating the new zeal Paris is showing for the appliances of the electric age.

The manner in which Paris is now proceeding to introduce electricity in every portion of the municipal area is of the utmost importance to all other cities that have to do with similar problems. There has been no undue haste. On the contrary, the subject has been treated in a patient, scientific, systematic way. To begin with, the municipality has spent 2,000,000 francs or more in making a central electrical installation of its own in the basement of "Les Halles Centrales," the great central market of Paris. This plant is conveniently situated for the illumination of a number of public buildings and establishments, and it can be enlarged indefinitely. But it has never been intended to use this or any other municipal installation for the general work of lighting the city. It is for experimental purposes, and also for the purpose of acting as a regulator of charges. It enables the municipality to command the situation, and gives it a corps of men who understand the practical details of an electrical establishment. For the purposes of general illumination the city has been divided into seven "secteurs électriques." Paris is approximately a circle; and the secteurs are segments, the dividing lines of which radiate from the vicinity of the Halles as a center and extend to the circumference. Each of these secteurs has been granted exclusively for a short term of years to a responsible electric company. Thus Edison has been accorded one, the great Paris contractor, Victor Popp (using the Thom-

son-Houston system), has two, and the others are conceded respectively to the Messrs. Rothschild, the Société Alsacienne, the Ferranti Company of London, and Naze & Co. (representing the Westinghouse system). Several of the secteurs were granted in the latter part of 1890, completing the distribution. As one of the conditions, it has been required that the companies proceed at once to make their installations and that within two years their districts shall be completely served with main cables. Thus, before the end of 1892, such provision will have been made that, if desired, every street in Paris, as well as every house, can be illumined with electricity. It is required that the companies shall supply street-lighting upon terms that are as favorable as possible,—at cost or even less,—and a maximum rate of charge to private users is prescribed. Each company has been required to give a guaranty fund of several hundred thousand francs to insure the fulfilment of all the conditions imposed in the concession. No payment has been required for the charters, the terms being short, and permanent arrangements being deferred until use can be made of the results of five or ten years' experience. Meanwhile the city has its own central plant, and it is not debarred from laying its cables into any or all of the secteurs, with a view to regulating prices by competition. Thus Paris is on the point of being more completely supplied with electric-lighting facilities than any other large city in the world.

It should be noted that the question how to dispose of wires,—a question that makes so vast and so continually recurring an agitation in all American cities,—never comes up at all in Paris, and is seldom mentioned in any European city. There are absolutely no obstructive wires in Paris. The government has purchased the telephone as well as the telegraph system, and all the wires for these services are placed in the subways or sewers. The wires of the electric companies are buried under the sidewalks. Armored cables are laid in simple conduits, or even in the bare soil, without the slightest difficulty from any point of view. In crossing streets it is forbidden to break the paving, and underground connection is made from the manholes of the sewers. The whole city of Paris will have been laid with a network of electric-lighting cables a few months hence, and traffic on the sidewalks and in the streets will have suffered a minimum of obstruction, while no injury whatsoever will have been done to pavements. All these minor questions of practical municipal engineering that we in our cities are attacking in a fumbling, rude, original way, heedless even of the experience of our nearest neighbors, while densely and contentedly ignorant of the expe-

rience of foreign cities, have been thoroughly solved in Europe. Instead of leading the van, we are from ten to fifteen years behind Europe in all these matters. Even in our own field of electrical methods, as a prominent American electrician assured me in Paris last December, we are now five years behind the Continent. He declared that the difficulties our American corporations still complain about, when asked to bury their telegraph, telephone, and lighting wires, were all met and vanquished in Europe several years ago, and that our fellow countrymen insist upon remaining in a state of invincible ignorance rather than learn anything from the technical and scientific achievements of Europe. But perhaps he stated the case too strongly. Doubtless we shall in time learn to be ashamed when we come to a realizing sense of the fact that the one city of Paris has at its command a larger and more brilliant array of engineering and architectural talent than all the important cities of the United States taken together can show, and that many a small European town is better supplied in this respect than many a large American city.

POPULATION, HOUSING, AND TRANSIT PROBLEMS.

UNQUESTIONABLY the immediate problem *par excellence* of all great cities is the transit problem. Possibly some municipal economist of experience and repute may reply that the proper housing of the people is a more imminent problem. But in point of fact the two go hand in hand; and it is my profound conviction that more can be done to relieve the congestion of overcrowded urban districts by improved facilities for cheap and rapid transit than by direct treatment of the housing question, although I do not for a moment deny the imperative necessity of a clearing out of insanitary tenement property and a police regulation of house occupancy. It is but just to acknowledge that American cities have led the world in the development of the means of cheap public transit, and that one of the most important consequences has been the distribution of our urban populations over comparatively large areas, with the great advantage to health and morals of abundant air and light. Speaking in general, American cities cover several times as large an area for a given population as do European cities, and convey several times as great a number of people annually in street cars and suburban trains. European cities have a traditional compactness that has given direction even to their more recent growth and construction, and it is obvious that the more compact is the population the less business there is likely to be for transit systems.

Before giving an account of the transit arrangements of Paris it may be well to make some observations upon the growth and distribution of the population that is to be transported. Paris has from time to time made a number of concentric accretions. Its street and boulevard system and the division lines of the *arrondissements*, as indicated upon a map of the city, show some of its more important successive lines of cincture. Originally the "Ile de la Cité" in the Seine was the sum total of the municipality. Through the centuries it has annexed widening zones of territory. Henry IV. increased its area to 567 hectares (a hectare contains 2.4711 acres); under Louis XIV. it grew to 1103 hectares; Louis XV. revised the limits and made them include 1337 hectares, and finally, just before the Revolution, a hundred years ago, Louis XVI. more than doubled the area, and made it include 3370 hectares. The Paris of the Bourbons was nearly round, and was almost equally divided by the river one way and by the boulevards St. Michel and de Sebastopol at right angles with the river, being encircled by what is now known as the inner line of boulevards, with the Bastille at the extreme east, the Madeleine, Place de la Concorde, and Hôtel des Invalides at the extreme west, and the Mont Parnasse and Port-Royal boulevards marking the southern curve. Louis XVI.'s great annexation included chiefly the districts lying on the north side of the river, between the inner and outer lines of boulevards, an accretion very distinctly indicated on the map. This area remained without change until January 1, 1860. The government had constructed within the preceding two decades the great outer girdle of fortifications, and it was inevitable that this should sooner or later become the boundary line of the city. For more than thirty years, then, the limits have remained as established by the law of 1859. At that time the existing limits of the *arrondissements* were fixed, the old area being divided into what are known as the ten inner *arrondissements*, and the annexed districts, or "faubourgs," with adjacent parts of the inner city being divided into the ten outer *arrondissements*, each one being given a name and a number. At the same time each *arrondissement* was divided into four quarters, each of which was named.

The Paris of one hundred years ago contained a population of 600,000, the area now comprised in the outer ten *arrondissements* being rural, with only ten or fifteen thousand people. At the time of the annexation in 1860, as shown by the census of 1861, the inner ten divisions had more than 900,000 people, and the outer ten more than 700,000, a total exceeding 1,600,000. It is extremely interesting to

follow the subsequent development of population. The inner ten divisions actually lost more than 30,000 people in the decade from 1861 to 1871, a period in which great demolitions and street improvements were made; and in the same decade the outer ten divisions gained more than 200,000 people. From 1871 to 1881 the inner ten gained 116,000 while the outer ten gained 300,000. From 1881 to 1886 the inner ten lost 18,000 and the outer ten gained 94,000. The net result of the twenty-five years from 1861 to 1886 was a gain of 64,845 for the inner ten *arrondissements* and of 611,850 for the outer ten, the one half having 1,010,970 people, and the other 1,330,580, a grand total of 2,344,550. Obviously the inner divisions have reached their maximum inhabitancy, and the census of 1891 will doubtless have shown a slight further decrease. What we may call the old Paris has for fifty years had a population averaging about 1,000,000; and there have been added, up to date, nearly 1,500,000 more people, occupying the new belt of *arrondissements* inside the fortifications, the Paris of to-day having nearly 2,500,000 inhabitants.

Meanwhile the suburban population outside the fortifications has been growing rapidly. The little *communes* of the department of the Seine outside of Paris are grouped in the two *arrondissements* of Saint Denis and Sceaux. Altogether this exterior belt had a population of about 255,000 in 1861, which had grown to 617,000 in 1886, and will doubtless be shown in the present year to have attained a population of fully 725,000.

The existing Paris covers 19,275 acres, or about 30 square miles, while metropolitan London with 4,000,000 population contains 118 square miles, and Chicago, as recently enlarged, provides an area about as extensive for 1,100,000. The average distance from the center of Paris to the circumference is only three miles. Minneapolis, with only 165,000 people, has a municipal area more than twice as large as that of Paris. Almost the entire population of Paris is housed in the flats of tenement structures averaging from four to five stories in height. According to the revised figures of the census of 1886 there were nearly 75,000 houses in Paris, and the average number of people in a house was about 30. In the old *arrondissements* of the inner Paris there are probably about 30,000 houses, accommodating about 1,000,000 people. For a total contrast in the plan of house-construction we have only to cross the channel and to examine London, where we find an average of about eight persons to a house for the whole metropolis. But the people of Paris are better housed, all things considered, than those of London. A popula-

tion of 2,500,000 within a circle whose radius is only three miles is certainly very dense, but it must be remembered that Paris is a many-storied city.

All these considerations bear most vitally upon the question of transit. The people of inner Paris have not, as a rule, far to be transported from their work. They live on the *étages* above their shops and business places. Instead of taking street cars or omnibuses to go home they simply walk up-stairs. And the same thing is true of the major part of the population of the outer *arrondissements*. Every quarter of the city is at once a business quarter and a residence quarter. Nevertheless, as the city grows in its outer districts, and as population rapidly increases in the suburbs beyond the gates, there is a vastly enhanced regular daily movement to and from the central portions where the principal business operations are massed. Thus the transit question assumes constantly increasing importance in Paris, as in the other large cities of the world.

There are two kinds of municipal transit that must be recognized, just as there are two kinds of streets in the great European cities. These cities have (1) their network of minor streets, and (2) their system of great thoroughfares and boulevards pertaining to the metropolis as a whole. Similarly, they have their systems of merely local street transit, by cabs, street railways, and omnibuses, and their more rapid system of what may be called metropolitan transit. It is this latter system that great cities are now earnestly discussing. In London it takes the form of the underground railway connecting the great passenger stations, and of innumerable suburban trains on all the railway lines. In New York and Brooklyn it has its beginning in the elevated railway system, and it is to have great extensions in the early future. In Boston it is the topic of the day. In our western cities surface, cable, and electric lines are made to answer temporarily the double purpose of local and metropolitan lines. The Berlin system I shall describe in another paper. But Paris, thus far, has developed no metropolitan system at all except the belt line, the "Chemin de Fer de Ceinture." The density of its population and the prevalence of high houses, as I have shown, sufficiently explain the tardiness of this great capital in such matters. The merely local system of transit, by cabs, omnibuses, and tram-cars, has had a steady development in Paris, however, and for a number of years the public authorities and skilled engineers have been anticipating the necessity of a metropolitan rapid transit system and have given the subject a vast amount of study and discussion. The consequence is that an important beginning is about to be made, and

after an account of the existing transit arrangements I shall explain the new proposals.

All kinds of passenger transportation in Paris have always been strictly supervised by the authorities. The omnibus system of the metropolis became important about sixty years ago. In 1854, by arrangement with the administration, fifteen existing omnibus lines became absorbed in the "*Compagnie Générale des Omnibus*," to which an exclusive franchise was given for thirty years upon condition of large annual payments to the city — a franchise that was renewed after the enlargement of the city in 1860, and was then extended to the year 1910. Under the plan of 1854 the company was required to pay the city 640,000 francs a year, with additional sums for each vehicle exceeding 350. By the arrangement of 1860, which is still in force, the company agreed to pay 1,000,000 francs a year, and to pay in addition for every omnibus used beyond the number of 500 an annual fee of 1000 francs until 1871, to be increased to 1500 francs from 1871 to 1886, and thereafter to be fixed at 2000 francs. Thus the present payment is 2000 francs each for every omnibus in use, and the number actually in use in 1889 was 639. After 1873, street railways came into considerable use, and those of inner Paris were constructed and operated by the *Compagnie Générale des Omnibus* as an added part of its business, its street railway franchises also extending to the year 1910. The company pays into the city treasury 1500 francs per year for each tram-car on its lines, and in 1889 there were 300 in operation. There are also two other street-railway companies operating in the newer and suburban parts of Paris, one system being on the north side and the other on the south; the southern system paying the city 1500 francs a year for each car and the northern system paying 750 francs per car.

The omnibuses and street cars of Paris are very large, ponderous, and slow, but they are operated upon the most methodical system in the world. The routes are precisely defined, and along each route is a series of neat stations built upon the sidewalk. Everything pertaining to the size and construction of the cars and busses and of the station-houses; to the style of rails and placing of tracks; to the arrangement, change, and addition of routes; to the prices charged and the transfers given; and to almost every other imaginable detail affecting the business, is prescribed by the public authorities. Upon the principle employed in dealing with the gas company as a chartered monopoly, the city has a right, after dividends and all public charges and private expenses are paid, to one-half of the surplus profits of the "*Compagnie des Omnibus et*

des Tramways"; but thus far little has been realized from residuary profits. The *Compagnie Générale* transported in its omnibuses in 1889 more than 121,000,000 passengers and in its tram-cars more than 80,000,000. Its business had grown from 108,754,560 passengers in 1872 to 201,945,280 in 1889. The other two tramway companies transported some 25,000,000 passengers each in 1889, making a grand total for Paris of 121,000,000 passengers carried by omnibus and 130,000,000 carried by street railway. These are not large figures when compared with corresponding ones for American cities; but it is worth while to remind American readers that the Parisian transit companies pay more than 2,000,000 francs a year to the city treasury as a rental for the privileges they enjoy on the streets.

Nearly all the cabs and public carriages of Paris belong to one great company, — the "*Compagnie Générale des Voitures de Paris*," which has about 8000 vehicles in use. For the use of the public cab-stands, and their license to do business, each carriage must pay an annual license fee of 365 francs — a franc per diem. In 1855, following the *Compagnie Générale des Omnibus* and the fusion of the gas companies, monopolies being the fashion, special privileges were accorded to a great cab company that was formed to absorb numerous small proprietorships; and in 1862 this company obtained an exclusive franchise for the use of cabs and public carriages throughout the enlarged municipality, upon the basis of a payment to the city of one franc per day for each vehicle and of a division with the city of the surplus profits, as in the case of the gas and omnibus companies, the patrons being protected by a fixed scale of charges and a minute code of regulations. But this monopoly was not deemed advantageous, and the exclusive privilege was revoked in 1866. To the surprise and indignation of the city government, the cab company obtained a judicial award of damages to the amount of 300,000 francs per year for each of the remaining 47 years of the original 50-year grant. That excessive award has of course given the company an advantage over all competitors, and it has steadily grown. Since 1866 the cab business has been free to all applicants, subject to the laws regulating the details of the service, and the fee has remained at 365 francs a year. There are probably about 10,000 public carriages in Paris, of which four-fifths belong to the general company. The annual receipts of the city from cab licenses exceed 3,600,000 francs; and the total receipts under the head of "*voitures publiques*" exceed 5,600,000 francs. In the past ten years, therefore, Paris has received between 50,000,000

and 60,000,000 francs as rentals from companies and individuals using the streets for passenger transportation. Undoubtedly for a number of years past the city council has not been especially friendly to the great monopoly companies of Paris, and it would be more than willing to have them superseded by a system of direct municipal operation. But conservative public opinion prefers the existing arrangements, and assuredly they are not seriously disadvantageous. What is especially needed in transportation facilities is a very great extension of the street railways and omnibus lines, with the introduction of small, frequent, and rapid vehicles, and a modification of the system of licenses that puts a penalty upon an increase in the number of tram-cars and omnibuses.

But in addition to these facilities for local transit, Paris needs a metropolitan system. I have referred to the belt railway. It follows the perimeter of the city just inside the fortifications. It is primarily a line for the connection of the great railways entering Paris. Only one of these roads has its passenger station conveniently near the center of the city, and the transfer of goods and passengers has been extremely inconvenient. The girdle line also serves, however, for a considerable amount of ordinary local transportation of passengers, and may be deemed part of a system of metropolitan rapid transit. For the completion of such a system several elaborate plans have at different times been worked out under the auspices of government and municipal engineers. Some have been plans for underground and others for elevated lines. But all have involved great expenditures and heavy subsidies or guaranties. Now, however, one of the great railway companies, the "Compagnie du Nord," and a well-known engineering and contracting firm, that of the famous M. Eiffel, have come forward with a joint plan requiring no public contributions or guaranties, and asking simply the right to proceed. The Compagnie du Nord proposes to build underground lines connecting its central station and the girdle line with the Halles Centrales on the one hand and with the Madeleine Quarter on the other; and M. Eiffel proposes, in continuation, to construct an inner circle of underground lines that shall follow in general the grand boulevards and shall pass under the Seine. The lines will be below the sewers and conduits, will be operated by electricity, brightly lighted, of course, with electric lights, and reached from the frequent stations on the streets by large passenger elevators. It is altogether probable, at the moment when this sketch is written, that the proposals will be adopted and the work taken in hand soon. The total cost is estimated at somewhat more

than 100,000,000 francs. The system thus begun can at any time be extended. The underground electric road is, in my judgment, to be the permanent rapid-transit system of the world's greatest cities; and Paris seems now to be destined to resume her place in the forefront of progressive municipalities by securing the *Nord-Eiffel réseau* of underground lines. The fact that the abolition of the fortifications is now seriously contemplated, and that Paris is sure to expand rapidly in all the suburban directions, adds much to the timeliness of these new transportation projects.

WATER SUPPLY AND DRAINAGE.

Two kindred functions of the modern city that are now deemed primary and vital are the supply of water and the provision of drainage facilities. In a general way it may be said that the amount of pure water that is daily distributed to the people of a great city, and that is safely drained off with its accumulation of impurities, measures the progress of material civilization. In the first decade of this century the average daily water supply of Paris was 14 liters per inhabitant. At present there are important works in progress, begun in 1890, that will bring the supply up to 250 liters per head of population. Until 1855 the supply was decidedly insufficient; but at that time great projects for improving it were set on foot. It was then determined to make use of a double system of pipes, so that pure water for domestic purposes could be supplied to houses, and common river water, unfit for drinking and household uses, could be supplied for street sprinkling, for sewer-flushing, and for other purposes. It was also decided that the pipes should, wherever possible, be placed in the sewers, and that new aqueducts and reservoirs should be constructed to bring the supply up to an average of 200 liters per day. These projects were in part carried out; but the annexation of the suburbs in 1860 made important changes in the program. By this extension of the municipal limits 500,000 persons were brought into the city who were being supplied with a wretched quality of water in painfully insufficient quantities at exorbitant prices by a private monopoly, the "Compagnie Générale des Eaux." The city of Paris had always dealt directly with the users of water, and the question arose how to solve the problem of the suburban supply. It was finally decided that the city should own and control the entire plant and supply, and should in every way regulate the water system; but that it should charter the Compagnie Générale to conduct the business of dealing with householders and private users throughout Paris,

accounting from week to week to the city treasury. The company was allowed to earn a dividend upon 20,000,000 francs (\$4,000,000), and all profits accruing above such dividend were to be divided between the city and the company. The municipality is in absolute control of the entire supply, public and private, and the water company is simply the city's agent for collecting rentals, making house connections, and transacting all business with private users. Meanwhile the company has nothing whatever to do with the second set of main pipes that carry water for street and public uses. As income from its share in the surplus profits of the business transacted by the company the city receives more than 12,000,000 francs a year. The company's charter will expire at the end of the year 1910, after which its services will doubtless be found superfluous. Meanwhile the arrangement works very well, and the whole management of the water question in Paris, whether from the administrative or the engineering standpoint, is in most favorable contrast with that of metropolitan London. The sources of supply are various springs and streams in the Seine valley within a hundred miles of Paris, as well as the Seine itself; and the system of canals, aqueducts, pumping-stations, reservoirs, filtration works, and other engineering appliances for collecting and distributing 500,000 cubic meters or more of water each day is extremely elaborate, and in most respects very scientific and admirable. There will have been spent between 1856 and 1892 upon the construction of water-works by the municipality of Paris a sum reaching nearly or quite 200,000,000 francs.

The development of the famous sewer system of Paris has been most intimately associated with that of the water supply. No city in the world possessed forty years ago what would to-day be called a tolerably respectable or complete system of underground drains. It was not until 1830 that the sewers of Paris began to have any considerable extension; and only in 1856, the date of so many of the huge reforms of Paris, did the present system, along with the enlargement of the water supply, have its beginning. It was in that year that M. Belgrand, *Directeur des Eaux et Égouts* (Director of Water Supply and Sewers), laid out the existing system of main sewer tunnels, or "collecteurs," as the French well call them. Of the collecteurs of the first class there are three: one on the right bank of the Seine, which is nine kilometers long and empties into the river at the Asnières bridge; one on the left bank, which is a little longer, and which passes under the Seine at the Pont de l'Alma, and joins the first collecteur at Clichy; and a third, which begins in north Paris at the Cemetery Père-Lachaise, fol-

lows the outer boulevards, and empties into the Seine at St. Denis. It is nearly twelve kilometers long. Besides these three great ones, there are several secondary collecteurs. As for the regular street sewers, it is the Paris principle that every street, however narrow, must have at least one sewer, and that every street of twenty meters or greater width must have two, one running under each sidewalk. The collecteurs and the principal street sewers are of enormous size, and accommodate large boats and wagons specially constructed. With reference to drainage, the Paris streets are divided into two categories, those of the "grande circulation" and those of the "petite circulation." The former, of course, have much the larger sewers. The average size in the ordinary streets is a sewer of elliptical shape about seven feet high and five feet wide. Small as is the area of Paris, it has not far from six hundred miles of good sewers, in all of which tall men can stand erect. These capacious tunnels have been costly, but Paris is finding them an excellent investment. All the water-pipes of the double water system are carried in the sewers and are easily cared for, replaced, or mended. The government is now the proprietor of telephone as well as telegraph lines, and the Paris municipality has various electric wires of its own; and all are readily accommodated in the sewers. Pneumatic tubes, for one purpose or another, are also distributed in these convenient subways.

Although carrying off all surface water, and a large amount of liquid refuse from houses and various establishments, the Paris sewer system was not originally constructed to receive solid waste. Under each house is a water-tight "vidange" or cesspool, constructed with strict reference to sanitary conditions, which is periodically emptied, under a scavenger system carefully regulated by law. But what the French people call the system of *tout à l'égout* (everything into the sewer), which prevails in the English and American cities, is being gradually introduced. The main difficulty to be met is the lack of sufficient fall in the sewers. Means are, however, being found to overcome all obstacles; and the highly objectionable system of cesspools will in the early future be totally abolished.

Paris, like all other great cities, has been much concerned with the question how to dispose of sewage. At present most of the outflow of the collecteurs pours into the Seine, to its serious pollution. But some years ago the municipality purchased several thousands of acres of land in the plain of Gennevilliers, a few miles down the river, and began the experiment of a sewage farm. The project has been an unqualified success. An extension from the Père-Lachaise-St. Denis collecteur carries a

large quantity of sewage to the farm, where it is used by irrigation as a fertilizer, with the best of results in every way. At present one-fifth or more of the total sewage effluent of Paris is used on the land at Gennevilliers; and in due time the whole quantity can be diverted from the river to this and other tracts of land which have been selected as suitable for the purpose.

WHAT PARIS DOES FOR ITS CITIZENS, AND WHAT IT ALL COSTS.

As the most highly organized of modern communities, a detailed study of Paris in all its municipal activities would easily fill a thousand pages. I can only hope to present the general characteristics and aims of the Parisian system, with a few salient facts and statistics. Paris, within its present limits, covers thirty square miles, ten of which are occupied by streets, waterways, and parks. Two and a half million people dwell upon the remaining twenty square miles. They live in a remarkable condition of order and apparent thrift and comfort. But, of necessity, their existence under such circumstances requires an exceptional development of social organization. In French parlance and law Paris is a "commune"; and, in fact, the Parisians are a community. An intelligent study of the municipal budget shows in the briefest possible way how much they have in common. It requires an ordinary expenditure of from 250,000,000 to 300,000,000 francs every year to defray the expenses of the city government—\$25 for each man, woman, and child. This sum is more than twice as great as the average corresponding figure for the other great cities of Europe, such as Berlin and Vienna. The great public improvements and transformations of Paris have imposed a debt upon the municipality of nearly \$400,000,000, upon which the annual interest charge is about \$20,000,000. This is a vastly greater debt than any other city carries; but it is steadily shrinking under a system of terminable annuities by which the yearly interest payments gradually extinguish the principal. Assuming the annual cost of the city government per inhabitant to be 125 francs, it may be instructive to show where the money is expended. Twelve francs go to the maintenance of the police department with all its various services; three are paid for the cleansing and sprinkling of the streets; three and a half are paid for public lighting; half a franc goes for protection against fire; ten francs are expended for the maintenance of the schools; ten more go for the support of hospitals and the relief of the poor; from eight to ten are spent in maintaining the ways of communication; a sum that varies greatly from year to year, but

which we may assume to call five francs, is paid out on new construction of streets and means of communication; and forty francs are required to meet interest and other payments on account of the municipal debt. The expenses of the general offices and city council, with a large salary list, and of various minor departments and services that need not be specified, easily account for the remainder of the 125 francs.

Most of these items seem enormous when compared with corresponding figures for other European cities. But it does not follow that taxation is ruining the Parisian people, or that the heavy municipal expenditures are a hardship. Thus the cost of maintaining, cleaning, and sprinkling the public highways is vastly greater per capita than that of almost any other European community; but the work is done in the most thorough and scientific manner, and the money is honestly and skilfully applied. The Parisians live in such a way that clean, smooth streets are from every point of view a wise investment. Health and private property alike require freedom from dust.

Public lighting is so generous in amount that it is of necessity expensive, but it would be easy to demonstrate the soundness of such an investment in Paris. The paving of streets is as perfect as possible, regardless of expense, and is in the hands of the most expert government engineers. Such paving for Paris, if not for other cities, is a measure of true economy.

The expense of public education in Paris will not be seriously criticised in any quarter. Probably no other city in the world secures equally advantageous results from the outlay upon schools. Under the compulsory education act the attendance of children in elementary schools has actually been made almost universal. But Paris does not stop with elementary education in reading, writing, and numbers. It maintains a marvelous system of industrial and trade schools for both sexes, in which almost everything that pertains to the production and traffic of Paris is taught and encouraged. American and English visitors at the exposition of 1889 will remember the remarkable display of the Paris industrial schools, especially in lines of decorative manufacture and art. It is in these schools that Parisian dressmakers, milliners, artificial-flower makers, furniture designers, house decorators, skilled workers in metals, and handicraftsmen in scores of lines of industry are educated to do the things that keep Paris prosperous and rich. It is public money wisely spent that maintains such an educational system. I need not refer to the higher schools of science, of classics and literature, of engineering, and of fine art. All the flowers of civilization are encouraged by the Paris mu-

nicipality. The yearly expenditure of a moderate but regular sum for the promotion of fine arts, by means of the purchase, under a competitive system, of designs for public statues, of pictures and mural designs for schools and various public buildings, and of other artistic works, not only educates the popular taste and adds to the adornment and beauty of the city but helps to keep Paris the art center of the world, and thus to maintain what, from the economic point of view, is one of the chief and most profitable industries of Paris. The mercantile schools that train so many thousands of women as well as men in bookkeeping and penmanship are also an admirable investment.

The city's care for its poorer population, as shown in the famous Mont de Piété and in the great system of savings banks, as well as in the various kinds of hospitals and retreats, seems fully justified by the facts of Paris life. The Mont de Piété, now venerable, but thoroughly active, has been imitated in various other European cities. It is a great public pawnshop with several central establishments and with twenty or thirty branches in the different parts of Paris. It receives money on deposit from the thrifty savers, and it loans on chattel security at fair rates to everybody who needs to borrow in that way. Undoubtedly it has saved hundreds of millions of francs for the poor of Paris. It handles in a year some 4,000,000 pieces of property, and does a business exceeding 100,000,000 francs. On any given day its books would show nearly 2,000,000 articles loaned upon, and nearly 50,000,000 francs outstanding in the hands of borrowers. It is successful in the highest degree. The municipal savings bank is another great establishment that represents the thrifty side, just as the Mont de Piété suggests the unfortunate side, of the life of the common people of Paris. The savings bank receives no money except from Parisians, and on the 1st of January, 1890, its actual depositors numbered 582,043, to whom was due the sum of 139,804,413 francs. The number of patrons increases steadily each year. In addition it should be said that the Paris offices of the national postal-savings-bank system have a still larger number of depositors, although they receive a smaller aggregate sum of money. In the two systems there are not far from a million individual accounts running, with deposits probably reaching 240,000,000 francs. The savings bank of Paris has a branch in each one of the twenty arrondissements of Paris except the first and second, which are readily accessible to the central establishment.

It has seemed to me well to pass with only general mention the relation of Paris to what

the French expressively call "approvisionnement." The great markets belong to the city, and the whole supply of food and drink comes under well-organized official cognizance. Paris was the first great city to abolish all private slaughter-houses and to concentrate the business in well-appointed municipal abattoirs. The municipal laboratory of chemistry is constantly testing foods and drinks, and the sanitary inspection of every kind of food supply is scientific and elaborately organized.

Having given the cost of Paris government, I must not omit in a summary way to explain how the 250,000,000 francs or more a year come into the treasury. More than 140,000,000 francs accrue from the octroi taxes—levied as local customs dues upon foods, wines, fuel, building-materials, and certain other articles brought into the city—and are therefore indirect taxation. Some 35,000,000 francs are obtained by direct forms of taxation, chiefly upon rental values and house occupancy. From 30,000,000 to 40,000,000 francs are gained by the profits of the city's various enterprises such as markets and abattoirs, and from its relations with the gas, water, street-railway, cab, and other profitable monopolies. The rest comes in large part from the national treasury, which pays its considerable proportion towards the cost of police, of paving, and of some other services in which the country as a whole is concerned. The octroi system, which prevails throughout the French towns and cities, tempts a digression. The chief arguments in its favor are its long-time existence, the fact that the people are accustomed to it, and the great practical difficulties that would be encountered in attempting to secure as large a municipal revenue by any other means, the national government having appropriated and applied almost to the limit of endurance nearly all the other usual sources and methods of taxation. In practice the Parisian octroi system is less objectionable than it is in pure theory, and there is no prospect of its abandonment in the early future. The large income that Paris derives as profits from special enterprises is a noteworthy topic. A critical discussion of the Paris budget is not in order in a descriptive article, and I may only say that my earlier unfavorable impressions, due to figures so large in comparison with other European cities as to seem indicative of extravagance, have been in the main removed by more careful study. If Paris spends vast sums in her municipal housekeeping, she has diverse, magnificent, and permanent results to show, and her people are, as I believe, enriched rather than impoverished by their common investments as a municipality.

Albert Shaw.

TOPICS OF THE TIME.

A Nation for a Mortgage.

WE have in previous numbers of *THE CENTURY* set forth the details of two notable historical efforts to lighten the burdens of the people and to increase their wealth by making money cheap and plenty. In *THE CENTURY* for April the Land Bank experiment in England in 1696 was considered, and in that for May the Rhode Island Paper Bank experiment of 1786. In the June number we turned aside for a moment from the historical record to consider some of the modern cheap money plans, in order to enforce upon our readers, while the English and the Rhode Island failures were fresh in their minds, the fact that these modern plans sought to repeat in our own times the disastrous experiments of one and two centuries ago. From that list of modern plans we purposely omitted one which may be said to have been the inspiring cause of nearly all those which we named. We refer to the Land Loan scheme of Senator Stanford of California. This in brief is, that the Government shall lend an unlimited amount of money for twenty years at two per cent. interest on land pledged as security at half its value; that the value of the land shall be fixed by appraisers appointed by a land loan bureau in every county in which a loan is applied for, their services to be paid by the mortgagees; that there shall be no limit to the amount of the money issued as loans, except the needs of landowners, and their ability to pledge the land; and that the bills so issued shall be receivable for all taxes and all debts.

This is in substance the Rhode Island experiment over again, but lest some one shall say that that experiment was made in a State only, and not in a nation, and hence had not the wealth of the whole country to guarantee its success, we shall not rely upon it as constituting a complete demonstration of the fallacy of Mr. Stanford's ideas. What was attempted in Rhode Island in 1786 was merely an imitation, on a small scale, of what was done in France in 1718-20 under the inspiration of the notorious adventurer and gambler, John Law. The history of his famous performances constitutes so perfect an answer to the economists of Mr. Stanford's school that we shall make it the subject of the present article in our series.

John Law was the son of an Edinburgh jeweler and money-changer. After a career of gambling, dueling, and reckless adventure in every capital in Europe, he turned his ingenuity to the invention of schemes of finance and banking, and went about from capital to capital seeking acceptance for them. Having had no success anywhere else, he appeared in Paris in 1716, just after the death of Louis XIV., when the regent, the Duke of Orleans, was confronted with a national debt of more than three billions, which made national bankruptcy imminent. He listened earnestly to Law when the latter assured him that the prosperity of a nation depended entirely upon the size of its circulating medium; that Holland with its wretched soil and dangerous shores was the richest country in the world simply

because of its immense circulating medium; and that France by doubling its capital would enormously increase its wealth and resources, pay off its debts, and become the richest nation in the world. How could France double its capital? Why, easily enough. All it had to do was to establish a bank on the basis of all the actual property of the State.

A private bank which Law established succeeded very well, its bills being accepted by the Government. It really laid the foundation of credit in France, since it was the first bank of circulation and discount. Its success turned the heads both of Law and the regent. If with a small capital they could by means of credit circulate a volume of notes several times the size of the capital, what might they not do with the whole of France for capital? The private bank was dissolved in 1718, and the Government established the Royal Bank with Law as its director-general. He at once began to put into practice his idea of uniting all the wealth of France into one great mass, and using it as a basis upon which to issue an illimitable volume of notes. "He had conceived the idea," says Blanqui in his "History of Political Economy," "of combining into one common association all the capitalists of France, and putting under their control, as a loan, all the elements of public wealth, from landed property to the uncertain ventures of colonial trade. What could be a finer mortgage than France!"

As a part of his great "Company of the West" he included his famous Mississippi scheme. The Chevalier La Salle, in his travels down the Mississippi River to the Gulf of Mexico, had taken possession of all the territory through which it flowed in the name of the French king, calling it, in honor of Louis XIV., Louisiana. Law obtained a concession of this district, gave dazzling accounts of its unlimited mineral and agricultural wealth, and founded a commercial company upon it with a capital of one hundred millions, divided into two hundred thousand shares of five hundred francs each. Other trading companies, the Canadian, Senegal, East Indian, and China were also taken into the bank, and each made a "basis" for the issue of notes. Then one after another the royal mint, the business of collecting the government taxes, and the receipts of the royal income were included. Law's idea was to get all the receipts and all the issues of the nation into the same hands, and then upon this vast basis, this fine mortgage of France, to issue notes at will.

The shares of his company were eagerly bought. He began the issue of paper money guaranteed by the Government, and based upon the value of all national property. "Bills issued on land," he said, "are in effect coined land. Any goods that have the qualities necessary in money may be made money equal to their value. Five ounces of gold is equal in value to £20, and may be made money to that value; an acre of land is equal to £20, and may be made money equal to that value, for it has all the qualities necessary in money."

As a beginning, Law had notes to the amount of one hundred and ten millions of pounds sterling struck off and circulated. They were receivable in taxes, nominally redeemable in coin, and made a legal tender. A great wave of instantaneous prosperity seemed to rush over France. The parliament of Paris, alarmed by the furor which seized the whole people, tried to check it by legislation, but was overborne at once. Law even threatened to abolish it for presuming to stand in his way. This bank lent the king twelve hundred billions of francs to pay off the debt. An eye-witness of the scenes in Paris, writing at the time, says: "All the town is in convulsion over the shares; the capital is thrown into a kind of state fever; we see the debt diminish before our eyes; private fortunes are made out of nothing." From all parts of France men poured into Paris to speculate. The street in which the bank was situated was crammed day and night. The shares rose to forty times their value in specie at the time of their issue. Everybody seemed to be getting richer, nobody poorer. The bank continued to pour forth paper money till its issue reached 3,071,000,000 francs, 833,000,000 more than it was legally authorized to emit. Its issue of shares at the extreme market value when the craze was at its height was twelve billion francs, which had been built up on an original issue of less than two millions.

M. Thiers, in his account of the situation at this time, says: "The variations of fortune were so rapid that stockjobbers, receiving shares to sell, by keeping them one single day had time to make enormous profits. A story is told of one who, charged with selling some shares, did not appear for two days. It was thought the shares were stolen: not at all; he faithfully returned their value, but he had taken time to win a million for himself. This power which capital had of producing so rapidly had brought about a traffic; people lent the funds by the hour, and exacted unprecedented rates of interest. The stockjobbers found, moreover, a way to pay the interest demanded and to reap a profit themselves. One could even gain a million a day." Law himself reaped a colossal fortune in paper, which he turned into land as fast as he could. He bought no less than fourteen titled estates in France, a fact which is cited as evidence that he had faith in his own schemes, for had he been a swindler he would have invested his profits in some other country.

Of course such a condition of affairs could not last. Scarcely had the whole system been made complete before the inevitable collapse began to threaten. People began to sell their shares for land, houses, coin, or anything that had stable value. Prices rose enormously, and gold began to be hoarded. The shares began to fall and the paper money to depreciate. Then Law, like his imitators a half-century later in Rhode Island, began to try to save his paper money from destruction by edicts or forcing acts. It was forbidden to convert the notes into gold or silver, and decreed that they should bear a premium over specie. It was decreed that coin should be used only in small payments, and that only a small amount of it should be kept in the possession of private persons. Any one keeping more than 400 or 500 francs in specie was to be fined 10,000 francs. The wearing of gems and diamonds was prohibited. Nothing made of gold was to weigh over one ounce. Old specie was confiscated, and domiciliary vis-

its were ordered to discover it. Of course these signs of desperation only hastened the end. The shares, which had been fluctuating wildly, began to go down steadily. This was in February, 1720, less than two years after the founding of the bank. When all the violent edicts failed to stop the decline, the Government decreed in May that the value of the shares and notes should be reduced one-half. This was the end. The great bubble collapsed, for credit had been completely destroyed. The bank stopped payment, and the whole nation gave itself over to rage and despair. Law's life was in danger, and that of the regent was threatened. The bank was abolished; its notes were reconverted into the public debt, leaving it as it was when the bank was established; Law's estates were confiscated, and by November of 1720 not a trace of the bank or its various companies remained. Law himself remained in France till the end of the year, when he became a wanderer on the face of the earth, dying at Venice in 1729 almost a pauper. "Of all the industrial values produced under the hot atmosphere of Law's system," says Blanqui, "nothing remained but ruin, desolation, and bankruptcy. Landed property alone had not perished in the tempest."

This is the experiment which Senator Stanford proposes should be repeated in the United States. It is the same experiment which Rhode Island tried with similar results in 1786. It is the same experiment also which the Argentine Republic has been trying within the past five years, and the results which that unhappy country is now reaping from it we shall make the subject of our next article in this series.

The New York of the Future.

THE first formal statement of the proposition to consolidate New York, Brooklyn, Staten Island, and other adjacent territory into one great city was made over twenty years ago. In 1868 Mr. Andrew H. Green, in an official communication, called attention to the "important subject of bringing the city of New York, and Kings County, a part of Westchester County, and a part of Queens and Richmond, including the various suburbs of the city, within a certain radial distance from the center, under one common municipal government, to be arranged in departments, under a single executive head." In that communication Mr. Green placed the number of people comprehended within the area of the city and its immediate neighborhood at "more than one and a half million, all drawing sustenance from the commerce of New York, and many of them contributing but little to the support of its government." In a very valuable bulletin issued from the Census Bureau at Washington under date of April 17, 1891, entitled "Urban Population in 1890," the Superintendent of the Census, Mr. Robert P. Porter, puts down the number of people living "within a radius of fifteen miles of the city hall on Manhattan Island" as being "considerably in excess of 3,000,000, or two-thirds that of London." His estimate includes, of course, parts of New Jersey, which are excluded from the consolidation scheme; but a fair estimate of the total population within the proposed consolidated limits places it at about 2,750,000. Thus it appears that during the twenty-three years in which the consolidation project has been under discussion the population of the communities concerned has nearly doubled.

It cannot be said that the discussion attracted much attention till within the last few months. In 1890 the State legislature passed a bill creating a commission "to inquire into the expediency of consolidating the various municipalities in the State of New York occupying the several islands in the harbor of New York." This commission organized with Mr. Andrew H. Green as president, but little interest was taken in its proceedings till in April last it sent a report to the legislature, favoring consolidation, defining the limits of the greater city, and recommending the passage of a bill empowering the commission to frame a charter for the city's incorporation, government, and administration, to be submitted to the legislature for approval at some future date. This formal action commanded the attention of the press, with the result of arousing more public interest in the subject than had previously been felt. The passage of the bill by the upper branch of the legislature added to this interest perceptibly, so that it could for the first time since the discussion began be said that the matter had really become a public question.

The one point upon which all commentators are agreed is that the consolidation is inevitable at some time or other. This being the case, the date of the consolidation will be hastened or retarded by the strength or weakness of the arguments which are brought forward in its behalf. It is conceded that all the localities concerned owe their existence to their nearness to New York and draw their sustenance mainly from it. They have been built up by the overflow from the narrow confines of Manhattan Island. Whether union would result in good or evil, to one or all, whether there would be wiser, more intelligent, more economic government in the united city than there has been in the separate municipalities, are questions upon which there is the widest difference of opinion. Probably it would be more accurate to say that there is as yet very little real opinion to be found, for few persons have given any except the most superficial thought to the matter.

The magnitude of the subject is likely to stagger even the most thoughtful examiners. The total land area of the future New York, as defined by the commission, would contain nearly 318 square miles, or over 203,000 acres. The present city contains about 39 square miles, so that the new city would cover more than eight times the space of the old. New York would thus, both in population and area, be larger than any other city in the world with the exception of London. In order that its size may be fully comprehended let us compare it with the leading cities of the world, both as to population and acreage, and also as to number of inhabitants per acre :

	<i>Acres.</i>	<i>Population.</i>	<i>Persons per acre.</i>
New York (now).....	24,760 ..	1,515,301 ..	60
New York (future)....	203,000 ..	2,750,000 ..	13
London	441,587 ..	4,764,312 ..	11
Paris	19,200 ..	2,269,023 ..	117
Berlin	15,500 ..	1,315,287 ..	85
Chicago	96,200 ..	1,099,850 ..	11
Philadelphia	83,200 ..	1,046,964 ..	12
St. Louis	40,000 ..	451,770 ..	11
Boston	23,661 ..	448,477 ..	19

It thus appears that New York at present is the most crowded city in the world with the exceptions of Paris and Berlin, and that even if its limits were to be extended as proposed it would still have more persons to each acre than London has at present, with nearly

double the population which the enlarged New York would have. If the past ratio of increase in New York be maintained, as there is every reason for believing that it will be, the population of the greater city will reach 10,000,000 by the middle of the twentieth century, or an average of forty-nine persons per acre.

It is not strange that the student of municipal government should find it difficult to form any opinion as to the kind of rule to be expected from a municipality of such colossal proportions. What reason is there for thinking that the union of New York and Brooklyn would result in giving us any better government for the two together than each is able to get separately now? Would union induce the intelligence and morality of the community to take any more active part in political matters than they have taken heretofore? We can make up our minds upon one point, and that is that the activity of the professional politicians would not be diminished. It is urged in favor of consolidation that we should be able to get a better system of wharves and docks, should be able, in fact, to construct a water-front worthy the foremost city of America, if we were to bring all the various municipalities at present owning parts of that water-front together and give them a common interest in its improvement. New York has had the sole interest in the greater part of it for many years, but she has shown little desire to make it worthy of her position as one of the greatest commercial ports of the world. If consolidation would arouse civic pride in her citizens in this or any other direction, it would be an unspeakable blessing.

If, however, there be no assurance of better things in government in the greater New York, it is perhaps equally true that neither is there assurance of worse things. The new territory would, by greatly enlarging the number of voters, make it very difficult for any central political organization like Tammany Hall to maintain control of a majority. The danger of internal dissensions among the political bosses in the various parts of the municipality would be increased as the size of the masses each was expected to control increased, and in such dissensions there is always opportunity for reform movements; but the amount of patronage and the opportunities for jobbery would at the same time be greatly increased, so that the greater possible good is counterbalanced by the greater possible evil. The limits of New York and other American cities have been extended many times within the past few years, but we have yet to hear that the enlargement of area has in a single instance led to a diminution in the evils of misgovernment.

It is, in fact, misleading to expect that consolidation, which is certain to be effected within a few years, will do much to solve the problem of municipal misgovernment, which is becoming more and more every year the most serious problem that confronts American sagacity. The Census Bulletin to which we have referred, gives very striking evidence of the rapidly increasing tendency of our population, in imitation of that in older countries, to congregate in the cities. It shows by the figures of the new census that nearly one-third of the entire population of the country is now living in cities, against about one-fifth in 1870; that while there was only one city which had over a million inhabitants in 1880, there are now three; that while there were only fourteen cities which had over 100,000
