inhabitants in 1870, there are now twenty-eight; and that while the total city population has increased nearly sixty per cent. since 1880, the total population of the country has increased only twenty-five per cent. This increase in city population has been accompanied by a steady increase in municipal misrule, if the amount of attention and anxiety devoted by all thoughtful minds to that subject affords satisfactory evidence, and we believe it does. Surely, therefore, this tendency to make not only New York but all our cities larger ought to give all patriotic Americans a fresh and powerful incentive to grapple with the problem of municipal government and to solve it in the only way in which it can be solved; that is, by separating municipal affairs completely from State and national politics, and conducting them, as the citizens of Berlin, Glasgow, Birmingham, and Manchester conduct theirs, upon a thoroughgoing, non-partisan, business basis.

"Journalists and Newsmongers" Again.

A YEAR ago we printed a suggestive array of facts under the title "What's the News?" which revealed the vast importance in a commercial sense of the expenses and revenues of a great modern newspaper. As the author, keeping within his purpose, had no call to discuss the moral side of the business of gathering and selling news, we thought his paper made a fit occasion for commenting editorially on the distinction which ought to be drawn between "Journalists and Newsmongers."

In effect we described a Journalist to be a responsible editor or publisher who seeks public support for a medium of important news, of trained judgment on public questions, and of unselfish criticism of persons and things that are prejudicial to the public welfare. Whatever he offers under those heads is an appeal to healthy intelligence and not to depraved taste; he measures these things by his own judgment and not alone by what he imagines to be a public craving. He recognizes that news is a force and not a commodity; a force that brings happiness and injury or punishment to thousands of fellow beings every time he sends it broadcast over his community; and that his license to lend this force is his moral acceptance of the duty of seeing that it is true and that it does not wantonly invade the rights of private persons. In so far as he is a purveyor of useful information and a wise and helpful censor of public affairs, his newspaper gains in influence, circulation, and business prosperity. He is a self-constituted public servant who is herald, soldier, statesman, and judge; his work, even with honest purpose, is colored by human qualities; but the evils of his faults are trifling compared with his enormous services to society. The Journalist of this pattern is numerous and honorable among us.

On the other hand the Newsmonger was described as an editor, or publisher, who looks upon the public functions of a journalist as the opportunity and cover of making merchandise of other people's affairs to satisfy the curiosity of those who will buy. He recognizes in the public a depraved taste as well as a healthy intelligence, and caters to both; he measures the influence of his journal by the number of copies he can sell and not by the effect of his teachings; his public, so far as "news" should satisfy it, is any class, vile or

innocent, whose interests may be cultivated. He lashes law-breakers on one page, and on another (maybe in his advertising pages) supplies them with the information that is a part of the tools of their lawlessness. While a doctor of divinity, perhaps, is assisting him with moral views in one department of his newspaper, a companion of ruffians is entertaining dog-fighters, pugilists, pool-sellers, and other law-breakers in the column alongside. And why? Because his self-constituted mission is to print whatever will sell, and because the news of vice is interesting, not alone to its professors, but also to thousands who are ashamed to practise it. He excuses his traffic in heartless gossip of weak or unfortunate persons, and in records of immorality and unlawful amusements, by saying that the public wants such news or it would not buy, and therefore if he did not take the profits of the sale himself somebody else, less scrupulous, would do so. He likes to wield the power of the press as much as does the Journalist, and is oftener tempted to abuse his facilities for dealing out private as well as public vengeance. Modern expansion of the means and ends of journalism gives him a power over the reputations of private individuals and public officers and law-makers that is the greatest tyranny of the time, and provides him with a capacity for self-defense which laughs at the few and superannuated restraints of the law. The Newsmonger of this pattern is also known among us, and the worst of his influence is the temptation to shade off into his methods which he offers to Journalists, by dint of his material success.

These views drew from the author of "What's the News" an explanation on behalf of certain prominent publishers, which is printed in "Open Letters" and is called by the writer "Conscience in Journalism." It is valuable for its candor, for the proof which sensitiveness gives of good intentions, and for the illustration it affords of the ascendancy of the business idea among American conductors of newspapers. For it is clear that by the word "publisher" the author means the man who gets the profits of the newspaper, or who represents those who do, and who is therefore first of all responsible for its business success; it is equally clear that it is this business thinker (who may or may not be, also, the writing thinker) who is the maker of the tone and policy of the newspaper. He is represented as the employer of paid and unpaid scouts whose purpose is not alone to inform him as to the kind of news his public are prepared to buy, but also in part to help him determine how much idle gossip and prurency must be supplied if he would not alienate some part of his daily patrons.

The men who revolt at this idea of the responsibility of a conductor of a newspaper are referred to as critics who are ignorant of the internal workings of a newspaper office. On the contrary most of the censors of the Newsmonger are men who are familiar with every sort of work on a newspaper, from setting type to writing editorials, except the sharing in the division of the net profits of the counting house. They know how salaries are earned; they realize the value of accuracy even in handling the details of a shop-girl's love affair, that otherwise might involve the owner in damages for libel; when they are sent to ask impertinent questions as to the private affairs of a man or woman, they are aware of the fact that their mission is infamous, and that

their employer, who is interested in having the "news" that he may sell it, would readily forego the profits if he were obliged to be his own inquisitor. We state an extreme case within which all shades of minor and proper inquisition adjust themselves. For it is well known that in general the part played by the reporter in the modern newspaper is alike most honorable to him and most useful to the public. When he is laboring heart and hand with a Journalist his task is elevating; it is only when he answers the behest of the Newsmonger that his work is degrading.

We are frankly told that "newspapers are run as the miller runs his mill, the miner his mine, the farmer his farm." But the Newsmonger counts as grist all that can be brought to his hopper; he dumps on the market the unrefined ore, and he sows tares with the grain; while the Journalist knows that he is working under a sacred trust to grind only what is wholesome, to bring to light only that which has the true ring, and to separate the chaff from the wheat. We are informed that in journalism "sentiment does not pay," which has a family resemblance to the remark of the Western editor, when he named a sum that would secure a reversal of his political policy, that "he was not running a newspaper for his health." But neither does the Journalist try to make Sentiment pay. With him Sentiment is a luxury that for his own manhood he may to some extent afford; while it is Sense that he relies upon to pay.

Because "newspapers are rapidly coming under the control of corporations," and "require vast sums of money for their conduct," we are told that "they are worked as other money-making corporations are worked — for all the profit they can be made to yield," and that "there is no other way to work them." This condition of modern journalism, which may be a positive strength and need not be a weakness, is nevertheless the Journalist's temptation and the Newsmonger's necessity. Through a certain rivalry for readers these types have been known to approach each other, and even to become merged in the "money-making corporation." Some of the greatest Journalists of this power-press age have been servants of newspaper corporations, and yet have held their masters to their own high standards, whether the business might have been made to yield larger revenues or not. But as a rule the master-mind in a newspaper corporation is a single person owning a majority of the stock. He it is who determines whether the influence of his journal shall tend upward, or downward. In our view he is *not* carrying "the standard" of "public taste" "forward as fast and as far as the public permits" him. He is pursuing honor or gain, or both, according to his tastes and his lights. His newspaper is as much an expression of his mental and moral personality as the atmosphere of the *mephitic* or the clover-breathing kine is of its distinctive habits and nature.

OPEN LETTERS.

Conscience in Journalism.

THE publication of my article "What's the News?" in THE CENTURY MAGAZINE for June, 1890, brought me, in substance, the following request from upwards of a score of publishers, no less than seven of whom bear national reputations: "Many say the newspaper press is sensational; some declare journalism to be below the mean of the public taste; a few charge journalists with this, and only this, aim: 'To raise hell and sell newspapers.' Will you, through THE CENTURY MAGAZINE if possible, set forth the true position of the journalist."

The chief points of newspaper management that have been attacked are: The subject selected to be printed as news; the style in which the news is written; the head-lines with which the news is labeled. In what follows I endeavor to define the journalist's position, employing in my language the material furnished me for this purpose by the publishers referred to, who, to begin with, lay down these propositions:

1. We publish the misdeeds of mankind, not as examples, but as warnings; not for imitation, but for correction.

2. We aim at attractiveness in the presentation of news, not at sensationalism, and we give, not as many sensational details as we often might, but as few as the public will be satisfied with.

3. We know the public taste, and, while we cater to it, we likewise undertake, by the only practicable means we know of, to elevate it. Our critics neither know the public taste, nor take any practicable means to improve it.

The usual argument of those who speak for the publisher is the declaration that the newspaper is a business enterprise, dependent upon public support for its existence, and therefore bound to give the public that which the public will pay for. I shall not argue by this declaration, because, while business of most other kinds is conducted upon this level, the newspaper, with all its faults, is not. For example, the manufacturer makes and the merchant sells the machine, the fabric, the pattern, the style that the public will buy. The machine may be poor, the fabric shoddy, the pattern homely, the style old; but if the public, being warned only so much as by a reduction in the price, do but buy, the manufacturer and the merchant count their duty done.

Not so the publisher. His goods must be neither stale nor shoddy, no matter how cheaply he offers to sell them. It is not claimed, however, that newspapers even approach perfection. Some, it is frankly admitted, go farther in forbidden directions than they ought, but with this admission can be pointed out the rapidly diminishing number of journals of this class — not because the public refuses to support them, but because honest journalism has made them disreputable by comparison.

Publishers have to depend upon employees to whom the temptation to exaggerate, to pry into private affairs, to invent sensations, is peculiarly great. This lightning age demands that the news of the world be collected and printed between the hours of eight o'clock in the evening and three o'clock the next morning. Errors creep in; mistakes of judgment are made; but woe to him who errs or misjudges purposely. The re-

porter who begins by bringing in unfounded sensations, gross exaggerations, and false interviews soon ends in disgrace, and were the critic to enter the ranks of the newspaper makers and follow the rules which he appears to think govern there, he would see the back-door before he would reach the second floor of journalism.

Publishers have not failed to recognize the public obligation imposed by the character of their wares. They do not follow the rule unhesitatingly followed by the manufacturer and the merchant—to give the public that which the public will pay for. Whatever the critic may demand, the public demands sensation. Every such demand must be carefully examined. The publisher must consider its legal aspects, its moral bearings; the rights of those involved, as well as the rights of the public to be served.

If he decide upon publication—and he many times decides not to publish, although he knows the public would read the story with zest—the publisher must give the facts, and only the facts. To do so uniformly is not easy, for be it remembered that few men and women, however high their standing, hesitate to make false statements to reporters, if it be strongly to their interest to do so. Publishers invariably go to first hands for news, verify it to every extent that money, training, and limited time admit, and publish it with a freedom from opinion, from personal animus, and from sensational discolor, possible only to experienced chroniclers of events; and with a freedom from exaggeration that not one person in a hundred, having occasion verbally to repeat it, is able to command.

In party journalism it is true that political opponents are often charged with serious, sometimes criminal, frequently absurd, offenses, but these are excusable, in a measure, through the stress of party strife. Besides, these charges never hurt—mark that I say they never hurt—unless they are true. Party and personal journalism, in an offensive sense, will before long be things of the past. The journal of the future, almost of the present, is independent of the party whip.

In the case of crimes, of scandals, of political charges, the corrective principle is never lost sight of. Mere wrong, because it is wrong, is never retailed. Just as nations endure war that they may have peace, so newspapers expose wrongs against the public, that the public may correct them, and right prevail.

The demagogue in politics, the knave in office, the trickster in business, the wreckers of families, the beaters of wives, the charlatans in the professions, the upstarts in orders, the dabbers in art—this vast horde are ruined by publicity. In their eyes the sin lies not in the sin itself, but in the public's discovery of it. Hence the newspaper, which discovers the sin to the public, comes in for abuse that is loud and prolonged. Sympathy is aroused, and even good people are often found lending their ears and their influence to this denunciatory harangue. In the midst of the muck a reputation is lost. How? Certainly not through the acts of the newspapers, for they never professed and never possessed such power. It was the truth that killed.

Do not understand me to say that newspapers are conducted solely upon sentiment. They are not. Why should they be? What obligation rests upon the dealer in news that does not likewise rest upon the dealer in flour, in meat, in iron, in real estate, to un-

dertake the elevation of the standard of public morals? Newspapers are run as the miller runs his mill, the miner his mine, the farmer his farm. Sentiment does not pay. Newspapers are rapidly coming under the control of corporations, like railways and financial institutions, and they require vast sums of money for their conduct. Hence, they are worked as other money-making corporations are worked—for all the profit they can be made to yield. There is no other way to work them.

The newspaper critic demands flesh of one business man, fish of another, and fowl of a third. Without any obligation resting upon them above that resting upon other men of equal ability and opportunity, the men who make their money at publishing news are daily, weekly, monthly bringing wrong-doers, both private and public, to justice; serving their political party and their country by making it impossible for bad men to remain long in power; battling for better laws, better schools, better streets, better morals, better government; while the men who make their money at selling dry goods, groceries, clothing, coal—what are they doing in these desirable directions? Speaking for the majority, nothing. If they be wealthy, and therefore able to exert more than the average influence, they generally neglect to attend primaries, go abroad in the heat of the campaign, and steadily refuse to serve on school, reform, and similar committees because of an alleged press of business cares. It is the very excellence of the newspaper that has made the newspaper critic possible.

While newspapers are not conducted upon sentiment, their conductors, following a precedent that is as old as the newspaper itself, give part of their time and much of their energy to the battle for public and private improvements. Did the first American hotel-keeper lament the lack of general intelligence, and set about extending it? Did the importers of Benjamin Franklin's day, any more than the importers of our day, regularly give part of their time and money to the public good? Did the theatrical managers of Hezekiah Niles's time undertake to see that government officials were honest, not dishonest? Did even the lawyers of Thurlow Weed's period, any more than now, go out of their way that we may have better schools, better charities, and fewer Tweeds?

The publisher's time is as precious and his business as exacting as those of the landlord, the importer, the theatrical manager, or the lawyer; and yet, since the days of William Bradford, the publisher has led, and that in two senses: He has worked for the public taste while other men have worked chiefly for themselves, and he has slowly raised that taste, while other men, speaking as a class and barring the clergy, have been dead weights in the scales.

Conductors of great newspapers do not "go it blind." They leave that course to the critics. Men responsible for the conduct of properties worth millions, and compelled to earn dividends upon the sixty-fourth part of a cent profit, are required to have rules of action, and to follow them. They have a reason covering every item they publish. It is not a general reason. It is a particular reason. It dictates, not alone the length, the tone, the form, but every phrase and sentence. Other items are not in their papers—a circumstance for which specific reasons likewise exist.

Upon what basis do publishers act? Upon the same basis that a general directs the movements of his army—his knowledge of the "lay of the land." And he gets this knowledge by the same method that a general does—from "scouts." Every publisher has about him persons whose duty it is to ascertain the drift of public opinion, and report it to him. These persons are not reporters. They are not known as employees. Sometimes they do not themselves know the functions they fulfil. Hardly ever do they number less than a score; oftentimes, if the publisher be a live one, they number several hundreds. Some are paid in money, some get a free copy of the newspaper, and some are not paid at all.

Thousands of persons do not know news when they see it—unless, of course, they see it in the newspaper, properly labeled. Hence, when you seek news experts you must take them where you find them. Thus it happens that newspaper scouts are likely to be either the apple-woman at the street corner or the society belle; either the policeman or the railway president. In short, they are anybody and everybody who can and will undertake the work.

These publishers' outposts ask persons in all walks of life and in all sorts of business, their opinions of this and that newspaper; whether they like political news; are they fond of sports; why, if they express a liking for a certain journal, they hold the opinion they do; what they read first, and what last; do they enjoy details of murders; do they read religious news, society gossip, and editorials?

Publishers try the plan of hiring persons acquainted in the town or neighborhood to ask these questions, that they may get opinions of value. Then they send strangers into the same locality—and compare results. Occasionally persons are found with novel ideas, for originality, like the law, is no respecter of persons. A farmer who had never been beyond the limits of his county, and knew no more about conducting a newspaper than about commanding a ship, gave a bit of advice to a newspaper that saved it from bankruptcy—every one of you would know the journal were I to mention its name—and so completely changed its character that almost every journal in the country observed and commented upon it.

A newsboy furnished the suggestion that the large four-page sheets in general use a few years ago be changed to the eight-page form, on the score of convenience, and the newsboy's suggestion, having been acted upon, altered in the course of about five years the form of nearly every leading daily in America.

Every letter bearing upon the newspaper's contents is sent directly to the publisher's desk. And the critics, by the by, should read these letters. There are hundreds of them. Just such letters as you would expect? Not a bit. The leading lawyer wants more particulars about the church congress; a clergyman complains of the meagreness of the report of the murder trial; the politician criticizes, not the political news, but the account of the lawn fête; the banker wants to know the cause of the error in the report of the number of "put outs" in yesterday's ball game; and the up-town woman asks that a certain stock be quoted in the financial news. There they are, scarcely one containing the query or the criticism you would expect, if you looked first at the signature.

VOL. XLII.—61.

The publisher who constantly receives reports from two or three hundred "scouts," and daily peruses as many letters setting forth, as they set them forth to no one else, the wants, the vanities, the craving for puffs, the thirst for notoriety, the ambitions, the love for scandal, the threats, the idiosyncrasies, of people in all walks of life, including the very highest, has a knowledge of the public taste that is at once certain and positive.

Hundreds of publishers, sitting at the focus of these multifarious public demands, struggle year after year, sacrificing money, time, and peace of mind, with the knowledge that they can at any moment increase their circulation and their profits by lowering the moral and literary standards of their publications. Why do they not lower them? There are many reasons. The publisher finds in his hands a powerful lever. It is a lever of better private and public morals; of better laws; of better public service; of detection for the wrongdoer; of wider education; of purer literature; of better chances for the weak; and the publisher bears all the weight upon this lever that a not-high public taste will let him. He does so because he is conscientious, because he is patriotic, because he is ambitious, because he seeks an honorable name, and because the traditions, the precedents, the contemporaneous newspaper comparisons demand that he shall do so.

The newspaper of to-day—I speak of the ninety and not of the ten—is above the mean of the public taste which it serves. And this is true, whether the journal be published in the new communities of the West or in the old communities of the East, in the mining towns of Colorado and Idaho or in the college towns of Massachusetts and Pennsylvania.

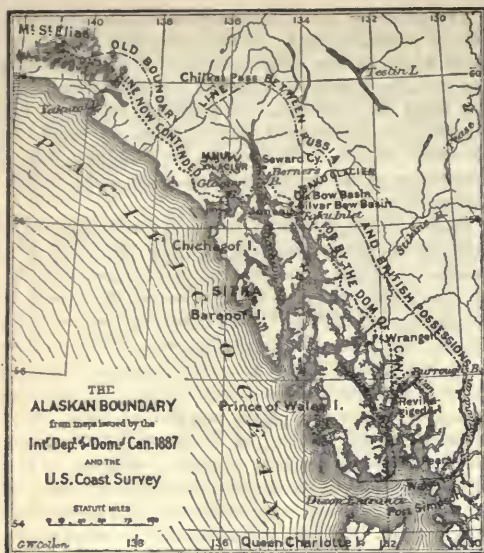

Publishers have acted with singular wisdom, rare public spirit, and remarkable unanimity. They ascertained the public taste, and then placed their standard as near the front of the column as possible. They do not go on ahead of the column, as their critics would have them do. Instead, they remain a part of the public demand, while leading it. In doing so they accomplish two things, impossible of accomplishment in any other way: they educate the public taste to their standard, and they carry that standard forward as fast and as far as the public permits them.

Eugene M. Camp.

The Disputed Boundary between Alaska and British Columbia.

THE boundary line between the United States and the British possessions in North America once more threatens to become the subject of international dispute, conference, and arbitration. A half century ago "Fifty-four Forty or Fight" was a campaign cry, and the coming controversy begins at that line, from which President Polk retreated, the once northern boundary of Oregon Territory being the southern boundary of our territory of Alaska. The discussion of the ownership of Revillagigedo, Pearse, and Wales Islands, and of the line of the Portland Canal, will rival the contest over San Juan Island and San Rosario or De Haro Straits, decided in favor of the United States by the Emperor of Germany as arbitrator, in 1872.

Each year that the boundary line between Alaska and British Columbia remains in question increases the difficulty of determining it. Each year settlements are

increasing in numbers, more private interests are involved, and the region in dispute becomes more valuable to either claimant. There is great indifference to the question on our side of the line, but in the Dominion it is well understood, and Parliament and public opinion have taken their stand. Canadian maps now differ from United States maps of that northwestern region, and this boundary question promises to provoke more international bitterness than the present Bering Sea dispute concerning the interests of a single company of fur-traders.

By his ukase of 1821, forbidding all foreign vessels from approaching within one hundred Italian miles of his possessions on either shore of the North Pacific, the Emperor of Russia purposely brought about the conferences of 1824 and 1825. Then were adjusted the claims of Russia, England, and the United States to various sections of the northwest coast of America. As the result, Russia was secured in the possession of the coast and adjacent islands, from the Arctic Ocean down to the line of $54^{\circ} 40'$, on the ground of Russian discovery and settlement, together with the northernmost third of the uninhabited and useless interior.

All overtures from England for the purchase of "the thirty mile strip" of coast accorded to Russia and now known as Southeastern Alaska were refused, but the tract was leased by the Russian government to the Hudson's Bay Company until 1867, when the Treaty of Washington, consummating the Seward purchase, once more defined its boundaries:

ARTICLE I.

His Majesty the Emperor of all the Russias agrees to cede to the United States, by this convention, immediately upon the exchange of the ratifications thereof, all the territory and dominion now possessed by his said Majesty on the continent of America and in the adjacent islands, the same being contained within the geographical limits herein set forth, to wit: The eastern limit is the line of demarcation between the Russian and the British possessions in North America, as established by the convention between Russia and Great Britain, of February 28-16, 1825, and described in Articles III and IV of said convention, in the following terms:

"Commencing from the southernmost point of the is-

land called Prince of Wales Island, which point lies in the parallel of 54 degrees 40 minutes north latitude, and between the 131st and the 133d degree of west longitude (meridian of Greenwich), the said line shall ascend to the north along the channel called Portland Channel, as far as the point of the continent where it strikes the 56th degree of north latitude; from this last-mentioned point, the line of demarcation shall follow the summit of the mountains situated parallel to the coast as far as the point of intersection of the 141st degree of west longitude (of the same meridian); and finally, from the said point of intersection, the said meridian line of the 141st degree, in its prolongation as far as the Frozen Ocean.

"IV. With reference to the line of demarcation, laid down in the preceding article, it is understood—

"1st. That the island called Prince of Wales Island shall belong wholly to Russia" (now, by this cession, to the United States).

"2d. That whenever the summit of the mountains which extend in a direction parallel to the coast from the 56th degree of north latitude to the point of intersection of the 141st degree of west longitude shall prove to be at the distance of more than ten marine leagues from the ocean, the limit between the British possessions and the line of coast which is to belong to Russia as above mentioned (that is to say, the limit to the possessions ceded by this convention) shall be formed by a line parallel to the winding of the coast, and which shall never exceed the distance of ten marine leagues therefrom."

The first contention as to the position of the boundary line between Alaska and British Columbia arose in 1873-74, when thousands of miners of different nationalities rushed to the Stikine River and the Cassiar region at its head-waters. Gold commissioners, customs officers, and sheriffs were alike defied; mining camps on the Stikine were first under one flag and then under another; the custom house was moved from place to place, and criminals escaped trial upon mere technicalities, until a temporary and approximate line on the thirty mile basis was agreed upon by the British Columbian officials and the United States military authorities, then in control of Alaska. The custom house and Hudson's Bay Company's post still remain, as then placed, at a distance of sixty miles from the mouth of the winding river.

Since 1878, prospectors, often to the number of five hundred in a single season, have crossed the Chilkat Pass to the rich placer regions along the Upper Yukon. Coarse gold and dust to the value of \$40,000 or \$50,000 have been carried out each year. A few seasons since, the Canadian gold commissioner visited the camps on Forty Mile Creek to collect fees and prevent unlicensed miners from working. The men claimed that they were within Alaskan boundaries, and as they were a rough and muscular set the commissioner retreated, and the question of miners' licenses in that region was waived until the two governments should determine and mark the line of the 141st meridian, which there forms the international boundary line.

The official Canadian map of 1887 places Forty Mile Creek that many miles within British limits. Although no official publication has been made, returning miners have brought word that the Turner and McGrath parties of the United States Coast and Geodetic Survey have determined that the meridian line crosses the Yukon almost at the mouth of Forty Mile Creek, leaving those rich placers in Alaska.

During the sessions of the Fisheries Conference at Washington, 1887-88, an informal discussion of this boundary question was arranged by Secretary Bayard and Sir Charles Tupper. Dr. W. H. Dall of the Smithsonian Institution and United States Geological

Survey, and Dr. G. M. Dawson of the Dominion Geological Survey were chosen as conferees, both being personally acquainted with the region in dispute. Dr. Dall is the most eminent authority on Alaskan matters, his close connection with the territory dating from his camping on the Upper Yukon in 1866-68. Dr. Dawson has for almost the same time devoted himself to surveys and scientific work in British Columbia.

By the Canadian interpretation in 1887 of the treaty's phrases, a considerable portion of the "thirty mile strip" which Russia had declined to sell to Great Britain, and which had always been mapped as Russian or United States possessions, is now claimed as British territory. Dr. Dawson's arguments were reinforced by a report and map made by Major-General R. D. Cameron of the British army, and parliamentary instructions had been given him to insist upon General Cameron's lines and yield nothing. Dr. Dall's report and memoranda of the discussion, including the papers and charts pertaining thereto, were published as "Extra Senate Document No. 146, 50th Congress—2d Session," and there the subject was dropped.

The official Canadian map of 1887 shows General Cameron's lines, which disregard the old acceptance of the meaning of the treaties' clauses, previous maps, and even British admiralty charts. Dr. Dawson claims that "the crest (or summit) of the mountains situated parallel to the coast" means the summit of the first range of precipitous foot-hills, "everywhere rising immediately from the coast and which borders upon the sea . . . and probably at an average distance of considerably less than five miles from it." The phrase "Ten marine leagues from the coast" is never considered, and as the coast presents no windings nor indentations to General Cameron's eye, he draws his line from Mount St. Elias southward without regard to such irregularities, or to the explicit instructions that the boundary line should run parallel to those windings. The Cameron line leaps bays and inlets, and breaks that portion of the Alaska coast into alternating patches of British and United States territory. This line does not even follow "along the channel known as Portland Channel" (to quote the treaty), but along Clarence Strait, Boehm Canal, and Burroughs Bay, thus including within British limits Revillagigedo and many smaller Alaskan islands, and a great peninsula as well.

By this picturesque method of partitioning Alaska, the boundary line would cross almost at the mouth of Glacier Bay, of Lynn Canal, and Taku Inlet; and on the Stikine River the boundary line would slip fifty miles down stream. Were it accepted, many canneries and settlements, the mining camps of Berners Bay and Seward City, the rich Silver Bow and Dix Bow basins back of Juneau would pass under the British flag, and the Muir, Taku, and other great tide-water glaciers—our most unique scenic possessions on this continent—would be taken from us.

On the first of July, 1891, the citizens of Alaska may, for the first time, enter town sites, purchase and obtain titles to their holdings, other than mineral claims, and legally cut timber; and this recent extension of the general land laws will rapidly attract settlers and investors into the region claimed as part of British Columbia. The completion of the Nowell tunnel and other costly pieces of mining engineering,

opening basins back of Juneau, the erection of new stamp mills in remote cañons, and further discoveries of gold placers and silver leads must invite the attention of the Canadian authorities to all this unlicensed mining, if the Dominion is to contest its claim. No one knowing the American miner, prospector, and frontiersman doubts that there will be forcible resistance to British officers, if necessary.

In any appeal to arms, the United States would be at every disadvantage in protecting Alaska, the impossibility of defending that possession being the chief reason for Russia's sale of it. There is no military force in Alaska, and no telegraphic communication beyond Nanaimo, British Columbia; there are no complete charts of its intricate water-ways, no lighthouses, and only one small man-of-war at Sitka. The British Asiatic squadron of twenty-four modern ships can reach Bering Sea in five days from its summer rendezvous at Hakodate, and Sitka but a few days later; and their naval force at Esquimaux is sufficient to close Puget Sound and the inside passage northward.

To illustrate the importance which British and Canadian officials attach to an early settlement of this boundary dispute, it will be remembered that Sir Charles Tupper and his colleagues were instructed to discuss this matter with Secretary Blaine at the informal conference concerning a reciprocity treaty between Canada and the United States, which these commissioners had hoped to hold in Washington in April, 1891.

Eliza Ruhamah Seidmore.

Similar Musical Phrases in Great Composers.

I HAVE thought it interesting to note some curious instances of the same musical phrase being conceived by different great composers. Those, that to the best of my knowledge I imagine to have been the first, I have put in the original key:

MENDELSSOHN, "If with all your hearts." "Elijah."

SCHUMANN, Berceuse.

WEBER, Aria, "Der Freischütz."

WAGNER, "Tannhäuser" March.

WEBER, "Oberon," Finale No. 15.

MENDELSSOHN, "Midsummer Night's Dream."
In this instance, the harmony differs somewhat.

GOUNOD, "Redemption." Part 3, No. 1.

BEETHOVEN, Sonata, op. 106, 3d movement.

GOUNOD, "Faust," duo, Garden Scene.

MENDELSSOHN, Overture "Melusine."

WAGNER, Music Drama, "Rheingold."

CHOPIN, Nocturne in E flat, 2d part.

BEETHOVEN, Concerto, C minor, 2d movement.

GOUNOD, "Faust," Cavatina, No. 8.

BEETHOVEN, Concerto in C, 2d movement.

CHOPIN, Funeral March (Trio).

The next two examples at least have a family likeness.

WAGNER, "Die Walküre," Tenor Song.

J. S. BACH, Concerto, D minor, last movement.

MENDELSSOHN, Rondo Capriccioso.

The peculiar part of all this is, that the sentiment expressed in both cases is very much the same, whether the case be "Elijah" or the "Redemption," "Melusine" or the "Rhine Maidens," the "Midsummer Night's Dream" or the "Oberon" fairies. Of course we must exonerate Beethoven from participating in the "Faust" scena, but *his* phrase is taken from what is generally known as the Devil's Sonata, probably on account of its difficulty.

Here is a remarkable case of the same music being equally beautiful in both instances:

WEBER, Opera of "Oberon," 1st Fairy Chorus, 1st act.

This was adapted from the above chorus, and is universally admired as a hymn tune. The rest of the tune can be found by tracing the chorus, the same harmonies being retained.

Perhaps the story of Balfe's method of making melodies when his inspiration failed him may be new to some readers of this article. He put the letters of the musical alphabet on separate bits of paper, duplicating each letter several times, and then drew them one by one, from a hat, and noted them down, having previously decided on the key, time, and value of the notes; and certainly the reiterated notes of some of his melodies warrant the truth of the story.

Richard Hoffman.

Talleyrand.

THE paragraphs from the Memoirs which did not reach us in time to follow the passage given in the June CENTURY simply threw out the idea that Maubreuil, who accused Talleyrand of the desire to bribe him to assassinate the fallen Emperor, in 1814, probably obtained his passports for a "secret mission" merely as one of the numerous emissaries sent out by the royalists to all points in France to proclaim the "legitimate" government. Talleyrand again denies the attempted accusation, and shows, moreover, how absurd and useless it would have been, as well as infamous.

An Incident of "General Miles's Indian Campaigns."

GENERAL NELSON A. MILES, after seeing the proofs of Major G. W. Baird's article in this number of THE CENTURY, wrote to the editor as follows:

Referring to the desperate fight with the Nez Percés in September, 1877 [see pages 363-364], in which Major G. W. Baird states that a staff officer went from me to give certain orders to Captain Hale and found that officer dead, Major Baird very modestly omits his own name, which should be inserted, as he was adjutant at that time, and in carrying the order he found Captain Hale and Lieutenant Biddle dead, and received two desperate wounds himself, one shattering his left arm and the other cutting the side of his head.

CALIFORNIANA.

Arrival of Overland Trains in California in '49."

WITH the fall of '49 came to California the vanguard of the immense immigration that braved the hardships of weather, Indian perils, cholera, fevers and starvation, in that long march across a continent in pursuit of gold. Not only men, but delicate women and children shut their eyes to every comfort and association of home, and faithfully shared these dangers and perils, or were buried in nameless graves on prairie, mountain, or desert.

In every subsequent year the State of California, with liberal appropriation and abundant supplies, sent out her citizens with open hand to welcome and aid the feeble and exhausted with every necessary assistance at the latter end of their long journey. But in 1849 there was no organized effort for systematic succor. The emigrants of that year were numbered by thousands, and circumstances made it impossible, except to a very limited extent, to meet and greet them even with words of good cheer. It was only through individual effort that aid could be extended them, and almost every individual was in some respects as hard pressed as they.

I can find only one instance upon the official records where Government protection was thrown around them, and that is in General Riley's report to the War Department, under date of August 30, 1849, in which he says, in reference to his need of soldiers in place of those who had deserted: "The detachment of dragoons on their march to the Department with the collector of this district and the Arkansas emigrants, have not yet arrived."

Among those who contributed individual effort in going out to meet the trains I can name only a few—first of all General Sutter; Sam Brannan of Sacramento, who was identified with the so-called "Mormon battalion"; Colonel Gillespie, formerly United States consul for Lower California, then a merchant in Sacramento; General Morehouse, Dr. Semple, and, I may safely say, the business men of Sacramento generally. There were others, but at this late day it is impossible to name them. Even the name of the comrade who accompanied the writer is forgotten.

Among those who came to Auburn in May, 1849, was Dr. Deal of Baltimore, a physician and a Methodist preacher. He was very enthusiastic in stating his purpose to become one of the "honest miners," and calling a gathering together with a long tin dinner-horn,

he expressed his intention to dig with them, and to institute divine worship the next Sunday, and he closed by making the hills echo with a cheery hymn. Monday morning's sunrise saw the doctor in the mines with tin pan, pick, and shovel. Eleven o'clock saw him with his shovel battered, his pick broken, his hands bruised and blistered, and his clothes muddy, placing his tools and tin horn in a wagon bound for Sutter's Fort. It was well he did, for together with another good Samaritan he leased a part of Sutter's Fort for a hospital, and when the forlorn bands of immigrants reached the Fort they found medical attention and care, which in many cases saved life or eased the passage to the grave.

The "Long Bar" mining claim on Bear Creek, where I was located, lay in the route of arriving immigrants, on the Sutter's Fort trail, a hundred miles from the fort. I shall never forget the sight presented by the tired, starved, sick, and discouraged travelers, with their bony and foot-sore cattle and teams. Men, women, and children, and animals were in every state of distress and emaciation. Some had left everything along the way, abandoning wagons and worn-out cattle to the wolves—leaving even supplies of clothing, flour, and food—and in utter desperation and extremity had packed their own backs with flour and bacon; some had utilized the backs of surviving oxen for the same purpose; and a few of the immigrants had thus made the last 600 miles on foot, exhausted, foot-sore, and starving.

Such as we could we relieved from our simple camp stores of flour, bacon, and coffee. Our blankets were spread on the ground for our nightly rest, always after an evening bath in the cooling snow-waters of Bear Creek, and our sleep was sweet and sound. But there was no comfort or relief for those worn-out men, women, and children. The few of us in that lonely river bed in the mountains did what we could, and then urged them on to Sutter's Fort and Sacramento.

I remember well the arrival of a once stalwart man, reduced almost to a skeleton. His comrades had perished on the way with cholera, his cattle had given out, and, selecting what he could carry that was most essential, he had finished the journey on foot. Reaching the place where we were digging and washing out the gold, he threw himself upon the ground, and said:

"And now I've reached at last where you dig out the gold. For this I have sacrificed everything. I had a comfortable home, but I got 'the fever.' Everything is gone, my comrades are dead, and this is all there is left of me. I thought I would be glad to get here, but I am not. I don't feel the least desire to dig gold now. All I ask for is rest—rest—rest. It seems to me as if I never could get rested again. I want to find home—*home*—and there is no home here."

He inquired how far it was to Sutter's Fort, and refusing proffered food or a look at the gold, he staggered feebly on again to look for "rest" and "home."

In September the swarm of immigrants became so continuous and their condition was so wretched, that I obtained one of their mules that seemed able to carry me, and giving up my business of gold-digging for a time started with a comrade up the Truckee River route to advise and encourage the new-comers. Here I witnessed many sorrowful scenes among sick and hungry women and children just ready to die, and dead and dying cattle. The cattle were usually reduced to skeletons. There was no grass, and they were fed solely by cutting down trees for them to browse on. But the cattle were too many for this supply of food along the trail. I once counted as many as thirty yoke hitched together to pull an almost empty wagon up a hillside, while to descend an incline it was necessary to chain a large tree to the back of the wagon, with all its limbs attached that they might impede the descent of the wagon, for the cattle were entirely too weak to offer the necessary resistance. One after another the wagons would follow, and thus slowly work their way up and down the mountain sides of the Sierra pass, while the women and children wearily plodded along in the deep, dry, and exceedingly dusty trail. Some fared better, but I apprehend few would ever care to pass twice through the hardships of the overland journey of '49.

As an instance of courage and suffering: A preacher, of the Methodist Church in Indiana, accompanied by his wife (a delicate little woman) and three children, started overland with ox teams. On the journey he was suddenly attacked with dysentery and had to lie helpless in the bottom of his wagon, vibrat-

ing between life and death. His brave little wife took his place, walked by the side of the team and guided them; but she lost her way, and for two weeks, with husband and children to care for, trudged along alone until by good fortune or a good Providence she found the trail again. I afterward made their acquaintance in Columbia, where he was pastor of the Methodist church. Wishing his church sealed inside, he took off his clerical coat, chopped wood, broke up limestone boulders, burned them into lime, and with his own hands plastered the interior of the church in good style.

At first we tried to give the new-comers employment on our mining claims, but in every case but one their strength was not equal to the labor of digging gold, and on they swept, all eager to reach a "settlement." Some in their enthusiasm had, at great sacrifice, dragged along strange, heavy, and wonderful patent devices to work out the gold. Often they had thrown away their flour and bacon, thus reducing themselves to starvation, to make room for their pet machine, which on trial was found utterly worthless, and was left to rust or rot in the mines.

Special relief parties were also sent up the trail with supplies of food, medicine, and other necessities, as well as with fresh animals, and many immigrants were safely brought in, before the snows fell in the mountains, who otherwise might have perished in the storms of early fall.

A. C. Ferris.

A Fourth Survivor of the Gold Discovery Party.

REV. JAMES GILLILAN, of Nephi, Utah, informs us that in addition to the three survivors of the party at Sutter's Mill at the time of the discovery of gold in California—namely, Messrs. Bigler, Smith, and Wimmer, as stated by Mr. Hittell in our February number—there is a fourth survivor, Mr. Wilford Hudson (not "Willis" as printed on page 530 of that number). Mr. Hudson is living at Grantsville, Tooele County, Utah, and his description of the circumstances of the gold discovery, says our informant, "substantially accords with Mr. Hittell's account."

BRIC-À-BRAC.

A Ballad of Paper Fans.

LET others rave o'er Raphael,
And dim and ancient canvas scan;
Give me in this so tropic spell
The simple art of paper fan:
The long-legged stork of far Japan,
A-flying through its straggling trees,
Does all for me that painting can—
I bless the gentle Japanese.

Give me such dragons fierce and fell
As earth saw when its life began;
Sweet views of frog and lily-bell,
Of moon-faced maid, and slant-eyed man;
Of flow'ry boughs athwart the wan
Full-orbed moon; of azure seas;

And roseate landscapes on a plan
Peculiar to the Japanese.

Give me the hills that sink and swell,
Faint green and purple, pink and tan.
Joy would it ever be to dwell
Where streams that little bridges span,
Ignored, may flow 'twixt maid's sedan
And lover's whispered flatteries;
For happy hearts are dearer than
Perspective to the Japanese.

L'Envoi.

O Love, how lightly, sweetly ran
Life's sands for us in climes like these!
Long leagues would lose their power to ban
Were you and I but Japanese!

Annie Steger Winston.

Spanish Songs.

GIVE THE KISS I GAVE TO THEE.

'T is my mother's step I hear;
Quick, oh, quickly give to me—
Haste, it is her step I hear—
Give the kiss I gave to thee.
She doth fret me night and day;
"Kisses, prithee," she doth say,
"Never maid should give away,
Never maid her love betray!"
Give, oh, quickly give to me—
Give the kiss I gave to thee.
"Have you kissed a man?" she 'll say,
And I 'll answer nay and nay;
Give, oh, quickly give to me—
Give the kiss I gave to thee.

IN THE MIRADOR.

ALL the night I am weeping;
But with the dawn's bright beauty,
I deck myself with blossoms.
All the night I am weeping.

All the night I am weeping.
I lean far out my balcony;
Below there 's one that passes.
All the night I am weeping.

All the night I am weeping.
Beside me, in her beauty,
Fair Zaide sits a-singing.
All the night I am weeping.

All the night I am weeping.
The rose from out my bosom
I lightly fling unto him.
All the night I am weeping.

All the night I am weeping.
Fair Zaide casts him lilies;
He loves the white flower best.
All the night I am weeping.

"PRAY FOR ME, SWEETHEARTS!"

WRAPPED in a mantle black as night,
Sweet Doña Inés passed me by;
My heart was wounded till it bled,
With passion's dart from out her eye:
"I am dead; pray for me, sweethearts!"

Upon the Prado, 'midst the crowd,
Sweet Inés passed me once again;
She sighed, I hid myself away
Far from the prying eyes of men:
"I am dead; pray for me, sweethearts!"

Beside the rose hedge twice and thrice—
The nightingales with song aflame—
I brushed her perfumed, purple robe,
But dared not even breathe her name:
"I am dead; pray for me, sweethearts!"

She sits behind her lattice close;
I pass below, I dare not stay,
Yet like a prisoner on his rounds
I come again without delay:
"I am dead; pray for me, sweethearts!"

A WEEK, A YEAR, I 'LL LOVE—A DAY.

I 'LL love for a week, I 'll love for a day,
I 'll love for a year, but not alway.
Alphonse my love he doth bespeak:
Dear heart, in vain he shall not seek;
I 'll love him for a week.

Base man, he turns from me away,
For a week's love he will not stay;
I 'll love him for a day.

He sighs once more. It doth appear
'T will break his heart, I surely fear;
I 'll love him for a year.

Not satisfied with this! Go 'way!
A week, a year, I 'll love—a day,
But not alway.

MY FIRST LOVE IT SHALL BE MY LAST.

I WAS so young and—oh, believed;
All hope within my breast has past.
I did not dream to be deceived—
My first love it shall be my last.

How can I bear the coming years,
The coming years of grief and gloom!
My only comfort in my tears,
My sole relief the silent tomb.
They say that I shall love again,
That grief like mine will hasten fast;
To comfort them I feign a smile—
My first love it shall be my last.

I seek the vale where last we met.
The roses were in bloom that day;
The roses they are blooming yet,
But love has stole itself away.
If one could only die at will,
I 'd die before the roses past;
But death it seeks a happy heart—
My first love it shall be my last.

Jennie E. T. Doowe.

Ye Guilelesse Barde

I wiste he was a Guileles Barde,
Fore ere to hys Spouse
He wrought a bitt of poesie
Alle daye within ye house.

He fetcht ye screede untwye ye dame,
And whan she ope ye ode.
She dealt hys lord a buffetinge
Whereat hys blue bludde flowde.

Ye lynes were pretty lynes yough,
And thutte whyche caused ye stryfe
Was ~~butte~~ ye fyfte that he chused:
"Ye Barde to hys firste wyfe!"

Terry McHayd'n's Wooing.

"ARRAH! jewel, sure Eileen, I swear by me troth
That the sun has been stealin' bright sparks from yer
eye,
And the pure soul that peeps through that iligant spot,
— There are two of thim spots on yer face,— faith, I 'd
die
To be j'ined to for life; for I 'm sure 't is meself
Would be peepin' at heaven whin gazin' far down
In the glorified depths of yer eyes. Yet a pelf
I 'd commit sure — I 'm selfish to seek such a crown.

"Ah! thin, Eileen, don't turn 'way yer iligant face.
Sure I don't praise yer eyes an' their beauty alone,
For yer soul plays in glory all over the space
Of yer nate, rounded cheeks. Thin yer mouth — och!
I moan
For the want of a word to describe the quare charm
That comes into me heart whin its glory I scan;
An' och! Eily, yer hair an' yer taperin' arm,
Sure they ne'er were excelled since the world began.

"An' yer figure an' form — thin begor! one should peep
At the art works in Rome to behold thim surpassed.
Thin yer bosom — och! murder! what language can
leap
To the call of me tongue for to paint it? 'T was cast
In mistake for a goddess above, so I think.
And yer — murder! me lips are now dumb for to say
What I think of yer foot. Oh! don't blush so like
pink,
Eileen Conner — yet you look so much purtier that
way."

"Och! thin, Terence McHayd'n, yer blarnified tongue,
Like the bard of Dunloe as he sings to th' past,
Would deludher the birds from the bushes that sung
Round the old fairy moat all the summer. Sure fast
Is me heart set ag'inst honeyed words, for no girl
Could live on swate, ranterin' praises alone,
An' no doubt you 've been wanderin' round in a whirl
Sayin' iligant things to the girls of Athlone."

Here fair Eileen made motion to hasten away
In mock anger that made her look ten times as sweet,
But her hand Terry seized, on his lips passion's say,
As he flung himself ardently down at her feet.
"Oh! thin, Eileen, be mine, darling Eily! I 've love
Sure for you, an' an iligant farm in me mindt,
An' —" Here Eileen fell into his arms like a dove.
"Och! Terry, you should come long ago to the p'int."

Daniel Spillane.

Cupid Rearmed.

PAINTERS, dip the brush anew,
Retouch the ancient masters!
Ring new jingles in your lays,
O choir of poetasters!

Cupid, merry little god
(His love-lore then was narrow),
Roamed the world in days of eld
With treacherous bow and arrow.

Many a heart he wounded sore,
And many a dart went flying
Far beyond the throbbing mark
And left a lone soul sighing.

Until, in dire disgrace, he found,
By youths and maidens banished,
From east to west, from north to south,
His occupation vanished.

Despair had seized the merry soul
Where erst reigned love's elation,
When on a fateful summer day
Joy flashed an inspiration.

Straightway a trusty net arose
Across a lawn of satin,
And then two "courts" wherein to court
And casually bat in.

"Love" points were scored at every "serve,"
"Love" points upon "receiving,"
And in the meshes spread between
Love's fingers had been weaving.

Again in triumph Cupid roved,
Each heart he stormed to sack it;
His arrows hung in quivered sleep,
He bore a tennis racket.

John Jerome Rooney.

"Not Suited to the Purpose."

"This pencil is too strong for me." — *Lewis Carroll.*

THE editor struggled in vain with his pen,
In only one way would it willingly move;
He made a beginning again and again,
And then said abruptly, "I must be in love!"

Yes; this must be why one fair face of all faces
Between him and his "copy" continually crept,
Presented itself in the smallest of spaces,
And smiled at him out of the clouds when he slept.

"The remedy 's surely before me — I 'll write!"
He muttered, and seized his recalcitrant pen.
"If I speak, I may possibly illustrate fright,
And girls, as a rule, adore courage in men."

Now this editor had a clear title to use
The letters "B. A." as attached to his name,
And why should so simple a matter confuse
A mind so long trained to directness of aim?

The printers were calling for copy — no time
Was his to debate, he must do it at once.
"Perhaps she would fancy it more done in rhyme,"
He murmured. "Oh, *why* do I feel like a dunce?"

"Well, simple directness, it may be, is best;
It might be ornate should I call her 'divine.'
If she loves me, her own heart will furnish the rest."
"I love you," he wrote; "dearest, will you be
mine?"

"I have analyzed carefully that which I feel,
And I give it substantially in the above;
Reply by the messenger to my appeal,
And state, if you can, a return of my love."

He mused, and then dreamily added: "P. S.
Write plainly on one side of paper, and give —
It need not be published — your name and address.
It is merely a form, for I know where you live."

The answer came swiftly; he read it between
Two paragraphs of a discourse upon banks;
And he stole to the shade of a Japanese screen.
"It 's concluded," he said; "she 's declined me —
with thanks!"

WILLIAM II., EMPEROR OF GERMANY.

ENGRAVED BY R. G. TIETZE.

PHOTOGRAPHED BY TH. PRÜMM.¹

VICTORIA, EMPRESS OF GERMANY.

THE CENTURY MAGAZINE.

VOL. XLII.

AUGUST, 1891.

No. 4.

THE GERMAN EMPEROR:

A SKETCH OF THE FIRST THREE YEARS OF HIS REIGN.

WILLIAM II. has been for three years emperor, and in this time has succeeded not only in winning the respect of foreign cabinets but in strengthening himself at home. He succeeded a father idolized by all who came within the sphere of his gentle and generous nature; his grandfather left behind a warlike fame so great that only the age of Frederick II. can afford a parallel. The present Emperor has had, therefore, no easy task before him, for it has been necessary for him both to remove prejudice and to give the country confidence in his intentions as well as in his abilities.

The secret of the Emperor's power with his own people arises mainly from three causes:

First. He has courage.

Second. He is honest.

Third. He is a thorough German.

If the whole country had to vote to-morrow for a leader embodying the qualities they most desired, their choice would fall unquestionably on their present constitutional ruler. Perhaps the virtues I have specified appear commonplace, and will be taken for granted by the reader; but an emperor must be compared with others in the same trade.

His honesty has been the cause of nearly all the malevolent criticism that outside papers have accorded him, for he has said freely what older or more politic people might have placed in a different way. He has made many minor mistakes from acting upon the impulse of the

moment, but these mistakes have never betrayed to his people a want of sympathy with their development. He has made his share of minor blunders in handling large masses of troops at the grand manœuvres, but the army would be happy to see him make a thousand times as many rather than to miss the active interest he takes in keeping the military machine in working order.

Since Frederick the Great no king of Prussia has understood his business like this emperor. He knows the routine of the public offices from having sat upon office stools. He knows what material development means from a practical inspection of foundries, mills, shipyards, irrigating-works, canals, factories, and the rest of the places where the strength of a nation largely displays itself. He knows the army from having carried a knapsack, obeyed his superiors, and worked his way up like the every-day Prussian. If a new ship is to make a trial trip, he goes in person to learn something new in naval construction. He has traveled in the most intelligent way the principal countries of the Old World, has come in contact with the men responsible for the state of affairs in Europe, and does not need to be prompted when a new ambassador presents his credentials.

From a child he has been noted for his love of outdoor sport, and as emperor has directed the taste of the growing generation away from pipes and beer-pots and has led them to seek their pleasures in more manly recreation.¹

The Emperor believes in force, and with editor, the German Emperor has no such redress against the abuse of international courtesy.

I may add that I have seen the Emperor on a dozen or more convivial occasions when, if ever, he might with impunity have indulged the taste attributed to him by this ill-informed and poison-spirited scribe, and that on no occasion has he given grounds for such statements.

¹ A press association furnished to the American papers of February 21 a charge of intoxication at the dinner in his honor given by the Brandenburg Diet. This article was fabricated either in London or in New York, though headed Berlin.

Such lies do more mischief than at first glance might be supposed, because, while a private man may occasionally venture to bring a libel action against an

good reason. Prussia has fought her way into the family of European nations at the point of the bayonet; it has taken her about 250 years of drilling and fighting to make Europe understand that she has come to stay: and the habits engendered by generations of barrack-room education cannot be altered in a few years. Not only does the Emperor believe in force, but his Germans almost to a man hold the same creed. The people of the fatherland all serve in the ranks, not merely because their Kaiser wishes it but because they themselves are convinced that this sacrifice is the only one that can guarantee them against invasion. The universal service is to-day the most popular institution in Germany; and while outcry is made against particular abuses in the army, and many desire to have the term of service reduced, no government could live a day that attempted to abolish it altogether. The public language, therefore, which the Emperor uses sounds strangely autocratic when read in the columns of one of our dailies, but calls forth no such reflection in Berlin.

No man in his position has in so short a time expressed himself so freely on so many impor-

and, as King of Prussia, defined his position as head of the state more clearly still.

"I am far," said he, "from wishing to disturb the faith of the people in the permanency of our constitutional position by efforts to enlarge the royal prerogative. The present rights of the crown, so long as they are not invaded, are sufficient to assure the amount of monarchical influence required by Prussia, according to the present state of things, according to its position in the Empire, and according to the feelings and associations of the people. It is my opinion that our constitution contains a just and useful distribution of the coöperation of the different political forces, and I shall on that account, and not merely because of my oath of office, maintain and protect it."

Opinions differ, even in Germany, as to the best distribution of political forces, but every Prussian, and every German as well, breathed more freely when their emperor had spoken the blunt words I have translated. The people were already beginning to feel that while they had to deal with a man who could fight for his own, he was, at least, not disposed to claim more than was his by law. The whole of that address

TOY FRIGATE ON THE HAVEL, NEAR POTSDAM, WHERE THE EMPEROR FIRST LEARNED TO BE A SAILOR.

tant topics as he, and if I have convinced the reader that his words are those of an honest and fearless man, I need offer no apology for quoting some of his own language as evidence that he is not devoid of judgment.

ON the 15th of June, 1888, William II. succeeded to the throne as German Emperor and King of Prussia. On the 25th he met the members of the imperial parliament, and gave them the assurance that he meant to govern according to the constitution, and to carry out vigorously all engagements, at home or abroad, connected with the welfare of the country. On the 27th he met the Prussian house of representatives,

is instinct with individual conviction, but much of its force was lost to the outside world because few knew how much of it was meant. When, for instance, he closes by promising to be the "first servant of the state," it was looked upon as a conventional figure of speech, such as even a Prince of Wales might use. How few then thought that he would work with an energy and persistence that would wear out any two ordinary servants; that he would have his study lamp burning long before the kitchen-maids of Berlin yawned themselves out of bed; that he would in person wait upon the drill-grounds of his regiments to see that punctuality was observed; that he would be accessible to every

THE MARBLE PALACE, POTSDAM, WHERE THE EMPEROR LIVED AFTER HIS MARRIAGE, BEFORE HE CAME TO THE THRONE.

complaint, whether from a day laborer or cabinet minister.

Like others in commanding positions, he is taxed heavily for all that he utters in public, but no one tells us of what he is in private. Because as head of the army he draws his sword he is charged with warlike ambition; if on the other hand he looks into the troubles of the day laborers he is attacked as a socialist in disguise; if he travels to visit his neighbors the paragraphers make merry over his perpetual junketing. The papers of England have hardly yet forgiven him for the crimes they imagine he committed while his father was at San Remo, though it has been abundantly proved that he acted as a loyal son and subject.

On the 16th of August, 1888, he made a few remarks at Frankfort on the Oder that set all tongues wagging as though he had already signed a declaration of war.

"Let me add one thing more," said he. "Gentlemen, there are people so weak as to say that my father thought of giving back what we conquered with the sword. We knew him all too well to accept coolly such a slander upon his memory. He was with us in thinking that nothing secured by the mighty efforts of those times should be given up.

"I believe that we of the Third Army Corps, as well as the whole army, know that on this subject there is but one voice: let us rather lose our eighteen army corps and forty-two million inhabitants on the field than give up a single stone of that which my father and Prince Frederick Charles have won."

This is not pleasant reading in Paris, but it is the kind of language I should expect to hear in New York if any philanthropic move-

ment was on foot to hand Texas or Arizona back to Mexico. It is just the language that would be heard in London if an attempt were made to restore to France, not Alsace-Lorraine, but the Channel Islands.

Shortly after this much-abused speech came the great autumn manœuvres, at which two corps of about 30,000 men each, equipped as for real war, were made to fight one against the other, and to solve in an unknown country all the difficulties of a real campaign. Under the old Emperor William these manœuvres had of late years become rather perfunctory, because of his advanced years and his indisposition to make radical changes. The Emperor Frederick was of course too feeble to make any personal impression on the army during his three months of office, and all Germany looked with eagerness to see what their new emperor would do when commanding large bodies for the first time, and under conditions that would test in some degree his ability to command in real war. He had of course in the field veteran generals of three great wars, and a man of less courage could have readily found an excuse for taking a merely conventional part in these operations. But the Emperor dreamed of nothing less than this. From the beginning to the end of the seven-days' fighting I was able to watch him closely, and even a layman in warfare could note the extraordinary independence with which he made his dispositions, the coolness with which he met sudden emergencies, the attention he was able to give to detail, and the energy with which he appeared at every point of difficulty.

Did he make any mistakes? I presume so;

THE SUMMER RESIDENCE OF THE EMPEROR AT POTSDAM.

I hope so, at least. And every soldier who saw him in those days blessed him for making them there rather than in the presence of a real enemy. He was learning to use his great military machine, and every German felt better at hearing that their Kaiser showed talent for his work. What if he did miscalculate the exact front that a division should occupy in an attack? what if he did bring his cavalry a bit too soon upon the enemy's infantry? The very fact of his doing so on this occasion was the best assurance that it would not happen in real war.

On the 14th of May, 1889, before he had been a year on the throne, he received a deputation of dissatisfied workmen, and, two days later, a similar body of employers. He spoke to each practically, briefly, sharply. He did not pat the employers on the back and order the workmen about their business, nor did he seek to curry favor with the mob by using the delusive phrases so common with politicians on the eve of political elections. What he said to each gave no pleasure to either, but, spoken as it was, honestly and for the good of both, it has given workmen and their employers throughout Germany a feeling of confidence in the Government as a judge in matters industrial.

To the workmen he said :

"Every subject who has a desire to express has of course the ear of his emperor. I have shown this in giving you permission to come here and tell your wants personally. But you have put yourselves in the wrong ; your movement is against law, if only because you have not abided by the fourteen-days' notice required to be given before striking. You have therefore broken your contract. Naturally this breaking of your engagement has irritated the

employers, and does them a wrong. Furthermore, workmen who did not desire to strike have been prevented from working either by violence or threats."

He summed up the wrong they had done, but nevertheless promised to have the matter thoroughly investigated. It is needless to say that he kept his word. When the employers came before him, no doubt expecting sympathy as against strikers, they were taken to task more cuttingly still for their selfishness. "I beg of you," said the Emperor, "take pains to give workmen a chance to present their grievances in a formal manner. . . . It is natural and human that each one should seek to better himself. Workmen read newspapers and know the relation that their wages bear to the profits of the company. It is obvious that they should desire to have some share of this."

Were these utterances the dictation of a political economist paid for joggling the imperial elbow in matters industrial they would deserve only the attention accorded to official papers read from the throne. But when they reflect the convictions of a ruler bent upon solving questions that are tormenting every industrial community, they are remarkable.

During the grand manœuvres of 1889 he received a delegation of university professors and took the occasion to set the country thinking as to whether the present system of education could not be improved. "The more thoroughly and energetically the people understand history," said he, "the more clearly will they understand their position ; and in this way they will be trained to united feeling in the presence of great undertakings." The language is not obscure to a German, who remembers the period of oppression under Napoleon I. and the many years that had to

pass before the people educated themselves to act and to think as one man in the struggle for unity. The Emperor has since taken means to put into practice the ideas he expressed to the professors of Göttingen, and Germans must thank him that the rising generation are permitted to form their ideals not merely from Greeks and Romans of very shadowy interest but from the flesh-and-blood patriots of these days—the Scharnhorsts, the Blüchers, the Gneisenaus, the Steins, the Colombs, Lützows, and other heroes of the great war of liberation.

entertain most strongly is that of relationship and friendship of long standing; and the future can only strengthen the heartiness of our relations."

This, I venture to say, is the most friendly language ever used by a German ruler or cabinet towards the United States, and it gains the more in value by coming from the mouth of a man who would not have said anything that he did not fully mean. The personal regard entertained for Mr. Phelps made the Emperor's language perhaps more easy for him;

THE THRONE-ROOM IN THE EMPEROR'S WINTER PALACE, BERLIN.

Shortly after the manœuvres of 1889 he received our minister, William Walter Phelps, in a manner more than complimentary, saying, among other things: "From childhood I have admired the great and expanding community you represent; and the study of your history, both in peace and war, has given me particular pleasure. Among the many conspicuous characteristics of your fellow citizens the world admires in particular their spirit of enterprise, their respect for law, and their inventiveness. Germans feel themselves the more drawn to the people of the United States because of the many ties that inevitably accompany kinship of blood. The feeling which both countries

but in addition to that, I am sure that few Germans who have not traveled in America are better informed of our conditions, our history, our resources, and our literature than he. When "Battles and Leaders of the Civil War" appeared, it was read by him with interest; as an officer in the army he attended courses of lectures on our principal military operations; and only within the past few weeks he was discussing with an American George Kennan's work on the treatment of Siberian exiles.

In February, 1890, he issued an order the gist of which is in these words: "In my army each individual soldier shall receive lawful, just, and humane treatment." This order was

THE WINTER RESIDENCE OF THE EMPEROR, BERLIN.

unexpected, for the army did not appear at the time to suffer more than ordinarily from the excesses of non-commissioned officers or even of commissioned officers. But it is the Emperor's habit to find out for himself what is going on in barrack-yards as well as in the cabinet. He does not wait until official red tape has permitted the Government to notice an abuse, or until dissatisfaction has spread. His language in this order has not made men more humane, but it has certainly made the brutal more cautious about venting their brutality, and this is as much as human law can hope for.

In the same month he calls together a congress of interested nations to see if something cannot be done to avoid the increasing friction between wage-payers and wage-earners. This congress may or may not achieve all that some have hoped for it. The Emperor himself did not offer to solve any question of social philosophy; his attitude was strictly that of an inquirer. He virtually said to the delegates: "Gentlemen, the industrial situation of Europe is critical. Let us discuss it calmly, let us offer suggestions, let us see if the question is capable of simpler definition."

Whether anything comes of this effort, the fact is remarkable that the most conspicuous public effort of a young and powerful em-

peror has been to interfere in behalf of the daily laborers.

On the 20th of March, 1890, Bismarck left his office of Prime, or rather sole, Minister. I do not wish to enter upon this question here, except to point out that he left office immediately after a popular election which resulted in more votes for socialist candidates than were ever before cast in the history of the empire. He was in a hopeless minority in the Reichstag, and had proved to the satisfaction of his countrymen that, whatever his merits were as a foreign minister, they dwindled painfully when it came to treating the more delicate questions of finance, socialism, press laws, and internal improvement.

During the labor conference the Emperor showed marked civilities to the French delegate, Jules Simon, and afterward sent him as a present the musical works of Frederick the Great, accompanied by a most cordial letter. This was an opportunity offered to France to say something that might be regarded as a harbinger of peace; to cease the snarling over Alsace-Lorraine that has been kept up for twenty years, and promises to continue until after the next war. Germany was disappointed in the result, for France showed that she has now only one political faith, the basis of which is hate.

From the salons of the Faubourg St. Germain to the attics of Montmartre, there is but one feeling — France has had her vanity wounded ; therefore Europe must expect no rest until she has had her revenge.

In 1890, on the 9th of August, Helgoland was added to the Empire without a blow or even an angry word. What Gibraltar is to Spain, that and much more was this little island at the mouth of her principal seaport to Germany. The peaceful accomplishment of so important an object is not so much an evidence of his desire to strengthen his coast-line as of the fact that England and Germany are to-day united in a friendship unknown since the year when Blücher and Wellington fought the French at Waterloo.

I have not spoken of the Emperor's travels in detail, for want of space. In general it may be said that no ruler of modern times has seen so much of the world, and made the fruit of his travels so directly profitable to his people. He has not merely traveled to distant countries, from the North Cape to the Golden Horn, and from the Thames to the Gulf of Finland. His acquaintance with his own country is no less thorough. He masters readily the industrial features of every neighborhood that he

visits, and it is rare for him to meet a man with whom he cannot talk instructively on the country or town that he represents. He does not waste time in these travels, but has a railway train fitted somewhat after the pattern of the Chicago limited vestibule. On the way he despatches state business, and discusses, as he flies along, any proposition requiring signature. His yacht serves him when afloat as conveniently as his train ashore, and both are so well used as to be always in the best working condition.

As an after-dinner speaker the Emperor has no superior in Germany. He speaks readily without notes, expresses himself with vigor, never descends to conventional commonplaces, and, above all, gives the very best assurance that his words are not prepared for him. I have heard conspicuous speakers in England and in our own country, and, if comparisons are not in this case invidious, I should say that the German Emperor need not fear to meet such an audience as even a New England society dinner assembles. One of the prettiest speeches I have listened to was delivered by the Emperor in answering the toast to his wife in the province where she was born. It was during the great combined naval and military manœuvres of 1890, at which the United States was repre-

THE WHITE SALON, WINTER PALACE, IN WHICH PARLIAMENT IS OPENED.

sent by Commander Ward, and Great Britain by Admiral Hornby.

The Emperor's words were: "I desire to express to you, my dearest sir, the gratitude felt by the Empress and myself for the kind words we have just heard; at the same time our thanks to the whole for the day we have passed and for the reception which the province has prepared for us. This day was, however, not needed in order to assure us of the warm friendship we have found here. The bond that unites me to this province, and chains me to her in a manner different from all others of my Empire, is the jewel that sparkles at my side, her Majesty the Empress. Sprung from this soil, the type of the various virtues of a German princess, it is to her that I owe it if I am able to meet the severe labors of my office with a happy spirit, and make head against them."

The words of the Emperor were unexpected, and to no one more so than to his wife, whose face beamed with happiness at the compliment she so publicly received. Nor did any one who listened to the speaker at that dinner think to question the spontaneity and honesty of the language.

In spite of the pomp that custom demands of an imperial court, the German Emperor is a man of singularly simple and healthy tastes. When he is out of office-hours his recreation is largely taken with his children in their nursery, or dropping in at the house of a personal

friend and begging a cup of tea and a cozy chat. He knows the value of knowledge, and while the machinery of his Government provides him with elaborate reports on every subject and from every corner of the world, he still prefers to study his people at first hand, and never loses an opportunity of seeing for himself what is going on about him. He reads, of course, all the new books of importance; sees the good plays, and assists in bringing forward such as have merit; he takes pleasure in running into artists' workshops at unexpected hours; is ready to meet any one who has an idea of interest.

When I think of him as the business manager of a practical political corporation, I am constantly inclined to look for the key to his success and popularity in Germany by quoting the laconic opinion of him expressed by an American officer who was presented to him for the first time at the Baltic manœuvres in 1890. He came away from his audience flushed with excitement, and I expected a vigorous report from the fact that this officer had been drawing his impressions of Germany principally from Paris and St. Petersburg.

"What do you think of him now?" I said.

"Immense; he has a genuine Yankee head on him."

It only need be added that this compliment was the highest in the court vocabulary of my fellow countryman.

Poultney Bigelow.

THOU REIGNEST STILL.

QUEEN JUANA OF SPAIN, TO HER LONG-DEAD LORD, PHILIPPE LE BEL.

THOU liv'st and reignest in my memory,
 Discrowned of earth, but crowned still in the soul
 Subject to thee from pole to utmost pole:
 This is the kingdom thou hast still in fee,
 Though silence and the night have hidden thee—
 King, crowned in joy, and crowned again in dole,
 Sovereign and master of my being's whole,
 My heart and life and all there is of me.
 It is thy breath I breathe upon the air;
 Thou shinest on me with the stars of night;
 Thou risest for me with the morning sun;
 And if I sleep and dream I find thee there,
 And, finding, quiver with the old delight:
 Monarch, yet lover, to thine arms I run.

GEORGE WHARFON EDWARDS.

Thumb- -nail Sketches

MOGLASHEN.

SOME one said that I should visit Beg Island while at Ingonish. But the advice made but little impression upon my mind at the time. In clear weather it might be seen from the shore, its shape resembling a squatty sugar-loaf upon the horizon.

One morning from my perch in the rocks, where I had securely fastened my canvas with ropes and boulders,—for the wind ever blows in this latitude,—I became conscious of the approaching figure of a man leaping from rock to rock, his arms waving wildly with the exertion. Evidently he was headed for the spot which I occupied.

I fancied that he had some message from the village for me, perhaps a letter; but a moment's reflection showed me that the semi-weekly mail was not due before the following day.

As he climbed the boulders I could see his face, a red dot in the center of a bushy growth of sandy whiskers which stood out in all directions.

Panting for breath, he reached the spot where I sat, and bounced himself down beside me at the risk of upsetting my color-box.

Cocking his head upon one side, and rubbing upon his trousers the hand which he had placed directly in the center of my well-covered palette, he ejaculated admiringly, with a sweep of the clean hand, "Hech, mon, but she 'll be a fine peentin' ye 're at."

"Yes?" said I, with an ill-suppressed smile at his predicament. "How did you know I was out here?"

"Aw 'll be speerin' you affshoor, an' the hale popilation kens what ye 're at, an' whaur ye are

tae, for that matter; but, d' ye see? ye 're wastin' ye'r time here. This 'll no be place for the peentin', aw 'll be sayin' to mase' comin' o'er, whan she 'll have Beg Islan'. D' ye ken Beg Islan'?"

"Oh, yes," I said, taking up my palette and endeavoring to repair the havoc his hand had wrought; "I know of it; at least I 've heard of it."

"Of coorse ye 'll hae heard of it, as well as them that belongs te it, the Moglashens. Aw 'll be a Moglashen, d' ye ken? an', what 's more, aw envite ye te stop wi' us o'er te Beg Islan'," he said, wiping his perspiring forehead with the painty hand, and leaving thereon a thin line of new blue, running rainbow fashion with a broader one of ochre. "The fam'ly envites ye, d' ye ken? She 'll be proud te have ye, mairover."

He paused and looked longingly at me. I was about to say something in thanks for the proffered hospitality, when he broke forth, "Ye 'll no be apel te be waverin' here, what-effer, a-peentin' on yon," indicating the canvas with a sweep. "The nor'easter's due, an' 'deed she 'll be here the night."

I saw that the sky did indeed look threatening, and the wind was changing.

"Ef ye 'll be acceptin' ma hospitality, aw 'll take ye ower te Beg Islan' the night."

I endeavored to persuade him of the impossibility of this.

"'Deed, then, an aw 'll no leave ye here, so ye mun just pack up ye'r traps, an aw 'll carry yer peentin' for ye."

As the wind had changed I saw the folly of remaining on the present spot; there was a

narrow gully to be passed, and in certain tides I had been warned that crossing was almost dangerous, for the water surged and boiled through the rocks with tremendous force.

When we came to this place I found that, in preparation for our return, the emissary of the Moglashens had so placed a drift spar that the crossing was comparatively easy. Once upon level ground, or at least that which is called level at Ingonish; his pent-up loquacity broke forth again, apropos of nothing. "Dinna ye see that the feshin 's no what it use te be? Theer aye an ill-gitted folk here, an' aw don't say, d' ye mind? that it 's no the hand o' Providence, for the wracks that 's been handled here."

"Were there wreckers here, then, in the olden times?" I asked idly, more to feed the flame of his loquacity than with an interest in the subject.

"In the olden time, is it?" he said. "Wha, mon,"—with a fearful look about, and a finger upraised,—“whist! aw tell ye, aw 'm keener te see uncommon things than ony. Syne aw takes a daunder through the shanties,—” with a contemptuous sweep of the hand in the direction of the village,—“do aw no see the belongings of the gaun-about bodies? Aw could tell ye o' the bagman's pack — Whist! Aw 'll ask ye — aw say te ye, come te Beg Island te the hoose o' the Moglashens. There ye'r belongin's an' ye'r peentin' 'll be safe fro' the deev'lish fingers; aw 'm sayin' that ye 'll be better off, d' ye see? aw 'm a-givin' ye a sicht o' ma mind — o' ma thochts. Aw 'm givin' ye warnin'."

"Do you mean to say that the people here will rob me?" I said.

"Aw mean te say that —" He broke off suddenly and pointed to the horizon, where Beg Island loomed up dark gray, a pyramid against the windy sky — "Aw mean te say that ye 'll be made welcome there for a twal month, if ye like te stop."

I began to be interested; there might be something in all this rigmarole, perhaps more than the fellow said. My picture was almost completed; it would be good to leave it for a while. The inn where I was stopping was by no means comfortable, hardly tolerable, and my room, being on the ground floor, was rather damp. No other was to be had; the upper rooms leaked from the roof, they said. Why not go over with this eager Gaelic gentleman of the open-handed hospitality? Surely I could be no worse off there than here in my present quarters.

"I 'll tell you what I 'll do," I said, when we were nearly at the inn; "I 'll toss up a cent. Heads I stay here, tails I go with you to-night over to Beg Island."

"Tails it is, an' at the first cast of the baw-bee," said the Moglashen, gleefully, as he touched the coin. "An' ye promised," seeing my glance at the gathering clouds.

Then he ran ahead, calling out that he would get the boat ready and carry down my traps and luggage.

I saw I was in for it now; there was no turning back—I was to be the guest of the Moglashens on Beg Island. There was some difficulty in explaining to the wondering inn people, but at length matters were settled, and I left word that any mail that arrived for me was to be sent over in a special boat.

In two hours we were off Beg Island, which loomed up before us vast and brown through a transparent mist of flying spray. The sea was rough, and before Ingonish was a mile away I had repented of my hasty decision. Soon I heard an exclamation from Moglashen, of whom I began to weary.

"There," he said, pointing to a white speck on the side of the hill, "there 's Moglashen's. They 'll be seein' us the noo. Jeannie 'll be in the toor,—Jeannie 'll be the eldest, d' ye ken? then the 'll be Patty; then the 'll be Matty; then the 'll be Tessie; then the 'll be—"

"What!" I said, "all girls?"

"Aye. The 'll be Lizzie; then the 'll be Laurie—sax o' them, an' a' the most enticin' sort, d' ye ken? But ye 'll see for yoursel. Aw mon say, though, that Jeannie 'll be the leddy," he exclaimed in an emphatic tone.

Here was an adventure sure enough! I was to live in a family of seven women, and I had evidently been brought here with the idea that I might fall a victim to one of the six of "the most enticin' sort."

The thought was so absurd that I laughed aloud, and this seemed to remove some lingering doubts in the mind of Moglashen, who had been eying me, for he exclaimed, with a great show of glee, "Aye," slapping his hand upon his knee, and rubbing it softly up and down. "Ye 'll be that happy—I 'll answer for 't, what wi' pianny playin' sax month on end, an' ye 'll no hae felt the time."

"What!" said I in surprise, "have you a piano here?"

"'Deed an' we hae. Wass a brig come ashoor—salvage, d' ye mind. Wull Taggart would hae it that 't was his, but"—with a chuckle—"aw would na. Mon," he added, after an interval of silence, during which we rapidly approached the island, "when ye hear

the skirl o' Jeannie's voice, and the manful pluckin' o' the pianny, ye 'll no regret yer uptassin' o' the bawbee."

In due time we reached the landing-place between two immense rocks, from which a path flanked by two spars—probably the remnant of the ill-fated brig—led up to the house, a long patchwork structure of stone, the lower part of which was whitewashed. It looked comfortable enough in the low western light.

Moglashen, who was busying himself with the boat, which he had hauled up on a sort of miniature ship-railway by means of a windlass, called out to me to follow the path up to the house, and he would "be joinin' me presently."

Somewhat to my surprise the door remained closed, nor did I see a sign of the "invitin' sort" who, according to Moglashen, were to make me so welcome to Beg Island.

I knocked loudly at the door, once, a half-dozen times, to no purpose, then boldly turned the knob, and entered. A fire was burning in a wide fireplace,—a fire of sea-wood from which tiny flames of green and blue flickered in a most delightful manner,—and a simmering kettle filled the room with harmonious sounds.

The floor was covered with mats of homemanufacture, archaic in design and of various shapes. On the table by the window was a ball of yarn in which the needles were sticking, the half-finished stocking depending from it half-way to

the floor, as if it had been hurriedly dropped, and beside the ball was a pair of silver-bowed spectacles. The room was a homely one altogether, and I threw off my greatcoat and high boots, seating myself in the armchair before the fire to dry my wet feet. The sea had been rough, and some water came over the bow in spite of Moglashen's skill.

While I was musing upon the absurdity of coming over to Beg Island, and almost dozing in the grateful warmth from the sea-wood fire, I heard voices in dispute, then the falsetto of Moglashen mingled with feminine exclamations. They seemed to come from the next room; a door slammed noisily, and then a woman's voice said distinctly: "She 'll no be able to stay here, an' that 's a fact, aw can tell ye, ye daundering aul' ejiot. Whaur in the name o' the prauphet 'll she sleep, when well ye ken

that we're aye sleepin' twa in a bed the noo?" Decidedly this was a welcome.

Just then the door opened, and Moglashen entered, saying with an uncouth attempt at light-heartedness that seemed absolutely ridiculous after what I had heard behind the closed door:

"An' aw hope ye 'll be enjoyin' yersel', ma freend, whiles the supper 's preparin'; an' after the supper we 'll aye hae a bit thump at the pianny. An' noo—" he tiptoed over to a cupboard, from which he brought forth a squatty, promising-looking jug and a cup, and set them before me—"an' noo we 'll just hae a wee bit drap te warm the cockles."

We were in the act of drinking each other's health when a female voice from the other room called out, "Will—yum!"

Moglashen almost dropped the cup from his hand, and, setting it down on the table, said in an awe-struck tone:

"An' aw 'll just hae te leave ye whiles I answer t' wife."

He closed the door after him. I seemed to hear a scuffle and smothered exclamations; then a door slammed, and silence fell. While I was speculating over these happenings Moglashen returned, bearing a lamp, for it had grown quite dark by this time. He still kept up the uncouth semblance of cheerful hospitality while laying the table, putting the tea to draw on the hob, and slicing a savory-looking ham, and then sat down beside me, his eyes fixed on the fire, his hands nervously rubbing his knees.

Determined to know what the trouble was, or rather to corroborate the surmise I had formed, I asked for his wife and daughters; were we not to have their company at supper?

"'Deed, then, aw 'll tell ye the hale lot o' them 's doon sick." He paused to note what effect this might have upon me, running his hand through the fiery red beard.

"Sick!" I exclaimed, "and you brought me here, knowing this?"

"Weel, ye canna be angered when aw tell ye aw deed n't ken they were as sick as aw that—eh, but they 're sare sick the noo," he exclaimed dismally, staring into the blaze, and rubbing his knees and thighs.

"But what ails them, man? Is it anything serious? Can I do anything to help—"

"Nae; ye jist canna, an' that 's aw about it, mon alive," he exclaimed, rising in a kind of desperation, and seizing the teapot. "Ye 'll just take a bit supper an' then—" A noise at the door and the voice calling, "Will—yum!" and Moglashen once more disappeared. When he returned we ate our supper almost in silence, and without further inter-

ruption; after which he cleared the table, handed out clay pipes and a box of leaf tobacco, and set a kettle of fresh water on to boil; then with a sigh, seating himself once more beside me before the fire, he delivered himself as follows:

"A mon may be hospeetable, an' yet hae no t' abeelity t' carry 't oot, d' ye see? Well, then, here ye hae a mon, as aw said, that 's aye hospeetable, an' aw thing 's ag'in' her. She 'll be wantin' for company o' the male kind, an' she 'll no be let hae it in peace, d' ye see? Well, then, aw 'll go a bit farther.

"Here ye hae a mon, as aw say, hospeetable, an' she finds an uncommon chance to hae a bit gossip aboot the grand great ceeties wi' a chap fresh frae it aw. Well, then, she takes a daunder ower the bit rocks, an' presents thae hospeetality to thae chap. Syne thae chap agrees," he continued miserably, "an' thae word 's gien." He paused, and, rubbing his whiskers meditatively, began again: "Here ye hae a mon wi'oot t' abeelity to carry 't oot, an' aw 'm sayin' she 's aye an ill-gitted mon that 's aye wi'oot a ward in her ain hoose; aw 'm sayin' here ye hae a mon wi'oot a word in her ain hoose, d' ye see?" he asked, anxiously seeking my eye.

"I see," I said reassuringly. Indeed I could not help seeing it all. In his own language, here we had a man who had a large element of hospitality in his nature, which he was forced to keep in abeyance in consequence of a difference of opinion on the part of his better half, and, for aught I knew, on the part of the "enticers" as well.

In his desire for companionship he had invited me to come to Beg Island and to stop with him for an indefinite period, all without consulting the wishes of his good lady, thereby getting himself into a difficulty from which he could see no means of escape.

"Well, what is to be done?" I said. "I cannot go out into the storm, and there 's no other house within reach, or—"

"Aw beg ye, don't, don't say anither ward aboot gangin' oot," he said piteously, wringing his hands. "Aw 'm—"

"Will—yum!" And he again disappeared. I composed myself as well as I could in the huge chair before the fireplace; the wind howled dismally around the eaves, and I could hear the waves dashing against the rocks below. I struggled against the desire to sleep; I was conscious that Moglashen came in at intervals, that he replenished the fire, that he piled coats and blankets about me. . . .

I awoke at daybreak, and soon after Moglashen came in, threw some chips and a log on the fire, and began preparations for breakfast. We talked without saying anything, strictly avoiding any reference to the ladies or referring in any way to the Moglashen hospitality. He was garrulous, yet in a subdued manner, constantly glancing at me out of the corner of his eye. He made no resistance to my demand to be taken over to Ingonish immediately after breakfast. I gave him to understand that I believed the "pianny" to be a myth, and—well, there might be six beauteous creatures, but I was not prepared to believe in them.

Utterly cowed, and as different as possible from the canny Moglashen of yesterday, was the creature Moglashen of to-day; his hair and beard no longer stood boldly out from his face, but were brushed back smoothly, evidently by feminine hands.

He led the way down the path to the boat, shoved her down the ways, stepped the mast, shook out the sail to the fresh morning breeze, and thus we left Beg Island and the long, low whitewashed house of the Moglashens shining in the morning sun.

When we were about a mile away I fancied I saw fluttering dresses against the green of the hillside; but this was the only glimpse I had of the ladies Moglashen.

Every week since my return to town a bundle of New York papers goes to Beg Island addressed to William Moglashen, but I have neither heard from him nor seen him since I left him that July morning standing abject and humiliated in his boat under the wharf at Ingonish.

George Wharton Edwards.

A COMMON STORY.

MILTON, NEW HAMPSHIRE,

Oct. 3, 1889.

AM thirty-two. I am not married. Yesterday I found a gray hair. My hair is light; it should not begin to turn so early. I am young. Isn't thirty-two young? We don't talk of age together. But of course he knows. I am not young; I have to remember that. By village standards, by marriage standards, I am just not middle-aged; that is, there is hope for me still. Oh! oh! oh!

for the time when there will no longer be hope, for the day when they will all give me up—the mother (dear mother!), the aunts, my girl friends who have married, the men who notch off birth-days in their cane-bottomed chairs in front of the Iroquois House.

The girl friends are the worst — though there is always mother. But mother is happy. *Her* marriage is a success. The marriages of the girls have been failures in various keys. Mother came in under the old arrangement. What do I mean by the old arrangement? I don't know; but the arrangement under which Sallie Beaumont was *not* married. Yes; that's it—the simple, natural arrangement. You should have heard Sallie's reasons for marrying Fred Maxim; *they* were n't simple, I promise you. Even to a journal I should n't like to tell all those reasons. When I think that Fred might some day come to know what they were I shrivel into a pucker. I wonder if men would ever dare to marry women if they could know *all* their reasons for consenting? Sometimes, perhaps. But none of the girls whose courtships, and engagements, and marriages I have watched from my maidenly watch-tower — my old-maidenly watch-tower, I should begin to call it now, I suppose — would like to be called upon to explain to their husbands all that was in their hearts as they went up the aisle on their father's arm. That I know. Perhaps I know too much. I know a great deal too much to make marriage the simple thing for me that it was for mother.

I wish to gracious that every one would n't tell me everything, and especially I wish that I had n't been obliged to go through Sallie Beaumont's engagement with her. Sallie's engagement, do I say? Dear me! Kate Duffield's, Margaret Hart's, Daisy Monteith's, Helen

Everard's, Sadie Macafee's—what of them? It frightens me just to set them down. But it ought to strengthen me to think that I'm here after it all.

Every one has his misfortunes. It has been mine to be the only girl in Milton who has not at some time between her twentieth and thirtieth year been engaged. I don't mean that my not having been engaged has been a misfortune; much the contrary. But my freedom from all such bother has given me time to look after the engagements of other girls. At least they have thought it did. Sallie could n't have brought her trouble about Fred Maxim and Jimmy Dexter (she was in love with Jimmy, and she knew she ought to marry Fred — Sallie was always intelligent) to Kate or Daisy. Kate was trying to think herself into love with Ned Fellows just then; and Daisy—but I could write a novel about Daisy's case. It was this way: the other girls were busy, and they each saw that I was n't—at least not in that way. Their doubts and their hesitations, and their woulds and their would n'ts, and their final plunge—well, they were awfully interesting. But they were wearing. I used to go upstairs, after Sallie had been proposing unanswerable problems about Fred and Jimmy for an hour in our parlor, and go to bed. Mother used to wonder what kept me so miserable. The truth was, I was suffering sympathetically for those girls. Perhaps you don't know what it is to decide to confide your future to six men at once. I did n't. But I know now. Twelve, I ought to say; for each of the girls had her doubts about some other man. But we declined him, so that really only makes six.

October 4.—I thought I could never keep a journal. I was sure that as soon as I tried to journalize this life I lead it would escape: the things that you can't say (that your hand gets too tired, and ink too shallow, and paper too small, to say) are so many, many more than the things you *can* say. And yet the things that you manage to fix are so interesting that, if you know how to fill up the blanks as I do, you find it fun, on the whole. That is the advantage of writing for your own eye alone: you don't have to fill up the blanks, and yet when you come to the real point, you can talk it down to bare bones with yourself, without caring for proportion or perspective or the relative importance of one of your doings to another. The relative importance of one's doings is just

what one thinks it, of course. My last winter's trip to southern California (it was delightful) would make more of a figure in a biography of me than the way Dick looked at me last evening when he said good-night, I suppose; but that only shows the stupidity of biographers. How can they know? — Which brings me to the real point: Why should I care how Dick looks at me when he says good-night? Or—no; that is n't the real point. The real one is, *Do I care?* Well, I guess I care. But you, Journal, are the only one who shall ever know it.

He has come back; it is two years since he was last in Milton. The last time he had a month's holiday, which left him three weeks here; the other week was spent in going and coming, for he was in Nebraska then. He says he feels like an Easterner now, for his work has taken him to Missouri (he builds trolley-car lines, like those in Boston, I believe, for the little cities out there); but Missouri has n't seemed to be far enough East to let him come back oftener than when he first went West. When he first went I did not care so much, I suppose; at least I did n't reckon time greedily. How strange it seems now; but it is true: whole weeks went by in those days when I did n't think of him. Yet we were friends then too; quite as good friends as now. Only I felt differently about him, I suppose. Suppose? Oh, don't let us pretend to each other, you safe, safe pen and paper, and my heart! To some one, to something, I *must* speak! Somewhere I *will* be all myself! I love him! I love him! . . . How dared I write that? It's a frightful word. But I'm glad. I wanted to look the dreadful thought in the eyes. I've seen it now; perhaps it will do me good. I'm not afraid to love him, though the word scares me. And, besides, no one knows.

October 6.—Yes; it is really true. No one knows. And how do you suppose I am sure of that? Why, because every one,—mother, and all the girls that I've helped to engage and marry and settle, even the one I've seen through her separation from her husband (that's Daisy),—all, all are poking me and pinching me and nagging me into *accepting* Dick! Ah, I've played my part of old maid too well. These twelve years in which I've fought them and scorned them, and swept my skirt clear of their odious ideas of marriage, have convinced them of too much. They have come to believe that because I won't look at the wrong ones there never will be a right one. I have found the right one now, and he has not found me. I tell you the plain fact in that way, dear Journal. I don't mind adding that it's not in this way I tell it to my pillow. He came a fortnight ago to-night. When

did I last sleep the night through? It was on a Wednesday. He came on a Wednesday. Oh me, how hot and wet one's pillow gets by two in the morning! And there is still the long night. They wonder why I get up so early. It's not because I'm rested. Oh, I'm tired, tired! How do other girls do who love men who don't love them? They don't. They don't allow themselves to. They have their pride. I've lost mine. And then they don't have a whole village at their heels begging them to like the man just a little, entreating them to give him a chance. There, I've said it. Give him a chance! I blush even to write it. How can I?

October 10.—You see what I mean, you poor, patient Journal. I am being thrown at the head of the man I love (O Dick, under my breath, hear me say how I love you!) upon their wicked and revolting theory about marriage. I am to trade upon the weakness of men; I am to bring him to my feet; I am to allure, to call him on, to snare him—why not say it? I am to make love to him—I who love him, I who would die ten deaths rather than that he should know it! Oh, is it likely?

October 13.—Dick is just a little younger than I am—perhaps a year. We went to the village school together long ago. We were in the same class. He used to bring me apples; we ate them together straight on through the season, from the blossom to the Baldwin. And then there was the Strawberry apple, which was good too, with its pretty streaks of red through the center. Dick used to call them blushes, and to make comparisons. He does n't make comparisons since he came back this time, and he is otherwise much changed. I like the changes. They only make him more utterly, Dickily Dick. Well, Journal, you would like him too if you could see him.

What is he like? What is any young girl's dream like? What is the love of a youthful spinster like? Like the nicest thing there is. Dick is a man, you know. That's it. Except my father, he is the only quite man I know. There are male beings and men. He was a man even as a boy, when he fought Tommy Maeder for me, and charged a snowballing mob of boys in my defense, single-handed. I liked him then. He knows that; he believes I still like him. I don't; but he will never know the difference. Mama and Aunt Caroline and the girls have arranged all that. Every time I meet him I say to myself, "I will conquer this feeling; I will. I will be natural with him. I will be myself." And every time it is the same old story. I am not myself: I am not any one at all. He does n't recognize me. I can see it. Why should he? I don't recognize myself. I am like a person who longs to shout, and can only produce dumb sounds. All the natural out-

flow of my nature — there really used to be one — seems dammed up the moment we meet now. I am baffled. I almost think I used to have a sort of charm for him once ; and if I ever had it is there still, perhaps. But it might as well not be. It will never reach him ; the wires are down. It all appears so strange that it somehow seems at times as though it could not concern me. At these times it seems another girl's story,—the story of a girl not less cruelly helpless,—at which I look on sadly. Ah, I've listened to other girls so long!

I shake mother ; but what good does that do? It's a feeling. You can't shake a feeling. It sounds like a simple thing to say to these eager, urgent, watchful girls who come to seeme every morning and talk of nothing else. "It's not urging I need. What I need is his love, and you are making it impossible." But the only simple thing about it is its brevity. I could never say it, of course, and if I could they would n't understand. Did n't I engage them and marry them? Don't I know their impossible ideas about marriage? — the ideas common among women, I mean. And my mother's ideas — yes, even my own dear mother's — are the same. In a way I bear it better from her. As I said, her marriage has been a success. The results of the marriages of the others make advice from them an impertinence. I have learned that it is n't, though ; it is simply the married woman's view of marriage, which is one and the same the world over. They mean it for my good — they always make that plain — when they pluck at me in private and throw me at his head in public ; and that they are killing me, instead, is just what I can't tell them.

They treat us as if we were engaged. I believe they come to the house when they know Dick is coming in order to go away on his arrival and leave us *tête-à-tête*. They nod kindly to me as they make their adieus on these occasions, and include us both in a look of understanding. If we go out together, — and on the whole it is less conscious, I have decided, to accept Dick's invitations than to refuse them, — we are isolated at once by common consent, as if I were n't already cut off from him enough by my own feelings! Perhaps it is merely the unskilled rural way of doing a thing which might be carried off naturally enough in town ; but it gives me the cold shivers. And do you think I can speak a natural word to Dick that evening? I don't know that I am more than common shy (though I'm not brazen, either), but I have my woman's senses. I can't help that. And these things simply stupefy and paralyze all our intercourse.

In a village it is easy to bring the entire population to agreement upon questions of a certain kind. Since Dick's arrival my mother,

my aunt, and the girls have unintentionally made it as plain to every one as if they had posted it at the town hall, that they look upon Dick Lester as a man whom I might capture if I would. I put it grossly. They state it more prettily to me ; but this is really what they mean. They are accustomed to add that it is my last chance — again putting it more politely.

Last night at the Unitarian fair I helped them out as "Rebecca at the Well," and from behind my curtain had the satisfaction of hearing young Mrs. McGregor (the wife of our doctor) say to Dick, "Is n't Miss Devius coming this evening?" I said that they treat us as if we were engaged. I should have said that they treat us as if we were married. And they think this the way to throw me into his arms! Of course he sees ; an owl must see. Imagine our graceful, natural, and easy conversation! Ugh!

October 17. — I have just learned that Dick's vacation expires a week from to-day.

October 18. — Yes, of course he sees. My too amiable mother made up a party yesterday to go over to the lake. I declined to make one of the carriage company. But mother insisted. They put us together on the front seat of course, and made Dick drive. I believe mother thinks Dick is the *driver* of his trolley cars. He does drive very well, because he does every thing well, and on this occasion he gave his whole mind to it. I saw he had begun to feel my inexplicable conduct ; but he said nothing then, and I could say nothing. I don't think we exchanged fifty words on the way to Lake Mesowree.

After luncheon on the shore — it's really a beautiful lake, hemmed in by the most gorgeous old hills — the company divided into rowing parties. You can imagine how they arranged it for Dick and me. He pulled for a mile or two in a silence which I made a number of efforts to break. But I could not force myself to speak. It has come to that. I can no longer so much as break a silence with this man whom I love, and whose reading of me I dread in every nerve. How he must wonder! But I am helpless. Stiff, formal, lifeless — that is what all our talk has become. It's a blight. I can do nothing with it. Two years ago, when he had been three years in the West and came home on his first vacation, it was all so different. We met then on the sure footing of our childish friendship ; there was the common liking to which we could both trust, and the common understanding. That is gone now, and we have nothing in its place. We have merely drifted into the doldrums.

If they had let us alone I don't say that the other would have come ; but things have their natural way of blossoming, and love has come

before of such relations. I suppose I must have loved him then—that is, before he went away. I was sure of it when he took my hand a little more than two weeks ago, the night he came back for this second time, and said in that deep, good, honest voice of his, “Well, Ellen?” Ah, if they would but let me have him,—if they would not snatch my love away and cry it in the streets so that every natural act becomes a shame to me, and I must seem to propose to him with every civil word I give him,—well, everything might be different!

Oh, I say might! I don’t know. He might care, he might not. But I could give him “the chance” my mother talks of in her awful ignorance of her daughter. I mean I could be myself; I could let things take their course. It is all that a woman has—that right: it does not seem a great privilege, does it? But I am denied it.

This is the sort of thoughts that keep racing through my head when I am with Dick. I was watching him pull silently on with big sweeps of his strong arms, and I ought to have been chatting with him, like the sensible and lively person I really am, but I was thinking instead, and thinking thoughts which never helped any one to such conversation—thoughts which I hardly dared think in the same boat with him. It always seems to me that he must see through the thin partition between such thoughts and him, his eyes are so clear; and something he saw in my face seemed actually to make him speak after a moment. I remember very well that it was at that moment that I was making my eyes seem to see him far, far away again, and wondering how I should bear it. He was drifting, drifting steadily out of my reach in my fancy,—it was the boat, I suppose, that gave me that idea,—and I was standing on a beach stretching my helpless arms out to him, and crying after him to come back; and he was willing, or not unwilling, but he too was helpless. He was being quietly, and steadily, and pitilessly carried away from me. His question brought me back to an actual lake, and to a real Dick who was asking me, ever so gently, in a kind way which is like no one’s else, why I was so different lately. Of course I had known this must come some time; but between my sad vision and my surprise at the suddenness of the question, I was in a panic, and had to think how to make myself appear quite calm before I could answer his question.

I said the very idlest and stupidest thing I could have said, naturally.

“Am I changed?” I asked.

Then it lay with him to show me how I was changed; and he did n’t lack circumstances for the accusation. It was impossible to answer him; I knew that from the start. But I really

think it would have been easier if he had n’t been so generous through it all, so anxious not to wound me, and so solicitous for our old friendship. He would hate to lose it, he said; he hoped I felt the same about it. O Dick! Dick!

For that one moment I wanted to be a man. In that one moment I would have given everything I possessed for the man’s right to be honest.

I don’t know what I said to him. I was thinking one thing and saying another, and what I said does n’t count except for its effect, which was to give him the impression that I was changed and was conscious of it, and that there *was* a reason which I would rather not tell him. I can see now that that impulse in defense of modesty, which, to women, is like the instinct of self-preservation, forced me to let him believe that the change, if there was one, was perhaps the dumb protest of a decent woman against the intention he must perceive in those about me. I saw that, whatever I had intended he should believe,—and I can never be sure now what it was,—this was what he did finally arrive at. I saw it from the sympathy and the respectful understanding implied by his tone, his manner, everything. And, as I sat there, watching him row on and on, I grew coldly, deadly sure that if there had ever been a chance for me to fight my way back to our old understanding—an understanding which now should include the new—it was gone. The half-truth he had got hold of was worse than any whole error. For half-truths there are no explanations.

Dick’s glad, cordial manner—a complete change from the Dick of the drive over—was in itself a definite and kindly assurance that no explanations were needed. If he could have known how I longed to explain, and how miserably unexplained I remained after he had understood everything! That friendly effect of having understood everything was in all his bearing towards me until we parted that night in the cool darkness at my mother’s door, and there he confirmed it in his lingering and speaking hand-clasp. We drew near in spirit at that moment, and again, as in the boat in the afternoon, I seemed to see our destinies taking form. But this time I saw clearly that we might be all in all to each other, that he could love me, that he *must* love me if we could know each other’s hearts. But what his hand-clasp was actually saying was that he understood—and everything! Good heavens! *Everything!*

October 21.—My mother has seen that we have entered on a new phase. I think my behavior, as she always calls it when it is a question of men, had begun to discourage even her; not in itself, but through its obvious effect on

Dick. But since Dick has understood he is so different, and we are so different together, in appearance, that mother has taken heart. She sees the kindness for me in all his bearing which now no one could help seeing; what she does not see is that she and the others have made it impossible for me to assist at the change of that kindness to anything nearer, in the way that all women assist at their love-affairs by merely consenting to them. If I was incapable of a natural attitude with him before, what do you suppose I am now? If I could not let him love me before, has it been made easier for me? But mother, naturally, cannot see this, and I certainly cannot tell her. So she has been going over the whole matter with me this morning again, making a last despairing appeal. As if I could do for appeals what I can't do for my own heart!

Yet I pity mother. Even if she does n't understand, I pity her. Ah! understand! You and I and our tears understand one another, don't we, Journal?

Dick comes daily now, and stays a long time, and is infinitely, tirelessly, agonizingly kind. Sometimes he is so kind that I feel as though I must scream. I really can't keep it up much longer. If he had not already set a day for going I believe I should beg him to do me the final kindness — the only one in his power — and go at once. He would even do that for me. He *does* like me; we talk of each other's lives; we have such heart-searching talks about everything but the only thing that matters; we find each other's thoughts and feelings intuitively; we get along. Why should n't we? We were made for each other, were n't we? That we are not going to carry out the arrangement — well, that's not our fault, is it? At least it's not mine, and I'm sure it's not Dick's. I forgot to say that I am quite, quite clear now that Dick would have loved me. . . .

October 24.—He came to see me last. He wanted me to be his last impression of home, he said. It was a chilly morning, such as comes up here in the mountains towards the last of October. The leaves on the hill we see from our front windows have all fallen; they were very gay three weeks ago — when he came. The Seckel pears are just ripe. He would n't come in; he held his hat in his hand as he came into our hallway for a moment. In his other hand he carried a small hand-bag.

"So you're really going?" I said. He had said the night before that he would look in on his way to the station, and all the morning I had waited his coming, imagining just this scene. But, now that he was here, it was this that I found to say.

He looked into my eyes — Dick's honest, stanch look — and said, "Yes; it's been good to be at home."

"But it's good to be going back to work, too," I said. I did not find the courage for a look like his; my eyes halted at his chin.

"Of course; work is always good. But the best thing is old friends. These have been happy times, Ellen, seeing you again. I sha'n't soon forget our talks. I shall have time to remember them in Missouri."

"But you have the new friends there." I wanted to hear him say it, and of course he said it, as he looked into my eyes, and took my hand.

"They're not like the old," he said.

"No?" asked I.

"No. Good-by." He took my hand in a wonderful, strong, warm, hearty grasp, and released it almost instantly.

"Good-by," I said, following him to the door as he put on his hat.

"Good-by."

At the gate he kissed his hand to me.

Wolcott Balestier.

TWO KINGS.

I.

ONE was a king of ruthless power
Who spurned his people's trust,
All whiteness from his soul erased
By tyranny and lust.

One was a monarch just to all
Within his kingdom's reach,
His creed of charity and love
Flowered in act and speech.

II.

The tyrant on a sumptuous couch
Outbreathed his final breath,
And his life lapsed all unconsciously
From tranquil sleep to death.

The king beloved by grateful hearts
Throughout his prosperous land,
While issuing some benign decree
Died from a murderer's hand!

William H. Hayne.

ON THE STUDY OF TENNYSON.

(To Miss Grace Newlight,
Oldport, near Boston.)

MY DEAR MISS NEWLIGHT:

It is very good of you to begin your letter by saying that you have read my book on "The Poetry of Tennyson." Almost every candid author (except, perhaps, a few who have written, but not published, in or near your native place) will acknowledge that he has what the French call a "*faible*" for the persons who have voluntarily become his readers, and that he inclines to form a high estimate of their wisdom, taste, and personal character. In this weakness I share, and take no shame in confessing it. Whether the opening of your letter was dictated by the natural goodness of your heart, or whether you have added a gentle diplomacy to your many other accomplishments, you have certainly put your request for "advice about the best way to study Tennyson" in such a form as to make me sincerely desirous of offering you my poor best.

Candidly, then, and after serious reflection, upon my literary honor and conscience, I believe that the very best way to study any poet is to read his poems.

There are other ways, of course; perhaps easier, unquestionably more in vogue. You remember those profound lectures which Professor Boreham gave last Lent on the "Pessimism of Petrarch," and how many young women were stimulated by them to wear the Laura hat and to enter a higher life. You know also the charming Mrs. Lucy Liebig, in whose "Class for General Information" it is possible to get the *extractum carnis* of several modern poets in an hour, so that thereafter one can speak of all their principal characters with familiarity and even with accuracy. You have been a member of the "Society for the Elucidation of the Minor Moral Problems in Sordello," and a subscriber to "The Literary Peptone," whose accomplished reviewers have made the task of digesting a book for one's self seem like an obsolete superfluity. With all of these devices for poetical study, so entertaining and in their way so useful, you are familiar. But, after all, if you really care to know and love a poet, I must commend you to the simple and old-

fashioned plan of reading him. Nothing can take the place of that.

And with Tennyson, believe me, you will not find this plan difficult. It is not an adventure for which you will need great preparation or many confederates. You may safely undertake it alone and for pleasure. Here and there, especially in "The Princess," there are hard places where good notes will help you. And perhaps with a few poems, notably with "In Memoriam," one needs an analysis or commentary. But in the main Tennyson is a clear poet, and therefore a delightful one. The only book which is indispensable for understanding him is that thick, green volume which bears on its back the title "The Works of Tennyson." Get a copy of this book for your very own,—and if you are wise, my dear young lady, you will get one that is not too fine for you to mark on the margin, and if you have a tender conscience you will get one that has not been pirated,—take it with you into a quiet place, among the mountains, or on the seashore, or by your fireside, and read it with a free mind and a fresh heart. Read not as if you were preparing for an examination or getting ready to make an index, but read for the sake of seeing what the poet has seen, and feeling what he has felt, and knowing what he has thought—read the book not for idle pastime, but for noble pleasure; not for dry knowledge, but for living wisdom. And if you read thus, I am sure it will do for you what Dr. Johnson said that every good, great book ought to do—it will help you to enjoy life and teach you to endure it.

Now I am perfectly sure that you are not a member of the tribe of the Philistines, and therefore you will not think of reading such a book as you would read a treatise on logic, straight through, from the first page to the last. You will want a plan, a principle of order, to direct your reading. The first question you will ask is, Where to begin among the poems, and how to continue? Is it possible to classify them? Can we "get a line through Tennyson" which may help us to understand the meaning of his works, and their relation to one another?

Well, as to classification, I am not inclined to set a very high value upon it in the study of poetry. There are certain broad divisions which can be made—none better, after all, than the old Greek trichotomy of epic, lyric, and dramatic, corresponding to the intellect, the emo-

tions, and the will. But unless you use this division in a strictly formal and mechanical fashion, it will not be possible to make the works of Tennyson, or of any other modern poet, fit into it exactly. You will find that some of the poems do not belong to any one of the three divisions, and others plainly belong to several. You will not know at all what to do with "Maud," or "Locksley Hall," or "The Palace of Art," or "Ulysses," unless you put them into a borderland. And when it comes to more minute classification, on the lines of psychology,—poems of reflection, poems of imagination, poems of fancy, poems of sentiment, and the like,—I doubt whether even a great poet can accomplish such a thing with his own works successfully. Wordsworth tried it, you know; and Matthew Arnold, an avowed Wordsworthian, confessed that it was not worth much. The first of Browning's commentators, Mr. Nettleship, made an even more elaborate analysis of that master's poems in the first edition of "Essays and Thoughts." Here is a specimen of it:

II. A. Poems not strictly dramatic in form, but which deal with the history, or some incident in the history, of the souls of two or more individuals mutually acting on each other towards (1) progress, or (2) arrest, in development.

But in his second edition Mr. Nettleship, with amiable frankness, makes fun of his own analysis. I would rather not attempt anything of the kind with Tennyson's poems, even for the pleasure of ridiculing my own failure afterward.

But though an exact classification may be useless or impossible, a general order, a broad grouping of the poems for the purpose of comprehending them as a whole, might be helpful and not too difficult to make it worth trying. It would serve, at least, as a guide to your reading, and bring together the poems which are most closely related in spirit and manner. I beg you then, to accept what follows, not as a classification, but simply as

AN ARRANGEMENT OF TENNYSON'S POEMS.

I. MELODIES AND PICTURES.

1.

Claribel.
Leonine Elegiacs.
Nothing Will Die.
All Things Will Die.
"The winds, as at their hour of birth."
The Owl.
The Dying Swan.
The Blackbird.
The Thristle.
The Snowdrop.
Early Spring.

Far — Far — Away.
"Move eastward, happy Earth."
"A Spirit haunts the year's last hours."
The Death of the Old Year.
A Farewell.
A Dirge.
The Merman.
The Mermaid.
The Sea-Fairies.
The Lotos-Eaters.
Child-Songs.
The Song of the Wrens.

2.

The Kraken.
The Eagle.
The Oak.
Recollections of the Arabian Nights.
Ode to Memory.
The Progress of Spring.
The Daisy.
Mariana.
Mariana in the South.
A Dream of Fair Women.
The Day-Dream.
The Beggar-Maid.
Isabel.
Lilian.
Madeline.
Adeline.
Margaret.
Rosalind.
Eleänore.
Sir Launcelot and Queen Guinevere.
The Lady of Shalott.

II. STORIES AND PORTRAITS.

1. Ballads.

Oriana.
The Sisters.
The May-Queen.
In the Children's Hospital.
Edward Gray.
The Letters.
Lady Clare.
The Lord of Burleigh.
The Captain.
The Victim.
The Revenge.
The Defense of Lucknow.
The Voyage of Maeldune.
The First Quarrel.
Forlorn.
Happy.

2. Idylls.

Audley Court.
Walking to the Mail.
Edwin Morris.
The Golden Year.
The Brook.
Sea Dreams.
The Lover's Tale.
The Sisters.
The Ring.
The Miller's Daughter.
The Talking Oak.
The Gardener's Daughter.
Godiva.
Dora.

Enoch Arden.
Aylmer's Field.
Ænone.

3. *Character pieces.*

A Character.
Love and Duty.

Tithonus, }
Teiresias, } *Classical.*
Demeter, }

Lucretius, }
Ulysses, }
Columbus, } *Historical.*
St. Simeon Stylites, }
Sir John Oldcastle, }
Romney's Remorse, }

Fatima, }
St. Agnes' Eve, } *Mystical.*
Sir Galahad, }

Amphion, }
Will Waterproof, }

 Vastness.
 Crossing the Bar.

Now if you will bear in mind that this arrangement is confessedly imperfect, you may have the double benefit of using it and finding fault with it at the same time. I think, at least, that it omits nothing of importance, that it is constructed on the lines of poetic development, and that it will be easy to discover the inward relationship and coherence of the principal groups, so that you can follow a clue from poem to poem.

You will do well to begin with the melodies and pictures, because Tennyson began with them, and because they belong to the lowest form of his art, although it is the form in which he has done some of his most exquisite work. There are many people — and not altogether illiterate people — who still think of him chiefly as a "maker of musical phrases." Well, he is that; and he meant to be that, in order that he might be something more. At the very outset he sought to win the power of expressing sensuous beauty in melodious language. The things seen and heard, the rhythm, the color, the harmony of the outward world — these were the things that haunted him, and these, first of all, he desired to convey into his verse. He threw himself with all the passion of youth upon the task of rendering these things perfectly.

I call it a task, because no man has ever done this kind of work by chance. Even to the painting of a simple flower or the making of a little song perfectly, there goes an infinite deal of preparation, of learning, of effort. Sometimes it is conscious, sometimes uncon-

scious; sometimes it is direct, sometimes it is indirect: but always it is there, behind the music, behind the picture; for no one can do anything good in any art without labor for the mastery of its little secrets which are so hard to learn.

If, then, you find some traces of effort in Tennyson's first melodies and pictures, like "Claribel," "The Mermaid," "Recollections of the Arabian Nights," you will say that this is because he has not yet learned to conceal the effort; and if you find that in the best of them, like "The Lotos-Eaters" and "The Lady of Shalott," the chief interest still lies in the sound, the form, the color, you will say that it is because he has set himself to conquer the technique of his art, and to render the music and the vision beautifully, for the sake of their beauty. Mr. R. H. Hutton, who does not always see the bearing of his own criticisms, has said, "Tennyson was an artist even before he was a poet." That is true, but it does not take anything away from his greatness to admit such an obvious fact. Giotto was a draftsman before he was a painter. Mozart was a pianist before he was a musician.

If you are wise, you will look chiefly for the charm of perfect expression in these melodies and pictures. Take a little piece which has stood on the first page of Tennyson's poems for sixty years — "Claribel." It does not mean much. Indeed its charm might be less if its meaning were greater. It is mere music — every word like a soft, clear note, each with its own precise value, and yet all blending in a simple effect. The difference between the sound of the quiet wave "outwelling" from the spring, and the swift runlet "crisping" over the pebbles, is distinct; the "beetle boometh" in another tone from that in which the "wild bee hummeth": but all the sounds come together in a sad, gentle cadence with the ending *eth* —

Where Claribel low-lieth.

In the picture-poems you will find a great deal of Preraphaelite work. It is exact and vivid, even to the point of seeming often too minute. It is worth while to notice the color words, how few they are, and yet how perfectly they do their work. Here are two lines from the "Ode to Memory":

What time the *amber* morn
 Forth gushes from beneath a low-hung cloud.
 That "*amber*" sheds all the splendor of day-
 break over the landscape.

And here, again, is a stanza from "The Lady of Shalott":

Willows *whiten*, aspens quiver,
 Little breezes dusk and shiver
 Thro' the wave that runs forever

By the island in the river
 Flowing down to Camelot.
 Four gray walls, and four gray towers
 Overlook a space of flowers,
 And the silent isle imbowers
 The Lady of Shalott.

How exquisite is the word "whiten" to describe the turning of the long willow leaves in the wind, and how well it suggests the cool coloring of the whole picture, all in low tones, except the little spot of flowers below the square, gray castle.

I do not think that this is the greatest kind of poetry, but certainly it has its own value, and we ought to be grateful for it. The perfection to which Tennyson has brought it has added a new sweetness and fluency to our language. Just as a violin gains a richer and mellower tone by the long and loving touch of a master, so the English language has been enriched and softened by the use that Tennyson has made of it in his beauty poems.

But already we can see that something deeper and stronger is coming into these beauty poems. The melodies begin to have a meaning, the pictures begin to have a soul. Of many of the young women in his gallery of female figures — Lilian, Adeline, Madeline, and the rest — it may be said in Tennyson's own words:

The form, the form alone is eloquent.

But in Isabel we see a character behind the form, and the beauty of her nature makes her sisters seem vague and unreal beside her. "The Lady of Shalott," which I have placed last among the melodies and pictures, is in effect a mystical ballad, foreshadowing the transition from the dream-world of fancy to the real world of human joy and sorrow. And so we come to the second group of poems, the stories and portraits.

The interest here centers in life and personality. It is some tale of human love, or heroism, or suffering, that the poet tells; and then we have a ballad. Or it is some picture that he paints, not for its own sake alone, but to make it the vehicle of human feeling; and then we have an idyll; that is, a scene colored and interpreted by an emotion. Or it is some character that he depicts, some living personality that he clothes with language, either in a meditative soliloquy which shows it in all its breadth of sentiment and thought, or in a lyrical outburst from some intense mood; and then we have what I have ventured to call a character-piece. The lines between these three divisions cannot be very clearly drawn. I have been much in doubt as to the best place for some of the poems. But there is a real difference among them, after all, in the predominance of the narrative, the descriptive, or the

dramatic spirit; and you will feel the difference as you read them.

In the ballads I think you will feel that the secret of their charm lies quite as much in their human sympathy as in the perfection of their art. The clearer, simpler, more pathetic the story, the more absolutely does it control and clarify the music. The best of them are those in which the beauty comes from delicate notes, so slight that one hardly hears them, though their effect is magical. How much the pathos of "The May Queen" is enhanced by the naïve touch in these verses:

Oh look! the sun begins to rise, the heavens are
 in a glow;
 He shines upon a hundred fields, *and all of them*
 I know.
 And there I move no longer now, and there his
 light may shine —
 Wild flowers in the valley for other hands than
 mine.

Or listen to the last lines of "The Lord of Burleigh":

Then her people, softly treading
 Bore to earth her body, *drest*
In the dress that she was wed in,
 That her spirit might have rest.

This is perfect simplicity — words of common life charged with the richest and tenderest poetic meaning. No less simple in its way — which is utterly different — is the glorious fighting ballad of "The Revenge." It is the passion of daring, now, that carries the poem onward in its strong, heroic movement. There is not a redundant ornament in the whole ballad. Every simile that it contains is full of swift motion.

At Flores in the Azores Sir Richard Grenville
 lay,
 And a pinnacle, *like a flutter'd bird*, came flying
 from far away.

So Lord Howard past away with five ships of
 war that day,
Till he melted like a cloud in the silent summer
 heaven.

Sir Richard spoke, and he laugh'd, and he
 roar'd a hurrah, and so
The little "Revenge" ran on sheer into the heart
 of the foe.

Among the idylls you will find a great difference. In some of them the pictorial element seems to count for more than the human feeling, and these I think are the poorest. Of such slight sketches as "Audley Court" and "Edwin Morris" all that can be said is that they have pretty passages in them. Tennyson was right in caring little for "The Lover's

Tale." "Aylmer's Field" is weaker than "Enoch Arden" just in so far as it is more ornate and complicated. "Dora" is the best of all, and I doubt whether you can discover one metaphor, or figure of speech, or decorative adjective in the whole poem. It moves like the book of Ruth, in beauty unadorned.

In the character pieces you will be impressed, first of all, by the breadth of their range. They touch the whole circle of humanity, from the Roman philosopher to the English peasant; they even go beyond it, and breathe into the ancient myths, like "Tithonus" and "Demeter," human life and passion. Some of them are humorous, as "Will Waterproof" and "The Northern Farmer"; and others are mystical, as "St. Agnes' Eve" and "Sir Galahad"; and others are passionate, springing out of the depths of life's tragedy, as "The Wreck" and "Despair." But almost without exception they are true and distinct portraits of persons.

And then you will observe that (with one early exception, "A Character") they are all dramatic. The characters are not described; they speak for themselves, either in blank-verse monologues or in dramatic lyrics. The first is the form that is used chiefly when the mental quality is to be expressed; the second is the form chosen to reveal the emotional quality. In all of them the thing that you will look for, and the test by which you will value the poems, is the truth of the thought and the utterance to the character from which they come. And I think that most of them will stand the test. If Mr. Swinburne had written them he might have made Ulysses and Columbus and Sir Galahad and the Northern Cobbler all speak the Swinburnian dialect. Mr. Browning might have set them all to analyzing their own souls and talking metaphysics. But with Tennyson each character speaks in a native voice and thinks the thoughts which belong to him. Take the subject of Love and hear what the Northern Farmer has to say of it:

Luvv? What 's luvv? thou can luvv thy lass an'
'er munny too,
Maakin' 'em goâ together, as they 've good right
to do.
Could n' I luvv thy muther by cause o' 'er munny
laaïd by?
Naây — for I luvv'd 'er a vast sight moor fur it:
reâson why.

And then listen to the hero of "Locksley Hall":

Love took up the harp of Life and smote on all
the chords with might;
Smote the chord of Self, that, trembling, pass'd
in music out of sight.

Or take the passion of exploration, the strong desire to push out across new seas into new worlds, and mark how differently it is felt and expressed by Ulysses and Columbus. Ulysses is the "much-experienced man," with a thirst for seeing and knowing which cannot be satiated.

I cannot rest from travel; I will drink
Life to the lees: all times I have enjoy'd
Greatly, have suffer'd greatly
I am become a name;
For always roaming with a hungry heart
Much have I seen and known; cities of men,
And manners, climates, councils, governments,
Myself not least, but honour'd of them all;
And drunk delight of battle with my peers
Far on the ringing plains of windy Troy.
I am a part of all that I have met;
Yet all experience is as an arch where thro'
Gleams that untravell'd world, whose margin
fades
For ever and for ever when I move.

This is the deep impulse of motion without a goal, the mere *Reiselust* of a restless heart. But Columbus is a man with a mission. It is the glory of Spain and the spread of the Catholic faith that drives him to seek an undiscovered continent.

I pray you tell
King Ferdinand who plays with me, that one,
Whose life has been no play with him and his
Hidalgos — shipwrecks, famines, fevers, fights,
Mutinies, treacheries — wink'd at, and con-
doned —
That I am loyal to him till the death,
And ready — tho' our Holy Catholic Queen,
Who fain had pledged her jewels on my first
voyage,
Whose hope was mine to spread the Catholic
faith,
Who wept with me when I return'd in chains,
Who sits beside the blessed Virgin now,
To whom I send my prayer by night and day, —
She is gone — but you will tell the King, that I,
Rack'd as I am with gout, and wrench'd with
pains
Gain'd in the service of His Highness, yet
Am ready to sail forth on one last voyage,
And readier, if the King would hear, to lead
One last crusade against the Saracen,
And save the Holy Sepulchre from thrall.

Or take the subject of death. To the weary philosopher, Lucretius, resolved on suicide, it means simply absorption into nature.

O thou,
Passionless bride, divine Tranquillity,
Yearn'd after by the wisest of the wise,
Who fail to find thee, being as thou art
Without one pleasure and without one pain,
Howbeit I know thou surely must be mine,
Or soon or late, yet out of season, thus
I woo thee roughly, for thou carest not
How roughly men may woo thee so they win, —
Thus — thus: the soul flies out and dies in the air.

But to the peasant mother in "Rizpah" it means the fulfilment and recompense of her intense, unquestioning passion of maternity.

Election, Election and Reprobation—it 's all very well ;

But I go to-night to my boy, and I shall not find him in Hell.

For I car'd so much for my boy that the Lord has look'd into my care,

And He means me I'm sure to be happy with Willy, I know not where.

Nothing could be sharper than the contrasts among these six poems; nothing more perfect than the consistency of thought, and feeling, and utterance, with the character in each.

"Maud," the longest of the character pieces, is a series of dramatic lyrics uttered by one person. Tennyson calls it a monodrama. The estimate that you will put upon it depends somewhat, I imagine, upon the age of your mind. If you are in the storm and stress period of mental adolescence, you will probably find that "Maud" is splendid. If you have passed a little beyond that, you will probably add that it fails in method. The lyric is overtaken; the passion is driven too hard. The finest passages—and some of them are superb in melody—lose something of their beauty because the reader comes to them half-wearied by the prolonged emotion of the poem. They would touch us more if they stood alone, or against a background of simple narration. And yet, though one may confess that "Maud" is a little incoherent, no one can say that it is not consistent as a study of the action of romantic love and tragic error upon a mind with a taint of hereditary insanity. This, it seems to me, is the right key to the understanding of the poem.

Of Tennyson's complete dramas I have said elsewhere that which seemed to me needful and fitting. Let me only beg you to study them for yourself,—at least the historic trilogy,—and not to be satisfied with taking the judgment of other people.

The finished epics, also, I have tried to criticize in another place. "The Princess" is the one of Tennyson's poems which stands most in need of notes. It is fortunate that they have been supplied by such an accomplished scholar as Dr. W. J. Rolfe, in his annotated edition. For my own part, I am inclined to think that this very need, which must arise from obscurity in the allusions and complexity in the diction, marks the poem as belonging to a lower order than Tennyson's best.

The epic entitled "Idylls of the King," besides its interest as the broadest and noblest piece of imaginative work that Tennyson has done, is the place in which you may most wisely make a careful study of his poetic manner. It

is common to speak of the Idylls as a gorgeous medieval tapestry, full of rich color and crowded with elaborately wrought figures. But I should like you to discover whether there is not something more precious in it; whether the very style has not rarer and finer qualities than mere ornament. Take some of the best passages, in which the so-called "Tennysonian manner" is quite distinct, and examine them thoroughly. For example, here is Arthur's description of his Round Table, from the idyll of "Guinevere."

But I was first of all the kings who drew
The knighthood-errant of this realm and all
The realms together under me, their Head,
In that fair Order of my Table Round,
A glorious company, the flower of men,
To serve as model for the mighty world,
And be the fair beginning of a time.
I made them lay their hands in mine and swear
To reverence their King, as if he were
Their conscience, and their conscience as their
King,

To break the heathen and uphold the Christ,
To ride abroad redressing human wrongs,
To speak no slander, no, nor listen to it,
To honour his own word as if his God's,
To lead sweet lives in purest chastity,
To love one maiden only, cleave to her
And worship her by years of noble deeds,
Until they won her; for indeed I knew
Of no more subtle master under heaven
Than is the maiden passion for a maid,
Not only to keep down the base in man,
But teach high thought and amiable words,
And courtliness, and the desire of fame,
And love of truth, and all that makes a man.

Now there is no mistaking this for the work of any other poet of our century. It belongs to Tennyson as obviously as if he had signed his name to every line. But what is it that gives the style its personal flavor, what constitutes the "Tennysonianism," as Mr. Howells calls it? Certainly it is not any redundancy of ornament, or opulence of epithet. This is not elaborate, decorative verse. The words are familiar and simple; most of them are monosyllables. There is only a single instance of alliteration. I think the peculiar effect, the sense of rich and perfect art, comes from the flow of the words. It is the movement that makes the style. And this movement has three qualities. First, sweetness: not a word is harsh, abrupt, strange; the melody flows without a break. Then, certainty: this comes from the sense of order and proportion; every word fits into its place. Then, strength: the strength which consists in fullness of thought and fewness of words.

Reflect upon the ideal of a true aristocracy which is expressed in this brief passage. It must begin with reverence and obedience; for only they are fit to command who have learned to obey. It must be brave and helpful, daring

to resist the heathen invaders, and devoted to the redress of human wrongs. It must be pure in thought and word and deed; for the thinking and speaking evil of others is one of the besetting sins of an aristocracy, and the spirit of slander is twin-sister to the spirit of lust. It must not banish the passion of love, nor brutalize it, but lift it up, and idealize it as the transfiguration of life, and make it a true worship with a ritual of noble deeds. And out of all this will come the right manhood, in thought, in speech, in manners, in ambition, in sincerity, in "all that makes a man." Now the art which can put this broad and strong conception of a class worthy to rule, to defend, and to lead society into a score of lines, so clear that they read without effort and so melodious that they fill the ear with pleasure, is exquisite. I think, more than anything else, it is this presence of a pure ideal shining through a refined and balanced verse, this union of moral and metrical harmony, that marks the consummation of the Tennysonian manner in "The Idylls of the King."

I have no time to speak of the patriotic poems, except to say that they ought to be studied together, because there is something in almost every one of them which is essential to the full understanding of the poet's conception of loyalty and liberty and order as the three elements of a perfect state.

The last division in the arrangement which I have made is poems of the inner life. You can probably conjecture why it is last. Partly because it is more difficult, and partly because it is higher, in the sense that it gives a more direct revelation of the personality of the poet. It is for this reason that we should not be in haste to enter it. For it is always best to look first at the fact and then at the explanation; first at a man's objective work and then at the account which he gives of himself and the spirit in which he has labored.

The group of poems in which Tennyson deals with art is important, not only for the poems themselves, but also for the light which they throw upon his artistic principles and tastes. It is not altogether by chance that the poets to whom he gives greeting are Milton, Virgil, Dante, and Victor Hugo. In "The Poet" you will find his early conception of the power of poetry; in "The Poet's Mind," his thought of its purity; in "The Poet's Song," his avowal that its charm depends upon faith in the immortal future. "The Palace of Art" is an allegory of the impotence of art when separated from human love. "The Flower" tells in a symbolic manner his experience with unreasoning critics. "The Spiteful Letter" and "Literary Squabbles" are reminiscences of the critical warfare which raged around him in

his youth, and made him sometimes forget his own principle of doing his work "as quietly and as well as possible without much heeding the praise or the dispraise."

But to my mind the most important, and in some respects the most beautiful, of these art poems is "Merlin and the Gleam." The wonder is that none of the critics seem to have recognized it for what it really is — the poet's own description of his life-work, and his clear confession of faith as an idealist.

The light that never was, on sea or land,
The consecration, and the poet's dream,—

this is the "Gleam" that Tennyson has followed. It glanced first on the world of fancy, with its melodies and pictures, dancing fairies and falling torrents. Then it touched the world of humanity, and the stories of man's toils and conflicts, the faces of human love and heroism, were revealed. Then it illuminated the world of imagination, and the great epic of Arthur was disclosed to the poet's vision in its spiritual meaning, the crowning of the blameless king. Then it passed through the valley of the shadow of death and clothed it with light.

And broader and brighter,
The Gleam flying onward,
Wed to the melody,
Sang thro' the world;
And slower and fainter,
Old and weary,
But eager to follow,
I saw, whenever
In passing it glanced upon
Hamlet or city,
That under the Crosses,
The dead man's garden,
The mortal hillock
Would break into blossom;
And so to the land's
Last limit I came —
And can no longer,
But die rejoicing;
For thro' the Magic
Of Him the Mighty,
Who taught me in childhood,
There on the border
Of boundless Ocean,
And all but in Heaven
Hovers The Gleam.

Not of the sunlight,
Not of the moonlight,
Not of the starlight!
O, young Mariner,
Down to the haven,
Call your companions,
Launch your vessel,
And crowd your canvas,
And, ere it vanishes
Over the margin,
After it, follow it,
Follow The Gleam.

That is the confession of a poet's faith in the ideal. It is the cry of a prophet to the younger singers of a faithless and irresolute generation.

Among the poems which touch more broadly upon the common experience of mankind in love, and sorrow, and death, you will find first a group which are alike only in their manner of treatment. It is allegorical, mystical, emblematic—find a name for it if you will. I mean that these poems convey their meaning under a mask; they use a symbolic language, just as "Merlin" and "The Flower" do in the preceding group. You must read "The Deserted House," "The Voyage," "The Sailor Boy," "The Islet," "The Vision of Sin," "The Voice and the Peak," for their secret significance. Then come three precious fragments of philosophy more directly uttered. "Will," "Wages," and "Flower in the crannied wall" go down to the very roots of human action, and aspiration, and thought. Then follows a group of poems more personal, varied in manner, and dealing in different moods with the sorrow of death. Their deepest and sweetest note is reached in the two lyrics which sprang out of the poet's grief for the death of Arthur Hallam. The world has long since accepted the first of these as the perfect song of mourning love. "Break, break, break," once heard, is never to be forgotten. It is the melody of tears. But the fragment called "In the Valley of Caunteretz" seems to me no less perfect in its way. And surely a new beauty comes into both of the poems when we read them side by side. For the early cry of longing,

But O for the touch of a vanish'd hand,
And the sound of a voice that is still!

finds an answer in the later assurance of consolation,

And all along the valley, by rock and cave and tree,
The voice of the dead was a living voice to me.

Of the final group of poems I shall say nothing, because it will not be possible to say enough. "In Memoriam" alone would require a volume, if one attempted to speak of it adequately. Indeed no less than five such volumes have been written; three in England by F. W. Robertson, Alfred Gatty, and Elizabeth Rachel Chapman, two in America by Professors Thomas Davidson and John F. Genung. If you

need an analysis or commentary on the poem you can find it easily. The one thing that I hope you will feel in reading this great poem, and the others which are grouped with it, is that they are real records of the inward conflict between doubt and faith, and that in this conflict faith has the victory. And you may well ask yourself whether this very victory has not meant the winning and unsealing and guarding of the fountainhead of Tennyson's poetic power. How many of his noblest poems, "Locksley Hall," "The May Queen," "Rizpah," "Guinevere," "Enoch Arden," find their uplifting inspiration, and reach their climax, in "the evidence of things not seen, the substance of things hoped for"! Could he have written anything of his best without that high faith in an immortal life which he has expressed in the rolling lines of "Vastness," and in that last supreme, faultless lyric, "Crossing the Bar"? Can any man be a poet without faith in God and his own soul?

And now when you turn to look back on your study of Tennyson, what are you to think of him? Is he a great poet? Your reply to that will depend on whether you think the nineteenth century is a great century. For there can be no doubt that he represents the century better than any other man. The thoughts, the feelings, the desires, the conflicts, the aspirations of our age are mirrored in his verse. And if you say that this alone prevents him from being great, because greatness must be solitary and independent, I answer, No; for the great poet does not anticipate the conceptions of his age; he only anticipates their expression. He says what is in the heart of the people, and says it so beautifully, so lucidly, so strongly, that he becomes their voice. Now if this age of ours, with its renaissance of art and its catholic admiration of the beautiful in all forms, classical and romantic; with its love of science and its joy in mastering the secrets of nature; with its deep passion of humanity protesting against social wrongs and dreaming of social regeneration; with its introspective spirit searching the springs of character and action; with its profound interest in the problems of the unseen and its reaction from the theology of the head to the religion of the heart—if this age of ours is a great age, then Tennyson is a great poet, for he is the clearest, sweetest, strongest voice of the century.

Henry van Dyke.

THE SQUIRREL INN.—IV.

BY FRANK R. STOCKTON.

XVIII.

SWEET PEAS.

ALTER LODLOE was now as much flushed with the fever of love-making as Lanigan Beam had been flushed with the fever of money-making, but he did not have the other man's luck. Mrs. Cristie gave

him few opportunities of making her know him as he wished her to know him. He had sense enough to see that this was intentional, and that if he made any efforts to improve his opportunities he might drive her away.

As he sat at his tower window, his fingers in his hair and his mind trying to formulate the prudent but bold thing he ought to do, a voice came up from below. It was that of Ida Mayberry.

"Mr. Lodloe! Mr. Lodloe!" she cried; and when he had put his head out of the window she called to him:

"Don't you want to come down and help us teach Mr. Tippengray to play tennis? He has taught us so much that we are going to teach him something."

"Who are going to teach?" asked Lodloe.

"Mrs. Cristie and I," said Ida. "Will you come?"

Instantly consenting, Lodloe drew in his head, his love fever rising.

The Greek scholar was one of the worst tennis-players in the world. He knew nothing of the game, and did not appear capable of learning it. And yet when Lanigan Beam appeared, having just arrived on horseback from Romney, Mrs. Cristie would not allow the Greek scholar to give up his place to the younger man. She insisted on his finishing the game, and when it was over she declared the morning too warm to play any more.

As she and Lodloe stood together for a moment, their rackets still in their hands, Mrs. Cristie smiled, but at the same time frowned.

"It is too provoking," she said; "I wish Douglas would wake up and scream his very loudest. I was just on the point of asking Ida to go with me into the garden to pick sweet peas, when Mr. Beam hands her that horrible bunch of wild flowers, crammed full of botany,

I've no doubt. And now just look at them! Before one could say a word, there they are on that bench, heads together, and pulling the weeds to pieces. Think of it! Studying botany with *him*, and Mr. Tippengray on the same lawn with her!"

"Oh, he's too hot to teach anything," said Lodloe. "You don't seem to approve of Mr. Beam's attentions to that young woman."

"I do not," said she. "You know what he is as well as I do."

"Better," said Lodloe. For a moment he paused, and then continued: "Mrs. Cristie, I wish you would let me go into the garden with you to pick sweet peas and to talk about Mr. Beam."

"Mr. Beam?" she repeated.

"Yes," said Lodloe; "I wish very much to speak to you in regard to him, and I cannot do it here where we may be interrupted at any moment."

As a young and pretty woman who knew her attractions, and who had made resolutions in regard to the preponderance of social intercourse in a particular direction, Mrs. Cristie hesitated before answering. But as a matron who should know all about a young man who was paying very special attention to a younger woman in her charge, she accepted the invitation, and went into the garden with Lodloe.

The sweet-pea blossoms crowded the tall vines which lined one side of a path, and as she picked them he talked to her.

He began by saying that he had noticed, and he had no doubt that she had noticed, that in all the plain talk they had heard about Mr. Beam there had been nothing said against his moral character except that he did not pay his debts nor keep his promises. To this Mrs. Cristie assented, but said that she thought these were very bad things. Lodloe agreed to this, but said he thought that when a young man of whom even professional slanderers did not say that he was cruel, or that he gambled or drank or was addicted to low company and pursuits, had determined to reform his careless and thoughtless life, he ought to be encouraged and helped in every possible way. And then when she asked him what reason he had to suppose that Mr. Beam had determined to reform, he straightway told her everything about Lanigan, Chicago oats and all, adding

that the young man did not wish him to say anything about this matter, but he had taken it upon himself to do so because Mrs. Cristie ought to know it, and because he was sure that she would not mention it to any one. When Mrs. Cristie exclaimed at this, and said that she thought that the sooner everybody knew it the better, Lodloe told her of the state of affairs between Calthea Rose and Lanigan Beam, and why the latter did not wish his reform to be known at present.

Mrs. Cristie dropped upon the ground every sweet-pea blossom she had gathered.

"I cannot imagine," she said, "how you can take the part of a man who would deliberately attempt to lower himself in the eyes of one woman in order that he might have a better chance to win another woman."

"Mrs. Cristie," said Lodloe, "I am a young man, and I have lived much among young men. I have seen many of them in dangerous and troubled waters, floating down to ruin and destruction, and now and then I have seen one who had turned and was trying to strike out for the shore. In every case of this kind I have tried to give the poor fellow a hand, and help him get his feet on firm ground. Sometimes he jumped in again, and sometimes he did n't, but all that was not my affair; I was bound to help him when I saw him facing the right way, and that is just the way I feel about young Beam. I do not approve of all his methods, but if he wants moral support I say he ought to have it."

Mrs. Cristie looked at the pink, blue, and purple blossoms on the ground. "His sentiments are good and generous ones," she thought, "and I shall not say one word against them, but Ida Mayberry shall not marry that exceedingly slippery young man, and the good Mr. Tippengray shall not be caught by Calthea Rose." She came to this resolution with much firmness of purpose, but as she was not prepared to say anything on the subject just then, she looked up very sweetly at Lodloe, and said:

"Suppose we drop Mr. Beam."

He looked for an instant into her eyes.

"Gladly," he exclaimed, with an impulse like a lightning-flash, "and speak of Walter Lodloe."

"Of you?" she said.

"Yes, of me," he replied; "of myself, of a man who has no scheme, no plan, no concealments, and who only wishes you to know that he loves you with all his heart."

She looked at him steadfastly for a moment.

"Was it for this," she said, "that you asked me to come with you and pick sweet-pea blossoms?"

"Not at all," he exclaimed; "I meant no more than I said, and thought of no more.

But the flowers we came to gather you have dropped upon the ground."

"They can easily be picked up again," she said.

"Not at all," he cried, and, stepping forward, put his foot upon the fragrant blossoms. Then with a few rapid dashes he gathered a bunch of sweet peas and extended them towards Mrs. Cristie.

"Will you not take these instead?" he said.

She put her hands behind her back.

"I do not mean," he said, speaking low but strongly, "that in accepting them you accept me. I only want to know that you will talk to me of what I said, or at any rate think of it."

But still she kept her hands behind her back. In her heart she knew that she wanted those flowers, but the knowledge had come so suddenly, so unexpectedly, and so unreasonably, that she did not even look at them, and clasped her fingers together more tightly.

"Some one is coming," said Lodloe. "Tell me quickly, must these flowers be dropped?"

Steps could be plainly heard not far away. Mrs. Cristie looked up.

"I will take one," she said; "the very smallest."

He thrust the bunch of flowers towards her, and she hastily drew from it one which happened to be the largest of them all.

The person who now appeared in the garden walk was Calthea Rose. She experienced no emotions but those of mild amusement at seeing these two together. At present she did not care very much about either of them, although, when she had heard of the expected coming of the young widow, she had been afraid of her, and was prepared to dislike her. But finding her, as she supposed, already provided with a lover, Calthea was quite satisfied with Mrs. Cristie. She liked Lodloe on general principles, because he was a man. Her greeting was very pleasant. It often happened that the people whom Calthea Rose neither liked nor disliked were those who found her the most pleasant.

She was inclined to walk on and leave them among the sweet-pea blossoms, but Mrs. Cristie would not allow this. She joined Calthea, and the three went on together. When they stepped upon the open lawn, Calthea gave a quick glance around, and the result was very satisfactory. Ida Mayberry and Lanigan were still sitting together under a tree, and she saw Mr. Tippengray talking to Mrs. Petter not far from the summer-house. Nothing could be better arranged. Lanigan was on the right road, and it would be quite as natural for her immediately to join Mrs. Petter as it would be easy to get rid of her.

The party separated, Lodloe going to his

room and Calthea walking towards the summer-house. She had come that day to the Squirrel Inn with a purpose; she was going to be taught by Mr. Tippengray. In this world we must adapt ourselves to circumstances, and she was going to adapt herself to the Greek scholar's hobby. She was a sensible woman, and did not for a moment purpose to ask him to teach her the dead languages, philosophy, or science, things in which he knew she took no

But now she was going to let Mr. Tippengray talk to her just as much as he pleased, and tell her all he wanted to tell her. She now knew him better than she had done before, and she had strong hopes that by this new string she would be able to lead him from the Squirrel Inn to Lethbury whenever she chose.

Mrs. Petter had long been accustomed to look upon Calthea Rose as a person whose anger would blaze up very suddenly, but would

"WILL YOU NOT TAKE THESE INSTEAD?"

interest. Indeed, she would not ask him to teach her anything, but she was going to give him the opportunity to do so, and she was quite sure that that would be sufficient for her purpose.

She intended to make herself an audience of one, and to listen in a way she knew would please him to the recital of his travels and experiences. Of these he had often essayed to talk to her, but she had not encouraged him. She never liked to talk upon subjects of which other people knew more than she did, and she always endeavored to bring the conversation into a channel where she could take an equal part. If she could lead, so much the better.

VOL. XI. II.—66.

go out quite as promptly,—which was true, when Miss Calthea chose to put it out,—but she was a little surprised that Calthea, after so recently going away in a huff, should treat Mr. Tippengray with such easy friendliness. If the Greek scholar himself felt surprised, he did not show it, for he was always ready to meet a cordial overture.

Miss Calthea had just accepted an invitation to be seated in the shade,—which she knew would very soon be followed by Mrs. Petter's going into the house, for that good woman was seldom content to sit long out of doors,—when up stepped Ida Mayberry.

"Mr. Tippengray," said she in the clear, dis-

"I HAVE DISSECTED ONE."

tinct way in which she always spoke, "here is something which I have been trying to explain to Mr. Beam, but I am afraid I have n't a quite correct idea about it myself. Will you please read it, and tell me how it strikes you?"

This was too much for the patience of Calthea Rose. Her resolutions of geniality and good nature could not stand for a moment against such an interruption at such a time. She turned sharply upon the nurse-maid and, without attempting to disguise her feelings, said it seemed to her that a person so anxious to learn would be much better employed in attending to her business and in trying to learn something about babies than in interrupting conversation in this impertinent way.

"Learn something about babies!" exclaimed Miss Mayberry. "Nobody knows more about babies than I do — I have dissected one."

At this Mrs. Petter gave a cry of horror, and Miss Calthea stepped back, speechless with amazement. As for the Greek scholar, he suddenly retired to a little distance and leaned over a bench, his back to the company. He was greatly agitated.

Without further remark Miss Mayberry closed her book, and, with dignity, walked back to Lanigan Beam.

XIX.

THE AROUSED ROSE.

THE soul of Miss Calthea Rose was now filled with one burning purpose, and that was to ban-

ish from the Squirrel Inn that obtrusive and utterly obnoxious collegiate nurse-maid who had so shamelessly admitted a desire for surgical research in connection with the care of an infant. It was of no use for Miss Calthea to think at this moment of her plans in regard to Mr. Tippetgray, nor indeed of anything but this one absorbing object. Until she had rid herself of Ida Mayberry she could expect to do nothing that she wished to do. Leaving Mr. Tippetgray to the quiet enjoyment of his agitations, Miss Calthea and Mrs. Petter immediately set off to find Mrs. Cristie.

"She must instantly know," said the former, "what sort of a serpent she has in her service. If I were in her place I would never let that creature touch my baby again."

"Touch the baby!" exclaimed Mrs. Petter, "I would n't let her touch me. When a person with such a disposition begins on infants there is no knowing where she will stop. Of course I don't mean that she is dangerous to human life, but it seems to me horrible to have any one about us who would be looking at our muscles, and thinking about our bones, and wondering if they worked together properly, and if they would come apart easily. Ugh! It's like having a bat in the room."

Mrs. Cristie was not in the mood to give proper attention to the alarming facts which were laid before her by the two women, who found her sitting by the window in her room. It had been so short a time since she had come from the garden, and the blossom of the sweet

pea, which she still held in her hand, had been so recently picked from its vine, that it was not easy for her to fix her mind upon the disqualifications of nurse-maids. Even the tale that was told her, intensified by the bitter feeling of Miss Rose, and embellished by the imagination of Mrs. Petter, did not have the effect upon her that was expected by the narrators. She herself had been a student of anatomy, and was still fond of it, and if she had been able properly to consider the subject at that moment, she might

haps imprudently, and does not always make herself understood."

This was said with an air of abstraction and want of interest which greatly irritated Miss Calthea. She had not even been thanked for what she had done. Mrs. Cristie had been very civil, and was evidently trying to be more so, but this was not enough for Miss Calthea.

"We considered it our duty," she said, with a decided rigidity of countenance, "to tell you what we know of that girl, and now we leave

MRS. CRISTIE CONSIDERS.

not have considered it a bad thing for Ida Mayberry to have the experience of which she had boasted.

But the young widow did not wish at that moment to think of her nurse-maid or even of her baby, and certainly not to give her attention to the tales of her landlady and the spinster from Lethbury.

"I must admit," she said, "that I cannot see that what you tell me is so very, very dreadful, but I will speak to Ida about it. I think she is apt to talk very forcibly, and per-

the matter with you"; which was a falsehood, if Miss Calthea was capable of telling one.

Then with much dignity she moved towards the door, and Mrs. Petter prepared to follow; but before going she turned with moist eyes towards Mrs. Cristie, and said:

"Indeed, indeed, you ought to be very careful; and no matter how you look at it, she is not fit for a nurse, as everybody can see. Make up your mind to send her away, and I'll go myself and get you a good one."

Glancing out of the door to see that the

Lethbury lady was out of hearing, Mrs. Christie said :

"You are very good, Mrs. Petter, and I know you wish me well, but tell me one thing; was n't it Miss Rose who proposed that you should come to me with this story about Ida?"

"Of course I should have told you myself," said Mrs. Petter, "though I might have taken my time about it; but Calthea did not want to lose a minute, and said we must go right off and look for you. She was as mad as hops any way, for we were talking to Mr. Tippetgray at the time, and Calthea does hate to be interrupted when she is talking to him. But don't you worry yourself any more than you can help, and remember my promise. I'll stick to it, you may count on that."

When Mrs. Christie had been left to herself she gave enough time to the consideration of what had been told her to come to the following conclusion: "She shall not have him; I have made up my mind to that. Interrupted by Ida! Of course that is at the bottom of it." And having settled this matter, she relapsed into her former mood, and fell to thinking what she should do about the sweet-pea blossom.

She thought until the supper-bell rang, and then she rose and with a pretty smile and flush upon her face, which showed that her thoughts had not in the least worried her, she put the sweet-pea blossom into a little jar which she had brought from Florence, and which was just big enough for one small flower.

At supper Walter Lodloe was very quiet and very polite, and Mrs. Christie, who was opposite to him, though not at all quiet, was also very polite, but bestowed her attention almost entirely upon Mr. Tippetgray, who sat beside her. The Greek scholar liked this, and his conversation sparkled.

Miss Calthea Rose, who had accepted Mrs. Petter's invitation to spend the night,—for if ever she was going to do anything at the Squirrel Inn, this was the time to do it,—did not like Mrs. Christie's politeness, and her conversation did not sparkle. In fact she was quieter than Mr. Lodloe, and paid little heed to the chatter of her neighbor, Lanigan Beam. This young man was dissatisfied. There was a place at the table that was sometimes filled and sometimes not filled. At present it was empty.

"I cannot see," said he, speaking to the company in general, "why babies are not brought to the table. I think they ought to be taught from the very beginning how to behave themselves at meals."

Mr. Petter fixed his eyes upon him, and, speaking through the young man, also addressed the company.

"I'm not altogether in favor of having small children at the table," said he. "Their food is different from ours, and their ways are often unpleasant; but I do think —"

"No, you don't," interrupted Mrs. Petter from the other end of the table—"you don't think anything of the kind. That has all been fixed and settled, and there's no use in bringing it up again."

Mr. Petter looked at his wife with a little flash in his eye, but he spoke quietly.

"There are some things," he said, "that can be unfixed and unsettled."

Mrs. Christie hastened to stop this discussion.

"As I own the only baby in the house," she said, with a smile, "I may as well say that it is not coming to the table either by itself or in any other way."

A thought now tickled Mr. Tippetgray. Without any adequate reason whatever, there came before him the vision of an opopsum which he once had seen served at a Virginia dinner-table, plump and white, upon a china dish. And he felt almost irresistibly impelled to lean forward and ask Mr. Lodloe if he had ever read any of the works of Mr. Jonathan Carver, that noted American traveler of the last century; but he knew it would n't do, and he restrained himself. If he had thought Lodloe would understand him he would have made his observation in Greek, but even that would have been impolite to the rest of the company. So he kept his joke to himself, and, for fear that any one should perceive his amusement, he asked Mrs. Petter if she had ever noticed how much finer was the fur of a cat which slept out of doors than that of one which had been in the house. She had noticed it, but thought that the cat would prefer a snug rug by the fire to fine fur.

Calthea Rose said little and thought much. It was necessary that she should take in every possible point in the situation, and she was doing it. She did not like Mrs. Christie's attention to Mr. Tippetgray, because it gave him pleasure, and she did not wish that other women should give him pleasure; but she was not jealous, for that would have been absurd in this case.

But the apparent state of feeling at the table had given her an idea. She was thinking very bitterly of Mrs. Christie, and would gladly do anything which would cause that lady discomfort. There seemed to be something wrong between her and Mr. Lodloe, otherwise the two lovers would be talking to each other, as was their custom. Perhaps she might find an opportunity to do something here. If, for instance, she could get the piqued gentleman to flirt a little with her,—and she had no doubt of her abilities in this line,—it might cause Mrs.

Cristie uneasiness. And here her scheme widened and opened before her. If in any way she could make life at the Squirrel Inn distasteful to Mrs. Cristie, that lady might go away. And in this case the whole problem that engrossed her would be solved, for of course the maid would go with the mistress.

Caltha's eyes brightened, and with a smile she half listened to something Lanigan Beam was saying to her.

"Yes," she thought; "that would settle the whole business. The widow is the person I ought to drive away; then they would all go, and leave him to me, as I had him before."

And now she listened a little, and talked a little, but still kept on thinking. It was really a very good thing that her feeling towards Mrs. Cristie had so suddenly changed, otherwise she might never have thought of this admirable scheme.

XX.

AN INGENUOUS MAID.

MRS. CRISTIE was unusually prompt that evening in going to the relief of Ida Mayberry, but before she allowed that young woman to go down to her supper she put a question to her.

"What do you mean, Ida," she said, "by talking about dissecting babies? Whatever you may have done in that line, I do not think it is very nice to bring it forward when you have charge of a child."

"Of course it was n't nice," replied Ida, "and I should never have thought of speaking of it if it had not been for that thing from Lethbury. She makes me so angry that I don't know what I say. You ought to hear Lanigan Beam talk about her. He has confided to me, although I am not sure that he should have done it."

"Of course not," said Mrs. Cristie, very promptly; "he should not have confided anything to you."

"Well," continued Ida, "he told me, but said he would not breathe it to any one else, that the great object of his life at present was to rid this neighborhood of Caltha Rose. He says she has been a plague to this community ever since he has known her. She is always ready to make mischief, and nobody can tell when or how she is going to do it. As for himself, he vows she has made it impossible for him to live here; and as he wishes to live here, he wants her to go."

"And how does he propose to make her go?" asked Mrs. Cristie.

"He wants her to marry Mr. Tippengray,

which she is very willing to do, and then he is quite sure that they will go away and travel, and stay abroad for a long time. He knows that this will be the very thing that she would want to do."

"And I suppose," said Mrs. Cristie, "that Mr. Beam told you all this in order that you might be induced to help on the match between Mr. Tippengray and Miss Rose."

"That was exactly his object," said Ida; "he said that everybody ought to help in this good work."

"And then, I suppose, he would like to marry you," remarked Mrs. Cristie.

"He has n't said so yet," replied Miss Mayberry, "but I think he would like to do it."

A MATRIMONIAL CONVERSATION.

Mrs. Cristie brought down her little fist upon the table, regardless of her slumbering child.

"That man is utterly without a conscience," she exclaimed. "If he had n't kept on engaging himself over and over again to Caltha Rose, she might have married somebody else, and gone away long ago. He has no one but himself to blame that she is still here to worry him and other people. And as to his wishing to sacrifice Mr. Tippengray to his ease and comfort, I think it is the most shameful thing I ever heard of. I hope, Ida, that you did not encourage him in this iniquitous scheme."

Ida laughed, but quietly—remembering the baby.

"Not much," she said; "in fact, I have determined, if I can, to rescue Mr. Tippengray from that clutching old thing."

"How?" asked Mrs. Cristie, quickly.

"By marrying him myself," said the nurse-maid.

"Ida Mayberry!" exclaimed Mrs. Cristie.

"Yes," said the other; "I have been considering the matter a good deal, and I think it can be done. He is much older than I am, but that is n't of great importance when people suit in other ways. Of course I would not wish to marry a very old man, even if he were suitable, for I should have to look forward to a married life so short that it would not pay; but Mr. Tippetgray was not born so dreadfully far back, and he is one of those men who keep young for a long time. I think he likes me, and I am sure I can easily make him like me more, if I choose. There is nobody here that I need be afraid of, excepting you, perhaps."

Mrs. Cristie looked at her in amazement.

"Me!" she exclaimed.

"Yes," said Ida; "and this is the way of it. For a time I rather liked Lanigan Beam, for he's young and good looking, and particularly because he seems very much in love with me; but although he pretends to be anxious to study, I know he is not very deep, and will probably soon tire of that. So when my sympathy for Mr. Tippetgray was fairly aroused,—and it has been growing for some time,—it was easy enough to drop Lanigan; but before I allowed myself to become too much interested in Mr. Tippetgray I had to consider all sides of the case. You seem to like Mr. Tippetgray very much, and of course if you really made up your mind to prefer him to anybody else, one great object would be gained, just the same as if I married him, and he would be saved from the hole those two are digging for him."

"And in that case," said Mrs. Cristie, repressing a strong disposition to laugh, "what would you do? Perhaps you would be content to take anything that might be left."

"I suppose you mean Mr. Lodloe," said Ida. "Well, to speak plainly, I have never thought that I had a right to take him into consideration, but if the field were entirely open, I would not hesitate a moment in preferring him to either of the others."

Now Mrs. Cristie laughed outright.

"I could never have imagined," she said, "that a young girl such as you are could have such practical and business-like views about matrimony."

"Well," said the nurse-maid, "I don't see anything out of the way in my views. I want to bring an intelligent judgment to bear upon everything I do, and if the higher education is of any good at all, it ought to help us to regulate our affections."

"I have nothing to say on the subject," said Mrs. Cristie, "except that they did not pretend to teach us that at Vassar. I don't see how you

can bring yourself to such calculations. But one part of your scheme I approve of highly: positively you ought to drop Lanigan Beam. As to marrying Mr. Tippetgray, that is your affair, and his affair. And you may be sure I shall not interfere in any way."

Ida looked at her and smiled.

"I was n't very much afraid of that," she said, "though of course I thought I ought to steer clear of even a possible interference; but now I can go ahead with a clear conscience."

Mrs. Cristie felt drawn towards this ingenuous maid.

"Ida," she said, taking her by the hand, "as you have been so confiding towards me, I will say to you that since you have concluded to drop Mr. Beam your choice is decidedly restricted."

"I am glad to hear it," said the other, warmly; "he is a good man, and I think he has brains that you can count on. Is it all settled?"

"Oh, no, no!" said Mrs. Cristie; "and mind, Ida, don't you say a word of this to a living soul."

"Oh, you need n't be afraid of that," said Miss Mayberry; "I never betray confidences."

"I am afraid," said Mrs. Cristie to herself, as she stood alone by her baby's bedside, "that I went a little too far. It is n't settled yet, and it would have been better not to say anything about it. However,"—and then her thoughts went wandering. She was going down-stairs and out of doors as soon as she had satisfied herself that Douglas could be prudently left to his slumbers.

XXI.

TWISTED TRYSTS.

MRS. CRISTIE found the lower floor of the Squirrel Inn quite deserted. She stopped before a window in a Norman tower and looked out. Twilight was fading, but there was a young moon in the sky. By stepping a little to one side she could see the moon, with the evening star twinkling not far away from it. She did not go out, however, but slowly wandered into a long room under the roof of a Swiss chalet. Here she went out on a queer little balcony and sat down; but her view was cut off by an out-jutting upper story of the old English type, with rows of small-paned windows, and she soon came in from the balcony. There was a light burning in the taproom, and as she passed its open door she stopped for a moment and gazed reflectively at the row of dilapidated stuffed squirrels, each of which had once stood guard upon the guide-post to the inn. But she took no note of the squirrels, nor of anything else in the quiet room, but as she stood, and instinctively put her finger to her forehead, a resolution came.

"I will be sensible, like Ida," she thought. "I will go out and let things happen as they may."

She went out into the young moonlight and, glancing across the lawn, saw, near the edge of the bluff that commanded the western view, two persons sitting upon a bench. Their backs

"I need not have feared for Ida," she thought; "she must have made a bold stroke to leave her rival in the lurch in that way, but I suppose in order to get one man she has to take both. It is a little hard on Miss Calthea"; and with an amused glance towards the couple on the bluff she moved towards the gardens.

CALTHEA HOLDS HIM WITH HER LISTENING EAR.

were towards her, but one of them she knew to be Calthea Rose.

"I hope that is not poor Mr. Tippengray," said Mrs. Cristie to herself. "If she has secured him already, and taken him out there, I am afraid that even Ida will not be able to get him away from her. Ida must be still at her supper. I should not have detained her so long."

But Ida was not at her supper. As she turned towards the end of the lawn Mrs. Cristie saw her nurse-maid slowly strolling over the grass, a man on each side of her. They were plainly to be seen, and one man was Mr. Tippengray and the other Lanigan Beam. The three were engaged in earnest conversation. Mrs. Cristie smiled.

Her mind was in a half-timorous and undetermined state, in which she would have been glad to wander about by herself and to meet nobody, or, if it so should happen, glad to meet somebody; and wistfully, but yet timidly, she wondered which it would be. All at once she heard a step behind her. In spite of herself she started and flushed, and, turning, saw Mr. Petter. The sight of this worthy gentleman was a shock to her. She had been sure he was sitting with Calthea Rose on the bluff. If it was not he, who was it?

"I am glad to see you, Mrs. Cristie," said the landlord of the inn, "for I want to speak with you. My mind is disturbed, and it is on account of your assistant, Miss Mayberry. She has been talked about in a way that I do not

at all like. I may even say that my wife has been urging me to use my influence with you to get her dismissed. I assured Mrs. Petter, however, that I should use that influence, if it exists, in exactly the opposite direction. Shall we walk on together, Mrs. Cristie, while I speak further on the subject? I have a high opinion of Miss Mayberry. I like her because she is what I term blooded. Nothing pleases me so much as blooded service, and, I may add, blooded associations and possessions. So far

self who that could be with Calthea Rose. If it was not Walter Lodloe, who was it? And if it was he, why was he there? And if he was there, why did he stay there? Of course she was neither jealous nor worried nor troubled by such a thing, but the situation was certainly odd. She had come out expecting something, she did not know exactly what; it might not have been a walk among the sweet-pea blossoms, but she was very certain it was not a conversation with Mr. Petter, while Walter

THE BABY AND THE SWEET-PEA BLOSSOM. (SEE PAGE 524.)

as I am able to have it so, my horses, my cattle, and all my live stock are blooded. I consider my house, this inn, to be a blooded house. It can trace its various lines of architectural ancestry to honorable origins. The company at my house, with the exception of Lanigan Beam,—who, however, is not a full guest, but rather a limited inmate, ascending by a ladder to his dormitory,—are, if you will excuse me for saying so, blooded. And that one of these guests should avail herself of blooded service is to me a great gratification, of which I hope I shall not be deprived. To see a vulgar domestic in Miss Mayberry's place would wound and pain me, and, I may say, Mrs. Cristie, that I have been able to see no reason whatever for such substitution."

Mrs. Cristie had listened without a word, but as she listened she had been asking her-

Lodloe sat over there in the moonlight with Calthea Rose.

"You need not have given yourself any anxiety," she said to her companion, "for I have not the slightest idea of discharging Ida. She suits me admirably, and what they say about her is all nonsense; of course I do not mean any disrespect to Mrs. Petter."

Mr. Petter deprecatingly waved his hand.

"I understand perfectly your reference to my wife," he said. "Her mind, I think, has been acted upon by others. Allow me to say, madam, that your words have encouraged and delighted me. I feel we are moving in the right direction. I breathe better."

"How is it possible," thought Mrs. Cristie, during the delivery of this speech, "that he can sit there, and sit, and sit, and sit, when he knows at this hour I am always somewhere

about the house or grounds, and never in my room? Well, if he likes to sit there, let him sit"; and with this she looked up with some vivacity into the face of her landlord and asked him if even his pigeons and his chickens were blooded, and if the pigs were also of good descent. As she spoke she slightly accelerated her pace.

Mr. Petter was very willing to walk faster, and to talk about all that appertained to his beloved Squirrel Inn, and so they walked and talked until they reached the garden and disappeared from view behind the tall shrubbery that bordered the central path.

Mrs. Petter sat on a little Dutch porch, looking out on the lawn, and her mind was troubled. She wished to talk to Mr. Petter, and here he was strolling about in the moonlight with that young widow. Of course there was nothing in it, and it was perfectly proper for him to be polite to his guests, but there were lines in politeness as well as in other things, and they ought to be drawn before people went off walking by themselves in the garden at an hour when most farmers were thinking about going to bed. The good lady sat very uneasily on her little bench. The night air felt damp to her and disagreeable; she was sure there were spiders and other things running about the porch floor, and there were no rounds to the bench on which she could put her feet. But she could not bear to go in, for she had not the least idea in the world where they had gone to. Perhaps they might walk all the way to Lethbury, for all she knew.

At this moment a man came up to the porch. It was Lanigan Beam, and his soul was troubled. The skilful Miss Mayberry had so managed the conversation in which she and the two gentlemen were engaged that its subject matter became deeper and deeper in its character, until poor Lanigan found that it was getting very much too deep for him. As long as he could manage to keep his head above water he stood bravely, but when he was obliged to raise himself on the tips of his toes, and even then found the discourse rising above his chin, obliging him to shut his mouth and to blink his eyes, he thought it wise to strike out for shore before he made a pitiful show of his lack of mental stature.

And in a very bad humor Lanigan walked rapidly to the house, where he was much surprised to see Mrs. Petter on the little Dutch porch.

"Why, madam," he exclaimed, "I thought you never sat out after nightfall."

"As a rule, I don't," the good lady answered, "and I ought n't to now; but the fact is—" She hesitated, but it was not necessary to finish the sentence. Mr. Petter and Mrs. Cristie

emerged from the garden and stood together just outside its gate. He was explaining to her the origin of some of the peculiar features of the Squirrel Inn.

When the eyes of Mr. Beam fell upon these two, who stood plainly visible in the moonlight, while he and Mrs. Petter were in shadow, his trouble was dissipated by a mischievous hilarity.

"Well, well, well!" said he, "she *is* a woman."

"Of course she is," said Mrs. Petter; "and what of that, I 'd like to know?"

"Now that I think of it," said Lanigan, with a finger on the side of his nose, "I remember that she and her young man did n't have much to say to each other at supper. Quarreled, perhaps. And she is comforting herself with a little flirt with Mr. Petter."

"Lanigan Beam, you ought to be ashamed of yourself," cried the good lady; "you know Mr. Petter never flirts."

"Well, perhaps *he* does n't," said Lanigan; "but if I were you, Mrs. Petter, I would take him out a shawl or something to put over his shoulders. He ought n't to be standing out there in the night wind."

"I shall do nothing of the kind," she answered shortly, "and I ought n't to be out here in the night air either."

Lanigan gazed at Mrs. Cristie and her companion. If that charming young widow wanted some one to walk about with her in the moonlight, she could surely do better than that. Perhaps a diversion might be effected and partners changed.

"Mrs. Petter," said he, "I would n't go in, if I were you. If you move about you will be all right. Suppose we stroll over that way."

"I am ready to stroll," said Mrs. Petter, in a tone that showed she had been a good deal stirred by her companion's remarks, "but I am not going to stroll over that way. The place is big enough for people to keep to themselves, if they choose, and I am one that chooses, and I choose to walk in the direction of my duty, or, more properly, the duty of somebody else, and see that the hen-houses are shut"; and, taking Lanigan's arm, she marched him down to the barn, and then across a small orchard to the most distant poultry-house within the limits of the estate.

When Mr. Stephen Petter, allowing his eyes to drop from the pointed roof of his high tower, saw his wife and Lanigan Beam walking away among the trees in the orchard, he suddenly became aware that the night air was chilly, and suggested to his companion that it might be well to return to the house.

"Oh, not yet, Mr. Petter," said she; "I want

you to tell me how you came to have that little turret over the thatched roof."

She had determined that she would not go in-doors while Calthea Rose and Mr. Lodloe sat together on that bench.

Early in the evening Miss Calthea had seen Mr. Lodloe walking by himself upon the bluff, and she so arranged a little promenade of her own that in passing around some shrubbery she met him near the bench. Miss Calthea was an admirable manager in dialogue, and if she had an object in view it did not take her long to find out what her collocutor liked to talk about. She had unusual success in discovering something which very much interested Mr. Lodloe, and they were soon seated on a bench discussing the manners and ways of life in Lethbury.

To a man who recently had been seized with a desire to marry and to live in Lethbury, and who had already taken some steps in regard to the marriage, this subject was one of the most lively interest, and Lodloe was delighted to find what a sensible, practical, and well-informed woman was Miss Rose. She was able to give him all sorts of points about buying a building or renting houses in Lethbury, and she entered with the greatest zeal into the details of living, service, the cost of keeping a horse, a cow, and poultry, and without making any inconvenient inquiries into the reasons for Mr. Lodloe's desire for information on these subjects. She told him everything he wanted to know about housekeeping in her native village, because she had made herself aware that his mind was set on that sort of thing. In truth she did not care whether he settled in Lethbury or some other place, or whether he ever married and settled at all. All she wished was to talk to him in such a way that she might keep him with her as long as possible. She wished this because she liked to keep a fine-looking young man all to herself, and also because she thought that the longer she did so the more uneasiness she would cause Mrs. Cristie.

She had convinced herself that it would not do for life to float too smoothly at the Squirrel Inn. She would stir up things here and there, but prudently, so that no matter who became disgusted and went away, it would not be Mr. Tippengray. She was not concerned at present about this gentleman. It was ten to one that by this time Lanigan Beam had driven him away from the child's nurse.

Walter Lodloe was now beginning to feel that it was quite time that his conversation with Miss Rose, which had really lasted much longer than he supposed, should be brought to a close. His manner indicating this, Miss Calthea immediately entered into a most attractive description of a house picturesquely situated on

the outskirts of Lethbury, which would probably soon be vacated on account of the owner's desire to go West.

At the other end of the extensive lawn two persons walked backward and forward near the edge of the trees perfectly satisfied and untroubled. What the rest of the world was doing was of no concern whatever to either of them.

"I am afraid, Mr. Tippengray," said the nurse-maid, "that when your Greek version of the literature of to-day, especially its humorous portion, is translated into the American language of the future it will lose much of its point and character."

"You must remember, my dear Miss Mayberry," said the gentleman, "that we do not know what our language will be in eight hundred or a thousand years from now. The English of to-day may be utterly unintelligible to the readers of that era, but that portion of our literature which I put into imperishable and unchangeable Greek will be the same then as now. The scholar may read it for his own pleasure and profit, or he may translate it for the pleasure and profit of others. At all events, it will be there, like a fly in amber, good for all time. All you have to do is to melt your amber, and there you have your fly."

"And a well-shriveled-up fly it would be, I am afraid," said Ida.

Mr. Tippengray laughed.

"Be not too sure of that," he said. "I will translate some of my Greek version of 'Pickwick' back into English, and let you see for yourself how my amber preserves the fly."

"Let me do it," said Ida. "It is a long time since I read 'Pickwick,' and therefore my translation will be a better test."

"Capital!" cried Mr. Tippengray. "I will copy a few lines for you to-night."

From out an open Elizabethan window under a mansard roof and overlooking a small Moorish veranda there came a sound of woe. The infant Douglas had awakened from a troubled sleep, and with a wild and piercing cry he made known to his fellow beings his desire for society. Instantly there was a kaleidoscopic change among the personages on the grounds of the Squirrel Inn. Miss Mayberry darted towards the house; the Greek scholar, without knowing what he was doing, ran after her for a short distance, and then stopped; Mrs. Petter screamed from the edge of the orchard to know what was the matter; and Lanigan ran to see. Mr. Petter, the natural guardian of the place, pricked up his ears and strode towards the inn, his soul filled with a sudden fear of fire. Mrs. Cristie recognized the voice of her child, but saw Ida running, and so, relieved of present anxiety, remained where her companion had left her.

Walter Lodloe, hearing Mrs. Petter's voice and the running, sprang from his seat; and seeing that it would be impossible to detain him now, and preferring to leave rather than to be left, Miss Calthea hurried away to see what was the matter.

XXII.

THE BLOSSOM AND THE LITTLE JAR.

PERCEIVING Mrs. Cristie standing alone near the entrance to the garden, Walter Lodloe walked rapidly towards her. As he approached she moved in the direction of the house.

"Will you not stop a moment?" he said. "Do not go in yet."

"I must," she answered; "I have been out here a long while — too long."

"Out here a long time!" he exclaimed. "You surprise me. Please stop one moment. I want to tell you of a most interesting conversation I have had with Miss Rose. It has animated me wonderfully."

Considering what had occurred that afternoon, this remark could not fail to impress Mrs. Cristie, and she stopped and looked at him. He did not give her time to ask any questions, but went on:

"I have been asking her about life in Lethbury — houses, gardens, everything that relates to a home in that delightful village. And what she has told me opens a paradise before me. I did not dream that down in that moon-lighted valley I should be almost rich; that I could offer you —"

"And may I ask," she interrupted, "if you have been talking about me to Miss Rose?"

"Not a word of it," he answered warmly. "I never mentioned your name, nor referred to you in any way."

She could not help ejaculating a little sarcastically:

"How circumspect!"

"And now," he said, coming closer to her, "will you not give me an answer? I love you, and I cannot wait. And oh! speak quickly, for here comes Mrs. Petter straight towards us."

"I do not like Lethbury," said Mrs. Cristie.

Lodloe could have stamped his feet, in the fire of his impatience.

"But of me, of myself," he said. "And oh! speak quickly, she is almost here."

"Please cease," said Mrs. Cristie; "she will hear you."

Mrs. Petter came up panting.

"I don't want to interrupt you, Mrs. Cristie," she said, "but really and truly you ought to go to your baby. He has stopped crying in the most startling and suspicious way. Of course I don't know what she has done to him, and whether it's anything surgical or laudanum. And it is n't for me to be there to smell

the little creature's breath; but you ought to go this minute, and if you find there is anything needed in the way of mustard, or hot water, or sending for the doctor, just call to me from the top of the stairs."

"My dear Mrs. Petter," said Mrs. Cristie, "why did n't Calthea Rose come and tell me this herself, instead of sending you?"

"She said that she thought you would take it better from me than from her; and after we had made up our minds about it, she said I ought not to wait a second."

"Well," said Mrs. Cristie, "it was very good in you to come to me, but I do not feel in the least alarmed. It was Ida's business to quiet the child, and I have no doubt she did it without knives or poison. But now that you are here, Mrs. Petter, I wish to ask your opinion about something that Mr. Lodloe has been talking of to me."

The young man looked at her in astonishment.

"He has been telling me," continued Mrs. Cristie, "of a gentleman he knows, a person of education, and accustomed to society, who had conceived the idea of living in Lethbury. Now what do you think of that?"

"Well," said Mrs. Petter, "if he's married, and if his wife's got the asthma, or he's got it himself, I have heard that Lethbury is good for that sort of complaint. Or if he's failed in business and has to live cheap; or if he is thinking of setting up a store where a person can get honest wash-goods; or if he has sickly children, and is n't particular about schools, I suppose he might as well come to Lethbury as not."

"But he has none of those reasons for settling here," said Mrs. Cristie.

"Well, then," remarked Mrs. Petter, somewhat severely, "he must be weak in his mind. And if he's that, I don't think he's needed in Lethbury."

As she finished speaking the good woman turned and beheld her husband just coming out of the house. Being very desirous of having a talk with him, and not very well pleased at the manner in which her mission had been received, she abruptly betook herself to the house.

"Now, then," said Mrs. Cristie, turning to Lodloe, "what do you think of that very explicit opinion?"

"Does it agree with yours?" he asked.

"Wonderfully," she replied. "I could not have imagined that Mrs. Petter and I were so much of a mind."

"Mrs. Cristie," said Lodloe, "I drop Lethbury, and here I stand with nothing but myself to offer you."

The moon had now set, the evening was

growing dark, and the lady began to feel a little chilly about the shoulders.

"Mr. Lodloe," she asked, "what did you do with that bunch of sweet peas you picked this afternoon?"

"They are in my room," he said eagerly. "I have put them in water. They are as fresh as when I gathered them."

"Well," she said, speaking rather slowly, "if to-morrow, or next day, or any time when it may be convenient, you will bring them to me, I think I will take them."

In about half an hour Mrs. Cristie went into the house, feeling that she had stayed out entirely too late. In her room she found Ida reading by a shaded lamp, and the baby sleeping soundly. The nurse-maid looked up with

a smile, and then turned her face again to her book. Mrs. Cristie stepped quietly to the mantelpiece, on which she had set the little jar from Florence, but to her surprise there was nothing in it. The sweet-pea blossom was gone. After looking here and there upon the floor, she went over to Ida, and in a low voice asked her if she had seen anything of a little flower that had been in that jar.

"Oh, yes," said the girl, putting down her book; "I gave it to baby to amuse him, and the instant he took it he stopped crying, and very soon went to sleep. There it is; I declare, he is holding it yet."

Mrs. Cristie went softly to the bedside of the child and, bending over him, gently drew the sweet-pea blossom from his chubby little fist.

(To be concluded in the next number.)

Frank R. Stockton.

THE PRESS AS A NEWS GATHERER.

BY THE MANAGER OF THE ASSOCIATED PRESS.

IS it true, as recently declared by a British writer, that "every respectable American is heartily ashamed of at least two things in his country—the press and the politicians"? and that "he shows it by openly de-

spising both—for he does not believe a word on the authority of the newspaper, and has no faith in the honesty of a politician"? Or is this merely a new outburst of British dislike of Americans so noticeable in the early part of the century?¹ However that may be, let us prefer to regard this opinion as an example of that hyperbolism which the writer condemns in American newspapers, rather than as a correct expression of the British sentiment of to-day. It would be extraordinary indeed if the free intercourse of a century had not increased the respect for one another of the two branches of the English-speaking race. And yet the words just quoted are quite as censorious as earlier opinions from British sources, even when the moral tone and intelligence of the American press were at the lowest. The author of "Cyril Thornton" said in 1830 that he found American newspapers "utterly contemptible in point of talent, and dealing in abuse so virulent as to excite

a feeling of disgust not only with the writers, but with the public which offered them support." Tried by this standard he concluded that the moral feeling of this people must be low indeed. Tried by a different standard (Could it be literary—the "uncouth alliterative verses of Joel Barlow"?) the charming Miss Berry in 1809 reached the same conclusion, that America then was, "perhaps, the lowest in the scale of moral education, the farthest from that intellectual character and perfection which such a system supposes."

If it shall be shown that the newspapers of to-day are as licentious and depraved as charged will not the opinions of Mr. Hamilton and Miss Berry be confirmed and the responsibility for the character of the press be placed at the door of the American citizen? If we are to believe the author of "Cyril Thornton," we have retrograded as a people from the beginning of the century. "Men here," said he, "are judged by a lower standard than in England; and this standard, both in regard to knowledge and manners, is becoming lower every generation."

However, it is some satisfaction to know that, as regards the press, British censure has, after all, been pretty impartial, and that the newspapers of the United Kingdom have come in for their share. "There is not only no person so important or exalted," said Mr. Brougham in 1811, "but no person so humble, harmless, and retired as to escape the defamation which is daily and hourly poured forth by the venal crew, to gratify the idle curiosity, or still less excusable malignity; to mark out for the indulgence of that propensity individuals re-

¹ MS. State Department. Richard Rush, United States Minister, in a letter to President Monroe in 1818, said that the influential circles were not well disposed to Americans—believed them degenerate English. Lord Holland was an exception.

tiring into the privacy of domestic life, to hunt them down and drag them forth as a laughing-stock to the vulgar, has become in our days, with some men, the road even to popularity; but with multitudes the means of earning a base subsistence." And Cobbett, the greatest polemic writer of his day, declared that the London editors spared characters neither public nor private. We find that Christopher North, while conceding that the "Times," "Chronicle," and "Globe" might be defended by a good devil's advocate in a gown, given him by a patent of precedency, denounced "the shameful yet shameless slave, the apostatizing 'Courier,' whose unnatural love of tergiversation is so deep, and black-grained, and intense, that once a quarter he is seen turning his back upon himself."

Less than sixty years ago the London "Times" denounced members of the House of Commons as "public enemies—usurpers of the people's franchises—cutpurses, robbers, plunderers, hired lackeys of public delinquents." Which is pretty good evidence that there was a time when at least the press of England had no faith in the honesty of a politician sitting in Parliament. Perhaps the severest arraignment of the head of a government that ever appeared in a responsible journal was the warning of the "Times" to the Duke of Wellington to look to the consequences, if he forced through coercive and obnoxious laws. "Oppressive and revolting laws," said the "Times," "must be enforced by violence; there is no other method. It is not, then, the people's bill, but the people's butchery. This is to be our prospect, is it? If so, may the right hand of every free Englishman perish

from his body if he do not himself, his children and country, right upon the head of the murderer."

More clearly seditious, certainly, than anything that appeared at an earlier period in our own press. But the fact is that the British and American newspapers have moved on parallel lines, whether in the abuse of privileges, mistaking license for liberty, or whether as the honest publishers of news, the defenders of their own rights or the rights of the people. "We have lived to hear the strange doctrine that to expose the measures of rulers is treason," indignantly exclaimed Channing. "Sae it's actionable to despise the government!" said the Ettrick Shepherd with an air of humorous contempt.

And at every stage in the progress of journalism since 1776, we shall find the same obstacles to be overcome, the same mistakes in yielding to corrupt influences, or in becoming the brutal instrument of party rancor, the same heroic and obstinate defense of the freedom of the press and of speech to the extent of the loss of property and the endurance of imprisonment, the same fearlessness in facing death in the presence of brutal mobs, the same democratic tendency in the discussion of social and political questions, and the employment of the same aids in promoting the influence and circulation of newspapers, on one side of the Atlantic as on the other.

At least one Englishman appreciated the partizan character of the American newspapers early in the century, and expressed the hope that the British government might have the benefit of such extrinsic aid in molding public opinion.¹ He said, in the publication of truth

1 MS. British Archives. Phineas Bond (Consul at Philadelphia) to George Hammond, August, 1808. The strictures in the "United States Gazette," said he, on the British Orders in Council and French Decrees, "have had so good an effect that I heartily wish we had under our influence some good press, through which truth might be detailed and mischievous falsehood constantly exposed. Is there no way of managing this?"

Mr. Bond was not in the secrets of his own government. The following copy of a confidential paper, found by the writer among the "Vansittart Papers" in the British Museum, will show that the British Government had not failed to enlist in its support the powerful aid of the press:

Secret and Confidential.

GENERAL POST OFFICE, February 15, 1806.

DEAR SIR: The hint in your secret note of Wednesday induces me to explain in writing some of the circumstances which have attached to me in regard to the newspapers.

During Mr. Addington's administration and for some years previous thereto, many of the respectable country papers received a small encouragement at the expense of Government, viz.: two daily papers, a three-day paper, occasional gazettes, etc., etc. This originated in the year 1792 with Mr. Charles Long, and was placed under my management. The condition with the proprietors was

that they should from time to time insert any articles having for their object a refutation of the dangerous principles disseminated by Paine and others for the subversion of every established principle and order.

I have the heartfelt pleasure to recollect that in my earnest, active, and laborious attention to this important service, I rendered considerable benefit to my country, and that the good effects of my proceedings were particularly evident at Norwich, Sheffield, Leeds, Manchester, Birmingham, Bristol, and various other places where seditious meetings and practices were openly convened and carried on.

In the course of time this agency assumed more of a political shape, and was occasionally, though not often, directed to calling the attention of the printers to the objects of a less general nature, but of sufficient importance to the Government. I always expressed a disinclination to be thus identified with the politics of the day, and frequently desired to be relieved from so unpleasant a service. This was, however constantly refused, both by Mr. Pitt and Mr. Addington, from each of whom I experienced many personal kindnesses.

I can appeal to Mr. Hely Addington as to the difficulties I encountered during his brother's administration. He knew them well, and the goodness of his heart led him to enter fully into all my views upon it.

When Mr. Pitt resumed the government I was called upon to continue the papers, but the printers were not required to insert any one article whatever. The papers were merely forwarded to the printers, who pursued their own line, certainly not hostile to his measures. But so

and the exposure of falsehood; but truth from his standpoint was British administration, right or wrong. Its exposition was not in the publication of all of the facts—the news—for the information of the people, but in an *ex-parte* editorial statement to support the view of his party. That was an American method.

Where does this history lead us? Few, perhaps, have thought of the tremendous significance of the press in its relations to the most advanced civilization of the nineteenth century; and that it flourishes only within the limits of the smallest portion of the human race. How insignificant are the Anglo-Saxon peoples in number when compared with the millions upon millions of the eastern lands, whose present is only a repetition of the life of past centuries—a superstitious adherence to the manners, customs, and religions of their ancestors! With these hope of amelioration is dead. In striking contrast is the restless energy of the exceptional civilization—of the progressive races—of which the press is typical, which constantly develops new conditions in political and social life, in harmony with moral law. "In estimating all of the grand human agencies let us not forget that (as Talleyrand finely said) the press is the chief instrument of representative government. That is, a free press, for without freedom of discussion the truth cannot prevail, and government will be a tyranny as it was in England after the close of the war with France. Her press had been enslaved, and "the masses of her population had been reduced to a state of degradation and a state of want which were enough to compromise all the fame that all her triumphs, whether in field of battle or upon the field of political liberty, had been able to secure for her." It was through the press reform came, and there was formed a public opinion of greater moral force and authority, which ministers were unable to subdue, and to which statesmen of all parties learned more and more to defer. But not only in the domain of politics is its usefulness felt. It fosters the spirit of inquiry in other fields, while in return its own influence is extended and its power for good augmented by the products of

science and the mechanic arts. "The discovery of yesterday is only a means to arrive at a fresh discovery to-morrow."

If the activity of the press is typical of the restless forces observable among enlightened peoples, it is greater in America than in any other country, because of the greater freedom and the more general diffusion of education. The American is vigorous, active, and dexterous, and the journalist preëminently represents the national character.

The brutality of the American press, which embittered the life of Jefferson and drew from the gentle Channing the remark that the influence of the press was exceedingly diminished by its gross and frequent misrepresentations, was even less offensive and virulent than the warfare of public men, conducted in correspondence or pamphlets. And if we study the sources of political information we shall find that the violence and unfairness of the press have been but the expression of party feeling, in which the most intelligent have shared. Parties have existed for centuries; the educational influence of the learned professions has meliorated social life and molded governments for ages, but the press, the mightiest influence for good or evil to-day, is the growth of only about one hundred years. In the answer to the question, Is it better in 1891 than in 1791? as it may be yea or nay, lies the hope for good or the fear of evil of every patriotic citizen.

WARFARE OF POLITICAL BEES AND WASPS.

THE newspapers of the close of the eighteenth century bear slight resemblance to the newspapers of to-day. A historical writer has said that the "Aurora" down to 1800 was the "nearest approach to a modern newspaper to be found in the country." This statement set down in the pages of history is as open to the charge of inaccuracy as a statement hurriedly made in a daily paper. There were several other newspapers quite equal to the "Aurora"; and notably one, the "Herald," of Augusta, Georgia, more nearly approached the better class of modern newspapers. But as a rule the

strongly did I feel what I have already described, that the day after Mr. Pitt's decease I wrote to Mr. T. Bourne that "nothing could induce me to continue an agency so troublesome in itself, so liable to misconception and invidious comment, an agency for which no adequate recompense ever was or ever could be made," and I declined it from that day.

Before I proceed any further I must acquaint you that I never lent myself to the circulation of anything personal or offensive to any individual whatever.

My object in troubling you with this detail is to discharge a duty which I conceive I owe to the Government by pointing out how the country press has been influenced. You will best judge whether the engine should again be resorted to; in such case all the information in my power ought to be afforded to any person to whom it may be entrusted. My own motives for declining have

been fully stated; they are such as you must approve, especially, too, as there was a time in which I was severely arraigned. I was contemned as a worm, a busy partizan, when I never meant to do more than obey the commands of Government with that zeal and fidelity which have characterized me in all instances in life. I was threatened also (in the year 1796 or 7), with a motion in the House of Commons, but (as I was told) the intervention of a friend prevented that proceeding. It was in the recollection of all these circumstances that I wrote my letter to Mr. T. Bourne, but it does not follow that Government should be deprived of what they may consider to be essential to their support, by any nice feelings or scrupulous objections of an individual anxious to discharge his full duty by all without becoming a political object of resentment to any.

I have the honor to be, etc.,

F. FRECHING.

news given related chiefly to foreign affairs, with brief space to such accidents, calamities, and other domestic events as were publicly known. The paper was the exponent primarily of a party or of the selfish views of a party chief. A single illustration may not be out of place :

Connecticut was an inhospitable State for Democrats, and after a brief and disastrous career at New London, the "Bee" in 1802 went in search of a new field in Columbia County, New York. The day after Holt, the proprietor, issued his prospectus, in which he promised to begin the publication of the "Bee" as soon as he obtained three hundred and fifty subscribers, the following *jeu d'esprit* appeared in the same place :

If there perchance should come a BEE,
A WASP will come as soon as he.

MYSELF.

PROPOSALS

For *Publishing in the City of Hudson a new paper, to be entitled*

THE WASP,

By ROBERT RUSTICOAT, ESQ.

This paper will be issued occasionally as may best suit the editor, at the moderate price of two cents a number. It will be printed with a legible type, on good paper, and will make its appearance as soon after Holt's "Bee" is commenced as possible, whether three hundred and fifty subscribers are obtained or not.

The editor will make but few promises. Wasps produce but little honey : they are chiefly known by their *stings* ; and the one here proposed will not materially differ from others. The "Wasp" is declared to be at enmity with the "Bee." Wherever the "Bee" ranges the "Wasp" will follow — over the same field, and on the same flowers. Without attempting to please his friends, the "Wasp" will only strive to displease, vex, and torment his enemies. With his sting always sharpened for war, he will never accept of peace. He will never accede to the philosophical doctrine, that

We are all Wasps — we are all Bees.

This stinging reference to the President's "We are all Republicans — we are all Federalists," cost the editor of the "Wasp" dear. When he reproduced the Callendar calumny, Mr. Jefferson's district attorney, Ambrose Spencer, who induced the "Bee" to locate at Hudson, prosecuted him for libel. It was a famous case, in which defendant offered the truth in evidence in justification, as had been permitted under the sedition law, but the court ruled that this could not be done under the common law, under which the prosecution was had.

The period of activity from the close of the second administration of Washington to the close of the second war with England was fol-

lowed by a period of impotency, as deadening in its influence as the era of good feeling on the moral sense of the community. When at last the pent-up passions burst forth, and party divisions were formed on the lines of personal ambitions and antipathies, the newspapers were swept into the whirlpool of personal strife, their legitimate functions were sacrificed, and they reached a greater depth of degradation than ever before or since. This may be best described as the Dark Age of journalism. Daniel Webster was seeking contributions to end the neutrality of newspapers or to set up new ones to counteract the aggressive audacity of Jackson-Clinton prints.¹ At a later day a deserter from the army of Jackson journalists, a man who had won some distinction as a member of the American Philosophical Society, offered his pen for hire to Clay, and on being spurned threatened to revenge himself on the great party leader through the press.² There was no longer a distinct newspaper press. In journalism the rule obtained that governed in personal warfare —

... he wha 's seeking
To sway the mob
Maun often do, against his liking,
A dirty job.

If there was preserved a semblance of dignity in the Crawford-Calhoun controversy, it was altogether abandoned in the newspaper correspondence between Major Eaton, Secretary of War, and Mr. Ingham, Secretary of the Treasury. The decent courtesies of life were thrown aside ; the coarsest epithets were employed by both parties ; the most atrocious charges were advanced, and even female character was not spared in this ferocious controversy. There were not lacking protests from good citizens against such blackguardism in political life ; and in the columns of a few decent newspapers in Richmond and Washington there was evidence of ability and a disposition to discuss public questions on their merits. But it was from the West that the most powerful influence for reform was to emanate. Charles Hammond, when not discussing legal questions in court, amused himself in shaping the course of the old Cincinnati "Gazette," and infused a new spirit into journalism, the spirit of manly independence and a love of the truth. One who knew him well, and in the next generation himself won distinction, said that "as a writer of great ability, and a man of large acquirements and singular integrity, Hammond was scarcely equaled by any man of his time." No other writer of his day could express an idea so clearly and so briefly. This protest against the brutalism of

¹ MS. 1827, Clay Correspondence.

² MS. Clay Correspondence.

partizanship, this gleam of light, gave promise of better things. Obviously the time had come for a revolution, a breaking away from old methods.¹

The modern American newspaper, however, had its beginning in New York. It was here that it was first clearly demonstrated that newspaper publishing could be divorced from the fortunes of a public character or of a party, and made a profitable business. No hand of writer to-day could draw so vivid a picture of the new journal, or so well describe the manner of its production, as the following from the files of a famous paper. The year is 1836 :

We published yesterday the principal items of the foreign news, received by the *Sheffield*, being eight days later than our previous arrivals. Neither the "Sun" nor "Transcript" had a single item on the subject. The "Sun" did not even know of its existence. The large papers in Wall street had also the news, but as the editors are lazy, ignorant, indolent, blustering block-heads, one and all, they did not pick out the cream and serve it out as we did. The "Herald" alone knows how to dish up the foreign news, or indeed domestic events, in a readable style. Every reader, numbering *between thirty and forty thousand daily*, acknowledges this merit in the management of our paper. We do not, as the Wall street lazy editors do, come down to our office about ten or twelve o'clock, pull out a Spanish cigar, take up a pair of scissors, puff and cut, cut and puff for a couple of hours, and then adjourn to Delmonico's to eat, drink, gormandize, and blow up our contemporaries. We rise in the morning at five o'clock, write our leading editorials, squibs, sketches, etc., before breakfast. From nine till one we read all our papers and original communications, the latter being more numerous than those of any other office in New York. From these we pick out facts, thoughts, hints, and incidents, sufficient to make up a column of original spicy articles. We also give audience to visitors, gentlemen on business, and some of the loveliest ladies in New York, who call to subscribe — Heaven bless them ! At one we sally out among the gentlemen and *loafers* of Wall street — find out the state of the money market, return, finish the next day's paper — close every piece of business requiring thought, sentiment, feeling, or philosophy, before four o'clock. We then dine moderately and temperately — read our proofs — take in cash and advertisements, which are increasing like smoke — and close the day by going to bed always at ten o'clock, seldom later. That's the way to conduct a paper with spirit and success.

¹ Personal journalism still held its preëminence, but the following from the pen of Hammond is in a different spirit from the daily utterances of contemporaries :

"I am afraid my quondam crony, Mr. Shadrach Penn, of the Louisville 'Public Advertiser,' has kept a great deal of bad company since the days of our political intimacy. He seems to mistake vulgarity for wit and mis-

There is a piquant flavor in the above that one misses in his morning paper now, calculated "to freshen even a town-bought egg," — a flavor, however, that is in this more cultivated age better omitted, even at the expense of one's digestion.

We have put behind us the past — a partizan, unscrupulous, dependent, frequently an inane journalism — and have begun a new era. What though the beginning be crude, it is a beginning nevertheless in the right direction, promising better things. We have left behind us the pronounced individuality of the conductor of the newspaper, and have taken on a new character that has challenged criticism quite as severe as that employed against the older journalism.

The fact most notable during this transition period is the demonstrable value of news. In England the London "Times" made the departure from the traditions of the past; in America the New York "Herald," which dates from 1835, inaugurated the new system of journalism. In every issue the "Herald" gave evidence of the energy, enterprise, courage, and practical common sense of its proprietor. He was in touch with the people of New York, studied their peculiarities, and every day gave them the news written up in an attractive style. The views and personal characteristics of the proprietor were predominant, but as one who seeks to please. All of the practical affairs of life were touched upon as the news of the day: markets, sanitary conditions, banking, commerce, the mechanic arts, labor, politics, religious affairs, etc., etc. The proprietor broke away from old forms in his Wall-street reports, and began what he was pleased to call a new era in commercial intelligence. It simply gave the spirit prevailing on the street and in the exchange, and causes of transactions, as determining values. "This," said he, "is my new philosophy in commerce, and this philosophy is one of the most pleasing and enchanting studies that the mind can dwell upon."

When the crash came in 1837, the "Herald" exercised a powerful influence for good. It covered the news features of the day with great thoroughness. It exposed the mistakes of political leaders and the rottenness of the banking system intrepidly and with fairness. When there was danger of disturbances of the peace, the "Herald" counseled calmness, forbearance.

representation for argument; errors from which, in days of yore, he was as free as most men. I am sometimes constrained, upon better acquaintance, to think and speak well of men whom I once reprobated. I have never yet felt disposed to vituperate a man that I once esteemed and commended. If such sink into vicious courses, I leave their exposure to others. I should as soon think of assassination as attacking a friend because he differed from me in politics."

On the 18th of May this was the most conspicuous editorial:

If the merchants cannot pay their debts in the legal standard, that itself is quite calamity enough, without adding insurrection or revolution to it. The country at heart is right. A tenth part of the great trading class cannot overturn the government. Let it be changed in due course of law — by the free suffrages at the polls. Let there be no public meetings in this crisis. Public meetings are foolish and dangerous things. They produce no effect on sense or justice — they settle no principles — furnish no argument. If other cities run into riot and confusion — if the outrageous conduct of the fraudulent banks, that stop paying specie, with specie in their vaults, drive Philadelphia, Boston, and Baltimore to madness, *let the people of New York show to the whole civilized world of Europe and America an example of MORAL DIGNITY — of INTELLECTUAL ELEVATION — of PURE PATRIOTISM — of LOVE FOR PUBLIC ORDER* — that will prove them to possess at least some of the fire, of the purity, of the honesty, of the integrity of the sacred Revolutionary age of 1776. Let us have no public meeting — no assemblages of an excited people. But let us refuse the irredeemable rags in every and all payments — let us return to gold and silver — let us deal in specie alone, or paper currency founded on personal integrity. But, above all, let us wait patiently till the day of election comes round — and then speak in a voice of thunder from the ballot boxes. We have “worn and eaten and drank too much” — let us get sober, eat in moderation, and cast away our purple and fine linen.

And when election day approached, the people were advised to demand of the new Legislature:

1. A repeal of the atrocious Suspension Law.
2. A repeal of the unjust Mortgage Law.
3. A repeal of the Usury Law.
4. A repeal of the ridiculous Restraining Law.
5. A repeal of the bank charters that will not resume specie payments instantly.
6. A repeal of all laws that unite the privilege of banking with the political powers of the State.
7. A repeal of all the corporation meat laws which cause the high prices of provisions.

ORIGIN OF THE ASSOCIATED PRESS.

FROM this time on until 1849 the individual papers continued to collect news without co-operation. A news-boat system had been introduced by the “Courier and Enquirer,” but as this was a temptation to collusion, it failed to receive public confidence. During this year a “Harbor News Association” was formed, the leading members of which were the “Journal of Commerce” and the “Herald,” and subsequently telegraphic and general news associations were organized for the purpose of covering a wider field. These undoubtedly had their

origin in the success of the “Herald” and the “Sun” in getting through from Texas, and Mexico, during the progress of the war, despatches by pony express in advance of the Government’s advices. It was manifest to the conductors of other newspapers that if they were to compete successfully with the new system inaugurated by Mr. Bennett they must adopt new methods. Negotiations were entered into and in 1851 the present “New York Associated Press” was organized under the following agreement:

It is mutually agreed between G. Hallock of the “Journal of Commerce,” J. and E. Brooks of the “Express,” J. G. Bennett of the “Herald,” Beach Brothers of the “Sun,” Greeley and McElrath of the “Tribune,” and J. W. Webb of the “Courier,” to associate for the purpose of collecting and receiving telegraphic and other intelligence.

The “Times” and “World” came in later — the latter under the “Courier” franchise — and since their accession there has been no change in the membership of the “New York Associated Press.”

Even at this time, the electric telegraph, which had introduced a new element in the making of newspapers, was used sparingly because the facilities were inadequate to a large business, and because the income of the best papers did not yet justify incurring extraordinary expenses. The mail, the express, and carrier pigeons were still the principal means for collecting news. The people had not yet acquired the intense habit that exacts uninterrupted service. That came with the great war.

As the telegraph has become the most serviceable of all agencies in the gathering of news, we may properly devote brief space to its development. In 1838, Morse and his associate Alfred Vail, who were endeavoring to enlist the aid of the national legislature, gave an exhibition of the working of the electric telegraph in Washington. In an invitation to a senator to be present the confident prediction was expressed that it would be practicable to get quotations of the New Orleans cotton market every day.¹ And when Henry O’Rielly’s lines (known as the “Atlantic, Lake, and Mississippi Telegraph”) reached St. Louis in 1849, a national telegraph and railroad convention was held in that city, which adopted an elaborate report recommending the immediate construction of a telegraph line to the Pacific Coast. The gold fever was at its height, and the Western people were impatient on account of the slow method of communication across the plains, or via Panama. Mr. O’Rielly’s plan was not brought to the attention of Congress until the session of 1851–2.

¹ MS. Clay correspondence.

It proposed that Congress should pass a law providing that instead of establishing forts, with hundreds of men at long intervals apart (as suggested by the War Department), the troops designed for protecting the route should be distributed in a manner better calculated to promote that and other important objects on the principal route through the public domain; namely, by stationing parties of twenty dragoons at stockades twenty miles apart. It provided also, that two or three soldiers should ride daily, each way, from each stockade, so as to transport a daily express letter-mail across the continent, protect emigrants, and incidentally the construction of a telegraph to California. At this time the line had been carried into New Orleans, and the O'Rielly system included 7000 miles of wire. This was scarcely forty years ago, and yet to-day the system of the Western Union Telegraph Company embraces 680,000 miles of wire, and all American companies combined, more than enough to girdle the world 27 times. At the close of the war this great company controlled 75,686 miles of wire, and distributed business through 2250 offices. In 1876 the system had been extended to 183,832 miles of wire and 7072 offices; in 1881 to 327,171 miles of wire and 10,737 offices, and in the last ten years the mileage and offices have been doubled. For many years the use of the wires in the collection of news scarcely kept pace with the growth of facilities. As I have said above, the business of the newspapers hardly justified lavish expenditures, and telegraphic rates continued to be high. Therefore the wires were employed only for brief mention of the most notable events of domestic news within a radius of a few hundred miles. The readers of newspapers had not yet outgrown the deliberate movements of the Post Office Department.

GOVERNOR SEWARD AIDS A JOURNALIST.

HON. CHARLES A. DANA relates an incident in his journalistic career that most happily illustrates the old ways of making a paper, when the steamship brought the news of Europe, and the mail the news correspondence of the United States.

There was to be a celebration of the opening of the Rochester and Niagara Railroad as a through line, at which Mr. Seward was to speak, and Mr. Dana went to represent the "Tribune." There was a large attendance at Niagara Falls, of members of the legislature and other dignitaries of the State, and of local municipal bodies, as the event was of more than usual importance. Mr. Dana knew it had been Mr. Seward's habit carefully to write out his speeches before delivery, and to supply the

"Tribune" with an advance copy. Mr. Seward had not done so in this case, and in order to have an adequate report Mr. Dana took full notes of his remarks. At the conclusion of the ceremonies he called upon the orator at the Cataract House, and asked him if he had prepared his speech on this occasion. Mr. Seward said that he had started to do so, but was prevented by other engagements. He had a half-dozen pages—the introductory part—roughly written out. With this and his notes Mr. Dana wrote out the speech for publication and submitted his manuscript to Mr. Seward, who made extensive corrections, until finally the report was satisfactory. An hour or two later he sent for Mr. Dana to say that a reporter from another paper had called upon him for his speech, and he suggested that Mr. Dana should permit him to make a copy of his report. "Governor Seward," said Mr. Dana, "I cannot do that. I attended the meeting and have made a report for my paper, and it would not be fair for me now to give to another, who was not in attendance through indifference or idleness, the benefit of my labors." Governor Seward admitted that Mr. Dana was right, and good-naturedly dictated a report, which from necessity was much briefer, to the other newspaper man. The next day Mr. Dana started for home by train, and in due time the report of Mr. Seward's speech appeared in the "Tribune," which of course had it in much better form than any competitor. There was no necessity for telegraphing, as no other reporter had the speech, and the exigencies of journalism in that day did not require the immediate and unrestricted use of the telegraph in all cases.

The telegraph companies were the pioneers in the news collecting and distributing business west and south. In 1860 the telegraphic reports scarcely exceeded fifteen hundred words a day for such cities as Pittsburgh, Cleveland, Cincinnati, Detroit, Chicago, and St. Louis. The files of the Charleston "Mercury" show even less for the South. The cotton markets of New Orleans and New York, brief mention of the latest European dates by steamship, and briefer even of Congress made up the variety.

All of this changed with the breaking out of the war. The "Associated Press" supplemented its reports of routine business with accounts of the movements of troops, of the transactions of departments, and with patriotic appeals; while the great journals of the principal cities inaugurated special correspondence from the fields of battle which increased their popularity and made the reputation of many able writers. People acquired the habit of reading daily papers, and new and improved machinery was constructed to meet the increasing circulation.

NEW METHODS TO MEET CHANGED SOCIAL CONDITIONS.

WE have now reached the latest stage in the development of the newspaper. The demand is as wide as the continent. How shall it be met? Very high authority says: "The first thing which an editor must look for is news. If the newspaper has not the news, it may have everything else, yet it will be comparatively unsuccessful; and by news I mean everything that occurs, everything which is of human interest, and which is of sufficient importance to arrest and absorb the attention of the public, or of any considerable part of it." These are the conditions which, once fulfilled, make the newspaper the most wonderful production of the times. What energy, what alertness, what intelligence, what comprehensiveness in its pages! All arts and inventions and subtle forces are called into play in its creation: The shorthand characters that preserve the spoken words of the statesman, the minister, the philosopher, or the man of business; the telegraph that transmits; the typewriter that puts copy into form; the linotype that sets the copy and casts the bars from which the impression is made; the electric motor that supplies power and light, and the steam press that throws off tens of thousands of sheets — representing the discoveries of science, the inventive genius and mechanical skill contemporaneous with the development of the newspaper. Then look at the contents. Every human interest touched upon, local and general domestic affairs with photographic minuteness, while from the four corners of the earth have been gathered in clear and comprehensive accounts of the achievements and accidents attending human activity during every twelve hours. From Melbourne to Montreal — from St. Petersburg to San Francisco — from Valparaiso to Halifax — all are within the magic circle. Space is obliterated. Time may be said in a sense to anticipate the sun. This activity tends not only to the increase of wealth, but to the promotion of a higher civilization. From the two great centers, London and New York, radiate influences that are rapidly revolutionizing governments and promoting a higher social order. The bloody past gives place to a humane policy. Man is the most important factor.

A further reference to the telegraph and the Associated Press, as agencies in the production of a newspaper, will make our story clearer. Not only has been realized the sanguine prophecy uttered in 1846, that it would be possible to transact commercial business between New York and New Orleans through telegraphic advices exchanged daily, but the commercial business of the leading cities of the world is

transacted by telegraph through almost momentary exchange. And what the telegraph is to the commercial world it is to the press. The New York Associated Press, whose organization has been described above, is the center of a combination of nearly all of the leading newspapers of the United States and Canada, known as "The Associated Press." Soon after the close of the war, on account of the meagerness of the service supplied by New York, the great papers of the chief western cities organized "The Western Associated Press," which made more favorable contracts with the Eastern organization and the Western Union Telegraph Company. In January, 1883, still closer relations were formed with the New York Associated Press, by which the management of the two organizations was consolidated for more effective work. Included in "The Associated Press" are the New England, the New York State, the Philadelphia, the Baltimore, the Southern, the Texas, the Kansas and Missouri, the Northwestern, the Trans-Mississippi, and the Colorado Associations. The basis of the Associated Press is coöperation. The papers have associated together for the convenient and economical conduct of one branch of their business. In this manner they have brought the collection of news to a state of great efficiency. The entire world is covered. For convenience in handling reports, despatches are sent to central points, such as Washington, New York, Boston, Philadelphia, Toronto, Chicago, St. Paul, St. Louis, New Orleans, Kansas City, Denver, San Francisco, and Portland, and there edited and such news as is of interest to other sections of the country retransmitted. Only the largest cities receive the bulk of the news; to the smaller places are sent reports carefully condensed. Only an extensive telegraph system, such as that of the Western Union Telegraph Company, would meet the requirements of the Associated Press. It renders a service incomparably the best in the world, and, considering the extent of country and population to the square mile, the cheapest. The facts given below will substantiate this statement.

In the Associated Press system New York is the principal center. From it extend to the east, to the west, to the northwest, to the south, and to the southwest, its leased wires exceeding 10,000 miles in length, which are operated under its own direction, and over which an enormous amount of report is received each day. It is thus practicable for the management to have as direct and prompt intercourse with agents in all of the great cities as with persons in the same office; or with the papers of Boston, Minneapolis, Denver, New Orleans, and other intermediate cities, as quickly as with the

papers of New York City itself. Here is first received the foreign news, except such as comes from China, Japan, and the Samoan Islands, through San Francisco; reports of the commercial transactions of Europe, India, and Australia; of debates in Parliament, in Reichstag, in National Assembly, or Cortes; of industrial and social movements; of the achievements of science, etc., etc. At its office in London, Berlin, or Paris is delivered for its use, as may be most convenient, the news collected by the great news agencies of Europe—Reuter, Wolff, and Havas, and their allies, with which the Associated Press has exclusive contracts. In addition to these, the resources of the Central News of London and the English Press Association are at the service of the Associated Press, which also employs special correspondents in the principal capitals of Europe to collect intelligence of distinctively American interest. These despatches are clearly and concisely expressed, except on occasions of unusual interest, when they are treated as elaborately as domestic reports. Market quotations are always transmitted by cable in an elaborate cipher, to insure accuracy and economy. These are promptly interpreted, verified, and sent out to the press and the various commercial exchanges.

THE WORK OF A SINGLE DAY.

FIGURES will give a clearer idea of the extent of the work performed daily by the Associated Press than any other form of description. The New York office handles daily from 75,000 to 100,000 words, equal to from fifty to seventy columns of matter. On January 13, 1891 (a date taken at random), this news amounted to 95,000 words. Of course, of this mass of material no paper prints the whole; but most of it finds a place somewhere. To meet the requirements of the service, the Associated Press adapted the type-writer to receiving directly from the Morse instrument, and a special paper was made which facilitates the handling of reports. These details may seem of small moment, but they go to show the pains taken to insure perfect work. The agents of the Associated Press, who are selected for character

and ability, are instructed to get all of the news, but if need be to sacrifice the "story" to the facts—in a word, to tell the truth.¹ They are required to treat all political and religious events with judicial fairness, and to omit social happenings having an immoral tendency. We do not find that anything is lost to thorough journalism by such limitation, but on the contrary much influence is gained thereby. The Associated Press enjoys the public confidence in its reliability to a degree unapproached by any other organization, and this enhances the value of the franchises of the papers supplied by it. This confidence is based upon an experience of forty years.

The enterprise of the Associated Press has been equal to every emergency. It began to make verbatim reports of the great national conventions of the political parties in 1872. Its descriptions of the scenes occurring in the halls during the sessions of the various conventions were made with such photographic accuracy as to give to the readers of the newspapers in distant cities a clearer idea of what was said and done than was possible to most persons who were actually present. The stenographers, type-writers, and operators followed the speeches and transactions with such rapidity and precision, that within fifteen minutes after the close of each session of 1880, 1884, and 1888, the last sentence was delivered to the papers in the various cities. When Mr. Cleveland was nominated in St. Louis, the Associated Press bulletin announcing the fact was put upon the Western Union wires, and was on the bulletin boards of the newspapers of San Francisco, and other cities, in less than two minutes. And, as a rule, announcements of this kind are generally displayed on the bulletin boards of the newspapers before the fact is known in the convention; the Press reporters keeping tally of the vote do it more quickly than the secretaries of the convention, and generally have the result on the wires before the footing is handed to the reading clerk.

The dynamite explosions of Westminster Hall and London Tower, in the winter of 1885, occurred between two and three o'clock in the afternoon. By ten o'clock New York time the forenoon of the same day, a bulletin reached the Associated Press announcing the explo-

¹ Within the pale of truth, said Jefferson, the press is "a noble institution, equally the friend of science and of civil liberty." In this connection we cite, as affording a curious and striking illustration that inaccuracy of statement is not peculiar to journalists, but may be alleged against many who write books, even historians, who are expected to verify their facts, the use made of the best known of Mr. Jefferson's utterances upon the press. We give below two instances of misquotations, 'followed by the text' from Jefferson's works:

When Jefferson declared, that if he had to choose between a government without a free press, or a free press without a government, he would prefer the latter, he

begged the question twice, etc.—"A Critical Review of American Politics."

I would rather live in a country with newspapers and without a government, than in a country with a government but without newspapers.—*Introduction to Hudson's "Journalism in the United States."*

What Jefferson did say was:

The basis of our government being the opinion of the people, the very first object should be to keep that right; and were it left to me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter. But I should mean that every man should receive those papers, and be capable of reading them.—*Works. Jefferson to Col. Carrington, Paris, Jan. 16, 1877.*

sion. That was hardly written and sent to the papers before the details began to follow in frequent despatches. So quick was the service, that one New York afternoon paper before noon had an "extra" on the street with a half-column report of the outrage, while the last editions had accounts filling several columns.

Extraordinary time has been made in transmitting the result of the Oxford-Cambridge boat race to the Associated Press. The despatch must first be sent by the government lines to connect with the cable, thence across the ocean to the American land lines, and thence to New York. Yet this has been done in ten seconds.

Mr. Gladstone made his great speech in Parliament in support of his famous Irish bill on the evening of June 7, 1886. The Associated Press cabled from London 13,000 words of this speech, giving large parts of it verbatim. It was doubtless the largest single cable despatch ever sent across the Atlantic. The orator finished speaking soon after ten o'clock London time. By the same hour New York time, ten columns of his speech and of description of scenes and incidents were in every important newspaper office in the United States.

The reader will recall the graphic account of the destruction of ships in the harbor of Apia by Mr. John P. Dunning, a staff correspondent of the Associated Press, who had been sent to investigate the political complications in Samoa; the reports of the great flood in the Conemaugh Valley; the report of the destruction of a part of Louisville, and more recently the accounts supplied of the Liberal dissensions in Great Britain, and of the Indian troubles in Dakota.

We have thus far considered only what is known as the "regular" service. The special service of the great newspapers of the principal cities is very large and expensive, and the editor of each is justly proud of what he has accomplished in this field. This spirit of enterprise gives an individuality to the journal which, in a notable case such as Mr. Bennett's sending Stanley to Africa, endures for many years. The "Tribune," the "Times," the "World," and the "Sun" of New York have scored their memorable "beats," and so have the newspapers of Boston, Philadelphia, Baltimore, Pittsburgh, Cleveland, Cincinnati, Chicago, St. Louis, Louisville, and San Francisco. But aside from notable occasions this special service has been, and continues to be, widely extended, covering not only political correspondence from the national capital, but also a great variety of social, business and political events in the States and Territories. Money is not spared to meet the demand of the reading public. A great journal will spend for this class of news between \$8000 and \$9000 a month, or \$100,000 a year in round numbers.

THE WORK OF A GREAT TELEGRAPH SYSTEM.

THE records of the Western Union Telegraph Company may be consulted to show the extent of the expenditures by the individual newspapers and the Associated Press, for telegraphic tolls alone, on this the largest telegraph system.

During the year ending June 30, 1890, the Western Union Telegraph Company delivered at all stations 322,088,438 words of "regular" or Associated Press report. This was delivered to an average of two newspapers in each place, at an average cost of fifteen cents per one hundred words for each place.¹ During the same period the company handled 206,025,094 words of specials, at an average cost of fifty-one cents per hundred words. These figures do not include reports transmitted by the Associated Press over its leased wires, or special correspondence sent on individual newspapers' leased wires. Estimating these two classes and the reports of the outside press, there was delivered to the newspapers during that year an aggregate amount of 1,500,000,000 words of telegraph news. On the regular service a little more than twenty-two per cent. is handled by the telegraph company in the day-time, while on the special service only about five per cent. of the volume is handled in the day-time. The day rate is twice the night rate. On the Associated Press leased wires, the proportions are thirty-four per cent. of day report to sixty-six per cent. of night report, and the difference in cost the same as by Western Union lines. The total press receipts by the telegraph company for the year ending June 30, 1890, including regular, special, and leased wires, were \$1,848,247.23.

It should be borne in mind that these figures do not include tolls on other lines, or cable tolls, or the wages of correspondents and operators, or miscellaneous expenses, or the sums paid for news by both individual newspapers and the Associated Press, which would aggregate a very large sum.

One very interesting feature of the news service, of which the public has no knowledge, is telegraphing in cases of storms and interruptions. It is on such occasions that the utility of a vast system is made manifest. During the blizzard of March, 1888, for instance, the Washington report was sent to Philadelphia via New Orleans, Memphis, St. Louis, Chicago, and Pittsburgh; while New York City received it from Albany, it having reached Albany via New Orleans, St. Louis, Chicago, Cleveland, and Buffalo. A more extraordinary case is that of Boston, which received a condensed report

¹ This is rendered possible only by the great number of places served on a circuit — from thirty to forty being supplied in some cases at the same time.

from New York, via London, it being sent by one cable from New York to London, and thence back by another cable which lands in New Hampshire. Boston is frequently served with New York news via Montreal, and Albany via Pittsburgh and Buffalo, the route being via the Pennsylvania Railroad to Pittsburgh, thence across via Cleveland to Buffalo, and thence down the New York Central to Albany.

PUBLIC CRITICISM CONSIDERED.

WHILE the extravagant opinion cited in the opening paragraph of this article is not shared by the general American public, a good deal of well-founded criticism is indulged in. With such vast resources at command, why are newspapers so unreliable? Has the objector ever taken into account the satisfaction he derives daily from the perusal of pages of carefully prepared and entirely trustworthy news matter, touching home and foreign affairs, in his paper? The one or two objectionable articles—untruthful or personally offensive—are the dead flies in the ointment, and the whole is condemned. Editors as a rule are painstaking, and, while aiming to excite interest, hope to inspire confidence. But there is a sensational journalism, as there was formerly a personal and a brutal partizan journalism, that offends the more intelligent members of the community, which will have its day as did the other. Three or four years ago the papers contained despatches of a startling character from the mining regions of Pennsylvania and West Virginia and the oil regions of Ohio. Their frequency led to an investigation, and it was found that two or three unscrupulous young men had adopted a system of invention for a livelihood, and had deceived the editors for a time. And within a few months the newspaper market has been flooded with cable fables—piquant and readable, but fables none the less. Even several conservative English papers became eager patrons. They call it the “Americanizing” method of making papers. January 14, the London “Times” devoted one of its ponderous editorials to demolishing the American State Department, which had its inspiration in a faked cable despatch sent from this side. “We are even warned,” said the “Times,” “that the American Minister here is to be specially instructed to tell Lord Salisbury what President Harrison thinks of his conduct.” After this astounding statement is revealed the *motif* of the fable: “At the same time, these rumors of agitation are not easy to reconcile with Mr. Blaine’s eagerness to inform an op-

portune interviewer that ‘the Department of State has not been taken unawares,’ that he had known for some time that judicial proceedings of some sort were contemplated by the Canadian authorities, and that the present step has not been a *coup* on the part of the British Government in the least.” All of which would be interesting if true. But the Secretary of State says he saw no interviewer, and of course did not unseal his lips on the subject to any one. Therefore his “eagerness” was evolved from the imagination of the “opportune interviewer.” To such *baseness* has the Thunderer descended.¹

A good “story” always finds a ready market, and doubtless this fact is usher to much that is objectionable and injurious. Again, lack of experience or faulty judgment may admit what ought to be excluded. Youth is impulsive, opinionated, and venturesome, and the staff of a newspaper is largely made up of young men. The possession of power is a great temptation to exercise it regardless of the effect produced. Since the days when Pendennis and his friends wrote for the newspapers and became popular, other young men have assumed impertinent airs and have tied up victims to their posts for the amusement of the public. This may be a defect of the system, but as long as readers of newspapers laugh, the comedy is pretty sure to be played. It is when wrong is intentionally done that one loses patience with the press. But even here “the antidote to the press is to be found in the press itself.”

The whole responsibility for misinformation should not be charged upon the press, but partly upon those who, having a knowledge of the facts, when the public is concerned, refuse to divulge them. At such times it is the duty of the press to make public the information, even rumors, obtained in order to develop the truth through agitation. For instance, it is in the power of railroad officials to work a reform in this regard, by promptly communicating the truth to representatives of the press in cases of railroad accidents resulting in loss of life. The real facts are pretty sure to be known eventually, and, if given immediately, would prevent the publication of rumors calculated to excite the people unduly. This remark will apply to other interests of a public or semi-public character.

HOW SHALL THE PRESS BE REFORMED.

IN the discussions that have been had recently a wide diversity of opinion is noticeable as to the responsibility of the press and its re-

¹ Another instance showing the tendency of the “Times” towards sensational journalism was recently afforded in the publication of a romantic story describ-

ing Prince Bismarck at the feet of the Empress Frederick, praying her interposition to prevent his dismissal from office.

lations to society. Judicial authority has declared in favor of requiring every article to be signed with the name or initials of the writer. A senator has expressed the opinion that regulation through legislative enactment might be had without impairing the freedom of the press; and a writer¹ of some distinction would use the power of the government through the press for the education of the people. His object is not the same as the senator's. He says:

Society may indeed, through its members, withdraw its support from an obnoxious press; but such action involves a trial of social force in which the respective press has all the advantage, even if it is not the medium of a sect, or party, or class, or the hampered tool of a clique, as most of them are. If, therefore, there is to be fair play, the vantage-ground must not be with the one or the other; but there must be an organic authority somewhere that sees to it that neither society nor the press exercises its power arbitrarily and oppressively. Neither should have an unlimited monopoly; but neither should, on the other hand, be bound down to unlimited submission; and this free status we get, when we are just as much on our guard against men and things when they call themselves "the press," as when they are mere citizens, and at the same time give them their rights equally in both conditions.

And the conclusion lies near, that there are things which somebody ought to compose and which somebody ought to publish; and with it goes the opposite perception, viz., that there are things which nobody should either write or publish. And these observations raise the question: Who is to be the authority to determine the issues raised by these social and political necessities? Who else but society, by the same organs which make, enforce, and execute all our laws?

We are, of course, aware that there is a public sentiment which denies the existence of these necessities, and asserts that no public authority ought to exercise such a power; but we beg simply to say, that it will be time enough to argue this proposition when somebody shall show us a human society that has not done to some extent these two things. We need only instance public notices, the town crier, public documents, the reports of public debates. We repeat, therefore, the only issue is: How shall these public wants be supplied?

The most formidable, because most plausible, proposition in contravention of this view is the one that the press can be this authority to itself; and that it does not need even to be organized and subjected to self-regulation for this. We might simply answer by asking: Why, then, has it not done it? But we prefer to point to the historic fact, that no institution which has to look for support, honor, or wealth to its public will tell to that public the truths which it needs, to be truly ethical. Each party organ abuses the other party, but does not expose the vices of its own. Where, then, is the disinterested action, the virtue, and

the wisdom to come from that is to give the press its higher tone? The press associations and conventions display inclinations in that direction; but their leading motive is the desire to make money and to rule. They embrace, moreover, only the press in the narrow newspaper sense, and cannot have full ethical interaction. Hear the press and all connected with it, give them full liberty to pursue their class as well as personal interest, but do not allow it to be the sole master-authority in the land.

He would, if the press failed to do its own proper *assaying*, have the government supply deficiencies by the criterion that its work shall be beneficial to all. "The reports of our consuls from abroad, the bulletins of foreign and domestic markets, the telegrams of the 'Associated Press,' all these have one object, viz: to place society *au fait* on the subjects vital to their private and public conduct. In brief, do everything that shall relieve the republic of those most abject, as well as most dangerous, individuals that form their opinions by reading their party press and then vote a party ticket."

This opens up a wide field for speculation, and naturally leads us to consider, as having a part in that speculation, the capacity of the newspapers. It is doubtful if a dozen years ago any one dreamed that the next revolution in journalism would be to double the size of the papers, double the quantity and variety of matter printed, and reduce their price one-half at the same time. Have these changes really responded to a public demand? It is doubtful. Rather, a sharp competition and the ample facilities at the command of the press have brought about this result. A great variety of subjects are treated elaborately. There is such a bewildering diffuseness that the mind grows weary, and one recalls with regret the satisfaction with which the Scottish humorist, in the halcyon days of early journalism, scanned the advertisements of his newspaper—"models o' composition, for every word 's pay'd for, and that gies the adverteeser a habit o' concease thocht and expression, better than a logic class." The frivolous character of much that is printed is calculated to create a distaste for more weighty subjects that would have an educating value. To this extent society is injured.

MORAL RESPONSIBILITY DIVIDED.

WE have thus traced the development of the press as a news-gatherer. We have noted its small beginning; its use as an instrument of party; its degradation as the mere representative of the personal ambition of a party chief; its still deeper degradation in suppressing the news, or stifling all discussion of the news. We have described also the remarkable changes that

¹ Hon. Charles Reemelin.

have been made in the methods of producing a newspaper, growing out of changed conditions. Something has been gained and something lost. A greater degree of independence has certainly been gained, and in character corresponding with the advance of civilization.

On the other hand, on account of the change in the conditions of proprietorship, the work of the employees lacks something in feeling as they conform to the ideas of the directing head. Something of respect for and confidence in others has been lost. The "great man" has disappeared forever. The confidences reposed in the editor, the egotism and selfishness laid bare in his sanctum by statesmen and politicians, the revelations that reach him from the domain of society have taught him that all men have their weaknesses and frequently incline him to the unhappy belief that real greatness is a delusion. The first revelation of this is a shock, and its frequent recurrence deadens and too often makes the editor a cynic. This leads us to certain moral considerations which are of the highest importance because of the rapidity of the growth of the press. We have seen that it is identified with all of the interests of man, and that it daily photographs, so to speak, the acts of the individual and of every people. In other words nothing is kept from public view. Nothing is kept from view save the real motive of human action, and in the absence of knowledge the ingenious reporter can, and too often does, supply a motive which may or may not be right. To the patron nothing seems to be omitted from the picture; but to us who are gravely discussing the subject this defect shows that the picture is not perfect, and gives rise to the painful reflection that it may be the means of gross injustice. If this ceases to be ephemeral and becomes a part of

history the wrong is deepened. A distinguished divine, eminent in theology and brilliant in speech, once said that "the newspaper hauls the rough marble out of which the historian may build eternal temples." The figure is appropriated from Lucian without credit, and adapted to this modern social force. It is of a kind to please, but is superficial. We ask, if the historian fail to discover the interior defects, will his work endure? If he do not separate the good and true from the wicked and false, will virtue be promoted?

Good is sure to come out of the extended discussion of the relations of newspapers to society, if the public conscience be quickened thereby to respond when the press exposes wrongs committed against the public. Let journalists be held to a strict accountability; let them be reminded that their profession is one with high responsibilities which ought never to be lost sight of; but let those who sit in judgment upon the press impartially condemn other evils incident to modern social life, likewise having far-reaching effects. We might name several which have been exposed in the newspapers, but name only one; we refer to that legal practice that abets crime — that corrupts legislative bodies and counsels evasions of law enacted to promote the general welfare of society. If we despise the low arts of the political demagogue and the harmful work of the news-monger, shall we not be brave and virtuous enough openly to condemn those who poison the morals of a community and bring the laws into contempt? Not the members of these two influential professions only, but men of all callings will find it to be as true to-day as in the time of Jeremy Taylor, that "a prosperous iniquity is the most unprosperous condition in the whole world."

William Henry Smith.

THE ELEVENTH-HOUR LABORER.

IDLERS all day about the market-place
They name us, and our dumb lips answer not,
Bearing the bitter while our sloth's disgrace,
And our dark tasking whereof none may wot.

Oh, the fair slopes where the grape-gatherers go!—
Not they the day's fierce heat and burden bear,
But we who on the market-stones drop slow
Our barren tears, while all the bright hours wear.

Lord of the vineyard, whose dear word declares
Our one hour's labor as the day's shall be,
What coin divine can make our wage as theirs
Who had the morning joy of work for thee?

L. Gray Noble.

LIFE ON THE SOUTH SHOAL LIGHTSHIP.

NO. 1, Nantucket, New South Shoal, pitches and plunges, rears and rolls, year in and year out, twenty-four miles off Sankaty Head, Nantucket Island, with the broad ocean to the eastward, and rips and breakers to the westward, north-

ward, and southward. No. 1, Nantucket, New South Shoal, is a lightship—the most desolate and dangerous station in the United States lighthouse establishment. Upon this tossing island, out of sight of land, exposed to the fury of every tempest, and without a message from home during all the stormy months of winter, and sometimes even longer, ten men, braving the perils of wind and wave, and the worse terrors of isolation, trim the lamps whose light warns thousands of vessels from certain destruction, and hold themselves ready to save life when the warning is vain. When vessels have been driven helplessly upon the shoals over which the South Shoal Lightship stands guard, her crew have not hesitated to lower their boat in seas which threatened every moment to stave or to engulf it, and to pull, often in the teeth of a furious gale, to the rescue of the shipwrecked, not only saving their lives but afterward sharing with them, often to their own great discomfort, such cheer as the lightship affords. Yet who ever heard of a medal being awarded

to the life-savers of No. 1, Nantucket, New South Shoal?

Before we left Nantucket for the lightship I gleaned from casual remarks made by grizzled old salts who had heard of our proposed expedition that I might expect something different from a cruise under summer skies. The captain's watch of five men happened to be ashore on leave, and when I called on the captain and told him I had chartered a tug to take Mr. Taber and myself out to the lightship and to call for me a week later, he said, with a pleasant smile, "You've arranged to be called for in seven days, but you can congratulate yourself if you get off in seven weeks." As he gave me his flipper at the door he made this parting remark: "When you set foot on Nantucket again, after you've been to the lightship, *you will be pleased.*" Another old whaling captain told me that the loneliest thing he had ever seen at sea was a polar bear floating on a piece of ice in the Arctic Ocean; the next loneliest object to that had been the South Shoal Lightship. But the most cheering comment on the expedition was made by an ex-captain of the Cross Rip Lightship, which is anchored in Nantucket Sound in full sight of land, and is not nearly so exposed or desolate a station as the South Shoal. He said very deliberately and solemnly, "If it were n't for the disgrace it would bring on my family I'd rather go to State's prison." I was also told of times when the South Shoal Lightship so pitched and rolled that even an old whaleman

who had served on her seventeen years, and had before that made numerous whaling voyages, felt "squamoush," which is the sailor fashion of intimating that even the saltiest old salt is apt to experience symptoms of *mal de mer* aboard a lightship. Life on a lightship therefore presented itself to us as a term of solitary confinement combined with the horrors of sea-sickness.

The South Shoal Lightship being so far out at sea, and so dangerous of approach, owing to the shoals and reefs which extend all the way out to her from Nantucket, and which would be fatal barriers to large vessels, the trip can be made only in good weather. That is the reason the crew are cut off so long in winter from communication with the land. The lighthouse tender does not venture out to the vessel at all from December to May, only occasionally utilizing a fair day and a smooth sea to put out far enough just to sight the lightship and to report her as safe at her station. The tender is a little, black side-wheel craft called the *Verbena*, and is a familiar sight to shipping which pass through the Vineyard Sound; but during long months the crew of the South Shoal Lightship see their only connecting link between their lonely ocean home and their firesides ashore loom up only a moment against the wintry sky, to vanish again, leaving them to their communion with the waves and gulls, awakening longings which strong wills had kept dormant, and intensifying the bitterness of their desolation.

The day on which we steamed out of Nantucket Harbor on the little tug *Ocean Queen*, bound for the lightship, the sky was a limpid, luminous, unruffled blue, and the sea a succession of long, lazy swells; yet before we reached our destination we encountered one of the dangers which beset this treacherous coast. We had dropped the lighthouse on Sankaty Head and were eagerly scanning the horizon ahead of us, expecting to raise the lightship, when a heavy fog-bank spread itself out directly in our course. Soon we were in it. Standing on until we should have run our distance, we stopped and blew our whistle. The faint tolling of a bell answered us through the fog. Plunging into the mist in the direction from which the welcome sound seemed to come, we steamed for about half an hour and then, coming to a stop, whistled again. There was no answer. Signal after signal remained without reply. Again we felt our way for a while, and again whistled. This time we heard the bell once more, but only to lose it as before. Three times we heard it, and three times lost it, and, as the fog was closing in thick about us, it seemed hopeless for us to continue our search any longer at the risk of losing the opportunity of putting back to shore before nightfall and the possible com-

ing up of a blow. Then, more than three hours after we had first heard the bell, it rang out to windward clearer and stronger than before. Then there loomed out of the fog the vague outlines of a vessel. There was a touch of the weird in this apparition. Flying mist still veiled it, and prevented its lines from being sharply defined. It rode over the waves far out at sea, a blotch of brownish red with bare masts; and the tide, streaming past it out of some sluice between the shoals, made it appear as if it were scurrying along without a rag set—a Flying Dutchman, to add to the terrors of reefs and rips. The weirdness of the scene was not dispelled until we were near enough to read in bold white letters on the vessel's side, No. 1, Nantucket, New South Shoal. After groping around in the fog, and almost despairing of finding the object of our search, we felt, as we steamed up to the lightship, a wonderful sense of relief, and realized the feeling of joy with which the sight of her must inspire the mariner who is anxiously on the lookout for some beacon by which to shape his course. Two days later we had what was perhaps a more practical illustration of the lightship's usefulness. It was a hazy morning, and the mate was scanning the horizon with his glass. Bringing it to bear to the southward, he held it long in that direction, while a look of anxiety came over his face. Several of the crew joined him, and finally one of them said, "If she keeps that course five minutes longer she'll be on the shoal." Through the haze a large three-masted schooner was discernible, heading directly for a reef to the southwest of us. She was evidently looking for the lightship, but the haze had prevented her from sighting us, although our sharp lookout had had his glass on her for some time. Then too, as the mate remarked with a slightly critical smile, "These captains feel so sure of their course that they always expect to raise us straight ahead." Suddenly there was evidence that she had sighted us. She swung around as swiftly as if she were turning upon a pivot. She had been lunging along in an uncertain way, but the sight of us seemed to fill her with new life and buoyancy. Her sails filled, she dashed through the waves with streaks of white streaming along each quarter like foam on the flanks of a race-horse, and on she came, fairly quivering with joy from keel to pennant. Such instances are of almost daily occurrence, and if we add to them the occasions—and they must run far up into the hundreds, if not into the thousands—when the warning voice of the fog-bell and the guiding gleam of the lamps have saved vessels from shipwreck, it seems as though the sailor must look upon the South Shoal Lightship as one of the guardian angels of the deep.

A HAZY MORNING.

Only the peculiarly dangerous character of the coast could have warranted the Government in placing a lightship in so exposed a position. Nantucket is a veritable ocean graveyard. There are records of over five hundred disasters to vessels on its shores and outlying reefs. How many ships, hidden by fog or sleet

one hundred and three feet long over all, with twenty-four feet breadth of beam, and stanchly built of white and live oak. She has two hulls, the space between them being filled through holes at short intervals in the inner side of the bulwarks with salt—"to keep her sweet," as the nautical paradox runs. These holes are closed

TAKING IN THE LIGHT.

from the watchers on shore and never heard from, have been lost on the latter, is a question to which the sea will never give answer; but many a poor fellow whose end has remained a mystery to anxious hearts at home has laid his bones upon the sands of the Nantucket shoals, which are a constant menace both to coasters taking the outside route for New England and Dominion ports and to European shipping, which shapes its course for New York after sighting the South Shoal Lightship. This vessel, therefore, stands guard not only over the New South Shoal, near which it is anchored, but over twenty-four miles of rips and reefs between it and the shore of Nantucket.

It has been on this station since 1856. A lightship was placed on the Old South Shoal, some miles farther in, during 1855; but its cable parted in one of the winter storms, and the vessel was wrecked on Montauk. Meanwhile the New South Shoal had been discovered, and the new lightship was anchored some two miles to the southeast of it. The shoal itself is marked by a red buoy.

No. 1, Nantucket, New South Shoal, is a schooner of two hundred and seventy-five tons,

by black plugs which are attached to the bulwarks by short bits of tarred rope, and the line of plugs running the length of the vessel forms a series of black dots near the rail which at once strikes the eye as a distinguishing mark between this and other ships. She has fore-and-aft lantern-masts seventy-one feet high, including topmasts, and directly behind each of the lantern-masts a mast for sails forty-two feet high. Forty-four feet up the lantern-masts are day-marks, reddish brown hoop-iron gratings, which enable other vessels to sight the lightship more readily. The lanterns are octagons of glass in copper frames five feet in diameter, four feet nine inches high, with the masts as centers. Each pane of glass is two feet long and two feet three inches high. There are eight lamps, burning a fixed white light, with parabolic reflectors in each lantern, which weighs, all told, about a ton. Some nine hundred gallons of oil are taken aboard for service during the year. The lanterns are lowered into houses built around the masts. The house around the main lantern-mast stands directly on the deck, while the foremast lantern-house is a heavily timbered frame three feet high.

THE SOUTH SHOAL LIGHTSHIP.

This is to prevent its being washed away by the waves the vessel ships when she plunges into the wintry seas. When the lamps have been lighted and the roofs of the lantern-houses opened,—they work on hinges, and are raised by tackle,—the lanterns are hoisted by means of winches to a point about twenty-five feet from the deck. Were they to be hoisted higher they would make the ship top-heavy.

A conspicuous object forward is the large fog-bell swung ten feet above the deck. The prevalence of fog makes life on the South Shoal Lightship especially dreary. During one season fifty-five days out of seventy were thick, and for twelve consecutive days and nights the bell was kept tolling at two-minute intervals, until the crew became so used to its iron voice that when the fog lifted they had to

accustom themselves to getting along without it, the silence actually disturbing their sleep the first night. Shackled to the keelson is a chain of two-inch thickness, which runs through a deck-pipe to the deck and over the latter forward to a hawse-pipe, through which it runs into the water full one hundred and five fathoms to the "mushroom," an anchor shaped like an inverted saucer and weighing 6500 pounds, which holds the vessel in eighteen fathoms of water. It is difficult to imagine that any power could part a chain of such strength, yet the South Shoal Lightship has been adrift twenty-three times, leaving a regular mushroom plantation at the bottom of the sea around the spot over which she is anchored. On one of these occasions she was fourteen days at sea, and on another she came to anchor in New York harbor. In spite of her two sail-masts she is rather indifferently rigged for such emergencies. Carrying only trysails to the sail-masts, a square-sail to the fore lantern-mast, a forestaysail, and a jib, she cannot beat against the wind, and hence when she parts her cable in an offshore gale she is blown out to sea until the wind shifts to a favorable point.

The most thrilling experience of this kind fell to the lot of the Cross Rip Lightship, which is anchored in Nantucket Sound. Her position is not so exposed or so desolate as the South Shoal, but she happens to have once parted her cable under peculiarly perilous circumstances, no word of her or her crew being received for over a month, when, after both ship and men had been given up for lost, the mate telegraphed the safe arrival of all hands in New Orleans. On the night of December 27, 1867, the captain being ashore, the Cross Rip Lightship took a heavy, icy gale from the southwest and rolled and plunged until one o'clock in the morning, when, the gale having increased to a perfect hurricane, she parted her cable, at the same time shipping a sea that carried away her life-boat. The harbor anchor was then cleared away, the mate giving her the whole of the chain. In spite of the terrible strain, she rode on this chain about ten hours, when she parted it some twenty fathoms from the anchor. The wind was then directly from the west. With her small sail area and her bow heavily weighted by the chains she was dragging, the handling of her was a difficult matter. There was not a cold chisel aboard with which the chains could be cleared away, for, owing to the frequent parting of the South Shoal, the Lighthouse Board suspected the crew of having tampered with the cable and had adopted rigorous measures to prevent any one taking a cold chisel aboard a lightship.

About one o'clock in the afternoon the light-house on Great Point, Nantucket, was made,

and the mate endeavored to beach the vessel; but finding she would go on the rip, he wore ship and stood out to sea. At three o'clock the mainsail split, and an examination showed four feet of water in the lower hold. She was fairly sheathed with ice, which had to be cleared away from around the pump before the men could get to work at the latter. At eight o'clock that night the foresail split, and, with a gale still blowing and a heavy sea running, there was nothing to do but to keep the pumps manned to prevent the ship, which was now at the mercy of wind and waves, from sinking. At eight o'clock on the morning of the 30th the crew were nearly exhausted, and the water had gained so that the vessel was settling. In this predicament, rendered more desperate by the loss of the boat, which left them absolutely without means of saving themselves, a sail was sighted to windward. The colors were set union down, and three hours later a vessel, which proved to be bound for New Orleans, spoke the distressed lightship, and, lowering a boat, took off the crew. They were saved just in time. Before they sailed out of sight the Cross Rip Lightship took her last plunge.

The South Shoal, like all lightships, is very high in the bow and heavily timbered—built to stay and built to kill. A lightship is in frequent danger of collision from other vessels, and as its preservation is of such importance to shipping interests it is constructed so that of the two ships it will be the one to survive the shock. Life aboard a lightship is in itself so desolate that the men's quarters are made as roomy as possible. The captain and the mate have a pleasant cabin aft, with two staterooms, a large table, lockers, and the ship library, a small case of miscellaneous books supplied by the Lighthouse Board. It cannot be said of the South Shoal's crew that they make much use of the library. About the only book aboard that looks well thumbed is a little pamphlet giving a record of the vessels that have met with disaster on the Nantucket coast. This is often referred to as an authority in settling disputes regarding the date and circumstances of certain wrecks. A door leads from the cabin into the berth-deck, which occupies the space usually taken for the upper hold. On each side are bunks which slope in towards the middle so that their occupants will not be thrown out by the violent rolling and lurching of the ship. In front of these bunks are the men's chests, which they also use for seats. Forward on the berth-deck is the cooking-stove and beyond it the mess-table. The lightship version of the "dinner under difficulties," familiar to every ocean traveler, is, if anything, a little livelier than the original. The method of keeping the table

THE FOG-BELL.

service in place is, however, somewhat more primitive than that in use on the ocean greyhounds. There are holes in the table into which pegs are fitted, and around each dish and cup is a little fence of these pegs. Sometimes, however, a plate will clear the fence on a running jump and deposit its contents in a dish of quite a different character, the result being a conglomeration mysterious enough to puzzle even a person who has solved the most profound problems of the culinary art. The mainstays of life aboard a lightship are scouse and duff.

Scouse is a wonderful commingling of salt beef, potatoes, and onions, with varied trimmings. Duff seems substantially like the dumplings served in Yorkshire pudding with a sauce of melted brown sugar. Plum duff—with raisins—is a great luxury; but often the plums are nothing more than “Nantucket raisins”—in plain English, dried apples. Now it is easy to imagine the result if a rolling sea causes the scouse and the duff, with its sugary sauce, to fraternize. The cook’s duties on the South Shoal are performed under similar difficulties. So ve-

hement is the pitching and rolling of the vessel that the pots and kettles are lashed to the stove to prevent them from winging their flight into various corners of the berth-deck. Despite these precautions, however, certain courses have at times been served with unexpected expedition. Thus, on one occasion during our stay, the pork made a flying leap from the pot into one of the port bunks, the occupant of which, while gratified at the generous propor-

remarkably long time when the desolate character of the service is considered. This is probably due to the fact that the dangers of this exposed station warn off all but those inured to the hardships of a seafaring life. The men who have been there so long are old whalemén, accustomed to voyages of several years' duration and to the perils of a whalerman's life. The pay aboard the South Shoal is somewhat higher than on other lightships. The captain receives

HOT COFFEE.

tions of the ration, expressed his preference for a service less automatic and rapid.

The routine of work on a lightship is quite simple. At sunrise the watch lowers the lights. At six A. M. the captain or the mate stands in the doorway leading from the cabin into the berth-deck and shouts, "All hands!" The men tumble out of their bunks and dress, breakfast being served at twenty minutes past six. At half-past seven the lamps are removed from the lanterns and taken below to be cleaned and filled. In smooth weather this duty can be performed in about two hours, but if the vessel is rolling and pitching the task may be prolonged an hour or two. When the lamps have been returned to the lanterns there remains nothing for the crew to do except to clean ship and to go on watch until sundown, when the lamps are lighted and the lanterns hoisted. The crew is divided into the captain's watch and the mate's watch of five each. Twice between spring and winter each watch goes ashore for two months, so that each member of the crew is aboard the lightship eight months in the year. It is not believed that they could stand the life longer than this. In fact, many men throw up their work as soon as they can get ashore. Three members of the South Shoal crew have, however, seen unusually long terms of service — twenty-one, nineteen, and seventeen years respectively, and others have served on her a

\$1000, the mate \$700, and the crew \$600. These sums may not seem large, but it must be borne in mind that even the prodigal son would have found it impossible to make way with his patrimony on the South Shoal Lightship, especially as the Government furnishes all supplies. Opportunities for extravagance are absolutely wanting. Occasionally a member of the crew may remark in a sadly jocose tone that he is going around the corner to order a case of champagne or to be measured for a dress-suit; but there is no corner.

A number of stores in Nantucket sell what are known as lightship-baskets. They come in "nests," a nest consisting of five or eight baskets of various sizes fitting one into the other. These baskets are made only on the South Shoal Lightship. Their manufacture has been attempted ashore, but has never paid. This is because there is a very narrow margin of profit in them for the lightship crew, who make them chiefly for the purpose of whiling away the weary winter hours. In summer the crew occupies its spare time "scrimshawing," an old whaling term for doing ingenious mechanical work, but having aboard the South Shoal the special meaning of preparing the strips of wood and ratan for the manufacture of the baskets in winter. The bottoms are turned ashore. The blocks over which the baskets are made have been aboard the ship since she was first anchored

off the New South Shoal in 1856. The sides of the baskets are of white oak or hickory, filled in with ratan, and they are round or oval, of graceful lines and of great durability, the sizes to a nest ranging from a pint to a peck and a half.

But notwithstanding these various attempts at killing time, life on the South Shoal Lightship is at its best a life of desolation, with only a few gulls or Mother Carey's chickens for visitors, who seek refuge aboard in stormy weather. The red-buoy bobbing up and down two miles to westward has become almost as much endeared to the crew as if it were a human companion. A man rarely comes up from below without casting a look over the bulwarks to see if the buoy is still there. Fog is dreaded, not only because it throws a pall over the sea and because the dismal tolling of the bell adds to the depression aboard, but also because it hides the buoy from sight; and as the fog recedes all eyes anxiously scan the horizon until the bonny buoy looms up out of the mist. As the ship swings around a good deal with wind and tide, the buoy marks a fixed

towards them from over the sea; and when the mirage melted away, and they felt again that twenty-four miles of ocean rolled between them and land, they turned away dejectedly and silently went below. Once, so one of the crew told me next morning, the mirage had been so strong that they had seen Nantucket plainly enough to discern the dories on Sunset Beach, and that this fleeting sight of land, after they had been exposed for nearly five months to the weary life of the lightship, had so intensified their longing for home that they were dejected enough to have been a set of castaways on a desert island, without hope of ever laying eyes on their native shores.

The emotional stress under which this crew labors can hardly be realized by any one who has not been through a similar experience. The sailor on an ordinary ship has at least the inspiration of knowing that he is bound for somewhere; that in due time his vessel will be laid on her homeward course; that storm and fog are but incidents of the voyage: he is on a ship that leaps forward full of life and energy

CLEANING THE LAMPS.

point of the compass for the crew, and thus the men have grown to regard it with a feeling of affectionate reliance. When that buoy parts and drifts away, as it sometimes does, the crew seem as depressed as if they had lost their only friend in the world.

One night when I was on deck the mate, who had the watch, rushed to the hatch and shouted down into the berth-deck, "Sankaty!" It seemed but an instant before the entire crew had scrambled up the gangway and were crowded at the bulwarks watching the light from Nantucket's grandest headland flash out

with every lash of the tempest. But no matter how the lightship may plunge and roll, no matter how strong the favoring gales may be, she is still anchored two miles southeast of the New South Shoal.

Those who endeavor to form an idea of the motion of the South Shoal Lightship must remember that she is as much at the mercy of the waves as a vessel stripped of sails or deprived of motive power in mid-ocean. Even in smooth weather the motion is entirely different from that of a ship under way. For a few minutes she will lie on an even keel, and

A RESCUE.

then without warning she will roll so that the water streams in through her scuppers. In the expressive language of her captain, "She washes her own decks." For this reason the port-holes of the cabin and the berth-deck are never opened, she being liable at any moment to swing around into the trough of the sea and to roll so as to take in water at them. In winter the violence of the pitching and rolling is such as to try the hardihood of the men to the utmost. On one occasion she rolled so sheer to starboard that she filled the star-board life-boat, which was swung high on davits, and then rolled so sheer to port that the boat emptied itself down the hatch into the berth-deck, drenching every one.

In winter, when the rigging begins tuning up until it fairly shrieks like a gigantic æolian harp at the touch of the hurricane, the poor fellow who, while dreaming of home, is awakened to take his turn at the watch on deck is exposed to the full fury of the elements. Then the ship, being unable to "use herself," butts at the waves so that the bow is submerged one moment and the boom the next, while the spray flies like a "living smoke" all over her, sheathing even the masts to the height of fifty feet with ice. At times the water and spray freeze so quickly upon her that the ice extends for twelve feet or more on each side of the bow, and a thick layer of it covers her deck, while the bulwarks are built up with it until holes have to be chopped through it to enable the crew to

look out to sea. It also forms to the thickness of a barrel around the rigging. In fact, it has covered the ship so completely that not a splinter of wood could be seen. In some seasons the severest storms have burst over the vessel about Christmas time, so that on Christmas eve each man has passed his watch standing forward on the icy deck pulling at the rope of the lightship bell, with the wind shrieking in the stays, the spray dashing over him, and sleet drifting wildly about him. What a celebration of the most joyous festival of the year, with the thought of wife and children ashore!

Besides enduring the hardships incidental to their duties aboard the lightship, the South Shoal crew have done noble work in saving life. While the care of the lightship is considered of such importance to shipping that the crew are instructed not to expose themselves to dangers outside their special line of duty, and they would therefore have the fullest excuse for not risking their lives in rescuing others, they have never hesitated to do so. When, a few winters ago, the *City of Newcastle* went ashore on one of the shoals near the lightship and strained herself so badly that although she floated off she soon filled and went down stern foremost, all hands, twenty-seven in number, were saved by the South Shoal crew and kept aboard of her over two weeks, until the story of the wreck was signaled to some passing vessel and the light-house tender took them off. This is the largest number saved at one time by the South Shoal,

but the lightship crew have faced greater danger on several other occasions. One stormy morning about the middle of January the watch descried a small, dark object over the water several miles to windward, and drifting rapidly away on the strong tide. The captain, on examining it through the glass, thought he perceived signs of life. In spite of the heavy sea that threatened every moment to stave the life-boat, it was lowered, and the crew pulled in the teeth of the furious gale towards the object. As they drew nearer they made out a man feebly waving a cloth. A full view, as they came up, disclosed the evidence of an ocean tragedy. Here, driven before wind and tide, and at the mercy of a winter storm, was a small raft. Stretched upon it was a corpse, held fast by the feet, which had caught under the boom. On the corpse sat a man, his face buried in his hands, and nearly dead with exposure. The man who had waved to them stood upon the grating holding himself upright by a rope which, fastened at two ends of the raft, passed over his shoulder. Having taken the two men who were still alive into the boat, the captain of the South Shoal at once asked them what disposition he should make of the corpse. Being, like all sailors, superstitious, he was unwilling to take the dead body into the boat and bury it from the South Shoal, lest it should sink directly under the lightship and bring ill luck upon her. The poor fellow's shipmates agreed that he should be given over to the sea then and there. So the captain, raising his voice above the storm, pronounced a verse of Scripture, and, drawing the corpse's feet from under the boom, allowed it to slide off the raft. But the sleeves of the dead man's oilers, having filled with air, prevented him from sinking, and, as it would have been a bad omen had he been allowed to float, one of the lightship crew slit the sleeves, and the waves closed over the frozen body of poor Jack. Often vessels lie to near the lightship for provisions and water, and during the war, when the Confederate cruiser *Tallahassee* destroyed the fishing fleet on St. George's Bank, three of the crews, rather than be made prisoners, took to their

boats and pulled all the way in to the South Shoal.

It might be supposed that after the crew have been subjected to the desolation of a winter twenty-four miles out at sea, their hearts would bound with joy when the *Verbena* heaves in sight in the spring. But the sight of her is as apt to raise the anxious thought, "What news does she bring from home?"

But after all is said of the hardships endured by the crew of No. 1, Nantucket, New South Shoal, the fact remains that the men are about as hale a looking set of fellows as one can find anywhere. Then, too, they at times discover in very gratifying ways that their vocation is appreciated. A fruiterer may lie to long enough to transfer to the lightship a welcome gift of bananas or oranges, and not infrequently passing vessels signal their readiness to take the crew's mail off the ship and to forward it from port.

The lightship's utter isolation from other parts of the world is, from certain points of view, a great hardship, but from others it has its advantages. When there is a heavy sea running, the view of the ocean as one "lays off" in a warm sun is unrivaled. The proximity of the rips and shoals gives the scene a beauty entirely its own. On every shoal there glistens at regular intervals the white curve of a huge breaker. Sunsets can be witnessed from the deck of this vessel which, if faithfully reproduced on canvas, would be unhesitatingly pronounced the gorgeous offspring of the artist's imagination. I remember one evening when the sun vanished beneath a bank of fog, permeating it with a soft purple light and edging it with a fringe of reddish gold. Right above it the sky melted from a soft green into the lovely blue that still lingered from the glorious day. Overhead the clouds were whipped out in shreds of fiery yellow, while in all directions around the ship was an undulating expanse of rose-colored sea. Gradually the colors faded away; the creaking of the winches, as the crew raised the lanterns, broke upon the evening silence; two pathways of light streamed over the waves—and No. 1, Nantucket, New South Shoal, was ready to stand guard for another night.

Gustav Kobbé.

TIRED OUT.

PLAY IN PROVENCE.

THE GRAND ARRIVAL OF THE BULLS.

SEVEN O'CLOCK: SALVOS OF ARTILLERY.

HIS was the first announcement on the program for the feast, industrial, commercial, and agricultural, at Arles, signed by M. le maire, and painted on great posters that we had seen for the last few weeks on the walls not only of that town but of all Provence.

Now the morning of the feast had come. We awoke to the banging, we dressed to the banging, we drank our coffee to the same music. In the South half the fun of the holiday is the noise made to celebrate it.

EIGHT O'CLOCK: SERENADE OF THE TAMBOURINES.

FROM a distance first, but drawing nearer and nearer, we heard the strangest music we had ever listened to. Shrill flute-like notes gave the tune, a dull drumming beat the accompaniment. It was not in the least like a fife and drum corps; it was not in the least like anything else. The musicians reached our hotel shortly after the hour. They were eight or ten in number. Each carried suspended on his left arm a long, antiquated-looking drum,—it was not really a tambourine at all,—and with the left hand he held to his mouth a little three-fingered flute, upon which he blew, while with the right he beat his drum. They were the most famous *tambourinaires* left in Provence: one was from Barbantane, another from Bolbonne, a third from Fontvieille—from Salon, from Mailane, from all around Mistral's country, they came. But unlike Daudet's Valmajour, these men were gray-haired and bent with age. Not one could have been under sixty-five. A crowd marched at their heels. At the first sound of their music people rushed to their doors and waited. All the morning they kept up their concert. Wherever we walked we heard the old-fashioned airs shrilly piped.

In the narrow streets small children joined hands and danced along in front of them.

THE FARANDOLE.

In front of St. Trophime and on the Lices, the wide, shady boulevard, market-women were driving hard, noisy bargains over their fruit, vegetables, and poultry, and traveling showmen had set up their gilded vans. But as the music passed everybody stopped to look up and listen. You could see that the old men felt their importance and enjoyed their success; they held themselves proudly, despite their bent backs. And when there was a min-

THE MARKET IN FRONT OF ST. TROPHIME.

ute's interval, like a great singer with a cold, they made their excuses. "One does n't really know what the tambourines are on a damp morning like this"—for the sky was overcast. "If the sun were shining or the mistral blowing, then we could play! *Allez!*"

NINE O'CLOCK : GRAND REGATTA AND NAUTICAL GAMES.

THE three races of the regatta were rowed on the fast-flowing Rhone. The racing-boats started from far up above Arles and came down with the tide; the river did the hardest part of the work, the steersmen almost all the rest. The nautical games were in a large basin of the canal. Men walked a pole over the water, climbed races up the masts of a big black boat, and swam

matches with ducks, their prizes when caught. Even the dogs joined in, and splashed and barked in hot pursuit. But the dogs of Arles always take part in the amusements of the people. I have seen them run in a cycle-race on the boulevards, and bait bulls in the old amphitheater with the bravest amateur in the town. It was all great fun, but greater was still to follow.

At twelve o'clock we had breakfast, and an hour or two afterward coffee.

FOUR O'CLOCK : THE GRAND ARRIVAL OF THE BULLS.

THIS was the event of the day. Usually the bulls for the Sunday's bull-fight are brought into the town from the Camargue in a closed van, and scarcely any one knows when they arrive.

NAUTICAL GAMES.

THE FARANDOLE.

But at rare intervals they are driven by their Camarguan keepers through the streets to the stables in the amphitheater. In most parts of the civilized world all precaution is taken to keep wild cattle out of the public thoroughfares; in Provence, to send them tearing through the towns is the treat of treats reserved for holidays. The route they were now to follow had been officially announced, with M. le maire's signature to the proclamation. The greater part of it of course lay along the boulevards. The whole place was barricaded with wooden barriers to prevent their escape down any cross street, and everywhere shutters were drawn in lower windows, and doors were closed, and shops were shut, in case they did, by chance, get loose. Business was suspended.

By three o'clock, the entire town of more than 20,000 people had turned out to meet them. At the cafés on the Lices there was not a vacant table. Gay parties were at every window and in every pretty hanging-garden. The paths opposite were thronged, and the

market was over. To greet the bulls the stately, handsome women of Arles had put on their finest costumes, their long gold watch-chains hanging over the Quaker-like shawls and soft fichus, the pretty Arlesian cross at their throat, a tiny square of rich old lace inclosed in the velvet ribbon of their head-dress. They walked together arm-in-arm on the wide road, conscious that they were, as a sight, equal to any other part of the day's show.

Boys already were climbing into the trees, in a delicious tremor of fear and expectation.

And the tambourinaires were out again. They marched straight to the public gardens. They were playing the *farandole*, and was it really because the clouds had now cleared away and the sun was shining, or because they had just come from a good breakfast and had had their *coup de vin*, that they played it with a fire and spirit we had not noticed in the morning? On the boulevards the women nodded their classic heads and swayed in time as they walked. In the garden, at one end, children

RACING FOR ONE MORE LOOK AT THE BULLS.

went tripping over the grass. The gaiety spread; it was hard to stand still.

Presently a man, a young Arlésienne in blue, an old wrinkled woman, her head done up in a handkerchief, danced out hand-in-hand from the crowd and down the gravel walk.

"La farandole! La farandole!" the people shouted on every side.

The dancers had not taken many steps before a dozen men and women had joined them, and then as many more. In a long line, slowly at first, with arms swinging, they started off. As the last passed us our hands were caught, and we were dragged along. We did not know a step, but what matter? No

We reached the front of the main entrance just in time to see the black bulls galloping up a narrow street, one or two a little in advance, and the white horses, their riders sitting firm in the saddle, the long tridents in their hands. They were at the top of the street. The only way now open for them led into the stables. Suddenly the barrier fell. Eight bulls were at large in the streets of Arles.

Everybody left. I did not wait to see anything more. But when, once safe inside the amphitheater, I looked out again, near windows and balconies were still crowded, and there were still groups on many housetops; but no one was on the street.

A NARROW STREET.

one else seemed to, either. Swinging their arms, they all jumped in the air, sang, and laughed, and, in a long line that kept getting longer, ran faster, and faster, and faster. But suddenly there was a cry of, "Yé! les taureaux!" and the dancers, hot and breathless, rushed to the garden railings. Out on the Lices people were fleeing in every direction, springing across the little ditch by the roadside, jumping up on the high marble benches.

At the far end of the boulevards rose a cloud of white dust. The next minute eight black bulls thundered past on a dead gallop, the foam streaming from their mouths, guarded on each side by men, each one of whom carried a long trident and was mounted on a white horse of the Camargue. After them came at full tilt men and boys and even women. From the gardens the crowd turned and made a short cut for the amphitheater. From every street people were running towards it, laughing, shouting, pushing, panting. All Arles was racing for one more look at the bulls.

Gradually the women came back to the doors, lifting up the green curtains and peeping out, while they kept the children well behind them. Men walked boldly about. Then at last we started cautiously for the hotel. Wild rumors were abroad. "One bull has gone into the Café du Forum. It jumped through the glass of the front door. The waiters and the *patron* ran. It knocked down the tables; it went out through the back door." "Two are in the Place de la République. They have got into the Hôtel de Ville, and are mounting towards the man of bronze. The clerks have flown." "They are coming here now! *Les taureaux! les taureaux!*" Then came precipitate flight.

But the bulls were seen no more that night. They had gone back to the Camargue. Eight others, fresh and fit for combat, were brought in the covered van to take their places.

Preposterous as it may seem to let a regiment of cowboys and bulls loose in this town,—a flourishing city long before the Christian era,—

THE PEOPLE'S BALL.

there was a barbaric picturesqueness about the grand arrival of the bulls not to be found in the better-regulated spectacles of more serious people.

NINE O'CLOCK: GRAND ILLUMINATION, TORCH-LIGHT PROCESSION.

THERE were lanterns in the Place du Forum, in the Place de la République, along the Lices. There were lanterns on long poles borne by men and boys marching with the tambouri-

naires, who still blew their little flutes and beat their long, light drums, as if they had not been blowing and beating and marching ever since early morning. In a blaze of light they passed through the dark streets into the brilliant boulevards. Great lamps flared in front of the tents and showmen's booths, where loud steam organs screeched, and pretty Arlésiennes bought tickets to see Venus, queen of love, the wild animals, the serpent-charmer, or any of the other wonders whose portraits, stuck up outside, had always their group of gaping admirers. There were crowds at the cafés, crowds walking on the wide road, crowds sitting on the chairs which industrious women in fichus and ribbons were busy hiring out.

TEN O'CLOCK: THE PEOPLE'S BALL.

THE ball-room was an inclosed space under the trees, with four gay arches of many-colored lamps and a loud brass band. The pretty women in their pretty dress, with their less attractive partners, danced far into the warm summer night, dancing not the farandole, but waltzes and quadrille-like figures.

And this is the way they keep a feast day in Arles. In the land of "Provençal song and sunburnt mirth" they need no Walter Besant to teach them how to enjoy themselves. Nor is there any use for philanthropic millionaires to provide a few easily spared francs. The city pays all.

Viva la joia !

Fidon la tristessa !

they still sing, as in the days when Tristram Shandy danced it across the broad plain of Languedoc.

THE TAMBOURINAIRES IN THE TORCHLIGHT PROCESSION.

THE FERRADE.

"BUT you must come back for the Ferrade," said the little lieutenant of Zouaves as we bade him good-by one August day in Arles, where we had descended for a moment on our way to Martigues. "Oh, you must see it, and Madame also. It will be splendid, magnificent,

immense! Me? I have been here five years and have seen only one—there has been only one other in that time. You will go? Very good. You don't know what a Ferrade is? But, *mon cher*, it is the most beautiful thing of Provence. In the morning they go to the Plains of Meyran. Then they chase the bull, and they brand him. One bull? *Mon Dieu*, no! Forty, or a hundred. Then all the world has a grand lunch. Then, after one has had one's drop of

ARRIVING ON THE GROUND.

wine, all the world dances the farandole. Then one chases the bull some more, and then one reënters one's self. Oh, *qu'es béou!*"

Well, on the first of October we came back for it. We waited a week, and it rained, and then Madame had to go home. But finally, about two weeks later, one perfect Sunday morning, the lieutenant *in civil*, and the sous-préfet in a top hat, and I in no condition to be seen in such company, in a gorgeous turnout, crossed Trincataio Bridge and made our way along the road that leads to Meyran. In front of us and behind us was a solid mass of "footers," country carts, diligences, wandering horse-cars, bicycles, omnibuses, and every conceivable sort of conveyance, all advancing, silhouetted in a glory of dust. The whole road seemed to be going with them. Far ahead, when the mistral blew the dust away, we could see flags waving over a grand stand, and as the people turned out of the highroad on to the plains they were divided right and left by a squad of gendarmes, and sent down to join one or the other of two lengthening files of vehicles, which, as soon as

LETTING LOOSE THE BULL.

the horses were taken out, were placed together, end to end, forming a complete barrier.

Of course swells like myself, the sous-préfet, and the officers of the garrison were allowed to do very much as we wished, and

VOL. XLII.—71.

we sat proudly in our carriage, quite conscious of our superiority and of the fact that we had paid fifty francs apiece for a day's spree.

After having paraded nearly all the way round the grounds, we drew up at the grand stand, from which the whole arrangement of the Ferrade was plain. The inclosure formed by the carriages was a parallelogram, probably half a mile long by about three hundred yards wide. At both ends tall masts with flags were stuck up some yards apart like a foot-ball goal. It was between these that the bulls were to be chased by the horsemen, overturned, and branded. Once a bull had passed the lower goal he could be run after by any one, but here the guardians would never follow. Behind one of the goals was a big square pen, or corral (*toril* they call it), the top of which was decorated with a frieze of excited Provençaux who were amusing themselves and the bulls by means of canes, goads, and tridents, and apparently with very good success, if one might judge from the crashes that came from inside.

Li Santo, Agui Morto, Albaron,
And Faraman a hundred horsemen strong
Had sent;

COWBOYS OF THE CAMARGUE.

and on their well-fed, beautiful, long-maned, long-tailed white horses they posed themselves, "on their long goads leaning," talking of I have not the faintest idea what, for I cannot, and I never knew a Frenchman out of Provence who could, make head or tail of Provençal. Or with tridents carried like lances they statuesquely rode about, "*des vrais Buffaler Beels*," as the sous-préfet put it.

I endeavored, to the best of my ability, to explain the difference between a cowboy and the Hon. W. F. Cody, but I do not know whether I succeeded.

Although the whole Camargue is probably not as large as some of the great western ranches, the life on it and the herdsmen are just as picturesque, and more pictorial in a certain way. Like the Arlésiennes, the herdsmen know their value in the landscape, and they are always posing. Their gray soft hats, black velvet coats and waistcoats are now taken off and tightly

rolled up behind the saddle. For a fête like to-day's all wear boiled shirts and white linen or corduroy trousers, but around their waists, or rather from their armpits down to their hips, a red or a blue sash is wound. Put a hundred men like this on white horses in a glittering plain and the effect is not bad. In fact, I doubt if the West could equal it. Their stirrups are steel-barred cages, their saddles have a back to them, and their harness is all tied on; there is hardly a buckle about it. On both sides of the horse there hangs down a mass of ropes and strings which give rather a disorderly effect.

Tara-ta!
Tara-ta!
Tara-ta-ta!

"Aha! they begin!" And the sous-préfet and some more officers who had come up carried me off with them to the tribune on the grand stand. With the mayor in his sash and the heads of the different administrative departments of Arles, we must have looked very imposing. At any rate, the people appreciated

gain rapidly. They lean over their horses' necks, their tridents at rest, and, just as one man is about to give him a push on the flank

THE CHASE OF THE BULL.

with his trident which shall upset him, the bull swerves, the horseman, who has distanced the others, recovers himself with difficulty, the bull darts between the two goals, and the crowd on foot rush after him; but the horsemen let him go, for they are not allowed to follow him farther. They walk slowly back to the starting-place, surrounded by their friends, the younger fellows here and there taking up behind them a pretty girl. By the time they have gotten back to the toril there is a wild commotion at

THE BULL DANCES THE FARANDOLE.

us, and applauded loudly, and we bowed condescendingly.

Tara-ta!
Tara-ta!
Tara-ta-ta!

The doors of the *toril* open. We see, for it is too far off to hear, a great excitement in the human frieze, and presently a young bull comes out. He starts on a run at once, passes between the goals, and, as he does so, the guardians, who have gone back and formed a line on each side of the pen, come after him, although

THE CHASE OF THE GENDARME.

he has gotten nearly a hundred yards' start. He tears away right down the center of the ground, followed by the whole troop. They

the other end of the inclosure. A long line of men and boys is unwinding itself, and a *tambourinaire* is playing the farandole; they hold a rope which has been put around the bull's neck, for they have thrown and branded him. Now he wears a wreath of grape leaves, and a young fellow, also crowned with vine leaves, sits proudly astride him like a young Bacchus, while others keep the bull straight by means of his tail. It is thus that the first bull of the day is made to dance the farandole. The whole affair, save for the costumes, is classic; and about it, too, is much of the old Roman cruelty. The people plagued the bull unmercifully, and he would be savage enough were he not played out. But then this is not so cruel as the English way of slaughtering rabbits and pheasants. One is play, the other is sport; that is all the difference.

"Tell them to let him go," said the sous-préfet to a gendarme, and they did at once.

Tara-ta!
Tara-ta!
Tara-ta-ta!

Now the same race began again. A gendarme who had been telling some people to get off the ground had forgotten to get out of the way himself, and the moment the bull saw another big black object dancing around on the plain he made for it. The prevalent idea is that a bull's gallop is not very rapid; but even the little white horses could scarcely catch him when he was given a hundred yards' start. When the big black charger of the solitary gendarme woke up to the fact that the bull was almost upon him he lay back his ears and ran. There was no dodging with him, as there would have been with the little white horses. The bull overhauled him, stride upon stride. It was all over in a few seconds. There was a thud, a shriek from the people, the black horse turned a somersault, the gendarme flew as if he had been shot; then he was carried away, and the horse was dragged off the ground. It was exciting and realistic, but not pleasant. Only two or three incidents of this kind happened during the morning, but they were quite enough. One man was caught in the middle of the plain, and,

"Sham dead!" went up a cry of agony.

Another time, however,

The beast his victim lifted high
On cruel horns and savage head inclined,
And flung him six and forty feet behind.

It was "Mirèio" realized.

One detail, perhaps, Mistral never saw. Not

BETWEEN THE COURSES.

all the bulls went out at once between the goals and escaped, even though they were not overturned and branded; but they tore up and down the plain until they were upset. One, more clever than the rest, went between the wagon-wheels at the side; but finding three horses in his way, he lifted them out on his horns, and vanished into the Camargue.

But even Provençaux get hungry, and in October it is very hot at noon. Another bugle sounded, and the play stopped, and two or three hours were consumed in the serious business of dining. All had not quite finished their *coup de vin* when from in front of the grand stand the music was heard.

"La farandole! La farandole!"

Up from the tables they jumped at once, catching one another's hands as they rose. Little lines of men and women, boys and girls, danced out on the plain from the rows of wagons, and longer ones from the pine groves where they had been lunching. They came dancing and running towards one another. And then with a change in the tune a long line started straight

THE FARANDOLE.

across the plain, a line of probably two thousand, swells and peasants, officers and cowboys, whole families; in fact, in ten minutes a third of the fifteen thousand people present must have joined it. The old tambourinaires played faster. The head of the line, now hundreds of yards long, had come back again. It wound in and out in circles. It went faster and faster. It swung round and round like a great "crack-the-whip." Then, with a wild scream from the flutes, a roll from the drums, and a great cheer, it stopped.

That is the way one "makes the feast" in Provence.

More farandoles, more bulls, more farandoles. Long twilight is coming on. The bulls, branded or not, are scattered all over the Camargue; the tambourinaires are exhausted. The

people are as gay as ever. In a whirlwind of dust, with galloping horses, every one returns to Arles.

And yet this was not all. Every street in the twilight was lined with Arlésiennes sitting in rows upon the sidewalk; and just as we came into the town a band of vintagers, garlanded and happy, each with vine leaves on his brow and a few sous in his pocket, danced over Trincataio Bridge.

"Do they know they are so picturesque?" I asked the sous-préfet.

"Why do they wear their costume?" was his answer.

And as, white with dust, we passed St. Trophime, two red-booked pilgrims slowly uttered, "Now, ain't that handsome!"

You visit a country; you see it, or you don't.

Joseph Pennell.

THE RETURN TO ARLES.

ALONE WE COME INTO THE WORLD.

ALONE we come into the world, alone
 Pass out of it upon the still, dark way
 Whence there is no return. Alone for aye,
 Each in a narrow circle of his own,
 Even here must dwell, till life's last spark has flown,
 Whatever thou, O wounded Love, may'st say,
 With tears of passionate protest — thou, whose sway
 Is mightier than immortal Death's. Unknown
 To all thy power is the supernal art
 That makes two spirits one. Yet, oh, take heart,
 And shout for joy, my soul, for thou shalt find
 Even there thy hope eternal. Through the dim,
 Close prison bars that shut thee from thy kind
 God reaches down to make thee one with him!

Stuart Sterne.

THE LITTLE RENAULT.

AN EPISODE OF TONTY'S LIFE IN THE ILLINOIS COUNTRY.

— “And a Parisian youth named Étienne Renault.”—*Parkman.*

I.

THE tenth of September of the year 1680 was a day of sunshine and languor in the great village of the Illinois. Lodges shaped like the covers of modern emigrant wagons, but colossal in size, and having

an opening left along the top for smoke, filled a wide plain between river and northern bluffs.

In one of these lodges the central row of half a dozen fires had all died down to ashes except one pile of pink embers. Above it the air reeled with that tipsy tremulousness which heat imparts. An old Indian woman sat on the side occupied by the blankets of her family, and her fingers flew like dark streaks among rushes which she was braiding into a mat—the gray-green shingle of every Illinois wigwam. A French lad stood beside her, ready to go out into the open air.

“My mother,” said he, using the name as a title of respect, “you have shown me how to bind an arrowhead to the shaft; now I will show you how to dance.”

The squaw, half-understanding his imperfect use of her language, looked up, smiling with many wrinkles, willing to be amused by a pretty creature who avoided Indian girls and came for counsel and chat to an old woman.

He flung himself back, brandishing the finished arrow, and, turning on one foot, spun around and around at the very verge of the fires. It was like the wheeling flight of a thistle plume through the open lodge end. Outside he still whirled and sprang, keeping a tune in his throat.

Some lazy old braves were gambling with cherry stones, having spread a blanket where

a wigwam shielded them from the afternoon sun. One of them shot a cherry stone after the flying, singing boy, and they all grinned with good humor at his merry defiance.

Naked children rolled on the ground, stirring up with kicks puppies as fat as themselves.

The lad skipped past a small arbor of bark wherein sat an Illinois girl and her silent lover. He checked his steps, and glanced back at them with that wistful, half-contemptuous curiosity of youth, and as he walked on lightly his flying curls settled to thick, black clusters around his neck. He had an exquisite feminine throat and face, and small, sunburnt hands. His dress was the buckskin suit of frontiersmen, yet it outlined a figure of undulations, unlike the square and masculine build of a man standing in the lodge door of the French.

He also was young, though his face had grown thin and his high temples sunken during his two years' exposure in the wilderness with the explorers La Salle and Tonty.

This Frenchman could see the whole Illinois town and the bluffs across the river. A mile or more up-stream one bold promontory jutted into the water, its glistening ribs of sandstone half clothed with cedars. This was the Rock of St. Louis, which La Salle had ordered his lieutenant Tonty to fortify. It stood waiting then, as it stands waiting to-day, for any human life which may briefly swarm over it and disappear.

Patches of cornfield around the outskirts of the Indian town had each its attendant squaw with her brood of children, driving off crows from the ripening maize. Farther away was the tribe's burial-place. Some of the sleepers were hidden from sight in the ground; but many were lifted high on platforms, with skins or blankets for their motionless palls, in sun and dew and rain, the voices of children and the monotone of the river forever sounding

below them. The whole country was mellow with that afternoon light of the year which we call autumn haze.

"Runaway," said the man in the lodge door, smiling at the sauntering lad, "where hast thou been idling?"

bank, while *L'Espérance* pulled ashore the canoe they had used.

La Salle's lieutenant had at that time much to depress him. With only five followers, including two priests, he was holding ground in the midst of a suspicious savage tribe until La

THE ARROW DANCE.

"In the old mother's lodge, learning to set arrowheads. Has Monsieur de Tonty yet returned, *Sieur de Boisrondet*?"

"He is coming yonder with *L'Espérance*. The fathers are now settled in their retreat. I saw no hint of a monk's hood in the canoe as it came down."

As the boy turned towards the river *Boisrondet* detected on his face the sweet eagerness which sometimes molds the features of a young girl.

Henri de Tonty was already striding up the

Salle could return from Fort Frontenac with new supplies and more men for their western venture.

Fort Crèvecoeur—below that expansion of the Illinois River called the Lake of Pimitoui—had been destroyed by insurgents and deserters, its stores stolen, its magazine emptied, and a half-finished ship left to rot. Only the seed of future enterprises seemed saved in this Illinois town where Tonty was waiting on the explorer's order to fortify that great rock jutting into the river. He had first thought of

pitching his camp on the natural stronghold, and setting up palisades. It could be ascended at one corner only, and might be held by the smallest garrison. But that would rouse distrust in Indian neighbors whom the French could never spare. He therefore built his lodge like any other wigwam in the midst of the town.

"You stopped at the Rock again, as you passed it, Monsieur de Tonty?" inquired Boisrondet.

"Yes," replied Tonty. A line of anxiety stood upright between his black eyebrows. His face was flushed with heat, and his cap and clustering hair were pushed back from his forehead. The ends of his mustache swept down his face. The frontier dress adorned his large presence, for Tonty unconsciously carried with him always the air of courts and battlefields.

He struck dust off the stiff right gauntlet which covered his metal hand.

"Never mind, Boisrondet. We will begin our fortification the moment Monsieur de La Salle arrives. The severest discipline in any campaign is waiting for reinforcements. On that rock you can see the country as from a cloud, except the prairie south and eastward beyond the ravine and the woods. If the fathers were of my mind they would be making their retreat on the Rock."

"And what spot have they selected for their retreat?"

"A place about a league from here, not distant from the sulphur spring. L'Espérance helped them build their lodge, and we stocked it well for them. They themselves made a cross of two unhewn limbs, and planted it beside their door."

"I do congratulate them," laughed Boisrondet, "that they are able to make a religious retreat from these tiresome heathen. There were never two priests more disgusted with missionary work than Father Membré and Father Ribourde."

The peasant L'Espérance, stooping in gait and grizzled around the temples, flung some feathered game past Tonty's back at the listening French lad.

"Thou art young, thou little Renault," he called, "and I am old and tired. Dress these birds for the commandant's supper."

"How many times have I told thee, L'Espérance," exclaimed Tonty, turning on him, "not to be constantly shirking upon the little Renault?"

"But I will dress them," cried the little Renault, snatching up the task. "It is nothing for me to do, Monsieur de Tonty."

"I am tired," repeated L'Espérance in a mutter. "The lad is ever as full of spring as a grasshopper, yet must I bear all the wood, and dress all the game, and be the squaw of

the camp, and take revilings if he lifts a finger to be of use."

"Growler," laughed the little Renault, striking at the old man with the birds, "go into the lodge and lie down to sleep." And L'Espérance trotted in willingly, while around the lodge side, with the hunting spoil, trailed that youthful treble which had so often waked Tonty and Boisrondet early in dewy mornings.

The two men looked at each other with silent intelligence, and forbore to interfere. Neither ever spoke to the other about the little Renault as a girl, though Boisrondet had been present when her father put her in Tonty's charge at Fort Crèvecoeur. The father was a sickly and despondent Parisian of the lesser nobles who had wedded and survived a peasant censitaire's stout daughter, and roved from trading-post to trading-post, putting his orphan into boy's attire that he might keep her with him through all experiences. His selfish life ending at Fort Crèvecoeur, he desired to send his little Renault home to Paris, and Tonty, in consternation, took charge of her jointly with the priests.

To Tonty she was never a girl. She was a free and vivid spirit—pinkly clothed in flesh, perhaps, and certainly looking through happy black eyes, but having above everything else a tiptoe facility in dancing over dangerous spots.

Crowded among men at Crèvecoeur she never seemed to hear any brutal jest. The chastening presence of priests made safer such a place for a young girl; yet there was in her a boyish quality which deceived all but her father's confidants. She had been born to the buckskin. She had never worn women's drapery; her round childish limbs spurned any thought of it. The beautiful fire of virgin youth seemed to flash from her person. In an age when women were pretty toys or laden beasts she lived the life of a bird in the wilderness. The license of a savage camp in no way touched her. She had never suffered deeply, for the early teens are kind to natural sorrow; and all visible things around her she mingled in her mind with invisible saints.

Tonty lay down on the grass, but Boisrondet still stood in the large door.

"It fills me with envy to see you so tired, Monsieur," said the younger man.

"It was necessary that one of us should stay and guard our lodge and the little Renault," replied his commandant. "But this lying like lazy, voiceless dogs at a lodge door doth unman us. Nothing has happened since our setting forth at daybreak?"

"Nothing, except that the cry of insects in the grass never seemed so loud before."

Tonty smiled, finding in himself full response to this impatient restlessness. But even men

THE IROQUOIS ARROW.

who were waiting in the midst of negative dangers might take some delight in that mellow picture of savage life.

The river was cut by a single canoe darting from the farther bank across to the town with impetuous rush like a water-fly. Boisrondet noted it, and thought idly that some hunter must be returning empty-handed and sullen.

The little Renault could be heard caroling at the other end of the lodge while she plucked birds. Their lodge was divided into three apartments by stretched blankets, and hers was the central shrine. Tonty and Boisrondet occupied one end, and the other held L'Espérance, a forge, and some tools saved from the pillage of Crève-cœur. The servant readily yielded his fire to the necessity of cooking, but it vexed him daily to have a mere boy—the little Renault, in fact—set apart as if more reverend than a priest. The priests, look you, had not been above sleeping and teaching in the lodges of the very Illinois.

Tonty lay with his head in the grass, letting the sun dazzle his half-shut eyes, while he piled upvisions of this Illinois country like those transparent clouds pinnacled in the zenith. His two years in the wilderness with La Salle had been a constantly rising tide of misfortune. But tides are obliged to ebb, and this silence must be the turn. La Salle had started to Fort Frontenac in March. He was surely retracing the five hundred leagues with supplies. La Salle could out-march any man of New France.

They would soon fortify the Rock and make it a feudal castle to these timid savages. Neighboring tribes would gather close and help to form a strong principality. It would be easy from this vantage-point to penetrate that unexplored river called the Mississippi.

But a yell rent this structure of thought like a tongue of lightning, and Tonty bounded to his feet. Calls and cries streamed in every direction, as if the whole Indian town had become a shower of meteoric voices. The women started from their cornfields, wailing in alarm, and naked children sprawled and uttered the echo of woe. Cherry stones and the stakes won thereby were forgotten. The hunter who had crossed the river was surrounded with lamentation.

Tonty found his followers at his side almost as soon as the yell broke out. They had lived so long on the edge of peril that union was their first instinct. L'Espérance was wide awake. Tonty put the little Renault between Boisrondet and himself, and as the savage mob surrounded them he unconsciously held her with his sound arm. Little Renault's curls were full of bird down, but her black eyes were full of courage.

"What is the matter?" demanded Tonty in imperfect Illinois.

"The Iroquois are coming! The Iroquois are marching here to eat us up."

"The Iroquois," screamed a wrinkled old warrior, "are your allies. They are at peace with all the French. They are your friends. But you are no friends of ours. Children, these Frenchmen have come here to betray us. They have brought the Iroquois upon us."

Out came the knives, Tonty with iron-handed arm pushing them back—persuading, shouting. The Indians drowned his voice with yells. The very squaws ran with firebrands. Some of the furious multitude fell upon the French lodge, and its mats flew in every direction. From the midst of falling poles ran sinewy red-bodied fellows dragging the tools and heavy forge which Tonty and his men had brought with such pains through the wilderness. The splash of the clinking mass in the river testified to their final use.

The lives of the Frenchmen standing back to back were scarcely a breath long. Tonty's stiff gauntlet kept the knives back, and he made his voice heard through the howling.

"If you kill us you kill yourselves. I tell you we are your friends. If you kill us your French father will not leave a man of you alive. We brought no invaders to your country. We know nothing about the Iroquois. But since they have come, I tell you we will go with you to fight them."

II.

"FULL of intelligence and courage," as a priest has described Tonty in this strait, his imperfect Illinois made the Indians slow to understand him. But as they understood, their tense threats relaxed; and with continued lamentation they turned to break up the camp.

The canoes were pushed out and filled with women, children, and provisions. Nearly all the young braves were away in a war-party in the northwest. The three or four hundred remaining were the oldest or youngest warriors. The Illinois Indian at his best estate was no model of courage. About sixty men accompanied the retreating town to a flat, wooded island down the river, where temporary lodges could be set up and defended.

The remainder at once began to prepare for battle. They brought wood and built great fires along the shore. Weapons were made ready, bodies greased and painted, and a kind of passover meal eaten.

The sun went down, and mists brooded on the river, but there was no silence all that night. The Illinois sang war-songs and danced waltzes under the slow and majestic march of the stars. Their fires shone on the water, and their dark, leaping bodies threw shadows across the deserted town.

Tonty and Boisrondet sat apart, also sleepless, taking counsel together. L'Espérance had been missing since the tumult of embarking. He, also, had taken a canoe and slipped away. Both masters were severe on him until they found next forenoon that he only went to bring the priests back, lest some of his faith should die without absolution.

Boisrondet had brought some of the scattered mats for the little Renault, and she hid in them as in a nest from the growing chill of night, sleeping like some sylvan creature reliant on the power that sheltered it.

Scouts sent out in darkness came back at early morning with news. They had seen the army of Iroquois creeping under cover of woods, armed with guns and pistols, and carrying raw-hide bucklers. They had seen, they said,—scowling aside at the Frenchmen,—La Salle himself leading the invaders. And at that the whole camp again rushed to take Tonty and his followers by the throat.

"If all the Iroquois had stolen French clothes you would believe there were many Monsieur de La Salles coming to fight you," declared Tonty. "He does not turn upon his brothers as you do. I tell you we will go with you to fight the Iroquois."

The frenzied tribe at once threw themselves into their canoes with these allies and crossed the river.

It seemed to both guardians that nothing could be done with the little Renault except to carry her into the action. Boisrondet gave a bitter thought to the selfishness of her father, and Tonty regretted not sending her with the priests. But life in her rose to the occasion. Her moccasins moved in swift unison with Tonty's and Boisrondet's up the wooded hill and across a tangled ridge. Her buckskin blouse was scratched by briars, but she herself went laughing and rose-lipped like Diana, carrying a weapon and eager for game. It seemed to Boisrondet the cruelest thing ever done, this shouldering a child into battle with wolfish men.

Few of the Illinois Indians had guns. They were armed with bows and arrows. They swarmed out on the prairie to attack the Iroquois, who came from covert with whoops and prancings, and roar of firearms and low song of flying shaft mixed with savage battle-cries.

At the instant of encounter Tonty saw how it must go with his allies. They were no match for the Iroquois with all forces mustered, and this fragment of them began to give back even in the fury of onset.

He offered to carry a wampum belt to the Iroquois and to try to stop the fight, and the leaders gladly gave him the flag of truce and sent a young brave with him.

Tonty started out across the open field towards the smoking guns of the Iroquois with this Indian at his right side. He felt a touch on his left elbow, and turned his eyes to find little Renault and Boisrondet keeping abreast of him. He stopped and commanded:

"Go back—both of you. Boisrondet, your orders were to take care of the lad."

"Monsieur," said Boisrondet, to the spat of Iroquois bullets on the prairie sod all around them, "the little Renault would not be kept back."

"Monsieur de Tonty, we go with you," she said.

"You will go back," repeated Tonty, meeting the living light of her eyes with military decision. "Boisrondet, pick up the lad and carry him back. Your duty as a soldier and a gentleman is to keep him out of this danger."

Boisrondet seized and lifted the little Renault in his arms. She struggled with all an untamed creature's physical repugnance to handling, and with all a woman's despair at being dragged from the object to which she clings. In her frenzy she struck Boisrondet upon his bulging forehead with no unmuscular fist.

"Go back with them," said Tonty to the willing young Indian. And running on alone, he did not see the Iroquois arrow which stooped, jarred, and stood upright in the girl's shoulder.

The young Indian alone saw it, and pulled it out as he hurried at the heels of Boisrondet, who felt his load relaxing while he panted and trampled through resin weed and yellow flowers back to the Illinois lines.

Tonty had left his gun when he took up the belt of peace. He held the wampum strip as high as his arm could reach, and rushed directly upon the muzzles pointed at him. His dark skin and frontiersman's dress scarcely distinguished him from the savage mob which closed around him, and before he could speak one of the Iroquois warriors stabbed him in the side. The knife struck a rib and made only a deep gash instead of killing him. He half fell, but caught himself, and opened lips from which blood, not words, gushed first. He held up and shook the wampum belt, and an Iroquois chief shouted that he must be a Frenchman, since his ears were not pierced. This brought some about him who opened his shirt and tried to stop the wound. But the great howling multitude—which an Indian army must become before it can act as an engine of war—was for finishing him.

Tonty spat the blood from his mouth, and declared to them that the Illinois were under the protection of the French king and governor. He demanded that they should be let alone.

One of the braves snatched Tonty's cap and waved it high on a gun. At that the half-sus-

pended firing broke out more fiercely than ever. He urged and demanded with all his strength. A cry rose in front that the Illinois were advancing, and that instant Tonty felt a hand grasp and twist his scalp-lock. He looked over his shoulder at the fierce face of a Seneca chief; but an Onondaga knocked the scalping-knife from the Seneca's hand.

Tonty was spun in a whirlwind of clamor and threats, putting his own shout against the noise of savage throats, and proclaiming that the Illinois had countless Frenchmen to fight with or to avenge them.

No one ever worked with imperious courage more successfully on the temper of Indians. The quarrel sank to his demands. Old men ran to stop the young braves from firing.

The little Renault had been docile, and walked willingly up the ridge with Boisrondet. She told him she was ashamed of her behavior and of keeping him out of the action. But she said nothing about her wound to a man who would insist upon examining it. The arrowstab in her buckskin blouse gave no vent to the blood, for that had taken to moving in a slow trickle down her back. Boisrondet, trembling betwixt chagrin and rapture, said little, but kept his gaze upon her and around her like an atmosphere of protection.

She sat down facing the fire, and Boisrondet stood by her, on his part seeing neither smoke nor moving figures, neither dew on the turf nor distant blue strips of forest.

Two Récollet capotes moved down among the waiting Illinois, for L'Espérance had not tarried about bringing the priests. They hurried to meet Tonty. He came staggering back across the open prairie holding up an Iroquois wampum belt as the sign of his success.

The little Renault let her restrained breath escape in a sob.

"He is safe! But he is pitching forward! He is wounded, monsieur! They have hurt him!"

She herself reeled as Tonty did before the priests received him in their arms, and a deadly sickness, the like of which the little Renault had never felt before, brought her head down among the knotty herbage of the hill.

III.

THE clear September morning seemed to stream around Tonty's eyes in long pennons of flame as Father Ribourde and Father Membré helped him to reach his allies. He was still under a nightmare, and struggled for speech to warn his weak people of the treacherous enemy who were checked only by his threats. He held up the wampum belt and told the Illinois that it was an Iroquois peace, but it

would be wisdom on their part to retreat from an Iroquois peace. If they and their families withdrew down the river, leaving some of their wise men in sight of signals, he would treat with the invaders and try to induce them to leave the country.

The small army which had escaped defeat could indeed see nothing better to do. They recrossed the river to their town, and set the lodges on fire, thankful for any chance of saving their national life.

An Indian might have little sentiment about his lodge, which was only a shelter, and never contained very much besides the row of fires. If destroyed, it could be rebuilt anywhere with new poles and mats. But his dead, on platform or in earth, were sacred relics to him. In the fleet of canoes retreating down the Illinois River many a shaven, dusky head was turned, many a mournful eye rested on that spot which could be no longer kept, and might soon be desecrated by a wolfish enemy.

Boisrondet and L'Espérance with the Récollet friars set to work to repair their own lodge, which the Illinois had torn down. Here the priests gave Tonty's wound a better dressing than that of his wild surgeons, and the little Renault lay on her blanket at a distance from him, seeking no remedy for her stiff hurt except to keep him in her sight.

Tonty had made the Iroquois pause; but they promptly crossed the river and prowled over that great field of smoking lodges. They took such poles and posts as had not burned, and built themselves a rough fort in the midst of the abandoned town.

Boisrondet found some blankets which he hung around the little Renault when night came. But she needed no privacy for sleep. He thought the prowling and yelling of the Iroquois made her toss, and draw her breath in tremulous starts. In the morning he was careful to get food for her, while he let L'Espérance serve Tonty and the priests. The Illinois had carried away much of their corn from the underground storehouses, but their ungathered fields still stood; and while the invaders trampled the crop, L'Espérance found some supplies for the inmates of Tonty's lodge. The little Renault awoke with fever, but that day was so full of effort and danger that the men, her guardians, overlooked her state.

They were called to a council by the savages. Tonty rose up and went with his followers into the sapling fort.

On the girl's fever-swimming eyes the circle of hideous Iroquois faces and half-naked bodies made grotesque impression.

Tonty sat in front of her, on each side of him a priest. When he had to rise they helped him; but on his feet he was like the cliff across the

river. His voice kept respect hovering in all those glittering and restless eyes, though a chief began the council by asking him insolently where were all the Illinois warriors he had boasted of, and the army of French who would keep the Iroquois braves from eating the flesh of a worthless tribe.

Tonty repeated the threats and demands he had before made. Six packs of beaver skins were laid before him. A chief proffered them piecemeal. Two were to promise that the Iroquois would not eat the children of the French — those cowardly Illinois; a third was the plaster which must heal Tonty's wound; the fourth was oil for anointing all French joints present at the council; the fifth said the sun was bright, and it was a good day to begin a journey; and the last ordered the French to arise and leave the Illinois country.

Tonty again came to his feet, and thanked his red brothers for their gift. But he desired to know when they themselves meant to leave the Illinois country.

Every copper-hued face turned darker; every guttural voice broke out, in presence of the pledge just made, with a declaration that their tribe would eat Illinois flesh before they went.

Tonty kicked the pack of beaver skins from him. It was their own method of expressing contempt for a one-sided treaty.

The Indians sprang up and drove his party out with drawn knives. The little Renault, hurried by Boisrondet, turned to see Tonty come last from the palisade, still restraining the savages by the threat they dared not disregard. He was determined to stand to the last risk between them and the tribe they had invaded.

During that day L'Espérance felt that he was throwing his scalp at the Iroquois by the frequent trips he made to the river, and all on account of that lad pampered among blankets, who would be constantly laving, and bathing, and drinking, for lack of other amusement.

Clean as a flower at all times, the little Renault was appalled to discover something like infection in her flesh, which she could not soak out. As the day wore to a close her illness so increased that she was forced to look around the blanket with glittering eyes, and whisper for the help of Father Ribourde. As shy of handling as a fawn, aversion even to his touch made her face piteous.

"Father, I cannot endure any longer to be filled with sickness from an arrow wound," she pleaded in excuse for the attendance craved. "There is something foul in my shoulder which I cannot wash away."

The buckskin was drawn partly off, and though she had covered herself, the stain of

shame deepened the pink of her angelic flesh as she submitted to the surgeon.

"Why did you not speak of a wound before?" demanded Father Ribourde.

"My father, I could not."

The priest's outcry brought his brother Récollet and Tonty behind the blanket, and jealously, though reluctantly, at their heels, Boisrondet. He took note of the cowering, blush-burned girl; but Tonty saw only the green-rimmed wound on the little lad's shoulder.

"It was a poisoned arrow," pronounced Father Membré.

At that Boisrondet wheeled and rushed into the open air cursing himself, and Father Membré followed close by his ear rebuking him. In many a victim the wound must have worked death within the time she had suffered, but her strong health and wholesome blood resisted. No medicine, no surgeon's skill, could now take the burning foulness out. The poison was in her eyes; it beat in her wrist and hammered in her brain.

"Poor little lad!" groaned Tonty. "I wish I could take this from thee and add it to my dagger cut. We have all been bad guardians. The boy would not be sacrificed thus if Monsieur de La Salle had been here."

"Must I die, father?" inquired the little Renault, lifting her eyes to the priest's sorrowful face when Tonty no longer stood by.

"The lives of all of us are in the hands of God," he answered. But while he dressed the gangrened spot he examined her conscience, and finished by giving her absolution.

"The only penance I shall lay upon thee, my daughter," murmured on his priestly monotone, "is to bear with patience such suffering as may result from this misfortune."

He added tales of martyrs and triumphant saints to keep from her ear the stormy agony of Boisrondet and Father Membré's remonstrances outside the lodge.

The Iroquois allowed another night to pass, and then ordered the French to be gone, giving them a leaky canoe for their voyage.

Tonty had done all he could to protect the timid tribe in retreat. He saw that he must now set off up-river, so the boat was provided with some corn and blankets and the guns of his men. Already the Iroquois were busy tearing down the scaffoldings of the dead. The plain, so lately a peaceful barbarian city, smoldered in little heaps. Groups of Iroquois paused in their work of desecration to howl a derisive adieu to the voyagers.

As the canoe passed the foot of the Rock Tonty looked up its height, hopeless — so poorly do we gage the future — of ever planting the French flag on its summit.

IV.

THE canoe was so leaky that it had to be pulled ashore when Tonty's party had rowed up-stream about twenty-five miles. They camped early in the afternoon. The two priests built a fire, while Boisrondet and L'Espérance cut branches, and with these and blankets made a couple of knotty mattresses on which Tonty and the little Renault could rest with their feet towards the blaze. Tonty's wound was again bleeding. After efforts to mend the boat he dropped upon his pallet in deadly sickness, and lay there while the autumn afternoon dimmed and faded out as if the smile of God were being withdrawn from the world.

Father Ribourde and Father Membré tended both patients with all their monastic skill. The little Renault was full of delirious laughter. L'Espérance, while he labored on the boat with such carking as the woods afforded, groaned over the lad's state and reproached himself for ever grudging the child service. Boisrondet worked at dragging fuel as if his one desire was to exhaust himself and die. As night came on he piled a fire of huge size, though it was a dangerous beacon, for they were camped on a flat and wooded strip some distance from sheltering bluffs, and their light perhaps drew other prowlers than the Iroquois. During the night there were stirrings in thickets, and once a soft dip or two in the river, as if a canoe paddle had incautiously lapsed to its usual motion.

After a meagre supper Father Membré and L'Espérance lay down to sleep while Father Ribourde and Boisrondet kept guard. The weather was changing, and a chill wind swept along the river valley. It continually scattered the little Renault's curls over her fever-swollen face, and Boisrondet, unable to endure this, built up a screen of brush. He sat on the ground beside her pallet, and Father Ribourde sat at the other side, though the priest rose at intervals and examined Tonty.

The whole pile of burning logs was heaped between the little Renault and Tonty. He lay opposite her, with his feet, also, to the fire, sleeping as only exhausted frontiersmen can sleep. Nothing in woods or stooping clouds, or in the outcry of spirits around him, reached his consciousness all that night. He was suspended from the world in a swoon of sleep. Hisswarthiness was so blanched by loss of blood that his black hair and mustache startled the eye. Father Riboude listened for his breath, into such deep recesses had his physical life made its retreat.

But the girl on the opposite side of the fire brought echoes from the darkness. She sang. She thought she was dancing in a whirl along peaks, or fishing in the river with L'Espérance, or shooting arrows at a mark with young In-

dians, or moving across the prairie with Tonty on his errand to the Iroquois. Through every act ran gladness. She exulted upward through the fire-gilt branches.

"O Mother of God, what joy thou hast given me! If there had been no Monsieur de Tonty — think of that! Then I should have crouched like fields blackened in frost. Then I should not know what life is. How desolate — to be without Monsieur de Tonty! The savages, and the wretches at Crève-cœur, they are all like grasshoppers beside him. I would rather have him call me his little lad than be queen of France."

The priest's soothing had no effect on her fever-driven imagination. She drank when he held a cup to her mouth, and stared at him, still laughing. But during several hours there was scarcely a pause in her talk of Tonty.

Boisrondet sat behind her back — for she lay upon her sound shoulder — and endured all this. The flower of martyrdom and the flower of love bloomed there before the priest in the dank woods beside the collapsing camp-fire. The lonesome, low wail of wind was contradicted by the little Renault's glad monotone. All the innocent thoughts which a girl pours out to her mother this motherless girl poured out to Tonty. It was a confession more sacred than any made to a priest. Boisrondet put his hands upon his ears.

Ruddy embers shone on Father Membré and L'Espérance, Récollet's capote and servant's shaggy dress rising and falling in unison throughout the night; for the watchers did not wake them at all.

When Father Ribourde rose up again to look at Tonty, Boisrondet crept to his place and sat by the delirious girl's head. The priest said nothing, and accepted the change. It became his care to keep the little Renault from jarring her wound with her groping hands.

Boisrondet's eyes may have pierced the floating veil of delirium to her consciousness. The smile of vague happiness which she gave the priest turned to a look of solicitude.

"Sieur de Boisrondet, did I hurt you?" she cried.

He shook his head.

"Forgive the blow."

"I was grateful for it," muttered Boisrondet.

Still his heart-broken eyes pierced the pavilion of her gladness, and she cried out again:

"Sieur de Boisrondet, did I hurt you?"

"No, no, no!"

"Forgive the blow."

"O saints in heaven!" the man groaned, holding his head in his hands.

"How good is God," said the little Renault, returning to her heights, "who made all his creatures so happy! My Monsieur de Tonty, my Monsieur de Tonty —" So she moved on through the clouds.

Tonty awoke at daybreak and stood up weak and giddy, looking first at the pallet on the other side of the sylvan hearth. A stiff small figure was covered there, and Boisrondet was stretched beside it face downward on the ground.

"The poor little lad!" groaned Tonty, coming down on one knee and lifting a blanket edge. "When did he die, Boisrondet?"

Without moving Boisrondet said from the ground:

"She died not long after midnight."

Her face in its pillow of black curls was a marble dream of gladness. She had the wonderful beauty of dead children, and Tonty saw her as a dead child rather than as a woman triumphant in flawless happiness, whose uninhabited face smiled on at her wondrous fate. She had seen her hero in his splendor without man-cruelty and pettiness. The world had been a good place to the little Renault.

Father Ribourde had no candles to put at her head and feet, but he knelt saying prayers for her peace.

The day was chill and sullen, and occasional spatters of sleet glazed twigs and grass tufts. Father Membre and L'Espérance silently took the labors of the camp upon themselves. They dug roots to add to the scant breakfast, and brought fuel. Boisrondet made no response to priest or commandant, but lay on the ground without eating until the slate-gray afternoon began to thicken.

"Boisrondet," then said Tonty, stooping, and taking his subaltern by the shoulder, "the Indians left us not a tool, as you know. We cannot hollow out any grave which would be deep enough to keep the little lad from the wolves."

Boisrondet shivered as if he were beginning to feel the sleet in his hair and on the little Renault's blanket.

"We shall have to sink him in the river, Boisrondet. Be a man."

Boisrondet rose directly, with fierce readiness to do the thing at once if it must be done. He did not look at her again, but sat under a tree with his back turned while preparations were made.

L'Espérance brought many stones, and the priests ballasted and wound the body in the best blankets the camp afforded, tying the packet well with buffalo thongs. They placed it in the canoe, and Tonty called Boisrondet.

Both Récollets stood on the bank repeating prayers while Tonty and Boisrondet pulled up against the current. The river was a dull monster, but a greedy one, reaching for its prey through the boat's seams.

"Will this do, Boisrondet?" appealed Tonty.

"Pull a little farther, monsieur. I cannot bear it yet."

Tonty with his single-handed stroke continued to help hold their boat against the current.

Three times they pulled up-stream and floated down past the friars.

"Will this do, Boisrondet?" twice repeated Tonty. Twice the answer was:

"Monsieur, I cannot bear it yet."

The commandant avoided gazing at Boisrondet's misery. His fraternal gaze dwelt on the blanket chrysalis of the little Renault. He would have given his remaining hand—which meant his future career—to bring back the boy's life, but even to his large sympathy Boisrondet's passion was like a sealed house. It had been impossible for him to grasp the feminine quality in that lad's black curls and flower-fresh face.

"My poor Boisrondet," he urged, "we must have the courage to lift the little lad and do for him what he would do for us."

"Lad! lad!" burst out the other with scoffing. "Always lad to you—the sweetest woman that ever drew breath!" His voice broke down, and he distorted his face, sobbing aloud.

Tonty broke down and sobbed with him. They arose with a desperate impulse together, the man she loved and the other man who loved her, lifted their heavy burden, poised, swung, and threw it out upon the water: It smote the river and sank, and their canoe reeled with the splashing and surging of a disturbed current. Tonty staggered and sat down gripping the sides of the boat, feeling his wound start afresh. Nature's old sigh swept across the wind-harp of tree-tops. The river composed itself and again moved steadily, perhaps rocking the packet in some pebbly hollow, perhaps passing it on towards the Mississippi. And the priests' voices concluded their monotone for the dead.

"Heaven give him sweet rest in this river of the Illinois!" uttered Tonty. But Boisrondet said nothing more.

When the canoe touched the bank Boisrondet took his gun and hurried into the woods. He did not come back at nightfall or in the morning. The others at first respected his quest after comfort. Then they searched for him, discharging their guns, and calling. Yet one more day they waited for him, the weather's increasing bitterness threatening instant winter.

When they finally broke camp the worthless boat had to be abandoned. Each man made up his little pack of necessities. The little Renault lay in the Illinois. Either Boisrondet's scalp hung before some savage wigwam, or he had hidden himself to die in the depths of the wilderness. They could only take their fate in their hands—as we must all do—and toil on towards the great lake.

ON ELKHORN.

SONG-MAKING Elkhorn! ever-flowing stream!

Lovely forever, whether winter holds,
Or spring awakes thee, or if summer's gleam,
With leaf and bloom and shadows warm in folds;

Or if upon thy sparkling waters float
The myriad mimic fleets launched from the trees,

The gold and russet tribute from each breeze
Of autumn, charmed by thy melodious note.

Always thy music, loud or soft, is dear;
Always with rapture thy sweet voice I hear.

How heavenly fair the ever-changing scene
With which is blent thy variable mood!
Wide, level lands of many-tinted green
With margins of young trees, new-leaved and wooed

By softest sighs of amorous-breathing spring,
Whose filmy veil of opalescent mist,
Rose-tinted, white, and palest amethyst,
Half hides the distant hills and seems to bring
The earth and sky together in a dream,
Through which, in silence, flows thy limpid stream.

In silence here, but I will follow thee,
For thou art changeful as the April skies
That gloom and flash and weep amidst the chance

Of cloud and sun—or like my lady's eyes,
Where mirth and sadness mingle in one glance.

If here thy quiet flowing seems to be
Thy pensive musing on some happier day,
It doth foretell that the next turn shall see
A glittering sweep of jostling waves at play,
Whose intermingling laughter dies away
In murmuring eddies—circling interludes—
Which whirl, and sway, and join again the tide

Of many-sounding harmonies, that meet
In one and deepen where the strain intrudes
Upon the silence of the woodland wide,
Whose leafy friendliness thy notes repeat,
Afar, amidst the dewy solitudes.

Amidst the cool and dewy solitudes!—
Away, away!
My song, impatient, will no longer stay
For numbers fitly framed: the fine delay
Of rounded tropes my eager verse eludes.
Away, away!

By field and grassy bank and shadowed hill,
And dappled slope and cliff and woodland still:

Speed, speed thy wave!
Be thou or swift or slow—
Dream thou, or rave

And fret thy heaving breast where thou dost lave

The mossy rocks which hedge thy winding way

In thy haste hastening—stayed by thy delay,
My spirit shall go whither thou dost go.

Be fleet, be free!

The fairest-fall'n inheritance is thine,—

The wide-spread dewy lea,

The endless, leafy archings of the trees,
And weavings of the perfume-breathing vine,
Stirred by caressing winds unceasingly,—

And over these

The passing pageant of the clouds, divine.

Away, away!

Leap through thy narrowing channel. Let the gray,

High-jutting walls repeat the clamoring
Of thy foam-figured waves. Lace with thy net

Of quivering beams the vaulted rock, and let

The wavering snare

Keep captive thy song's battling echoes there.

Be wayward, fierce, fantastic! Crash and swing

Along thy course, a living voice that swells
Forth from the passion of the wilderness.
Turn madness into desperate mirth, and fling

In many a glittering jet,

High on the sun-shot and vibrating air,

The momentary blossoms of the spray.

Still shall my spirit share

The unimaginable joy that dwells

In thy tumultuous rest, the peaceful war

Of Nature's effortless control, the stress

That makes repose, the storm-calm which compels

In place the dewdrop and the mightiest star.

How slowly flows thy crystal current here!
And silent as the sky, which looks through thee
Upon another sky as blue and clear
And soundless—deep as its own self can be.
And all the shimmering green which frames thee in

OUR SUMMER MIGRATION.

A SOCIAL STUDY.

URING the last thirty or forty years our summer migration has been increasing until its magnitude can be grasped only by a wide treatment of details coupled with some exercise of the imagination. Figures on the subject are not easily accessible. The statistician does not deal with them. To sift them from the records of railroads, steamboats, hotels, boarding-houses, cottages, and camps, would be an almost impossible task. The summer boarder of twenty-five years ago no longer represents the mixed multitude of which he was the herald. All classes and conditions of men enter the streams of population which from the middle of May to the middle of October ebb and flow through the land. Every social grade, every occupation, is represented. The rich and the well-to-do middle classes appear most conspicuously, but the currents are swelled by small tradespeople, by pensioners on limited legacies, who hive in the city during the winter, and swarm early in summer among the country orchards, where cheap living is to be had. Then come the work-people, who in one way and another manage to move with the rest. Your colored barber, when trade begins to slacken in the large town, informs you that he is thinking of taking a little vacation. The carpenter and joiner sends his wife and babies a hundred miles away to spend weeks or months on a farm that takes boarders. Factories frequently shut down for a week or more, and empty their armies into the open fields of retired country places. Household servants go in part with the families which they serve, but hundreds pack their trunks and bundles for the homeward journey. Professional men, college students, teachers, seamstresses, and fresh-air fund beneficiaries pour forth to the mountains, the seaside, the lakes, where they spend their summer outings in rest or in various forms of service.

This migration is limited to no region of country. It sweeps over all portions of the land available for summering—in Maine, and northward beyond the great Gulf of St. Lawrence, along the seacoast far to the south, in the mountain ranges of the Carolinas, in the interior and the great West, among the Rockies and the Sierras, on the route to Alaska, along

the northern lakes, in the wildernesses of the States and the Canadas. In order to comprehend, one must see what is taking place along all thoroughfares, over every mountain trail; in innumerable hotels and boarding-houses, each of which harbors from ten to a thousand or more of these fugitives from heat and toil.

Those who limit their excursions to the principal routes and resorts have little conception of the manner in which these people push into out-of-the-way places. It has been my practice for years to take long tours by private conveyance through various parts of New England, sometimes driving the entire distance from Long Island Sound to northern Vermont, coursing through the seclusions of our mountain ranges, stopping at out-of-the-way taverns, loitering by trout brooks, dreaming through old villages, sleepy and quaint, in the late spring, in midsummer, or in the yellow autumn. While on these journeys I have been surprised to learn into what regions visitors penetrate. Wherever one stops in front of a neat farmhouse commanding a view and overshadowed by maples, he will hear, while taking the draught of water which he has begged, the oft-repeated announcement, "We take summer boarders." By the unfrequented road the house with its piazza, and the red chairs set out, and the hammock swung aloft, advertise the same fact almost as unmistakably as did the old swinging sign, with its fierce lion glaring down on our childhood, show that the village tavern held its doors open to travelers.

Less inviting places have their guests. While making a long detour through a lake-dotted region in western Vermont I was drawn to a low, rambling house of cheap construction, without other inviting feature than a veranda of the simplest kind across its front, though near by slept a lake in tempting beauty. Here were to be had only mean accommodations and coarse fare. The people were kindly, but of uninviting appearance. They kept summer boarders. During a portion of the hot season all available space had been packed with factory hands. Released for a time by a shut-down, they had rushed hither for rest, under what would have seemed to most of us hard conditions. I doubt not they had a good time, lounging by the water, breathing the fresh air, flirting and courting, and at last going back to

their work refreshed; some of them to honeymoons that might never have shone but for the boat ride on the lake, the stroll along the beach, or the sunset seen from the rocky ledge, and the robin's twilight note flung from the opposite shore.

Any numerical estimate of this migration for the whole country would have to be taken with allowance. We may aid our impressions by calling to mind the vast extent of our transportation systems, and by reflecting on the proportion of our public travel which is made up of those who, in the warm season, move for pleasure rather than for business. The accommodations of our railroad, steamboat, and stage lines are crowded in early summer with those who are leaving their homes, and in autumn with those who return. Thousands of these would not journey but for our habit of summering in the country. The excursion business of these lines assumes enormous proportions. It covers all movements for outing, from the mammoth crowds which respond to advertisements for a single day's run to some point of interest, to the thousands of tourists who buy round-trip tickets to seaside resorts, mountains, western parks, or whatever regions attract their fancy. I have before me a volume of some 240 pages, large octavo, devoted by a single railroad corporation to its thousand or twelve hundred excursion routes. A single railroad system of limited area reports, in kindly response to my inquiries, an estimate of 500,000 tickets taken up from summer migrants, by far the larger portion being long-distance tickets. As each person must show a going and a return ticket this number would represent 250,000 passengers. Another road reports about the same number, and another makes a showing of about 2,000,000 tickets to summer resorts, only a small proportion of which represent local traffic not connected with summer travel. This last system annually honors about 300,000 tickets of other corporations. If roads covering comparatively small territories are able to report such figures, what millions must pass over a system like that of the Pennsylvania Railroad, covering the great seaside resorts of New Jersey, Delaware, and Maryland, while it stretches out to our inland waters as far as Lake Michigan.

We may obtain further help by a glance at the extent of that hotel industry which caters mainly to the wants of summer visitors. The capacity of the summer hotels is an indication of the demand for accommodations. Throughout the months of July and August many of them are full to overflowing, but we may be content to take as a fair basis two-thirds of the advertised capacity. Perhaps in most instances one-third of this number arrive

each day, and an equal proportion departs. The number of individual visitors in a season of sixty days would thus be one-third of two-thirds the capacity into sixty. This would give, for a hotel capable of accommodating 300 guests, 4000 visitors in a good season. On this basis we may roughly estimate the visitors to the hotels of any region of which the hotel capacity is known. Passing by such places as Asbury Park, Atlantic City, Newport, and Saratoga, and reaching out after more rural regions, we find in the Adirondacks hotel accommodations for 8000 people, in Bar Harbor for about 4000, in the Catskill Mountains for over 5000, on Lake George for 4000, at Old Orchard 3000, among the Rangely Lakes 1500, in the White Mountains over 8000, in Bethlehem alone, of the White Mountain region, over 3000—figures which show what proportions the hotel interest is assuming in answer to the demands of our summer migration. These few regions offer accommodations for over 33,000 visitors, and by our method of estimation would welcome in the course of a sixty-days' season in the neighborhood of 440,000 guests. To those who are entertained at hotels must be added, in some instances, an equally large number of persons who go directly into camps, cottages, or boarding-houses. Cottage life and camp life are becoming more and more popular. In late years these methods of summering are gaining, as compared with that of the hotel and boarding-house. Cottages and camps are erected in all of the more frequented regions, some with an endeavor to imitate primitive simplicity, and some on a magnificent scale. One who twenty, or even ten, years ago was familiar with our inland waters or our coast lines is surprised, on resuming some route of former days, to note the change which has taken place. Elegant or cozy cottages greet him at turning-points of the ride or sail, while displays of bunting, and waving handkerchiefs, and shouts draw attention to the fisherman's or hunter's lodge.

The magnitude of such a movement as this justifies the assumption that the social influences exerted by it are worthy of serious consideration. They may be none the less powerful, and may become more ineradicable, because they work quietly and attract little notice.

The prevailing motive for this change of population from town to country is sanitary, and the aggregate result in this direction is of unspeakable value, though the least calculable. Laying aside the consideration of comfort as affected by health, and passing over the moral conditions dependent on physical soundness or unsoundness, the economic value of the sanitation which comes from a yearly bath of the body in fresh air, supplemented by a changed

diet, and by the immersion of the mind in new currents of thought suggested by new surroundings, can hardly be exaggerated. To do more and better work, to be more capable of planning and executing, to invent and to utilize invention, to prolong a working life or the working period of many lives, are aims fundamental to national production and to the success of our people in the world competitions into which we are rapidly being drawn. Business men subjected to a heavy mental strain secure, by means of the summer vacation, not only added vigor for enterprises but a prolongation of the active period of life. A like result may be anticipated for all employees, and especially for in-door workers. If it is true that lessening to a reasonable extent the number of hours which constitute a laboring day does not diminish the yearly product of a mill, it may be presumed that a limited annual period of release from the routine of manual labor, and the devotion of the time to out-of-door pleasures, involve no loss and probably bring gain. We have yet to learn how much the wealth of the country depends on the health of its producers. The rise of a single degree of average annual temperature over a continent might tell heavily on our total rainfall, though to the senses of the people the thermometric rise might not be noticeable. A like difference in the health of our laboring population must materially affect the aggregate production of the country. From a purely economical point of view, therefore, the migration of our people pays in the increased intellectual and material product of the land.

The amount of money distributed from the great centers over the rural districts by our migration forms an important element in our estimate of its value to the nation. Whatever tends to the distribution, as opposed to the concentration, of wealth must be accounted a healthful influence. What does it cost to move an army of a hundred thousand men a hundred miles? The people who come from the large towns constitute an army, of which the transportation and forage are paid in cash. The men, women, and children thus annually transported, all of them with some baggage, and some with piles of baggage, are numbered by the hundred thousand. The money which changes hands in the process runs into the millions, distributed among railroads, steamboat lines, stage lines, hotels, and other places of entertainment, as well as among guides, *voyageurs*, and helpers innumerable. For actual figures I am indebted to the courtesy of railroad officials who have made such rough estimates as they were able concerning their departments. Three systems report the probable value to them of summer travel as respectively \$700,000, \$550,000, and \$500,000. In other instances, such as that

of the Pennsylvania Railroad system, the sum would doubtless exceed a million, and perhaps reach millions. The total for the country can not be estimated, and can hardly be exaggerated. Any interference with this source of income becomes a serious matter. A not large but prosperous corporation, owning one of our main steamboat lines on an inland lake, was compelled to reduce its dividends by the occurrence, in summer time, of the smallpox in one of the chief cities towards which travel by that route was directed. Other lines terminating in the same city must have experienced a similar diminution of profits. When we take into account the magnitude of our system of transportation, extending in all directions over the land, and by all water-ways interior and coastwise, and when we consider that, in so far as the summer migration is for its own sake and not for business, it spends money which would not otherwise get into the hands of those who operate these lines, we realize what an effectual agency of money distribution we have here. Every employee on every route, from the hackman to the section hand of the railway, or the deck-hand of the steamer, or driver of the stage-coach, shares in the benefit of our passion for summering in the country. For the accommodation of the moving population railroad trains that have been discontinued through the cold season are set in motion, steamers that have been put into winter-quarters are set afloat, and freshly painted stage-coaches are brought out. These enlarged facilities of intercommunication involve the employment of more labor, not only in the direct work of transportation, but in the branches of manufacture subsidiary to transportation. Our migration thus becomes the occasion of increased production, as well as of scattering hoarded money. Some lines are built and maintained with well-nigh exclusive reference to summer travel.

The pecuniary significance of the migration only begins with the cost of transportation. Every person who thus temporarily changes his abode carries money for his support during his stay in the country, and gradually gives it over to the inhabitants. Bills for board or for camp forage, pay for numerous services, constant outgo in the thousand and one ways incident to summer travel or residence, swell the total expenditure to an aggregate far exceeding the millions which go to transportation lines. Some of all this finds its way back to the city, but a large part is scattered by increasingly minute distribution over wide regions of rural territory, to the wealth or sustenance of which it becomes an important contribution. How much is thus annually yielded to the State of Maine? How much goes into New Hampshire? How much is scattered along the shores of our northern

lakes, and in the far West? Figures now inaccessible may sometime be gathered which will open the eyes of dwellers in these and many other regions to the total brought to them every year by the stream which sets from the cities and large towns towards the seashore, mountains, country villages, farms, and wildernesses.¹

What this outlay means for thousands of recipients scattered through our land needs only to be suggested. Without it whole villages now rendered flourishing would have remained stationary or have fallen into decay. Local tradesmen secure an increased volume of exchange during the summer months. Many a farmer who opens his house to strangers gathers from this source the principal return of the year, and the same is true of numerous villagers who let rooms or furnish board. Our summer migration means to many an obscure home the return to it in autumn of one or more members who have been out to service in the hotel or boarding-house, bringing a large share of all the money which such a poor family will handle in a twelvemonth. It furnishes a home market for products such as milk, butter, poultry, eggs, lamb, veal, and other supplies from the farm or garden, not forgetting hay, grain, and fruits. As these are in demand at first hand, better prices are realized than when they go to distant markets through middlemen and at cost of transportation. A region occurs to me in which the call for early poultry caused by a few city families produces a scarcity, and in the same region we have an amusing result of the advent of summer visitors, in that sweetbreads are worth in summer double the price paid for them in winter, at which time the local inhabitants are content to eat them.

We need not enumerate the occupations benefited by a migration which calls into its service well-nigh every trade and handicraft. The rural market for labor is perceptibly strengthened by this cause, and the variety of employments is increased. Preparations must be made for guests. Hotels must be built, with their appendages of barns and small cottages. Farmhouses must be enlarged and fitted with conveniences. To this is to be added the building of country-seats on a grand scale, the erection of modest cottages, the putting up of permanent camps, the building of boats, the manufacture of sportsmen's outfits. Occupation is thus furnished to laborers, many of whom, but for these industries, would be compelled to seek employment in the larger towns and cities. Household servants are secured with increased difficulty throughout those regions

towards which the tide of travel sets. Farm help is interfered with and commands a higher price. The laying out of estates frequently involves the purchase of hundreds of acres and the employment of hundreds of hands during a term of years in the erection of houses and barns, as well as in grading, draining, road-making, gardening, and all the work of a great establishment. After this initial labor is performed the maintenance of such an estate furnishes permanent occupation for a large company. The effect of this is felt over the surrounding country in the greater difficulty of securing laborers, especially in the busier seasons of the year. Where operations are less conspicuously centered on a single country-seat they may be equally influential, because of the employment of a corresponding amount of labor at numerous scattered points. A not inconsiderable influence is in these ways exerted on the wage question. Any support given to labor in the country tends to equalize wages and to prevent the concentration of work-people in the great centers of population.

The amount of taxable property in the country towns is largely increased by these activities, and in many cases the price of land is measurably enhanced. Confining ourselves to strictly rural regions, the now famous town of Lenox, Massachusetts, ranked, fifty years ago, with other agricultural towns of New England. The number of visitors at any one time staying there has gradually risen since then to 2500 or 3000. A large proportion of these are dwellers in cottages. Whole farms have been bought for country-seats. A recent sale of 100 acres is quoted at \$1000 per acre. This may be regarded as the price of farm land which includes a building site commanding good views. In the village there is no fixed valuation of land. Recently a corner lot three by four rods in size sold for \$15,000. In Bethlehem, New Hampshire, about the same number of visitors have brought up the price of village lots to \$1000 per acre. Even outside the village, farm lands are quoted at \$120 per acre. These values are three times as great as those which prevailed before the influx of summer visitors. Those who knew the Adirondacks in their primitive wildness can hardly realize that on Mirror Lake, close by Lake Placid, land which twelve or fourteen years ago could have been obtained for \$50 per acre now commands \$1000 per acre, while eligible sites on Lake Placid itself are worth from \$100 to \$500 per acre. Industries new to those regions, such as truck-gardening, milk-farming, and so on, have sprung up, and laborers' cottages occupy clearings by the roadsides.

Similar results may be noted at Mt. Desert, with its 25,000 annual summer visitors, and its

¹ The amount of money paid in the season of 1890 to the hotels and boarding-houses of New Hampshire alone is placed at \$5,000,000.

sales of large tracts of land at a high average per acre. Such facts as these might concern us little did they mean nothing more than that considerable sums of money are thrown into the hands of a few original owners of building sites; but they mean much more than this. The value of surrounding lands is affected, and there is a general transition from a relatively sluggish life, or even from lifelessness, with exceedingly low values, into a stirring life with increase of numerous industries and a general betterment of material conditions. Processes less rapid but hardly less important are going forward on a broad scale in many States. Wherever minute ramifications of the great tide of migration penetrate, industries are proportionately revived and values increased. A modest influence of the same kind is exerted wherever sons who have gone from among their native hills to engage in commercial enterprises finally realize a life-long dream in returning to the ancestral home, putting decayed buildings in order, and spending the summer amid the scenes of their childhood. Every old homestead thus appropriated is taken out of the market, and by so much, as well as by its improvement, enhances the desirability of surrounding lands.

We reach here the of late so widely and profitably discussed problem of deserted farms. That these are numerous in the older States is well known, though the impression that they are more frequent in this country than in others is erroneous.

It is not my purpose to discuss the causes of this phenomenon. Two correctives present themselves, each of which must operate slowly, but each of which is prophesied by present tendencies. The first, though not perhaps the earliest, of these is the reflux wave of population before long to set from the western portion of our country as the wild lands are occupied. The agricultural migrations of our times are subject to the law which has ruled barbaric migrations. Such movements exhaust themselves for want of new fields. When the barrier of the ocean or the desert is reached the advancing tide of population rolls back on itself, and lands lately deserted are reoccupied. The reflux wave from the far West is already sending out warning of its coming. The fearful scramble for the opening Indian reservations shows how scarce are desirable agricultural lands. Another generation will see the wave flowing back and taking up sites which the present generation has forsaken. Against such a time it may be hoped that the new agriculture, now so rapidly supplanting old methods, will have become sufficiently established in practice to enable farmers to restore these valuable but much abused lands without too heavy an outlay of capital.

The second, and possibly more speedily op-

erative, cause of resuscitation is to be found in the tide of population from the cities. This comes at present in the form of summer migration; but that is only a premonitory symptom. A change is already observable in the habits of those who annually seek the country. The period of their stay is gradually lengthening. Boarders come early and remain till late in autumn. Owners of country homes leave the city sooner each year and linger as long as possible. There is an increasing disposition to spend the autumnal months in the seclusion and amid the splendors of the country. People are beginning to talk of Christmas as the proper time to return to the city. Many houses are kept open all winter with a view to possible occupancy when sleighing and other winter pleasures are at their height. Country life is asserting its charms as compared with life in the city. The time seems to be approaching when an increased number of people will regard themselves as permanently domiciled in the country, and as visitors to the town only for the season of social gaiety which will intervene between Christmas and Lent. The importance of this inclination towards domicile can hardly be overestimated.

For the present, however, deserted farms must look to a short visitation in the most inviting portion of the year. Since the advertisement and discussion of them, inquiries in regard to them have been numerous. The Hon. N. J. Batchelder, Commissioner of Immigration for New Hampshire, reports that in his State about 350 farms have recently been sold to people who have bought them for summer homes. Where hill farms commanding fine views can be bought for a few hundreds or a thousand dollars, many a family of moderate means might secure such a resort. Clergymen, teachers, men of various professions, as well as prosperous mechanics and moderate tradespeople, can find desirable sites, the buildings of which may be put in attractive condition with moderate outlay.

By such steps as are here pointed out our summer migration gives every year increasing promise of solving one of the grave social problems of the age. The decadence of the rural districts, the flow of population towards the great centers, and the consequent decline of rural industries and values, are disastrous features of our latest civilization. Were the process to go forward as rapidly in the future as it has done in the last three or four decades, some of our country districts must soon present a pitiable exhibit. Schools must degenerate for want of support, church privileges must be retrenched, rusticity must progress towards barbarism. Arrest of the drift of population towards the commercial centers is the cure for this evil. Whatever gives remunerative occu-

pation to craftsmen and other laborers becomes the first means to such an arrest. So long as wage-workers can find well-paid labor near home, the temptation to seek the city is lessened, while the retention of the laborers in their native places prevents an over-supply in the city and helps to maintain prices there. We have seen how the summer migration affects this. It further tends to restore to the country as permanent elements some portion of what is at first only a transient class. The attractions of country life will hold children to places purchased by their parents as temporary homes, and in general the stimulus given to life on the farms will lessen the present prevailing disposition of farmers' sons to forsake the scenes of their childhood and to try fortune abroad.

A few other results of the migratory movement are worthy of notice. As a direct consequence of it road-making has begun to attract increased attention. Riding and driving are chief amusements of summer visitors, and, other things being equal, the region that offers the finest roads will draw visitors. Rural enterprise of this kind is to be desired because of many points of economy involved in it. The irrational waste of our present system of road-making does not confine itself to the road-bed alone. With it is to be counted the wear and tear of vehicles and beasts of burden, as well as the consumption of unnecessary time, which in a country where labor is dear becomes in the aggregate an enormous item. The effect of roads upon land values appears when we consider that a region which can be reached only by ways nearly impassable easily becomes deserted.

The culture of fish, especially in our inland waters, is already matter for legislation, and has assumed importance as a source of food supply to our increasing millions. Few who are not acquainted with the operations of our rural sections are aware what a factor the summer visitor becomes in this branch of industry. In my drives last summer I heard complaint from the hotel interest over the discouragement arising from recent legislation in one State limiting the trout season to the spring and earlier summer months, so that inducements to anglers are taken away just at the time when they are wishing to leave the city. The income from sportsmen is not inconsiderable. As soon as they are open the northern streams draw eager fishermen from foreign parts. The increase of such patronage, and the revenue derived from it, necessitate the stocking of streams, and justify private protection of the haunts of fish

with a view to the sale of privileges. The sums of money that a party of fishermen will, in the course of two or three days, pay to farmers for permission to catch, or to try to catch, trout in protected streams, cause no small amount of banter among members of the party, and bring many a broad smile to the faces of the recipients of such revenues, who but a moment before were "making the air blue" with maledictions on poachers who, regardless of placards against "shooting, trapping, and fishing," quietly slip bait or fly under the green banks of a brook. Pisciculture, thus stimulated by the summer migrant, is extending over our national domain.

A prospective rather than at present realized result of the summer migration is the encouragement of domestic handicrafts. The revival of such crafts in the rural districts of England has been attempted with remarkable success.¹ Work in this direction might well be undertaken for the reinvigoration of our rural life. The drift of young men and women towards the mills of manufacturing centers not only depopulates the regions from which they come but robs the home of its chief attraction to those who stay behind, and deprives the wanderers of needed healthful influences. How to save the home life of those who earn bread is a weighty problem. The mills must principally furnish the world's markets, but fondness for the products of handcraft lingers among refined buyers. Machine-made articles may be woven with greater evenness, or turned with more perfect trueness, but they lack the human flavor which comes with the toil of deft hands, and they leave no room for the display of individual taste. That thousands upon thousands of precisely the same make are thrown on the world detracts from the sense of rareness. Articles of domestic make are more durable. The old-time all-wool flannel cloths that linger in many an ancient family are precious; and what a feeling of firmness and coolness is given to a summer bed by the ancient linen of the hand loom! Rag carpets of pretty dyes and rugs of quaint patterns yield pleasantly to the pressure of our feet. Such industries might multiply and become more varied as well as more artistic wherever they were encouraged, and the products would carry with them thoughts of homes among the hills or in the backwoods. Fabrics of peculiarly delicate texture might be spun and woven from the fleeces of fine-wooled sheep, and would have special value for the assurance which domestic manufacture usually gives of honest material and work.² The sum-

¹ See article in *CENTURY MAGAZINE*, February, 1889, by Albert Fleming, "Revival of Hand Spinning and Weaving in Westmoreland," a most interesting paper, showing that such household crafts can be made pecuniarily profitable.

² Mr. Fleming in the article cited above adduces as samples of fine hand-work Indian muslin with 100 threads of warp and 110 of weft to the inch and Egyptian linen with 270 *double* threads in warp and 110 in weft to a single inch.

mer migration brings a market to the doors of country homes, the life of which, thus encouraged, would be preserved in its sanctity. The ready wit of our American women, once directed into these channels, would secure a speedy harvest of skill and good taste. The pecuniary and moral results of such industry might easily exceed sanguine expectations.

The decadence of country towns is forcing rural churches into ever narrower straits. Loss of population and decline of farm values render it more and more difficult to pay parish expenses; ministerial supply becomes irregular and of a lower order; church life declines. The summer migrant is not always helpful. He often imagines that a vacation is as needful from religious as from secular activity. Nevertheless, the major part of visitors observe Sunday, and many attend church. Frequently the city family becomes a valuable accession to the forces of the rural church, returning each year to greet and encourage the residents. Interest thus indulged feeds on activity and develops into attachment. Families which locate permanent summer homes become dependent on neighboring pastors and churches for spiritual privileges, and when people who have lived in luxury, and maintain what seems to a simpler habit an extravagant style, prove by their devotion to religion and humanity that they stand near to the whole Christian brotherhood, they easily meet with affectionate recognition from those of plainer ways, and the relation becomes of mutual benefit.

I do not know that an effect of summer migration on the country school is often observable. Exceptional instances exist, and cases may be numerous. The increasing disposition of families to prolong their stay in the country beyond the limits of the city-school vacation suggests that the time may not be far distant when those who control the village schools will adjust the terms and the studies so as to enable children from the city to continue work during a portion of their stay. The similarity of courses in all graded schools favors this transfer, and by painstaking a fair adjustment might be reached. This would take away from many city families a chief objection to prolonging their sojourn, and would result in a positive benefit to the inhabitants. Lacking some such arrangement, the migratory habit must soon lead to the establishment of private schools in some districts to accommodate temporary residents.

A noteworthy instance of aid to rural affairs has been furnished in Ashfield, Massachusetts, under the wise leadership of such men as Mr. George William Curtis, Professor Charles Eliot Norton, and Dr. G. Stanley Hall, who have taken a practical interest in the problem of the country town. I do not

know how far their counsels may have prevailed to secure the fine roads which help to render that region attractive, but their sense of the beautiful, their love of time-honored ways, and their quick sympathy with all country affairs, are doing much to make the place worthy of the increasing flow of visitors along the maple-embowered streets, and to awaken in the minds of the inhabitants appreciation of and loyalty to their heritage. As a special point around which to rally effort these men have laid hold of the village academy. An annual festival given in its favor brings distinguished speakers from abroad; the large public hall is crowded with visitors, neighboring farmers, and excursionists from distant towns. It is the great day of the year. The perpetuation of this academy, when many have become extinct, is a pleasing commentary on the effectiveness with which various enterprises might be supplemented and directed by summer residents. At the dinner, a few years since, the gift of a park by a visitor was announced, and at the same time it was made known that the decline of population, to which, in common with so many others, this farming community had been subject, had been arrested and a small gain secured.

The church and school suggest the moral bearings of our summer migration. These are not all in right directions. The sight of numbers of apparent idlers or pleasure-seekers is not inspiring to those who are tied to toil, and we may well believe that discontent with the country, and a restless desire to taste the imagined ease of city, life have been aroused by the sight, and have lured many a young man or woman from what seemed the dull routine of home life to try fortune amid competitions of which no conception had been formed, and under a strain of exertion, not to say of temptation, greater than could be borne. Of these, while one wins the goal of desire many must lead a disappointing career, which will make the hillsides and the home seem a paradise unattainable. Especially must we deprecate the influence exerted on the youthful imagination by those displays of wealth which the larger summer resorts present, and which are not infrequent in retired districts reached by visitors. When our young women are taught to make a landau or a four-in-hand with flunkeys their ideal of destiny, and when young men imagine that the chief object of going into trade is to drive a dog-cart or to own a yacht, the process of demoralization is begun. Whatever removes from our people the conviction that life must be earnest if it will be worth living, that there is no easy road to success, and that it is better for a man to work out a noble character along a toilsome way than to live in the pursuit of

pleasure, is a disaster. We have to regret the introduction of the hedonistic philosophy anywhere, and the tendency of pleasure-seeking crowds is in this direction. The presence in a country district of a few careless, wealthy families who give their time to equipage, yachting, fox-hunting, four-in-hand driving, Sunday dinner-parties, and all sorts of in-door and out-of-door sports, introduces ideas of life out of harmony with the best development of manhood and womanhood. The contagion of display invades to some extent all classes, and in a more positive degree those thrifty homes where increasing means facilitate indulgence; and one sees rapidly spreading among the local inhabitants a standard of living that involves many who are unable to maintain it. Extravagance, with its evils, creeps through a society heretofore content with a rational simplicity. Greed of gain comes with fondness for display. Those who have hitherto been content with moderate profits begin to demand unreasonable prices, perhaps descend to trickery or downright dishonesty. A result only less unpleasant is realized when, for the hire which wealth gives, and in consideration of lighter toil, young men in whose veins runs some of the best blood of the old country town lay aside honored rural callings to don the coachman's or the footman's hat, coat, and boots.

On the other hand, we must not overlook the fact that relatively few of our summer migrants are very rich or are mere pleasure-seekers. Many of them belong to the learned class; many are teachers in colleges and schools; some are professional or amateur artists; some are collectors of natural objects. Such people bring culture into the rural districts, along with quiet ideas of life. Contact of these visitors with one another is valuable, and an influence towards appreciation of beauty and goodness is exerted over those who live permanently in the region. These influences go into many families and help to elevate and purify home life. On the whole, a great deal is being done in this way. Personal fellowship is the most natural, effective, and economical method of operation of intellectual, esthetic, and moral forces. In a broad way we may say that what is being accomplished is that most desirable thing—the mingling of city life with rural life for mutual action and reaction. The division of our population into a rustic and an urban class, with little in common, must involve the repetition on our soil of an Old World misfortune. The transfusion of the two is an end on many accounts desirable. City life is our dangerous life. Its excessive development and its isolation from rural life have

ever been a source of peril. Politically speaking, there is safety in having many points of attachment between city and country. The personal and local affections formed become a safeguard. Already we find no small diversity of interest springing up between commerce as represented by the city and agriculture as represented by the country. The more freely our manufacturers and merchants mingle with those who cultivate the soil, the better will be the understanding between them. Some of the greatest questions of our present political economy must be settled on our farms. Students might well make it an object to study them there.

The cultivation of rural tastes is a source of mental and spiritual health. The hills, the fields, the woods, the brooks, the open sky, are the natural heritage and instructors of men. In them meditative, as contrasted with active, life, now disproportionately stimulated, must always find a large share of its inspiration. Whether we speak of literature, science, art, or religion, we may fairly raise the question whether we do not lack, in all of them, that spirit of personal communion with being and the Being of beings which flourishes best under the direct power of rural nature. To what extent have originators and molders in all these departments caught their fundamental spirit and direction from life in the country?

In these days in which we are recognizing that during the last forty or more years the drift of business life and even of American legislation has set towards the undermining of home, we may thankfully receive the promise which our summer migration gives of an enlarged and improved country home life. It is a good thing to see the owners of country-seats watching for the first breaking away of winter and the return of the warm days of spring, with longings for the fields, and with thoughts of the many preparations to be made for the coming season. These people have learned that the first bird-songs are sweet, that opening buds have a charm, that it is cheering to watch the up-starting grass, and that the numerous expectancies of the country at this time of the year possess a peculiar fascination. They are drawn ever earlier away from the bustle of the town to the quiet of the country house. Rural life makes a larger share of their span of life; the flavor of the home amid the fields, different from that amid the crowds, is cultivated and loved. On a large scale this is going forward, and no one who is touched with sentiment or with concern for a healthy national spirit can fail to rejoice over the process.*

CAPE HORN AND COÖPERATIVE
MINING IN '49.

THE late summer months of 1848 were marked by exciting rumors of the discovery of gold in California. The first reports, coming as they did through Mormon channels, were received with suspicion. There was a general concurrence of opinion that the story had been set afloat for the purpose of Mormon proselytism — in the hope that out of the army of westward-bound pilgrims which such rumors would put in motion a legion of new recruits to the Mormon faith might be induced to halt by the way and cast in their temporal and spiritual fortunes with these “latter-day saints” in the infant colony by the margin of the Great Salt Lake. But in September, this suspicion in the public mind was effectually dispelled by the receipt in Washington of official despatches from Thomas O. Larkin, — who, under Mexican dominion, had been American consul at Monterey, and who was still acting as the confidential agent of the government, — Mr. Larkin’s despatches confirming the reports of the discovery of gold.

In the New England States the "gold fever" soon became epidemic. Among the young men there was a burning desire to set out for

California, inspired perhaps as much by an intense yearning for adventure as by dreams of wealth. To New Englanders, remote from the new El Dorado and to a large extent a maritime people, an ocean voyage presented itself as the most practicable route.

Naturally enough, the formation of coöperative associations suggested itself as the most practicable method of proceeding. The first move in this direction was made by Mr. Timothy Rix, a Boston merchant. Although then past middle life, Mr. Rix was full of energy and ambition, and under his leadership was organized "The Boston and California Mining and Trading Joint Stock Company," the fortunes of which this narrative is to chronicle. A prospectus was issued, and applications for membership were invited. The shares were placed at three hundred dollars each, and the whole number of members was limited to one hundred and fifty. The first public notice calling attention to the organization brought hundreds of applications for membership. The roll was soon filled, and from the overflow new organizations were started, and in due course followed the example of the parent company. Captain Henry Smith, who had sailed for many years as commander of the vessels of Frederick Tudor, the old Boston merchant who originated the ice trade with the West Indies and southern ports, was chosen to act in the double capacity of president of the company and commander of a ship, Mr. Rix taking the vice-presidency and the writer being chosen as secretary.¹ The company was composed of men representing every calling in mechanical and professional life. There were

¹ The Board of Directors who were to have the practical management of the affairs of the company were Enoch Jacobs, of Chicopee, Mass. ; William A. Egery, of Boston ; James L. Bates, of Weymouth,

Mass.; John E. Dix, of Boston; Abiel Carter, of Concord, N. H.; Edward P. Abbe, of Boston; Lucius Flagg, of Boston; I. C. Whipple, of Concord, N. H.

graduates of New England universities, and young men whose future was yet undefined by any calling or profession. Of the whole number of the 150 members who composed the expedition, 120 had not passed their thirtieth year, 85 were twenty-five or under, 33 were twenty-one or under, while 12 were not yet "out of their teens."

The ship finally selected and purchased for

Thomas O. Larkin

the voyage was the *Edward Everett*, one of the "Medford built" craft for which Boston had long been celebrated. She was a full-rigged ship of about 800 tons burden. She had been built for the European trade, was comparatively new, and ranked as one of the finest ships hailing from Boston. She was spacious between decks and otherwise well adapted for the purpose.

The organization of this unique expedition, and its approaching departure, was for the time being the chief topic of the day. Mr. Everett, with wise forethought and liberality, presented to the company a well-selected library of historical, biographical, and scientific works, accompanying the gift with a communication expressing the great interest which he in common with the public at large felt in the success of the company and in the part which those who composed it would take in the social and political organization of the new State which they doubtless would help to found. The Sunday before the ship sailed the members of the company

attended the Ashburton Place church by special invitation to listen to a sermon by the Rev. Dr. Kirk, on the part that this first expedition from New England was expected to perform in the cause of civilization and religion on the Pacific coast. In all circles the prospective departure of the "*Edward Everett Expedition*," as it had now come to be known, was an event of rare interest and was the current topic of discussion and speculation. The *Edward Everett* swung loose from her moorings at the wharf on the evening of January 11, 1849, and dropped down the harbor to an anchorage near Fort Independence, preparatory to putting to sea on the morning tide. The harbor was filled with floating ice, and the wind swept across our decks with arctic severity.

At daybreak on the morning of the 12th the ship was under way and standing out to sea before a fresh and bitterly cold northwester. I pass over the unpleasant first days of the earlier part of the voyage, when the wild wintry weather covered decks and rigging with frozen spray, and two-thirds of the ship's company were prostrated from sea-sickness. The balmy atmosphere of the Gulf Stream and a smoother sea soon brought about a happier condition of affairs. The company was organized into messes, and order took the place of the chaos that had unavoidably prevailed for the first few days. Plans were devised for social organization and recreation. The publication of a weekly newspaper, under the title of "*The Barometer, or Gold Hunter's Log*," was begun and faithfully kept up throughout the voyage. Press and types were wanting, but it was read from manuscript every Saturday to the assembled ship's company, and furnished one of the most prolific sources of amusement of the whole voyage.

The 1st of February found us drifting through the weed-matted surface of the "Sargasso Sea," with hardly wind enough to keep the ship's sails from slatting against her spars. The run off the coast, across the Gulf Stream, and through the Atlantic down to the latitude of the Madeiras, had been a lively one. The wind had been fresh and fair enough to satisfy even the skipper himself. From 33° north latitude, down to and through "the Sargasso Sea," it was like a doldrum drift, and welcome was the change when in about 21° north the ship began to feel the influence of the northeast trades. Straight on her course, the wind on her port quarter, with everything set to her main sky-sail, she bowled along day after day until we were within two degrees of the equator. "Running down the trades" was indeed the very poetry of sea-going. It brought men and boys alike on deck, put them fairly on their "sea legs," and made sailors of them in good or bad

FAIR WEATHER.

weather for the remainder of the voyage. On the 13th of February the *Edward Everett* lay,

As idle as a painted ship
Upon a painted ocean—

fairly upon the equator. Some three miles away to the northwestward was another ship, which by her rig was unmistakably an American craft. Yet so flat was the calm that her signals hung idly against the halyards. A boat was lowered, and a party of us started for an

equatorial visit to the stranger. She proved to be the *Aurora* from Nantucket, an old whaler, worm-eaten and dilapidated in her upper works, sorely afflicted with dry-rot, and looking as though she would not last to reach Cape Horn, much less to round that formidable point and complete her voyage. Compared to the *Edward Everett* she was a crazy old tub indeed. Months afterward, when our anchor was let go in the harbor of San Francisco, we found ourselves within hailing distance of this same old "blubber-hunter," which had made the port nearly two weeks in advance of us! She was the type of a class of vessels that were pressed into service during the California excitement, not one of which was regarded as any longer seaworthy, but every one of which eventually made the voyage in safety, many entering port with pumps going, and running directly upon the mud flats of San Francisco harbor only to be used as storeships or broken up by the old junk men for firewood, or for the old iron and the rigging that remained.

Less than five degrees south of the equator we caught the southeast trades. If the run through the northeast trades had been a pleasant episode in the voyage, that upon which we were now entering was a summer idyl of prolonged delight.

From the 20th of February to the 12th of March the ship lay on her course with a long line of foam in her wake, stretching away astern in sunny whiteness by day, and brilliant with phosphorescence by night. Nor did we start tack or sheet until latitude 43° south

SIGHTING AN OLD WHALER.

REEFING THE TOPSAIL. (REPRINTED FROM THE CENTURY FOR JUNE, 1882.)

was reached, and the "trades" had spent their force. The transition from these halcyon days to the stormy period which followed was abrupt and unexpected. On the 13th the wind suddenly shifted to the southwest, and in an hour the ship was close-hauled on the wind under a reefed fore-topsail, fore-course and main-top-sail, spanker, and jib. A rising gale was brewing. "The glass" was falling rapidly, but still, with watchful eye to windward and a somewhat anx-

ious expression upon his weatherbeaten face, our "skipper" held the ship steady in her course. Still the gale continued to freshen. The ship was tearing through the water with her lee rail half submerged, when suddenly the wind came down upon us with the force of a tornado, while the ship yet carried canvas enough to insure her being knocked down upon her beam-ends unless suddenly released from the pressure under which she was strug-

gling. And that sudden relief came with the quickness of thought. Her foresail burst like the explosion of a piece of heavy artillery and went away to leeward in shreds. It was now "let go" and "clew up" all along the line and, with everything cast loose and threshing furiously in the blast, the good ship righted and came up into the wind preparatory to being made ready for the battle with the elements upon which she was entering. A moment later the roof of the cook's galley was on fire; the flames and sparks from the wood-work around the smoke-pipe threatened a conflagration,

CAPE HORN. (FROM THE "CAROLINA," APRIL 9, 1849.)

which was averted by the courage and coolness on the part of a few who bestowed buckets of salt water judiciously upon the flames above—and into the soup below.

We were now in our first real gale. Soon the ship was lying head to the sea under a close-reefed main-topsail, with just enough of her spanker hauled out from the brails to keep her well balanced. The tempest was howling weirdly through her rigging, while the fast-rising sea, breaking against her weather bow, beat time in thundering unison to the blasts that were lashing its surface into a chaos of flying foam. To look to windward meant to be half blinded by the driving scud that cut like needles into the face. Fifty feet away from the ship's rail to the leeward the atmosphere was impenetrable. Fast gathering night was adding its dismal quota of horrors to the scene. But not only did the noble ship at once attest her seagoing qualities by her superb behavior, but captain, officers, and crew alike by their masterly work won the confidence of the ship's company. Three days later the ship was plowing her way southward again with a fair wind and a smooth sea.

Entering the stormy latitudes of the southern seas, we were welcomed by the cape pigeon and the strong-winged, mild-eyed albatross. Their numbers steadily increased as the ship worked her way to the southward. There is nothing that so relieves the monotony of a sea voyage through these waters as the at-

tendant presence of these beautiful birds. From the upper Patagonian coast on the Atlantic to the same latitude on the Pacific, they are the sailor's inseparable companions in sunshine and in storm. The eye of the albatross has a gentle, human expression, and he who has once sailed over these troubled waters will not be at a loss to understand the lesson of "The Rime of the Ancient Mariner."

As we drew near the cape the ship was stripped of her "top-hamper." Her upper yards and spars were sent down, and with top-gallant yards yet crossed she was made ready for the rough-and-tumble work to be looked for "off the Horn." On the 29th of March, with the rugged and inhospitable coast of "Tierra del Fuego" lying in full view to the southwest,—the first "landfall" made since leaving Boston harbor,—we entered the Straits of Le Maire. Grim and forbidding the outline of Staten Land loomed out of the haze on our port beam as the ship drove forward with a free wind, fairly in mid-channel and pointing directly on her course as night shut down upon us.

At midday on the 30th, when in the latitude of Cape Horn and some seventy-five miles to the eastward of the dreaded locality, the wind suddenly hauled to the southwest and came out with hurricane fury. The long, heavy swell from the Pacific swept down upon us with irresistible force, and all hands were soon brought to a stern realization that the battle of "doubling Cape Horn" had fairly opened. At noon next day the ship had been blown a hundred miles to the eastward before the gale and the heavy seas that accompanied it. Nor did the next day's work show a gain of half a dozen miles of the ground thus lost. It was a contest between a good ship and good seamanship on the one side, and the terrific storms and yet more terrific seas that beset this bleak and inhospitable region.

Perhaps no merchant ship had ever left port better officered and better manned than this. Her commander was an old-time mariner, and a navigator who could read his way along the trackless deep with unerring accuracy. "Bowditch's Navigator" was his Bible. He fairly reveled in lunar observations and exulted over the necessities of storm and cloudy stress by day that forced him to exhibit his skill at double altitudes of the fixed stars by night. And when for a succession of days and nights no gleam from sun, moon, or stars had been visible to light the way along our course, his "dead reckoning" was never at fault, nor was the position of the ship ever marked wrong upon the chart. One could lie down to sleep at night in the serene confidence that wherever "the

IN A HEAVY SEA. (REPRINTED FROM THE CENTURY FOR JUNE, 1882.)

old man" had dotted the location of the ship at each recurring midday there she must be.

The first officer of the ship was Mr. William V. Wells. He was a young man of rare physical perfection, a great-grandson of the revolutionary patriot Samuel Adams, and was worthy of his illustrious ancestry. His voyage in the *Edward Everett* closed his maritime career. Entering the profession of journalism in San Francisco, he became in after years one of the most popular writers for the daily press in that city. He enriched the literature of the present day by his "Life and Public Services of Samuel Adams" and his "Adventures in Honduras." Gentle and refined by nature, he was none the less a true sailor when in command on a ship's deck. Above the roar of the sea and the blast of the tempest, in the wildest night off Cape Horn, his voice rang out loud and clear without the aid of a trumpet, giving his orders with precision and coolness in a tone that was never misunderstood or disobeyed.

The second and third officers of the ship, Mr. Briard and Mr. Pike, were "old sea-dogs" of the truest type. In the forecabin there were few who had not long before been graduated in their calling as "mates" and "second mates," and were seeking this method of working their passage to "the land of gold."

Not a day nor an hour passed for weeks when the ship was not struggling under short and

close-reefed canvas. Half the time her decks were swept by tremendous seas, and not a true or reliable observation was to be had from the day of her passage through the Straits of Le Maire until the cape had been fairly rounded and the ship's head pointed northward.

On the 21st of April, having battled our way around the cape and up to 51° south latitude on the Pacific side, the wind came out from the southward and we "squared away" for Valparaiso. The ship had not lost an inch of canvas or a spar nor parted a rope in her long struggle. With everything set alow and aloft, and studding-sails boomed out to port and starboard, she sailed as she had never sailed before on this voyage; nor was sail shortened until, on the 29th of April, she ran into calm weather off Valparaiso harbor.

But two ships of the California fleet had arrived at Valparaiso before us. These were the Baltimore-built clippers,—famous in their day for speed,—the *Gray Eagle* and the *Grayhound*. The ship *Montreal* from Boston arrived a few hours later with 93 passengers. The barks *Victory*, 90 days from New York with 30 passengers, and the *Josephine*, 108 days from New York, arrived later in the day; the ship *Orpheus*, 90 days from New York with 195 passengers, and the brig *David Henshaw*, from New York with 7 passengers, reaching port on the following day. With 500 Americans thus turned loose upon the streets and hills of this old Spanish

city after more than three months at sea, there was doubtless more bustle and animation in Valparaiso than had ever been witnessed before. It was a visit full of novelty and interest to this small army of gold hunters. "Knowing that we were going to a land where Spanish was spoken," writes a member of the *Edward Everett* company, "we all studied 'Ollendorff's New Method of Learning to Read, Write, and Speak Spanish'; and for several days before our arrival at Valparaiso no other language was spoken on board the ship. We were much sur-

prised on going ashore that the people did not understand their own language." However, means of communication were established, sufficient to enable us to supply our wants and to minister to our pleasure.

On the 4th of May all but two of the fleet were again under way, if a drift seaward with not air enough to prevent a ship's canvas from hanging idly against her masts can be so called. And drift, drift, drift it was, for days and days, the coast of Chili lying along in full view to the northward and eastward, and the ship rolling helplessly from side to side in the long, heavy swells of the glassy ocean. "They that go down to the sea" in steamships, in these days of ocean steam-navigation, do not realize the luxury of a storm at sea as compared with the helplessness of a sailing ship in a dead calm, when every roll threatens to jerk the spars out of her and leave her a helpless wreck.

Two days out from Valparaiso we had a strange experience. The ships *Montreal* and *Edward Everett* drifted into uncomfortable proximity, each moment visibly lessening the distance by which they were separated and increasing the prospect that the vessels would grind each other to splinters. A collision seemed inevitable, and men stood facing each other on the decks with pale faces and a common expression of infant helplessness. And all

the while the sea was glassy, the sky placid, and the atmosphere beaming with serenity. As they approached to within half a ship's length, the *Everett*, as though impelled by a mysterious power, seemed to forge ahead slowly, while the bow of the *Montreal* swung as slowly to star-board, until, with her jib-boom fairly over our port quarter and for a moment foul with our spanker gaff, she swung clear and the two ships drifted apart and out of danger to either. It was a hair-breadth escape.

A PERIL OF THE PACIFIC.

Crossing the equator on the 5th of June, we continued to drift lazily northward, until we took the northeast trades about 14° north latitude and were soon hastening towards the end of the voyage.

Preparations were now commenced for active work on our arrival. The ship's cargo, in addition to the company's stores, consisted mainly of lumber, flour, and the engine and boiler for a small steamer, which, with wise forethought, had been planned before leaving Boston to be built by the company and run upon the Sacramento River. Lumber was hoisted on deck, the frame of the boat was got out and fitted together, several barges were built, and tents were made. For the remainder of the run we had an animated company. The engine and boiler of the little steamer were hoisted on deck, set up, and connected. Steam was gotten up and the engine run for some hours and put in perfect order. While this operation was going on the clipper ship *Architect* was signaled, bound to San Francisco, where she arrived on the first of July and reported that she had passed the *Edward Everett* making her way to port under steam!—a report which was gravely published in the next day's issue of the "*Alta California*," the only newspaper then published in California.

As we approached the coast the fourth of July was at hand. It was celebrated with noisy displays of patriotism and appropriate ceremonies. The orator of the day, Mr. Louis R. Lull, delivered an address, and a poem written on the occasion by Rev. Joseph A. Benton was read by him.

It was afternoon of the 6th of July when we entered the Golden Gate. The hills about the bay were dressed in the arid garb of the dry midsummer. Until Telegraph Hill was rounded no habitation or sign of civilization was visible save the dilapidated earthworks at Fort Point and the few crumbling adobe buildings that then constituted "the Presidio," or old Mexican military post. Alcatraz Island, now covered with fortifications and barracks and crowned with a lighthouse at its summit, was then naked and white with the guano of the

A FOURTH OF JULY ORATION.

myriads of cormorants, gulls, and pelicans that nested and hatched their broods upon it. The hills of Contra Costa and the plains at their feet were rank with wild oats, and were the pasture ground of herds of cattle. Here and there across the broad and beautiful bay the white-washed walls of an adobe ranch house were visible. Rounding Telegraph Hill, however, there was a change of scene. As the harbor of San Francisco opened up before us a whole fleet of vessels of every class and description were seen at anchor. Clearly some kind of talisman was drawing hither the commerce of the world, although on shore, as viewed from the ship's deck, one saw but a few adobe buildings, relics of Mexican methods and habits, some small wooden structures here and there,

GUANO ISLANDS, FROM THE STEAMER "COLUMBUS."

and tents large and small dotting the hillsides and beach.

Landing on the rocks at Clark's Point, a spur of Telegraph Hill (for no wharf then existed), we skirted along the cove round into the center of the town, then fairly embraced within the space now covered by the few blocks bordering upon the Plaza or Portsmouth Square. A locality more replete with bustle and excitement than this then was never existed. Gambling and gamblers were in full possession of the field. Tents were crowded with people surrounding the tables where the Mexican game of "monte," and other so-called banking games were in full blast. These were the first and most conspicuous features of the scene. The mercantile establishments were thronged with men fitting out for "the diggings." Activity prevailed everywhere, occasioned mainly by the innumerable expeditions and squads of men about to depart for the mining region. For aside from the gambling fraternity, and the comparatively few older and wiser heads who saw a safer and more profitable field of operations in the opportunities which existed for trade and speculation in San Francisco, the heart of the multitude was set upon gold-digging, the "making of a pile,"—in the parlance of the day,—and a quick return to the old home again. Indeed, it may be

safely estimated that ninety-five per cent. of the "Forty Niners" who had then arrived, and were still arriving, in California were animated by this sentiment. For at that time the country, with its arid and uninviting aspect, presented few or no attractions for permanent residence. Much less did it then exhibit any of the evidences of the resources of soil and climate which the subsequent forty years of American energy and enterprise have developed.

If the gold fever had become epidemic along the Atlantic border and throughout the west, here it was raging with an all-consuming, burning fury, attacking all alike, and making eventually hapless victims of many. Our own ship's company were no exception to the rule. The sailors left the ship an hour after her anchors were down, and only the community of interest which bound us together prevented a stampede of everybody. Some days elapsed before a plan of proceeding could be agreed upon. Our spare lumber, of which we had

THE NORTH POINT OF ISLAND SANTA MARGARITA.

brought a goodly quantity, was readily sold for three hundred dollars per thousand feet, and payment received in gold dust. A considerable surplus of saleratus, which by chance happened to be among the ship's stores, found an immediate sale at eight dollars per pound. Other commodities were disposed of at similar rates of profit, so that already, in addition to the ship and her remaining stores, boats, barges, steamer, and camp equipments, with rugged health and strength prevailing among the members of the company, the treasury was well stocked with ready funds, and the company was prepared to commence operations.

It was finally decided that the headquarters of the company should be located at Benicia, on the straits of Carquinez, some thirty-five miles from San Francisco, and on the 10th of July the ship got under way for that point, in charge of Captain Harrison, the bay pilot

ISLAND JUAN FERNANDEZ.

of that day. Before nightfall she was safely moored alongside the marsh, in front of the point at which the city of Benicia at that time was *expected* to rise and rival San Francisco in wealth and importance.

Preparations were immediately made for the transportation of the main body of the company up the Sacramento, *en route* to the mining region, while a sufficient number—and among them the best mechanics of the company—were to be left behind to set up and launch the steamer. The next day the expedition started up the river. It consisted of four barges and two surf boats, all deeply laden with men and stores. The little flotilla sailed

upon the right bank of the stream. The memory of that night will be vivid in the mind of the last survivor of those who shared its miseries, though he live to round out a century of existence. The atmosphere was dense with the most voracious breed of mosquitoes. It was a night of purgatorial penance, and deep was the rejoicing when morning dawned and we were again afloat.

The waters of the Sacramento were then clear and uncontaminated by the mining debris that subsequently made it a muddy and shallow stream. Its banks were fringed with trees, shrubs, and climbing plants fairly tropical in their luxuriance. Every bend in the silent

NIGHT ON THE SACRAMENTO RIVER.

away up the straits into Suisun Bay. The true channel through this bay was at that time not marked by buoys or beacons by which it could be followed. Mud banks existed in all directions, and these we were soon successful in locating. Half the time the boats were aground, and half filled with water from the spray of the sea that broke over them as they were lifted and thumped upon the soft mud shoals. The passage across this troublesome sheet of water was at length safely effected, however, and the little fleet entered a broad estuary that opened out before it, only to find, an hour or two later, that we were ascending the San Joaquin instead of the Sacramento River. Beating our way back we at last reached the entrance to the Sacramento, and encamped for the night

river brought a new revelation of solitude—beautiful effects of foliage and placid waters, with the distant Sierras dimly outlined in the hazy atmosphere. There was no sign of human habitation until, as we rounded a bend in the river, the tents and shanties of Sacramento came into view.

The city of Sacramento was at this time but little more than a busy, thriving camp, along the river and on the line of what is now Front street. Back of this was a light growth of timber which shut off the view of the country beyond. Heaps of merchandise were scattered along the river bank. Teams of every description and pack trains were constantly loading and departing for the mines. Places where business was being carried on in tents and rough struc-

tures alternated with gambling resorts open day and night. Excitement prevailed everywhere and was written in the expression of every face. The people of these days—as indeed for years afterward—lived at the rate of ten years in one. Proper food was scarce. In a land now so well known to be the most productive in fruits and vegetables of any part of the world, not a fruit tree existed or a garden patch was cultivated outside of the mission grounds scattered widely apart over the country along the coast. A wagon-load of potatoes and onions arriving from the Mission of San José, while we were yet encamped at Sacramento, was speedily disposed of at a dollar a pound. Many months elapsed before we again indulged in these luxuries.

The next movement was to be towards the mines. In what direction we should move, was the momentous question. It was finally decided that the Mokelumne River should be our point of destination; and on the afternoon of the 17th of July, about one hundred and twenty in number, with three teams loaded with stores and camp equipage and drawn by oxen, we took up our line of march. Our road led out through the thin line of timber in the direction of Sut-

hope, we started on our march carrying no water. Before ten o'clock every man in the party began to experience the effects of the heat and the pangs of thirst. The heat grew more and more oppressive. We learned afterward that the mercury at Sacramento was at 110° in the shade. The sharp, hot gravel crunched under our footsteps, the atmosphere shimmered with heat in all directions. By eleven o'clock the burning plain met the horizon on all sides, with not a sign of life or vegetation, or an indication of water in any direction. Men and animals were panting like dogs just in from the chase. Still there was no time to halt. Relief could only be had by pushing forward. The pace was necessarily a slow one. The oxen wearily dragged their heavy loads, while the men kept within easy reach of the wagons, not knowing who might be first to fall from heat and exhaustion. Soon after noon, the line of timber that skirts the Cosumnes appeared on the northeastern horizon. Underneath it was an equally long line of open sky, so that the trees seemed literally to be growing in the air. It was the deceitful mirage that had brought them thus prematurely into view, and many weary miles yet remained to be traversed

before they were reached. But the sight inspired new hope and effort and we plodded on. Men now began to give out, and these were lifted upon the wagons. The older and stronger men of the party were first to succumb; "the boys" still held out. At length, late in the afternoon we drew near the river. As the head of the straggling column reached its banks there was a rush for the stream; many threw themselves headlong into the shallow waters, while all drank their fill. The poor fellows on the wagons were lifted tenderly down and taken to the water. Two or three of the number had fallen behind the wagons and were not yet in. Volunteers carrying water started back and

found them prostrate a mile away, in a state of complete collapse. Water revived them, and by the aid of their stronger companions they struggled into camp. But not until long after night had fallen was the camp fire lighted and our supper eaten.

We cooked our breakfast and broke camp at daylight the next morning and started again on our weary tramp. Some of the party had to be carried on the wagons. But although there were hills to climb and a long march to make on this day's journey, yet there were shade-trees in abundance, and springs here and there along the route, making it comparatively a holiday trip. By noon we were fairly within the "min-

THE SACRAMENTO RIVER, ABOVE SACRAMENTO.

ter's Fort, some two miles back from the Sacramento, near the left bank of the American River. Here we camped for the night preparatory to a long trip on the morrow. Up to this time the weather had been insufferably hot, though the nights were cold. We were not unaware, therefore, that a tiresome and oppressive tramp was before us, when on the following morning we broke camp and started on our journey. Our route was in a southeasterly direction straight out over a dry and arid plain, beyond which, some twenty-five miles away, was the Cosumnes River. We did not know that not a drop of water was to be had until the Cosumnes was reached, and, buoyant with

ARRIVAL OF THE "EDWARD EVERETT" AT SACRAMENTO.

ing region." Our route now lay along the line of what has since come to be known as "the mother lode" of California, and from which millions have since been extracted in the quartz-mining operations that have been and are still being prosecuted upon it. In all California, however, not a blow had yet been struck in quartz-mining, for the "placer diggings" were as yet virgin ground, and quartz operations were unthought of. Before leaving Boston, we had taken into our party a "professional" geologist, who passed with us over miles and miles of the "mother lode" without ever suspecting its existence, and was as helpless as the most inexperienced youngster of the party in the hunt for gold when "the diggings" were reached.

Our party reached the summit of the ridge that constitutes the northern descent to the Mokelumne River late in the afternoon. No teams had ever before gone down the trail to the river itself, the few gold-seekers who preceded us having carried their stores on "pack animals." A unique method of descent was adopted by us. The oxen were hitched to the rear of the wagons, headed up the hill; the tongues of the wagons were steered by two strong men; ropes were rigged out and manned on the upper side of the incline and also to assist in "lowering away" when all was ready. Thus with the cart literally before the oxen, and the rudder rigged out forward instead of astern, and with the strong cattle backing slowly down the

hill, the descent was finally accomplished, and camp was made that night by the side of the brawling river.

The next morning the digging for gold commenced in earnest. The first day's journey in the burning heat of the Sacramento valley had prostrated several of the company, however, and the hospital at once became a necessary adjunct to the as yet chaotic camp. The search among our stores soon revealed the fact that the medicine-chest had been left behind. Ludicrous as the fact may seem, a box which was supposed to contain the medicines proved to be the outer covering of a carboy of acid which had been provided by our geologist to test the loads of gold which it was confidently expected we should soon accumulate. Something had to be done to rectify the blunder immediately, for several of the men were now in the hospital tent. The writer was detailed to return alone to Sacramento and hasten forward the medicines—a trip successfully accomplished with the aid of a stout little mustang.

My presence as secretary of the company having now become necessary at the ship, still lying at Benicia, I returned two days later to Sacramento, and descending the river by a small boat, reached the *Edward Everett* a day later. Work on the small steamboat had progressed rapidly. The keel had been laid on the 13th of July, and all hands were pushing forward the construction. On the 12th of August she was successfully launched, and swung along—

side the ship. Her boiler and machinery were lowered into her, and soon put in place, and on the 15th a trial trip was successfully made, although it cannot be said that the speed was satisfactory. She was loaded, and, commanded by our first officer, William V. Wells, with Alfred N. Proctor as engineer and S. P. Barker as assistant, she started on her first voyage up the river on the 17th of August, 1849. The writer, in company with others, was a passenger on board. We reached Sacramento on

California Mining and Trading Joint Stock Company ceased to exist.

Out of this whole ship's company not more than thirty remained in California. So far as the writer has been able to ascertain, but fifteen are living there to-day. The others returned again to their Eastern homes, where their subsequent careers, with few exceptions, are unknown.

Some of the delusions of the time are curious. One ship's company, for example, came

STEAM GOLD DREDGER ASCENDING THE SACRAMENTO, 1849.

the early morning of the 19th. The steam whistle was sounded on approaching, and the whole camp was soon assembled upon the river bank to receive us and witness the unique sight of a steamboat on the Sacramento. Such a greeting has seldom been witnessed. The blasts of the whistle and the yelling of the multitude ushered in a day of jollification, in which whisky was the fuel that kept up steam on shore long after the fires had gone out under the boilers of the little *Pioneer*.

As a coöperative body, the rest of the story of the *Edward Everett* company is soon told. Two weeks on the Mokelumne resulted in the unanimous decision that coöperative gold digging was impracticable, and a resolution to disband was adopted. Mr. J. L. Bates, one of the directors of the company, was authorized to return to Benicia, sell the ship, and close up the affairs of the company, while singly and in squads the men scattered, some to hunt for and dig gold on their individual account, others returning to Sacramento and San Francisco soon after, satisfied that they had mistaken their calling.

The ship was sold for \$30,000; the little steamboat was purchased by Simmons, Hutchinson & Co. for \$6000, and soon after was snagged on the Feather River, where it sank. A final dividend of \$160 was paid to each member of the company, and the Boston and

in the expectation of dredging gold from the bottom of the Sacramento River or its branches. They brought with them a large scow, to be propelled by a stern wheel operated by an engine in the usual manner. A house, or workshop, was built over the entire boat, within which was the dredging apparatus, and quarters for men who were to operate it, and where they were to divide the proceeds of their labor as the gold was dredged from the bottom of the river. The unique craft steamed up the river and made experiments, which so completely convinced her owners of the absurdity of the scheme that they quietly dismantled and disposed of her.

This was not more delusive, however, than the attempt to dig gold upon the coöperative principle. It was assumed that a hundred or more men could be called together indiscriminately from every vocation in life, many of whom had never performed a stroke of hard labor, and that all could work in harmony together, some performing more daily labor than others and producing more than others, and all standing on a basis of perfect equality in the division of the combined product. Such was the underlying principle upon which the organization of the *Edward Everett*'s company was based. Its brief existence when the mining region was reached, and the system of coöperative labor was attempted to be carried

into effect, attests its absurdity. It served its purpose, perhaps, in bringing about a combination of capital and effort to secure an economical method of reaching California, but beyond that it was a detriment to every man who really desired to "try his luck," so to speak, at gold digging. For instead of leaving the whole field of the California gold region open to every one of the company, it concentrated into one chance the opportunities of all. It disgusted the large majority of the company with gold digging at the very outset, and sent them back to their ordinary vocations at home or in California. Not one of the company ever grew rich by gold digging. There was really but little to choose between the folly of attempting to dredge gold in 1849 from the mud of the Sacramento, and that of digging gold in the foothills of the Sierras by coöperative labor.

Through the years 1849 and 1850, the Cape Horn route from the Atlantic States to California maintained the supremacy over all others, but towards the close of 1850 the Panama route gained the ascendancy. From that time on the voyage "round the Horn" ceased to command any considerable share of travel, and was finally given over to the famous fleet of American clippers so renowned in their day as fast freight carriers to the Pacific coast. It is interesting to note the relative share of travel by sea which these routes commanded in these early days. The only record in existence from which information can be obtained is that which was kept by Mr. Edward S. King, harbor master of San Francisco during that period, the custom house records having been destroyed by the great fire of May 4, 1851. This valuable record is now the property of the Society of California Pioneers in San Francisco, and from it the following compilation is made:

PASSENGER ARRIVALS BY SEA IN SAN FRANCISCO
IN 1849.

<i>Via Cape Horn.</i>	<i>Via Panama.</i>	<i>From Pacific Ports.</i>
15,597	6489	9217

From the 1st of July to the 31st of December the record shows the arrival of male and female passengers. From this it appears that the number of female passengers during that period was as follows:

From Atlantic and European Ports and via Panama	309
From Australia.....	102
From Chili.....	72
From Mexico.....	70
From South Sea Islands.....	23
From Peru.....	15
From China.....	8
Total	599

In 1850 the arrivals were as follows:

<i>Via Cape Horn.</i>	<i>Via Panama.</i>	<i>From Pacific Ports.</i>
Males, 11,209 ..	Males, 13,490 ..	Males, ..9823
Females, 561 ..	Females, 319 ..	Females, 1522
Total number of males.....	34,522	
Total number of females.....	2402	

Of the females the classification was as follows:

From American and European Ports and Panama	880
From Australia.....	895
From Mexico.....	451
From Chili.....	117
From South Sea Islands.....	41
From Peru.....	16
From China.....	2
Total	1522
Total	2402

No record exists from which the volume of overland travel to California during these years can be given. Its ratio can be best approximated perhaps by reference to the records of membership of the Society of California Pioneers. This organization is made up of those who arrived in California prior to January 1, 1850, and their male descendants. From this source the following compilation is made:

Members who arrived via Cape Horn.....	518
Members who arrived via Panama.....	213
Members who arrived overland.....	208
Members who arrived by other routes.....	77
Total	1016

It thus appears that more than half of these associated argonauts made the Cape Horn voyage. The list of "forty-niners" from which this tabulation is made embraces of course but a small portion of those who were eligible to membership had they not long since been gathered to their fathers, or been scattered to other parts of the world, or failed to avail themselves of their privilege.

It is a remarkable circumstance that out of a fleet of 760 vessels from American ports that sailed around Cape Horn to San Francisco in 1849-50, not one was wrecked or sustained any serious disaster on the long and tempestuous voyage. Yet this great fleet was largely composed of old vessels that had long been regarded as unseaworthy, and in many instances had been condemned, but which had been patched up and pressed into service again to meet the exigencies of the occasion. Many and many a ship entered the Golden Gate with pumps which had been almost constantly manned to keep it afloat, and many and many instead of coming to anchor were run directly upon the mud flats of Mission Bay, where they ended their sea-going days by being transformed into storehouses, hotels, or boarding-houses, finally to be broken up by the "old

junk" men. The *Niantic*, a large, full-rigged ship, that had seen service in every sea, was floated up to what is now the very heart of San Francisco, and there converted into a hotel. Over the gaping wound in her stout oaken side, where a doorway was cut for a public entrance, was inscribed the hospitable legend, "Rest for the weary and storage for trunks." The ship *Apollo* was converted into a saloon and lodging-house, while on the opposite side of the way was the hulk of the brig *Euphemia*, which had been purchased by the *ayuntamiento*, or city council, for a prison, and was the first place for the confinement of criminals which the city of San Francisco owned. Many a ship was deserted by owners, officers, and crew for the more attractive "diggings."

The wonder becomes still greater that this vast fleet of vessels—many of them worn and unseaworthy—made the Cape Horn voyage successfully, when it is remembered that most of them made the passage in mid-winter of that stormy region. The average number of days occupied in making the voyage by those which were off the cape in the summer months of that locality was 153, as against an average of 203 days for those which were there in the winter months. In some instances vessels "sighting" Staten Land, or even the cape itself, would be blown off eastward by the never-ceasing southwest gales, and after six weeks' battling with the storm would again find the same "landfall" to the windward, and actual progress round the bleak headland not yet begun. It was not an unusual experience

to lie close-hauled to the wind under a single storm staysail for week after week, the ship's rigging covered with icy sleet, her decks half the time covered with hail or buried in water, the sea breaking over her and washing everything away not securely bolted or lashed to her decks, the galley flooded with water so that little or no cooking could be done, and "old horse" and "hard tack" the only fare. Add to this the gloom of the long, dark winter nights, and the cheerlessness of the short winter days,—the sun breaking through the murky atmosphere low down in the north for an hour or two, perhaps, now and then,—hatches battened down, making life almost unendurable below decks, and discomfort and misery prevailing everywhere, the rolling and pitching of the ship rendering sleep next to impossible and actual rest unattainable, and this condition of things continuing in many instances for a period of two months before the work of "doubling the cape" was accomplished. The constant sense of danger that no man could fail to realize added misery to the situation yet more unpleasantly appreciable.

It is an interesting circumstance that every one of these vessels entered the harbor of San Francisco and found an anchorage without the aid of a pilot. It is none the less singular, perhaps, that not until after a pilot system was established was there a single wreck to record of vessels entering or attempting to enter the Golden Gate. Yet no more competent body of men than these pilots have ever pursued the calling in any part of the world.

Willard B. Farwell.

GRAY ROCKS AND GRAYER SEA.

GRAY rocks, and grayer sea,
And surf along the shore—
And in my heart a name
My lips shall speak no more.

The high and lonely hills
Endure the darkening year—
And in my heart endure
A memory and a tear.

Across the tide a sail
That tosses and is gone—
And in my heart the kiss
That longing dreams upon.

Gray rocks, and grayer sea,
And surf along the shore—
And in my heart the face
That I shall see no more.

Charles G. D. Roberts.

THE WHITE CROWN.

EUROPE is a garrison. Its frontiers are but a succession of fortresses, whose guards are bipedal dogs trained to fret at a strange face or to bite the uninvited guest. Its cities are scientific intrenchments,

and its citizens are unwilling recruits.

Spring is not hailed by the powers with poetic enthusiasm, nor is it greeted by the commoners in rhapsodies. The Continental spring may prove not the glad awakener of life but the signal for the final atrocity of high civilization — wholesale murder legalized. For with the new crispness of the grass, the tender buds upon the trees, and the bridal songs of the cuckoo and the lark, come the intricate evolutions of battalions of men taken from the plow, and come the rumors of war. Suspicions, jealousies, hatreds that have hibernated for very cold now creep forth and warm themselves into malignant activity. Frost deprives vipers of their sting and armies of success. Europe breathes a sigh of relief when the winter sets in cold. It trembles at the farmer's prediction of an early spring. It stands guard when the last ice is melted, and apprehensively awaits the mailed gauntlet, ignorant from what quarter the emblem of defiance will be cast. Is the Czar about to execute the dream of his dynasty against Constantinople? Has France intrigued with the Duke of Luxembourg? Or has she bribed Belgium? Or both? What means this new uprising in Bulgaria against the Turkish yoke? Will Austria break her last treaty with Germany, her hereditary foe, and afford Russia a highway for the price of the land filched by Frederick the Great from Maria Theresa? Why has France a standing army of three millions? Does she herself perchance menace, and still cherish the hope of Alsace and Lorraine? Is the German Empire the nut or the cracker?

During the spring of which we write the politics of Europe took to itself an unusually bloody hue. There was a strange restlessness in diplomatic circles which did not fail to communicate itself to the lower classes. It was rumored that the Czar was about to mobilize four army corps upon his western frontier; and it was known that the pneumatic rifle, the secret of which the Russian government had purchased from an American, noiselessly pro-

jected its bullet at an initial velocity one-third greater than the smokeless rifles of Austria, Italy, Germany, and France. The commination of the Slavs, the nightmare of the Teutonic races, was almost a wakeful reality. An ambassadorial discourtesy, a drunken officer on the frontier, a mistaken despatch — these were sufficient to fulminate the catastrophe.

The famous remark of a German emperor, "I wish my subjects taught to be Germans, not hoary Romans; soldiers, not near-sighted dreamers," added a new fervor to patriotism. Enormous army-credits were voted by the Reichstag. The war-footing was increased five hundred thousand, and the women turned the clods in the valleys, and sowed the grain unaided by their men, as bravely and almost as sadly as if the battle were actually at hand.

The spring opened with manœuvres upon field and ocean. Tactless Germany flaunted her lancers and artillery in the eyes of France; and France, rejoicing like the morning in her strength, shrugged her shoulders at her beery foe and suddenly massed a million men at St. Dié, Lunéville, Nancy, Verdun, Rocroy, Malplaquet, and Lille. Well said Jean Jacques Rousseau, "that it is nobler to plant trees on a terrace than colors on a breach." Who can understand that in the Christian year of our story a nation could be proud of the science of sending men out of the world?

Alas for Europe! When the first shot is fired there will come a struggle such as the world has never imagined. The strain will be terrible and long. There will be no masking of movements and surprises under the friendly cover of smoke. A new genius of victory must be evolved. A new courage and stimulus and discipline must be born. The carnage of the battlefield will be presented in all its ghastliness from dawn till dark. To win, the dead must outnumber the living. "War is an inexorable, dangerously incalculable thing," wrote Carlyle. "Is it not a terrible question, at whose door lies the beginning of a war?"

It was the middle of March, and the wind blew as skittishly up the Charlottenburger Chaussée into the Thiergarten as it does up Fifth Avenue into Central Park. There was no snow; spring had promised early, but the ground was hard and dusty and uncompromising. Even a flurry of clean snow would have been easier to bear than these drifts of fetid powder that kissed a traveler with insulting

freedom, and then slapped him in the face and hurried on.

The traveler shook his head and shoulders bravely after each poisonous embrace, and walked the faster, for it was growing dark. A detachment of Pomeranian infantry had marched from Berlin to Potsdam that morning at five; a stranger had accompanied them to their barracks, and now he was returning to the capital. It was not quite time for the incandescent lights, and up the straight avenue from the railroad-crossing the Brandenburg Thor could be seen dimly whenever the war-
ring hurricanes of dust permitted.

Our traveler had a high-born mien, and yet he had walked thirty miles that bitter day. He had not a military gait, and, as he must have been nearly forty years old, clearly he was not a German. He was tall and well-proportioned. From the rear view there was nothing that challenged attention about him except occasional quick upward motions of the head. These movements sometimes attracted the glances of stolid pedestrians whom he passed in his hurried walk, and awoke in their dull imaginations the idea of nervous resolve. But those who met the man face to face were startled. Many turned and stared at him. A few walked deliberately back and then turned again so as to see that face a second time. Certainly the stranger was not thinking of the weather; that would have distorted the symmetry of his countenance. Nor could he have been intent upon the noble park at his right, nor upon his journey's end before him, for this would have given to his look the expression of passing interest. His forehead was high above the eyes, and of the translucency of pallid onyx. His eyes were as deep as a coal-mine and as black; but from them there came a steady flow of light, heat, and emotion. When men saw his eyes for the first time it seemed to them as if they had lived unlighted and unwarmed until then. His mouth was fine and firm, and yet, in spite of its gravity, there played about its corners a humor that made children run after him to play; but they never touched him, they knew not why. His beard fell full to his breast, and his brown hair with virile waves clung to his shoulders. The delicacy of woman and the strength of man were revealed by the texture of his hair and the spring of his pace. As he walked, his look was inward rather than observant. He appeared entranced with a tremendous problem. People were bewildered and awed, even humbled, as they looked upon him; and then they looked again. The power that radiated from this stranger seemed to be the power of a body tingling with every function of life, whose mind was dominated by a unique idea, which the soul in turn ordered to a final expression.

Yet he stooped like one who carried a crushing burden, and his cheeks and eyes paled and glowed as if his were a sleepless mission.

"A hundred thousand thunders! What have we here now?"

Five officers had come down the broad walk abreast, arm in arm. Women had been pushed aside by them in their ungentlemanly advance. Children had rushed to the street to escape brutality. Civilians had slunk into the gutter, not daring to withstand the haughty onslaught. The stranger lifted up his eyes and looked upon them.

"Gott in Himmel!" began another, blusteringly, but the execration died away. A third touched his sword, but his hand dropped from its hilt. The five boisterous guardsmen shriveled under the calm gaze of this dusty wayfarer, saluted in a shamefaced way, and filed respectfully past him without a murmur. The stranger seemed in no wise elated by the humility of these military lords; it could hardly be said that he noticed what he seemed to take as a matter of course. Was he a general in disguise? Not so, for there is an edict that no officer shall appear without his uniform in the street. Von Moltke wore a civilian's dress but once in his official career of seventy years, and then he burned it after he had exchanged courtesies with an American. Could this stranger have been a prince incognito? Would a prince walk to Potsdam and back when there is a railroad—and in March?

And now he set his face more resolutely towards the Brandenburg Gate, and began to look about him as if he expected to be met. He passed a private and a corporal talking aloud.

"Ach, Rudolph, thinkest thou that the Kaiser will have war this summer?"

"Ei, Fritz; perhaps. I for my part am content as it is. Thou knowest I have nearly served my time, and in June I go back to the good mother and my sweetheart, please God."

"But, thou foolish head, if it be God's will that we smite the French? Thunder and lightning! There is glory for the Kaiser—"

"A dead soldier thinketh little of the Kaiser's glory," interrupted Rudolph, soberly.

"Na-na, thou art a cabbage-head, and knowest nought of powder and glory—"

"I dare fight," protested the private, hotly; "thou knowest that, comrade. I go against the cursed Frenchman gladly, and that thou knowest also. Was not my father at Sedan, and Metz, and Paris? Now I understand this not. There are Hans, and Peter, and thy cousin Fried'l with the six infants. The frau of Hans is a sickly thing, and weepeth about his neck. When the two brothers of Peter were killed at Strasburg,—thou rememberest how the cap-

tain said they never had a chance to fire a shot, and they bled to death, and their mother died of heart sorrows,—tell me now, was that glory?"

"Nay; I know not," answered Fritz, with an embarrassed stammer. "That is the Kaiser's business, not mine."

The stranger passed beyond the voices of the simple couple. The peasant class of Germany furnish loyalty and to spare. But to what? A travesty, a principle, or a power?

The words he had overheard recalled him to his first thoughts. He walked abstractedly. His head drooped towards his breast. Clouds of dust enveloped him and nagged him. He seemed to be struggling in an agony, but whether of the body or of the spirit, whether he were fighting the wind or wrestling in prayer, who should say? When he reached the Avenue of Victory he instinctively stopped. Equipages swung around the corner with Russian swiftness. Many were open, and the electric lights were reflected from epaulets and helmets. What a surge at this hour! It was the rush of an army, for every three men out of four were clothed in uniform. The sight was brilliant; the cost must have been terrible. But who thought of that, except when an increased war-budget was ostentatiously fought in the Reichstag, or a scheme for increasing the taxes was opposed by a few trembling representatives of a desperate people?

The stranger looked up at the monument of Victory before him, towering in the Koenig's Platz to the height of two hundred feet. The huge eagles at the summit were now imperious in the white electric glare, and now extinguished by the shadow of the storm.

"Victory!" he mused, half aloud; the carriages muffled his voice. "Two hundred feet of victory purchased with how many feet of graves!"

The crowd hustled him, and, as he turned, they divided, and he walked on. Almost under the Brandenburg Gate he stopped again. This Athenian structure is surmounted by a quadriga of victory.

"Victory again! Four-yoked victory!" he mused. "Truly a fit name for victory. Glory, oppression, execration, death, are the yokes of thy victory, O King!"

As he spoke, outriders and a carriage plunged through the central passage of the Doric gate. Confused cries of "Hoch!" greeted the Emperor. Hats were deferentially raised. Only the stranger remained covered. A guard sprang forward, but the stranger waved him off, and the uniform fell back. The young ruler bent far out to the exceptional sight. Being a military man, he had a veneer of popularity with his people, and was unused to discour-

tesy. The two men regarded each other. It seemed as if for the passing second each engraved the other upon the retina of his soul. A fierce strangulation of rage burst hotly, like a sudden perspiration, upon the Emperor. He tried to brush it off with an unconcerned laugh. He felt disconcerted for the first time in his life, and was ashamed to mention the matter to his aide-de-camp. But the stranger stood with eyes full of overwhelming sorrow. Someone respectfully touched him upon his arm.

"You are prompt and faithful. I am glad that my comrade is at hand," the stranger said without turning.

"I am here as you ordered. The despatches are in my hands, and the loyal await your commands."

"We enter the Austrian Embassy," replied the stranger, quietly. "A private room awaits us there."

"The Austrian Embassy!" exclaimed the other.

"And why not?"

"But I thought—"

"Think no more," returned the stranger, smiling. "Think not, but obey and trust."

The two entered the Embassy silently. A bowing attaché escorted them to an antechamber, and, after a whisper from the stranger, obsequiously closed the door and mounted guard without.

"In an hour I am gone," began he who was plainly the master. "You have despatches from Stralsund, Dantzic, Königsberg, Bromberg, Breslau, Dresden, and Stuttgart."

"I have, indeed, Sire. Here they are."

The stranger read the papers carefully, while his companion, with an expression in which astonishment, respect, and love struggled for the mastery, regarded him attentively.

"And Spandau?" inquired the stranger without looking up.

"The commandant will be present at the meeting to-night."

"That is well done. How many, think you, wear the white crown in Berlin to-night?"

"The reports give a few over thirteen thousand."

"Add ten thousand more. And the Emperor?"

"Baron Van der Weh is to-day in favor. His report conveys the hope that the Emperor will appoint a new General of Division. Von Eisenach is spoken of."

"He too is ours. Three months more,—if hearts are true,—Europe is saved. My time is due. Send the messengers I spoke of to Potsdam to-morrow. They shall stay until every man is won. They will find the Pomeranians come. Give orders—" Then followed with precision and with the peculiar authoritativeness of a

hopeful and practical dreamer minute commands, given in a low voice.

"His excellency the ambassador desires audience, Sire," interrupted the attaché, with deferential salute.

While the stranger sat alone awaiting this visitor, his glance fell upon his own dusty boots, and he smiled at their contrast with the gorgeous rug beneath them. As he lifted his face, and even while he heard a commanding step along the corridor, something of irresistible triumph flashed forth from foot to face. Yet there was nothing of haughtiness in it, nor of self-satisfaction. In a twinkling the blaze of conscious power was over, and as he slightly bent his head he murmured to himself these words:

"Yea, Jesus, thou art first."

The spacious apartments of General la Guerre, Chief of Division, were situated in the Avenue de la Grande Armée. The General was still young,—that is, not old,—and Paris had not yet learned to be fickle to her distinguished soldier. He had been recalled from Algiers, promoted to the head of his division, with headquarters in Besançon, and was now on an indefinite furlough in Paris in order that he might perfect his destructive inventions at the expense of the state. General la Guerre held a brilliant court. Some salons whispered his name for Minister of War; a few inner circles enthusiastically recommended him as a major-general of France, while "*Le Temps*" hinted vaguely that he might become the creator of a new political party.

General la Guerre sat impatiently awaiting a visitor; and as the general had lost money at piquet the night before, he was already prejudiced against the man before he was announced. The General's greeting, however, was courteous, as became a Frenchman.

"I have called because the time has come that I should do so," began his visitor. He spoke so gently, and withal so authoritatively, that the General's attention was arrested at once. At the first glance the officer's soul started within him before the face he saw. He could not describe it afterward, but his impression was one of a man of such purity and faith that he had strength to move the world.

"You are not a soldier, sir," said the General, confusedly, not knowing what he said.

"No; but I command my hundreds of thousands of soldiers."

In spite of this preposterous statement, worthy of the maddest brain that trembled, the General found himself compelled to believe that the speaker said the truth.

The stranger began to explain himself, and he poured forth his purposes as the clouds pour

forth the rain. For three mortal hours the two men sat in solemn conclave. At first the General tried to look wearied. He lighted a cigarette, and toyed with it. Then he cast it aside, and welded his eyes upon the stranger's face.

"Sacred name of God!" he exclaimed, "can this be possible?" As the stranger sketched his awful mission the General's excitement increased. "Name of a dog!" he ejaculated. "*Sacré bleu!*" he muttered. At last he could contain himself no longer. "*Mille tonnerres!* Monsieur, for God's sake, who are you?"

The stranger shook his head, and continued. Then came timid questions and convincing replies. The General paced the room feverishly. There was one more question left. With a supreme effort the soldier shot it out.

"But, sir, is this not called, in vulgar language, treason?"

"What is the debt of France?" asked the stranger unmoved.

"Thirty milliards of francs."

"Who pays its enormous interest?"

"The people of France."

"What is the present peace-footing of the army?"

"Fifteen hundred thousand men."

"What do they do?"

"Drill."

"Why?"

"To be able to fight."

"Why?"

"For France."

"Why?"

The General shook his head.

"Who pays for this?"

"The people."

"Do you ever hear them murmur, General? Are tears treason? Is misery rebellion? Can you impeach widowhood and desolation?"

"The consequences of the military idea are matters of course," protested the General.

"Possibly. You may have never thought of another consequence. How many citizens, think you, are mine in France to-day?"

"Dieu! How know I?"

"Open the window, General, and look out. What do you see?"

"A company of Zouaves marching this way."

"You are their superior officer. Order them to halt, and call two men up. Choose the men yourself."

General la Guerre accepted the challenge without remark. At his brusque command two privates quickly saluted at the doorway, and awkwardly shuffled in. Wonderingly the company stood attention below, while its captain fumed at the interference.

The stranger approached the two uncomfortable men, spoke to them a word, and unbuttoned their coats. Upon the shirt of each a

silver badge shaped like a crown was thus made visible.

"I am *he*," slowly said the stranger to the two soldiers. At that word tremors of joy seized these men. They would have fallen upon their knees, but he constrained them.

"I have dreamed of this, but believed it not," stammered one.

"I am content. When shall the word be spoken?" asked the other.

"In God's time," replied the stranger, serenely. With a reverential salute the soldiers softly filed out.

The stranger turned with enraptured face upon his bewildered host.

"These are but two of a million taken at your random choice. France is mine. Germany is mine—"

"What? Germany? *Mon Dieu!* Who are you? Speak!" The Frenchman clasped his hands as only a Frenchman can.

"Austria is mine," continued the terrible stranger, heedless of the interruption. "Italy is mine. Denmark and Sweden are mine. Spain totters to my arms. Russia heeds my beckonings. England has resigned to me. Behold, I hold Europe in my hand; and when I open it, let her kings tremble."

"Take me!" cried the man of war. "Take me for your comrade! I am yours. Believe me,"—his voice faltered in his great emotion,—*"I swear it on my sword."*

"Not on the sword, but on this," said the stranger, smiling. He drew from his bosom a plain emblem like the one the soldiers showed, and put it softly in the General's hand. In comparison with his claim for authority, the badge seemed singularly simple and cheap. It was of silver, unchased, unjeweled. The thin plate was cut in the fashion of a crown, and the whole was polished to a curious whiteness. The trinket fascinated the eye. Was this simple emblem bewitched or blessed?

"It is only a soldier's order," said the stranger, slowly, "but its possession confers the rarest opportunity and calls forth the largest loyalty of your life. Wear it, General *la Guerre*, not in my name, but in the name of your people, and in a greater name than that of France. 'For Christ's sake' is the watchword of him who wears the silver crown."

ST. PETERSBURG slept. The brilliant moon guarded its streets. Now and again a fitful patrol took a step forward at the sound of approaching feet, looked at the pedestrian insolently, and slunk back into his dark corner as the suspect passed. At irregular intervals the thundering of an equipage at full gallop awoke somnolent echoes that chased each other from side to side and died away in a duet of angry

snarls. The guard always smiled indulgently at such rumbles, for these were but nobles returning home, poor of purse, intoxicated with champagne, and by the Tsigani's voluptuous music and dance.

It was one o'clock, and the bell of Cazan rang out "God save the Czar!" St. Petersburg turned uneasily on its pillow, muttered an invocation to the Virgin, and slept the weary sleep of one above a mine and a countermine.

Only the Czar of all the Russias did not rest. He paced his cabinet like a conquered leopard. His face was haggard from aged anxiety. He glanced at a paper and sighed deeply. At last, with despairing resoluteness, he tapped a bell and handed a written order to his aide. Then he suspiciously watched the door close. He stepped softly to it, and listened attentively; then he pulled a curtain tremulously aside, and hastened through a secret passage to an unused bedchamber, there to pass another unassassinated night.

From the stuccoed palace of Prince Azov no light flashed except the electric glitter of the Nevskoi Prospect and the glimmer of the moon, both of which fought brilliant combats on the hundred-plated panes, and were beaten back in a thousand zigzag, dismembered rays.

Suddenly there was a violent ringing at the porter's bell. Twenty black figures pushed by the stolid servant and forced their way into the sumptuous apartments of the Prince. Escritoires were wrenched open. Papers were hurriedly examined and stowed away by practised hands. Like locusts they ravaged until they came to the inner chambers.

"In the name of the Czar," was their ominous excuse.

Bedrooms were ruthlessly invaded. Ladies shrieked. A shot was fired. The Prince, pale, but with forced dignity, cried out to the leader of the horde:

"Halt! Whom seek ye?"

"Yourself, Prince, and your guest."

A door opened, and a tall man of dignified mien appeared. He was fully dressed, as if he were prepared. His cape was on his shoulder. His hat was in his hand. He spoke to the leader:

"I am ready; take me. Am I not enough?"

At the sound of his deep voice the soldiers fell back a step, but the leader advanced.

"My commands are to escort his royal Highness also."

"Then do your duty, in God's name, and be quick," spoke up the Prince in a clear, proud voice.

Such expeditions are too common to be managed bunglingly. The Prince and his guest were quickly and deftly, though respectfully,

hurried into a black carriage, the patrol on the street carelessly muttered, "Another!" and before the bells tolled two the prison-fortress had shut her relentless gates upon two more victims of the Czar's tyranny.

"It gives me great pain, your Highness," said the commandant to his titled prisoner after the usual formalities of registration were completed, "it affords me much distress, to see you here; but I am empowered to make your visit as comfortable as I can, and to assure you on the honor of the highest authority that you will not be detained from your home above three days. No crime is laid at your door. The detention is bureaucratic, not penal. Have you any request to make?"

The Prince shook his head skeptically, and was respectfully conducted to an apartment princely in comparison with uncounted oubliettes forty feet below it, dens too hideous to describe, too dark to see at midday, whose slimy walls are ever bathed by the icy ripples of the Neva. When the Prince had gone, the commandant turned to the stranger before him. He seemed to regard the prisoner coldly and accusingly. The prisoner returned the look with a dignity unalloyed by bravado; then he let his glance travel from face to face, not omitting the secretary sitting before him. The eyes of the prisoner dilated curiously after he had finished his inspection, while his countenance lost nothing of its powerful expression of serenity.

"Your name?"

"I am called, but nameless," replied the prisoner, quietly.

"You trifle, sir," said the commandant, severely enough. "It is too late for pleasantries; conduct the man to N. The examination will be continued to-morrow."

The commandant looked the other way, while the prisoner was led to a subterranean cell the oozing stones and malignant fetors of which had decayed the body and broken the will of more than a score of Russia's martyred patriots.

A half-hour later one of the most extraordinary scenes ever witnessed by this prison, historic with surprises, was enacted in the cell from the iron door of which exuded the letter N.

Within its oval walls knelt the commandant of the fortress, pleading with the prisoner of his apparent scorn. He clasped the stranger's hands and kissed them with the veneration which Russians feel towards religious emblems. The stranger bent above him, and with the tenderness to which the Russian tongue lends itself called him dear one and loyal brother.

"Now will I conduct you safely out," cried the commandant, his voice broken with emotion. He felt that fervor for self-immolation which forms the essence of the Slavic patriot.

He knew that execution or lifelong banishment would follow — a speedy penalty for this act of treason. The rough keeper of this horrible fortress was in an ecstasy of self-sacrifice.

"You are needed, Sire," he added simply. "I have no family, and can easily sink beneath the current. No one will be the sadder." The stranger shook his head tenderly.

"But, Sire, the cause calleth you. I hear its cry. Hasten, or it is too late!" Beads of anguish stood upon the commandant's face. He had reached that stage of self-annihilation in which he was afraid that his sacrifice would be denied him. "For Christ's sake!" he added solemnly. He reverently took from his bosom a silver periapt cut in the image of a crown, and pressed it to his lips. That was his final, unanswerable argument.

The prisoner's eyes quivered with tears. In the dull light of the lantern it could be seen that his lips pressed themselves together passionately in the act of great self-control, and that in spite of himself he wept. Such precious loyalty might well move a strong man, and leave him unashamed of the rare tear. Then the stranger bent over his friend and kissed him as if the touch were a rite of benediction.

"For Christ's sake I will not. I have come to save life, not to spill it. Never shall death enter the world through me. I should be accursed if it happened thus. Arise, my friend; get thee quickly to thy room. Station two guards before thy door that it be publicly known that thou art there, and there do thou stay until the reveille calls the morrow. Nay; speak not, nor grieve for me. Thou hast done thy duty, and art absolved. God will suffer no harm to me until my work is done. That is my faith. Do thou also hold it. Now, go! I command thee, for Christ's sake, go!"

The commandant obeyed with dull homage. Mechanically he closed the iron door, sorrowfully he locked it, slowly and obediently he went to his own room.

At sunrise the next morning there was a running to and fro within the prison courts, and the hubbub of a terrible excitement. A turnkey had discovered the stranger's cell to be empty. In fact, the man had mysteriously disappeared. There were rumors afloat that with the strength of a hundred giants, such as composed the guard of Frederick William, he had burst the bars asunder, and had forced an exit to the world. But upon examination the bolts were found intact, the walls untouched. There was another subtler report that there had been a mighty treason among the minor guards of the prison, that they had arisen and had themselves escorted the powerful stranger without the walls and the moat. But the commandant was unimpeachable. The guards were

ignorant and dumb. Only an unintercepted glance now and then was furtively exchanged between a few soldiers whose reputation for hebetude from that hour began to wax. At any rate, the prisoner had vanished, and many high officials came in time to believe that their victim had not been apprehended by them at all.

THE Emperor of Germany awoke on the morning of the first of June with the impression that he had been drinking ink. Indigestion had violently assaulted him, and his head felt as if it were an eight-inch mortar charged with melinite to the muzzle, and ready to burst at an incautious touch. The august sufferer groaned. For once he had allowed himself to depart from his habitual abstemiousness, and at the British Legation the night before he had eaten some truffles prepared by an accursed French cook, and had imbibed too much French champagne, to the detriment of his principles and his stomach. Now it was already seven o'clock, his usual rising hour, and he could hardly move. Eminent maledictions were stifled with heroic restraint before they rose to his tongue, for, in spite of his sufferings, he remembered that he was the father of his children as well as the father of his fatherland.

At last, with a tremendous effort of will he arose, staggered into his uniform, and felt his way to his first breakfast. Confident that if he could only get on horseback and gallop sharply before his soldiers on the parade-ground he would feel better, he was just about to give the order for his mount when his chamberlain approached him.

"Your Majesty, Monsieur the French ambassador desires audience on important business."

Now the important business that made demands at so unreasonable an hour happened to be due to a little fracas on the French frontier. Two ignorant French peasants had been arrested because they chanced to be gathering wood three furlongs beyond the soil of France. They had been summarily seized by a squad of German soldiers, and, naturally indignant at such rough measures, one of them had protested tooth and nail. He had been calmly shot, and buried where he lay. The other was hurried into the nearest German fortress on the preposterous charge of being a French spy, and now the government at Paris was trying to "diplomat" him out. Feeling ran high on both sides of Lorraine, and the Emperor had been considerably annoyed. But to have this low-born republican ambassador demand to see him at this hour was more than he could bear.

"Pots thousand! Thunderweather! Tell him to come again when I am at leisure."

"But—" urged the oily chamberlain.

"By the beard of Barbarossa!" exploded the man of melinite.

There was no need to say more. The official vanished with his uncomfortable message.

The Emperor was somewhat appeased, and was about to descend to the courtyard to mount, when General Von Eisenach and Baron Van der Weh, the new Minister of War, were announced, and, with the liberty of intimacy, rushed resonantly in and saluted their imperial master.

The Emperor's head was still in a state of whizzing turmoil. His eyes saw nothing but blackness before them. His dyspepsia was so severe that he hardly knew what he said, and was aware of only one thing thoroughly, namely, that he was extremely irritable, and that it was impossible for him to be anything else.

"Well, what now?" asked the Emperor, sternly.

"Your Majesty," answered the Minister of War, breathlessly, "I have just spoken with the French ambassador. He asserts that France will brook no delay. The man must be surrendered, and an indemnity must be paid, *instantly*."

The Emperor clutched the hilt of his sword in the heat of his passion. He did not know that it was truffles and champagne. He forgot that there was a German outrage which his better sense would gladly redress. He was only conscious that France had made an insulting demand.

"Himmel! Cross! Thunderweather! The Frenchman shall rot in Metz first!" burst forth the ruler. "What sayest thou, Eisenach?"

The young General looked at the young Emperor, and then at the young Minister of War. He hesitated to speak. His answer might lose him his division, or Germany an opportunity of honest amends. But his blood was up, too. His immaturity decided him.

"*Ja, wohl!* Your Majesty is right. Let the French bay. We growl not, but we bite."

The Emperor smiled for the first time on that memorable morning.

"And thou, Van der Weh?" He turned upon his Minister of War.

"France shall not dictate to the fatherland," answered Van der Weh, sententiously.

The Kaiser's face burned with excitement. His blood pumped itself to and fro as if in a fire-engine. He imagined himself fanned by the righteous bellows of patriotism.

"Ye are my friends indeed,"—he took the hands of the two men in his,— "and the protectors of the German honor. If needs be, we will fight. Eh, my friends, will we not?"

Never had there been such a declaration by

the hot ruler before. His enormous armies were held ostensibly in the interest of peace. He had forgotten that the continued sight of battalions of men drilled to the guns was as much the temptation to use them as the sight of cognac is the incentive to drink. It is easier to create an opportunity of trying an army than the army itself.

The three looked at one another, almost frightened by the words just spoken. Their terrible import stole over these men. Then it began to intoxicate them. They stood inspecting one another silently, but with eloquent eyes.

"See that my will be made known to the ambassador," said the Emperor hurriedly to his Minister of War. Then he removed his hands, and with a dramatic motion drew forth his sword. "But should France insist, she shall not outventure us this time in a declaration. By the gods of our fathers, I believe my hour has come. Now will I place my brother upon the throne of Spain. Now shall I have my Gravelotte and my Sedan, my Strasburg and my Paris!"

Inspired by this enthusiasm the two subjects had also unconsciously taken attitudes worthy of a historic painter.

The Emperor paced the chamber restlessly, while Van der Weh hastened to transmit his commands. Von Eisenach stood attention, and eyed his master anxiously. For fully two hours the one paced, and the other watched, without speaking. They were not interrupted. Lackeys are quick. The rumor had spread abroad that the Emperor was "sad," and not even his children ventured to pay their morning respects of ceremony.

"Mein Gott! It is done," panted the Minister as he plunged into the apartment.

The Emperor now began to understand too well the meaning of those words. He turned white, and collected his disordered mind with great effort.

"It is God's will," he said, reverentially.

"Perhaps," doubted the General to himself. But aloud he said: "*Vorwärts!* It is war. Let us begin."

"But the Reichstag?" queried the Minister of War, trembling.

"I am the Reichstag and the people!" stormed the Emperor with a stamp of his spurred heel.

The decision had now become history. Dyspepsia had done its unparalleled work. Within two hours France had recalled her representative, and had begun to mobilize her enormous army; England to prepare her fleet; Russia to threaten with five hundred thousand Cossacks; Austria to mass her troops against—whom? Belgium and Luxemburg to totter; while Germany, ox-headed Germany, un-

dismayed and stolid, challenged her hereditary foe.

Three days had not passed, and the million-headed dog of war was straining at its leash.

It was night, and not a shot had been fired. The two armies rested before the carnage that could not be delayed beyond the morrow. The valley lay darkly between the two camps. From the opposing hills a thousand fires shot gleams of hatred at one another. It was a starless night, and no reflection lighted the sluggish river that divided the valley and the armies.

Well-trained dogs with muffled mouths and velvet feet guarded the German outposts. The Wandering Jew could not have passed scent and sentry without imperative challenge. The countersign of the German line on that eventful night was given out at sunset gun by Von Eisenach and was received with peculiar agitation by the rank and file. "For Christ's sake" was repeated at many a summons of "Who goes there?" and it was noticeable that the words were never uttered carelessly, but invariably with a dreamy veneration for sacred things which is apt to surprise us a little in the Teutonic heart.

It was barely nine o'clock, and the vast camp was still alive with a quiet bustle. Regiments were pouring in, and were adjusting themselves with that calm exactitude peculiar to the discipline of the German army. Here sat a group about a tent, polishing their accoutrements to while away the time, and listening to one of their number singing Körner's "Sword Song" or Uhland's pathetic "Passage." Yonder one almost stumbled over a dozen fellows, looking in the dark like will-o'-the-wisps glowing from their pipes, and telling in tender tones stories of their homes. None of the anxiety or forced gaiety usual on the evening before the first battle was apparent. Raw recruits were as serene as scarred veterans. One listened in vain for words of hatred or curses against the French. It might have been the prestige of previous victory that tempered the soldier's resentment, or it might have been the solemnity of the last night on earth that made bitterness seem irrational to the Lutheran nature. Whatever the cause, the motive of the war was strangely ignored in the conversation of the army. When heaven imperatively beckons from the mouth of a gun, what philosopher curses the misguided hand that pulls the trigger? But all men are not philosophers.

From a plain tent on the highest eminence electric lights burned. Within could be heard voices estimating distances, while in a lull an important, half-burned cigar would point out an eligible route across the map. Only the imperial standard, drooping disconsolately above

the tent, revealed that it was the Emperor's, and the numerous aides-de-camp stationed in attendance testified that the last and the most important meeting of the Emperor's generals was convening.

"Here will we pin them; here will we annihilate them; over this road will we march upon Paris," said the Emperor, proudly, marking the map with a pencil. He thought of Napoleon, and believed that the Corsican's genius of victory had leaped the Rhine and found a tenure in his own fate. His generals bowed their heads. They did not differ with him.

The camp was not yet asleep. Here and there, from artillery to cavalry, from sappers to infantry, from tent to tent, from group to group, from man to man, might have been seen the dim outline of a flitting form which seemed bent upon some errand not in consonance with the situation. The effect that this person had upon the army was extraordinary. He seemed to intoxicate, not with the schnapps of brute power, but with the cordial of a mysterious inspiration. With a heart-moving longing to see him pass, men lay awake listening for his step. What genius is this to fascinate an army? When the man strode into the light some looked at him devoutly, others greeted him with quiet respect; all evidently held him in an awe which had a touch of the superstitious. And when he vanished into the blackness the men slipped silently into their blankets and dreamed prophetic dreams.

He was accompanied by no attendant, and, though by his dress a civilian, and oddly out of harmony with the uniformed camp, he seemed to grasp every detail with a military omniscience. Had a spy followed his quick course through the camp, he would have observed that the stranger made little or no distinction between commissioned officers and the rank and file, treating every one with a republican affability. Could he have been a socialist, perhaps of kingly rank, who flattered the mob, and cajoled its chiefs to gain his unknown end? But no common plotter or iconoclast of thrones commands the reverence of his tools. Clearly this stranger had another mission than to destroy. That he too knew the watchword was evident, and when he gave it, the sacred speech took to itself a meaning the significance of which more than one sentry may have divined.

A corporal saw him leave the tent of the Minister of War, and wondered not. A quartermaster beheld him enter the general's headquarters, and muttered, "It is well."

As the stranger made the rapid round of the huge camp he left behind him on those he passed the spiritual impression of an oratorio. There came into dull faces the look of men who halt on a glad march to a festival. Are

we to kill one another to-morrow? Impossible! Incredible! Forgotten!

On the outskirts of the camp the stranger walked up to half a dozen officers who were discussing in whispers the issues of the next day. They smiled with grave pleasure when they saw him approach, and hastened to meet him. They did not speak at first. Evidently these were the stranger's most intimate confidants. A wonderful smile touched his face as he leaned towards them.

"For the last time," he said gently, "we stand face to face. Your eyes ask the secret of my birth. Be content to know that power comes no longer of birth, or name, or riches, but of a holy aim. If I have opened to your eyes God's economy of nations, it is enough. Our work is almost done. Finish it, in the name of Him whose sacred pledge you wear upon the battlefield to-morrow. I give you my last command. Yield to no other allegiance than to mine for the short space of fifteen hours, and you have saved Europe—perhaps the world. Obey! Obey, for Christ's sake! Nay; question me not, for I go from you. The hour has come."

As he spoke he melted from them. Neither the sentinels nor their dogs restrained him. He passed them by as if he were a cloud. At the brink of the river a boat was in waiting to convey him to the other side.

Who was this mysterious man who could penetrate palaces, awe generals, escape dungeons, and wield imperial power over an army of millions? Was he a spy, that he should pass to the French side at dead of night, give the countersign, be received with respect similar to that which he had just experienced, and proceed from outpost to sentry, from sentinel to earthworks, on to the camp, and thence to the tent of General la Guerre, the chief of all the French forces, second in command only to the President of the Republic? With what wild scheme had this adventurer entrapped the imagination of a continent? By what power had he controlled the undercurrent? Who was this religious fanatic? Whence his birth, his resources, his inspiration? Was he a man of gigantic fraud or of dedicated fate? Was he a madman, a genius, or a fool?

It so happened that a sentry, piqued with curiosity, crawled upon his stomach and lifted the flap of the general's tent. What secret of state has he overtaken? For what can he sell these whispers? By the light of a brilliant burner he sees a strange sight. The generals of the French army? Upon their knees? *Praying*? And in the midst of them the solemn stranger lifting up his hands and voice to heaven.

"And do thou, Heavenly Father, bless the work of these hands. Suffer it not to fail at the

last hour. With the strength and the faith that thou hast given me, do thou anoint these. May the sublime victory of the crown be guided and blessed by thee. For Christ's sake." As the singular group rose from their knees he who had prayed uttered a last command.

"Let every possessor of the crown wear it openly upon his breast to-morrow, from the highest to the lowest man."

The eavesdropper, telling his beads and repeating many an Ave, had slipped to his post, and now presented arms. But the stranger, passing out into the dense night, observed him not. He walked on rapidly.

Ah! What is there? A sentry asleep! A light touch pins upon the left breast of the criminal a silver crown, and a gentle whisper wakens him. As the dreamer rubs his eyes, and stirs, he sees a stately figure flitting by. Beyond the last rampart, the last breastwork, the last patrol, the last electric sentry, it passes with the air of a god whose work is well done.

At four o'clock the vast camp of the Germans was astir. At five o'clock six hundred thousand men breakfasted. At six o'clock the valley was still covered with a white mere of mist. At seven o'clock the artillery were ordered to train their mortars and pneumatic guns upon the French intrenchments eight miles or more away. At eight the subterrestrial torpedoes were in position, making an assault upon the German line an impossibility. The companies were drawn up in battalions, the battalions in divisions. Every private was armed with a bayoneted rifle that could fire a ball a second, which, when skilfully aimed, could pierce through five feet of flesh three miles away.

By this time the lake of mist scudded before the sun, and exposed what was about to become a tarn of fire.

The Emperor, impatient of glory, had no thought of resting upon the defensive, but, in order to force the fight himself, had ordered the guns to vomit their attack sharply at nine o'clock. He himself would give the word of command.

The Emperor had been born emotional; that is to say, his enthusiasm was of the fitful, nervous kind. He was forever groping, but after best things. He had successively attitudinized as a monarchist, a socialist, a reformer of scholarship, a patron of arts and of Jews. He had subsidized a merchant navy as insistently as he had treated for universal disarmament. To preserve international equilibrium, he controlled a million of the best-drilled troops in Europe. But in spite of his public protestations the secret ambition of his heart was about to be accomplished. To play the god

of war is more heroically dramatic than to act the peasant of peace. So here he is—Frederick the Great and William I. *redivivus*!

Now the Emperor, in the enthusiasm of his maiden campaign, forgetting that modern victories are to be won from calculation in the tent rather than from *furor* on the battlefield, determined, as *generalissimo* of his army, to give the first deadly order in person. The potentate who lectured an eminent theologian on biblical interpretation found this natural. So, surrounded by his staff, he pranced from division to division, encouraging his men as a father should—only, in this case, it was the father right royally giving up his children to be crushed by a death he did not share. From earthworks and batteries to outposts he had been received with respectful cheers. Still there was not enough manifestation to satisfy his vanity. He frowned.

"You cannot expect to receive the same enthusiasm, your Majesty," explained his Minister of War, with an apologetic cough, "in the uncertain period before victory that you will after. Many of these louts are imagining that they have shouted their last 'Hoch,' and are a bit downcast."

"Thunder and lightning! It is a great honor to die for the fatherland and for me," answered the Emperor, hotly.

"No doubt they see it, your Majesty, but they have not yet learned to express it at the pinch," answered his Minister, with dry deference.

As the army stood attention, ready for the duty and the glory of the day, flecks of white could be seen glittering in the sunlight like interrupted lightning, flashing from breast to breast. This was not the sheen of buttons or the glare of arms but the glitter of a new device. It danced along the immovable lines of cavalry; it lighted up long files of infantry; it started from officer to officer, and wound its brilliant coil from private to private until it enveloped the whole army. This strange white spangle could be seen to the best advantage when one looked diagonally along a file of men.

The rigid eye of the Emperor was quick to notice the new display, which the generals ostentatiously ignored.

"It seems to me my men wear a new decoration. It must be a very common order. Who dared confer it, Von Eisenach?"

"It is impossible for me to tell you, Sir," replied Von Eisenach, slowly. Stepping up to a petty officer, the Emperor sharply asked him:

"What does this thing mean, corporal?" touching the source of offense contemptuously with his sword. Without hesitation the man courteously answered:

"It is a charm given to me by my sweetheart, your Majesty, to protect life." He saluted, and stood blank attention.

"And you — where did *you* get the thing from?" proceeded the ruler, looking darkly at the nearest private.

"My sweetheart, Sir."

"And *you*?" thrusting at the next.

"My sweetheart, also, your Majesty," answered the private, stolidly.

Not a face changed expression. The Emperor was nonplussed. He glanced beyond; everywhere the same decoration. There were a thousand of them in view.

But there was no time to lose in discussion: a parson's charm, no doubt; a crotchet, and not an infringement; a superstition, and not a treason.

"Jesu!" ejaculated the Emperor, with a smile, "has the whole regiment the same sweetheart?"

He laughed at the thought, and rode away. Then a sudden cold sweat swept his skin, he knew not why. His trained gaze had gone dull for the moment, and had not shown him that the silver crown nestled beneath a blazing order upon the breasts of Von Eisenach and Van der Weh. Why fret about a freak? The hour of his apotheosis was at hand. He stood beside the gunners. The eyes of the staff, officers, and men regarded him furtively. There swept from picket to exploiting cavalry, from the hospital tents to the guns, from epaulet to knapsack, a thrill as if an epoch was at hand. It was afterward remembered that at this fateful moment the doctors of the ambulance corps, who should have been whetting their "merciful, merciless" knives, had thrown aside their pipes, their novels, and their cards, and stood trembling, watches in hand. It was said that the nurses of the Red Cross, who should have been preparing cots and lints, had cast upon the floor their knitting or embroidery, and had, many of them, fallen on their knees in prayer. The Emperor himself felt this hidden agitation. Before him artillerymen stood as they were taught, expressionless. But an awful tension in every face told that their souls were freighted with the resolve of a great deed. Only the Emperor and the guns smiled; these guns of nickel and of steel, capable of silently dropping five hundred pounds of the most disastrous compound known to science ten, twelve, fifteen miles away, crouched like panthers, with grins of delight. Suppose each gun before it cracks slaughters only a hundred men who average three decades of existence each — the monster has imprisoned in his remorseless belly three thousand years of life.

The gunners stood with fingers upon the

electric buttons ready for the word of command. The delicate pressure of a hundred forefingers might blot out how many centuries of precious thought? Yet the faces that should have been lighted with this magnificent opportunity were sternly set in an inflexible mold. The Emperor shuddered involuntarily as he had only shuddered once before in his life. That was at the Brandenburg Gate, not long ago. A vague feeling of terror smote him and embarrassed him. He almost wished that he had prevented this hour. But with a violent wrench he cast off this sentimental emotion. He looked at his watch and gained courage from the approaching instant. As he bent his head the army drew a long breath, and the air seemed exhausted of its vitality.

Now the German Emperor raised himself proudly. His standard waved above him. He encountered a thousand pitying eyes, but he saw them not. He beheld victory. He straightened himself upon his war-horse. Nine o'clock, and Germany's moment had come. Every plan was complete. He threw rare majesty into his command.

"Now!" he cried. "*Ready! FIRE!*"

THE President of France, like the Emperor of Germany, was by virtue of his high office commander-in-chief of the French army. This dignitary was not born to the purple, but a perfumer. At eighteen he became a feuilletonist; at twenty-five a politician; at twenty-eight the lover of a duchess, and rich. When he was thirty France declared war against Germany, and he enlisted with a commission; in three years, by reason of vacancies and valor, he was made a general; at forty-five he found himself Minister of War; and at fifty-one the President of the Republic. He had a well-defined ambition towards which he bent his whole soul — the recovery of Alsace and Lorraine. In 1883 he happened, while on a furlough, to visit a village school in Picardy. Hanging upon the door was a rude map of France of which an eastern portion was inclosed in a broad, black line. Underneath was this inscription: "Children, never forget Metz and Strasburg!" The incident affected him profoundly.

Older than the German Emperor, he was as ardent and as ambitious. He was the ideal product of a republic, and as such merited the contempt of the monarchist, which he was not slow to return. While waiting for his opportunity, with the patience of an ironmonger he had forged an army which Germany secretly feared and openly despised. Unwilling to court unpopularity by forcing a declaration of war, he was elated that the opportunity was now thrust upon him to punish Germany's impetuosity.

His artillery was invincible. Russia was his willing ally, and he meditated the investiture of Berlin to his army in three months' time. He was as brave as he was imaginative, as cautious as he was aspiring. His only defect was the vanity of a *bourgeois* who has acquired distinction. But in his case it was of the American quality. It was vulgar. Flattering this weakness, his generals urged upon him the honor of making the first move. Thus it came about that the head of the French Republic, swelling with his importance, gave the orders to his gunners to fire, just as if he were a mere captain or sub-lieutenant, simultaneously with his imperial foe. With a coincidence in which there seemed to be something more startling than mere fate, the titanic duel began with a synchronous thrust. On the eighth day of June nine o'clock struck momentarily upon the ears of Europe.

WE have said that the Emperor of the confederate principalities of Germany concentrated his majesty in that ringing command to begin the attack. He had rehearsed this thrilling moment to himself during the whole of the previous night, and now he flattered himself that the indomitable soul of all the Hohenzollerns blazed forth in his order to fire. He mentally closed his ears against the terrible concussion of a hundred rifled cannon. The ruler's face twitched with suppressed excitement. For a second after he gave his command he waited for its execution. Then he did not trust his senses.

Had the intoxication of the crisis sent him into insanity? He stared at the impassive gunners. These men, in whom the honor of Germany reposed, stood with military erectness in position. Their lips were compressed as if in martyrdom. They had not fired. What? No; not a shot! The imperial command disobeyed! The guns were as mute as abandoned sphinxes, and had an insulted air. Refused to obey? And in the very mouth of battle? Impossible! Death is the slightest penalty for such treason. What miasma had mounted to the delirious brains of these mutineers? Had their souls been purchased by the enemy, or had a general paralysis overtaken them in the face of a hitherto-underestimated foe? The Emperor could not credit his sight. In the nightmares to which every occupant of a throne is subject such a possibility had never been pictured. He passed his hand over his head as if to brush away this incubus of rebellion. Then he recovered himself; and with a voice made terrible by the vague apprehensions that tampered with the consciousness of his limitless power, he cried out:

"Gunners! I command you! *Fire!*"

The gunners, tortured by the habit of discipline and by the ordeal of a mysterious motive, sweat great drops, and trembled. For whom were these a scapegoat? For whom this sacrifice? The army shuddered. One of the artillerymen fell fainting to the ground, such was his rack; but not one obeyed the Emperor.

At the sight of this extraordinary treason the Emperor shook with rage. He frothed at the mouth. He could hardly articulate. Nine o'clock had passed, and the attack was delayed. This incident was an ill omen for the day. Had the Emperor seen the faces of his army he would have reflected; but there was a clot upon his brain.

"Up, guards!" he shouted. "Arrest these dogs! Let them be shot at sunrise! Forward, march!"

Fresh men took the traitors' places.

"Ready!" cried the Emperor, with suffused face. "Now! *Fire!*"

But these also refused obedience, and the protesting guns were dumb. The young Emperor now divined that this was no ordinary rebellion. For what vain conceit did these misguided soldiers court death? Is it not easier to be cut down by the enemy than by one's brother? If wars are organized mobs for the dealing of death, there must be a nobler motive than gain to spur men to choose the ignominious rather than the glorious end. Ah, but to the dead ends are all alike.

"What means this hellish mutiny?" demanded the Emperor, little thinking that he was the sole actor in this battle scene. "Let them be shot on the spot!" Then, with an eagerness to afford a dramatic example, he rode at fierce gallop to the nearest cannon, with one thrust cut the gunner down, leaped from his horse, and completed the destructive circuit with the dripping tip of his sword. But no cylinder of death hurtled from the steel monster, nor groan from its wounded keeper. Had the guns been pledged to mutiny?

"Explain this devilish thing!" cried the Emperor to an officer standing near. As he spoke he advanced upon the lieutenant and shook him violently by the coat. In doing so he wrenched from the man's breast a badge, which remained in his infuriated hand. The officer did not alter his respectful attitude. His name will be canonized in history as that of the first one who made the revelation to his master. He looked at the Emperor steadily. His eyes grew stern and proud. There was a triumph in his voice, like Cromwell's, when at his spiritual height he daunted kings. He spoke with the orotund voice of a fogbell on a dangerous coast.

"It means, Sire, that the armies of Ger-

many have sworn by the silver crown you hold in your hand to commit no murder — for Christ's sake."

The Emperor looked stupidly from the officer to the silver crown. His sword fell with a thud to the earth. But, as yet, he did not understand.

"C — Captain of the Guards," he stuttered, "do your duty!"

"We will arrest, your Majesty, but we will not kill."

The Emperor shot confused glances from conspirator to conspirator. He had the ferocious, wandering expression of a grizzly bear when just caged and mocked by its tormentors. Then he burst the bars. He flung the burning badge far from him with a soldier's oath, and, brandishing a swordless arm, he turned towards his staff.

"Van der Weh! Eisenach! Generals! Let the cavalry cut the traitors down. Command the infantry to advance, *instantan*!"

There was a movement among these mounted generals as if the floodgates had burst upon them. Motionless faces in the ranks turned rolling eyes towards the distinguished group. The Minister of War, whose indefatigable zeal had planned the campaign, stood before his colleagues and encountered the blood-shot eyes of his master. He looked upon the Emperor gently, and with a solemnity that cannot be described he said:

"Your Majesty, we will command an advance for you, we will march for you, we will suffer and die for you, but the time has passed when we can persuade these soldiers, either for you or for any other king, to fire upon a man to kill him. On this they have sworn their oath."

The generals gravely nodded their assent to this extraordinary speech, and closed together. An electric thrill, leaping from file to file unto the farthest outpost, told the countless wearers of the silver crown that the crisis was at hand.

The Emperor stood at bay and snarled at his army.

"Is this then the meaning of your accursed crowns?"

"It is," answered Von Eisenach, laconically.

At this moment a courier rushed forward with a telegraphic despatch, and handed it to the monarch. It was from the general of the German forces on the northeastern frontier.

"We have met the enemy. The Russians refuse an engagement. Our soldiers will not fight. There can be no war here. Men desert to each other's camp by the thousand, and are carousing with joy. Foes have become brothers. Send instructions immediately. Shall we go home?"

This was signed by the general in command.

The Emperor dropped the paper listlessly.

After a few moments he raised his eyes. They had a tamed look. Then the Emperor of Germany was heard to plead:

"But, generals, soldiers, Germans, will you suffer yourselves to be cut down by the enemy? Will you not defend your lives and your homes against the cursed French?"

It was Van der Weh who answered.

"Sire, who are our enemies? We will defend our lives and our homes when swords are at our throats. But wantonly kill we will not, for we cannot. We have sworn it, for Christ's sake."

Then the monarch bent to the blow. He trembled like a baby. He put his hands to his face, and tears trickling through his fingers told his soldiers that a great military heart was broken.

Now there hurried into camp a second courier waving a white standard of truce, and bearing a letter from the President of France to his imperial foe.

"Read it to me, Van der Weh," said the Emperor, not looking up. The Minister read it aloud, omitting all preliminary titles.

"There is a devilish conspiracy in my camp. Not a man will fight. *Sacré bleu!* What does this mean? I will not surrender. May I have the honor of an audience with your Majesty immediately? We are undone. All hell is loose. Pardon my lack of ceremony, your Majesty. I pray that you may meet me between our intrenchments at twelve, or I go mad."

The Emperor bowed his head and merely ejaculated: "I will go alone. Let us have no witness to that meeting."

This then was the stranger's mystery. What? Europe? Hot-blooded, jealous Europe refuse to fight? It was preposterous, incredible! Nay, it was ridiculous. Thirty milliards of francs in France; twenty-five billions of marks in Germany; incalculable billions of taxes in Russia — this treasure, wrung from hopeless peasants, spent for no fight? Not even one calamitous shot! Only one man in Europe wounded, and that by his master because he would not spend the deadly shell for which the best years of his manhood had been taxed. Go, deluded soldiers! Trained for nothing but to kill and to be killed, you have cut the ladder beneath you; but you have thrown ambition, advancement, glory to the angels that your children shall be saved.

This, then, had the nameless enthusiast done. There is a law higher than the will of emperors which the enlightened heart obeys. The godlike mission, starting with a handful, had become a fanaticism in comparison with which the Mohammedan belief was a zephyr. It had developed into a hurricane, sweeping

from army to army, through states and empires, until the military world was pledged to peace. How was the secret of this gigantic purpose concealed beneath so calm a front? The unique personality of this stranger, trusting in his mission and in the religious common sense of the modern intellect, had "conceived the inconceivable," had overcome the unconquerable, and had achieved the impossible. Only an exalted few among a hundred army corps were ignorant of this divine secret—the emperors of Russia and of Germany, the President of France, and a few others.

Fanaticism, that great conservator of ideas, kept the conspiracy from the press and from the world as carefully as the catacombs of Rome hid the presence of believers in Christ. It is said, further, that every wearer of the crown was pledged by his oath to conceal its import from sister, from sweetheart, from mother, and from wife. There were not wanting a few cynics who attributed the success of this stupendous achievement chiefly to that clause in the oath.

Thus two enormous armies, equipped with the most recent invention for massacre, confronted each other in this absurd position. Soldiers had marched who knew that they could not fight. Generals had led who knew that they were to command no assault. Only two chiefs were ignorant that there was not a rifle but had its charge of blank cartridges; that there was not a machine gun, a mortar, a rifled gun, dragged to its commanding position with incredible labor, but had its charge of God's harmless air, and nothing more. The enlightenment had been delayed until this hour in order that the dramatic revelation might be the more readily digested by the world. Nations forget many a lesson, but never a farce. It is too readily repeated.

Now, the Emperor did not notice that his army regarded the plain beneath them with more than ordinary attention. He raised his

head wearily to Von Eisenach, who was supporting him, and asked:

"Where is he who is chief of this terrible order? I would speak with the Master of Europe. What is his name?"

The General tenderly turned the stricken Emperor, and pointed before him. The monarch dumbly followed the direction of his officer's finger. On an eminence beneath them, and between the two camps, stood a man of imposing stature. Even at so great a distance he seemed to be surrounded by a halo of dignity that lifted him above ordinary men. Von Eisenach whispered reverently to his royal companion:

"We do not know his name, but he is called by us the Prince of Peace."

The Emperor trembled, but did not speak. Even as he gazed, the stranger moved. He lifted up his hands above him. One hand seemed to hover over the French army, the other over the German camp. It was a benediction, and he blessed them into one. As he stood with outstretched hands, the armies knelt. They tried to shout. They could not. Only the sounds of weeping fell upon the sunlight. As he saw a million men upon their knees the stranger smiled.

But even as he blessed the kneeling armies a white mist strode down the valley. Softly, like a dream, it approached the stranger. Not a soul stirred. Not an eye wavered from the fascination of the transcendent sight. The cloud swept over the man of mystery. It clothed him. Only his outstretched arms appeared. It enveloped him, and it passed on.

What of the stranger? Fame sought him, and found him not. Those who saw him, who heard his voice, who try to recall a marvelous personality that mysteriously evades the memory even when the eyes are closed, say that when an impious nation threatens war he will come again.

Herbert D. Ward.

The manuscript of the preceding pages has recently been found between the covers of an old Latin folio presented to the British Museum by the estate of a distinguished scholar. It is supposed to have been a report on the abolition of war from the world, written for the British Historical Society. This report was, it is thought, rejected because it was compiled in too im-

passioned and imaginative a style, and with an obvious lack of that judicial impartiality which this association found necessary to the preservation of its constitution.

The publication of this ancient and valuable record of a great historical event in which the world has long since had common cause to feel the profoundest interest is hopefully ventured.

Office of the "World at Peace."

London, March, 2891.

THE FAITH DOCTOR.¹

BY EDWARD EGGLESTON,

Author of "Roxy," "The Circuit Rider," "The Hoosier Schoolmaster," "The Graysons," etc.

XXVII.

A BAD CASE.

NOTWITHSTANDING Phillida's efforts to the contrary, the most irrelevant things were sufficient to send her thoughts flitting—like homing pigeons that can ply their swift wings in but one direction—towards Millard, or towards that past so thickly peopled by memories of him. Now that Eleanor Arabella Bowyer, Christian Scientist and metaphysical healer of ailments the substantial existence of which she denied, had cast a shadow upon her, Phillida realized for the first time the source of that indignant protest of Millard's which had precipitated the breaking of their engagement. Her name was on men's lips in the same class with this hard-cheeked professor of religious flummery, this mercenary practitioner of an un-medical imposture calculated to cheat the unfortunate by means of delusive hopes. How such mention of her must have stung a proud-spirited lover of propriety like Millard! For the first time she could make allowance and feel grateful for his chivalrous impulse to defend her.

No child is just like a parent. Phillida differed from her strenuous father in nature by the addition of esthetic feeling. Her education had not tended to develop this, but it made itself felt. Her lofty notions of self-sacrifice were stimulated by a love for the sublime. Other young girls read romances; Phillida tried to weave her own life into one. The desire for the beautiful, the graceful, the externally appropriate, so long denied and suppressed, furnished the basis of her affection for Millard. A strong passion never leaves the nature the same, and under the influence of Millard her esthetic sense had grown. Nothing that Eleanor Arabella Bowyer had said assailed the logical groundwork of her faith. But during the hours following that conversation it was impossible for her to reflect with pleasure, as had been her wont, on the benefits derived from her prayers by those who had been healed in whole or in part through her mediation. A remembrance of the jargon of the Christian Scientist mingled with and disturbed her meditations;

the case of a belief in rheumatism and the case of a belief in consumption with goitre stood grinning at her like rude burlesques of her own cures, making ridiculous the work that had hitherto seemed so holy. But when the morrow came she was better able to disentangle her thoughts of healing from such phrases as "the passive impressible state" and "interior perception." When at length the remembrance of Miss Bowyer had grown more dim, the habitual way of looking at her work returned.

One morning about ten days later, while she was at breakfast, the basement door-bell was rung, and when the servant answered it Phillida heard some one in the area, speaking with a German accent.

"Please tell Miss Callender that Rudolph Schulenberg will like to speak with her."

Phillida rose and went to the door.

"Miss Callender," said Rudolph, "Mina is so sick for three days already and she hopes you will come to her right away this morning, wunst, if you will be so kind."

"Certainly I will. But what is the matter with her? Is it the old trouble with the back?"

"No; it is much worse as that. She has got such a cough, and she cannot breathe. Mother she believe that Mina is heart-sick and will die wunst already."

"I will come in half an hour or so."

"If you would. My mother her heart is just breaking. But Mina is sure that if Miss Callender will come and pray with her the cough will all go away wunst more already."

Phillida finished her breakfast in almost total silence, and then without haste left the house. She distinctly found it harder to maintain her attitude of faith than it had been. But all along the street she braced herself by prayer and meditation, until her spirit was once more wrought into an ecstasy of religious exaltation. She mounted the familiar stairs, thronged now with noisy-footed and vociferous children issuing from the various family cells on each level to set out for school.

"How do you do, Mrs. Schulenberg?" said Phillida as she encountered the mother on the landing in front of her door. "How is Wilhelmina?"

"Bad, very bad," whispered the mother,

closing the door behind her and looking at Phillida with a face laden with despair. Then alternately wiping her eyes with her apron and shaking her head ominously, she said: "She will never get well this time. She is too bad already. She is truly heart-sick."

"Have you had a doctor?"

"No; Mina will not have only but you. I tell her it is no use to pray when she is so sick; she must have a doctor. But no."

"How long has she been sick?"

"Well, three or four days; but she was not well"—the mother put her hand on her chest—"for a week. She has been thinking you would come." Mrs. Schulenberg's speech gave way to tears and a despairing shaking of the head from side to side.

Phillida entered, and found Mina bolstered in her chair, flushed with fever and gasping for breath. The sudden change in her appearance was appalling.

"I thought if you would come, nothing would seem too hard for your prayers. O Miss Callender,"—her voice died to a hoarse whisper,—"*pray for me. I wanted to die wunst already; you remember it. But ever since I have been better it has made my mother and Rudolph so happy again. If now I die what will mother do?*"

The spectacle of the emaciated girl wrestling for breath and panting with fever, while her doom was written upon her face, oppressed the mind of Phillida. Was it possible that prayer could save one so visibly smitten? She turned and looked at the mother standing just inside the door, her face wrung with the agony of despair while she yet watched Phillida with eagerness to see if she had anything to propose that promised relief. Then a terrible sense of what was expected of her by mother and daughter came over her mind, and her spirits sank as under the weight of a millstone.

Phillida was not one of those philanthropists whom use has enabled to look on suffering in a dry and professional way. She was most susceptible on the side of her sympathies. Her depression came from pity, and her religious exaltation often came from the same source. After a minute of talk and homely ministry to Wilhelmina's comfort, Phillida's soul rose bravely to its burden. The threat of bereavement that hung over the widow and her son, the shadow of death that fell upon the already stricken life of the unfortunate young woman, might be dissipated by the goodness of God. The sphere into which Phillida rose was not one of thought but one of intense and exalted feeling. The sordid and depressing surroundings—the dingy and broken-backed chairs, the cracked and battered cooking-stove, the ancient chest of drawers without a knob left upon it, the odor

of German tenement cookery and of feather-beds—vanished now. Wilhelmina, for her part, held Phillida fast by the hand and saw no one but her savior, and Phillida felt a moving of the heart that one feels in pulling a drowning person from the water, and that uplifting of the spirit that comes to those of the true prophetic temperament. She read in a gentle, fervent voice some of the ancient miracles of healing from the English columns of the leather-covered German and English Testament, while the exhausted Wilhelmina still held her hand and wrestled for the breath of life.

Then Phillida knelt by the well-worn wooden-bottomed chair while Mrs. Schulenberg knelt by a stool on the other side of the stove, burying her face in her apron. Never was prayer more sincere, never was prayer more womanly or more touching. As Phillida proceeded with her recital of Wilhelmina's sufferings, as she alluded to the value of Mina to her mother and the absent Rudolph, and then prayed for the merciful interposition of God, the mother sobbed aloud, Phillida's faith rose with the growing excitement of her pity, and she closed the prayer at length without a doubt that Mina would be cured.

"I do feel a little better now," said Wilhelmina, when the prayer was ended.

"I will bring you something from the Diet Kitchen," said Phillida as she went out. The patient had scarcely tasted food for two days, but when Phillida came back she ate a little and thought herself better.

Phillida came again in the afternoon, and was disappointed not to find Mina improving. But the sick girl clung to her, and while Phillida remained she would have nothing even from the hand of her mother. The scene of the morning was repeated; again Phillida prayed, again Wilhelmina was a little better, and ate a little broth from the hands of her good angel.

The burden of the poor girl and her mother rested heavily on Phillida during the evening and whenever she awakened during the night. Mrs. Callender and Agatha only asked how she found Wilhelmina; they thought it best not to intrude on the anxiety in Phillida's mind, the nature of which they divined.

When breakfast was over the next morning Phillida hastened again to the Schulenbergs.

"Ah! it is no good this time; I shall surely die," gasped Wilhelmina, sitting bolstered on her couch and looking greatly worse than the day before. "The night has been bad. I have had to fight and fight all the long night for my breath. Miss Callender, my time has come."

The mother was looking out of the window to conceal her tears. But Phillida's courage was of the military sort that rises with supreme difficulty. She exhorted Wilhelmina to faith,

to unswerving belief, and then again she mingled her petitions with the sobs of the mother and the distressful breathing of the daughter. This morning Wilhelmina grew no better after the prayer, and she hardly ate two spoonfuls of the broth that was given her. She would not take it from Phillida this time. Seeing prayers could not save her and that she must die, the instincts of infancy and the memories of long invalidism and dependence were now dominant, and she clung only to her mother.

"You haf always loved me, mother; I will haf nobody now any more but you, my mother, the time I haf to stay with you is so short. You will be sorry, mother, so sorry, when poor unfortunate Wilhelmina, that has always been such a trouble, is gone already."

This talk from the smitten creature broke down Phillida's self-control, and she wept with the others. Then in despondency she started home. But at the bottom of the stairs she turned back and climbed again to the top, and, reëntering the tenement, she called Mrs. Schulenberg to her. "You 'd better get a doctor."

Wilhelmina with the preternaturally quick hearing of a feverish invalid caught the words and said: "No. What is the use? The doctor will want some of poor Rudolph's money. What good can the doctor do? I am just so good as dead already."

"But, Wilhelmina dear," said Phillida, coming over to her, "we have no right to leave the matter this way. If you die, then Rudolph and your mother will say, 'Ah, if we 'd only had a doctor!'"

"That is true," gasped Mina. "Send for Dr. Beswick, mother."

A neighbor was engaged to carry the message to Dr. Beswick in Seventeenth street, and Phillida went her way homeward, slowly and in dejection.

XXVIII.

DR. BESWICK'S OPINION.

DR. BESWICK of East Seventeenth street was a man from the country, still under thirty, who had managed to earn money enough to get through the College of Physicians and Surgeons by working as a school-teacher between times. Ambitious as such self-lifted country fellows are apt to be, he had preferred to engage in the harsh competition of the metropolis in hope of one day achieving professional distinction. To a poor man the first necessity is an immediate livelihood. Such favorite cross streets of the doctors as Thirty-fourth, and the yet more fashionable doctor-haunted up-and-down thoroughfares, were for long years to come far beyond the reach of a man without money or social backing, though Beswick saw

visions of a future. He had planted himself in Mackerelville, where the people must get their medical advice cheap, and where a young doctor might therefore make a beginning. The sweetheart of his youth had entered the Training School for Nurses just when he had set out to study medicine. They two had waited long, but she had saved a few dollars, and at the end of his second year in practice, his income having reached a precarious probability of five hundred a year, they had married and set up office and house together in two rooms and a dark closet. There were advantages in this condensed arrangement, since the new Mrs. Beswick could enjoy the husband for whom she had waited so long and faithfully, by sitting on the lounge in the office whenever she had sedentary employment — the same lounge that was opened out at night into a bed. Both of the Beswicks were inured to small and hard quarters, and even these they had been obliged to share with strangers; since, therefore, they must lead a kind of camp life in the crowded metropolis they found it delightful to season their perpetual picnic with each other's society. And, moreover, two rooms for two people seemed by comparison a luxury of expansion. When youth and love go into partnership they feel no hardships, and for the present the most renowned doctor in Madison Avenue was probably something less than half as happy as these two lovers living in a cubbyhole with all the world before them, though but precious little of it within their reach beyond two well-worn trunks, three chairs, a table, and a bedstead lounge.

Dr. Beswick was profoundly unknown to fame, but he was none the less a great authority on medicine as well as on most other things in the estimation of Mrs. Beswick, and, for that matter, of himself as well. He liked, as most men do, to display his knowledge before his wife, and to her he talked of his patients and of the good advice he had given them and how he had managed them, and sometimes also of the mistakes of his competitors; and he treated her to remarks on that favorite theme of the struggling general practitioner, the narrowness of the celebrated specialists. When he came back from his visit to Wilhelmina it was with a smile lighting up all that was visible of his face between two thrifty patches of red side-whiskers.

"The patient is not very sick, I should say from your face," was Mrs. Beswick's remark as she finished sewing together the two ends of a piece of crash for a towel. For this towel the doctor had made a kind of roller, the night before, by cutting a piece off a broken mopstick and hanging it on brackets carved with his jack-knife and nailed to the closet-door.

"I can always tell by your face the condition of the patient," added Mrs. Beswick.

"That 's where you 're mistaken this time, my love," he said triumphantly. "The Schulenberg girl will die within two weeks." And he smiled again at the thought.

"What do you smile so for? You are not generally so glad to lose a patient," she said, holding up the towel for his inspection, using her hand and forearm for a temporary roller to show it off.

"Oh! no; not that," he said, nodding appreciatively at the towel while he talked of something else. "I suppose I ought to be sorry for the poor girl, and her mother does take on dreadfully. But this case 'll explode that faith-quackery if anything can. The Christian Science doctor, Miss Cullender, or something of the sort, made her great sensation over this girl, who had some trouble in her back and a good deal the matter with her nerves."

"She 's the one there was so much talk about, is she?" asked Mrs. Beswick, showing more animation than sympathy.

"Yes; when her mind had been sufficiently excited she believed herself cured, and got up and even walked a little in the square. That 's what gave the woman faith-doctor her run. I don't know much about the faith-doctor, but she 's made a pretty penny, first and last, out of this Schulenberg case, I 'll bet. Now the girl 's going to die out of hand, and I understand from the mother that the faith-cure won't work. The faith-doctor 's thrown up the case."

"I suppose the faith-doctor believes in herself," said the wife.

"Naah!" said the doctor with that depth of contempt which only a rather young man can express. "She? She 's a quack and a humbug. Making money out of religion and tomfoolery. I 'll give her a piece of my mind if she ever crosses my track or meddles with my patients."

Crowing is a masculine foible, and this sort of brag is the natural recreation of a young man in the presence of femininity.

Two hours later, a frugal dinner of soup and bread and butter having been served and eaten in the mean time, and Mrs. Beswick having also washed a double set of plate, cup, saucer, knife, and fork,—there were no tumblers; it seemed more affectionate and social in this turtle-dove stage to drink water from a partnership cup,—the afternoon hung a little heavy on their hands. It was not his day at the dispensary, and so there was nothing for the doctor to do but to read a medical journal and wait for patients who did not come, while his wife sat and sewed. They essayed to break

the ennui a little by a conversation which consisted in his throwing her a kiss upon his hand, now and then, and her responding with some term of endearment. But even this grew monotonous. Late in the afternoon the bell rang, and the doctor opened the door. There entered some one evidently not of Mackerelville, a modestly well-dressed young lady of dignified bearing and a gentle grace of manner that marked her position in life beyond mistake. Mrs. Beswick glanced hurriedly at the face, and then made a mental but descriptive inventory of the costume down to the toes of the boots, rising meanwhile, work in hand, to leave the room.

"Please don't let me disturb you," said the newcomer to the doctor's wife; "don't go. What I have to say to the doctor is not private."

Mrs. Beswick sat down again, glad to know more of so unusual a visitor.

"Dr. Beswick, I am Miss Callender," said the young lady, accepting the chair the doctor had set out for her. "I called as a friend to inquire, if you don't mind telling me, what you think of Wilhelmina Schulenberg."

When Dr. Beswick had made up his mind to dislike Miss Callender and to snub her on the first occasion in the interest of science and professional self-respect, he had not figured to himself just this kind of a person. So much did she impress him that if it had not been for the necessity he felt to justify himself in the presence of his wife he might have put away his professional scruples. As it was he colored a little, and it was only after a visible struggle with himself that he said:

"You know, Miss Callender, that I am precluded by the rules of the profession from consultation with one who is not a regular practitioner."

Miss Callender looked puzzled. She said, "I did not know that I was violating proprieties. I did not know the rules were so strict. I thought you might tell me as a friend of the family."

"Don't you think you might do that, dear?" suggested Mrs. Beswick, who felt herself drawn to this young lady, for Miss Callender had won her heart by an evident deference for Dr. Beswick's position and professional knowledge, and she was touched by a certain sadness in the face and voice of the visitor.

The doctor relented when he found that his wife would sustain him in it.

"I may answer your question if you ask it merely as a friend of the patient, but not as recognizing your standing as a practitioner," he said.

Phyllida answered with a quick flush of pain and surprise, "I am not a practitioner, Dr. Bes-

wick. You are under some mistake." I know nothing about medicine."

"I did n't suppose you did," said the doctor with a smile. "But are you not what they call a Christian Scientist?"

"I? I hate what they call Christian Science. It seems to me a lot of nonsense that nobody can comprehend. I suppose it's an honest delusion on the part of some people and a mixture of mistake and imposture on the part of others."

"You have made a pretty good diagnosis, if you are not a physician," said Dr. Beswick, laughing, partly at Phillida's characterization of Christian Science and partly at his own reply, which seemed to him a remark that skilfully combined wit with a dash of polite flattery. "But, Miss Callender,—I beg your pardon for saying it,—people call you a faith-doctor."

"Yes; I know," said Phillida, compressing her lips.

"Did you not treat this Schulenberg girl as a faith-healer?"

"I prayed for her as a friend," said Phillida, "and encouraged her to believe that she might be healed if she could exercise faith. She *did* get much better."

"I know, I know," said the doctor in an offhand way; "a well-known result of strong belief in cases of nerve disease. But, pardon me, you have had other cases that I have heard of. Now don't you think that the practice of faith-healing for—for—compensation makes you a practitioner?"

"For compensation?" said Phillida, with a slight gesture of impatience. "Who told you that I took money?"

It was the doctor's turn to be confounded.

"I declare, I don't know. Don't you take pay, though?"

"Not a cent have I ever taken directly or indirectly." Phillida's already overstrained sensitiveness on this subject now broke forth into something like anger. "I would not accept money for such a service for the world," she said. "In making such an unwarranted presumption you have done me great wrong. I am a Sunday-school teacher and mission worker. Such services are not usually paid for, and such an assumption on your part is unjustifiable. If you had only informed yourself better, Dr. Beswick—"

"I am very sorry," broke in the doctor. "I did n't mean to be offensive. I—"

"Indeed, Miss Callender," said Mrs. Beswick, speaking in a pleasant, full voice and with an accent that marked her as not a New Yorker, "he did n't mean to be disrespectful. The doctor is a gentleman; he could n't be disrespectful to a lady intentionally. He did n't know anything but just what folks say, and

they speak of you as the faith-doctor and the woman doctor, you see. You must forgive the mistake."

This pleading of a wife in defense of her husband touched a chord in Phillida and excited an emotion she could not define. There was that in her own heart which answered to this conjugal championship. She could have envied Mrs. Beswick her poverty with her right to defend the man she loved. She felt an increasing interest in the quiet, broad-faced, wholesome-looking woman, and she answered:

"I know, Mrs. Beswick, your husband is not so much to blame. I spoke too hastily. I am a little too sensitive on that point. I don't pretend to like to be talked about and called a faith-doctor."

There was an awkward pause, which the doctor broke by saying presently in a subdued voice:

"In regard to your perfectly proper question, Miss Callender, I will say that the Schulenberg young woman has acute pulmonary tuberculosis."

"Which means?" queried Phillida, contracting her brows.

"What people call galloping consumption," said the doctor. "Now, I can't help saying, Miss Callender,"—the doctor's habitual self-contentment regained sway in his voice and manner,—"that this particular sort of consumption is one of the things that neither medicine nor faith was ever known to heal since the world was made. This young woman's lungs are full of miliary tubercles—little round bodies the size of a millet seed. The tissues are partly destroyed already. You might as well try to make an amputated leg grow on again by medicine or by prayer as to try to reconstruct her lungs by similar means. She has got to die, and I left her only some soothing medicine, and told her mother there was no use of making a doctor's bill."

There was a straightforward rectitude in Dr. Beswick that inclined Phillida to forgive his bluntness of utterance and lack of manner. Here at least was no managing of a patient to get money, after the manner hinted at by Miss Bowyer. The distinction between diseases that might and those that might not be cured or mitigated by a faith-process, which Phillida detected in the doctor's words, quickened again the doubts which had begun to assail her regarding the soundness of the belief on which she had been acting, and awakened a desire to hear more. She wanted to ask him about it, but sensitiveness regarding her private affairs made her shrink. In another moment she had reflected that it would be better to hear what was to be said on this subject from a stranger than from one who knew her. The natural honesty

and courage of her nature impelled her to submit further to Dr. Beswick's rather blunt knife.

"You seem to think that some diseases are curable by faith and some not, Dr. Beswick," she said.

"Certainly," said Beswick, tipping his chair back and drumming on the table softly with his fingers. "We use faith-cure and mind-cure in certain diseases of the nerves. Nothing could have been better for that Schulenberg girl than for you to make her believe she could walk. I should have tried that dodge myself, but in a different way, if I had been called."

"Don't speak in that way, dear," interposed Mrs. Beswick, softly, seeing that Phillida was pained.

"Why, what's the matter with that way?" said the doctor, good-naturedly.

"Well, Miss Callender will think you are not honest if you talk about trying a dodge. Besides, I'm sure Miss Callender is n't the kind of person that would say what she did n't believe. It was no dodge with her."

"No; of course not," said the doctor. "I did n't mean that."

"You do not admit any divine agency in the matter, doctor?" asked Phillida.

"How can we? The starting-point of that poor girl's galloping consumption, according to the highest medical opinion of our time, is a little organism called a bacillus. These bacilli are so small that ten thousand of them laid in a row lengthwise would only measure an inch. They multiply with great rapidity, and as yet we cannot destroy them without destroying the patient. You might just as well go to praying that the weeds should be exterminated in your garden, or try to clear the Schulenberg tenement of croton bugs by faith, as to try to heal that young woman in that way. Did you ever look into the throat of a diphtheria patient?"

"No," said Phillida.

"Well, you can plainly see little white patches of false membrane there. By examining this membrane we have come to know the very species that does the mischief—the *micrococcus diphtheriticus*."

The conversation was naturally a little disagreeable to Phillida, who now rose to depart without making reply. She went over and shook hands with Mrs. Beswick, partly from an instinctive kindness, judging from her speech that she was a stranger in New York. Besides she felt strongly drawn to this simple and loyal-hearted woman.

"If you'd like to come to the mission, Mrs. Beswick," she said, "I'd take pleasure in introducing you. You'd find good friends among the people there and good work to do. The mission people are not all faith-healers like me."

"Oh, now, I'd like them better if they were

like you, Miss Callender. I think I'd like to go. I could n't do much; I have to do my own work; the doctor's practice is growing, but he has n't been here long, you know. But I think I might go"—this with a look of inquiry at her husband.

"Why not?" said Dr. Beswick. He could not help seeing that the association of his wife with the mission might serve to extend his practice, and that even Mrs. Beswick must grow tired after a while of conversations with him alone, sugared though they were.

When Phillida had gone the doctor's wife said to her husband that she never had seen a nicer lady than that Miss Callender. "I just love her," she declared, "if she does believe in faith-healing."

"Ah, well, what I said to her will have its effect," he replied, with suppressed exultation.

"You said just the right thing, my love. You'most always do. But I was afraid you would hurt her feelings a little. She does n't seem very happy."

XXIX.

MILLARD AND RUDOLPH.

RUDOLPH, coming home from work early on the next Saturday afternoon, saw Millard approaching from the other direction. With that appetite for sympathy which the first dash of sorrow is pretty sure to bring, the young man felt an impulse to accost the person who had thought enough of his sister's sufferings to give her a wheel-chair.

"Mr. Millard!"

"Oh, yes; you are Wilhelmina Schulenberg's brother," scrutinizing the young man. "And how is your sister now?"

Rudolph shook his head gloomily.

"She cannot live many days already; she will be dying purty soon."

"What? Sick again? Then Miss Callender's cure did not last."

"Ah, yes; her back it is all right. But you see maybe praying is not strong for such sickness as she has now. It is quick consumption."

"Poor child!" said Millard.

"She has been very unlucky," said Rudolph. "We are all very unlucky. My father he died when I was little, and my mother she had to work hard, and I soon had also to work. And then Wilhelmina she gets sick, and it gave mother trouble."

"Has Miss Callender seen your sister?"

"Yes; she did not tell you already?" queried Rudolph.

"I have not seen her for a long time," said Millard.

"Oh!" exclaimed Rudolph, and went no farther.

"Did she — did she not try to make your sister well?"

"Yes; but believing is all good enough for the back, but it is no good when you're real sick insides. You see it is consumption."

"Yes; I see," said Millard. A rush of feeling came over him. He remembered Mina Schulenberg as she sat that day about a year ago — the day of his engagement — near the bust of Beethoven in the park. She had been the beginning and in some sense she had been the ending of his engagement. Millard walked away from Rudolph in a preoccupied way. Suddenly he turned and called after him:

"I say — Schulenberg!"

The young man faced about and came back. Millard said to him in a low voice and with feeling: "Will you let me know if your sister dies? Come straight to me. Don't say anything about it, but maybe I can show myself a friend in some way. Here's my address at home, and between nine and three I'm at the Bank of Manhadoes."

Rudolph said yes, and tried to thank him, but Millard strode away, his mind reverting to the poor girl whose now fast-withering life seemed to have some occult relation to his own, and thinking, too, of Phillida's unfaltering ministrations. What mistakes and delusions could not be forgiven to one so unwearingly good? Why did he not share her reproach with her, and leave her to learn by time and hard experience? Such thoughts stung him sorely. And this death, under her very hand, of the Schulenberg girl must be a sore trial. Would she learn from failure? Or would she resolutely pursue her course?

Millard was not a man to lament the inevitable. Once he and Phillida had broken, he had set out to be what he had been before. But who shall cause the shadow to go backward upon the dial of Ahaz? When was a human being ever the same after a capital passion that he had been before? Millard had endeavored to dissipate his thoughts in society and at places of amusement, only to discover that he could not revolve again in the orbit from which he had been diverted by the attraction of Phillida.

Business, in so far as it engrossed his thoughts, had produced a temporary forgetfulness, and of business he now had a great deal. Farnsworth, who had contrived to give everybody connected with the Bank of Manhadoes more uneasiness than one could reasonably expect from a man whose vitality was so seriously impaired, died about this time, just when those who knew him best had concluded that he was to be exempted from the common lot. He died greatly regretted by all who had known him, and particularly by those who had been associated with him in the conduct of the bank from

its foundation. So ran the words of the obituary resolutions drafted by Masters, adopted by the Board of Directors of the bank, printed in all the newspapers, and engrossed for the benefit of his widow and his posterity. Posterity indeed gets more out of such resolutions than contemporaries, for posterity is able to accept them in a more literal sense. Hilbrough's ascendancy in the bank, and his appreciation of Millard, in spite of the latter's symmetrical way of parting his hair, the stylish cut he gave his beard, and the equipoise with which he bore his slender cane, procured the latter's promotion to the vacant cashiership without visible opposition. Meadows would have liked to oppose, but he found powerful motives to the contrary; for Meadows himself was more and more disliked by members of the board, and his remaining there depended now on the goodwill of Hilbrough. He therefore affected to be the chief advocate, and indeed the original proposer, of Millard for the place.

The advancement carried with it an increase of dignity, influence, and salary, which was rather gratifying to a man at Millard's time of life. It would have proved a great addition to his happiness if he could only have gone to Phillida and received her congratulations and based a settlement of his domestic affairs upon his new circumstances. He did plan to take a larger apartment next year and to live in a little better style, perhaps also to keep horses; but the prospect was not interesting.

While he sat one evening debating such things the electric bell of his apartment was rung by the conductor of the freight-elevator, who came to say that there was a German man in the basement inquiring for Mr. Millard. His name was Schulenberg. Rudolph had come in by the main entrance, but the clerk, seeing that he was a workingman, had spoken to him with that princely severity which in a democratic country few but hotel and house clerks know how to affect, and had sent him packing down-stairs, out of sight, where he could have no chance to lower the respectability of a house in which dwelt scores of people whose names were printed in the Social Register, they subscribing for the same at a good round price.

Rudolph had lost his way two or three times before he could find the entrance to the lift, but at the convenience of the elevator-man he was hoisted to Millard's floor. When he presented himself he looked frightened at being ushered into a place accessible only by means of so much ceremony and by ways so roundabout.

"Mr. Millard, my sister has just died. You told me to tell you already," he said, standing there and grasping his cap firmly as though it was the only old friend he had to help him out of the labyrinth.

"When did she die?" asked Millard, motioning the young fellow to a chair.

"Just now. I came straight away."

"Who is with your mother?"

"Miss Callender and a woman what lifts in the next room."

Millard mused a minute, his vagrant thoughts running far away from Rudolph. Then recovering himself he said:

"Have you money enough for the funeral?"

"I haf fifteen dollars, already, that I haf been puttin' in the Germania Spar Bank for such trouble. I had more as that, but we haf had bad luck. My uncle he will maybe lend me some more."

"What do you work at?"

"Mostly odd jobs. I had a place in a lumber-yard, but the man he failed up already. I am hopin' that I shall get something more steady soon."

"It will be pretty hard for you to go in debt."

"Yes," with a rueful shrug. "But we 're unlucky. Poor folks 'mos' always is unlucky already."

"Well, now, you let me pay these expenses. Here's my card. Tell the undertaker to send his bill to me. He can come to the bank and inquire if he should think it not all right. But don't tell anybody about it."

"I thank you very much, very, very much, Mr. Millard; it will make my mother feel a leetle better. And I will pay you whenever I haf the good luck to get some money."

"Don't worry about that. Don't pay me till I ask you for it. Was Miss Callender with you when your sister died?"

"Yes. Oh, yes; she is better as anybody I effer see."

Millard said no more, and Rudolph thanked him again, put on his cap, and went out to try his luck at finding the door to the freight-elevator for a descent from this lofty height to the dark caves of the basement—vaulted caves with mazes of iron pipes of all sizes overhead, the narrow passages beset by busy porters bearing parcels and trunks, and by polyglot servants in dress-coats and white aprons running hither and thither with trays balanced on their finger-tips and mostly quite above replying to the questions of a bewildered intruder clad in trousers of well-worn brown denim.

xxx.

PHILLIDA AND PHILIP.

MRS. GOUVERNEUR concluded not to try her clever hand on Millard and Phillida again. Pessimistic Philip could no longer reproach her for having blasted his hopes, for he had a new chance if he chose to improve it. But to im-

prove any opportunity seemed to be out of Philip's power, except perhaps the opportunity to spend his last available dollars on a rare book. He had of late been seeking a chance to invest some hundreds in a copy of Captain John Smith's "Generall Historie of Virginia," provided that he could find a copy with 1624 on the title-page. The 1626 was rare and almost, if not exactly, word for word the same as the 1624; but it would not do. For there were already several twenty-sixes in this country, and there was no fun in possessing a book that two or three other people could boast of having. When not busy with his books Philip was mostly crouched in an armchair in his library, or for a change crouched in an armchair at the Terrapin Club—in either case smoking and, as his mother believed, making profound reflections which might one day come to something. For how could a bright-minded man like Philip fail to bring forth something of value, seeing he bought expensive books and gave so much of his time to meditation?

That Phillida should be specially asked to dine at her aunt's was rather inevitable under the circumstances, and Mrs. Gouverneur saw to it that she came when Philip was at home and when there was no other company. This arrangement pleased Phillida; Uncle Gouverneur was dull enough, but Cousin Philip was always interesting in talk, and a good fellow, if he did spend his life in collecting books mostly of no particular value to anybody but a curiosity-hunter, and in poking good-natured fun at other people's cherished beliefs.

The meal was well-nigh finished when Philip said to his cousin who confronted him—there were only four at the table:

"Phillida, I saw Mrs. Maginnis day before yesterday at Mrs. Benthuyzen's. She is still sounding your praises as a faith-healer, but she confided to me that a pious girl and a minister's daughter ought not to be proud. She suggested that you did n't get that from your father. 'Her pride comes from the mother's side, they tell me,' she said. 'How's that, Mr. Gouverneur?' and she laughed at what she regarded a capital drive at me."

Phillida was not pleased at the mention of Mrs. Maginnis. Since the death of Wilhelmina, two weeks before, her mind had been disturbed as to the substantial value of faith-cures. Dr. Beswick's rationalism on the subject rose to trouble her. Happily she had not been sent for to visit any new cases, the death of Wilhelmina, her first notable example, having a little spoiled the charm of her success, as Dr. Beswick had foreseen. Doubt had made her cowardly, and there lurked in her mind a hope that she might no more be called upon to exercise her gift in the direction of faith-healing, and that she might

thus without the necessity of a formal decision creep out of responsibility and painful notoriety in a matter concerning which she could not always feel absolutely sure of her ground. To this shrinking the revolt of her taste against such getters-on as Miss Bowyer had contributed, for her mind was after all that of a young woman, and in a young woman's mind taste is likely to go far more than logic. To Philip's words about Mrs. Maginnis she only replied:

"Curious woman, is n't she?"

"Yes," interposed Mrs. Gouverneur, desirous of turning the talk away from what she saw was a disagreeable subject to Phillida—"yes; and I don't see the use of taking such people into society in such a hurry, merely because they *are* exceedingly rich."

"Mrs. Maginnis is respectable enough," said Philip, "and interesting," he added with a laugh; "and I thought her the most brilliant of the party at Mrs. Benthuyzen's, taking her diamond necklace into the account."

"Yes; no doubt she's entirely respectable," said Mrs. Gouverneur. "So are ten thousand other people whom one does n't care to meet in society. It seems to me that New York society is too easy nowadays."

"It's not too easy towards the poor; eh, Phillida?"

"That's no great deprivation to the poor," said Phillida. "They could not indulge in fashionable amusements anyhow, and some of the most sensible among them believe that the families of fairly prosperous workmen are happier and more content than the rich."

"Certainly people in the social world are not examples of peace of mind," said Philip. "For me, now, I would have sworn last week that I should be as perfectly happy as a phoebe-bird on a chimneytop if I could only get a John Smith of 1624, which I've been trying for so long. But I got it yesterday, and now I'm just miserable again."

"You want something else?" queried Phillida, laughing.

"Indeed I do. You see the splendid John Smith looks lonesome. It needs a complete set of De Bry's Voyages to keep it company. But I could n't find a complete De Bry for sale probably, and I could n't afford to buy it if I should stumble on it. John Smith has eaten up the remainder of my book allowance for this year and nibbled about two hundred dollars out of next year."

When dinner was over Philip said:

"Come up-stairs, Phillida, you and mother, and see my lovely old Captain Smith in the very first edition, with the fresh-looking portrait of Pocahontas as Lady Rebecca."

"You go, Phillida; I'll follow you in a minute," said Mrs. Gouverneur.

"The book is of the earliest impression known," went on Philip with enthusiasm as he led the way up-stairs followed by his cousin, "and is perfect throughout except that one page has been mended."

"Mended?" queried Phillida, as she followed Philip into his library and sitting-room. "Do they darn old books as they do old stockings?"

"Oh, yes! it is a regular trade to patch books."

Saying this, Philip turned up the gas, and then unlocked a glass case which held what he called his "nuggets," and took down the two precious volumes of the bravest and boastfullest of all the Smiths, laying them tenderly on a table under the chandelier. Turning the leaves, he directed Phillida's attention to one that seemed to have the slightest discoloration of one corner; rather the corner seemed just perceptibly less time-stained than the rest of the leaf.

"There," he said; "the most skilful mender in London did that."

"Did what?" said Phillida.

"Put on that corner. Is n't it a work of art?"

"I don't see that anything has been done there," said Phillida. "The corner is ever so little paler than the rest, maybe."

"That is the new piece. The mender selected a piece of hand-made paper of similar texture to the old, and stained the new piece as nearly to the tint of the old leaf as possible. Then he beveled the edge of the leaf, and made a reverse bevel on the piece, and joined them with exquisite skill and pains."

Phillida held the leaf between her and the light, regarding it with wonder, hardly able to believe that a piece had been affixed.

"But, Philip, how did he get a corner with the right printing on it. The line where the two are joined seems to run through the middle of words and even through the middle of letters."

"All the letters and parts of letters on the corner were made by the hand of the mender. He has imitated the ink and the style of the ancient letters. Take this magnifying glass and you may be able to detect the difference between the hand-made letters in the new part and the printed ones. But to the naked eye it is perfect."

"What a genius he must be!" said Phillida. "I should think that the book would be worth more than if it had never been torn. Do they ever tear a piece out just for the sake of mending it?"

"On the contrary, it would have added fifty dollars to the price of this copy if the original page had been complete, or if it could have been mended without a possibility of detection—say by a process of faith-cure."

Philip said this laughing, as he set a chair for Phillida, and then sat down himself.

"I beg pardon, Phillida. I ought n't to jest about what you — feel — to be sacred."

Phillida colored, and compressed her lips a little. Then she said :

"I don't think I ought to refuse to hear anything you have to say about faith-cure, Philip. You evidently differ with me. But I want to know the truth ; and I —" here Phillida made a long pause, smoothing out the folds of her gown the meanwhile. "I will tell you, Cousin Phil, that I am not always so confident as I used to be about the matter."

Mrs. Gouverneur looked into the room at this moment, but perceiving that the conversation had taken on a half-confidential tone, she only said :

"I'll have to leave you with Philip a little longer, Phillida. I have some things to see to," and went out again.

Philip went to a drawer of rare old prints, and turned them over rapidly until he came to one of Charles II. touching for the king's evil.

"There," he said ; "Charles was a liar, a traitor, who took money to betray the interests of his country, and a rake of the worst. You would n't believe that he could cure sickness by any virtue in his royal touch. Yet great doctors and clergymen of the highest ranks certify incredible things regarding the marvelous cures wrought by him. If one might believe their solemn assertions, more cures were wrought by him than by any other person known to history. The only virtue that Charles possessed was lodged in his finger-tips."

"How do you account for it?"

"The evidence of a cure is the obscurest thing in the world. People get well by sheer force of nature in most cases. Every patent medicine and every quack system is therefore able to count up its cures. Then, too, many diseases are mere results of mental disturbance or depression. The mind has enormous influence on the body. I know a doctor who cured a woman that had not walked for years by setting fire to the bedding where she lay and leaving her a choice to exert herself or be burned. The woman was finally cured, it is said."

"But there are the cures by faith related in the Bible. I am afraid that if I give up modern cures I must lose my faith in miracles," said Phillida. Some unusual tenderness in Philip's speech had dissipated her reserve, and she was in a mood to lay bare her heart. In this last remark she disclosed to Philip her main difficulty. With a mind like hers such things are rather matters of association than of simple logic. Religion and miracles were bound up in the same bundle in her mind. To reject the latter was to throw away the former, and this, by

another habitual association in her mind, would have seemed equivalent to the moral subversion of the universe. On the other hand she had associated modern faith-healing with Scripture miracles ; the rejection of faith-cures involved therefore a series of consequences that seemed infinitely disastrous.

If it had been merely an abstract question Philip would not have hesitated to reject the miraculous altogether, particularly in any conversation in which such a rejection would have yielded interesting results. But Phillida's confiding attitude touched him profoundly. After all, he deemed faith a very good thing for a woman ; unbelief, like smoking and occasional by-words, was appropriate only to the coarser sex.

"Well," he replied evasively, "the Bible stands on a very different ground. We could n't examine the ancient miracles just as we do modern faith-cures if we wished. The belief in Bible miracles is a poetic and religious belief, and it does not involve any practical question of action to-day. But faith-healing now is a matter of great responsibility."

Philip spoke with a tremor of emotion in his voice. His cousin was sitting on the other side of the table looking intently at him, and doing her best to understand the ground of his distinction between ancient and modern miracles, which Philip, agitated as he was by a feeling that had no relation to the question, did not succeed in clearing up quite to his own satisfaction. Abandoning that field abruptly, he said :

"What I urge is that you ought not to trust too much to accidental recoveries like that of the Maginnis child. If faith-healing is a mistake it may do a great deal of harm."

Phillida's eyes fell to the table, and she fingered a paper-weight with manifest emotion.

"What you say in regard to responsibility is true, Philip. But if you have a power to heal, refusal is also a responsibility. I know I must seem like a fool to the rest of you."

"No," said Philip, in a low, earnest voice ; "you are the noblest of us all. You are mistaken, but your mistake is the result of the best that is in you ; and, by George ! Phillida, there is no better in anybody that lives than there is in you."

This enthusiastic commendation, so unexpected by Phillida, who had felt herself in some sense under the ban of her family, brought to the parched and thirsty heart the utmost refreshment. Phillida trembled visibly, and tears appeared in her eyes.

"Thank you, Philip. I know the praise is not deserved, but your kindness does me no end of good."

Mrs. Gouverneur came in at this moment. Phillida's eyes and Philip's constraint showed

her that something confidential had passed between them, and she congratulated herself on the success of her plan, though she could not divine the nature of the conversation. Phillida would not be a brilliant match for Philip in a worldly point of view, but it had long been a ruling principle with Mrs. Gouverneur that whatever Philip wanted he was to have, if it were procurable, and as the husband of such a woman as Phillida he ought to be a great deal happier than in mousing among old books and moping over questions that nobody could solve. Besides, Phillida possessed one qualification second to no other in Mrs. Gouverneur's opinion — there could be no question that her family was a first-rate one, at least upon the mother's side. The intrusion of a third person at this moment produced a little constraint. To relieve this Mrs. Gouverneur felt bound to talk of something.

"I scold Philip for wasting his time over old books and such trifles," she said to Phillida. "I wish you could persuade him out of it."

"Trifles!" exclaimed Philip. "Trifles are the only real consolation of such beings as we are. They keep us from being crushed by the immensities. If we were to spend our time chiefly about the momentous things, life would become unendurable."

The conversation drifted to indifferent subjects, and Philip talked with an unwonted gaiety that caused Phillida to forget her anxieties, while Mrs. Gouverneur wondered what change had come over her son that he should feel so much elation. The confidence and affection that Phillida had exhibited while conversing with him this evening consoled Philip for the misery of having to live, and his cheerfulness lasted throughout her visit. At its close he walked towards her home, with her hand upon his arm, in an atmosphere of hope which he had not been accustomed to breathe. At the door Phillida said:

"Good-night, Cousin Philip. Thank you for the kind advice you have given me. I don't think I shall agree with it, but I'll think about it." Then in a low voice she added, "If I have made a mistake it has cost me dear — nobody knows how dear."

After he had left her Philip's buoyancy declined. These last words, evidently full of regrets as regarded her relation with Charley, gave him a twinge of his old jealousy and restored him to his habitual discouragement.

. XXXI.

A CASE OF BELIEF IN DIPHTHERIA.

It was inevitable that Phillida should turn Philip's talk over in her mind again and again. There were moments when she felt that her

healing power might be as much of a delusion as the divinity in the touch of the merry King Charles. There were other times when Dr. Beswick's infecting bacteria germinated in her imagination and threatened destruction to her faith, and yet other times when sheer repulsion from Miss Bowyer's cant of metaphysical and Christian therapeutics inclined her to renounce the belief in faith-cure, which seemed somehow a second cousin to this grotesque science. But the great barrier remained; in her mind faith-healing had associated itself with other phases of religious belief, and she could find no resting-place for her feet betwixt her faith and Philip's ill-concealed general skepticism. She did go so far as to adopt Philip's opinion that an exclusive occupation of the mind with the immensities rendered life unendurable. She came to envy her cousin his eagerness over unreadable Indian Bibles, black-letter Caxtons, and a rare date on a title-page. She envied Millard the diversion that came to him from his interest in people, his taste in dress, his care for the small proprieties, his love for all the minor graces of life. Why should she alone of the three be crushed beneath the trip-hammer of the immensities? But she ended always as she had begun, by reverting to that ancestral spirit of religious strenuousness in which she had been bred and cradled, and by planting herself once more upon the eleventh of Hebrews and the renowned victories of faith that had been the glory of the Church in every age. To leave this ground seemed to her an abandonment by consequence of all that was dearest and noblest in life. Nor was she aware that with each cross-examination her hold on the cherished belief became less firm.

About two weeks after her talk with Philip she had just concluded a fresh conflict of this sort, and settled herself once more in what she intended should hereafter prove an unwavering faith in the efficacy of prayer, at least in certain cases, even against all sorts of bacteria, when it was announced that Mr. Martin wished to see her. It was eight o'clock, and the evening was a raw and rainy one in March.

"Howdy do, Miss Callender? How's all with you?" said Martin, when Phillida appeared at the door.

"How do you do, Mr. Martin?" she said. "Won't you come in?"

"No, thank you," said Martin, standing shivering in the vestibule, his solemn face looking neither more nor less like mortuary sculpture than it ever did. "Mother wants to know if you won't come down right away this evening. Our Tommy is seemingly sick."

"Seemingly sick?" asked Phillida. "How do you mean?"

"He's got a belief in a sore throat," said Mr.

Martin, "and he's seemingly not well. Mother 'd like to see you."

After a moment of puzzled thought Phillida comprehended that this way of speaking of disease was a part of the liturgy of Christian Science. She could not persuade Mr. Martin into the parlor; he waited in the vestibule while she got ready to go. Once out on the wet sidewalk he said:

"It's all the fault of the infant-class teacher down at the Mission."

"What is the fault of the infant-class teacher, Mr. Martin?" asked Phillida with some surprise.

"This seeming sore throat of Tommy's."

"How can that be? I don't understand."

"Well, you see she talked to the children last Sunday about swearing and other such sins of speech. Now sin and disease are cor—what-you-may-call-it. Tommy he came home with that big head of his running on the talk about swearing, and in two days here he is with a—a belief in a sore throat. If I had my way I'd take the children out of Sunday-school. But mother will have her own way, you know, and I ain't anywhere when it comes to anything like that."

Phillida said nothing in reply to this, and presently Mr. Martin began again:

"It ain't my doing, the getting you to come and pray for Tommy. I wanted somebody ruther more scientific; Miss Bowyer she knows the cause and effect of things. But mother ain't enlightened yet, and she declared up and down against Miss Bowyer. And I declared up and down against doctors that can only cure sickness on the mortal plane. So, you see, we comp'omised on you. But I let mother know that if she would be so obs'inate ag'inst Miss Bowyer I wa'n't risponsible for the consequences; they'd be on her head. She can't say that I'm risponsible."

Phillida shuddered, and made a motion as of drawing her sack more closely about her.

"Though, for that matter," Martin went on, "Tommy's kind of settled the thing himself. He declared up and down that he did n't want Miss Bowyer, and he declared up and down he did n't want a man doctor. What he wanted was Dick's Sunday-school teacher. And neither one of us kind of liked to refuse him anything, seeing he's sick; and so that kind of settled it. And so the risponsibility'll be—I don't know where—unless it's on you."

Phillida found Tommy in a state of restlessness and dullness, complaining of difficulty in swallowing. Mrs. Martin was uneasy lest there should be something malignant about the attack; but to Phillida the case seemed an ordinary one, not likely to prove serious. She held Tommy in her arms for a while and this was a

solace to the little fellow. Then she prayed with him, and at half-past nine she returned home leaving Tommy sleeping quietly. When she neared her own door she suddenly bethought her that she had not seen the other children. She turned to Mr. Martin, who was walking by her side in silence and with a measured stride that would have been very becoming to an undertaker, but with which Phillida found it quite impossible to keep step.

"I did n't see the rest of the children, Mr. Martin; where are they?" she asked.

"Well, a neighbor acrost the street come over to-day and took 'em away. She did n't know but it might be dip'thery."

"Have you had any diphtheria in your neighborhood?"

"Well, yes; the caretaker of our flats down on the first floor of the next house lost a child last week by a belief in dip'thery. The neighbor acrost the street thought Tommy might have got it, but we did n't believe it. But it made mother kind of uneasy, and she wanted to see you or a doctor to-night. For my part, I knew that it was the talk of the infant-class teacher that was at the bottom of it, dip'thery or not. Sin ought n't to be mentioned to a child. It's likely to break out into a belief about sickness."

Phillida's spirits suddenly sank to zero. Alarm at the responsibility she had taken got the better of her faith by surprise, and she said:

"Mr. Martin, get a doctor. It may be diphtheria."

"Why, what if it is?" said Mr. Martin. "It's better to treat it on a spiritual plane. No, I'm not a-going back on my faith in the very words of the Bible."

"But, Mr. Martin, I don't feel sure enough to want to be responsible for Tommy's life. You must get a doctor as you go home. You go almost past Dr. Beswick's in Seventeenth street."

"No, I won't do that; I'd made up my mind already that your treatment wa'n't thorough enough. You have n't had the experience; you have n't studied the nature of disease and the cor-what-you-may-call-it between sin and sickness. I'll call Miss Bowyer if Tommy don't mend before morning."

Just then it began to rain again. The sudden splash of the downpour and Phillida's instinctive impulse to get quickly under shelter interrupted the conversation. A minute later Miss Callender was standing in the vestibule with a weeping umbrella in her hand, while she heard Mr. Martin's retreating footsteps, no whit hurried by the fitful gusts of rain, or the late hour, or the illness at home.

She thought of running after him, but of what use would that be, seeing his obstination against treating diseases on the mortal plane? She would have liked to go home with him and

beg the mother to send for a doctor; but she could not feel sure that this would serve the purpose, and while she debated the rain came on in driving torrents, and the steady beat of Mr. Martin's steps was lost in the distance and the rush of waters. In vain she told her mother that the child did not seem very ill, in vain she told herself during the night that Tommy had only an ordinary cold. She was restless and wakeful the night long; two or three times she lighted a match and looked at the slow-going clock on the mantelpiece.

In that hour unbelief in the validity of her cures came into her mind with a rush that bore down all barriers before it. Her mind went over to Dr. Beswick's side of the question, and she saw her success in some cases as the mere effect on the nervous system. In the bitterness of something like despair she thought herself a deluded and culpable enthusiast, worthy of ridicule, of contempt, of condemnation. There were no longer any oscillations of her mind toward the old belief; the foundations of sand had been swept away, and there was no space to make a reconstruction. Scarcely could she pray; unbelief tardily admitted threatened to revenge itself for the long siege by sacking the whole city. She was almost ready to plunge into Philip's general skepticism, which had seemed hitherto a horrible abyss. At a quarter to five o'clock she lighted the gas, turning it low so as not to disturb the others. She dressed herself quickly, then she wrote a little note in which she said:

I am uneasy about Mrs. Martin's child, and have gone down there. Back to breakfast.

PHILLIDA.

This she pinned to Agatha's stocking, so that it would certainly be seen. Then she threw an old gray shawl over her hat, drawing it about her head, in order to look as much as possible like a tenement-house dweller running an early morning errand, hoping thus to escape the curiosity that a well-dressed lady might encounter if seen on the street at so early an hour. The storm and the clouds had gone, but the air was moist from the recent rain. When she sallied forth no dawn was perceptible, though the street lamps were most of them already out. Just as the sky above Greenpoint began to glow and the reeking streets took on a little gray, Phillida entered the stairway up which she stumbled in black darkness to the Martin apartment.

The Martins were already up, and breakfast was cooking on the stove.

"Is that you, Miss Callender?" said Mrs. Martin. "I did n't expect you at this hour. How did you get here alone?"

"Oh, well enough," said Phillida. "But how is little Tommy?"

"I'm afraid he is worse. I was just trying to persuade Mr. Martin to go for you."

"I came to give up the case," said Phillida, hurriedly, "and to beg you to get a doctor. I have done with faith-cures. I've lost my faith in them entirely, and I'm afraid from what Mr. Martin told me last night that this is diphtheria."

"I hope not," said Mrs. Martin, in renewed alarm.

Mr. Martin, who was shaving in his shirt-sleeves near the window, only turned about when he got the lather off his face to say: "Good-morning, Miss Callender. How 's things with you?"

Phillida returned this with the slightest good-morning. She was out of patience with Mr. Martin, and she was revolving a plan for discovering whether Tommy's distemper were diphtheria or not. During her long midnight meditations she had gone over every word of Dr. Beswick's about bacteria and bacilli. She remembered his statement that the *micrococcus diphtheriticus* was to be found in the light-colored patches visible in the throat of a diphtheria patient. At what stage these were developed she did not know, but during her hours of waiting for morning she had imagined herself looking down little Tommy's throat. She now asked for a spoon, and, having roused Tommy from a kind of stupor, she inserted the handle as she had seen physicians do, and at length succeeded in pressing down the tongue so as to discover what she took to be diphtheria patches on the fauces.

"Mrs. Martin, I am sure this is diphtheria. You must get a doctor right away."

"I'll attend to that," said Mr. Martin, who had now got his beard off and his coat on.

As he donned his hat and went out the door, Mrs. Martin called: "Father, you'd better get Dr. Beswick"; but her husband made no reply further than to say, "I'll attend to that," without interrupting for a moment his steady tramp down the stairs.

"I'm afraid," said Mrs. Martin, "that he has gone for Miss Bowyer."

"I hope not," said Phillida.

"If he gets her he'll be awfully stubborn. He has been offended that I sent for you last night. It touches his dignity. He thinks that if he does n't have his way in certain things he is put out of his place as head of the family."

Phillida presently perceived that Mrs. Martin was shedding tears of apprehension.

"My poor little Tommy! I shall lose him."

"Oh, no; I hope not," said Phillida.

But Mrs. Martin shook her head.

In about half an hour Henry Martin, with a look that came near to being more than usually solemn, ushered in Dr. Eleanor Arabella Bowyer, and then sat himself down to his breakfast, which was on the table, without a word,

except to ask Phillida if she would n't have breakfast, too, which invitation was declined.

Miss Bowyer nodded to Phillida, saying, "Your case?"

"No," said Phillida; "I have no case. This is a case of diphtheria."

"Case of belief in diphtheria?" queried Miss Bowyer, and without waiting for an invitation she calmly poured out a cup of coffee and drank it, standing. When she had finished the coffee and was ready for business, Phillida said:

"Miss Bowyer, let me speak with you a moment." She drew the psychopathic healer over toward a large old-fashioned bureau that the Martins had brought from the country and that seemed not to have room enough for its ancient and simple dignity in its present close quarters. "Miss Bowyer, this is diphtheria. A child in the next house died last week of the same disease. Mrs. Martin wishes to call a doctor, a regular doctor. Don't you think you ought to give way to her wish?"

"Not at all. The father is enlightened, and I am thankful for that. He knows the mighty power of Christian Science, and he does not wish to have his child treated on the mortal plane. Parents often differ this way, and I am sometimes supported by only one of them. But I never give way on that account. It's a great and glorious work that must be pushed."

"But if the child should die?" urged Phillida.

"It's not half so apt to die if treated on the spiritual plane; and if it dies we'll know that we have done all that opportunity offered. In all such cases the true physician can only commend the patient to the care of a loving Providence, feeling assured that disorder has its laws and limitations and that suffering is a means of developing the inner nature."

Having reeled this off like a phrase often spoken, Miss Bowyer walked over to the bed where the little lad lay.

"Miss Bowyer," said Mrs. Martin, with an earnestness born of her agony, "I don't believe in your treatment at all."

"That's not necessary," said the doctor with a jaunty firmness; "the faith of one parent is sufficient to save the sick."

"This is my child, and I wish you to leave him alone," said Mrs. Martin.

"I am called by the child's father, Mrs. Martin, and I cannot shirk my responsibility in this case."

"Please leave my house. I don't want you here," said Mrs. Martin, with an excitement almost hysterical. "I believe you are an impostor."

"I've often been called that," said Miss Bowyer, with a winning smile. "Used to it. One has to bear reproach and persecution in

a Christian spirit for the sake of a good cause. You are only delaying the cure of your child, and perhaps risking his precious life."

"Henry," said Mrs. Martin, "I want you to send this woman away and get a doctor."

"Hannah, I'm the head of this family," said Martin, dropping his chin and looking ludicrously impressive. But as a matter of precaution he thought it best to leave the conflict to be fought out by Miss Bowyer. He feared that if he stayed he might find himself deposed from the only leadership that had ever fallen to his lot in life. So he executed a strategic move by quitting his breakfast half-finished and hurrying away to the shop.

Miss Bowyer was now exultantly confident that nothing short of force and a good deal of it could dislodge a person of her psychic endurance from the post of duty.

She began to apply her hands to Tommy's neck, but as there was external soreness, the little lad awakened and cried for his mother and "the teacher," as he called Phillida.

Mrs. Martin approached him and said: "Miss Bowyer, this is my child; stand aside."

"Not at all, Mrs. Martin. You are doing your child harm, and you ought to desist. If you continue to agitate him in this way the consequences will be fatal."

Certainly an affray over Tommy's bed was not desirable; the more so that no force at present available could expel the tenacious scientist. Phillida, who somehow felt frightfully accountable for the present state of affairs, beckoned Mrs. Martin to the landing at the top of the stairs, closing the door of the apartment behind them. But even there the hoarse and piteous crying of Tommy rent the hearts of both of them.

"You must send for Mr. Millard," said Phillida. "He will have authority with Mr. Martin, and he will know how to get rid of her," pointing through the door in the direction in which they had left Miss Bowyer bending over the patient.

"There is nobody to send," answered Mrs. Martin, in dismay.

"I will send," said Phillida. They reëntered the room, and Phillida put on her sack in haste, seizing her hat and hurrying down the long flight of stairs into Avenue C, where the sidewalks, steaming after the yesterday's rain, were peopled by men on their way to work, and by women and children seeking the grocery-stores and butcher-shops. Loiterers were already gathering, in that slouching fashion characteristic of people out of work, about the doors of the drinking-saloons; buildings whose expensive up-fittings lent a touch of spurious grandeur to the pinched and populous avenue.

THE CLOWN AND THE MISSIONARY.

IT was a sunny May morning, and the *Baltic* was steaming out of New York bay for Liverpool. It was the old ship's last trip in these waters, and she made it under special conditions. She was given up entirely to second-class passengers, who of course, as a result, had in some respects first-class accommodations. The consequence was a social mixture perhaps a shade odder and more varied than is usually seen. Two weeks before, my friend Miss Milman had happened to see this arrangement advertised, and we had suddenly and happily discovered that at the rates given we could afford to drop work (our painting and writing) for a month or two and together "run over to the other side."

We were on deck in that May sunshine, our hands full of flowers,—for our friends had graciously ignored our lowly second-class estate in their farewells,—the bright waters dancing around us, the workaday world behind us, enchanted lands of romance and beauty before us, and at our elbows a new and heterogeneous representation of the dear, dull, supremely interesting human race. By the time we had spent an eternity of two days in a universe of water and sky we had discovered beneath the prevailingly commonplace exteriors various pleasing features among our fellow passengers. We enjoyed the incongruity of the Irish ward politician's obvious moral heinousness with his tender devotion to a little sick wife; we relished the simple and profound moral patronage we received from a trio of professional feminine philanthropists, well-meaning souls, dripping with self-esteem, who were going over to investigate the workings of some society for the promotion of some sort of good works; we delighted in their genuine horror of a stunning, bouncing, good-looking young woman who was said to be an actress, but whose normal position, it was perfectly clear, was at the head of a column of lightly clad Amazons in a Kiralfy spectacle, and we liked her as a perfect specimen of her kind; but we had most pleasure in the simple admiration and respect we felt for a shabby, gentle, intelligent missionary from China, who was on his way to a great Exeter Hall meeting in London, and in the curiosity aroused in us by a dumb, wooden youth with watery, pale eyes and a red head, who looked rough and "horsey," and whom we repeatedly saw sit-

ting in his state-room—it was opposite ours—reading a small Bible.

We thought it piquant when we found he knew the spectacular Amazon, but that was but the beginning of satisfactions, for we soon discovered that he was himself a circus clown.

To look upon a little dull, faithful-looking creature like that, to see him absorbed in reading a pocket-edition of the Holy Scriptures, and to be able to reflect that he lived by the violent vivacities of a sawdust buffoon, was a privilege that, among other things, made me laugh till I cried. Perhaps the step from the one expression to the other was shorter than usual.

The sight of him gave me new thoughts as to the possible value of rites, of formal observances. There was nothing in his aspect as he read to suggest keen intellectual or spiritual activity; on the contrary, I could imagine him turning two leaves at once and being never the wiser—or the less wise. The occasion was plainly one of ceremony, but it was equally plain that it was ceremony observed with religious feeling, and without going into the gloomy question of how far religious feeling may be removed from a sense of moral obligations, I felt very sure with such a boy as this, English or American, and unflattered by the public opinion of his world, the ceremony of Bible reading was morally conserving.

The third day out I did a highly reprehensible thing. I had seen the clown on deck as I came down to my state-room, and when near the open door of his I saw the Bible lying on one of the theatrical trunks with which the place was filled. The temptation was irresistible. I took it up and opened it at the front fly-leaf. Yes, there was the inscription in a half-formed, school-girlish Italian hand—American school-girls wrote something like it forty years ago:

To my Beloved Brother Teddy, from his loving Sister Emmy.

Remember thy Creator in the days of thy youth.

I called softly to Amy, and held up the page. "How could you be such a br—" "Brute" she was going to call me, but she stopped to avail herself of my misconduct and to read the words, and then we laid the book where I had found it and slipped away.

"Yes," she said, as we exchanged a look and a smile, "it would have been a pity to

miss that because of any small scruples. And now you 'd better stop; a little circus clown traveling over the earth like that is too picturesque an object for investigation. He 'll never come up to the situation."

I thought she was probably right; still my curiosity was not slaked.

During the several years spent by myself "on the stage" I had occasionally come in touch with circus people. To some extent they recruit the stage, and though actors affect great superiority to them, there is a degree of common understanding, and, on occasion, of good-fellowship between all show folks. I consider myself to hold rather originally favorable opinions of the sawdust performers as compared to other nomads, but I am not accustomed to see religion flourish among any such class, except, semi-occasionally, in the case of Roman Catholics. One effect of puritanism on Protestantism has been to unfit it for many Christ-like ministrations which the old church still better or worse performs. It was the loneliness of the little clown's religious aspirations that touched me most. I reflected on how many good people would be disconcerted to hear of them, feeling that in some mysterious way they most irritatingly and unjustly weakened their own position of condemnation towards clowns and circuses in particular, and the world, the flesh, and the devil at large.

I smiled at the thought. I was lying on deck in my steamer chair, and just then the captain of the Amazons, in much nautical splendor of blue serge and white anchors, whirled down the deck and collided in front of me with the shabby missionary.

The girl turned very pale. It was pleasing to see the awe with which the cloth inspired her, and in the confusion of her apologies she dropped a pack of cards. The missionary picked them up, and with a kindly, faintly humorous smile handed them to her, and she got herself off expeditiously, though, so to speak, with much sail taken in.

It occurred to me that perhaps this preacher did not illustrate the points I had been making against the pious. We had arrived at a bowing acquaintance, the missionary and I, and now when he glanced my way I smiled my recognition of the moment's accident. He smiled, too, and said, "When I first went to China I found that for the work I wanted to do I must dress like a Chinaman." The conclusion of his thought, that the clerical broadcloth might still interfere with his usefulness, he expressed only by a quizzical glance down the deck towards the young lady whose normal costume was tights.

Later in the long, fair, ocean-girt day, as the ship glided on between two still, blue wonder-

worlds,—the water was like satin,—Amy brought her water-color box on deck and began to sketch.

Everybody was on deck; the clown with a white, bell-shaped soft hat pulled down to his ears, and his hands in his pockets, was doggedly taking a constitutional and chewing a tooth-pick.

I was planning to use my past connection with the stage to help me to his acquaintance, when it appeared that we were to win that privilege through a quite different appeal. As I lay drowsy with content, watching the dashes of color brighten Amy's pad, I became aware that Teddy Catty (that was his delightful name) was circling about us, his pale, white-lashed little eyes blinking fixedly—if you will permit the paradox—upon Amy's work.

I looked up at him amicably as he came nearer; he touched his hat; there was a touch of the grotesque, something very clownish, in his very organization, and the way he touched his hat was faintly funny, was dimly Audrey-like. He came nearer shyly, cleared his throat, and said, with a very good accent and in quite the usual English way:

"Beg pardon, I hope you 'll excuse me for watching, but I take such an interest when I see any one painting."

"Do you paint?" I concluded my reply.

"Oh no, no, no indeed, but I have a sister who does. She paints wonderfully." Then, lowering his voice, he added hesitatingly, as if it were really immodest to speak of so much glory, "She has a picture in the Royal Academy this year."

Now this was exactly what I wanted to hear about. Amy was painting away; she had recognized the clown's presence by a civil glance only, so I encouraged him to draw up a stool and wait till her sketch was done.

I soon learned much of the little all that my week's acquaintance with him disclosed. The sight of a girl painting had melted him into a mood as communicative as a child's, and he only wanted a sympathetic audience to enjoy with him the music of Emmy's name. Yes, the heroine of the Royal Academy and the dear giver of the little Bible were one—she was Teddy Catty's only sister.

Let me give such an outline of their history as I can, in orderly sequence.

The father had been in charge of the work-room of a china-painting firm. "That 's all knocked off now," said Teddy Catty, and he explained lamely and naively how people wanted "high art" nowadays, and how consequently his father's old firm had gone out of business; his father had been with them forty years, and "he died pretty soon after he lost his place."

The mother had been a ballet-girl before she married, and she had numbers of relatives in various branches of the "show business." The children, four of them, were all put on the stage in pantomimes and such things when they were little. Of the family there were now left only the one brother and sister.

No, Emmy was not on the stage, "not in no way." Though his accent was so good the little clown's grammar was not upon a dull level of correctness. "Emmy never exactly liked the stage, her mother never exactly wanted her to go on it," and just when they did not know what she should do, she solved the problem the old way, and married—married a scene-painter at the Lyceum Theater.

"You may know by that that he's a good one; he was only in a small position when Emmy married him, but he's one of the head ones now. Then, you know, he knew some real artist painters, and Emmy,—she did n't have any children,—and she thought she'd like to learn to paint pictures; and she did. Her husband's awful proud of her."

It was the fifth day out, when, after much narrative that—as is the way of talk—did not advance the story, we reached this point.

We were again on deck, and Amy and I were lying in our chairs gazing over a tossing dark sea at a red sunset, while Teddy Catty sat facing us.

"You would n't think Emmy was my sister," he said. "She's like another kind. She's a beauty, and she's just like a swell, a nice swell, in her ways, and then she's good. My, she's good!"

"Is she religious?" I ventured.

"Now you know,—yes,—but then it's hard to say exactly what different people mean," and the boy gave himself up with grave pleasure to the serious business of accurately informing us as to Emmy's spiritual life. "She is as religious as she can be one way," he went on, "and then the other she only goes as far as she can without feeling as if she was throwing over the rest of us. Her husband he thinks religious people ain't his kind, and of course I'm nowhere with 'em, and Emmy can't make herself up to contract with them that despises us. You would n't believe what she thinks of me, you would n't indeed. So she just goes without religion except what she can get reading the Bible and—" half hesitating, and softening his tone, "and praying. She says she believes we can be good that way. She wants me to try. She is—good, good. I wish, though, she could be with real religious people, some kind. Our grandmother, one of 'em, was a great chapel-goer. She was an Independent. I think Emmy would be happier that way."

He turned his face towards the angry gloom

of the sea and the fading western sky, and we were all silent. What a comforting glimpse of human nature! What a touching, beautiful hint of human history in that disorderly Bohemian world was this the clown had given us! Not typical, perhaps, of anything less than the deep heart of man, but none the less typical of that because of its irrational, incongruous, half-comic setting.

Presently Amy said, with an odd little accession of formal courtesy in her tone, "I hope, Mr. Catty, you have a picture of your sister that you can show us. I should like to know how she looks."

Yes, he had her picture in his state-room; he wanted us to see it.

The limitless night was darkening around us in momentary pulsations; we left the wild, soul-searching scene for the petty, pretty glare of the cabin. While we were drinking our tea Teddy Catty brought us the photograph.

It seemed out of harmony with our present fleshly reaction against the infinite things of the spirit; we had to give our poor flagging souls a tug to make them respond to the unconscious awe that looked, madonna-like, upon us. You never saw a little child's face more deeply, simply serious. And yet—I find myself saying "and yet"—it was of the most typical, modern, London sort, with delicate, high, regular features, flat cheeks, and strong, smooth, structural lines—beautiful, but with an over-civilized, sophisticated beauty curiously at variance with the pure, tender goodness of the expression, and, in some obscure way, making it the more touching.

The next day I took the picture to show to the missionary; he smiled benevolently as I told of the quaint brother and sister, but being a missionary and not an artist, and seeing nothing to do for them, his mind inclined to wander. Yet once or twice afterward as he walked the deck with one of his small children by the hand,—he always had one with him when he did not have two,—he tried to join in our conversation with Teddy Catty; but when he saw the little fellow draw back overawed, he readily enough, with a shade of relief, perhaps, abandoned the gentle attack.

This trio was not often in session, so to speak, for Teddy Catty was very modest, and was scrupulously careful not to intrude upon us; but he was sure to be within beckoning distance whenever Amy was sketching. The sight exercised an absurd fascination upon him.

It was easy to see that he regarded me as of an altogether inferior race of beings as compared to Amy; with me he could talk on occasion, but to her he could scarcely more than speak when he was spoken to. This dumb

shyness, together with his professional position, puzzled Amy.

"Do you suppose," said she, "that he is anything of a clown, that honest little owl?"

In truth there seemed nothing clown-like about Teddy Catty except the clownishness of which I have spoken, the touch of oddity that made his identity seem a little humorous. But then I had seen successful comedians flourish on nothing more than a lesser degree of the same thing, and I knew too, what is always puzzling to the world, that the possession of the technique of any art enables the possessor to mold into expression much of his nature which he may lack either freedom, will, or strength to express in his life; so you see I was not surprised when my interest in Teddy Catty's artistic side was gratified by a chance verdict—but not a worthless one—that he was a good clown. It came from the spectacular Amazonian captain on the occasion of my first conversation with her. It happened one afternoon, as I was walking on deck, that I stumbled, and simultaneously the ship gave a lurch, and I was thrown upon the histrionic Amazonian breast. Upon such a provocation to unreasoning resentment her boundless good-nature instantly asserted itself, with pleasure in the opportunity, and then in an instant more she realized another opportunity—she would gratify a thirst for knowledge. Having helped me to my feet she hurried to say:

"I've heard Teddy Catty speak about you; he said you've been on the stage yourself. He's awful taken up seeing that friend of yours paint, ain't he? He's dead proud of that sister of his a-painting. Did you know anything about him before you came on board? Did n't you ever see him in the ring? He's a good clown, a real good one. They say he'll get with Barnum next, likely. There's some fun to him—not all just as if you'd pulled a string. I tell him he ought to go on the stage—comic opera. He can't sing much, but that don't matter for a funny man. I've been in comic opera some, not a principal of course—but I can get more with the Kiralfys and in pantomime over here," with a toss of the head towards the bow of the ship. I was as pleased with this confirmation of my divination as if I had been less assured in making it.

After having dreamed away half a lifetime in this little world upon the waters, and having all but forgotten previous states of existence,—at the end of ten days, that is,—we anchored off Queenstown. There, according to expectation, we met a party of pleasant acquaintances of both sexes, and straightway we sank—rose?—were transformed from the lofty patrons of Teddy Catty into something perhaps more like conventional young ladies

than some old-fashioned people would suppose possible.

It is strange now to think how unimpressively on this changed mood fell the news that Teddy Catty at Queenstown had met dark sorrow—a letter had come telling him his sister was dead. Not that we were indifferent. No; I remember feeling his bereavement with one of those appalling thumps of realization—no expression more conventional will express a sensation so fatal to conventions—that visit most of us often enough to point the blessing of our usual "wadding of stupidity." But after all, this heart-stopping sensation—as usual, I think—came rather from a sudden vision of the tragic conditions of all life than from direct, simple sympathy with Teddy Catty. Poor Teddy Catty had all at once become a very remote little figure, all but invisible, and there was so much to talk over with our friends; news was to be heard, experiences were to be exchanged, and plans to be made—a sudden development for us of a full world out of nebulous space. Still in the midst of all this pleasant pother we could but gaze upon the door that shut in the little clown and his sorrow, and feel momentarily rebuked for life and its inevitable frivolities.

It was a relief when his room-mate—a young man; we knew nothing more about him—came to me and with stammering, misplaced apologies asked if I thought, if I supposed, that the missionary would not mind, or did I think he would mind—"Does Mr. Catty want to see the missionary?" I asked with a sense of relief, and I went gladly to summon him.

The missionary was as usual occupied with his numerous little ones; his wife was sick throughout the voyage, and had scarcely left her state-room.

The missionary turned his bowed head a little from me as he listened, as if he were stealing himself against a personal misfortune.

"He begins where we leave off," I said to myself as I looked upon his pity-moved face.

He came back to me after he had taken the children to his wife, and said, "If I can comfort this poor boy through the word and love of my Master—there is no other comfort—I'll not forget it's to you I owe the opportunity"—there was self-reproach in the missionary's tone—"I never should have known anything about him."

It seemed that it took three or four people in this case to make one Good Samaritan. It happened as it is always happening in this fantastic life, that though I wished to ask the missionary about his interview with Teddy Catty, and had of course rational human motives for such an interest in the lad, one puerile triviality after another preoccupied me,

so that I had just a word with him before the ship's company parted at Liverpool.

We were in the custom-house. The missionary's wife, thin, pale, shabby, quietly executive, and a lady, kept order among her children in a corner of the great bare, over-lighted, ugly place, and beside her sat Teddy Catty with his hat pulled over his eyes.

I felt that I could not speak to him there,—to do so would, it seemed, emphasize the cruel, bold publicity of the place,—so I went to where the missionary stood over his bags and boxes—a queer lot—and asked him, if the worthlessness of the words did not choke him, to tell the boy good-by for us, and to say that we felt for him. I stopped short, shamed with the thought of how little we felt, realizing for once not only the powerlessness of human sympathy but its painfully absurd deficiency in quantity, the unnecessary thickness of our wadding of stupidity. Then I reflected, as I stood there, that this whole little episode of our acquaintance with the missionary and the clown, so slight, yet so dyed in the primary colors of life, its grotesqueness and comedy and inconsequence, its mystery and tragedy, was ending, or rather, as is the way of life, fading, wilting, passing, like a cloud, into something else, and that soon the quaint pair would exist for me no more; and I rebelled against the mutability of existence. I said to the missionary: "I shall be in London in a week or two. I don't suppose I'll ever be the least good to you or to Teddy Catty, and there is no reason in keeping up such an acquaintance as ours; but for no smaller reason than that we are all human beings—" The missionary's eyes responded so adequately with humor and a good deal beside that for a moment it did not occur to me to finish my sentence, and then I concluded, "let me come to see you or your wife a moment to hear how things are. You'll probably know something of Teddy Catty for as much as a fortnight longer."

Yes, he thought his friendship with the clown might survive all-devouring time so long, and he said he would be glad to see me again.

Yet I had been in London a week, and had not looked up my fellow-passengers, when one day as Amy and I were going through the amazingly crowded rooms of the Royal Academy whom should we see but the clown! He was sitting on one of the divans, dressed in the conventional mourning of a law-loving Englishman, a frock coat and a crape-banded silk hat dignifying Teddy Catty's little figure. We saw him furtively wipe his eyes as he gazed at the gilt-and-canvas-covered wall before him, and we knew Emmy's picture was there. We soon found it; it was a little one, hung rather high, and, like several thousand others in that home

of English art, it was of a baby, and, again like the majority of them, it was a poor picture—dull, conventional. Whatever had been in poor Emmy's heart when she painted it was concealed under a false, frigid method faithfully carried out.

Teddy's face worked convulsively for a moment when he saw us, then he pointed out the picture and gave us his place to sit in while we gazed. There was plainly no need of talking about it; he did not think of comment as becoming the occasion.

"It belonged to one of the dressers in the theater," he said softly after a time. "She had a lot of children, and her husband died, and—Emmy—Emmy helped her, and she was tremendously fond of that baby. She used to keep it at the house days and days to get chances to paint it." Teddy's voice failed him again.

After a while in the moving of the throng he got a seat beside us, and I noted as if it were something surprising that in taking it he arranged his coat-tails with the same little odd funniness of movement as of old; it did seem quite strange for a moment that his grief had not lifted him into ideal grace. He looked from one to the other of us and said, "I was going to try some way to see you ladies, but the missionary said you were going to come to see him. I wanted to tell you that I'm going back with him to China, and I'd never have known him if it had n't been for you."

"Going with him?"

"Yes, Miss Milman; I'm going to see if I can help him—help him be a missionary, you know." Teddy's unfamiliarity with the phrases of the "work" pleased my ear. "I've got a little money," he went on, "and I feel as if I'd like to do something—something religious sometime, and it seems as if this was my chance. I fancy Emmy would like it. But I never could turn in with church or chapel people here at home, I know I could n't. They think a circus man ought to repent a lot, you know, and that I ought to throw over the show business for good, and I don't see how I can, and I don't know that I want to. Long as Emmy did n't cut it altogether I don't know as I want to."

"But—what—how are you going to manage out in China?"

"Why, you know the missionary's different from most religious folks; he just takes things naturally; and I've some money by me, and Emmy left me a little—" He stopped a moment and stared fixedly into space, then, shifting his position a little, went on in a different tone: "I can go out there, and then he says he can give me things to do for him as a lay worker,—that's what he calls it,—and that I can be some use to him, and that it'll be easier for me to be in good standing there than here. I don't care

how it is, but I 'd like to stay with him awhile and do something some way for religion, you know, the real thing. Yes," in answer to a question, "I suppose I 'll come back and go in the circus after my money 's all gone. They 'd never want to support me as if I was a real missionary. I would n't be worth it; but they 'll let me be a Christian there."

We shook hands with Teddy Catty at the door of Burlington House, and I saw him no more; but when I called on the missionary he confirmed the story of these queer plans.

"Yes," he said; "Teddy seems so little capable of the ordinary ways of entering into and feeling about the religious life that I don't know what channel of usefulness would be open to him here. He wants to come with me, and it seems to me it is a good step; things are simpler out there. About his coming back—I don't think he 'll come back. I think in time

he can be taken fully into the work. If he does return, why, he 'll have a fuller religious experience than he has now to fall back on."

And so, thankssomewhat to two highly modern young women professing grave philosophical doubts of the wisdom of foreign missions, this curious transaction came actually to pass, and the only circus clown I ever knew, without renouncing what I shall call his art, sailed away to China as a Christian missionary.

No philosophical doubts could stop us from bidding him God-speed, nor have they quenched, since that day, a high degree of interest in Chinese missions.

Teddy Catty has not yet returned. We feel it would be piquant to see him again fill his place in the ring, but, withal, other than artistic sentiments will make us contented if the missionary's prediction comes true, and the circus knows him no more.

Viola Roseboro'.

TOPICS OF THE TIME.

The Argentine Cheap Money Paradise.

IN many respects the experience through which the Argentine Republic is passing, in an attempt to increase the general prosperity by making money cheap and plentiful, comes closer to the American people than any of the similar efforts in other countries which have been described in previous numbers of THE CENTURY. The government of the Argentine Republic is closely modeled upon that of the United States. It is a country of almost boundless natural resources, whose development has been so rapid as to be almost without parallel in history, and whose growth in wealth, prosperity, and commercial importance has been so nearly approached by no other country in the world as by America. Its people are an energetic, buoyant, self-confident race, full of pride in their country and inclined to the belief that it is capable of withstanding any strain that may be put upon it. Yet, rich and prosperous as they were, these people conceived the idea, when a slight check to their development was felt a few years ago, that what they needed in order to attain the full measure of their prosperity was to make money "cheap and plenty." Perceiving the importance of their experience as an object-lesson for our own country, bearing as it does directly upon discussion and propositions current here, we have gone thoroughly into the matter, examining all available sources of information, and have thus been able to prepare for our readers what we believe to be the most complete as well as accurate account yet published.

In 1873 there was established in the capital city of the Argentine Republic, Buenos Ayres, the Hypothecary or Mortgage Bank, whose main object was to make loans on all kinds of landed property. The principles upon which these loans were to be made were much the same as Senator Stanford is advocating as a basis for similar loans by the United States Government. Any person owning landed property in the province

could go to the bank and secure a loan for half its value, which was to be fixed by the bank's appraisers. The bank gave him a mortgage bond, called a *cédula*, which was to run for twenty-four years, at from six to eight per cent. interest, two per cent. amortization, and one per cent. commission. The interest was payable quarterly, and there were coupons attached for the twenty-four years. The *cédulas* were issued in alphabetical series, beginning with A and running to P. They were bought and sold on the Bolsa or Stock Exchange, and from their first issue became an important element in speculation. The first issue of series A was between \$13,000,000 and \$14,000,000, the Argentine dollar being about ninety-six cents of our money, being based upon the unit of the French monetary system. These remained at par for only a short time after issue. They were quickly followed by others, until series A closed with a total issue of \$27,394,000. Then came series B with an issue of \$1,092,000, series C with \$813,000, series D with \$288,000, all at seven per cent. Then came series E with a total issue of \$15,830,000 at six per cent., and F with a total issue of \$6,100,000 at seven per cent. Ten years after the bank's establishment over \$100,000,000 of these *cédulas* had been issued, all based, be it remembered, upon the landed property of a single province. They had from the outset been used for speculative purposes, and every year this use became more wild and reckless. A ring was formed between directors of the bank and certain favored brokers for the absolute control of the successive issues. No one could obtain concession for a loan who did not make application through these brokers, and in order that all the members of the ring might reap their share of the profit, the value of the property upon which the loans were placed was raised to extravagant figures.

The fictitious prosperity, which the Hypothecary Bank brought to Buenos Ayres infected the entire republic, and in 1884 Congress passed a law annexing a National Hypothecary Bank to the National Bank,

which was the fiscal agent of the government and of all the provinces except Buenos Ayres. The issue of *cédulas* on the landed property of the nation was authorized, for fifty per cent. of its value, at interest from six to eight per cent., with two per cent. amortization and one per cent. commission, no single loan to exceed \$250,000, and all payable at the end of twelve years. The issue of *cédulas* was at first limited to \$40,000,000, but this was extended from time to time so that in November, 1890, six years after the National Bank began the experiment, it had out no less than \$204,000,000 in gold, all bearing interest. The Buenos Ayres Bank had increased its issue of *cédulas* so that at the same date it had out no less than \$330,000,000, but these were in paper, making the grand total of money which had been loaned upon land in the republic during seventeen years, \$534,000,000, or over \$140 for every man, woman, and child.

When the National Bank went into the hypothecary business in 1884 paper money was at par with gold. Several severe checks to the national prosperity were felt during that year. Cholera made necessary a rigorous quarantine against Mediterranean steamers and checked immigration. Heavy floods during the fall delayed the shipment of crops from the interior to the seaboard. A new government loan of \$90,000,000 was to be placed, but the European market which was expected to take \$10,000,000 of it was so nearly sated with Argentine investments of one kind or another that it declined to take more than \$3,500,000.

In January, 1885, a run began upon the Provincial Bank of Buenos Ayres, and compelled it to suspend specie payments. Whereupon the President of the republic declared the national currency a legal tender. Gold rose at once to 17 per cent. premium, and then to 20 per cent. In February it had reached 33 per cent., and it continued to rise steadily till at one time it was at 300 per cent. That is to say, \$400 in paper was worth only \$100 in gold. From the moment that the gold standard was abandoned, the demand for more paper money began to be heard, and it was poured out by the government in almost unlimited volume. Under the pretense of creating a sounder financial system and securing a more stable currency, a law was passed in November, 1887, establishing a system of State Banks, forty in number, similar to our National Banks. These started with a capital of \$350,000,000, and began to issue paper money, not being required, as our banks are, to be able at all times to redeem their notes with gold. When the premium on gold had reached 40 per cent. the government took the position that the increase was a trick of the brokers, and not in any way an outcome of currency inflation, and issued a decree allowing the banks to issue currency practically without limit. At the same time the government, to satisfy the demand for gold, and prove its belief in its own contentions, threw \$30,000,000 of its gold reserves on the market. The gold premium continued to rise with no perceptible check, and as it rose the banks poured out more and more paper money in a frenzied attempt to check its upward flight.

It was discovered after a time that, through trickery, there were several millions more of this irredeemable paper money in circulation than had been supposed. A provision of the national banking law required that all banks reorganizing under it should withdraw and cancel

their old notes when they put their new ones in circulation. Several banks, in collusion with dishonest officials, violated this requirement, and kept a large part of their old issue in circulation with the new. At one time the amount of this fraudulent money, based on nothing whatever, amounted to \$60,000,000. Some of this was afterward destroyed, but the latest official estimate put the amount still in circulation at over \$35,000,000. As the latest attainable total of the regular paper issue of the banks places it at \$345,000,000, the grand total of paper money in circulation in March of the present year, worth about 25 cents on a dollar, was \$380,000,000, all irredeemable, and decreasing in value every day. This was a *per capita* circulation of \$100 for every man, woman, and child in the republic. That ought certainly to have put "plenty of money in the pockets of the people," for \$100 is the highest sum *per capita* our wildest cheap money advocates have ever demanded.

With the entry of the National Bank into the business of loaning money on land, the whole country plunged into a wild debauch of speculation, which closely resembled that through which France passed when the same financial experiment was made under John Law's inspiration, as described in the preceding number of THE CENTURY. All kinds of property acquired a fictitious value, and were made the basis for loans at that valuation. The government, departing with complete abandon from all the limitations of legitimate government, helped on the popular furor by giving its aid and sanction to all kinds of mushroom banking, building, and colonization enterprises designed to "boom" the value of property and increase its loanable capacity. The country was sprinkled all over with banks pouring out millions of paper money which could never be redeemed, and thickly studded with inflated joint-stock companies with millions of capital on paper, whose business it was to get from the banks loans for many times the real value of the property upon which they were based. When the banks had exhausted all their capital in loans, the government, assuming their indebtedness, gave them millions of gold with which to continue the issue of *cédulas*. The business of speculating in gold became enormously profitable, and private banks made fortunes. Men made 10 per cent. per week in the business, and 20 to 24 per cent. per annum was the usual profit. A Bank of Construction was conceived and put in operation by a German Jew, which, in collusion with dishonest government officials, bought vast amounts of property, improved it, obtained exaggerated loans upon it, and sold it in such dishonest ways that the interest on the loans could never be collected. The Jew made a colossal fortune; the stock of his bank went to enormous figures on the Bolsa but, when the tide turned, fell 100 points in a single day, carrying ruin to hundreds of men who fancied themselves rich.

Many of the early *cédulas* had been sent abroad, and their ready sale in London, Paris and Berlin had encouraged their further issue. About \$15,000,000 in all were taken abroad, and more would have been bought had not the European market been flooded with Argentine loans between 1881 and 1890. These were instituted or backed by the Argentine government, and consisted chiefly of loans either to the government or to provinces or to cities. They were for nearly every conceivable purpose, railways, harbors,

street paving, public buildings, school-houses, markets, tenement-houses, bridges, theaters, hospitals, boulevards, public squares, and drainage. In December, 1889, the aggregate of these loans, taken largely in England, was over \$122,000,000 for the republic and over \$193,500,000 for the provinces, and the total amount of gold which had to be exported annually from the Argentine Republic to pay the interest on its foreign indebtedness, and dividends on railway, bank, and other stocks held abroad, was over \$75,000,000. With a foreign debt of \$315,500,000, there had been accumulated at the close of 1889 an internal national debt of \$207,000,000, and an internal provincial debt of \$44,000,000, making at the close of that year a grand total debt of \$566,500,000. This has since been increased to \$772,500,000. As the population of the republic is about 3,800,000, the debt is over \$203 for every inhabitant.

It is small wonder that under this mountain of debt the national government is bankrupt, having neither money nor credit, and that it anticipates a deficit for the current year of over \$17,000,000. The provincial deficit for the current year is estimated at between \$4,000,000 and \$5,000,000, making a probable deficit in the whole republic of nearly or quite \$22,000,000. Affairs have been going from bad to worse since the crisis of 1890. Credit practically collapsed in the spring of that year. After that time the provincial banks were not able to meet their obligations. The lands upon which loans were based became unsalable, *cédulas* dropped to 50 and even 35 cents on the dollar, which was equivalent to 13 and 9 cents respectively in gold. The paper dollar was worth about 25 cents. The Provincial Bank of Buenos Ayres, which was the savings bank of the working classes, stopped paying its obligations in 1890, and the National Bank passed its dividend. A revolution broke out, and though the government quelled it the President was forced to resign.

Investigations instituted by the new government into the condition of the banks revealed astounding rottenness and corruption. The whole power of the government was exerted for several months to prevent the National Bank and the Provincial Bank of Buenos Ayres from being publicly declared insolvent, but on April 8, 1891, the President gave up the struggle and issued a formal decree for the liquidation of both, all payments being suspended till June 1. The time was subsequently extended twenty days by Congress, and then extended indefinitely. This was the end, and the wreck of the banks was complete. In 1886 the National Bank had a capital of £10,000,000 sterling, and the Provincial Bank one of £8,000,000 sterling. Not a penny of the latter remained. The National Bank had lost £8,800,000 of its £10,000,000, and owed the government £14,000,000. These two banks had lost, therefore, during five years' experience with cheap money based on landed property, about £30,000,000 sterling, a sum more than double the capital of the Bank of England.

When the collapse came the nation gave itself over, as France had done two centuries earlier, to rage and despair. Men who were believed to be worth millions found themselves paupers. One man who had been worth \$20,000,000, which he had accumulated during a lifetime's devotion to honest industry, but who had been tempted to venture it in speculation, lost every

dollar. He had just completed the building of a house of palatial magnificence, costing \$180,000, but had never entered it, when the crisis came and it was taken to pay his debts. A United States minister to a South American government, who was in Buenos Ayres at the time, thus describes the condition of the nation:

In six months the people have passed from commercial activity and enthusiasm to depression; from happiness to misery; from confidence to despair. They have taken a Niagara plunge, from which they will not recover in a generation. The worst of the scheme was that it offered irresistible temptation to bribery. It made it possible for any man who owned real estate to get almost any quantity of money, if he would only swear falsely. An acquaintance of mine had a nice farm there which he valued at \$15,000. The law would give him a loan to one-half of the value—that value to be fixed by the official appraisers. He "saw" the appraisers, and he obtained a loan of government money—*cédula*—amounting to \$250,000, the maximum loan permitted by law to one person. Think of it! And the money was indorsed by the Barings, the great London bankers! Of course the appraisers got half of it, but the people have it to pay. And they are now in debt more than \$100 for every, man, woman, and child—hopelessly bankrupt.

Mr. E. L. Baker, the United States consul at Buenos Ayres, to whose valuable reports we are indebted for much of the information contained in this article, says under date of Nov. 17, 1890:

The collapse has come, and come with a vengeance. Lands unsalable at any price; national banks gutted and left without a cent in their strong boxes; stock companies with fraudulent entries in their records and without anything to show for the pretensions they set up; merchants unable to meet their liabilities in bank; notes protested and extensions granted; the general business at a standstill; the banks hesitating to discount; and nobody able to say whom it is safe to trust—such is the picture which the country presents to-day. . . . Every business, every industry, every new enterprise feels and suffers from the tremendous reaction which has taken place. Everybody is confounded and stands aghast, looking at the stick which but yesterday, as it were, was a flaming rocket. The truth is the Argentine Republic is suffering from a paralysis of credit. . . . The "fool's paradise" in which the Argentine people have been living for the last few years must be wiped out of existence. Inflation must give place to "hard pan." . . . It has been the general boast among those who were pushing on the "boom" that this was an "exceptional country," and that the ordinary laws of trade, currency, and banking, however requisite to be followed in such countries as England or the United States, had no significance or applicability in the Argentine Republic. Here, it was insisted, all manner of violations of economic principles could be practised with impunity, and the country would flourish by the outrage. The present prostrate condition of both public and private credit shows the inherent fallacy of such an assumption. I only fear that the country will for a long time have to walk in the valley of humiliation and endure a protracted period of business and financial depression before it will again be able to hold up its head and present that buoyant and triumphant look which it has heretofore so proudly worn.

This is the experiment which men imbued with Senator Stanford's ideas are seeking to have the United States undertake. They are advocating it with precisely the same kind of talk which Mr. Baker quotes as having been heard in the Argentine Republic. They are calling the United States an "exceptional country" which is so great and prosperous that it can defy not merely economic laws but the teaching of all human experience. The consequences of the Argentine experiment were felt not only in that republic, but they convulsed the financial centers of three great European countries and virtually ruined the first banking house

of England. The effect was so severely felt in this country that a panic was imminent nearly every day for several weeks, while all branches of trade suffered a mysterious and numbing paralysis.

In the gain or loss of one race all the rest have equal claim,

says Lowell, and of nothing is this more true than of the observance by a nation of the great laws of common honesty and fair dealing which lie at the foundation of all economic science.

The Lottery's Last Ditch.

THE determined fight which Governor Nichols of Louisiana is making against the proposal to give a new lease of life to the lottery in that State deserves the moral support of the whole country. It is a fight for the rescue of the State and its people from the clutches of an evil which has been driven from every other American State, and which the American Government has by formal legislative enactment declared to be so pernicious that the mails cannot be used in any manner in its behalf. Kentucky, which for some time shared with Louisiana the bad distinction in being the only other State in which lotteries were permitted, has abolished them and put into her new constitution a prohibition against their reestablishment. An effort was made in 1890 to introduce them into the new State of North Dakota, but was defeated by the vigorous opposition of the Governor.

Lotteries have at one time or another been employed by all modern governments as a source of revenue, but though they have proved to be a ready and sure means for replenishing a depleted treasury, they have in all cases been found to exercise a mischievous and demoralizing influence upon the people, and to do harm especially to the poor. Between 1816 and 1828 they were in use by the French Government and yielded an annual income of 14,000,000 francs. They were suppressed in May, 1836, and in January following it was found that 525,000 francs more were on deposit in the savings banks of Paris alone than had been there in the same month of the previous year. Parliamentary lotteries existed in England from 1709 till 1823. Their harmful influence began to attract attention in 1819, but so strong were they that it took four years of agitation to secure their suppression. They appeared in the United States very early in its history, and were used for the aid of all kinds of enterprises. Through their agency colleges, hospitals, and churches were built, and roads and bridges and other public works constructed. The first movement for their suppression began in Pennsylvania in 1833, and extended so rapidly to other States that by 1875 no fewer than twenty-six States had adopted laws suppressing them and making the advertisement of them or of foreign lotteries a penal offense. At the present time, as we have said, Louisiana is the only State in which they are allowed.

A general law was at one time on the statute-books of Louisiana forbidding lotteries, but during the "carpet-bag" régime in 1868 this was superseded by an act granting a charter to the Louisiana State Lottery for a term of twenty-five years at an annual license fee of \$10,000. In 1879 a bill for the repeal of the charter was passed by both houses of the legislature, but as part of the license fee for that year had been

paid the company raised the point that the repeal was invalid, since it was a violation of a contract with the State. The question was carried into the constitutional convention which was sitting in that year, and as a result the new constitution which that body adopted had two curiously conflicting clauses, one declaratory, to the effect that the repeal legislation was invalid because violating a contract between the State and the lottery company, and the other prohibitory, ordering that all lotteries should cease after January 1, 1895. This same constitution, while declaring gambling to be a vice and ordering the legislature to enact laws for its suppression, authorized the granting of other lottery privileges and charters in addition to perpetuating the charter of the Louisiana State Lottery. Various explanations are given for these contradictory provisions of the constitution, but students of the pernicious character of lottery influences think there is no mistaking the real cause.

This action of the convention destroyed all hope of repeal of the charter before its expiration, for it implanted it firmly in the constitution of the State. The company was secure till 1893, at which time its charter would expire. In the spring of 1890, when the waters of the Mississippi were most seriously threatening the levees, the lottery company made its first move for a new lease of life by sending to Governor Nichols an offer of \$100,000 to be used for levee purposes. The Governor returned the money on the same day on which he received it, saying that as it was generally known that the company would seek a new charter at the approaching session of the legislature in May, he would not consent to place the State under any sort of obligation to the company. When the legislature met, the Governor, in anticipation of the application for a new charter, gave up a large portion of his annual address to an earnest and eloquent protest against granting it. We quote some of the more striking passages:

A legalized lottery is forced into taking a constant, active interest in the movements of not only one, but all political parties, sending its paid agents among the masses to corrupt and deceive them, buying up, throttling, silencing, and muzzling the press whenever and wherever it can be done, in the cities and in the country, breeding treason and dissension among friends and among leaders, fomenting faction and independent movements when faction suits its purposes, using all expedients and halting at nothing necessary to compass its ends.

I have already alluded to an appeal to be made to the members of the General Assembly to avoid responsibility by permitting the people of Louisiana to vote themselves for the adoption or rejection of the proposed amendment. Such an appeal will be nothing more or less than an appeal to give the lottery company the opportunity to go into the next campaign (fortified, as it will claim to be, by the approval of this General Assembly), and by and through an immense corruption fund mass all the bad elements in the State, white and black, and by their united vote endeavor to ride rough-shod over the respectable and worthy people of this State. Let no man deceive himself, and let no man be deceived by others in this matter. This is precisely what this appeal means. The occasion is too serious to mince matters. I am addressing men of Louisiana, who know as well as I do the value of my words, when I say to them that, should this lottery get firmly planted in this State, it will own and hold the purchasable vote solidly in the hollow of its hands, forever, and through it and by it the liberties, the property, and the honor of the people of Louisiana are at its feet. It would make and unmake governors, judges, senators, representatives, commis-

sioners of election, returning officers, assessors, and all other officials, at its will. Merit would be disregarded and the test of office would not be ability, integrity, public spirit or worth, but subserviency to the behests of that company. Virtue would be the very best bar to official position.

The manner in which the lottery company went about the business of securing its desired new charter confirmed the Governor's declarations about its insidious and corrupting methods. A bill was introduced in the legislature providing for the submission to the people of the State of a constitutional amendment, in which a new charter was granted to the lottery company for twenty-five years in return for the sum of \$31,500,000, to be paid in annually to the treasury of the State, in the following amounts: For the public schools, \$350,000; for the levees, \$350,000; for charities, \$150,000; for pensions to Confederate soldiers, \$50,000; for the city of New Orleans for drainage and sanitary purposes, \$100,000; and for the general fund, \$250,000. This was indeed a bribe of enormous proportions — \$1,250,000 a year for twenty-five years offered to the people of the State to induce them to put gambling into their constitution, and thus make their State a partner in a gigantic gambling corporation. When the measure came up in the two houses it passed in each by exactly the two-thirds vote necessary. This was sufficiently clear evidence of careful and systematic work in its behalf. It was sent to the Governor, and promptly returned with a veto message in which he reiterated his former views, and made an eloquent plea against committing the State to the disgrace involved in the enactment of such a bill. He pointed out that the State had no need of such aid, that it had not been since the war in a better condition, and that it was moving forward to an era of assured prosperity. He declared that the company, composed of seven men, of whom the name of only one was known, was asking the State to sell its birthright for a mess of pottage, and thus solemnly adjured the legislature to do its duty:

I call upon it to pause before it takes finally that step and plunges this State into untold trouble. Is there nothing significant in the vote by which this bill has passed, the exact two-thirds vote in each house, and nothing deeply significant in the twelve of the votes in the house and four of the votes in the senate by which that exact majority was reached? Is not the future foreshadowed? To me it most certainly is.

I say to this General Assembly in all earnestness that should this measure be passed we shall enter upon a period of strife such as has never been seen before in Louisiana, and should this contemplated corporation ever be forced upon us, an era of corruption and degradation will follow, beside which the era of reconstruction will appear as one of honor and happiness.

Not the least impressive portion of the veto message was a passage in which the Governor expressed his conviction that if the charter were to be granted the ultimate result would be the pauperization of the State. "Extravagance, profligacy, and corruption will as surely follow the result as the night follows the day," he said; and then proceeded to argue that there would be an immediate falling off in legislative appropriations for all purposes for which the lottery money was given, depreciation in the State credit, and increase in the State's interest-bearing debt, with the result that at the end of twenty-five years a vast amount of interest would have been paid out unnecessarily, improperly, and illegally, and the State's poverty would be so ex-

treme as to furnish a far stronger claim than it does at present for a continuation of the lottery.

The lower house passed the measure immediately over the veto by the same vote as before, and it went to the senate. Before a vote was reached in that body, one of the senators who had voted for it on its first passage died, and there were not two-thirds in its favor. The company then had the senate shift its ground, sending the bill back to the lower house with the claim that it did not require the Governor's signature in order to be ready for submission to the people, and that hence the veto was of no account. The house rescinded its vote, and the clerical officers of both houses were directed to certify all proceedings upon the bill to the Secretary of State. The Secretary of State did not include the act in the printed journals of the legislature promulgated in book form after the adjournment, on the ground that it did not belong there as it had not been passed in accordance with legal requirements. A mandamus was obtained to compel him to promulgate it, and, after argument on both sides, the Supreme Court decided in April last to make the mandamus peremptory, thus sustaining the lottery company in its course. This decision sends the amendment before the people for their approval or disapproval at the election in April of next year, and makes the lottery issue the absorbing one of that contest. Governor Nichols's successor and a new legislature are to be chosen at that time, and the campaign is certain to be the most exciting that the State has witnessed since it overthrew the carpet-bag régime in 1877. What the lottery company will do in order to carry the day is foreshadowed in the passages from Governor Nichols's message which we have quoted above.

The interest which the whole country has in the struggle, aside from the moral aspect of it, is emphasized by the declaration of the lottery company that only three per cent. of its revenue comes from the people of Louisiana; the rest is drawn from the country at large. It was to shut off the greater part of this ninety-seven per cent. that Congress passed the law which went into effect last year, excluding newspapers containing lottery advertisements from the mail, and prohibiting its use for sending tickets, collecting money, and distributing prizes. The lottery company is contesting the constitutionality of this law in a suit which is pending in the Supreme Court of the United States, and which is to come up for hearing at the October term. The company's contention is that the act is an abridgment of the freedom of the press, and an attempt on the part of Congress so to pervert one of its legitimate powers to an illegitimate use as to accomplish a purpose entirely outside of Federal jurisdiction, that is, to suppress a business within a State. If the court shall uphold the constitutionality of this law, the power of the lottery company for evil, even if it succeeded in obtaining its new charter, will be greatly lessened. Indeed it is difficult to see how, without the aid of the United States mails, the company will be able to do business enough to enable it to pay over to the State its annual bribe of a million and a quarter of dollars.

"Orthodoxy and Liberty."

NEVER in our generation, perhaps never in America, were questions of creed and of church discipline crop-

ping out in so many new ways, places, and humors, as at this moment. Creed revision, accusations of "unsoundness" or actual "heresy," discussions in the pulpit and in the so-called religious and so-called secular press, are with us continually. It is idle to say that the whole matter is a specialty and that the opinion only of specialists is of any account. Matters of religion are vital to every soul, and the pew as well as the pulpit must make up its mind,—the priest and the layman, the scholar and the unscholarly. We must all know and do something about it; we cannot, at the very least, help thinking about it; and we cannot be altogether blamed if sometimes we "think out loud."

Now this matter of *thinking* brings us straight to a point which some of those in ecclesiastical or official place seem sometimes to lose sight of. The modern world is too much in the habit of doing its own thinking to look without amazement at any apparent effort to put a stop to this highly sane and sanitary habit of the human mind. If it should get to be understood that in any branch of learning, in any historical, philosophical, moral, or religious system, in any society or group of scholars, or teachers, or preachers, fearless and unbiased investigation, and the frank acceptance of the results of such investigation,—in other words, honest, earnest, and independent thinking,—was at a discount, was, in fact, to be peremptorily, and hopelessly, and forever limited by some fixed and ancient formula, why, then there would arise a suspicion of—shall we say a contempt for?—that system, or that group, which would militate against its intellectual and moral influence to an extent beyond all computation.

We know well the honesty, the honor, the devotion, and the deep conviction of many of those active in stemming what they regard as "the tide of infidelity," which appears to them to be perilously invading, in our day, the most sacred places. But it seems to us they should welcome an outside view which they may at first deem entirely and impertinently secular, when that view is a warning as to the effect upon the world at large of what might have the appearance of persecution of preachers and teachers known in their various communities for a genuine, a glowing, a most helpful, a most passionate Christianity.

Nor should these questioners of the faith of others spurn the opinion of that world at large as an opinion unsanctified and worthless. The world at large is made up of separate souls to whom it is the mission of the Church to bring the food of the spirit. The Church, therefore, should seek—should it not?—to remove, so far as possible, every barrier that separates it from those it would succor and uplift—every barrier moral, spiritual, and intellectual. There are minds that do not wish to do their own thinking, that are happiest when utterly relieved of that duty; but there are others—and in the modern world the number is increasing—who can no more cease to think than they can cease to breathe. It would be moral and intellectual death in the first place as surely as physical death in the second. The motto, "Leave thought behind, all ye who enter here," over the door of any church or any institution of any kind of learning—what would be the effect, think you, of such a motto upon the young, curious, active, and earnest minds of this generation? And it is just such minds that are

needed now no less imperatively than at any former epoch to carry on the work not only of evangelizing the world but of christianizing christendom.

But is it a mere secular warning? A little while ago one of the leading divines of the country was elected to a chair in the Union Theological Seminary of New York. Before entering upon his new duties the Reverend Henry Jackson Van Dyke passed suddenly away from the scene of a helpful, noble life. It is a great loss; yet many useful years in the important position to which he had been just called might not have had a wider or deeper influence than certain words of prophetic warning spoken by him a few days before his death. "If we cannot have orthodoxy and liberty," said Dr. Van Dyke, "let us have liberty, and go without orthodoxy!"

It is a general principle of which we are speaking; we do not desire to judge of particular events, of decisions made in this case or that. In every society, in every institution, there must be limits to individual action; even to the results of individual thought, when those results lead too far away from assumed standards or self-imposed obligations. The individual surrenders something of his individuality when he seeks certain advantages which can come only by association. And, too, the question must inevitably arise in the conscience of the individual, as to how far he may grow to differ with his surroundings—with the creeds, and rules, and obligations of his position—and still honestly maintain his original formal relationship to those surroundings.

It is therefore, we repeat, not our desire to refer to special occurrences, or to any details with regard to these occurrences—save a single one. When the question recently arose of the official confirmation of the election of a certain eminent Episcopal clergyman to the bishopric of his own diocese, one of the objections urged to the confirmation was, to quote the exact language of protest, "the presence" of the great preacher "at the so-called 'ordination' services" of another eminent preacher of the same Gospel of Jesus Christ—a preacher belonging, in other words, to another denomination of orthodox Christians.

When the study of ecclesiastical history can lead a good and conscientious Protestant ecclesiastic—along with many other good and conscientious and intellectual men and women—to conscientious and painful doubts of the propriety of making a bishop of one whom they acknowledge to be "great," "the prince of preachers," "a king among men," because he with other priests of his church takes a less strenuous and technical view of the "historical episcopate," and one that permits him to extend the right hand of fellowship to other pure, able, and devoted preachers of the word of God; when such a seeming perversion of Christianity is proclaimed to the world at large as of the essence of the Christian Church—the world looks at such a spectacle with an indignation, or a levity, that should turn instead to awe and wonder at the laws that govern the human mind and that involve such astounding inconsistencies in the intellectual processes of the good. And in the end this awe and wonder should breed that finest and most Christlike flower of the spirit of toleration—namely, the tolerance of intolerance.

OPEN LETTERS.

"Valor and Skill in the Civil War."

IN THE CENTURY for May, 1890, there appeared an exceedingly interesting article entitled "Valor and Skill in the Civil War." The article was divided into two parts, the first written by Colonel Theodore Ayrault Dodge of the United States Army, the second by Charles A. Patch of the United States Volunteers. The whole article is in so friendly a spirit that we are obliged to believe in the intention of the writers to be fair. Yet in the part written by Colonel Dodge occur some very misleading and erroneous statements. It is the purpose of this article to call attention to some of these statements, but without any design of discussing the question "Was either the better soldier?" In arguing that the Southern Confederacy was not as greatly overmatched as some nations that had been more successful, Colonel Dodge says:

If we will turn back to our own Revolution, we shall find that the population of the United Kingdom alone was five times as great as that of the colonies. And yet Great Britain was unable, after seven years of staunch effort, to reduce these revolted colonies to obedience. If we will go back a half generation further, to old Frederick, we shall find that in the Seven Years' War the population of the allies was twenty times as great as that of Prussia. And yet the allies failed in those seven years to wrest Silesia from the iron grip of this "Last of the Kings." . . . If a hundred years ago Great Britain, with more than five times their population, failed in seven campaigns to subject the colonies; if Austria, Russia, France, Sweden, and the Imperial forces combined were unable, in seven campaigns, to overwhelm that grim old Brandenburg monarch, surely we may feel that our work was not ill done, if in five campaigns, with a population of but three and a half to one, we succeeded in crushing out the rebellion of 1861.

Colonel Dodge seems to overlook the fact that the broad Atlantic, separating Britain from her revolted colonies, was worth to the cause of America thousands of men. He also leaves entirely out of the count France, Spain, and Holland, which powerful nations all combined against Great Britain. At Yorktown the allied armies of France and the United States more than doubled the effective force under Cornwallis, and, besides, a powerful French fleet made certain the victory which secured American liberty. In the war of the Revolution Great Britain was the party overmatched and not the United States. Again, in the Silesian or Seven Years' War Frederick had as his allies Britain, Hanover, and Hesse, whose combined army, under the able leadership of Duke Ferdinand of Brunswick, did splendid service for the Prussian king. When at the close of his sixth campaign all subsidies from England were stopped by the Earl of Bute (after George II.'s death), Frederick was reduced to as great straits as was the Southern Confederacy at the close of 1864. Prussia was at her last gasp; but the death of the Czarina converted the most powerful of Frederick's enemies into a fast friend, and the Czar Peter III. joined his army to that of Prussia, while Sweden also retired from the alliance against him. Thus by timely help when all seemed lost Frederick was saved. Alone and unaided the Confederacy struggled for four

years against a foe whose population outnumbered its own in the ratio of three and one-half to one, and whose armies were swelled by thousands of recruits from the nations of Europe. Again, Colonel Dodge says:

Owing to its extraordinary exertions, the South had under arms, until the last third of the war, an average of about three-quarters of the force of the North. And we shall see that at the point of actual contact the forces of the North and the South were not far from equal up to 1864.

To prove this statement he introduces the following extraordinary

TABLE OF NORTHERN AND SOUTHERN FORCES UNDER ARMS.

Date.	Federals.	Confederates.	Per cent.
January 1, 1861..	16,000 ..	Arming.	
July 1, 1861.....	186,000 ..	150,000 ..	80
January 1, 1862..	576,000 ..	350,000 ..	60
March 1, 1862....	637,000 ..	500,000 ..	80
January 1, 1863..	918,000 ..	690,000 ..	78
January 1, 1864..	860,000 ..	400,000 ..	47
January 1, 1865..	959,000 ..	250,000 ..	26
March 31, 1865..	980,000 ..	175,000 ..	18
May 1, 1865.....	1,000,000 ..	None.	

From what source did Colonel Dodge get the above figures? In the greatest war-history ever published, viz. "Battles and Leaders of the Civil War," we find, Vol. IV., p. 767, an article entitled, "Notes on the Union and Confederate Armies." In these notes we find, taken from the official records, a table showing the number of men enlisted in the army and navy of the United States during the civil war. This number amounted to 2,778,304. There is another table, also taken from the official records, showing the whole number of men enrolled—present and absent—in the active armies of the Confederacy on each 1st of January:

Jan'y 1, 1862	Jan'y 1, 1863	Jan'y 1, 1864	Jan'y 1, 1865
318,011	465,584	472,781	439,675

The writer of the "Notes" adds:

"Very few, if any, of the local land forces, and none of the naval, are included in the tabular exhibit. If we take the 472,000 men in service at the beginning of 1864 and add thereto at least 250,000 deaths occurring prior to that date, it gives over 700,000. The discharges for disability and other causes and the desertions would probably increase the number (inclusive of the militia and naval forces) to over 1,000,000."

Now, every one knows that the Confederate armies were much smaller in 1864 than in 1862 or 1863, and in 1865 they were smaller still. Hence it is evident that the absent list included sick, disabled, prisoners of war, and deserters. Every soldier knows that in an active campaign the absent from proper causes soon number a large proportion of the force enrolled, and that in garrison duty there is always a large proportion of sick. On page 290, Volume VII., "Southern Historical Society Papers," Adjutant-General Cooper, of the Confederate army, says: "I can only state from general recollection that during the two last years of the

war, the monthly returns of our armies received at my office exhibited the present active force in the field nearly one-half less than the returns themselves actually called for, on account of absentees by sickness, extra duty, furlough, desertions, and other casualties incident to a campaign life."

Of the 439,675 *present and absent* on the first of January, 1865, the Army of Northern Virginia is credited with 155,000 and the Army of Tennessee with 86,995. Now it is a well-known fact that at that very time the Army of Northern Virginia had less than 60,000 effectives for the field and the Army of Tennessee could not have mustered 20,000 effectives. At this rate the total available force of the Confederacy at that time must have been less than 150,000 men. Now the official records show conclusively that the Confederacy never at any time had 690,000 men enrolled present and absent; 472,000 present and absent is the largest number enrolled at any time, and that, too, on the 1st of January, 1864, when everybody acquainted with the facts knows that the Confederate armies were smaller than in either of the previous years. The writer of "Notes on the Union and Confederate Armies," as we have seen, estimates that, inclusive of the militia and naval forces, there were enlisted in the Confederate armies from first to last more than a million men. When we consider that the militia consisted of old men, boys, and disabled soldiers who had already been once enrolled, 100,000 would be a liberal estimate for the militia and naval forces of the Confederate States, which would bring the total number of enlistments considerably below a million. But suppose we concede the correctness of the estimate of the writer of the "Notes." Then, if 2,700,000 enlistments in the Union armies give as the largest force under arms at any one time only one million men, surely 1,000,000 total enlistments in the Confederate armies ought to give as the largest force under arms at any one time only a little over 370,000 men, inclusive of militia and naval forces.

We also think that Colonel Dodge's list of battles contains several mistakes. At Fort Donelson the Confederates did not have over 15,000. Grant brought against them about 27,000, of whom, he claims, 6000 or 7000 were guarding trains.

At Cedar Mountain, Virginia, Banks had on the field from first to last 17,900 men instead of 7500, and he was driven entirely from the field. Jackson, who had 20,000 men with him, held the field and buried the dead, and on the second day after the battle retired behind the Rapidan to wait the arrival of Lee. At Perryville, Kentucky, Buell had, according to the official records, 54,000 men, about half of whom were actually engaged, and Bragg 16,000. Each side claimed the victory, but Bragg's loss was only three-fourths that of Buell. At Murfreesboro', or Stone's River, Tennessee, according to the official records Rosecrans had 43,000 men, while Bragg had 37,000 instead of 47,000. At Antietam, or Sharpsburg, according to McClellan's report the Union army numbered 87,000, and about 60,000 took part in the actual fighting. According to Lee's report the Confederate army numbered less than 40,000. If Malvern Hill, from which the Union army retired at night without waiting for the renewal of the Confederate attack, was a Union victory, then most assuredly Antietam, where Lee repulsed nearly twice his numbers and

offered battle all the next day without being attacked, was a Confederate victory.

Colonel Dodge also makes the following statement: "As regards brilliant assaults upon regular works, the Confederates were never called on to show such devotion as was manifested by the Federals at Fredericksburg, the several assaults at Vicksburg and Port Hudson, Spotsylvania, Cold Harbor, and Petersburg."

How about the persistent and successful assaults of the Confederates upon McClellan's fortified lines at Richmond, their successful attack upon Hooker's entrenched lines at Chancellorsville, their attack upon a force equal to their own behind strong field-works at Corinth, their brilliant but hopeless assault at Knoxville, and their brilliant and almost successful assault upon superior forces strongly posted at Gettysburg?

The aim of this article is merely to get at the facts of history. The Union and Confederate soldiers made each a noble record of heroic deeds, of which all Americans may well be proud.

*Joseph T. Derry,
Formerly of the 1st and 63d Georgia Regiments.*

COLONEL DODGE'S REJOINDER.

I DID not suppose that my article would provoke controversy; I awaited criticism. Mr. Derry has stated his objections fairly. They are hard to answer, because, whether he is right or wrong, my conclusion remains unimpeached. What I sought to show was that, after all is said, the business of suppressing the insurrection of the South was fairly well done by the United States, compared with the military work of other times and countries; and that, taking the actual fighting done, there was not much to choose between Yankee and Southron. Suppose the table of forces under arms to be corrected to conform to that in Vol. IV. of the "Battles and Leaders of the Civil War," it will not change the conclusion that, "compared, then, with what other nations have accomplished, it may be claimed that the statistics of our war abundantly demonstrate that the North did the business of suppressing the Rebellion in a workmanlike and respectable, not to say handsome, manner, leaving, under the circumstances, no great room for adverse criticism." Suppose each emendation Mr. Derry makes to the list of battles to be allowed, it will not alter the percentages so as to invalidate the conclusion "that the Confederates . . . opposed to the Federals fully equal numbers at the point of fighting contact; and secondly, that of the combats during the entire struggle the Federals had their full share of victories." If we should allow that statistics exhibit an excess at the point of fighting contact of ten per cent. on the side of the Federals, it does not seem to me that the conclusion would be altered one jot. What I wrote and my statistics tend to show *substantial equality*. In such a case, ten per cent. might be disregarded. We should call two armies of ten and eleven thousand, or fifty and fifty-five thousand men, respectively, substantially equal; and had my figures, when tabulated, shown an excess of ten per cent. in favor of the Federals, I should have considered the case proved, as I should if, out of fifty battles, either side had an excess of three or four.

My article was written in Florence early in 1887, without ready access to records or statistics. I think that Vol. IV. of "Battles and Leaders of the Civil War"

was not then out. I had not seen the War Records table. It must of course be taken as accurate, and mine, made some years ago, as faulty. I could not now exhumate the sources of the Southern items of my table. The Northern items are from the Provost-Marshal-General's accounts. My table was first published in 1883. The table referred to in Vol. IV. of "Battles and Leaders" does not include "local land forces" of the Confederacy. Taking these at ten per cent. of those at the front, "the South had under arms, until the last third of the war, an average of about three-fifths the force of the North," and not "about three-fourths," as stated in my article. Or, throwing out "local land forces" entirely, "the South had about fifty-five per cent. of the force of the North." While this error in my figures is not thereby excused, the argument is in no material degree weakened by the variation. By a fair allowance for garrison work which the North had to do and the South had not, the original statement of three-quarters would stand.

At the time of making my battle-estimate I corresponded with the War Records Office, asking it to make for me the figures of men at the point of fighting contact in the battles tabulated; but the Bureau was practically unable to do so without taking indefinite time and more pains than I could ask. No official records, that I am aware of, have been made of the men at the point of fighting contact. I made mine by taking the brigades and divisions known to have been engaged, and estimating their force as well as possible when it was not given by some good authority. The numbers were set roundly. My premise depends strictly on estimates of men *at the point of fighting contact*, and I think my estimates are very close. For instance, if Chancellorsville were taken as an example, we would have a total of one hundred and thirty thousand men pitted against about fifty-eight to sixty thousand. But the men who actually fought were, not to count the assault on Fredericksburg Heights:

May 2d, at Dowdall's,	22,000	Confed's	against	10,000	Federals.
" 3d, at Fairview,	37,000	"	"	32,000	"
" 3d, at Salem Church,	10,000	"	"	9,000	"
" 4h, at Banks's Ford,	25,000	"	"	20,000	"

This makes a very different showing. Every Northerner who fought at the front recognizes the brilliant gallantry of the South. Many of us carry ever-present mementos of their hard fighting. The higher the Southern capacity to fight, claimed or proved by statistics, the better the work done by the North in carrying the war through to a successful issue. I do not insist on every item of my figures being beyond dispute; but it still seems to me that "no reasonable or admissible variation will alter the conclusion which must be drawn from them."

Mr. Derry points out fairly the difference between the conditions of the contestants in our Revolution and in our Civil War. There can be no exact historical parallel found. To illustrate my point, the one I chose remains good, especially as Anglo-Saxons were concerned in both wars.

Is not Mr. Derry inaccurate in what he says of Peter III. and Frederick? The Russian alliance with Frederick was terminated by Peter's death some four months after it was made. The help was timely and useful, but it was neither that which saved Frederick,

nor the withdrawal of Sweden from among his enemies. The work of Ferdinand of Brunswick, while excellent, was of negative value in the campaigns of Frederick. Mr. Derry is right in saying that neither the Revolution nor the Seven Years' War is a close parallel; but each is illustratively good.

Mr. Derry's rule-of-three estimate of forces is ingenious, but I doubt if it will work in practice. Very slight difference in the methods of organization or of raising troops North and South would throw out this calculation.

While it is "impossible to argue the question to a satisfactory conclusion on theories and opinions," and while I owe an apology to the readers of THE CENTURY for not correcting my table of forces up to date, the primary value of the statistics is to prove or disprove "either to be the better soldier." *Quoad hoc*, I do not see wherein the figures given have been falsified, nor do I think the premises capable of alteration so as to draw any other than my conclusion.

I thank Mr. Derry for his frank and kindly criticism.

Theodore Ayrault Dodge.

"Does Vivisection Help?"

IN the May number of THE CENTURY Mr. Thomas W. Kay endeavors to weaken my case against vivisection as a method of advancing the healing art. He asks, "How can the great mortality in countries where no physicians exist be accounted for?" and goes on to urge that the increase of doctors always implies increase in the average of human life.

His question and his answer are alike beside the mark, so far as my argument is concerned. I merely explained what the "expectant treatment" was. I do not imagine that it is very largely followed by those who are chiefly responsible for the health of the community. As a fact, it is found that people do get well *without* doctors, just as they die *with* them. Of course the presence of a number of doctors in any country means a certain amount of civilization, and this means, in its turn, good sanitation, and improved hygienic conditions. With these things vivisection has nothing to do. I do not attach much importance to medical or surgical statistics. A famous and witty American physician (was it Dr. Bigelow?) once said, "You can tell as many lies with figures as with words, and bigger ones."

Mr. Kay says the improvement in modern surgery is largely due to greater dexterity in operating, which dexterity is "obtained by practising on the living animal, either man or beast." I do not know what goes on in American schools of surgery, but I am positive that no English surgeons learn dexterity in operations on human beings by practising on animals. I was for four years a pupil at the largest hospital in London, and I never knew a single instance where a surgeon attempted to fortify himself for an operation on a patient by practising on a beast. Mr. Kay says that Mr. Lawson Tait has acquired his manual dexterity and his diagnostic skill only by experiments on women. In a certain sense every surgical operation is an experiment; but there are experiments and experiments. There are operations which are so uniformly fatal that it is merely another sort of murder to perform

them. There are others which have been so marvelously thought out, so admirably planned and carried out with such skill, that they are almost lifted from the region of experiment and elevated into certainties. Of this class are Mr. Lawson Tait's particular operations. A woman operated upon by Tait is rather safer than if she were traveling on certain lines of railway, if we may trust statistics.

It is refreshing to read the quotation which is given from Dr. Winkel, the German surgeon who complained that Lawson Tait's operations "were, in fact, animal experiments on living women." Is Saul also among the prophets? Does a surgeon, and a German one especially, come forward to denounce animal experiments on living patients? Have I been asleep for a long spell and awakened to find the hospitals reformed? And was it in the remote past that "Dying Scientifically" and "St. Bernard's" set the world talking of the horrors that went on in the hospital wards of England? And was it so very long ago that Mr. Erichsen said, "Will the surgery of our time record surgical triumphs or operative audacities?" And was it in such a very ancient medical journal that Dr. Jackson, lecturer on surgery at the Sheffield School of Medicine, proposed to use the word "atrocities" instead of "audacities"?

Was it in 1886, as I thought, or in a more distant age that the "Lancet" said, "It is doubtful whether some of these operations have resulted in adding to the sum total of human life; the prolongation of a life here and there does not compensate for the cutting short of that of many others"?

I could "tell an I would" of a great surgeon who could not finish his operations in many cases because he always liked to let his patient die in bed rather than on the operating-table! Of another, too, whose name is now before me, who said of his experiments that "Death seems to begin from the time of the operation, or, rather, during it." Are not these things written in the volumes of the "British Medical Journal" and the "London Lancet"? And do not their reporters say, "We have no right to rush our patients into such a fearful risk, yet this is done every day"? And the "British Medical Journal" in which this is recorded (p. 1837) was dated December 10, 1887. Yet here, in what I took to be 1891, I find doctors making charges against Professor Lawson Tait for experimenting on living women!

There was once a great German surgeon who went to Mr. Tait to ask him "to what he chiefly attributed his great success in abdominal surgery?" And Mr. Tait, glancing at his questioner's fingers, replied, "To always taking care to keep my finger-nails clean." Some unforgiving men would have spoken ill of Mr. Tait after this; perhaps this one did.

I have seen so many evil results of tampering with the brain by the surgeon's knife that I am skeptical as to the whole business of brain localization, so far as its application to surgery is concerned.

Mr. Kay asks, "What will these antivivisectionists do with the bacteriologists who are daily sacrificing thousands of animals on the altar of science?" I would inoculate them with the filthy products of their own cultivations, and let them have a taste of the sufferings they inflict on the animals.

Mr. Kay asks, "Could Pasteur have discovered a

remedy for hydrophobia without experimenting?" I do not know, but I do know that he has not discovered anything of the kind by his experiments.

Once more Mr. Kay demands, "Could Koch have made his wonderful discoveries which render probable the cure of consumption?" What, ask this question in May, 1891? No! I have not been on the Catskill Mountains asleep with Rip van Winkle. I am, and have been, wide awake. I know this Koch; he comes from Berlin, and is going into oblivion.

Edward Berdoe, M. R. C. S.

LONDON, May 5, 1891.

Alexander Harrison.

THOMAS ALEXANDER HARRISON was born in Philadelphia in January, 1853, and while engaged in work on the United States Coast Survey on the Pacific slope in 1875-76 became sufficiently interested in the fine arts to think of taking up painting as a serious pursuit. He entered the schools of the San Francisco Art Association, and worked there two or three years. He went to Paris in 1878, and became a pupil of Gérôme in the École des Beaux-Arts. He has since resided in France. He visited New York the past winter, when an exhibition of some of his work was held, including among other pictures "Le Crépuscule," engraved in this number of THE CENTURY. Mr. Harrison's first success dates from the Salon of 1882, when he exhibited there a picture called "Castles in Spain," which attracted much attention from artists and critics. He has been a constant contributor to the Salon exhibitions since that time, and last year, when the division in the Society of French Artists occurred, he was made a member and juror of the new Société Nationale des Beaux-Arts, which has given two brilliant exhibitions at the Champ de Mars. He received at the old Salon an honorable mention in 1885. At the International Exposition at Paris in 1889 he was awarded a gold medal in the American section, and made a Chevalier of the Legion of Honor and an Officer of Public Instruction by the French Government. He has received various medals and prizes at exhibitions in the United States where his works have been shown, and is a member of the Society of American Artists. Some of his most noted pictures are "Arcady," "Le Crépuscule," "The Open Sea," and "The Wave." He is best known as a painter of marines, though he has signed excellent landscape and figure studies. "Arcady," an outdoor effect of sunlight striking through the foliage of willow trees growing in a meadow on the border of a stream, with three nude female figures, is one of the most remarkable canvases the modern *plein air* movement has produced. Mr. Harrison's pictures of the sea are noted for their beauty of color and individuality of treatment. He is an artist who has studied nature with great conscientiousness, and has sought for truth in a direction that is enough his own to stamp his creations with an unmistakable personal character. It may justly be said of him that he is one of the ablest of modern painters, and he is one whom we are glad to honor for the sake of American art.

William A. Coffin.

The Treatment of Inebriates.

MEDICAL experts in the treatment of insane persons have for many years protested against the inhumanity of efforts to cure dipsomaniacs and confirmed inebriates by fines and imprisonment.

We now have almost literally no discrimination in our treatment of persons arrested for being drunk. The lad arrested for the first time and the old "rounder" who faces the court for the hundredth time are served alike. A fine is imposed; if not paid, they are sent to work it out in the correctional institution. In a few cases where friends of means and influence interest themselves the inebriate is treated in a private asylum for inebriates, or some lunatic hospital; but the great body are all classed together: fine follows fine, and imprisonment follows imprisonment, and the man or woman who enters upon the career by a first arrest seems bound to continue in it until the community and the victim are both relieved by the drunkard's death.

Nearly all medical testimony is to the effect that a certain class of inebriates have passed the point where their inebriety is a vice or a crime, if it is ever so, and reached a condition of disease which they can no more control than the typhoid-fever patient can control his fever. This class needs curative and reformatory treatment; for such we should have special hospitals to treat such cases and no other. Persons of this class are never properly sent to correctional institutions, either for longer or shorter periods; neither should they be sent for treatment to lunatic hospitals or insane asylums.

All persons arrested for drunkenness should be detained before trial long enough to make a complete investigation of their antecedents. If found to belong to the dipsomaniac class, they should be sent to the hospital especially provided for the cure of that disease; if arrested for the first time, and it appears that they are regularly employed, they should be allowed to go free as soon as they have become sober, with an admonition not to be arrested again; for a second offense a little longer detention should be inflicted, and some effort should be made to place the person under the restraint of some friends or of a probation officer; for a third offense, within three years, the defendant should be committed to an institution where he could be compelled to labor for a period of at least three months. Such institution should have officers fitted to bring moral influence to bear upon the inmates, to build up their will-power, that they may be able to withstand temptation when released.

For those who have been committed more than five times within three years a sentence of not less than two years should be imposed, to still another institution, where labor and mental and moral discipline are rigidly enforced. For the hardened offenders who spend eleven months out of every twelve in our institutions, who are never sober for more than a few days at a time, there should be no question about shutting them up for long terms, instead of arriving at a similar result by a dozen different arrests and convictions in a single year as now. By putting this class away for long terms society will protect itself in many ways: it will relieve itself from the danger which their presence in the community threatens; the assaults, breaches of the peace, thefts, burglaries, and murders they may commit would be prevented, society would be saved from their tainted offspring, and the tax-payers would save the

considerable difference between their treatment upon this plan and under the present system.

The writer is not a medical expert, but is situated so as to be a constant observer of the working of the present system of treating drunkards in one of our larger cities, and feels no hesitation in saying that he believes if the authorities were to endeavor to invent a scheme for permanently destroying the usefulness of every person who happens to be arrested for drunkenness for the first time, they would labor long before they could improve upon our present system.

L. Edwin Dudley.

"The Confederate Diplomatsists."

A DENIAL FROM MR. EDWIN DE LEON.

WE have received from Mr. Edwin De Leon indignant denial of the statements concerning him in the following paragraph from Mr. Bigelow's article on "The Confederate Diplomatsists" in our May number:

He was regarded by Slidell from the first rather as a spy upon him than as an auxiliary, and that they would not get on harmoniously together needed no prophet to foresee. Besides, De Leon's curiosity got the better of his judgment, and he fell into the habit of opening Slidell's despatches, a practice eminently fitted to strain, the relations between these "high concocting powers."

Mr. De Leon says: "I distinctly pronounce both these assertions to be as untrue as they are insulting. Of the former, Mr. Bigelow never had an opportunity of judging, and my earlier relations with Mr. Slidell were, for nearly two years, of the most friendly character. My intercepted despatches, published in a New York journal, then caused a coolness between us."

With regard to the second charge, that he "fell into the habit of opening Slidell's despatches," Mr. De Leon declares it to be "as absurd and impossible as it is untrue," and says: "To support it, Mr. Bigelow cites, from what purports to be a despatch from Benjamin to Slidell, such an allegation, which he (Benjamin) refers to as having been made by Slidell to him at that time—twenty-seven years ago. I declare, upon my honor, that there never was the shadow of such a suspicion attaching to me, as far as I have known, up to the moment of reading this alleged despatch of Benjamin's and Mr. Bigelow's comments thereon; and that each and all of these are slanderous and false."

EDITOR.

The Steamboat "Ariel."—A Correction.

ON the first page of the JUNE CENTURY, in the article on "Colonel William Byrd of Westover, Virginia," there was mention of the steamboat *Ariel* which plies between Richmond and Norfolk. As some of our readers might infer from the allusions that the steamer was perhaps not entitled to the public confidence, we take pleasure in saying that since the appearance of the JUNE CENTURY, the annual inspection certificate of the *Ariel* being about to expire, the United States steamboat inspectors, as required by law, made a "thorough examination of the *Ariel's* hull, boiler, engine, and life-saving equipment, and found all the requirements of the law complied with, and that the *Ariel* was in good and safe condition in every department. The inspectors thereupon issued their certificate accordingly, which is her official passport for another year from date."

Reflections.

BREAD cast upon the water purely as a business speculation is liable to sink before reaching port.

DON'T worry your brain about the man in the moon, but study the man in your own overcoat.

THE true prince will find it easier to disguise himself than the world would have him believe.

THERE are plenty of good fish always in the sea, but thousands of worthy inland people can never get to the seashore.

THE dog that bays the moon is wiser than the one that bays a bigger dog that is viciously inclined.

TACT can afford to smile while genius and talent are quarreling.

BOTH courage and fear owe much to the armed neutrality of prudence.

WHEN impudence dons the mask of repartee, it is time for the company to disperse for the night.

THE seeming length of a sermon is generally proportioned to its need.

IT is expensive economy to make a part of the truth suffice for the whole.

A MAN cannot be truly eloquent if he knows not how to listen.

BEWARE of the vicious man who proposes to reform his life on the instalment plan.

VIRTUE and laziness may live together, but they are not usually on the best terms.

NO sagacious wise man will quarrel with his own opportunities by lamenting the abundance of fools in the world.

THERE is many a rogue in the world who objects to the Ten Commandments on account of their hackneyed ideas and lack of originality.

THE balloon route to the top of Olympus has never been successfully traveled.

J. A. Macon.

.Cour d'Amour.—Cupid, J.

[APPEAL TAKEN ON EXCEPTIONS — PLAINTIFF'S BRIEF.]

FAIR maid, as when I saw thee first,
 'T was with such sweet surprise
 Pygmalion saw the statue burst
 To life before his eyes.
 And then, as when I saw thee last,
 'T was with such secret pain
 His work Pygmalion viewed, aghast,
 To marble turn again.

The image by the sculptor wrought
 Was not more fair than thou,
 And yet she gave her love unsought,
 While mine thou spurnest now.
 Pygmalion pledged no troth like mine;
 I love but thee alone.
 Sweet mistress, I am wholly thine;
 Why should'st thou turn to stone?

Charles Francis Coburn.

Patience Ceased to be a Virtue

LONG, long, and sweetly he had borne each load,
 At last some slight increase drove in the goad;
 Then cried they all whose burdens bent him low,
 " 'T is strange, 't is sad, that trifles fret him so! "

Edith M. Thomas.

Two Seasons.

No slightest shape of summer cloud
 The June-time sky bedimpled.
 June roses tossed their pretty heads,
 In white and crimson wimpled.
 Yet, oh, my heart! what winter woe
 Enchained and kept thee down!
 For swart December's menace lay
 In Sylvia's frown!

Now winds speed past us wild with snow,
 The year bewails its ending.
 The sky, a helmet wrought in steel,
 On earth's wan brow is bending.
 Yet, oh, my heart! what sylvan cheer
 Inspires thee all the while!
 For summer's airy sweetness breathes
 In Sylvia's smile!

Eva Wilder McGlasson.

The Thoughtless Thinker.

HE 's not unkind to me, this dear philosopher
 Whose happy wife I am; far from it, very far.
 He 's only on occasions somewhat hasty, sir,
 And rather thoughtless, as you know most thinkers
 are.

John Kendrick Bangs.

AN INDIAN UPRISING.

To an English Sparrow.

Is it springtime, my pert little sparrow?
 I hear your voice, honest and shrill.
 I see you out there on the narrow
 Promenade of my bleak window-sill.
 When the blues came, my spirits to harrow,
 You darted in sight like an arrow,
 Piping, "Cheer up! Cheer up!"
 So loud on your tiny, blithe quill.

I like you, my brave, saucy Briton,
 You've a way that has captured my heart;
 And though others your failings may twit on,
 I'm a friend that will e'er take your part.
 And as much as you wish you may sit on
 My sill which you often have lit on,
 Singing, "Cheer up! Cheer up!"
 With a fervor much sweeter than art.

Few people, I know, praise your singing,
 And I own that your harsh vocal powers
 Can't compete with the robin's voice ringing
 Every June in the lush morning hours;
 I confess that the lark, upward winging,
 And the bobolink's silver throat flinging
 "Bobolink! Bobolink!"
 Add a charm to the seasons of flowers.

But when winds of midwinter were blowing,
 And the window-panes rattled with sleet;
 And the heavens were gray, and 't was snowing,
 What became of those visitors sweet?
 When we needed them most, they were going,
 But you stayed, your stout heart overflowing
 In that "Cheer up! Cheer up!"
 Which I've heard you so often repeat.

Your enemies say you're a fighter.
 Ah, well, what of that? So am I.
 I will sing if 't is darker or lighter;
 You have taught me a gay battle-cry.
 When fortune's against me, despite her,
 I will wait for the days that are brighter,
 Singing, "Cheer up! Cheer up!"
 I will fight and will sing till I die.

George Horton.

Observations from the Women's Quarters.

LIGHT yo' pipe an' missus will call.

NIGGER say, "Honey de softes' fore de saremony
 ap' to hit de hardes' afte'wuds."

MUDDER-HEART beat as true under white skin as
 black.

SAMBO hones' enough yo' 'doan' give 'im chance to
 steal.

DOAN' car' for a sunset wi' dust in yo' eye.

PICCANINNY know more 'n he ort at five ap' to know
 less 'n he ort at fifty.

IKE's rheumatiz too bad to chop wood, jes right to
 dance de hoe-down.

SOMETIMES whites' heart thumpin' under blacks'
 skin.

DRAPPED stitches picked up sight quicker 'n cross
 wuds.

DEAD piccanninies doan' make yo' head ache wid der
 noise.

COOK de coon in his own fat, an' war yo' own clo'es.

ALL de frog's practis'n' won't make him a mockin'-
 bird.

Chloe.

Sweet Mistress Nance of Milburn Town.

WHEN I had gone the highway down,
 I met sweet Mistress Nancy there,
 With bonnet quaint, and jaunty gown,
 And sundown glints about her hair;
 Such silken hosen, dainty feet
 That should not climb the mountain lands,
 Such wondrous hair, like sheafened wheat
 All bursting from its golden bands.

"Sweet Mistress," I made bold to say,
 "May I go down the glebe with you?"
 I heard a bird sing yesterday,
 I wish me what it sang were true;
 A robin bird" (my knees did shake
 To see that she did me so view),
 "A robin bird" (I did so quake),
 "I wish me what it sang were true."

"Ah, Reuben Foster," quoth the lass,
 "What ails the lad that he's gone wrong?"
 Best get thee to thy looking-glass—
 What is it of the robin's song?
 I'll warrant me the bird did flee
 Ere thou didst learn its piping lay.
 Ah, Reuben, man, art fooling me?
 And is it naught thou hast to say?"

"Sweet Mistress Nance of Milburn town,
 I am a loutish country lad,
 In bonnet quaint and jaunty gown
 You quite distract and make me mad."
 And all this time the bonnet's tints
 Grew quainter still, I do declare,
 And all this time the sundown glints
 Made merry with the unsheafed hair.

"What riddle talk ye, Reuben, man?"
 And tossed her wondrous mane along;
 "To it again, where ye began—
 What is it of the robin's song?
 I'll warrant me in all the throng
 Along the green there's none so rare
 As would not tell a robin's song,"
 And tossed again her wondrous hair.

And all this time we passed along,
 The lass did so undo my brain
 I durst not tell the robin's song—
 I wish that we might walk again;
 And all this time the highway down
 I went with Mistress Nancy fair,
 Up by the glebe into the town,
 Some sun-glints still about her hair.

William Page Carter.

Positively Pretty.

SWEET girlhood's grace the maiden wore.

When for her photograph I plead,
 "I have none. I am plain," she said;
 "My picture's worse. I'll try no more."

And all the while her prettiness
 Was painting on my inner eye
 A picture wondrous fair. Then why
 Should photographic art praise less?

But, pondering how that process gives
 Negation first, then truth, I knew
 E'en sunlight, with her face in view,
 Could have no heart for negatives.

VOL. XLII.

SEPTEMBER, 1891.

No. 5.

A WINTER JOURNEY THROUGH SIBERIA.

ON Friday, the 8th of January, 1886, Mr. Frost and I left Irkutsk, the capital of Eastern Siberia, for a journey of about four thousand miles to St. Petersburg. The route that we intended to follow differed a little from that which we had pursued in coming into Siberia, and included two important towns that we had not yet visited, namely Minusinsk and Tobolsk. The former we expected to reach by making a detour of about four hundred miles to the southward from Krasnoyarsk, and the latter by taking a more northerly route between Omsk and Tiumen than the one over which we had passed on our way eastward. Our equipment for this long and difficult journey consisted of a strongly built *pavoska*, or seatless traveling-sleigh, with low runners, wide outriggers, and a sort of carriage-top which could be closed with a leather curtain in stormy weather; a very heavy sheepskin bag six feet wide and nine feet long in which we could both lie side by side at full length; eight or ten pillows and cushions of various sizes to fill up chinks in the mass of baggage and to break the force of the jolting on rough roads; three overcoats apiece of soft shaggy sheepskin so graded in size and weight that we could adapt ourselves to any temperature from the freezing point to eighty degrees below; very long and heavy felt boots known in Siberia as *vállinki*; fur caps, mittens, and a small quantity of provisions consisting chiefly of tea, sugar, bread, condensed milk, boiled ham, frozen soup in cakes, and a couple of

roasted grouse. After having packed our heavy baggage as carefully as possible in the bottom of the *pavoska*, so as to make a comparatively smooth and level foundation, we stuffed the interstices with pillows and cushions; covered the somewhat lumpy surface to a depth of twelve or fourteen inches with straw; spread down over all our spare overcoats, blankets, and the big sheepskin bag; stowed away the bread, boiled ham, and roast grouse in the straw, where we could sit on them and thus protect them to some extent from the intense cold;¹ and finally, filled the whole back of the *pavoska* with pillows. At ten o'clock Friday morning all was in readiness for a start, and as soon as the driver came with the horses from the post-station we sang "Home, Sweet Home" as a prelude to the next act, wrapped up the banjo carefully in a soft rug and put it behind our pillows, took seats in the *pavoska* with our feet and legs thrust down into the capacious sheepskin bag, and rode away from the Hotel Dekó amid a chorus of good-bys and shouts of "May God grant you a safe journey!" from the assembled crowd of servants and clerks.

In an article entitled "Adventures in Eastern Siberia," which many readers of THE CENTURY will doubtless remember, I have already described our experience for the first four days after leaving Irkutsk, including our visit to the Alexandrófski Central Prison, and our difficult journey down the half-frozen Angará to the little settlement of Kámenka. Near the latter place we succeeded in crossing the river, by means of an ice-gorge, to the western bank, and stopped

¹ A temperature of forty degrees below zero will turn a boiled ham into a substance that is as useless for edible purposes as the famous "chunk of old red sandstone" from Table Mountain. You can neither cut it, gnaw it, nor break it in pieces with a sledge-hammer; and unless you have facilities for thawing it out, and time enough to waste in that way, you can no more

get nourishment from it than you could get beef tea from a paleozoic fossil. Having learned this fact from sad experience, Mr. Frost and I were accustomed to put articles of food that contained moisture either under us or into the sheepskin bag between us, where they would not freeze so hard.

for the night in the post-station of Cherómka on the great Siberian road. It is customary in Siberia, when traveling by post, to ride night and day without other rest than that which can be obtained in one's sleigh; but I was still suffering from the results of the previous night's exposure to storm and cold in the mountains of the Angara, and at every respiration was warned by a sharp, cutting pain in one lung that it would be prudent to seek shelter and keep warm until I should be able to breathe freely. But it was very difficult to keep warm in that post-station. Almost every hour throughout the night travelers stopped there to change horses or to drink tea, and with every opening of the door a cold wind blew across the bare floor where we lay, condensing the moisture of the atmosphere into chilly clouds of vapor, and changing the temperature of the room from twenty to thirty degrees in as many seconds. I had taken the precaution, however, to bring our large sheepskin bag into the house, and, by burying myself in the depths of that, I not only escaped being chilled, but succeeded, with the aid of medicinal remedies, in getting into a profuse perspiration. This soon relieved the pleuritic pain in my side, and in the morning I felt able to go on. Neither of us had had any sleep, but to the experienced Siberian traveler deprivation of sleep for a night or two is a trifling hardship. I do not think that Mr. Frost had two consecutive hours of sleep in the whole week that we spent on the road between the Alexandrofski Central Prison and Krasnoyarsk; but when we reached the latter place he went to bed, with his clothes on, and slept sixteen hours without waking.

In several villages through which we passed between Cheromka and Nizhnibhinsk the *étapes* were evidently occupied by exile parties; but we did not happen to see such a party on the march until Wednesday, and it came upon us then very suddenly and unexpectedly. The day was cold and stormy, with a high wind and flying snow, and we were lying half buried in our sheepskin bag, watching for the next verst-post. The atmosphere was so thick with snowflakes that we could not see the road distinctly for a greater distance than seventy-five or one hundred yards, and the party of exiles was fairly upon us before we discovered that it was not—as we at first supposed—a train of *obózes*, or freight-sleighs. I was not absolutely sure of its nature until the head of the column was so near us that I could make out the muskets of the advance-guard of Cossacks and hear the familiar clinking of the prisoners' leg-fetter chains. I then ordered our *yamshchik* to drive out into the deep snow at one side of the road and there stop. The general appearance of the party, as it passed

us, was very different from the appearance of the similar party whose departure from Tomsk we had watched in August. Then the convicts were all in their light summer costume of gray, their faces were black with sunburn, and they were enveloped in a cloud of fine yellow dust raised by their shuffling, slipper-clad feet from the powdery road. The exiles before us were all dressed in reddish *pólu-shúbas*, or short overcoats of sheepskin, and *bródnias*, or high-topped leather boots, their faces were pallid from long confinement in the Tomsk forwarding prison, and they were wading slowly and laboriously through fresh-fallen snow. The order of march was the same as in the summer, but on account of the storm and the condition of the road there seemed to be some relaxation of discipline and a good deal of straggling and disorder. The dress of the marching convicts consisted of the usual gray Tam o' Shanter cap, with a handkerchief, a ragged tippet, or an old stocking tied over it in such a way as to protect the ears; a *polu-shuba*, with the reddish tanned side out; long, loose leather boots, which had been stuffed around the feet and ankles with hay to make them warmer; woolen trousers, foot-wrappers, or short woolen stockings, and big leather mittens. The leg-fetters, in most cases, were worn inside the boots, and the chain that united them was looped in the middle by means of a strap attached to the leather waist-belt. From this point of support it hung down to the ankle on each side between the tucked-in trouser-leg and the boot. With some slight changes—such, for example, as the substitution of a fur hood for the flimsy Tam o' Shanter cap—the dress, it seemed to me, would afford adequate warmth in ordinary winter weather to men whose blood was kept in vigorous circulation by exercise; but it was by no means sufficient for the protection of sick or disabled convicts who were exposed for eight or ten hours at a stretch to all sorts of weather in open vehicles. I noticed a number of such incapables lying in the shallow, uncomfortable one-horse sleighs at the rear of the column, and clinging or crouching together as if to seek warmth in mutual contact. They all seemed to be half frozen to death.

As the straggling column passed us a convict here and there left the ranks, apparently with the permission of the guard, and approaching our pavoiska with bared head and extended cap, begged us, in the peculiar, half-wailing chant of the *milosérdnaya*,¹ to "pity the unfortunate" and to "have mercy on the poor and needy, for Christ's sake." I knew that money given to them would probably be used

¹ The exiles' begging-song, which I have already described and translated.

A MARCHING PARTY OF EXILES PASSING A TRAIN OF FREIGHT-SLEDGES.

in gambling or go to the *maidánshchik*¹ in payment for *vodka*; but the poor wretches looked so cold, tired, hungry, and miserable, as they tramped past us through the drifting snow on their way to the distant mines of the Trans-Baikal, that my feelings ran away with my prudential philosophy, and I put a few *kopéks* into every gray cap that was presented to me. The convicts all stared at us with curiosity as they passed; some greeted us pleasantly, a few removed their caps, and in five minutes they were gone, and a long, dark, confused line of moving objects was all that I could see as I looked after them through the white drift of the storm.

After we passed the party of convicts our monotonous life of night-and-day travel was not diversified by a single noteworthy incident. Now and then we met a rich merchant or an army officer posting furiously toward Irkutsk, or passed a long caravan of rude one-horse sledges laden with hide-bound chests of tea for the Nízhni Nóvgorod fair, but we saw no more exiles; the country through which we passed was thinly settled and uninteresting, and the wretched little villages where we stopped to change horses or to refresh ourselves with tea were literally buried in drifts of snow. At the post-station of Kamishétskaya, five hundred and thirty versts west of Irkutsk, we overtook two political offenders named Shamárin and Peterson who had just finished their terms of administrative exile in Eastern Siberia, and were on their way back to European Russia. We had made their acquaintance some weeks before in Irkutsk, and had agreed to travel with them, if possible, as far as Krasnoyarsk; but our route differed somewhat from theirs at the outset, and, owing to our detention at the Alexandrofski Central Prison and to our various mishaps on the Angara, we had fallen a little behind them. They greeted us joyously, shared their supper with us, and after an hour or two of animated conversation, in which we related to one another our several adventures and experiences, we put on our heavy shubas, again climbed into our respective pavoskas, and with two *troikas* of horses went on together.

As we approached the town of Kansk, Thursday, January 14, the sky cleared and the weather suddenly became colder. The thermometer fell that night to thirty degrees below zero, and on the following night to forty degrees below. We continued to travel without stop, but suffered intensely from cold, particularly during the long hours between

midnight and dawn, when it was impossible to get any warm food at the post-stations, and when all our vital powers were at their lowest ebb. More than once, notwithstanding the weight and warmth of our outer clothing, we became so stiff and chilled between stations that we could hardly get out of our pavoska. Sleep, of course, was out of the question. Even if the temperature had not made it perilous, the roughness of the road would have rendered it impossible. Under the conjoint action of a dozen howling Arctic gales and four or five thousand pounding freight-sledges, the deep snow that lay on this part of the road had been drifted and packed into a series of huge transverse waves known to travelers in Siberia as *ukhábi*. These billows of solidified snow measured four or five feet vertically from trough to summit, and fifteen or twenty feet horizontally from crest to crest, and the jolting and banging of our heavy pavoska, as it mounted the slope of one wave and plunged into the hollow of the next, jarred every bone and shocked every nerve-ganglion in one's body. I finally became so much exhausted, as a result of cold, sleeplessness, and jolting, that at every post-station, particularly in the night, I would throw myself on the floor, without blanket or pillow, and catch five or ten minutes' sleep while the horses were being harnessed. At the lonely post-station of Kuskún-skaya, about eleven o'clock one night, I threw myself down in this way on a narrow plank bench in the travelers' room, fell asleep, and dreamed that I had just been invited to make an extempore address to a Sunday-school. The school was in the church of a religious denomination called the "Holy Monopolists." I inquired what the "Holy Monopolists" were, and was informed that they were a new sect consisting of people who believed in only one thing. I wanted very much to ask what that one thing was, but felt ashamed to do so, because it seemed to me that I ought to know without asking. I entered the Sunday-school room, which was an amphitheater of seats with a low platform in the middle, and saw, standing on the platform and acting in the capacity of superintendent, a well-known citizen of Norwalk, Ohio, whom I had not seen before since boyhood. All the scholars of the Sunday-school, to my great surprise, were standing in their places with their backs to the platform. As I came in, however, the superintendent said, "You will now please resume your seats," and the boys and girls all turned

¹ The *maidánshchik* occupies something like the same position in a convict party that a sutler occupies in a regiment of soldiers. Although a prisoner himself, he is allowed, by virtue of long-established custom, to keep a small stock of such luxuries as tea, sugar, and

white bread, for sale to his fellow prisoners; and at the same time, with the aid of the soldiers of the convoy whom he bribes, he deals surreptitiously in tobacco, playing-cards, and *vodka*.

around and sat down. The superintendent then gave out a hymn, and while it was being sung I made a few notes on the back of an envelope to aid me in the extempore address that I was about to deliver. I decided to give the scholars a talk on the comparative merits of Buddhism and Mohammedanism, and I was just considering the question whether I

inform us who this lamented Alaskan euchre-player was. Instead of doing so, however, he bowed towards me and said, "The distinguished friend whom we have with us to-day will please tell us who was the first progressive-euchre player that after his death was brought back from Alaska amid the mourning of a nation." A cold chill ran down my spine. It suddenly

A VILLAGE ON THE GREAT SIBERIAN ROAD.

should not also include fetishism when the hymn came to an end. The superintendent then announced, "We will now proceed to the lessons of the day." "Good!" I said to myself; "that will give me time to think up my speech."

As the recitation began I noticed, to my surprise, that all the scholars held in their hands big, round soda-biscuits, which they looked at now and then as if they were lesson-books. I did not have time, however, to investigate this remarkable phenomenon, because it was urgently necessary that I should get my extempore remarks into some sort of shape before the superintendent should call upon me to speak. I paid no heed, therefore, to the questions that he was propounding to the scholars until he came to one that nobody, apparently, could answer. He repeated it solemnly several times, pausing for a reply, until at last it attracted my attention. It was, "Who was the first progressive-euchre player that after his death was brought back from Alaska amid the mourning of a nation?" As I glanced around at the faces of the scholars I could see that everybody had given up this extraordinary conundrum, and I turned with interest to the superintendent, expecting that he would

flashed upon me that this must be an elementary fact that even school-children were expected to know—and I was so ignorant that I had never even heard of an Alaskan euchre-player. In order to gain a moment's time in which to collect my faculties I said, "Show me the question." The superintendent handed me a big, hot soda-biscuit, as if it were a book. I examined it carefully on both sides, but could not find on it anything that looked like printing. The superintendent thereupon pulled the two halves apart and showed me the question stamped in Tibetan characters around the inside of the biscuit about half an inch from the edge. I found in the queer-looking letters no clue to the answer, and in an agony of shame at being forced to confess to a Sunday-school of "Holy Monopolists" that I did not know who was the first progressive-euchre player that died in Alaska and was brought back amid the mourning of a nation I awoke. For a moment I could not recover my mental hold upon life. I was apparently in a place where I had never before been, and over me were standing two extraordinary figures that I could not remember ever having seen before. One of them, a tall, powerful man with black, bushy, Circassian-like hair, and blazing blue eyes,

SNOW-WAVES OR UKHABI, NEAR KRASNOYARSK.

was dressed in a long, spotted reindeer-skin *kukhlanka*¹ and high fur boots, while the other, who seemed to be an official of some kind, had on a blue uniform with a double row of brass buttons down the front of his coat, and was holding over my head a kerosene lamp. "What 's the matter, Mr. Kennan?" inquired the figure in the reindeer-skin *kukhlanka*. "You have been moaning as if you were in pain."

As memory slowly resumed its throne I recognized in the speaker my exile traveling companion Peterson and in the official the post-

¹ A very heavy fur blouse or over-shirt covering the body from the neck to the calf of the leg, and confined about the waist with a sash.

station-master. "I have had a bad dream," I replied. "How long have I been asleep?"

"We have been here only ten minutes," replied Peterson, looking at his watch, "and I don't think you have been asleep more than five. The horses are ready."

With stiff and aching limbs I hobbled out to the pavoska, crept into the sheepskin bag beside Mr. Frost, and began another long, cold, and dreary night ride.

Between Kuskunskaya and Krasnoyarsk we experienced the lowest temperature of the winter,—forty-five degrees below zero,—and had an opportunity to observe again the phenomena of extreme cold. Clouds of vapor rose all the time from the bodies of our horses; the

freight-wagon caravans were constantly enshrouded in mist, and frequently, after passing one of them, we would find the road foggy with frozen moisture for a distance of a quarter of a mile. When we opened the door of a station-house a great volume of steam seemed to rush into it ahead of us; little jets of vapor played around the holes and crevices of the windows and doors; and in a warm room white frost accumulated to a thickness of nearly half an inch upon the inner ends of iron bolts that went through the window-casings to the outside air. Throughout Friday and Saturday, January 15 and 16, we stopped to drink tea at almost every post-station we passed, and even then we were constantly cold. This was due partly to the extreme severity of the weather, and partly to the fact that we were compelled, every five or ten miles, to get out of our pavoska and help the horses drag it through the deep soft snow at the side of the road, where we had been forced to go in order to get past a long train of freight-sledges. Sunday, January 17, nine days after our departure from Irkutsk, we drove into the provincial town of Krasnoyarsk, having made, with forty-three relays of post-horses, a journey of about seven hundred miles. Mr. Frost and I took up our quarters in the same hotel at which we had stopped on our way into Siberia the previous summer, and Messrs. Shamarin and Peterson went to the house of an acquaintance.

In the course of the three days that we spent in Krasnoyarsk we renewed our acquaintance with Mr. Innokénti Kuznetsóf, the wealthy mining proprietor at whose house we had been so hospitably entertained on our way eastward five months before; took breakfast with Mr. Sávenkof, the director of the Krasnoyarsk normal school, whose collection of archæological relics and cliff pictographs greatly interested us; and spent one afternoon with Colonel Zagárin, inspector of exile transportation for Eastern Siberia. With the permission of the latter we also made a careful examination on Wednesday of the Krasnoyarsk city prison, the exile forwarding prison, and the prison hospital; and I am glad to be able to say a good word for all of them. The prisons were far from being model institutions of their kind, of course, and at certain seasons of the year I have no doubt that they were more or less dirty and overcrowded; but at the time when we inspected them they were in better condition than any prisons that we had seen in Siberia, except the military prison at Ust Kámenogórsk and the Alexandrófski Central Prison near Irkutsk. The hospital connected with the Krasnoyarsk prisons seemed to me to be worthy of almost unqualified praise. It was scrupulously clean, perfectly ventilated, well-

supplied, apparently, with bed linen, medicines, and surgical appliances, and in irreproachable sanitary condition generally. It is possible, of course, that in the late summer and early fall, when the great annual tide of exiles is at its flood, this hospital becomes as much overcrowded and as foul as the hospital of the forwarding prison at Tomsk; but at the time when we saw it I should have been willing, if necessary, to go into it for treatment myself.

The Krasnoyarsk city prison was a large two-story building of stuccoed brick resembling in type the forwarding prison at Tiúmen. Its *kámeras*, or common cells, were rather small, but none of them seemed to be crowded, and the inscriptions over their doors, such as "murderers," "passportless," and "politicals," showed that at least an attempt had been made to classify the prisoners and to keep them properly separated. There were wheel-ventilators in most of the cell-windows and ventilating-pipes in the walls; the stone floors of the corridors were clean; the closet fixtures and plumbing were in fairly good condition; and although the air in some of the cells was heavy and lifeless and had the peculiar characteristic prison odor, it could be breathed without much discomfort, and without any of the repulsion and disgust that we had felt in the overcrowded cells of the prisons in Tiúmen, Tomsk, Irkutsk, and at the mines. The exile forwarding prison, which stood near the city prison in a stockaded yard, consisted of three large one-story log buildings of the Tomsk type, and presented to the eye nothing that was particularly interesting or new. It did not contain more than half the number of prisoners that, apparently, could be accommodated in it; some of the *kámeras* were entirely empty, and the air everywhere was fresh and good.

By a fortunate chance we reached this prison just in time to see the departure of a marching party of two hundred and seventy male convicts destined for the province of Yakútsk and the mines and prisons of the Trans-Baikal. It was a bitterly cold morning, and two-thirds of the mustered party were walking back and forth in the prison-yard, trying, by means of physical exercise, to keep themselves warm while they were waiting for the medical examination of the other third. After watching them for a moment we entered a large new log building standing a little apart from the prison proper, where we found the prison surgeon, an intelligent, kindly-looking man, engaged in making a physical examination of seventy-five or eighty convicts who had declared themselves unable to march. To my inexperienced eye all of them looked thin, pallid, and miserable enough to be excused from

GOING AROUND A TRAIN OF FREIGHT-SLEDGES.

a march of twenty miles in such weather and over such a road; but the doctor, after a brief examination by means of scrutiny, touch, and the stethoscope, dismissed as imaginary or frivolous the complaints of nine men out of every ten, and ordered sleighs for the rest. In less than half an hour all was in readiness for a start. The soldiers of the convoy, with shouldered rifles, formed a cordon outside the gate to receive the party; the prison blacksmith made his appearance with hammers, rivets, and spare irons, and carefully examined the leg-fetters of the chained convicts as they came out; the incapables climbed into the one-horse sleighs that were awaiting them; an under-

officer counted the prisoners again, to make sure that they were all there; and at the command "March!" the whole party instantly put itself in motion, the soldiers at the head of the column setting so rapid a pace that many of the convicts were forced into a run. In three minutes they were out of sight.

Marching parties of exiles leave Tomsk and Krasnoyarsk every week throughout the winter, and go through to their destination without regard to weather and with no more regard to the condition of the road than is necessary to determine whether it is passable or absolutely impassable. It would be perfectly easy, by making use of horses and vehicles, to trans-

port the whole annual contingent of exiles from Tomsk to Irkutsk during the summer months, and thus relieve them from the suffering that they now endure as the necessary result of exposure to winter cold and winter storms; but for some unknown reason the Government has always persistently refused to take this step in the direction of humane reform. It cannot explain nor defend its refusal by pleading considerations of expense, because the cost of transporting ten thousand exiles from Tomsk to Irkutsk with horses would actually be much less than the cost of sending them on foot. Before me, as I write, lies an official report of Colonel Vinokúrof, inspector of exile transportation for Western Siberia, in which that officer shows that if all the convicts for the whole year were despatched from Moscow in the summer, and were carried from Tomsk to Achinsk in one-horse wagons instead of being forced to walk, the expense of delivering them in the latter place would be reduced by almost 50,000 rubles.¹

The late Colonel Zagarin, inspector of exile transportation for Eastern Siberia, told me in the course of a long conversation that we had on the subject of Krasnoyarsk, that in 1882 or 1883 he made a detailed report to Governor-general Anúchin in which he set forth the evils of the present system of forwarding exiles on foot the year round at the rate of only one party a week, and recommended that the Government restrict the deportation of criminals to the summer months, and then forward them swiftly to their destinations in wagons with relays of horses at the rate of a party every day. He showed conclusively to the governor-general, he said, by means of official statistics and contractors' estimates, that the cost of carrying the annual quota of exiles in wagons from Achinsk to Irkutsk (780 miles) during the summer months would be 14 rubles less per capita, and more than 100,000 rubles less per annum, than the cost of sending them over the same distance on foot in the usual way. Besides this saving in expense, there would be a saving, he said,

of at least sixty days in the time occupied by the journey, to say nothing of the saving of human life that would be effected by shortening the period of confinement in the forwarding prisons and étapes, and by making the season of exile-travel coincide with the season of good weather and good roads. The overcrowding of the Tomsk forwarding prison, with its attendant suffering and mortality, would be at once relieved by the daily shipment of exiles eastward in wagons; the periodical epidemics of typhus fever, due chiefly to overcrowding, would cease; the corrupting influence of étape life upon first offenders and upon the innocent families of banished criminals would be greatly weakened; and finally, the exiles would reach their destination in a state of comparative health and vigor, instead of being broken down on the road by the hardships and exposures of a thousand-mile winter march.

"Why, in the name of all that is reasonable, has this change not been made?" I said to Colonel Zagarin when he finished explaining to me the nature of his report. "If it would be cheaper, as well as more humane, to forward the exiles only in summer and in wagons, why does n't the Government do it? Who can have any interest in opposing a reform that is economical as well as philanthropical?"

"You had better inquire when you get to St. Petersburg," replied Colonel Zagarin, shrugging his shoulders. "All that we can do here is to suggest."

The reason why changes that are manifestly desirable, that are in the direction of economy, and that, apparently, would injure no one, are not made in Russia, is one of the most puzzling and exasperating things that are forced upon a traveler's attention. In every branch of the administration one is constantly stumbling upon abuses or defects that have long been recognized, that have been commented upon for years, that are apparently prejudicial to the interests of everybody, and that, nevertheless, continue to exist. If you ask an explanation of an official in Siberia, he refers you to St. Petersburg. If you inquire of the chief of the

¹ The part of the great Siberian road that lies between Tomsk and Achinsk, 260 miles in extent, is the only part of the exile marching route over which Colonel Vinokúrof has jurisdiction, and for that reason his figures and estimates relate to it alone. In the report to which I refer he makes an itemized statement of the cost of sending 9417 exiles on foot from Tomsk to Achinsk in the year 1884, and says: "It thus appears that the expense of forwarding 9417 exiles from Tomsk to Achinsk—on the basis of a twenty-one days' trip—is not less than 130,342 rubles. This is at the rate of 13 rubles and 75 kopeks for every marching prisoner, while the cost of a pair of post-horses from Tomsk to Achinsk, at the regular established rate, is only 11 rubles and 64 kopeks." In other words, according to Colonel Vinokúrof's figures, it would be actually

cheaper to hire relays of post-horses for every convict and to send him to his destination as if he were a private traveler—or even a Government courier—than to march him across Siberia "by étape" in the usual way. Colonel Vinokúrof then makes an itemized statement of the expense of carrying 9417 exiles from Tomsk to Achinsk in wagons with relays of horses, and shows that it would not exceed 80,817 rubles. The saving that would be effected, therefore, by the substitution of this method of deportation for the other would be 49,525 rubles, or about \$25,000 per annum, on a distance of only 260 miles. At the same rate the saving for the distance between Tomsk and the mines of Kara would be more than \$175,000 per annum, provided all the prisoners went through.

EXAMINATION OF POLITICAL CONVICT'S LEG-FETTERS AT THE PRISON GATE.

prison department in St. Petersburg, he tells you that he has drawn up a "project" to cope with the evil, but that this "project" has not yet been approved by the Minister of the Interior. If you go to the Minister of the Interior, you learn that the "project" requires a preliminary appropriation of money,—even although its ultimate effect may be to save money,—and that it cannot be carried into execution without the assent and coöperation of the Minister of Finance. If you follow the "project"

to the Minister of Finance, you are told that it has been sent back through the Minister of the Interior to the chief of the prison department for "modification." If you still persist in your determination to find out why this thing is not done, you may chase the modified "project" through the prison department, the Minister of the Interior, and the Minister of Finance, to the Council of the Empire. There you discover that, inasmuch as certain cross-and-ribbon-decorated senators and generals, who

barely know Siberia by name, have expressed a doubt as to the existence of the evil with which the "project" is intended to deal, a special "commission" (with salaries amounting to twenty thousand rubles a year and mileage) has been appointed to investigate the subject and make a report. If you pursue the commission to Siberia and back, and search diligently in the proceedings of the Council of the Empire for its report, you ascertain that the document has been sent to the Minister of the Interior to serve as a basis for a new "project," and then, as ten or fifteen years have elapsed and all the original projectors are dead, everything begins over again. At no stage of this circumrotatory process can you lay your hand on a particular official and say, "Here! You are responsible for this—what do you mean by it?" At no stage, probably, can you find an official who is opposed to the reform or who has any personal interest in defeating it; and yet the general effect of the circumrotatory process is more certainly fatal to your reformatory project than any amount of intelligent and active opposition. The various bureaus of the provincial governor-general's office, the chief prison department, the Ministry of the Interior, the Ministry of Finance, the Ministry of Justice, the Council of Ministers, and the Council of the Empire constitute a huge administrative maelstrom of ignorance and indifference, in which a "project" revolves slowly, month after month and year after year, until it is finally sucked down out of sight, or, perhaps, thrown by a fortuitous eddy of personal or official interest into the great gulf-stream current of real life.¹

On the occasion of our first visit to Krasnoyarsk, in the summer, we had not been able to find there any political exiles, or even to hear of any; but under the guidance of our new traveling companions, Shamarin and Peterson, we discovered three: namely, first, Madame Dubrova, wife of a Siberian missionary whose anthropological researches among the Buriats have recently attracted to him some attention; secondly, a young medical student named Urúsof, who, by permission of Governor Pedashénko,

was serving as an assistant in the city hospital; and, thirdly, a lady who had been taken to that hospital to recover from injuries that she had received in an assault made upon her by a drunken soldier. The only one of these exiles whose personal acquaintance we made was Madame Dubrova, who, in 1880, before her marriage, was exiled to Eastern Siberia for making an attempt, in connection with Madame Róssikova, to rob the Khersón Government Treasury. After the adoption of the so-called "policy of terror" by the extreme section of the Russian revolutionary party in 1878, some of the terrorists advocated and practised a resort to such methods of waging war as the forgery of imperial manifestos as a means of inciting the peasants to revolt, and the robbery of government mails and government treasuries as a means of procuring money to relieve the sufferings and to facilitate the escape of political exiles in Siberia. These measures were disapproved and condemned by all of the Russian liberals and by most of the cool-headed revolutionists; but they were defended by those who resorted to them upon the ground that they (the terrorists) were fighting against tremendous odds, and that the unjust, treacherous, and ferociously cruel treatment of political prisoners by the Government was enough to justify any sort of reprisals. Among the terrorists of this class was Madame Dubrova, or, as she was known before her marriage, Miss Anna Alexéiova. In conjunction with Madame Róssikova, a school-teacher from Elizabethgrad, and aided by an escaped convict from Siberia, Miss Alexéiova made an attempt to rob the Kherson Government Treasury by means of a tunnel driven secretly at night under the stone floor of the vault in which the funds of the institution were kept. Judged from any point of view this was a wild scheme for young and criminally inexperienced gentlewomen to undertake; and that it ever succeeded at all is a striking evidence of the skill, the energy, the patience, and the extraordinary daring that were developed in certain classes of Russian society at that time by the conditions of revolutionary life. Young, refined, and educated women, in all parts of the Empire,

¹ This natural history of a Russian "project" is not imaginary nor conjectural. A plan for the transportation of exiles in wagons between Tomsk and Irkutsk has been gyrating in circles in the Sargasso Sea of Russian bureaucracy for almost thirty years. The projected reform of the exile system has been the rounds of the various circumlocation offices at least half a dozen times since 1871, and has four times reached the "commission" stage and been reported to the Council of the Empire. (The commissions were under the presidency respectively of Sollohub, Frisch, Zubof, and Grote. See "Eastern Review," No. 17, July 22, St. Petersburg, 1882.) Mr. Kokóftsef, assistant chief of the Russian prison department, announced, in a speech that he made to the International Prison Congress at Stock-

holm in 1878, that his Government recognized the evils of the exile system and was about to abolish it. (See "Report of the International Prison Congress of Stockholm," by E. C. Wines, United States Commissioner, Government Printing Office, Washington, 1879.) That was thirteen years ago, and my latest Russian newspapers contain the information that the "project" for the reform of the exile system has been found "unsatisfactory" by the Council of the Empire, and has been sent back through the Ministry of the Interior to the chief of the prison department for "modification." In other words, this "project" in the course of thirteen years has progressed four stages backward on the return gyration.

entered upon lines of action, and devised and executed plots that, in view of the inevitable consequences, might well have daunted the bravest man. The tunnel under the Kherson Government Treasury was successfully driven without detection, entrance to the vault was obtained by removing one of the heavy stone slabs in the floor, and the young women carried away and concealed a million and a half of rubles in available cash. Before they could remove the stolen money to a place of perfect safety, however, and make good their own escape, they were arrested, together with their confederate, the runaway convict, and thrown into prison. The confederate turned state's evidence and showed the police where to find the stolen money, and the amateur burglars were sent to Siberia. Madame Rossikova, as the older woman and the originator of the plot, was condemned to penal servitude at the mines, while Miss Alexeiova

at Krasnoyarsk, almost every variety of political offender from the shy and timid school-girl of sixteen to the hardened and embittered terrorist; but I had never before happened to make the acquaintance of a political treasury robber, and, when Mr. Shamarin proposed to take me to call upon Madame Dubrova, I looked forward to the experience with a good deal of curiosity. She had been described to me by Colonel Nóvikof, in Chita, as nothing more than a common burglar who had assumed the mask of a political offender with the hope of getting a lighter sentence; but as Colonel Novikof was both ignorant and prejudiced, and as, moreover, pretending to be a political with a view to getting a lighter sentence for

burglary would be very much like pleading guilty to murder in the hope of getting a lighter sentence for simple trespass, I

MOUNTAINS AND PALISADES OF THE YENISEI.

was sentenced merely to forced colonization with deprivation of certain civil rights. After her marriage in Siberia to the missionary Dubróf, she was permitted to reside, under police supervision, in Krasnoyarsk.

I had seen in Siberia, long before my arrival

did not place much confidence in his statements.¹

Shamarin, Peterson, and I went to see Madame Dubrova the next night after our arrival in Krasnoyarsk, and found her living in one half of a very plainly furnished house in a re-

¹ Colonel Novikof sat as one of the judges in the court-martial that tried Madame Rossikova and Miss Alexeiova, but he was either incapable of understanding the characters of such women or he was trying to deceive me when he described them to me as "nothing but common burglars and thieves." Madame Rossikova was represented to me by all the political exiles who knew her as a woman of high moral standards and self-sacrificing life. She was one of the young women who took part in the quixotic but generous movement

known as "going to the people," and lived for seven or eight months like a common peasant woman in a peasant village merely in order to see how that class of the people could best be reached and helped. As a revolutionary propagandist she was very successful, particularly among the Stúndists or Russian Baptists. She opposed terrorism for a long time, but finally became a terrorist herself under the influence of letters from her exiled friends in Siberia describing their sufferings.

SCENERY OF THE UPPER VENISEI.

spectable but not fashionable part of the town about half a mile from our hotel. She was a lady perhaps thirty years of age, with dark hair, large dark eyes, regular features, clear complexion, and a frank, pleasant manner. Ten years earlier she must have been a very attractive if not a beautiful young girl; but imprisonment, exile, disappointment, and suffering had left unmistakable traces in her face. She greeted us cordially, expressed particular pleasure at meeting a traveler from the United States, regretted that her husband was absent from home, and began at once to question me about the political situation in Russia and to make inquiries concerning certain of her exiled friends whom I had met in other parts of Eastern Siberia. A general conversation followed, in the course of which I had an opportunity to form a hasty but fairly satisfactory judgment with regard to her character. It was in almost all respects a favorable judgment. No one that was not hopelessly blinded by political hatred and prejudice could fail to see that this was a type of woman as far removed from "common burglars and thieves" as Charlotte Corday was removed from common murderers. You might possibly describe her as misguided, fanatical, lacking in sound judgment, or lawless; but you could class her with common criminals only by ignoring all the characteristics that distinguish a man like John Brown, for example, from a common brigand. The law may deal primarily with actions, and pay little attention to motives,

but in estimating character from the historical point of view motives must be taken fully into account. Madame Dubrova was arrested the first time—before she was eighteen years of age—for going with Madame Rossikova into a peasant village on an errand that was as purely and generously philanthropic as that of the educated young women from New England who went South during the reconstruction era to teach in negro schools. From that time forward she was regarded as a political suspect, and was harried and harassed by the authorities, and exasperated by unjust treatment of herself and her friends until, under the dominating influence of Madame Rossikova—a character of the true John Brown type—she became a terrorist. Like many other young Russians of ardent nature and imperfect acquaintance with the history of man's social and political experiments, she acted sometimes upon erroneous conceptions of duty or mistaken ideas of moral justification; but for this the Russian Government itself is again responsible. Upon the pretense of guarding the moral character of its young people and shielding them from the contagion of "seditious" ideas, it deprives them of the knowledge that is necessary to guide them in dealing with the problems of life, sets them an example of lawlessness by punishing them for social activity that is perfectly innocent and legal, and then, having exasperated them into crime by injustice and cruelty, holds them up

to the world as monsters of depravity. I have been accused by Russian officials of idealizing the characters of the political exiles; but when the history of the latter half of the nineteenth century shall have been written, it will be found, I think, that my portraits of the Russian revolutionists, imperfect and sketchy as they must necessarily be, are much more like the originals than are the caricatures of human beings left on record by the prosecuting attorneys of the Crown in their political speeches and indictments.

On the second day after our arrival in Krasnoyarsk we narrowly escaped getting into what might have been serious trouble as the result of an unexpected perquisition in the house of the acquaintance with whom Shamarin and Peterson were staying. This acquaintance, it seemed, was under suspicion, and late in the evening, during the absence of the two young men from their quarters, the police suddenly appeared with orders to make a house-search. The search was duly made, but nothing of a suspicious nature was found except the two locked trunks of Shamarin and Peterson. In reply to a question as to what was in them the proprietor of the house said that he did not know, that they were the property of two of his acquaintances who had stopped for a few days with him on their way from Irkutsk to St. Petersburg. Upon being asked where these acquaintances were, he replied that he did not know, that they usually went out after dinner and returned between eleven and twelve o'clock. After a brief consultation the police officers decided that as they had no orders to search the personal baggage of the house-owner's guests they would not force the locks of the trunks, but would merely cord and seal them so that the contents could not be tampered with, and leave them until morning.

When Shamarin and Peterson returned to

their quarters about midnight they found their trunks corded and sealed so that they could not be opened. In one of them were many letters from political exiles and convicts in Eastern Siberia to friends and relatives in European Russia—letters describing my investigations and the nature of the material that I was col-

lecting and asking the friends and relatives in European Russia to coöperate with me—and a photograph of myself that I had given to Shamarin with a dedication or inscription on the back that would reveal to any intelligent police officer the intimate nature

A PREHISTORIC BURIAL-PLACE.

of my relations with political convicts. What was to be done? To break a police seal under such circumstances would be a penal offense and would probably lead to imprisonment and an investigation. To leave the letters and photograph in the trunk would be to insure their discovery and confiscation on the following morning, and that might create a very embarrassing situation for me, as well as for the authors of the letters and their friends. The two young men finally concluded to make an attempt to get the trunk open without removing the cords or breaking the seals, and as the letters and photograph were near the bottom, and as the lid could not be raised even if the trunk were unlocked, they decided to take out a part of the bottom and afterward replace it. By working all the rest of the night they succeeded in getting out one of the bottom boards, obtained the dangerous

letters and the photograph, put the board back without disturbing any of the seals, and when the police came in the morning stood by with unruffled serenity and saw the trunk searched. Of course nothing more dangerous than a hair-brush, and nothing more incriminating than a hotel bill, could be found.

There was another little episode at Krasnoyarsk which gave us some uneasiness, and that was the offensive behavior of two unknown men towards us one night in a bookstore. The readers of *THE CENTURY* will perhaps remember the mysterious pistol-shot that was fired through the partition of our room late one night in Chita. That incident first suggested to me the possibility of becoming accidentally involved in some sort of affray or mystery that would give the police a plausible excuse for taking us temporarily into custody and making an examination of our baggage. I knew that, on account of the nature of the papers and documents that I had in my possession, such a search would be absolutely fatal, and I resolved to be extremely careful not to fall into any snare of that kind should it be set for me. I even refrained, on one occasion, from going to the aid of a woman who was being cruelly and brutally beaten late at night in the other half of a house where I was calling upon a political convict. I felt sure that her screams would soon bring the police, and I not only did not dare to be found by them in that place, but I did not dare to be connected with an affair that would lead to a police investigation. But it was very hard to hear that woman's screams and not to go to her relief.

The Krasnoyarsk incident to which I refer was as follows:

Frost and I early one evening went into the principal bookstore of Krasnoyarsk to buy some provincial maps, writing-materials, notebooks, and other things of that kind which we happened to need. We were followed into the store by two men in plain citizen's dress whom I had never seen before, and to whom at first I paid little attention. In a few moments, however, I discovered that one of them had attached himself to me and the other to Mr. Frost, and that they were mimicking or caricaturing, in a very offensive way, everything that we did. They were not intoxicated, they did not address any of their remarks to us; in fact they did not make any original remarks at all. They simply mimicked us. If I asked to see a map of the province of Yeniseisk, the man by my side also asked to see a map of the province of Yeniseisk, and did so with an elaborate imitation of my manner. If I went to another part of the store and expressed a desire for writing-paper, he went to the same part of the store and also expressed a desire for writing-paper. The in-

tention to be offensive was so unmistakable, and the manifestation of it so extraordinary and deliberate, that I at once suspected some sort of police trap. No two sane and sober private citizens would follow perfect strangers into a bookstore and behave towards them in this studied and evidently prearranged manner without some definite object. I could imagine no other object than the provocation of a fight, and as I could not afford to engage in a fight just at that time, there was nothing left for me to do but to transact my business as speedily as possible and to get out of the store. The men followed us to the sidewalk, but did not speak to us, and we lost sight of them in the darkness. When I asked the proprietor of the store the next day if he knew the men he replied that he did not. In view of the mass of documents, letters, and politically incendiary material of all sorts that we had concealed about our persons and in our baggage, and in view of the tremendous interests that we had at stake generally, such episodes as these, whatever their significance may have been, were very disquieting. Long before I reached the frontier of European Russia, I became so nervous, and so suspicious of everything unusual, that I could hardly sleep nights.

Wednesday, January 20, having spent as much time in Krasnoyarsk as we thought we could spend there profitably, and having recovered from the fatigue of the journey from Irkutsk, we set out for the town of Minusinsk, which is situated on the northern slopes of the Altai, near the Mongolian frontier, in what is half seriously and half jocosely called "The Siberian Italy." The distance from Krasnoyarsk to Minusinsk is about two hundred miles, and the road between the two places in winter runs on the ice up the great river Yenisei. It is not a regular post-route, but the well-to-do and enterprising peasants who live along the river are accustomed to carry travelers from village to village at the established government post-rate, and there is no more delay than on the great Siberian road itself. The weather, when we left Krasnoyarsk, was cold and stormy, and the snow was drifting so badly on the ice that beyond the second station it became necessary to harness the three horses tandem and to send a fourth horse ahead with a light sledge to break a track. As the road was perfectly level, and the motion of the pavoska steady, Frost and I buried ourselves in the depths of our sheepskin bag as night came on and went to sleep, leaving our drivers to their own devices. All that I remember of the night's travel is waking up and getting out of the pavoska at intervals of three or four hours and going into some peasant's house to wait for the harnessing of fresh horses. Thursday we traveled slowly all

day up the river through deep soft snow in which the pavoska sank to its outriggers and the horses to their knees. The banks of the river became higher as we went southward, and finally assumed a wild mountainous character, with splendid ramparts of cliffs and stratified palisades here and there. Upon these cliffs Mr. Savenkof, the accomplished director of the Normal School in Krasnoyarsk, found the remarkable inscriptions and pictographs of which he has so large a collection. There are many evidences to show that the basin of the Yenisei was the home of a great and prosperous nation. On Friday, after leaving the seventh station from Krasnoyarsk, we abandoned the river for

a time and rode through a shallow, grassy, and almost snowless valley which was literally a great cemetery. In every direction it was dotted with innumerable gravestones, inclosing burial-mounds like that shown in the illustration on page 656. It is not an exaggeration, I think, to say that there were thousands of them, and throughout the whole day they were the most prominent features of every landscape.

Before daylight, Saturday morning, January 23, we reached our proximate destination, the town of Minusinsk, and found shelter in a two-story log house that for many years was the home of the distinguished political exile, Prince Alexander Kropotkin.

George Kennan.

THE WOOD-NYMPH'S MIRROR.

(ADIRONDACKS.)

I.

THE wood-nymph's mirror lies afar
Where yellow birch and balsam are;
Where pines and hemlocks lift their spires
Against the morn's and even's fires,
And where, as if the stone to break,
Rock-clinging roots of tamarack take
Strange reptile shapes whose coils are wound
The gray and lichen'd boulders round.

Across the face of that fair glass
No shallop e'er has sought to pass;
Only the white throat of the deer
Divides its surface dark and clear,
Or breasts of wild fowl that from high
Blue pathways of autumnal sky
Slant earthward their slow-wearying wings
To try the coolness of its springs.

But fairest things reflected are
In the nymph's mirror. Many a star
Beholds therein its beauty. Oft
The moon, unveiled, or wrapped in soft
Sky-tissues, paves a silver way
Or doubles her half-hidden ray,
While snowy cloud fleets, to and fro,
High o'er its dusky oval go.

II.

The frame that round this mirror runs
Was wrought by springtime's gentle suns
And tender rains, and these have made
A setting as of greenest jade.
In winter it may often be
A miracle in ivory.
In spring the wild wood-blossoms set
Rare gems, as in a coronet,

Around its rim; and summer comes,
And still the bee its burden hums,
Straying in jeweled paths to shake
The flower-bells for their sweetness' sake.

But of the seasons 't is confessed
That autumn's frame is loveliest;
For then the maple's green is lost
In crimson carnage of the frost;
The year's heaped gold is hung in reach
On twigs of silver-birch and beech;
The shrubs—gray-green, and gold, and red—
Rival the splendors overhead,
While all between these treasures bright
Is dusk with shadowy malachite.

III.

This glass, 't is said, hath power to tell
Of depths that in the bosom dwell
Unknown and unsuspected. He
Who feels its magic subtlety—
Who wins a single glance from her
Whose presence sets the veins astir—
Is straight transformed. No longer held
By chains the world delights to weld,
He is enfranchised; not to wear
Again the links her captives bear;
No more for greed of earthly gain
To give his all of brawn and brain;
No more to bear his quivering heart
Unto the Shylock of the mart:
But evermore to be as one
Whose thoughts to radiant summits run,
Piercing a way through which their light
Gilds all his toil, illumines his night,
And makes his humblest action seem
Full of strange beauty as their gleam.

Charles Henry Lüders.

THE POEMS OF THOMAS BAILEY ALDRICH.

I.

BEING born a poet is one thing,—a man owes this to nature,—but the making of a poet is another and an altogether different thing—a thing he must do for himself. It is this and the manner of it that entitle

him to distinction, not the faculty with which he is endowed at his birth.

Mr. Thomas Bailey Aldrich was born a poet in the year 1836, and some time before he had reached the age of nineteen he gave the first proofs of his birthright in a slender little book, called "The Bells" (1855). To begin with this volume, and to read in the order of their publication those that have followed it, is to become acquainted with the manner of a poet's making and to see both the promise and its fulfilment.

The real nature of his gift he seems to have begun to understand early in his career, for in his second volume containing the single poem "The Course of True Love Never Did Run Smooth" (1858), the work, while in some respects immature, becomes individual and independent, the simple octosyllabic verse without stanza forms giving entire freedom to his fancy. As a poem, it is the merest bit of fanciful Oriental legend, told with a winning grace of expression and melody; but, slight as it is, there are to be found in it the same felicitous tropes and charming effects of verbal coloring which have come to be recognized as characteristic features of his work; and in it, too, his happy choice and use of words begins to be noticeable:

A thousand lanterns, tulip-shaped,
Of amber made, and colored glass,
Were hung like fruit among the trees;
And on the garden-walks and grass
Their red and purple shadows lay,
As if the slave-boys, here and there,
Had spilt a jar of brilliant wine!
The stagnant moonlight filled the air;
The roses spread their crimson tents;
And all the night was sick with scents
Of marjoram and eglantine.

But it is in his third volume that one must look to find the tokens by which his work is known to-day. The pieces in "The Ballad of Babie Bell, and other Poems" (1859) show a much wider range of the imagination, a finer

discrimination in their treatment, a surer touch in their finish, and a more nicely balanced symmetry. Here any survey of Mr. Aldrich's poetical productions properly begins; and, with the exception of two brief passages in "The Course of True Love" which were afterward modified and included in the "Blue and Gold" edition of his poems, this is where he himself seems to consider that his career began.

The door of the human heart opened at once to receive "Babie Bell," and, for the voice that sang it, it has stood open ever since. But there are others among these poems and ballads just as attractive as this. Here are "After the Rain," "Palabras Cariñosas," "The Unforgiven," and "The Legend of Elsinore," now become familiar as "The Lady of Castlenore," and here also is that clever piece of orientalism, "When the Sultan Goes to Ispahan." These and a few more appear in both editions of his collected poems (1863-1865), and later in "Cloth of Gold." It is interesting to compare the different readings of the same lyric in these three volumes, to see the changes that were made to bring the work closer to the author's ideal, and to note how in every instance his judgment was fortunate, and always gave a new grace to a line or a brighter luster to a figure. Let us take one which has been least altered and see it in its original state:

The rain has ceased and in my room
The sunshine pours an orange flood;
And on the church's dizzy vane
The ancient Cross is bathed in blood.

From out the dripping ivy-leaves,
Antiquely carved, gray and high,
A dormer, facing westward, looks
Upon the village like an eye;

And now it glimmers in the sun,
A globe of gold, a disc, a speck;
And in the belfry sits a Dove
With purple ripples on her neck.

The only change that has been made in this is the substitution of "airy" for "orange" in the second line. This adds to the effectiveness of the line, giving a more natural feeling to it and enhancing the beauty of the picture by a better distribution of the colors.

Of the eighteen pieces in a diminutive book entitled "Pampinea, and other Poems" (1861), Mr. Aldrich has been willing to preserve but twelve. From this dozen, which includes the idyllic "Pampinea" and "Piscataqua River,"

let us select "Hesperides," which seems prophetic of what was to come after. It records the expression of a hope which has since been realized, and it defines an ideal in art to which the poet has now attained:

If thy soul, Herrick, dwelt with me,
This is what my songs would be:
Hints of our sea-breezes, blent
With odors from the Orient;
Indian vessels deep with spice;
Star-showers from the Norland ice;
Wine-red jewels that seem to hold
Fire, but only burn with cold;
Antique goblets, strangely wrought,
Filled with the wine of happy thought;
Bridal measures, dim regrets,
Laburnum buds and violets;
Hopeful as the break of day;
Clear as crystal; new as May;
Musical as brooks that run
O'er yellow shallows in the sun;
Soft as the satin fringe that shades
The eyelids of thy fragrant maids.
Brief as thy lyrics, Herrick, are,
And polished as the bosom of a star!

There could not be a happier characterization of a great number of his own songs than this. The final couplet names their two most striking features—brevity and finish; a brevity not gained at the expense of roundness or completeness, and a finish not carried to the extent of over-decoration.

The first collected edition of Mr. Aldrich's poems appeared in 1863, and was followed by a second in 1865, enlarged by the addition of new work of a more mature character. "Judith" and "Friar Jerome's Beautiful Book" were sufficient to prove that his predilection for writing short lyrics was not due to limitation of power, but was rather the result of a keenly critical sense of the nature of his subjects. They showed that he was able to paint upon a larger canvas, to deal with a greater variety of colors, and also to maintain the same degree of excellence in all the details of his larger pictures that was to be found in his miniatures. But, what concerns us most in this collection is the sonnets. Of these there are eight examples carefully wrought, delicate in conception, and expressed with singular melody and grace. None shows this more plainly than the one called "Accomplices," one of the best poems inspired by the war:

The soft new grass is creeping o'er the graves
By the Potomac; and the crisp ground-flower
Lifts its blue cup to catch the passing shower:
The pine-cone ripens, and the long moss waves
Its tangled gonfalons above our braves.
Hark, what a burst of music from yon bower! —
The Southern nightingale that, hour by
hour,
In its melodious summer madness raves.

Ah, with what delicate touches of her hand,
With what sweet voices, nature seeks to screen
The awful crime of this distracted land —
Sets her birds singing, while she spreads her
green
Mantle of velvet where the murdered lie,
As if to hide the horror from God's eye.

In 1874 appeared "Cloth of Gold, and Other Poems," composed entirely of pieces selected from the collected edition published nine years before, and including all that the author wished to retain. It contains the best of what he had written up to this time, improved in form and phrase — a word here, a line there, a whole passage elsewhere. The changes made in the opening stanza of the lyric entitled "Amon-tillado" are interesting, as showing something of Mr. Aldrich's success in resetting his fancies. As first written it ran thus:

Rafters black with smoke,
White with sand the floor is,
Twenty whiskered Dons
Calling to Dolores —
Tawny flower of Spain,
Empress of the larder,
Keeper of the wines
In this old posada.

To obviate the imperfect rhymes "larder" and "posada" the author chose to lay the scene in the Nevada mining district, where the

Twenty whiskered Dons
were replaced by
Fellows from the mines,
and the
Empress of the larder
became
Transplanted in Nevada.

This was an improvement so far as the rhymes were concerned. But in the final setting the scene is in Spain again, and the strained sixth line is supplanted by the happy simile,

Wild rose of Grenada.

The last stanza of this merry song is so fortunate in its figure, that one wonders why the author, in the "Household Edition" of his poems, has not kept "Amon-tillado" merely for the sake of this:

What! the flagon's dry?
Hark, old Time's confession —
Both hands crossed at XII,
Owning his transgression!
Pray, old monk! for all
Generous souls and merry.
May they have their fill
Of Amontillado Sherry!

The two most conspicuous pieces in the book are "Judith" and the medieval legend of "Friar Jerome," the first written in blank verse and betraying the author's preference for the Tennysonian model, without showing any direct imitation of the Laureate's manner, the second written in octosyllabic measure, and recalling something of the method employed in "The Course of True Love," although far in advance of that poem in conception and imaginativeness. This passage from "Judith" gives a fair idea of the character of Mr. Aldrich's blank verse at the time:

When she had gained her chamber she threw off
The livery of sorrow for her lord,
The cruel sackcloth that begirt her limbs;
And, from those ashen colors issuing forth,
Seemed like a golden butterfly new-slit
From its dull chrysalis. Then after bath,
She braided in the darkness of her hair
A thread of opals; on her rounded breast
Spilt precious ointment; and put on the robes
Whose rustling made her pause, half-garmented,
To dream a moment of her bridal morn.

Equally charming and illustrative of the grace of the second poem is this description of the illuminated folio which was "Friar Jerome's Beautiful Book":

To those dim alcoves, far withdrawn,
He turned with measured steps and slow,
Trimming his lantern as he went;
And there, among the shadows, bent
Above one ponderous folio,
With whose miraculous text was blent
Seraphic faces: Angels crowned
With rings of melting amethyst;
Mute, patient Martyrs, cruelly bound
To blazing fagots; here and there,
Some bold, serene Evangelist,
Or Mary in her sunny hair;
And here and there from out the words
A brilliant tropic bird took flight;
And through the margins many a vine
Went wandering — roses, red and white,
Tulip, wind-flower, and columbine
Blossomed. To his believing mind
These things were real, and the wind,
Blown through the mullioned window, took
Scent from the lilies in the book.

"Flower and Thorn" (1877) makes an admirable companion for "Cloth of Gold," being like it in character. But in pieces like "Spring in New England," "Miantowona," and in the "Quatrains," the poet's path leads him in a new direction, while in the group of lyrics embracing "Destiny," "Identity," and "An Untimely Thought," it trends towards the weird and ghostly. "Spring in New England" is written in irregular measures, and is a tribute to the men who were lost in the war. Simple, dignified, noble, and sincere, there are passages in it that

rank with the best Mr. Aldrich has done. Of those buried in nameless graves he sings:

Ah, but the life they gave
Is not shut in the grave:
The valorous spirits freed
Life in the vital deed!
Marble shall crumble to dust,
Plinth of bronze and of stone,
Carved escutcheon and crest —
Silently, one by one,
The sculptured lilies fall;
Softly the tooth of rust
Gnaws through the brazen shield;
Broken, and covered with stains,
The crossed stone swords must yield;
Mined by the frost and the drouth,
Smitten by north and south,
Smitten by east and west,
Down comes column and all!
But the great deed remains.

"Miantowona" is an Indian legend created out of the author's fancy, and woven delicately into song. The main incident of the legend was conceived by Mr. Aldrich nearly twenty years before the poem was written, and is to be found in a story entitled "Out of His Head."

Of the Quatrains there are a score. These tiny poems are wrought with great finish and precision of epithet. One is a dainty fancy; another, a whole poem condensed into four lines; here, a mood, gay or grave; and there, a happy conceit whose only merit is the beauty with which it is expressed.

GRACE AND STRENGTH.

Manoah's son, in his blind rage malign,
Tumbling the temple down upon his foes,
Did no such feat as yonder delicate vine
That day by day untired holds up a rose.

THE PARCÆ.

In their dark House of Cloud
The three weird sisters toil till time be sped;
One unwinds life; one ever weaves the shroud;
One waits to cut the thread.

The lyrics in which the element of weirdness is prominent are too familiar to require quotation. Striking as they all are, none is more so than this airy and graceful "Nocturne," which lends a fragrance to the whole book:

Up to her chamber window
A slight wire trellis goes,
And up this Romeo's ladder
Clambers a bold white rose.

I lounge in the ilex shadows,
I see the lady lean,
Unclasping her silken girdle,
The curtain's folds between.

She smiles on her white-rose lover,
 She reaches out her hand
 And helps him in at the window —
 I see it where I stand.

To her scarlet lip she holds him,
 And kisses him many a time —
 Ah, me! it was he who won her
 Because he dared to climb.

"The Guerdon" and "Tita's Tears" are excellent examples of skill in the use of the rhymed pentameter couplet, to which Mr. Aldrich gives the polish of Pope without Pope's hardness and artificiality. But in this volume, as in "Cloth of Gold," it is the sonnets that are the most noticeable feature. They show why it is that he shares with Longfellow the honor of having written the finest sonnets in American literature. One of these, in honor of the poet's craft, might be applied to his own work:

Enamored architect of airy rhyme,
 Build as thou wilt; heed not what each man
 says.

Good souls, but innocent of dreamers' ways,
 Will come, and marvel why thou wastest time;
 Others, beholding how thy turrets climb
 'Twixt theirs and heaven, will hate thee all
 their days;

But most beware of those who come to praise,
 O wondersmith, O worker in sublime
 And heaven-sent dreams, let art be all in all;
 Build as thou wilt, unspoiled by praise or
 blame,

Build as thou wilt, and as thy light is given:
 Then, if at last the airy structure fall,
 Dissolve, and vanish — take thyself no shame.
 They fail, and they alone, who have not
 striven.

The sonnet to "Sleep" seems faultless in conception and expression, and of the many poems written upon the same theme it is one of the most exquisite:

When to soft sleep we give ourselves away,
 And in a dream as in a fairy bark
 Drift on and on through the enchanted dark
 To purple daybreak — little thought we pay
 To that sweet-bitter world we know by day;

We are clean quit of it, as is a lark
 So high in heaven no human eye may mark
 The thin swift pinion cleaving through the gray.
 Till we awake ill fate can do no ill,

The resting heart shall not take up again
 The heavy load that yet must make it bleed;
 For this brief space the loud world's voice is still,
 No faintest echo of it brings us pain.

How will it be when we shall sleep indeed?

"Mercedes, and Later Lyrics" (1884) contains his first venture in the field of dramatic literature. "Mercedes" is a prose drama condensed in form, written in the most direct man-

ner, and depending for its success upon the story alone. It is thoroughly dramatic in feeling and treatment, and inspires the hope that he may some time make a more extended effort in the same line of composition. Among the lyrics is to be found another of those weird imaginings, called "Apparitions":

At noon of night, and at the night's pale end,
 Such things have chanced to me
 As one, by day, would scarcely tell a friend
 For fear of mockery.

Shadows, you say, mirages of the brain!
 I know not, faith, not I.
 Is it more strange the dead should walk again
 Than that the quick should die?

But the gem of all is the song entitled "Pre-science," which is lovely in its simplicity, its tenderness, and its melodious rhythm:

The new moon hung in the sky,
 The sun was low in the west,
 And my betrothed and I
 In the churchyard paused to rest —
 Happy maiden and lover,
 Dreaming the old dream over:
 The light winds wandered by,
 And robins chirped from the nest.

And lo! in the meadow-sweet
 Was the grave of a little child,
 With a crumbling stone at the feet,
 And the ivy running wild —
 Tangled ivy and clover,
 Folding it over and over:
 Close to my sweetheart's feet
 Was the little mound up-piled.

Stricken with nameless fears,
 She shrank and clung to me,
 And her eyes were filled with tears
 For a sorrow I did not see:
 Lightly the winds were blowing,
 Softly her tears were flowing —
 Tears for the unknown years
 And a sorrow that was to be!

"Wyndham Towers" (1890), a long poem in blank verse, is the most ambitious of the poet's productions. A comparison between this and "Garnaut Hall" (Poems: 1865), a discarded poem from which the main incident of "Wyndham Towers" is taken, exhibits the growth of Mr. Aldrich's powers, his increased facility in the writing of blank verse, and his admirable handling of a subject of varied requirements. To tell a story in blank verse is a difficult task. To accomplish it successfully a poet needs to understand the art of the story-teller almost as well as his own. The dramatic movement must be everywhere carefully adjusted to what may be termed the poetic balance: the narrative must be kept clearly

in view and yet not be made too prominent, serving much the same purpose as the fabric upon which is wrought a piece of embroidery—the background and the detail of the pattern each lending its beauty to the other, and so producing a harmonious effect in the whole design. Plot, incident, character, each must be treated with due regard to its importance: while the music of the rhythm must conform to the mood, the thought, and the sentiment. These requirements Mr. Aldrich has met in a way that entitles him to the highest praise, the result being the most artistically finished piece of blank verse that has been written in this country. The entire poem of fourteen hundred lines is built up with the same care that is to be observed in the author's couplets. The imagery is new, and rich in color; the descriptions of nature are apt and beautiful; the characterizations are strong and vivid; and the details of the work are wrought out with a rare sense of proportion and scale.

The following extracts will illustrate these features:

Lean as a shadow cast by a church spire,
Eyes deep in sockets, noseless, high cheek-boned,
Like nothing in the circle of this earth
But a death's-head that from a mural slab
Within the chancel leers through sermon-time,
Making a mock of poor humanity.

Hard by from a chalk cliff
A torrent leaps: not lovelier Sappho was
Giving herself all silvery to the sea
From that Leucadian rock.

A laugh . . .
Like the merle's note when its ecstatic heart
Is packed with summer-time.

Her beauty broke on him like some rare flower
That was not yesterday. Ev'n so the Spring
Unclasses the girdle of its loveliness
Abruptly, in the North here; long the drifts
Linger in hollows, long on bough and brier
No slight leaf ventures, lest the frost's keen tooth
Nip it, and then all suddenly the earth
Is naught but scent and bloom.

The one lyric—a variation of one of the songs in the 1859 volume—merits a place with the daintiest and most graceful of its Elizabethan cousins:

It was with doubt and trembling
I whispered in her ear.
Go, take her answer, bird-on-bough,
That all the world may hear—
Sweetheart, sigh no more!

Sing it, sing it, tawny throat,
Upon the wayside tree,
How fair she is, how true she is,
How dear she is to me—
Sweetheart, sigh no more!

Sing it, sing it, tawny throat,
And through the summer long
The wind among the clover-tops,
And brooks, for all their silvery stops,
Shall envy you the song—
Sweetheart, sigh no more!

As "Wyndham Towers" is the most important of Mr. Aldrich's long pieces, so "The Sisters' Tragedy, and Other Poems" (1891) is the most important volume of his miscellaneous verse. The character of the work in this latest collection is marked by strong personal and dramatic qualities. In kind it resembles that of former collections—the themes ranging from the lightest and gayest to the most serious and thoughtful; but it is far beyond what preceded it. Coming now from the poet in his prime it brings a new promise, as if his finest and most enduring work were yet to be done.

A deeper philosophy and a more intellectual spirit pervade this volume. The author's moods, hitherto emotional and objective, are now often reflective and personal. In "The Shipman's Tale" and the noble sonnet, "I vex me not with brooding on the years," his themes deal with questions of the gravest character and of the most serious concern; while in "The Sisters' Tragedy," "Pauline Pavlovna," "The Last Cæsar," and "Thalia," the dramatic feeling adds to their potency, just as the personal element adds to the strength and force in the "Monody on the Death of Wendell Phillips" and the lines upon "Sargent's Portrait of Edwin Booth." But this deepening and widening of the stream of thought and imagination have in nowise affected its transparency; and there are still left the sunny shallows where all is joy, glow, and music, as, for instance, in these lines entitled "Memory":

My mind lets go a thousand things,
Like dates of wars and deaths of kings,
And yet recalls the very hour—
'T was noon by yonder village tower,
And on the last blue noon of May—
The wind came briskly up this way,
Crisping the brook beside the road;
Then, pausing here, set down its load
Of pine scents and shook listlessly
Two petals from that wild-rose tree.

In the group of verses called "Bagatelle" one can see how the material of *vers-de-société* may be molded into something that is distinctly different. The piece that comes nearest to being society-verse is "At a Reading," but it is uplifted by its poetic pinions: it is simply a lower flight. Mr. Aldrich may be able to write society-verse, but he has never proved his ability to do so. His lyrics have wings rather than feet; they fly, but neither dance nor run.

The most musical lyric in the book, and, in-

deed, the most musical lyric Mr. Aldrich has written, is the "Echo Song." "At the Funeral of a Minor Poet" is a strong protest against the present school of Realism; the tribute to "Tennyson" is admirable in its loftiness and dignity; and these lines from "In Westminster Abbey" are fine:

Tread softly here; the sacredest of tombs
Are those that hold your Poets. Kings and
queens

Are facile accidents of Time and Chance.
Chance sets them on the heights, they climb not
there!

But he who from the darkling mass of men
Is on the wing of heavenly thought upborne
To finer ether, and becomes a voice
For all the voiceless, God anointed him:
His name shall be a star, his grave a shrine!

Oh, ever-hallowed spot of English earth!
If the unleashed and happy spirit of man
Have option to revisit our dull globe,
What august Shades at midnight here convene
In the miraculous sessions of the moon,
When the great pulse of London faintly throbs,
And one by one the stars in heaven pale!

II.

WHAT most impresses one in reading Mr. Aldrich's poems is their strong individuality of manner and treatment. There are times, now and then, when one is conscious of something reminiscent of Keats in its sensuousness, or of Herrick in its airiness or spontaneity; but it is Landor to whose delicately chiseled and cameo-like verses these polished lyrics bear the closest resemblance. Yet the work of Mr. Aldrich is unlike that of any one of them; it is distinctly his own and shows him to be his own master. His fondness for and use of apt words which have a definite poetic value reminds one of Théophile Gautier, but the finish given to his verse by this fastidiousness is Greek rather than modern. In his attitude towards nature he is not an interpreter, but a lover who is influenced by her external beauties. Without botanizing or analyzing he wins from her forms and moods those graces which are her most pleasing attributes: the tint and perfume of the rose, the voice of the wind, the fantastic fret-work of the frost—these are enough to satisfy him. All of his songs have a rare musical quality, and some of them, like the "Nocturne" which we have quoted, almost sing themselves. His words and meters

are always happily wedded, and there is a sufficient variety of each, from the light and tripping measures of "Corydon" to the rich melodiousness of "The Piazza of St. Mark's at Midnight."

One finds in Mr. Aldrich's work an occasional inaccuracy in his rhymes. The instances are very few, and for this reason they are the more noticeable. In "Pursuit and Possession," one of his most graceful sonnets, "haunt me" and "want thee" are almost enough to spoil the effect of the whole composition; while in "The Lady of Castlenore" a more exasperating combination is that of "morn" and "gone"; but it is in the recently written "Guilielmus Rex" that the false rhymes are most prominent, occurring as they do in four lines out of sixteen. These are purely matters of technique, and in the work of a poet less skilful in the choice and handling of words would not call for any special notice; but with Mr. Aldrich's creed in mind, "Let art be all in all," one feels such blemishes. The notion that there are three kinds of rhymes—those for the eye, those for the ear, and those for both the eye and ear—is not well founded. Rhyme is of a mathematical nature; it is a poetic equation which must be satisfied by fixed musical values. In a long poem an occasional deviation or approximate substitute may be excused; so, too, in a short poem where the terminal word of the line is the one word that can convey the poet's idea. But in the poems to which these examples belong, one cannot help believing that Mr. Aldrich could find other terms of expression equally happy that should carry with them his thought, and, at the same time, be absolute in their rhyme. But these are slight defects. He has always gaged his power with accuracy; doing well whatever he endeavored to do, and not attempting anything beyond his capabilities. Hence to review his work is to find much to praise and little to condemn. His claim to the honor and distinction of being a poet is based upon a long and loyal service to the lyric muse. His gift was genuine and precious, and by patient and painstaking study he has greatly enhanced its worth.

The art and beauty of Mr. Aldrich's verse are great enough to make it last. These are imperishable qualities and, being imperishable, shall keep his name in remembrance as one of the rarest lyric poets of the nineteenth century.

DAVID AND GOLIATH.
(SEE "OPEN LETTERS.")

TO CALIFORNIA IN 1849 THROUGH MEXICO.

California with its mines of gold, and how soonest to get there was the ruling excitement of the hour, in the fall of 1848. The "gold fever" was at its height. Many desired to go gold-hunting that could not for want of money, and many that had the wherewithal could not abandon families, homes, and business with any degree of self-approval. So in many instances the matter was compromised, and he who could spare the cash (and sometimes he that could not) entered into agreement with the impecunious but enterprising adventurer who desired to go, to furnish him the means, the proceeds to be shared between them on his return. Had the gold-hunters kept faith with their bankers and shared all they obtained, it would have been another case of fisherman and gate-keeper. The fisherman, it will be remembered, was denied admittance to the castle with a splendid fish, of which he knew the lord of the castle was fond, until he agreed to give half he received to the obstinate gate-keeper. Once admitted, he refused to dispose of it to the master except for one hundred lashes. He was compelled to explain, and received one-half lightly laid on, while the gate-keeper received the other half laid on with vigor. Could the pioneer have given to his stay-at-home partner one-half of the hardships, dangers, diseases, shipwrecks, extreme hunger, and dire distresses he endured he would doubtless have been willing to share the gold also.

But these arrangements enabled thousands of energetic and fearless men to start on the pilgrimage for gold in many ways. One of these, which I am about to narrate, was the formation of a company of two hundred adventurous spirits fitted out in New-York. The plan was to go by sea to Vera Cruz, Mexico, thence overland to the Pacific coast at San Blas or Mazatlan, and in the absence of ves-

sels at these ports to continue the journey of two thousand miles by land through Mexico, Lower and Upper California to the mines. A part of the company embarked from San Blas, a part from Mazatlan, and a part made the entire journey overland from Vera Cruz.

This company, mostly composed of picked young men, was organized under the comprehensive title of the "Manhattan-California Overland Association," and numbered about two hundred members. We were full of a sanguine spirit of adventure and eager to dig our fortunes from the mines in the shortest possible time. We were fitted out with very wide-brimmed soft hats, boots of rubber or leather reaching above the knee, woolen and rubber blankets, red flannel shirts, a liberal supply of tin pans for washing out the gold, shovels, picks, spades, crowbars, camp-kettles, frying-pans, tin plates, tin cups, daguerreotypes, locks of hair, Spanish books, a few patent gold-washers, musical instruments, etc., the most of which assortment was early scattered along the Mexican trails or in the chaparral, or perhaps sold to the natives for a few small coins. To these were added rifles, carbines, shot-guns, revolvers, and bowie-knives, to which we clung closely all the way. We chartered the bark *Mara*, Captain Parks, in ballast, of some two hundred tons, fitted her hold with a flooring and two tiers of double bunks all around her sides, placed a cook-stove amidship in the hold with the pipe projecting from the open hatchway, provisioned her at our own expense with vari-

"OH, SUSANNAH, DON'T YOU CRY FOR ME."

ous sea-stores of the common sort, beans and pork, salt beef, hams, mackerel, sea-bread, coffee, and a supply of water, and were ready for the voyage.

We provided no cook, as we were all earnest on the score of economy and self-denial, and our outlay thus far for the voyage to Vera Cruz was but twenty dollars each. We presented a remarkable appearance as we boarded the bark

of the most emphatic oaths, which he freely bestowed upon us.

Among our number, gathered on the vessel's deck at the wharf, was one young man of striking physique, very tall, wearing a broad sombrero and boots reaching to his hips and already fitted with spurs for the Mexican mustang he expected to ride, and with buckskin gauntlets reaching to his elbows, and two

THE CATHEDRAL AND HARBOR OF VERA CRUZ.

at the foot of Burling Slip on the last day of January, 1849, every man in full California costume, his armament in his belt—boots and buckskin gauntleted gloves, a roll of blankets strapped *à la militaire* on his shoulders, a carbine or rifle slung upon his back, and frying-pans, coffee-pots, camp-kettles, and assorted tinware in his hands. The bark had a poop-deck on her quarter in which were a few small rooms for which lots were drawn, and I was fortunate in drawing one, which freed me from the confinement of the packed and darkened bunks of the vessel's hold, with its foul atmosphere of bilge-water and heated humanity.

Captain Parks enlisted but a small crew, depending on volunteers, but he was wisely provided with his own cook and caboose. His cook had a remarkable personality: a light copper-colored negro over six feet in height, exceedingly slim, gaunt and gray, wrinkled and crippled, with but one eye, three fingers on one hand and none on the other, and with a vocabulary in English which consisted entirely

of the most emphatic oaths, which he freely bestowed upon us. Among our number, gathered on the vessel's deck at the wharf, was one young man of striking physique, very tall, wearing a broad sombrero and boots reaching to his hips and already fitted with spurs for the Mexican mustang he expected to ride, and with buckskin gauntlets reaching to his elbows, and two

Oh, Susannah, don't you cry for me;
I 'm bound for Californy with my tin pan on my knee,

when a pretty, fair-haired girl, her rosy cheeks wet with tears, put up her lips that our booted hero might impart his farewell kiss. His heart was tender if his boots were large, and, just as we were casting loose from the wharf, he sprang upon the deck, threw his baggage ashore, and followed it with agility, renouncing for love all his golden visions of California.

THE COURTYARD OF A MEXICAN HOTEL.

Down the bay we sped, with the tug-boat alongside and the chorus of "Susannah" ringing over the waters, to which was added the refrain :

But the happy time is over ;
I 've only grief and pain,
For I shall never, never see
Susannah dear again,

which was concluded with three ringing cheers and a hurrah for California as the tug left us on the broad Atlantic. A gale speedily sprang up, and all night long our lightly ballasted bark rolled hither and thither upon the heaving seas, and many penitential landsmen, under the influence of their first seasickness, wished they had never left their homes, and were freely urged by the more jolly ones to wade ashore.

By the next morning's light was revealed a dejected and motley group of seasick humanity taking its first sea lessons on old Neptune's dominions. And now came a culmination of our miseries. We had pork, beans, coffee, and hardtack, but where was the cook ? How were two hundred men with stomachs now in a state of entire vacuum to be fed with hot coffee and cooked rations ? In times of emergency the Yankee always calls a public meeting, and so a mass meeting was convened ; and, after speeches had been made, it was decided to accept the proposal of two of our number, who for a valuable consideration volunteered to cook for the two hundred till we should reach Vera Cruz. Thenceforth, after a period of fasting, we had one lunch a day, when the sea was not too rough, till our voyage was ended, on the 24th day of February.

The writer must leave it to the imagination of the reader to divine what the zoo, confined on that small vessel for twenty-four days, did in the way of mischief. Once only on the voyage did the boisterous spirits on board require discipline. This the good, but sorely tried, Captain Parks administered by ordering the bark "laid to." This was effective, as every one was in haste to reach California before the gold should all be "dug out," and dreaded delay.

We arrived off the coast of Mexico just as the evening sun was descending amid the golden clouds over the mountain peaks, flanked by dark and somber masses, the snow-crowned Orizaba, or star mountain, set high in the blue heavens, flashing as with a coronal of diamonds. Two snow-white birds of flowing plumage came off from the yet distant land, and with an easy and graceful movement of their wings circled around our mastheads, and then flew straight landward again. They were the mariners' pilot-birds of the tropics come to guide us ashore. It was Sunday morning

when we dropped anchor near St. Juan de Ulloa, with its quaint ancient tower, and the city of Vera Cruz just before us.

The uniformed customs officials speedily boarded us from a small boat, and while the clanging of some scores of musical Spanish bells from the cathedral towers filled the air, the officers were entertained by an encounter between two of our pugnacious gold-hunters, who struck vigorously from the shoulder. We received a speedy permission to land, as the officials did not appear to enjoy our companionship. Sunday was passed in looking at the sights in the old Spanish city, battered and bombarded as it had been two years before by the artillery of General Scott. Walls and buildings constructed of coral rocks were shattered as he had left them, fragments of bombs and solid shot lay about the streets where his cannon had fired them, and along the beach were numerous dilapidated wrecks of surf-boats where he had abandoned them. Numerous army wagons, caissons, and artillery carriages were scattered about, and thousands of Yankee-made pack-saddles were offered us for our journey. These and much other paraphernalia, the production of army contractors, had only served the purpose intended—that of enriching the contractors. The only pack-saddle found useful was the Mexican one, consisting of two great pillows of leather connected and hung astride the mule, and weighing without the "cargo" some eighty pounds, on top of which or suspended from it would be a load of some two hundred pounds.

As Vera Cruz is in a section of sand, cactus, and lizards, surrounded by a large tract of chaparral, messengers were sent to the nearest ranches and haciendas to announce that an arrival of "Los Yankees" was in want of horses, mules, and "burros." We were constrained to remain for the night in the yellow-fever-producing city among its so-called "greasers" (as our soldiers had termed them). This we passed in a caravansary, the first floor of which was packed with two hundred head of pack-mules and "burros." We spread our blankets on the boards of the second floor, disturbing large colonies of fleas who held pre-emption rights, and who resisted our encroachment by furious onslaughts on every part of our bodies. There were openings in the wall of our room but no windows, and from below, the whole night through, there was one continual braying and uproar from the two hundred hungry mules. Nothing could parallel this first night in Mexico but a page of Dante's "Inferno."

As our war with Mexico had just closed, and the ignorant masses yet held us in the same enmity with which they had regarded

their conquerors, matters did not look favorable for a peaceful passage over the whole extent of Mexico, especially as we expected to follow the route taken by Scott's army, and to pass over battle-fields where, as we learned, bleached skeletons lay still unburied. The government, in fact, the whole country, was yet in a state of demoralization, and guerrillas and robbers infested almost every mile of the way. Besides this, merchants of intelligence in Vera Cruz warned us that we were almost sure to be robbed and murdered, that if we should escape this fate we could not find provisions on our journey for men or beasts, and that we would most surely break down our animals, and be glad to resort to horse or mule meat to sustain life. Impressed by these tales (which found fulfilment to some extent even as to mule meat, with rattlesnakes added), about fifty of the most pronounced and boastful among our company took a return passage on the vessel for New York.

On Monday Mexican horse-traders presented themselves, in comparison with whom the sharpest Yankee horse-jockey sunk into utter insignificance. They drove in before them, with a "whoop la" and a Comanche yell, caravans of horses and mules that included not only the halt and the maimed, the lame and the blind, but also some of the most vicious and worthless brutes that were ever collected together—galled and chafed, sore-backed, buckers, jumpers, and balky. Yet with wonderful skill the owners of these gothic animals covered up and disguised their defects and their vicious tricks, so that in most cases the deception and trickery were not discovered till the vendors were well on their way to their ranches again. From twenty-five to forty dollars, or *pesos*, each was paid by anxious buyers for animals which the owners would have been glad to sell for one-quarter the money. We found that these mustangs could with equal facility throw the rider over their heads, or kick him off to the rear, or shoot him upward, or lie down abruptly, or take out a liberal piece of his flesh, and yet under the manipulation of the ranch owner they had been as docile and gentle as could be desired.

However, our passports having been viséd and each man mounted, and some several times dismounted, by Monday night we reached as best we could a general rendezvous or camping-place at Santa Fé, a group of huts some ten miles from Vera Cruz, and passed our first night on our blankets with the ground for a bed and the heavens for a shelter tent. On the vessel we had organized into four divisions, each with a captain at its head, known as the New Jersey, Island City, Enterprise, and Pacific. The originator of the en-

terprise, who had professed to be a veteran Mexican traveler and who was to act as generalissimo of the whole, had failed to report on board the *Mara*, so a mass meeting was convened at Santa Fé, and with very brief speech-making the writer was chosen to take command of the expedition. On calling the roll it was found that one member had been left in Vera Cruz, having been thrown skyward from his horse and somewhat injured. Wishing to abandon none, I called for a volunteer and started back to the city (ten miles through deep sand lined with a growth of chaparral) to escort our comrade out to camp. The volunteer was a Mr. Pierce, who had been a member of a company of cavalry at home and had brought with him his long cavalry sword, which he secured in a dangling position from the horn of his saddle. His steed was not used to such an appendage, and soon the rider was rolling in the sand in one direction and the horse in another. As the way was beset with guerrillas, I gave my horse a free rein and spur; and with a ready revolver in one hand rode into the city and safely brought my comrade out to the camp.

At this first camp we divided into "messes," bought and distributed a Mexican beef, and cooked our first meals. We made our first start for a day's march on the morning of the 28th day of February. The first camp-fires, the cooking, the saddling-up, the loading of baggage and equipments on the vicious, kicking, biting mustangs and donkeys, and the final mount and start were altogether beyond description. Besides the rider, they had to carry two blankets, his mining tools, coffee-pot, camp-kettle, and frying-pan laid on or hanging from his saddle, and his bag of tin cups, spoons, and tin plates, and his gun, rifle, or carbine slung on his back, and a variety of other articles supposed to be essential. Don Quixote and Sancho Panza joined to Falstaff's regiment would not have presented half so motley a group. The rattle of tinware and the orders and the shouting in an unknown tongue excited the wild and half-broken mustangs to madness. I soon had to organize a rear-guard under Captain Pierce to pick up stragglers, help reload broken cargoes, and lift stubborn and refractory mules to their feet. It was also necessary constantly to halt the column, knowing well that a man who should be left out of sight in the rear would be speedily gobbled up by the watchful robbers trailing after us. Along the day's route, as all the way across the whole of Mexico, we found wooden crosses, indicating that a murder had been committed there. This first day's ride of ten miles brought us to a stream known as Murderer's Den. Here, before starting from camp in the morning, a detail

A MEXICAN HORSE-TRADER.

of organization was made, and by adopting a rigid military discipline, and discarding worthless incumbrances in the way of mining tools, gold-washers, etc., I was able to train my troop so that when the trail was not very rough or mountainous over twenty Mexican leagues a day was made between camps. As we left the low-lying, malarious sea-coast, our road and climate both improved, and on the first Saturday we camped for rest over Sunday in the suburbs of the beautiful city of Jalapa, a city of fruits and flowers, of which the Mexican proverb says: "See-Jalapa and die."

Before starting again on Monday morning many exchanges for better animals took place, and a better outfit generally was provided, and a more cheerful spirit prevailed. Here our horses and riding mules were shod, a necessary preliminary to crossing the mountain ranges. If the mule was not too refractory, this was managed by tying one of his hind legs to his tail, well up from the ground, but if he was intractable he was left but two feet to stand

upon, the opposite forefoot being tied close under the body.

On the plaza of Jalapa the hostile feeling against the Yankees had its first outbreak. A great crowd gathered about the red-shirted horsemen as we rode into the plaza on Sunday, and a rush was made by the mob to dismount us and drive us from our saddles. But a vigorous charge promptly made against the mob with threatening revolvers drove them back and gave safe escape to the hard-pressed horsemen. Through the villages of the country parts we were received by the *señoras* and *señoritas* with kindness, but by the males with frowns and threats, and with the significant gesture of a finger drawn across the throat. In no place were we safe from attack except in groups which commanded safety and respect. To them in their ignorance we were still Yankees and *soldados*. One night, a little way beyond Jalapa, our entrance into one of their walled towns caused great excitement; a general alarm was rung on the cathedral bells,

A SAMPLE STEED.

messengers rode out in haste to alarm the surrounding haciendas, and natives flocked into the town, two or three mounted on the back of each mule, armed with *escopettes*. But we remained close inside the strong gates of our hacienda, and, the excitement subsiding, we were allowed to leave without an attack early the next day. Camp was aroused usually at three o'clock in the morning; fires were kindled, pots of coffee were boiled, and, when possible, eggs (*wavos*) also. Then came a march in military order of about twenty miles, when halt was ordered for dinner, provided water and corn were to be had for the horses. Supplies of whatever could be purchased were foraged for along the route, bananas and sweet potatoes being the staple; occasionally pork could be had, and in the larger places very poor beef, cut into long strips and sold always by the yard. This tough beef was eaten by the Mexicans cut first in small pieces and then stewed in a quantity of red peppers resembling stewed tomatoes (called *carne de Chili*). If our halt was made at a hacienda, the universal national dish of "tortillas" and "frijoles" was to be obtained, served with coffee, at three cents a meal. But our hungry and robust riders could dispose of many meals at a sitting, and

when camping and with a sufficient supply of yards of meat to satisfy their hungry stomachs, the quantity they fed themselves from their frying-pans was not only an astonishment but almost a horror to the natives, who crowded our camp to see the show. Upon one occasion, after a hard day's ride of over forty miles along a route where supplies were not to be had, we camped by a clear stream, where but a few native huts of poles and branches sheltered the population. Two priests, with a large, mule-drawn carriage, were just in advance of us, and in receiving the monthly tithes for the church had carried away all the wealth of the place, and there was but one answer, to our calls for food, "*Nada, Señor, nada. No hai tortillas. No hai frijoles.*" Lieutenant Gray, a stray soldier, who had been left adrift in Mexico, volunteered to bring me some supper from among the villagers. In utter fatigue, I threw myself upon the ground in one of the huts, and was soon in a deep slumber. At about eleven o'clock Gray returned and awakened me. The hut was crowded full of men and women gazing at me with great interest, but they were careful to keep at a safe distance from me. Gray explained his stratagem thus: He had told them the *capitan* was a great warrior, and had

eaten the prisoners he took in battle; that I was very hungry and would also eat corn and hay, but liked eggs and onions better. He brought eggs, onions, and salt, leaving outside a supply of corn and hay for me to eat, an operation which the ignorant but curious natives had come to witness. So far as the boiled eggs and onions were concerned, being my first meal of the day, I was glad to be able to gratify them.

In camping for the night, sentries were stationed, and pickets were posted, and the animals were secured with lariats inside the picket line, but sometimes, when guerrillas abounded, in the center of the camp. Once only did these *ladrones* make an open demon-

and in platoons at double quick charged towards the guerrillas. Evidently a fight with the hated Yankees in red shirts was not what they desired, for as we came within short range, their leader gave the word "*Vamos*," and away they galloped down the ravine helter-skelter, and we saw them no more. We certainly were not a handsome crowd at this time.

At National Bridge we saw the wreckage and the unburied bones of that battle-field, and looked with wonder upon the fortified height that guarded the entrance of the almost perpendicular heights up which Colonel Harney's dismounted dragoons worked their way with the help of bushes and props, and to which they

A WAYSIDE CROSS.

stration. We were in a section of country covered with low bushes, in which jack-rabbits, wild turkeys, and other game were present. No towns were near, and, feeling secure, a large part of the company was scattered in pursuit of the game, hoping to secure enough to fill our camp-kettles on our next halt, for we had been some days on short rations. The Mexican women were always friendly, and presently some were met on the trail, calling out to us: "*Ladrones! ladrones!*" and pointing forward on our path. At this our stragglers were called in. The robbers were a large band of well-mounted and well-armed men, and had filed across our road in the bed of an *arroyo* or dry stream. To fight as a troop of cavalry with camp equipage and cooking utensils dangling from our saddles, or to wait a charge from them, would have been sure defeat. So I dismounted a part of my troop,

clung in the face of a sweeping fire from the Mexican batteries on its summit, which they captured with a rush, turning their own guns upon the artillerists as they ran down the opposite side of the hill. We feared having to force our way over this bridge, but were not molested.

Upon the heights of Cerro Gordo we camped for our noonday meal. Upon its central battle-field, where Santa Anna made his most stubborn fight, we kindled our camp-fires, and, dipping water from its sunken pools covered with slimy green vegetation, we drank our coffee under the shade of the same trees where the desperately wounded lay to die, glad of the luxury of that stagnant pool to quench their thirst. It was the best those heights afforded amid that deathly struggle. All around us lay scattered uncoffined bones, and ghastly skulls looked down upon us where in mockery they

had been secured among the branches of the trees, and everywhere earth and trees and broken armament gave silent witness of the awful struggles of our little army. All the way up the heights for miles the pine trees from the roadside yet obstructed the national road as they had been felled to hinder the onward march of our soldiers, while from point to point the Mexican troops and batteries were rallied for another stand. We left the historic spot with a triumphant three times three and with

very sides; they seemed almost to cling to us for safety. It was Saturday afternoon, and we found welcome shelter in the hacienda Buena Vista near the mountain summit, a spot made historic afterward as a place of refuge for the unfortunate Emperor Maximilian.

We found the whole mountain-summit infested with guerrillas. We were on the highway of travel and not far from the City of Mexico, and in this section these lawless bands were accustomed to make the boldest and most suc-

SHOEING A MULE.

uncovered heads in honor both of our dead and our living heroes.

We were soon well up the Rio Frio mountains, and were received near the summit by a terrible war of the elements in the pine forest — thunder, lightning, rain, hail, snow, intense cold, and a howling hurricane. We were drenched through and through, and shook as with an ague, and our poor animals, used to the warm plains below, chilled with cold and in terror from fright, trembled in every limb and crouched helplessly upon the ground, dazed by the lightning and shocked by the thunder which seemed to discharge at our

cessful raids either upon mounted travelers or upon the *diligencia*, which was periodically and helplessly plundered, often with the addition of wanton murder. I felt justified in taking possession of the hacienda; posted my own sentries, and picketed it for some distance outside, obliging its own proprietor and employees to come and go by my permission and only with the password. By Sunday morning, for the safety of my troop, I found it expedient to leave this stronghold (as I learned we were largely outnumbered) and make a hasty march to Mexico City, which we safely accomplished. Even under these circumstances it was a sub-

lime experience to ride down that mountain height—Mounts Popocatepetl and Iztaccihuatl both looking down upon us, the great valley and City of Mexico in full view below us, and a thunder shower with its dark nimbus clouds and forked lightning full in the sunshine under us. On the way down the mountain we saw three guerrillas hanging from a frame by the roadside by ropes passed under their arms.

We stopped for our lunch at noon, and were entertained by a company of Mexican rangers or lancers, handsomely uniformed and armed with a long spear with a red pennant and the indispensable lasso of raw-hide, and mounted on superior, hardy Mexican horses. They had captured, and, without the form of judge or jury, had riddled with bullets and afterward hanged the three robbers we had passed on the way-side. With their gay trappings of silver-ornamented riding outfit, their swarthy faces, black hair, fierce mustaches, and fiery eyes, the lancers were well calculated to affright the souls of fearful adversaries. Their favorite method of attack was to throw the lasso over their victim, then with their well-trained horses to jerk him from the saddle, drag him to death over the ground, or in mercy lance him. By their invitation I stood at a considerable distance from them to test their skill with the lasso. By the utmost agility I was utterly unable to escape its folds.

Across the valley of Mexico, picturesque with parallel rows of the century plant, which furnishes the national drink of *pulque*, we entered through open gates the ancient city of Montezuma, not long before conquered and evacuated by the small army of the United States. We found quarters in a comfortable hacienda, while the numerous *fondas* of the city furnished refreshment and pulque. Pulque is the lager beer of Mexico. It is everywhere transported on the backs of mules in skins of hogs stripped from them in some mysterious way by which legs and all are utilized for a great bottle.

On the following day the antipathy to Americans was shown on the public plaza near the great cathedral, during the passage of a religious procession of the Host preceded by the ringing of a bell. Every one within hearing indoors or on the street reverently knelt where he was, removed his hat, and made the sign of the cross. This was not regarded by the gold-hunters, who stood erect, curiously gazing at the scene. At once they were set upon by those nearest them, dragged to their knees, and their hats knocked off their heads. A mob quickly gathered. The men resisted with desperation, and had it not been for the

"LADRONE."

prompt interference of others, lives would undoubtedly have been lost and our travels would have ended inside prison walls. This made our longer stay in the city both uncomfortable and hazardous, and once again we mounted our now rested steeds for the trip to the Pacific.

Dissatisfied with my purpose to halt on Sundays for rest and to recruit the horses, some thirty of the company now detached themselves from my command. They were in haste to reach California before the gold was all "dug out," and considered such halting a waste of time. So they bade us good-by and started at a rapid gait in advance.

On this part of the journey we had an illustration of justice in an alcalde's court. Two of our men, who differed about the ownership of a mule, agreed to arbitrate before the alcalde of the village where they chanced to be. One claimant slipped a \$2.50 gold piece in the alcalde's hand, and a speedy decision was rendered in his favor. After leaving the town a short distance the other claimant rode back, put a \$5 gold piece in the alcalde's hand, and speedily came back with a decision written out in his favor and reversing the other.

After a long day's march we reached Celaya, a walled town of some six thousand inhabitants. The people were decidedly hostile, and the alcalde sent me a summons to appear before him, and commanded that I should make no attempt to leave the town before sunrise, and that I should at once send one-half my number to another town, some ten miles beyond, a town of about the same size as Celaya,

adding that he would also send a messenger with us to insure our safety, as otherwise we were sure to be attacked. I replied that I would not do so, that we asked no protection, but if attacked would take care of ourselves. He then gave an order to the proprietor of the hacienda to hold us prisoners inside the fortress (for a hacienda is also a fortress) until sunrise the next morning. At three o'clock I called up and mounted my men, and then awakened the keeper, and with a revolver placed at his head persuaded him to unlock the barricade, and we rode triumphantly out. The alcalde's plan was to divide the troop, and with the aid of the other town, where were some troops, to get satisfaction for incidents of the war.

Our journeying led us, on Saturday night, to a small walled town not far from the large city of Guadalajara. It had abundant orange as well as banana groves, and a clear stream swept along part of the town. Three hundred miles, in part of rough mountainous travel, had been made during the week; and men and horses were alike worn and weary and glad of so enticing a place of rest. While sipping a cup of coffee in the fonda on Sunday morning I heard the report of a gun in our quarters and a messenger entered hurriedly to say that young W—— (from New Jersey) had shot himself dead. Our quarters were at once crowded by the excited natives, who desired to administer summary punishment on us for what they considered a murder. We held them off till nightfall. As best we could we extemporized a coffin from some rude boards, prepared his body for burial, and I read over him the burial service, and waiting till the town was silent, in midnight darkness, we silently stole out of the town and buried him in a secluded spot, placing at the head of his grave a rude wooden cross to preserve it from desecration.

We then made our escape in the early morning, and with sadness entered the great city of Guadalajara. We arrived at about eleven o'clock in the morning. A regiment of soldiers were there on the way to chastise some rebellious Indians. The presence of the soldiers joined to the entrance of my company of one hundred and fifty red-shirted, travel-worn, armed troopers brought the excitement at once to a demonstration. We had just reached a hacienda when the cry of "Revolution!—revolution!" was raised. Soldiers discharged their muskets in the streets, women screamed, men hurriedly closed their places of business for fear of robbery and joined in the excitement. We shut and barricaded our fortress doors, fearing that this was to be the end of our California journey, while we were yet more than an hundred miles from the seashore. With the popu-

lation opposed to them, every one of that brave group of young men stood up to the issue; their faces paled a little, but weapons were coolly got ready for a fray out of which none expected to come alive. How the attack upon us was ever held in check I never learned, but a little after midnight we succeeded in getting away unmolested.

The remainder of our journey brought us to the commercial town of Tepic, whose trade was with the seaport of San Blas, and we found no further obstruction or enmity, as the intercourse and interests of commerce had made the people friendly to the American people. We arrived at San Blas in excellent health and condition, having lost but one of our number. In port we providentially found the brig *Cayuga*, Captain Savage, of some two hundred tons, belonging to the firm of Pacific traders, Howland & Aspinwall. Captain Savage, an Austrian, had sailed her down the coast in ballast, on the chance that some party of gold-hunters might cross Mexico and require a vessel to transport them to San Francisco. A contract was soon entered into similar to the one with Captain Parks, of the *Mara*. The hold of the *Cayuga* was floored, and double bunks were again provided with about three feet of space from floor to deck. In the absence of water-casks, red-wood or dug-out canoes filled with supplies of water were stowed below the floor. As before, we furnished our own sea-stores. They consisted of old whalers' sea-bread, condemned after one voyage of three years to the Arctic seas, well-filled with vermin, which, however, were rendered innocuous by being baked over in a well-heated oven; a supply of well-

A MEXICAN RANGER.

salted Mexican jerked beef as sold by the yard, sun-dried till it would have answered as well for harness-leather as for food, with coffee and sugar for luxuries. These provisions were placed in sacks and stowed under the flooring, where they were always accessible through an open hatch. Upon the outer deck, just back of the foremast, was laid a temporary flooring of brick without covering or protection from the weather or the sun, and this constituted our cooks' galley, each mess having its own cook. We paid Captain Savage \$80 each as

this small brig we had about one hundred and fifty men including our gold-diggers, besides the crew, the horse, and a dozen goats. We had no tables, but ate our hardtack and jerked beef and drank our tin mugs of coffee wherever and whenever we found it convenient.

On the eighty-fourth day from New York, anchor was weighed and we set sail for San Francisco. By this time all hardships were accepted as a matter of course, and each man made himself especially jolly over every new danger or deprivation that was encountered.

A MEXICAN DUEL.

passage money, while the sea-stores cost us \$30 each. About 120 of our company took part in this arrangement, thus paying the sum of \$9600 for the storage part of the brig and \$3600 more for our supplies and rations. As water was an important factor for so large a number at sea, in addition to the supply in canoes in the hold, a very large canoe was secured on the brig's deck and filled with water, but for economy of stowage a deck of rough boards covered it. In addition to our party Captain Savage had taken on board a full complement of cabin passengers in the little rooms on the after part of the brig. As these few aristocrats of the voyage had paid fabulous prices the captain had contracted to supply them with fresh provisions, and for this purpose a number of goats were taken on board, which were duly served on the cabin table. Added to these Captain Savage, as a perquisite, had embarked a Mexican saddle-horse on deck, so that on

But the old whalers' bread had to be well soaked before it could be eaten, and the writer as well as others lost teeth in the effort to masticate it. On account of the saltiness and toughness of the jerked beef, it was found necessary to attach it to ropes and tow it in the sea for forty-eight hours before any attempt could be made either to cook it or eat it without cooking. Sea-bathing may accomplish much good, but it never yet made tender Mexican jerked beef. Our supply certainly never tempted the most hungry shark in our course. The roll of the sea and the tacking of our ship so far emptied our canoes of water that all hands, except the horse and the goats, were put on short allowance. Our captain, who was an experienced navigator of those latitudes, and anxious to be rid of us as soon as possible, decided to take an indirect southwest course to fall in with the trade wind, and so sailing in a semi-circle to come into the Bay of San Fran-

cisco from the northwest. So we were promptly put on an allowance of something over a pint of water a day each, with which to make our coffee, dampen our whalers' bread, and gratify our thirst. Water of a red color and impregnated with the peculiar odor and taste of the canoes was served daily in this proportion to each mess. But there was no grumbling. Did we not already see the enticing glitter of the yellow gold in the mines of California?

The time of the journey of the main company was :

	Days.
From New York by bark <i>Mara</i> to Vera Cruz...	24
From Vera Cruz to embarkation on brig <i>Cayuga</i> ...	60
Voyage on the Pacific to San Francisco.....	30
Total.....	114

The thirty seceders who left us at Mexico City arrived at San Blas two weeks after our

A PULQUE CARRIER.

On one occasion, however, the water after having been served to a mess was pilfered from the bottles. It was suggested by Doctor Brinkerhoff (afterward the physician and surgeon of Walker's Nicaragua Expedition), that the mess should endure another day of thirst while he should place a prescription in their water-bottles. This was done with success, and the ensuing day, although it was very calm, several men (not members of the association) were terribly afflicted with an awful seasickness. The remedy proved effective, and great respect was paid thereafter to bottles of canoe water.

After thirty days on the *Cayuga*, we entered the Golden Gate on the 14th day of May, 1849, and I claim that we were the first organized body to reach that port both by sea and land, although at that date a hundred sail of vessels were at anchor in the harbor.

party, most of them too late to be included in the benefits of the *Cayuga* charter. Both men and horses had broken down on the seven-days-a-week system. They straggled into San Blas, and continued their journey by land to Mazatlan, 200 miles north. A few of those who arrived first secured places on our brig, while some of the main body, not having sufficient funds, joined those who journeyed overland to Mazatlan. Here they chartered a small coasting schooner, provisioning her mostly with rice and water. After thirty days' coasting, with the alternation of land and sea breezes, their rice being almost entirely exhausted, they found themselves but 200 miles farther north on a journey of some 2000 miles. One of them, who was a Sabbath observer, sickened and died, and was buried on the shore. The small party then divided, a few continuing along the

coast on foot, while the rest remained on the vessel and, after untold suffering from want of food and water, six months afterward arrived at San Diego, where the schooner was condemned as unseaworthy, and the company scattered, making their way to San Francisco as best they could, poor in pocket and broken in health and ambition. Those who landed pressed onward on foot, mostly through a barren and desert country, devoid of food, water or game, with their faces resolutely set towards the magnet of the gold mines. When game was to be had, even were it hawk or buzzard, it was killed and greedily eaten, kind, quality, and cookery not being considered. Toads, lizards and crows were alike welcome, and any sunwarmed and stagnant pool of

water was considered most refreshing. The horrors of the siege of Paris were paralleled by the shifts to which the party were reduced, and in one section of country venomous rattlesnakes were killed and, after being skinned and prepared, were cut in sections for food and boiled. In this way they subsisted and survived, and, with a determination sustained only by the hope of the fortunes that awaited them in the gold mines, they pressed forward through the blazing heat. For months they endured this, with no beds but their ragged blankets. The writer met the first one to arrive in San Francisco in the month of November, ten months after the departure of the buoyant party on the deck of the *Mara*.

HACKENSACK, N. J.

A. C. Ferris.

ELDER MARSTON'S. REVIVAL.

HORSES were tied to the small oak trees that fringed three sides of the playground. Young men stood around in groups and canvassed neighborhood affairs, not boisterously, but in modulated tones; for

this was not a spelling-school. They had gathered to hear Elder Marston preach.

A party of youngsters at the door moved aside respectfully, giving way to Maxa Haven, the schoolmistress. She greeted them pleasantly and passed within, taking her place in the narrow seat, and waiting reverently; for what was school-room by day was sanctuary by night, and nothing common or trivial should profane it.

The house was rapidly filling. Men upon the left hand, women on the right, crowded the benches. They indulged a whispered comment on the presence of Charley Cook, a farmer, noted for his wild delight in all things sacrilegious. He had long been a terror to the weaker preachers, and his "gang" had caused the premature suspension of many a service. He stood in the neighborhood as an enemy incarnate of religion; yet he was honest in his dealing with men, given to industry and good rules of farming, and proud of his prosperity even when reminded that from of old his fellows had flourished "like a green bay tree."

Cook had often expressed a desire to meet Elder Marston, and all the love of order in the community trembled now that the "revivalist" stood face to face with this force of evil. For the preacher was himself a notable character. He had for years conducted revivals in the larger school-houses and rural churches,

and had drawn to his meetings great numbers of people who seldom went to service elsewhere. He was middle-aged, smooth-faced, vigorous; with a knowledge of the Bible that impressed his hearers, and with a fund of incident, analogy, anathema, a faculty for painting the graces and the horrors, the blessings and the cursings of his gospel, which stood him well instead of doctrine.

Elder Marston led in singing, and brought with him from the fields of other successes a score of songs whose swift motion and easy melody quite won his audience. He was his own chorister, and would even pause in the midst of a measure to correct this part or that, dropping deftly from air to bass, or rising with the clearer tenor till his finer ear was satisfied. These interruptions were not resented by the homely throng that filled the house, and each acquired melody was a fresher bond of union between them and him.

He had been warned of the presence of Cook, the disturber, and seemed to gather from the threatened opposition a strength to make his work the more effective. He announced his text, then, turning from the Bible, stepped forward and began without further preparation one of the swiftly moving songs which seemed to form his chief equipment. Beating time with palm to palm, turning this way and that as he directed the twining of graceful music around the standards of old, familiar lines, Elder Marston laid down his gage of battle to all foes whomsoever. Ending this song, he instantly started another in which his followers quickly joined, urged them to swifter time, lighting the fires of latent enthusiasm and fanning them with his own vigor and interest.

DRAWN BY ALFRED KAPPES.

ENGRAVED BY H. DAVIDSON.

"I GIVE UP!"

Then, turning quickly to the desk, he took up the text and passed with the same swiftness into the sermon. It was prophecy, and the thunders of Sinai were invoked; the dream of Daniel, the vision of John, were drawn upon to strengthen and embellish his discourse. At the close of an impassioned period he stopped, stepped forward, and again began singing:

Sweeping through the gates of the New Jerusalem,
Washed in the blood of the Lamb.

Then he stopped the strident measure as abruptly as he had begun it, and returned to the sermon as though there had been no interruption.

Maxa Haven, the schoolmistress, watched him with much interest. Surely he had a strange power over these people. How he swayed them, how he led them whithersoever he would, inspiring them with shouts of victory, or hushing them into silence with a word. She wondered if he was sincere, then cast out the thought, and bent her eyes to the ground in humbleness of spirit. Was he not preaching the Word? But the doubt came back at the close of the sermon. It came back at midnight when she sought her rest, and it stood by her bedside when she waked in the morning. Was he sincere? It troubled her without apparent reason when she took up her school-work again in the morning, and she was glad of a diversion furnished by Amos, one of the larger boys who swept the room each morning.

"See what I found on the floor," he said, displaying some bits of shining metal. "Awful lot of trash on this floor of a morning."

They looked like silver, and had been dropped molten upon the boards, and lay there, hardened in fantastic shapes like ice crystals. She put them in her desk to await some chance claimant among the pupils—for the rights of little ones must be conserved—and welcomed the labors that filled the day. But lessons were strangely puzzling. The pupils, spurred by the magic of her discipline, fairly outran expectation.

"I must carry home some books at night and prepare the lessons in advance," she said.

Maxa went to meeting again that evening and saw not only the benches but the aisles crowded with listeners. She saw that same tense figure sitting alone in the shadow behind the desk, watching the people with wide, unwinking eyes. She thought of a panther, not resting, but crouching; of a fate only waiting to hurl itself in bolts of destruction on unguarded heads. She thought he might be angel or demon, praying in silence for the deliverance of souls or spreading a snare for feet unwary. She was glad to be aroused when Elder

Marston almost sprang to his feet and began a revival hymn:

I am standing upon the green shore,
All weary and faint with delay,
Still fearing the billows that roar,
Still dreading the mist-covered way.
And oh! that my Saviour would come
And carry me safe o'er the lea,
To rest in that beautiful home
My Father provided for me.

Oh, fear not, dread not, the dark flowing wave—
The Saviour is near you, and mighty to save.

The rhythmic cadences were caught up by the crowd as the rising and falling waves of the song swept over them, and faces reflected the lighting fires of the heart. Maxa joined in the singing, and hoped with that to stifle doubt. She was strangely comforted by the uncouth music, strangely touched by some power exerted by this man. She followed him through the passages of another song and listened with interest to the sermon. She was conscious that an influence reached from that rude pulpit to hearts all over the house, past faces as yet stolid with indifference, and wondered what the result would be when conviction seized the multitude, and the stress of waters should break all bounds.

In the midst of her wondering the sound of bells broke on the ear. A team was galloping towards the school-house, and through the windows she could see Charley Cook standing up in his sleigh and lashing his horses, while a half-dozen young men, well-muffled in buffalo robes, sat in the body of the vehicle and sang with all vigor a bacchanalian song. Here was the expected attempt to break up the meeting. The issue would soon be joined.

The jingling bells were still a moment as the party drove up to the door, and one after another filed into the house. The sermon was suspended till the confusion should pass, and as the roysterers crowded about near the stove Elder Marston began another song, leading with a vigor which told of strength for the conflict. The trespassers joined in the chorus for a moment, and then took up again the rollicking measures with which they had announced their arrival. The sacred music flagged. Young men who had been assisting dropped the lines to watch the outcome. Cook led with a gusto that was reassuring, fitting some local incident to the leading line, and throwing all possible emphasis into the refrain.

Glory, glory, hallelujah!

Glory, glory, hallelujah!

Glory, glory, hallelujah!

Said Marston to his men.

But both numbers and leaders were against "the gang." The minister suffered his hymn

to stop, and as the revelers paused on completing their measure, he started quickly a battle-hymn both famous and familiar :

I have read a fiery gospel writ in burnished rows
of steel ;

As you deal with my contemners so with you my
grace shall deal.

Let the Hero born of woman crush the serpent
with his heel—

Since God is marching on !

Music and chorus were the same as that chosen by the disturbers. The preacher impressed the power of his selection with a force they had never seen. The tune of the sinners was wielded by the saints, and so boldly did the resonant members sing that when the last line was reached the strong

Truth goes marching on

was heard above all disturbance. Another stanza sung through with equal vigor, and Charley Cook's adherents had subsided. A third, and they joined in the music to a man.

Then the sermon was quickly taken up with even more force, and through the silence wrung from uproar the minister painted the beauties of a life redeemed. No vials of wrath, no thunderings of anger—only the sorrow of pure souls, and the infinite loss a rebel must suffer, were portrayed. This rural genius warned and terrified and pleaded by turns, but never lashed out a rage. Heads were bowed ; eyes were streaming ; men who had passed unmoved through a score of revivals bent forward on the rude desks of the school-room and gave way to tears.

Instinctively the gang had separated, and its stranded members were in hiding. Elder Marston had won. He dropped the sermon and rose in song. The effect was magical. Almost at the first note a shout proclaimed some soul in a tumult of joy. The rude song was a pæan. It unlocked the gates that had stood against warning and pleading alike. In the midst of it a strong man knelt in prayer, beating with his hands and crying aloud for mercy. Another followed him, and as the cadences of the song continued, rising in strength with each passing moment, another and another sank down and called out in earnest supplication. The preacher rose into visible power as the fire he had invoked swept over his subjects. Standing out strong before them he shouted :

"Come in ! Come in ! It's winter with sin ; here is warm sunshine. The roads are rough out there ; here the paths are smooth. Burdens are crushing you, killing you, there ; come in and be saved."

Each word could be heard through the uproar of the lifted voices. Above the united, impassioned, fervid clamor of those who

prayed, through the loud, clanging beat of the song, each short sentence pierced a pause like arrows in the joints of harness.

Maxa grew dizzy. The room seemed swinging, whirling, rising, falling, as the flames of enthusiasm tossed high or bent low in their weird contortions. The house was like a great bell ; that man who evoked and directed its pealing was a giant armed with a hammer, striking here, there, above, below—wherever he would, and beating out a note of warning, a chord of love, a strain of sorrow. She felt herself clutch her reason with an almost palpable grasp and struggle, half stifled for breath. She put out her hand to touch some solid thing, to find some object that her calmer consciousness had known, some line by which she might find her way back again to paths her feet had trod. But the chaos seemed to have found no center, and Maxa felt the last wall of conscious motive going, when a sharp cry near her broke the spell and startled the girl to normal life again.

She turned and saw Charley Cook standing in a circle of space that had been purchased for him by denser crowding. The man was in an agony. He was gasping. One hand was pressed fiercely across his eyes, pulling his face sidewise, as though the physical struggle with himself was a relief. The other hand was outstretched, wide open, palm downward, groping. The whole figure was tense and rigid, and in the silence which followed his first outcry the man's deep suspirations could be heard. Through the knotted, swollen throat came harsh, grating sounds. The demons were indeed rending him before they were cast out.

"I give up !" he cried in a loud voice quite void of inflection. "I give up ! Don't keep me out ! Let me come in !"

With one hand still pressed upon his face, and one stretched out and feeling as he went, the tortured man crept forward, while those who had filled the space before him pressed back to right and left and gave him passage.

Elder Marston had not moved a step. He stood in triumph as the crushed rebel came, thus humbled, to claim the promise of forgiveness. His head was bent forward, his deep eyes glanced out brightly, his smooth face was fairly luminous in the fierce joy of victory.

But what made Maxa start ? She thought she saw on that face and in those eyes a very demon gloating above the writhings he had inflicted. She closed her eyes. Why should she be so haunted ?

There was little more. A score of tender hearts were filled to overflowing with gratitude that this strong sinner had laid down his arms. His groping hand had touched the preacher's palm, and he was struggling in untried prayer

there by the desk. Above him stood Elder Marston, calming and hushing the tumult in the house, softening the grief of this one, tempering the shouts of that, and even checking the audible prayer.

Then light as a lullaby, gently as a mother, he led the way into the sanctuary of song:

Jesus, lover of my soul,
Let me to thy bosom fly.

Every voice was attuned to tenderness, and when the lines were done Elder Marston raised his hands and pronounced a benediction, dismissing the audience for the night.

Maxa joined her brother at the door, and they walked home together without a word. That Charley Cook had been "converted" was fact stupendous enough to silence conversation. Not one doubt of his sincerity was entertained. It was marvelous, but it was true. She sat with her parents some moments before the wide fireplace, and then left them for the night. But she went no more to meeting. She allowed her school-work to furnish excuse, but gladly greeted the reports that Charley Cook had thrown all his forceful nature into the work he had once opposed. She knew that with his surrender the ice-gorge of opposition had broken, and that scores of honest men and women had united in forming a society that prayerfully hoped for established services in a house of their own.

One evening the girl dismissed her school as usual, and gathered up the books she meant to take home for review, strapped them in a bundle, and then forgot them, leaving the little parcel so necessary for to-morrow's success exposed on her desk. When tea was done, and the home-work of the evening laid aside, she remembered her books. She must have them, for the good results of past days had depended, she was sure, on these nightly reviews of the lessons.

Her father's age excused him in her thought; she could not go now, for service was by this time in progress at the school-house; her brother and the farm help were among the worshipers. Something of the comical was suggested in the situation, and the lighter vein brought back her olden force and independence.

"I'll get them myself when meeting is over," she said, and devoted the hours till that should be to songs and pleasantries. She watched the bright lights from the four broadside windows of the school-house when the time for closing came. She saw them, one by one, darkened as the heavy board shutters were put up outside. She listened till the last group of neighbors had passed to their homes, and then put on a warm coat and hood, slipped her feet into rubbers, took a box of matches, and passed un-

noticed from the house. The books could be secured, she could be at home in half an hour, and the problems could soon be solved.

The night was dark, but she hurried along the frozen road not nearly so badly frightened as she had expected. Were not all these indistinct figures familiar from childhood? But when the dark building outlined itself against the forest and sky her heart gave a great throb at the thought of entering the lonely place.

Then reason stilled the rising terror. Of course there was nothing in the house; she knew that right well. The room would be warm and the floor would be littered with the usual wreck of which Amos complained. She would need no light, as she could easily find her way. And then, if anything should occur, did she not have the matches? She stepped upon the door-stone and stamped her feet to loosen the particles of ice and snow.

As she did so her ear caught the sound of two light footfalls within the house. It startled her for a moment until her courage could be rallied, and with the rebuke, "How foolish!" she inserted her key and opened the door. She threw it wide and gazed into the black depths of the room. Not an object could be distinguished save the fire which glowed through the crevices in the stove.

Something in that sight restored her sense of familiar things, and she stepped boldly into the room. But the blaze was not smoldering, as it should have been. The sides of the stove were red-hot, and as she took another step she wondered why it had been left burning so brightly. The door swung shut behind her just as she found her passage barred by a long bench drawn right across the open space in the center of the room. She nearly stumbled over it as she advanced towards her desk.

Lest she should encounter other obstacles she drew a match from the box and struck it against the rough back of the offending bench. She had taken the wrong end, and, as it failed to light, she turned it in her fingers, thinking how steady her nerves were, and what a very odd thing she was doing.

She struck again, and the flame lighted up the gloom about her. The tip had scarcely ignited when the air was shivered with a crashing blow on a window. Shattered glass jingled as it fell to the floor, and heavy strokes were rained on the strong shutters. She was conscious through the rush of fears that these blows had fallen on the glass first and then on the wood. The assault was from within the house.

In her fright she dropped the box and the lighted match as well. It fell, as though guided there, straight upon the rest, and instantly the

hundred of minute torches were ablaze. Not her own corner of the room, but the whole wide school-house was alight now, and by the kindling flame Maxa saw a man walk from the window to the desk, saw him turn up the lighted wick in the lamp, and saw him assume an attitude that horrified her with its familiar pose.

"Elder Marston!"

It was all the girl could say. In the crouching figure, in the pallid face, in the shining eyes, she saw not a power for good, but a spirit from perdition, whose flitting figure had haunted her ever since that night at meeting.

Benumbed by the sight, yet fascinated, her eyes swept around the room. Here was a strange kettle; there was a curious mold; on the hearth lay an iron-handled ladle. And as if to set speculation quite at rest, on the very bench which had barred her progress was laid a row of bright new coins.

How she stood there, how she could face a being so demoniac, she never knew; but she turned from these utensils of an outlawed-craft with something of strength against the man before her.

"Yes, Elder Marston," he said.

Maxa had compelled him to speak. He was trapped; escape was hopeless; denial was useless. For an instant his courage had deserted him, and he tried to beat down the shutters. Now he was himself again, and he met the steady gaze of an honest woman with the composure of a veteran, an adept in sin.

"Do you know what I have been doing?" he asked.

"Certainly," said Maxa, with rising spirit. It occurred to her that this was her school-room, and the sense of proprietorship helped her mightily. He was conscious of her growing power, but the old feeling which conflict always provoked came over him.

"What will you do, Miss Haven?"

"I will send you to prison," she replied, hot with a strange emotion. It was not anger; it was not fear. It was deeper than these. This man a counterfeiter, and in this room where two hours before he had bathed a score of souls in prayer! This man!

"Let me say a word. First I will put out that fire of yours. The matches are burned up now, and in a moment that dry floor will blaze."

"Stay where you are," said Maxa, fiercely. "I will attend to the fire."

She stepped to the corner and lifted the pail of water. She took the tin cup and poured upon the flame until it was quite extinguished. As she did so Elder Marston saw that her nerves were like steel. He wondered how long

it would be before the recoil would come and loosen the singular force that armed her.

"I am a counterfeiter," he said calmly. "I have been for years. I don't believe it is wrong. My dollars are as good as the Government's, and you know they are needed. No one has enough of them. If you contend it is wicked, I still assert I have a balance to my credit, for I am doing good every day. These people are really converted. Charley Cook has been on the borderland of heaven for two weeks. This community is better, and always will be better, for my coming; and if I had not come twenty men and women whom you know would have been lost forever. You tell what you have seen to-night, and twice that number will rush to ruin headlong, and all the Bibles on earth and all the angels above can't save them. You will not help them, and you will not kill me; you will harm them without helping anybody. If I am wrong, let Him judge who is wiser than you. Now will you tell?"

She could make no response. Was that a human being who stood there and debated a problem so awful?

"Are you thinking of the law?" he continued. "Think rather of the eternity of these people. Safe to-day, wrecked to-morrow. You know the law is really lighter than that. If you sin against the latter in keeping silence, how much more will you sin against the Spirit by exposing me and cursing my people? One thing more. If you are silent I promise—and I keep my word—never to coin another dollar. Now will you keep still?"

While he spoke the girl pondered rather than listened. As he closed, she turned about, opened the door, and sprang into the night. She fled down the road, through the farm-yard gate, and up to the house.

"Father," she cried, as she burst into the wide sitting-room, "Elder Marston is a counterfeiter. I went to the school-house for a book after the people had left to-night and found him making money."

The dim light in the room grew dimmer; she thought the words "making money, making money" were repeating themselves over and over again. She tried to walk to the settee, but could not lift her feet along the rapidly rising floor. The settee became frightened at her staring eyes, and ran far away, almost out of sight, down a long, icy road. Her feet were very cold, but her face was burning in the flames of ignited matches. A crash like millions of goblets broken with blows drowned the words "making money, making money, making money," and then came silence.

Help was summoned, and the fainting girl was carried to her bed. One of the boys saddled a horse and galloped for a physician.

David, the hired man, took down the shot-gun and ran to the school-house. When nearly there he heard the door close with a bang, and although he could see no fleeing figure he fired, and then called out:

"Halt, thou, or I'll shoot again!"

"Why, shoot again, certainly," responded a voice that David had heard in song, in prayer, in preaching service every night for a month.

He ran as he never had run before. He hallooed for help, shouting the names of the nearest neighbors, and shouting again.

Lamps were lighted in the school-house, and there the farmers gathered while David told them what the girl had seen. One of the earliest arrivals was Charley Cook. The recent converts looked to this reformed son of Belial for their cue. They were dumfounded at Marston's brazen infamy. To their simpler natures such evident blasphemy loosened the very grasp of God. Scoffers whispered in their ears that the preacher had done this very work for years, and reveled in sin every summer. "He was too good any way; these perfect men are always scaly."

But through the promptings of temptation a strong voice pitched in earnest supplication drew all to view the figure of Charley Cook, and his simple devotion stemmed the rising tide of infidelity. He was kneeling on the littered floor near the center of the room where he had stood or knelt every night since his conversion, and where he had tried to atone for sins committed.

He bent down there now, his rough wool hat beside him, his hard hands clasping the sacred book from which the light was drawn that had dispelled his darkness, and lifted up his voice in prayer.

"Lord," he said, without a trace of formal intonation, "can't a traitor carry good news? Can't a lost man light a beacon-fire? Can't a hungry man bring bread? Can't a sick man heal? Help us to ask if this message is good, if this beacon-fire leads up out of trouble; if this bread satisfies, if this medicine cures us. And if they do, help us to take 'em, no matter how they come. Amen!"

And then he rose and went out and led the chase with such tireless vigor that by another nightfall the culprit was overtaken and landed in jail.

No event in twenty years had so engrossed attention as did this trapping of the counterfeiter, this unmasking of Elder Marston. In the weeks following his arrest the school-house where his latest work had been performed became a place to visit. Men came for miles, and told of other services where crowds had flocked to hear him preach, where doubtless he had been as infamous as here. But they found nothing in the place or its surroundings that could

criminate the man. The closest search failed to reveal the hiding-places of tools. In that brief while granted him between the flight of Maxa and the arrival of David every vestige of his work had been obliterated. His craft had not deserted him even in the rush of moments that followed detection.

This phase of the case won comment; and while sincere men who had believed Elder Marston were grieved beyond expression at the awful revelation, they pinned their faith to Maxa's testimony, and were glad to know her sense of justice was strong enough to beat down all her barriers of timidity. She would tell exactly all she knew. And now that his preliminary hearing was at hand, crowds of countrymen flocked to the city for what was to them a veritable judgment.

In the city such curiosity had been aroused that Commissioner Bayne concluded to hold the inquiry in quarters more commodious than the little office where his customary business was transacted. The "old hall" was near at hand, once used for the sittings of the Federal court, now seldom occupied above the first floor, whose crowding occupants monopolized the little room; and never in the forty years since its erection had the ancient walls inclosed so dense a throng.

The newspapers had exploited Elder Marston's record with a brilliancy of description that won attention. It was understood that the prisoner would appear as his own attorney. His shrewdness, his logic, his eloquence, were said to be phenomenal.

The hall would not contain the crowd that came to witness the proceedings. Men pushed inside the bar, and took up positions about the desks and tables. They were packed about the deep windows through whose small, untidy panes the light had come so long. Officials of all grades took seats of honor near the bench.

A hush of habit fell upon the audience as the gray-haired commissioner took his seat and ordered the prisoner brought in. A murmur of comment followed as a slender, dark-faced man entered the room, searching swiftly with his deep-set eyes till they rested on Maxa Haven. Was it anger or appeal she read in them? A swaying, crushing movement of the crowd told how deep was the interest. In the shuffling noise of many feet a breaking timber somewhere in the room roused a few to apprehension, which was stilled in a moment by the rage to hear. There was a sense of offending in the incident.

The formal arraignment was listened to in a hush that drove the great crowd forward half a man's breadth, that bent the body and turned the ear to catch the faintest sound.

"Not guilty," said Elder Marston, calmly; and it was his first utterance since arrest.

"Ah! he will fight."

The audience breathed again; it swayed back with loosened tension; feet were shifted to an easier position. An attorney rose to state the case — when the commissioner, looking past him with dilated eyes, saw the center of the room slowly sinking. Before he could open his lips in warning they saw their danger. A straining timber crashed, the first shot in a broadside of ruin.

"The floor is falling," yelled a hundred voices in a breath — voices that rose from articulate rills to yells and shrieks, then sank to smothered groans as the whole mass sank swiftly down.

Dastards and heroes had mingled on equal footing in the audience; they could be distinguished now. Strength was panic-stricken, and weakness was underfoot. But as the scores of persons uninjured sprang from the windows and the lower doors, the work of rescue began. Out into the sunshine as from the shadow of death strong men assisted their fellows to safety, till the last maimed body was stretched in the gracious light of a winter sky — out from the suffocating horror of the dust cloud to the thankful consciousness of life.

All but one.

When Elder Marston's ear first caught the sound of breaking wood he knew the avalanche was coming. Calmer than others, because he knew what they were there to learn, he darted one thought at what might be the end, then turned his eyes and studied Maxa Haven. He felt the floor quiver as the crowd drew back, he saw the windows rising as the center sank, and his last look as the hundreds swept downward was on the girl, was on the prosecuting witness, clinging there with both hands to the broad ledge of the window, clinging and crying for help.

He knew how much this ruin meant. Surely some lives would be lost; why not hers? He knew the tale locked in that honest heart and waiting for the telling by those honest lips; and he knew that with her silenced he could not be convicted. But one glance backward as he reached the air changed all his swift-formed plan. Through the rising cloud of dust he saw that she had gained a footing on the broken timbers which the floor had left, and

was standing pressed close against the wall and gazing at the crush below. She would be saved unharmed.

Conviction lay that way; but — could he not escape? Nothing was easier. In the mad confusion which had seized the town he had safe conduct through any streets he chose. He was already on the outer circles of the crowd, the spirit of flight stirring within him, when he heard a later cry, a sharp voice lifted and repeating over and over again:

"The walls are falling! Look out!"

There was Elder Marston's battlefield. Just silence now, and all the world could not bring home that charge. Just silence, and those trembling walls, that vaulting roof, would hush forever the lips that could accuse him. Doubtless she was screaming. Let her scream. So were scores of others. No one thought of looking up there. Only he knew.

Only he knew? Dared he keep silence? Would not his hands be red? All this in an instant. Then came the revulsion that erased the last vestige of that wicked thought, and Elder Marston turned back through the crowd, pushing and pressing nearer till he stood under the window where Maxa was clinging.

"Can't a hungry man bring bread?" Charley Cook had asked in his prayer. Aye; but he will feed at times. "Can't a sick man heal?" Yes; but there is contagion in life; the healer is better that he bettered his friend.

"Help me with this ladder," he cried. "There's a woman."

They were slow to obey him. They had drawn back from the walls. A loosened brick fell at his feet, but he did not mind the warning. If only he might save that girl! He was better than any three as they raised the ladder. He waited for none of them, but sprang up swiftly before it had touched the house. He stood on the broad ledge and tore the sash from its fastenings, threw it behind him blindly, and stooped down with hands and eyes and heart brimful of blessing.

He lifted her to safety; but in the effort which thrust the girl beyond the reach of danger the rescuer lost his balance and fell with the crumbling walls, under the heavy roof, into a tomb where he lay acquit, beyond the reach of human questioning.

VIGILANCE.

MORE than one king goes wandering in disguise,
And, with a realm at heart, a cake must turn.

But — art thou Alfred? Never let it burn:
Show, in a kitchen, thou hast royal eyes.

Charlotte Fiske Bates.

THE DISTRIBUTION OF ABILITY IN THE UNITED STATES.

OME time ago there appeared in "The Nineteenth Century" an article entitled "The Distribution of Ability in England." The writer had taken a dictionary of contemporary biography and had classified all the Englishmen therein mentioned according to the occupation in which they had attained distinction, and then by the counties in which they were born. In this way he was able to show in what proportion the counties of England had produced men of distinction and in what department these men had gained eminence. This article suggested to me the idea of writing one of a similar character showing the distribution of ability in the United States by States, and also by race-extraction, which I felt sure would have an even greater interest than the classification made by the English writer, because it was possible here to cover the entire history of a rapidly growing country, and because American States are necessarily far more distinct and important social and political divisions than counties could possibly be. I therefore took Appleton's "Encyclopedia of American Biography" in six volumes, one of the largest and most recent works upon the subject, and classified the persons mentioned therein who were citizens of the United States according to occupation, birthplace, and race-extraction.

I began this work, which has proved much larger and more laborious than I anticipated, with a feeling of curiosity. But when I had obtained my results I found that they went much further than the satisfaction of a merely curious inquiry. I am satisfied, and I think any one who will examine the tables which follow will be equally satisfied, that the results obtained have a great deal of historical value. The number of names classified and tabulated reaches 14,243, not including the immigrant table, and a number so large includes virtually all the men and women who by their ability have raised themselves even slightly above the general level. The method of classification which I have adopted shows what communities have produced the men who have

governed the country and fought its battles, who have educated it and influenced its thought, who have produced its literature, art, and science, and who have made the inventions which in some instances have affected the history of the United States and of mankind.

The classification according to birthplace is as absolutely accurate as is possible in tallying such a large number of names. There are a few instances in which the birthplace was unknown, and these have of necessity been omitted. There are many cases in which the birthplace may be said to have been accidental, and where the person in question had no real connection either by parentage, ancestry, or subsequent career with the State in which he was born. I found it impossible to fix any rule in regard to these cases if I once departed from the actual place of birth as a test. I determined therefore to exercise no discretion in the matter, but to credit to each State every one who was born within its borders, no matter whether their parentage and subsequent career connected them with that State or not, and as I am satisfied that these cases in a large degree balance each other I do not think the accuracy of the general result is affected. To this general rule I have made but a single exception. Edgar Allan Poe was born in Boston, but it would have been such a manifest absurdity to credit him to Massachusetts that I have given him to Maryland, to which State he of course really belonged.

While it was possible to be absolutely accurate in regard to the place of birth, and practically so in regard to the occupation or profession, it was not possible to be more than approximately correct on the question of race-extraction. In the first place it was necessary to make the race classification according to the paternal line alone, which is of course partial and, if the French saying that "*les races se feminisent*" be true, is also a misleading arrangement. At the same time, as will be readily seen, it is the only method possible, and moreover the errors arising in this way in large measure balance one another. Taking, therefore, the paternal line as the one to fix race origin, it is less difficult than might be supposed to determine what the race

origin is. In a large number of cases, especially where the extraction is not English, the race stock is given in the dictionary. In a still larger number of instances the name and the place of birth furnish unmistakable evidence as to race. That error should be avoided in this classification is not to be expected, but I am perfectly satisfied that the race distribution is in the main correct. Such errors as exist tend, I think, here as elsewhere in these statistics to balance one another, and the net result is, I believe, so substantially accurate as to have very real value, and to throw a great deal of light on what we owe in the way of ability to each of the various races who settled the United States.

The classification which I have described thus far shows only the quantity, and has no bearing upon the quality of ability. The arrangement of the dictionary, however, furnished me with methods of estimating and distributing ability by quality as well as quantity. A small portrait inserted in the text is given of each person who attained more than ordinary distinction, and my examination satisfies me that these portraits have been in the main so judiciously distributed as to enable us to use them as a test of quality and as constituting a class. To the persons having a small portrait I have given a single star, and in the following tables there will be found a classification of these names under that head. A further but much less valuable classification of the same sort I have given of those to whom were awarded full-page steel engravings. This, I say, is less valuable from the fact that these large portraits do not appear to have been distributed simply on the ground of ability and eminence. For example, an arrangement which gives a place to William Gilmore Simms and shuts out Hawthorne, Poe, and Lowell in the field of literature is manifestly of little weight. In the same way a classification which of necessity includes Tyler, Pierce, and Fillmore, and which omits Jay, Taney, and Chase because they did not happen to be Presidents, is quite misleading as an index of the quality of ability represented. At the same time there is something to be learned from the distribution of these large portraits, especially as their race classification is perfectly accurate, and I have therefore given the persons who have them a double star and have made a table in which they are classified by State and race.

I have also classified by race and occupation all persons of foreign birth who have gained distinction in this country. I have treated as immigrants all persons who came to the United States after the adoption of the Constitution. It was, of course, necessary to draw the line dividing the immigrant from the original settler

at some definite point, and for this purpose I took 1789 as the most convenient date. This table, to which I have appended one covering all negroes mentioned in the dictionary, is, of course, accurate, and will, I think, be found to have an especial value as showing the countries to which we are indebted for ability among our immigrants, and also in what directions that ability has been displayed.

The total number of names classified, apart from the table last described, is, as I have said, 14,243, and these are divided among the States as follows:

TABLE A.
TOTALS BY STATES.

Massachusetts	2,686
New York	2,605
Pennsylvania	1,827
Connecticut	1,196
Virginia	1,038
Maryland	512
New Hampshire	510

Indiana	113	
Illinois	59	
Michigan	44	
Missouri	39	
Wisconsin	12	
California	5	
Iowa	5	
	641	

The foregoing table needs no comment, but the next, which distributes the totals according to race, requires, perhaps, a few words of explanation. The term Scotch-Irish is well understood in this country, and I have therefore used it, but it is so far from accurate as an ethnic description that it is almost a misnomer. The English phrase of "Ulstermen" is unfortunately no better. The people called Scotch-Irish in the United States are descendants of the Scotch and English who settled in the north of Ireland, and who made themselves famous by their defense of Londonderry. In some instances there was an infusion of Irish blood, but for the most part these people were of pure Scotch (both lowland and highland) and English stock and were ardent Protestants. Their heaviest emigration to America began about 1729 and continued with fluctuating numbers until 1774. They have played a great part in the United States, as will be seen by the detailed tables presently to be given.

The Huguenots cover of course the Protestant French who came here during the seventeenth and eighteenth centuries, either direct from France, or by way of England and Holland, where they had first taken refuge. They are quite distinct from those classified simply as French, who are descended as a rule from the original settlers of Louisiana, Missouri, and Illinois, from soldiers who came with Rochambeau, or from refugees who fled here from San Domingo in 1792.

The Welsh enumeration is undoubtedly im-

perfect. I have included all described as of Welsh origin, and all others where the Welsh extraction was obvious, but there are certainly many Welshmen whom it was impossible to distinguish either by name or place of birth, and who are therefore counted among the English.

The Irish may seem surprisingly few, but as there was virtually no Irish immigration during the colonial period, and indeed none of consequence until the present century was well advanced, no other result could have been looked for.

All the other race divisions are, I feel satisfied, substantially accurate, except, perhaps, for a slight margin of error in each case in favor of the English. It is possible that the Scotch-Irish have benefited at the expense of the Scotch pure and simple, owing to identity of name, but the two classes include virtually all persons of Scotch descent given in the dictionary. The division of the total number by races is as follows:

TABLE B.

TOTALS BY RACE.

English	10,376
Scotch-Irish	1439
German	659
Huguenot	589
Scotch	436
Dutch	336
Welsh	159
Irish	109
French	85
Scandinavian	31
Spanish	7
Italian	7
Swiss	5
Greek	3
Russian	1
Polish	1
	14,243

The next two tables, C and D, give the State and race divisions, with the distribution in each case according to professions or occupations, showing in what directions the ability of the States and races has been manifested. A few words only are needed to explain the classification. "Statesmen" includes not only persons who have held public office, but all who as reformers, agitators, or in any other capacity have distinguished themselves in public affairs. "Clergy" covers not only ordained ministers and missionaries, but all who have been conspicuous in any religious movement, and many of those included under this head, it may be added, have attained distinction in other fields, chiefly as writers. "Literature" covers all who have distinguished themselves as writers and includes journalists. "Musicians" includes singers, players, and composers. All the other titles are, I think, self-explanatory.

It is not my intention to analyze the foregoing tables in detail. Indeed, it is not necessary to do so even if space permitted, for the figures tell their own story plainly enough. There are, however, a few general results to which it may be well to call attention. I will take the last table, that relating to immigrants, first. It will be noted that the Irish, who in the general tables contribute a very small number of names, stand third in this table of immigrants. It will be observed too that the Irish have contributed more largely to the soldiers than any others, the Germans and Scotch-Irish coming next, and the English and Scotch being remarkably small in this field. It is also very interesting to note in this connection, especially with regard to some statements that used to be made about the persons of foreign birth in the armies of the United States, that of the men who gained distinction as soldiers, in fighting the battles of the country, 1892 were native-born, and only 80 were immigrants, while in the navy the disproportion was quite as glaring, 482 being native-born, and only 14 being contributed by immigrants. The largest amount of ability in the immigration table is shown by the English, and if we add to them the Irish, Scotch, Scotch-Irish, and Welsh, as well as those from the British provinces, we find that the immigration from Great Britain has contributed three-fourths of the ability furnished from outside sources. Germany comes next to England in the total amount of immigrants who have attained distinction, but the largest num-

ber in proportion to its immigration is undoubtedly given by France, which furnishes 63 names to the table. Immigration has contributed most largely to the clergy, to literature, and to art, the proportion in the latter case being astonishingly high, 112 immigrants to 147 native-born. On the other hand, the immigrants have contributed as little to the statesmanship of the country as they have done to its army and navy.

By the table showing the distribution according to States (Table C) it will be seen, as might be expected, that the oldest communities with the largest white population have been most prolific in ability of all kinds. At the same time this rule is by no means absolute in its application. In Virginia, Massachusetts, and Connecticut the percentage of ability in proportion to the total white population is higher than in the two other leading States, New York and Pennsylvania. In proportion to its population, Connecticut leads every other State in the total amount of ability. In the matter of groups, not only the absolute amount of ability but the percentage in proportion to population is higher in the New England and Middle States than in those of the South and West, outside Maryland and Virginia.

Even more interesting than the percentages shown by the totals is the distribution by occupation. There are eighteen departments enumerated in which distinction has been achieved. New York leads in eight: soldiers, lawyers, artists, navy, business, engineers, architects, and actors. Massachusetts leads in eight also: clergy, physicians, literature, science, educators, philanthropy, inventors, and musicians; while Virginia leads in the remaining two: statesmen and pioneers.

This table also shows that the production of ability has been remarkably concentrated, and has been confined, on the whole, to comparatively few States. A few comparisons will prove this. Two States, Massachusetts and New York, have furnished more than a third of the ability of the entire country. Three, Massachusetts, New York, and Pennsylvania, have supplied almost exactly one-half, and five, Massachusetts, New York, Pennsylvania, Connecticut, and Virginia, have produced two-thirds of the total amount. In the arrangement by groups, we find that the New England group and that formed of the four Middle States must each be credited with more than a third of all the ability produced. The six New England and the four Middle States furnish together almost exactly three-quarters of the ability of the country. If Virginia be omitted, it also appears that Massachusetts alone has furnished a little more and New York alone a trifle less ability than all the Southern and Western

States together—that is, than twenty States and the District of Columbia. In the Western States the wide difference which exists is owing, of course, in large measure to their very recent settlement, for which proper allowance must be made in drawing any deductions from the figures given in the tables.

Among the new States settled and admitted to the Union since the adoption of the Constitution, some interesting results may also be obtained. I do not include Maine in this division, because Maine, although a new State, is one of the oldest settlements. Excluding Maine, then, we find that Ohio has a long lead over all the other new States, including Kentucky, which was settled about the same time, and Louisiana, which was settled many years before. This striking fact in regard to Ohio can be due only to the character of the original settlement.

If we turn now from the distribution by totals and examine that by professions, we find that while the Southern and Southwestern States, including Virginia and Maryland, are comparatively strong in statesmen, soldiers, and pioneers, and in a less degree in lawyers, they are weak in all other classes. The ability of the South, less in amount than that of the New England and Middle States, was confined to three or four departments. In other words, there was in the South but little variety of intellectual activity. In the Middle States and New England ability sought every channel for expression, and was displayed in various ways. All the States in not very widely varying proportions produced statesmen, soldiers, lawyers, pioneers, and clergymen, and the seaboard States naval officers. But almost all the literature, art, science, business, philanthropy, and music; almost all the physicians, educators, inventors, engineers, architects, and actors were produced by the Middle and New England States. This is a most significant fact. It shows a wide difference between the two civilizations, that of the New England and Middle States on the one side and that of the Southern States on the other; for the surest tests of civilization in any community are the amount of ability produced and the variety of directions in which that ability has been displayed. The thirteen original States were with one or two variations settled, and they were all controlled, by men of the same race-stocks and of like traditions. The cause of the wide difference in amount and variety of ability shown by these tables is a fresh proof, if proof were needed, of the pernicious results of slavery upon even the finest races. There never was a more complete or a worse delusion than the one once so sedulously cultivated, that in this age of the world aristocracy in the best and truest sense

and a high civilization could be compatible with slavery. No finer people ever existed than those who settled and built up our Southern States, but when slavery became, in the course of the world's progress, and in a free country, nothing less than a hideous anomaly, it warped the community in which it flourished, limited the range of intellectual activity, dwarfed ability, and retarded terribly the advance of civilization. It is wonderful that the people who labored beneath the burden of a slave system achieved as much as they did, and the mass of ability which they produced under such adverse conditions is a striking proof of the strength of the race. The effects of slavery are painfully apparent in these tables, and only time will enable the people who suffered by the evil system to recover from them.

If we narrow the examination of the tables to special professions we can get in that direction also many interesting results. It is possible to point out only a few of them here. In literature Massachusetts has a long lead over any other State, and together with New York and Pennsylvania has furnished more than half of all the writers produced in the United States. New York, as might be expected from her large population, is ahead in soldiers and, what was less to be anticipated, in naval officers also. Of the total of 1892 soldiers New York, Massachusetts, Virginia, and Pennsylvania furnished the country with 1047. Ohio, however, in proportion to the total amount of ability, shows among the larger States one of the highest percentages in soldiers, and is far ahead of all those nearest it in total numbers. Virginia leads slightly in statesmen, and with Massachusetts, New York, Pennsylvania, and Connecticut supplies more than half of all produced. New York is far ahead in art, which has come almost wholly from that State and from New England and Pennsylvania. Massachusetts has a similar lead in music, of which New England rather unexpectedly furnishes nearly two-thirds. Invention has come chiefly from Massachusetts, New York, and Connecticut, and educators are most numerous in the same group. New York leads in business, Massachusetts in philanthropy, while Virginia is ahead in pioneers and explorers, with Massachusetts a close second.

If we turn now from the table of States to that of races we find that in statesmen and soldiers the Scotch-Irish, Scotch, Huguenots, and Dutch all have a slightly higher percentage in proportion to their totals than the English, while in other directions these four race divisions fall behind the leading race. Other per-

centages of this kind can readily be made from the tables, but the most interesting question in this direction arises in regard to the proportion of ability to the total numbers of each race. Unluckily only a rough estimate can be made, for there is absolutely no means of knowing exactly the total amount of immigration in any case. I believe that in proportion to their numbers the Huguenots have produced more and the Germans fewer men of ability than any other races in the United States. I think there can be no doubt as to the Germans, for their immigration was larger than any other in the colonial period except that of the English and possibly of the Scotch-Irish. Their comparatively small numbers in total amounts are emphasized by their further decline in the table of single stars. The explanation is, I think, obvious. The Germans settled chiefly in two or three States, and by retaining their language for at least a century kept themselves more or less separated from the rest of the community. In other words, they did not quickly become Americans. The result was less ability produced and less influence exerted upon the country in proportion to their numbers than that of a much less numerous people like the Huguenots who at once merged themselves in the body of the people and became thoroughgoing Americans. Indeed, if we add the French and the French Huguenots together we find that the people of French blood exceed absolutely, in the ability produced, all the other races represented except the English and Scotch-Irish, and show a percentage in proportion to their total original immigration much higher than that of any other race. The Dutch suffered slightly, I have no doubt, in the same way and from the same causes as the Germans, while the other immigrants, from Scotland, Ireland, and Wales, did not suffer at all and had no barriers of language to overcome.

The race table shows the enormous predominance of the English in the upbuilding of the United States, and if we add to the English the people who came from other parts of Great Britain and Ireland that predominance becomes overwhelming. The same table shows also what I think is the most important result of the whole inquiry, that the people who have succeeded in the United States and have produced the ability of the country are those who became most quickly and most thoroughly Americans. This is a moral of wide application, and carries a lesson which should never be forgotten, and which, whenever we meet it, should be laid to heart.

Henry Cabot Lodge.

THE SQUIRREL INN.—V.

BY FRANK R. STOCKTON.

XXIII.

HAMMERSTEIN.

MISS CALTHEA ROSE was up and about very early the next morning. She had work to do in which there must be no delay or loss of opportunity. It was plain enough that her scheme for driving

away Ida Mayberry had failed, and, having carefully noted the extraordinary length of time which Mrs. Cristie and Mr. Lodloe spent together under the stars the previous evening, she was convinced that it would not be easy to make that lady dissatisfied with the Squirrel Inn. She therefore determined to turn aside from her plans of exile, to let the child's nurse stay where she pleased, to give no further thought to Lanigan Beam, and to devote all her energies to capturing Mr. Tippengray. She believed that she had been upon the point of doing this before the arrival of intruders on the scene, and she did not doubt that she could reach that point again.

Miss Calthea was very restless that morning; she was much more anxious to begin work than was anybody else on the place. She walked about the ground, went into the garden, passed the summer-house on her way there and back again, and even wandered down to the barnyard, where the milking had just begun. If any one had been roaming about like herself, she could not have failed to observe such person. But there was no one about until a little before breakfast-time, when Mr. Petter showed himself.

This gentleman greeted Calthea coolly. He had had a very animated conversation with his wife on the evening before, and had been made acquainted with the unwarrantable enmity exhibited by this village shopkeeper towards Mrs. Cristie's blooded assistant. He was beginning to dislike Calthea, and he remembered that the Rockmores never liked her, and he wished very much that she would cease to spend so much of her time at his house. After breakfast Calthea was more fortunate. She saw the Greek scholar walking upon the lawn with a piece of writing-paper in his hand. In less than five minutes, by the merest accident in the world, Mr. Tippengray was walking

across the lawn with Miss Rose, and he had put his piece of paper into his pocket.

She wanted to ask him something. She would detain him only a few minutes. The questions she put to him had been suggested to her by something she had read that morning—a most meager and unsatisfactory passage. She held in her hand the volume which, although she did not tell him so, had taken her a half-hour to select in Mr. Petter's book-room. Shortly they were seated together, and he was answering her questions, which, as she knew, related to the most interesting experiences of his life. As he spoke his eyes glistened and her soul warmed. He did not wish that this should be so. He wanted to bring this interview to an end. He was nervously anxious to go back on the lawn that he might see Miss Mayberry when she came out of doors; that he might show her the lines of "Pickwick" which he had put into Greek, and which she was to turn back into English.

But he could not cut short the interview. Miss Calthea was not an ancient mariner; she had never even seen the sea, and she had no glittering eye, but she held him with a listening ear, and never was wedding guest, or any other man, held more securely.

Minutes, quarter-hours, half-hours passed, and still he talked and she listened. She guided his speech as a watchful sailor guides his ship, and whichever way she turned it the wind always filled his sails. For the first ten minutes he had been ill at ease, but after that he had begun to feel that he had never so much enjoyed talking. In time he forgot everything but what he had to say, and it was rapture to be able to say it, and to feel that never before had he said it so well.

His back was towards the inn, but through some trees Miss Calthea could see that Mr. Petter's spring wagon, drawn by the two grays, Stolzenfels and Falkenberg, was at the door, and soon she perceived that Mr. Lodloe was in the driver's place, and that Mrs. Cristie, with Ida Mayberry holding the baby, was on the backseat. The place next to Lodloe was vacant, and they seemed to be waiting for some one. Then Lanigan Beam came up. There was a good deal of conversation, in which he seemed to be giving information, and presently he sprang up beside the driver, and they were off.

The party were going for a long drive, Miss Calthea thought, because Mrs. Petter had come out and had put a covered basket into the back of the wagon.

Mr. Tippengray was so absorbed in the interest of what he was saying that he did not hear the roll of the departing wheels, and Miss Calthea allowed him to talk on for nearly a quarter of an hour, until she thought she had exhausted the branch of the subject on which he was engaged, and was sure the spring wagon was out of sight and hearing. Then she declared that she had not believed that any part of the world could be as interesting as that region which Mr. Tippengray had been describing to her, and that she was sorry she could not sit there all the morning and listen to him; but duty was duty, and it was necessary for her to return to Lethbury.

This announcement did not seem in the least to decrease the good spirits of the Greek scholar, but his chin and his spirits fell when, on reaching the house, he heard from Mrs. Petter that his fellow guests had gone off for a long drive.

"They expected to take you, Mr. Tippengray," said his hostess, "but Lanigan Beam said he had seen you and Miss Rose walking across the fields to Lethbury, and so they asked him to go. I hope they'll be back to dinner, but there's no knowing, and so I put in a basket of sandwiches and things to keep them from starving before they get home."

Miss Calthea was quite surprised.

"We were sitting over yonder the whole time," she said, "very much occupied with talking, it is true, but near enough to hear if we had been called. I fancy that Lanigan had reasons of his own for saying we had gone to Lethbury."

Poor Mr. Tippengray was downcast. How much time must elapse before he would have an opportunity to deliver the piece of paper he had in his pocket! How long would he be obliged to lounge around by himself waiting for Ida Mayberry to return!

"Well," said Calthea, "I must go home, and as I ought to have been there long ago, I am going to ask Mr. Petter to lend me a horse and buggy. It's the greatest pity, Mr. Tippengray, that you have lost your drive with your friends, but as you can't have that, suppose you take one with me. I don't mind acknowledging to you that I am a little afraid of Mr. Petter's horses, but with you driving I should feel quite safe."

If Mr. Tippengray could have immediately thought of any good reason why he should have stayed at home that morning he would probably have given it, but none came into his mind. After all, he might as well be driving to Lethbury as staying there doing nothing, and

there could be no doubt that Miss Calthea was very agreeable that morning. Consequently he accepted the invitation.

Calthea Rose went herself to the barn to speak to Mr. Petter about the horse, and especially requested that he would lend her old Zahringen, whom she knew to be the most steady of beasts; but Zahringen had gone to be shod, and there was no horse at her service except Hammerstein, and no vehicle but a village cart. Hammerstein was a better horse than Zahringen, and would take Calthea home more rapidly, which entirely suited Mr. Petter.

It may be here remarked that the barn and stables were not of Mr. Petter's building, but in order that they might not be entirely exempt from the influence of his architectural fancies, he had given his horses the names of certain castles on the Rhine.

Calthea was not altogether satisfied with the substitution of the big black horse for the fat brown one, but she could make no reasonable objection, and the vehicle was soon at the door.

Mr. Tippengray was very fond of driving, and his spirits had risen again. But he was a good deal surprised when Miss Calthea declined to take the seat beside him, preferring to occupy the rear seat, with her back to the horse. By turning a little to one side, she said she could talk just as well, and it was more comfortable in such a small vehicle as a village cart to have a whole seat to one's self.

As soon as they were in the road that ran through the woods she proved that she could twist herself around so as to talk to her companion, and look him in the face, quite as easily as if she had been sitting beside him. They chatted together, and looked each other in the face, and the Greek scholar enjoyed driving very much until they had gone a mile or more on the main road and had come upon an overturned wagon lying by the roadside. At this Hammerstein and the conversation suddenly stopped. The big black horse was very much opposed to overturned vehicles. He knew that in some way they were connected with disaster, and he would not willingly go near one. He stood head up, ears forward, and slightly snorting. Mr. Tippengray was annoyed by this nonsense.

"Go on!" he cried. "Get up!" Then the driver took the whip from the socket and gave the horse a good crack.

"Get up!" he cried.

Hammerstein obeyed, but got up in a manner which Mr. Tippengray did not intend. He arose upon his hind legs, and pawed the air, appearing to the two persons behind him like a tall, black, unsteady stepple.

When a horse harnessed to a village cart sees fit to rear, the hind part of the vehicle is brought

very near to the ground, so that a person sitting on the back seat can step out without trouble. Miss Calthea perceived this, and stepped out. On general principles she had known that it was safer to alight from the hind seat of a village cart than from the front seat.

"Don't pull at him that way," she cried from the opposite side of the road; "he will go over backwards on top of you. Let him alone, and perhaps he will stop rearing."

shouted in such a way that Hammerstein was convinced that he was being urged to use all efforts to get away from the oncoming monster. He did not turn into the Lethbury road when he came to it, but kept straight on. At such a moment the straighter the road the better. Going down a long hill, Mr. Tippengray, still pulling and shouting, and now hatless, perceived, some distance ahead of him, a boy standing by the roadside. It was easy enough for the prac-

MISS CALTHEA STEPS OUT.

Hammerstein now stood on all his feet again, and Miss Calthea earnestly advised Mr. Tippengray to turn him around and drive back.

"I am not far from home now," she said, "and can easily walk there. I really think I do not care to get in again. But I am sure he will go home to his stable without giving you any trouble."

But Mr. Tippengray's spirit was up, and he would not be conquered by a horse, especially in the presence of a lady.

"I shall make him pass it," he cried; and he brought down his whip on Hammerstein's back with such force that the startled animal gave a great bound forward, and then, finding himself so near the dreaded wreck, he gave a wilder bound, and passed it. Then, being equipped with blinders, which did not allow him to see behind him, he did not know but the frightful wagon, its wheels uppermost, was wildly pursuing him, and, fearing that this might be so, he galloped onward with all his speed.

The Greek scholar pulled at the reins and

tised eye of a country boy to take in the state of affairs, and his instincts prompted him to skip across the road and open a gate which led into a field recently plowed.

Mr. Tippengray caught at the boy's idea, and, exercising all his strength, he turned Hammerstein into the open gateway. When he had made a dozen plunges into the deep furrows and through the soft yielding loam, the horse concluded that he had had enough of that sort of exercise, and stopped. Mr. Tippengray, whose senses had been nearly bounced out of him, sprang from the cart, and, slipping on the uneven surface of the ground, tumbled into a deep furrow, from which, however, he instantly arose without injury, except to his clothes. Hurrying to the head of the horse, he found the boy already there, holding the now quiet animal. The Greek scholar looked at him admiringly.

"My young friend," said he, "that was a noble thought worthy of a philosopher."

The boy grinned.

"They generally stop when they get into a plowed field," he said. "What skeered him?"

Mr. Tippengray briefly related the facts of the case, and the horse was led into the road. It was soon ascertained that no material harm had been done to harness or vehicle.

"Young man," said Mr. Tippengray, "what will you take for your hat?"

The boy removed his head-covering and looked at it. It was of coarse straw, very wide, very much out of shape, without a band, and with a hole in the crown surrounded by a tuft of broken straw.

"Well," said he, "it ain't worth much now, but it 'll take a quarter to buy a new one."

"Here is a quarter for your hat," said the Greek scholar, "and another for your perspi-

top of the hill, which he had not noticed when passing it in mad career, and, naturally turning to the right, without thinking very much about it, he had taken this road instead of the one by which he had come. Our scholar, however, did not yet comprehend that he was on the wrong road, and kept on.

Soon his way led through the woods, with great outstretching trees, with wide-open spaces, interspersed here and there with masses of undergrowth. Mr. Tippengray greatly enjoyed the shaded road, the smell of the pines, and the flowers scattered along the edges of the wood; but in a few minutes he would doubtless have discovered that he had gone astray, and, notwithstanding the pleasantness of his surroundings, he would have turned

"WHAT SKEERED HIM?"

city. I suppose I shall find my hat on the road, but I cannot wait for that. The sun is too hot."

The Greek scholar now started homeward, leading Hammerstein. He liked walking, and had no intention whatever of again getting into that cart. If, when they reached the overturned wagon, the animal should again upheave himself, or in any way misbehave, Mr. Tippengray intended to let go of him, and allow him to pursue his homeward way in such manner and at such speed as might best please him.

The two walked a long distance without reaching the object of Hammerstein's fright, and Mr. Tippengray began to think that the road was a good deal narrower and more shaded than he had supposed it to be. The fact was, that a road diverged from the right, near the

back, had he not suddenly heard voices not far away. He stopped and listened.

The voices came from behind a clump of evergreens close by the roadside, and, to his utter amazement, Mr. Tippengray heard the voice of Lanigan Beam saying to some one that true love must speak out, and could not be silenced; that for days he had been looking for an opportunity, and now that it had come she must hear him, and know that his heart was hers only, and could never belong to anybody else. Then the voice of Ida Mayberry, very clear and distinct, replied that he must not talk to her in that way; that her line of life and his were entirely different. And she was doubtless going to say more, when her companion interrupted, and vowed with all possible earnestness

that whatever line of life she chose should be his line; that he would gladly give up every plan and purpose, follow her in whatever direction she chose to lead, and do whatever she wished he should do.

Mr. Tippengray was very uneasy. The subject matter of the conversation he was overhearing disturbed him in a manner which he did not understand, and he felt, moreover, that it was not proper for him to listen to another word. He did not know what to do; if he moved forward they would hear the wheels, and know that he had been near, and if he attempted to back out of the vicinity there was no knowing what hubbub he and Hammerstein might create. While standing undecided, he heard Lanigan speak thus:

"And as for Greek and that sort of thing, you shall have all you want. I'll hire old Tippengray by the year; he shall be the family pedagogue, and we'll tap him for any kind of learning we may happen to want."

Instantly all thought of retreat fled from the mind of the scholar; his eyes glittered, and he was on the point of doing something, when there came from a little distance the voice of Mrs. Cristie loudly calling for Ida. There was shuffling of feet, and in a few moments Mr. Tippengray perceived the nurse-maid rapidly walking away between the trees while Lanigan leisurely followed.

With head erect and nostrils dilated, as if he had been excited by the perception of something upside down, Mr. Tippengray again laid hold of the bridle of Hammerstein, and went on. In a few minutes he emerged upon an open space, through which flowed a little brook, and where sat Mrs. Cristie, Lodloe, Ida Mayberry with the baby in her lap, and Lanigan Beam. All of these persons, excepting the infant, were eating sandwiches.

At the sight of the little man and the tall horse, the former spattered with mud, smeared with the earth of the plowed field, and crowned with a misshapen hat with the expansive hole in the top, the sandwich-eaters stopped eating, gazed open-eyed, and then burst out laughing. Mr. Tippengray did not laugh; his eyes still glittered.

It was half an hour before the tale was told, order restored, and Mr. Tippengray had washed his face and hands in the brook, and taken refreshment. Then he found himself alone with Mrs. Cristie.

"Truly you have had a hard time," said she, kindly.

"Madam," answered the Greek scholar, "you are entirely correct. This has been an unfortunate day for me. I have been cunningly entrapped, and heartlessly deserted; I have been nearly frightened out of my wits, have had my soul nearly burned out of my

body, and have been foully besmirched with dirt and mud. But, worse than all, I have heard myself made the subject of contempt and contumely."

"How is that?" exclaimed Mrs. Cristie. "I do not understand."

"I will quickly make it plain to you," said the indignant scholar, and he related the conversation he had overheard.

"What a shameful way to speak of you, Mr.

MR. TIPPENGRAY STOPPED AND LISTENED.

Tippengray!" cried Mrs. Cristie. "I did not suppose that Mr. Beam would dare to say such things to one whom he knew to be your friend. I have no doubt that if I had not called Ida at that moment you would have heard her resent that disrespectful speech."

"I hope so; with all my heart, I hope so," replied the Greek scholar.

He said this with so much feeling that his companion looked at him a few moments without speaking.

"Mr. Tippengray," she said presently, "it is time for us to go home. How would you like to take Ida Mayberry back in your cart?"

The brightness in the eyes of the Greek scholar changed from the glitter of indignation to gleams of joy.

"Madam," said he, "I should like it of all things. It would remove from the anticipated pleasures of this day the enormous Alpha privative which has so far overshadowed them."

The young widow did not exactly comprehend this answer, but it was enough to know that he was glad to accept the opportunity she offered him. No sooner had he spoken than Mr. Tippengray remembered the hazards to which he was exposing himself by again taking the reins of Hammerstein; but not for an instant did he think of drawing back. His desire to take Ida Mayberry away from that fellow, and have her by himself, overpowered fear and all other feelings.

Mrs. Cristie's arrangement for the return

pleased everybody except Lanigan Beam. The nurse-maid was perfectly willing to go in the village cart, and was not at all afraid of horses, and Walter Lodloe had no objection to sit on the back seat of the wagon with his lady-love, and help take care of the baby. Lanigan made few remarks about the situation; he saw that he had made a mistake, and was being punished for it, and without remonstrance he took the front seat and the reins of the grays.

XXIV.

TRANSLATIONS.

LANIGAN BEAM had no more fear of Mr. Tippengray as a rival than he would have had of Mr. Petter, but the apportionment of companions for the return trip nettled him a good deal, and, as a consequence of this, the pair of grays traveled homeward at a smarter pace, and Hammerstein and the village cart were soon left far behind.

The road was not the one by which Mr. Tippengray had arrived on the scene, but led through the woods to the main road, which it joined at a point not far from the sign of the Squirrel Inn. Hammerstein traveled very quietly and steadily of his own accord, slackening his gait at the rough places, thus giving Mr. Tippengray every opportunity for an uninterrupted converse with his fellow scholar; and he lost no time in submitting to her his Greek version of the lines from "Pickwick."

"I am very glad you have it with you," said Ida, "for I put my Greek dictionary in my pocket this morning, when I first came down, hoping to have a chance to do some translating. And what better chance could I have than this?"

Drawing out her dictionary and a little blank-book she immediately began her labors. Mr. Tippengray did not altogether like this. He felt an intense and somewhat novel desire to converse with the young woman on no matter what subject, and he would have preferred that she should postpone the translation. But he would not interrupt the engrossing occupation into which she now plunged with ardor. Rapidly turning backward and forward the leaves of the little dictionary, and tapping her front teeth with her pencil as she puzzled over the correlation of Greek and English words and expressions, she silently pursued her work.

Although he did not talk to her, it was very pleasant for Mr. Tippengray to sit and look upon this fair young scholar. At her request he made the tall steed walk, in order that her pencil might not be too much joggled, slyly thinking, the while, that thus the interview would be prolonged. The air was warm and balmy. Everything was still about them. They

met no one, and every minute Mr. Tippengray became more and more convinced that, next to talking to her, there could be no greater joy in life than basking in the immediate atmosphere of this girl.

At last she shut up her dictionary.

"Now, then," she exclaimed, "I have translated it, and I assure you that it is a fair and square version, for I do not in the least remember the original paragraph."

"I have the original here," said Mr. Tippengray, pulling the second volume of "Pick-

THE TRANSLATION.

wick" from his pocket, "and we will compare it with your translation, if you will be so good as to read it. You do not know with what anxious enthusiasm I await the result."

"And I, too," said Ida, earnestly. "I do not think there could be a better test of the power of the Greek language to embalm and preserve for future generations the spirit of Dickens. Now I will read, and you can compare my work with the original as I go on."

The translation ran thus:

"For the reason that he who drives a vehicle of the post-road holds high office above the masses," to him answered the Sire Weller with eyes afflicted; "for the reason that he who drives a vehicle of the post-road acteth at will, undoubted, humanity otherwise prohibited. For the reason that he who drives a vehicle of the post-road is able to look with affection on a woman of eighty far distant, though it is not publicly believed that in the midst of any it is his desire to wed. Among males which one discourseth similarly, Sammy?"

"I wrote Sammy," she explained, "because I remembered that is the way the name is used in English."

Mr. Tippengray raised his eyebrows very high, and his chin slowly began to approach the sailor knot of his cravat.

"Oh, dear," he said, "I am afraid that this would not express to future ages the spirit and

style of Dickens. The original passage runs thus," and he read:

"'Cos a coachman's a privileged individual," replied Mr. Weller, looking fixedly at his son. "'Cos a coachman may do without suspicion wot other men may not; 'cos a coachman may be on the very amicablest terms with eighty mile o' females and yet nobody thinks that he ever means to marry any vun among 'em. And wot other man can say the same, Sammy?"

"They are not much alike, are they?" said Miss Mayberry. "I think if Dickens could read my translation he would not in the least recognize it. The fact is, Mr. Tippengray, I do not believe that your method of Greek pickling will answer to preserve our fiction for the future. It may do for histories and scientific work, but when you come to dialect and vernacular, if you once get it into Greek you can never get it back again as it used to be."

"That will be a great pity," said Mr. Tippengray, "for fiction makes up such a large part of our literature. And it does seem that good English might be properly translated into good Greek."

"Oh, it is n't the translation," said Ida; "that is all easy enough: it's the resurrection back into the original condition. Look at the prophet Enoch. He was translated, but if it were possible now to bring him back again, he would not be the same Enoch, you know."

"One might infer from that simile," said the Greek scholar, smiling, "that when a bit of English gets into Greek it goes to heaven, and would better stay there. Perhaps you are right in what you say about fiction. Anyway, it is very pleasant to talk with one who can appreciate this subject, and reason sensibly about it."

Mr. Tippengray shut up his book and put it back into his pocket, while his companion tore her translation from her note-book and scattered it in little bits along the road.

"I would not like it," she said, "if any one but you were to read that and know I did it."

Mr. Tippengray's eyes and Mr. Tippengray's heart turned towards her. Those words, "any one but you," touched him deeply. He had a feeling as if he were being translated into something better than his original self, and that this young woman was doing it. He wished to express this in some way, and to say a good many other things which came crowding upon his mind, but he expressed nothing and said none of these things. An exclamation from Ida caused him to look in front of him, and there was the spring wagon with the horses standing still.

Mrs. Christie turned round and called to them:

"Mr. Beam says that there are some by-

roads just ahead of us, and as he was afraid you might turn into one and get lost, he thought it better to wait for you."

"Nonsense!" cried Miss Mayberry; "there was no danger that we would turn into any by-ways. The road is plain enough."

"I'm not so sure of that," said Mr. Tippengray to himself. "I think that just now I was on the point of turning into a by-way."

The wagon now moved slowly on, and the village cart followed. Mr. Tippengray would gladly have dropped a good deal behind, but he found this not practicable, because whenever he made Hammerstein walk Stolzenfels and Falkenberg also walked. It was plain enough that Lanigan Beam did not wish any longer to cut himself off from the society of the lady to whom he had made a proposal of marriage, and whenever he could find a pretext, which was not difficult for Lanigan, he called back to her to direct her attention to something, or to ask her opinion about something. Miss Mayberry did not respond with any readiness, but the persistence of the young man succeeded in making the conversation a general one, and the Greek scholar made no attempt to explain to the nurse-maid that he was in course of translation.

Dinner was very late at the Squirrel Inn that day, and Mrs. Petter gave her guests a scolding. But this did not in the least disturb the mind of Mr. Tippengray, who was well used to being scolded for coming late to his meals. But something else disturbed him, and for nearly an hour after dinner he wandered about the lawn and around the house. He wanted very much to see Miss Mayberry again, and to tell her the things he did not have a chance to tell her on the road, and he also very much wished to prevent that rascally Lanigan Beam from getting ahead of him, and continuing his broken-off interview with the lady.

XXV.

MR. TIPPENGRAY MOUNTS HIGH.

It seemed as if every one must be taking an afternoon nap, for the Greek scholar had the grounds to himself. When he began to be tired of walking, he seated himself where he had a good view of the house, and presently saw Ida Mayberry at her window, with the young Douglas in her arms. Almost at the same moment he saw Lanigan Beam approaching from the direction of the barns.

"If he turns his steps towards that window," thought the scholar, "I shall see to it that I am there before him."

But the young man did not walk towards the front of the house, but went in the direction of his room, where the ladder stood leaning

THE PROPOSAL.

against the open window. Mounting this, he disappeared within.

The eyes of Mr. Tippengray flashed, and his face was lighted by a bright thought. In an instant he was on his feet and running lightly towards Lanigan's room. Cautiously and silently he approached the ladder; deftly and without making the least noise he moved the upper end of it from the side of the building; and then, putting it on his shoulder, gently walked away with it.

Around to the front of the house Mr. Tippengray carried the ladder, and boldly placed it nearly upright under Miss Mayberry's window. In astonishment that young lady looked out, and asked him what in the world he was doing.

"I want to speak to you," said Mr. Tippengray, "on a subject of great importance, and I cannot afford to lose this opportunity. May I come up?"

"Certainly," said Ida.

In a moment the Greek scholar was standing on one of the upper rounds of the ladder, with his head and shoulders well above the window-sill. Little Douglas was delighted to see him, and, taking hold of his outstretched forefinger, gave it a good wag.

"It was a capital notion," said Mr. Tippengray, "for me to take this ladder. In the first place, it enables me to get up to you, and, secondly, it prevents Lanigan Beam from getting down from his room."

Miss Mayberry laughed, and the baby crowded in sympathy.

"Why should n't he get down, Mr. Tippengray?" said she.

"If he did," was the answer, "he would be sure to interfere with me. He would come here, and I don't want him. I have something to say to you, Miss Mayberry, and I must be brief in saying it, for bystanders, no matter who they might be, would prevent my speaking plainly. I have become convinced, Miss Mayberry, that my life will be imperfect, and indeed worthless, if I cannot pass it in prosecuting my studies in your company, and with your assistance. You may think this strong language, but it is true."

"That would be very pleasant," said the nurse-maid, "but I do not see how you are going to manage it. My stay here will soon come to an end, for if Mrs. Christie does not return to the city in a week or two, I must leave her. I am a teacher, you know, and before the end of the summer vacation I must go and make my arrangements for the next term, and then you can easily see for yourself that when I am engaged in a school I cannot do very much studying with you."

"Oh, my dear young lady," cried Mr. Tippengray, "you do not catch my idea. I am not thinking of schools or positions, and I do not wish you to think of them. I wish you to know that you have translated me from a quiet scholar into an ardent lover, and that it would be of no use at all to try to get me back into my original condition. If I cannot be the man I want to be, I cannot be the man I was. I ask you for your hands, your heart, and your

intellect. I invite you to join me in pursuing the higher education until the end of our lives. Take me for your scholar, and be mine. I pray you, give me — ”

“Upon — my word!” was the ejaculation, loud and distinct, which came up from the foot of the ladder and stopped Mr. Tippetgray’s avowal. Miss Mayberry instantly thrust her head out of the window, and Mr. Tippetgray looked down. It was Calthea Rose who had spoken, and she stood under the window in company with Mr. and Mrs. Petter. A short distance away, and rapidly approaching, were Mrs. Cristie and Walter Lodloe.

“Here is gratitude!” cried Calthea in stinging tones. “I came all the way back from Lethbury to see if anything had happened to you and that horse, and this is what I find. The top of a ladder and a child’s nurse! Such a disgrace never fell on this county.”

“Never indeed,” cried Mrs. Petter. “I would n’t have believed it if angels had got down on their knees and sworn it to me. Come down from that ladder, Mr. Tippetgray! Come down from it before I make my husband break it to bits beneath you. Come down, I say!”

“Mr. Tippetgray,” said Mr. Petter, in solemn voice, “in the name of the laws of domesticity and the hearthstone, and in the honorable name of the Squirrel Inn, I command you to come down.”

There was but one thing for Mr. Tippetgray to do, and that was to come down, and so down he came.

“Disgraceful!” cried Miss Rose. “You ought to be ashamed to look anybody in the face.”

“Never would I have believed it,” exclaimed Mrs. Petter. “Never, never, if I had not seen it with my own eyes, and in broad daylight too!”

What Mr. Tippetgray would have said or done is not known, for at that instant Ida Mayberry leaned far out of the window and claimed the attention of the company.

“Look here,” she cried, “we have had enough of this. Mr. Tippetgray has nothing to be ashamed of, and he had a perfect right to climb up this ladder. I want you all to understand that we are engaged to be married.”

This announcement fell like a sudden down-pour upon the people beneath the window, and they stood silenced; but in an instant the Greek scholar bounded up the ladder, and, seizing Miss Mayberry by the hand, kissed it rapturously.

“I may have been a little abrupt,” she said, in a low voice, “but I was n’t going to stand here and let our affair be broken off like that.”

At Mr. Tippetgray’s spontaneous exhibition of tender affection, Mr. Petter involuntarily and reverently took off his hat, while Mrs. Cristie and Lodloe clapped their hands. The lover, with radiant face, now descended the ladder and received congratulations from everybody except Miss Calthea, who, with her nose pointed about forty-five degrees above the horizon, walked rapidly to the post where she had tied her horse.

Miss Mayberry now appeared, with the baby in her arms, and an expression of great satisfaction upon her face. Mrs. Cristie relieved her of the first, but the latter increased as the little company heartily shook hands with her.

“I had supposed it would be different with you, Mr. Tippetgray,” said Mrs. Petter, “but people ought to know their own minds, and I have no doubt that Calthea would have often made it very hot for you, especially if you did not turn over an entirely new leaf in regard to coming to your

MR. PETTER TAKES OFF HIS HAT.

meals. But there must be no more laddering; whether it is right or not, it does not look so. When Ida is n't tending to the child, and it's too wet to be out of doors, you can have the little parlor to yourselves. I'll have it dusted and aired."

"Excuse me," said Lodloe, coming forward, "but if you have no further use for that ladder, Mr. Tippengray, I will take it to Lanigan Beam, who is leaning out of his window, and shouting like mad. I presume he wants to come down, and as I have locked the door of my room he cannot descend in that way."

"Poor Lanigan!" ejaculated Mrs. Petter, "he does n't know what he's coming down to. But no matter what he undertakes he is always a day after the fair."

Mr. Petter drew the Greek scholar aside.

"My dear sir," he said expressively, "I have a special reason for congratulating you on your decision to unite your blood and culture with those of another. Had you been entrapped by the wiles of our Lethbury neighbor, a person for whom I have but slight regard, and who is looked upon with decided disapprobation by those as competent to judge as the Rockmores of Germantown, I am afraid, my dear sir, I should have been compelled to sever those pleasant relations which for so many months have held us together, and which I hope may continue for years."

"My good Petter," said Mr. Tippengray, "I have a pleasant house in town, which I hope to occupy with my wife this winter, and I should like it very much if you and Mrs. Petter would make us a visit there, and, if you wish, I'll have some of the Germantown Rockmores there to meet you."

The landlord of the Squirrel Inn stepped back in amazement.

"Do you mean to say," he exclaimed, "that you know the Rockmores?"

"The way of it is this," replied the Greek scholar; "you see, my mother was a Purley, and on the maternal side she belonged to the Kempton-Tucker family, and you know that the head of that family married for his second wife a Mrs. Callaway, who was own sister to John Brent Norris, whose daughter married a Rockmore. So you see we are connected."

"And you never told me!" solemnly exclaimed Mr. Petter.

"No," said his companion; "there are pleasures of revelation which are enhanced by a delay in realization, and, besides, I did not wish to place myself in a position which might, perchance, subordinate some of your other guests."

"I must admit that I am sorry," said Mr. Petter; "but your action in the matter proves your blood."

And now, Mrs. Cristie having finished her

very earnest conversation with Ida, the newly betrothed pair walked together towards the bluff from which there was such a beautiful view of the valley below.

XXVI.

ANOTHER SQUIRREL IN THE TAP-ROOM.

"If I had known," said Lanigan Beam, as late that night he sat smoking with Walter Lodloe in the top room of the tower, "that that old rascal was capable of stealing my ladder in order to make love to my girl, I should have had a higher respect for him. Well, I'm done for, and now I shall lose no time in saying good-by to the Squirrel Inn and Lethbury."

"Why so?" asked his companion in surprise. "Was the hope of winning Miss Mayberry the only thing that kept you here?"

"Oh, no," said Lanigan, "it was the hope that Calthea might get old Tippengray. You will remember I told you that, but as she cannot now go off with him, there is nobody for her to go off with, and so I must be the one to travel."

Lodloe laughed. "Under the circumstances, then," he said, "you think you could n't stay in this neighborhood?"

"Not with Calthea unattached," replied Lanigan. "Oh, no! Quite impossible."

When Miss Rose had been convinced that all her plans had come to naught, earnestly and with much severity and singleness of purpose she considered the situation. It did not take her long to arrive at the conclusion that the proper thing for her to do was to marry Lanigan Beam, and to do it without loss of time. Having come to this decision, she immediately began to make arrangements to carry it into effect.

It was utterly vain and useless for Lanigan to attempt to get away from her. She came upon him with a sweet assurance which he supposed had vanished with her earlier years; she led him with ribbons which he thought had faded and fallen into shreds long, long ago; she clapped over his head a bag which he supposed had been worn out on old Tippengray; and she secured him with fetters which he imagined had long since been dropped, forgotten, and crumbled into dust. He did not go away,

LANIGAN BEAM WANTS
HIS LADDER.

and it was not long before it was generally understood in the neighborhood that, at last, he and Calthea Rose were to be married.

Shortly after this fact had been made public, Lanigan and Walter Lodloe, who had not seen each other for some days, were walking together on the Lethbury road.

"Yes," said the former, "it is a little odd, but then odd things are all the time happening. I don't know whether Calthea has taken me in by virtue of my first engagement to her, or on some of the others. Or it may be that it is merely a repeal of our last breaking off. Anyway, I found she had never dreamed of anything but marrying me, and though I thought I had a loose foot, I found I had n't, and there 's an end of it. Besides, I will say for Calthea that her feelings are different from what I supposed they were. She has mellowed up a good deal in the last year or two, and I shall try to make things as easy for her as I can.

"But one thing is certain; I shall stick to my resolution not to tell her that I have made money, and have reformed my old, loose ways of living and doing business. All that I am going to keep as a sort of saving fund that I can draw on when I feel like it, and let it alone when I don't feel like it. We are going to travel,—she is wild on that point,—and she expects to pay the piper. She can't do it, but I shall let her think she's doing it. She takes me for a rattling scapegrace, and I need n't put on the sober and respectable unless I choose to; and when I do choose it will be a big card in my hand. By George! sir, I know Calthea so well that I can twist her around my finger, and I am not sure, if I had got the other one, that I could have done that. It's much more likely that I should have been the twisted one."

"What is Miss Rose going to do about her business?" asked Lodloe.

"Oh, that 's to be wound up with a jerk," answered his companion. "I've settled all that. She wanted to hire somebody to take charge of the store while we're gone, and to sell out the things on her old plan; but that 's all tomfoolery. I have engaged a shopkeeper at Romney to come out and buy the whole stock at retail price, and I gave him the money to do it with. That 's good business, you know, because it 's the same as money coming back to me, and as for the old oddments and remnants and endments of faded braids and rotten calicoes, it 's a clear profit to be rid of them. If the Romney man sends them to be ground up at the paper-mill, he may pay himself for the cartage and his time. So the shop will be shut day after to-morrow, and you can see for yourself that my style of business is going to be of the stern, practical sort; and after all, I

don't see any better outlook for a fellow than to live a married life in which very little is expected of him, while he knows that he has on tap a good bank-account and a first-class moral character."

THE autumn was a very pleasant one, and as there was no reason for doing anything else the guests at the Squirrel Inn remained until late in the season. Therefore it was that Miss Calthea was enabled to marry and start off on her wedding tour before the engaged couples at the inn had returned to the city or had even fixed the dates for their weddings. Calthea was not a woman who would allow herself to be left behind in matters of this nature. From her general loftiness and serenity of manner, and the perfect ease and satisfaction with which she talked of her plans and prospects with her friends and acquaintances, no one could have imagined that she had ever departed from her original intention of becoming Mrs. Lanigan Beam.

In the midst of her happiness she could not help feeling a little sorry for Ida Mayberry, and this she did not hesitate to say to some persons with whom she was intimate, including Mrs. Petter. To be sure she had been informed as to the year of Mr. Tippetgray's birth, which, if correct, would make him forty-six; but it was her private opinion that sixty would be a good deal nearer the mark. However, if the young child's nurse should become an early widow, and be thrown upon her own resources, she, for one, would not withhold a helping hand. But she earnestly insisted that not a word she said on this subject should ever be breathed into another ear.

When Ida Mayberry heard what Calthea had said about her and Mr. Tippetgray's age, she was very angry, and declared she would not go to the old thing's wedding, which was to take place the next day in the Lethbury church. But after thinking over the matter she changed her mind, and concluded that at times like this we should all be pleasant and good-natured towards one another; so she sat down and wrote a letter to Miss Calthea, which she sent to the expectant bride that very afternoon. The misadventure ran thus:

MY DEAR MISS ROSE: I have seen so little of Mr. Beam in the last few days that I have had no opportunity to express to him some thanks which are due him from Mr. Tippetgray and myself. I am therefore obliged to ask you, my dear Miss Rose, to give to him a message from me, which, as it is one of gratitude, you will be pleased to deliver.

Not long ago when Mr. Beam took occasion to tell me that he loved me and asked me to marry him,—I remember now that it was on the very day that Mr. Petter's horse behaved so

badly and, unfortunately for you, tipped you out of the tail end of the little cart, and made it necessary for you to give up both it and Mr. Tippetgray to me,—he (Mr. Beam) was so good as to say that if I would agree to be his wife and still wished the instructive companionship of Mr. Tippetgray, he would take that gentleman into his family as a tutor. Now this, as you will readily acknowledge, my dear Miss Rose, was very good in Mr. Beam, and in return I wish you to say to him, both from Mr. Tippetgray and from me, that if there should ever be any position in our gift which he is capable of filling, all he has to do is to ask for it.

Most sincerely yours,
IDA MAYBERRY.

And the next day in church no face expressed a more delighted interest in the nuptial ceremonies than that of the pretty Miss Mayberry.

It was late in November, and the weather was getting decidedly cool. There was a fire in the tap-room of the Squirrel Inn, and also one in the little parlor, and by this, after supper, sat Mr. and Mrs. Petter.

The guests were all gone; Mr. and Mrs. Tippetgray, who had had a quiet wedding in New York, were on their way to Cambridge, England, where the bride would spend a portion of the honeymoon in the higher studies there open to women, while Mrs. Cristie and Mr. Lodloe were passing happy days in the metropolis preparing for their marriage early in the new year. The Beams were in Florida, where, so Lanigan wrote, they had an idea of buying an orange grove, and where, so Calthea wrote, she would not live if they gave her a whole county.

The familiar faces all being absent, and very few people dropping in from Lethbury or the surrounding neighborhood, the Squirrel Inn was lonely, and the hostess thereof did not hesitate to say so. As for the host, he had his books, his plans, and his hopes. He also had his regrets, which were useful in helping him to pass his time.

"What in the world," asked Mrs. Petter, regarding an object in her husband's hands, "made you take down that miserable, dilapidated little squirrel from the sign-post? You might as well have let him stay there all winter, and put up a new one in the spring."

"This has been a most memorable year," replied her husband, "and I wish to place this squirrel in his proper position on the calendar shelf of the tap-room before the storms and winds of winter have blown the fur from his body and every hair from his upturned tail. I have killed and prepared a fresh squirrel, and I will place him on the sign-post in a few days."

"If you would let that one stay until he was a skin skeleton he would have given people a better idea of the way this year has turned out, than he does now," said Mrs. Petter.

"How so?" he asked, looking at her in surprise.

"Don't we sit here stripped of every friendly voice?" she said. "Of course it's always more lonesome in the winter, but it's never been so bad as this, for we have n't even Calthea to fall back on. Things did n't turn out as I expected them to, and I suppose they never will, but it always was my opinion, and is yet, that nothing can go straight in such a crooked house. This very afternoon, as I was coming from the poultry-yard, and saw Lanigan's ladder still standing up against the window of his room, I could n't help thinking that if a burglar got into that room, he might suppose he was in the house; but he'd soon find himself greatly mistaken, and even if he went over the roof to Mr. Lodloe's room, all he could do would be to come down the tower stairs, and then he would find himself outside, just where he started from."

"That would suit me very well," remarked Mr. Petter.

"If this house had been built in a plain, straightforward way," his wife continued, "with a hall through the middle of it, and the rooms alike on both sides, then things might have happened in a straightforward way, and not all mixed up as they were here this summer. Nobody could tell who was going to marry who, and why they should do it, if they ever did."

Mr. Petter arose and, still holding the stuffed squirrel in his hand, stood with his back to the fire.

"It strikes me, Susan," said he, looking reflectively in front of him, "that our lives are very seldom built with a hall through the middle and the rooms alike on both sides. I don't think we'd like it if they were. They would be stupid and humdrum. The right sort of a life should have its ups and downs, its ins and outs, its different levels, its outside stairs and its inside stairs, its balconies, windows, and roofs of different periods and different styles. This is education. These things are the advantages that our lives get from the lives of others."

"Now, for myself, I like the place I live in to resemble my life and that of the people about me. And I am sure that nothing could be better suited to all that than the Squirrel Inn."

"All sorts of things come into our lives, and when a thing like Lanigan Beam comes into it, what could be better than to lodge it in a place where it can go no farther? and if something of a high order, something backed up by Matthew Vassar, but which is a little foreign, and not altogether of our kind, how well to be able to put that in a noble and elevated position where it can have every advantage and can go and come, without being naturalized or made a part of us. Think, too, how high ex-

cellence can be worthily lodged, with the comforts of the North and the beauties of the South, as in the case of Mrs. Cristie's rooms, and how blooded service is not forced into a garret, but is quartered in a manner which shows that the blood is recognized and the service ignored."

"If I had known what she was when she came," remarked Mrs. Petter, "I should have put her on the top floor."

"Think, too," continued the landlord, "of noble sentiments, high aspirations, and deep learning, lodged of their own free will, for it appears that there was no necessity for it, so near as to answer every need of social domesticity, and yet in a manner so free and apart as to allow undisturbed and undisturbing reveries beneath the stars, and such other irregular manifestations of genius as are common to the gifted."

"Such as coming late to meals," interpolated the lady.

"Think, too," Mr. Petter went on to say, speaking in a more earnest voice—"think, too, of a life or a house in which there is no place for a *Calthea Rose*; in which she cannot exist, and which, I am happy to say, she has always opposed and condemned."

Mrs. Petter slightly yawned.

"All that sounds very well," she said, "and there may be truth in it, but, after all, here we are alone by ourselves, and, so far as I can see, no chance of being less lonely next season, for your rules keep out all common folks, and we can't count on the people who were here this year coming again."

Mr. Petter smiled. "There is no reason to suppose," he said, "that next season we shall not be favored with the company of the *Rockmores* of Germantown."

And with that he walked away to place in its proper position on the shelf in the tap-room the squirrel of the past season.

Frank R. Stockton.

THE END.

BUILDING.

WHEN but a little, imitative child
My plaything bits of this and that I piled
One over other, ever high and higher,
And called it building houses; but desire
To build less pleased me than by one last piece
To see down-topple the whole edifice.

Oh, the eager, Oh, the triumphant feeling,
When to the ground in ruin it went reeling!

In youth I built me towers and palaces
Such as life's prime and richest heart most please.
Yet little wherewithal had I to build;
Only the heavens and untried earth were filled
With visionary forms of beauty, lent
As for a model of my tenement.

Just at the cope the world o'erthrew it, saying,
Why art thou still with childish toys a-playing?

Youth's visions gone and boy's prophetic play,
On the firm earth a well-planned base I lay;
Stone upon stone my house shall rise and stand,
Not as the child's, to fall at touch of hand,
Nor yet the youth's, at scorn of elder eyes,
But like the world's, and worthy of its prize.

Then God's strong arm reached forth, my structure rending,
Me back to dreams and youth forever sending.

John Albee.

THE FAITH DOCTOR.¹

XXXII.

FACE TO FACE.

NCE in the street, Phillida's perplexities began. She had undertaken to send for Millard, but there were no slow-footed district Mercuries to be had in the Mackerelville part of New York. It was now barely half-past six, and Millard would hardly have risen yet. In a battle against grim death and Miss Bowyer time seemed all important. She therefore took the Fourteenth street car and changed to an up-town line carrying her to the vicinity of the Graydon, debating all the way how quickest to get an explicit message to Millard without a personal interview, which would be painful to both, and which might be misconstrued. Alighting from the car in the neighborhood of the Graydon, whose mountainous dimensions deflected the March wind into sudden and disagreeable backsets and whirling eddies that threatened the perpendicularity of foot-passengers, she requested a florist, who was opening his shop and arranging a little exhibition of the hardier in-door plants on the sidewalk, to direct her to a district telegraph office. She was referred to one just around the corner. To this always open place she walked as rapidly as possible, to find a sleepy-looking young woman just settling herself at the desk, having at that moment relieved the man who had been on duty all night.

"Can you give me a messenger right away?" she demanded.

"In about fifteen or twenty minutes we'll have one in," said the girl. "We don't keep but two on duty at this hour, and they're both out, and there's one call ahead of you. Take a seat, won't you?"

But Phillida saw in her imagination Mrs. Martin badgered by Eleanor Bowyer, and heard again the grievous cry of the frightened and suffering Tommy. After all, she could only make the matter understood imperfectly by means of a message. Why should she stand on delicacy in a matter of life and death? She reflected that there was no animosity between her and Millard, and she recalled his figure as he reached

his hand to her that fatal evening, and she remembered the emotion in his voice when he said, "Part friends?" She resolved to go in person to the Graydon.

The entrance to the apartment building had lavished upon it a good deal of that joint-stock grandeur which goes for much and yet costs each individual householder but little. Despite her anxiety, Phillida was so far impressed by the elaborate bronze mantelpiece over the great hall fireplace, the carved wooden seats, and the frescoing and gilding of the walls, as to remember that she was dressed for a tenement in Avenue C, and not for a west-side apartment house. The gray shawl she had left behind; but she felt sure that the important-looking hall boys and, above all, the plump and prosperous-seeming clerk behind the counter, with an habitually neutral expression upon his countenance, must wonder why a woman had intruded into the sacred front entrance in so plain a hat and gown at seven o'clock in the morning. She felt in her pocket for her card-case, but of course that had been left in the pocket of a better dress, and she must write upon one of those little cards that the house furnishes; and all this while the clerk would be wondering who she was. But there was a native self-reliance about Phillida that shielded her from contempt. She asked for the card, took up a pen, and wrote:

"Miss Callender wishes to see Mr. Millard in great haste, on a matter of the utmost importance."

She was about to put this into an envelop, but she reflected that an open message was better. She handed the card to the clerk, who took it hesitatingly, and with a touch of "style" in his bearing, saying, "Mr. Millard will not be down for half an hour yet. He is not up. Will you wait?"

"He must be called," said Phillida. "It is a matter of life and death."

The clerk still held the note in his hand.

"He will be very much annoyed if that is not delivered to him at once. It is his own affair, and, as I said, a matter of life and death," said Phillida, speaking peremptorily, her courage rising to the occasion.

The clerk still held the note. He presently beckoned to a negro boy sitting on one of the carved benches.

"Washington," he said.

Washington came forward to the counter.

"Wash," said the clerk in an undertone — an undress tone kept for those upon whom it would have been useless to waste his habitual bearing as the representative of the corporate proprietorship of the building — "has Mr. Millard's man come in yet?"

"No, sir."

"Take this up to seventy-nine, and say that the lady is below and insists on his being called at once." Then to Phillida, as the form of Washington vanished upward by way of the marble staircase, "Will you take a seat in the reception-room?" waving his hand slightly in the direction of a portière, behind which Phillida found herself in the ladies' reception-room.

In ten minutes Millard came down the elevator, glanced about the office, and then quickly entered the reception-room. There were unwonted traces of haste in his toilet; his hair had been hastily brushed, but it had been brushed, as indeed it would probably have been if Washington had announced that the Graydon was in flames.

There was a moment of embarrassment. What manner was proper for such a meeting? It would not do to say "Phillida," and "Miss Callender" would sound forced and formal. Phillida was equally embarrassed as she came forward, but Millard's tact relieved the tension. He spoke in a tone of reserve and yet of friendliness.

"Good morning. I hope no disaster has happened to you." The friendly eagerness of this inquiry took off the brusqueness of omitting her name, and the anxiety that prompted it was sincere.

"There is no time for explanations," said Phillida, hurriedly. "Mr. Martin has called a Christian Science healer to see Tommy, who is very ill with diphtheria."

"Tommy has diphtheria?" said Millard, his voice showing feeling.

"Your aunt wants a doctor," continued Phillida, "but Mr. Martin has left the woman in charge, and she refuses to give up the case. Tommy is crying, and Mrs. Martin is in a horrible position and wants to see you." Here Phillida's eyes fell as she added, "There was nobody to send; I could n't get a messenger; and so I had to come myself."

"I am glad —" here Millard paused and began over — "You did the best thing to come yourself. You will excuse me, but I don't understand. You have n't charge of the case at all, then?"

"No, no, Charley — Mr. Millard; there is no time to explain. Get a good doctor, and put Miss Bowyer out, if you have to fetch a policeman. Get a good doctor at once. If you save

the child you must be quick, quick! The horrible woman will be the death of him."

Millard caught the infection of urgency and began to take in the situation. He stepped to the door, drew aside the portière, and said:

"Washington, call a coupé for me. Quick, now." Then he called after the boy as he went to the telephone, "Tell them to hurry it up."

He turned towards Phillida; then with a new impulse he turned again and walked impatiently to the office. "Mr. Oliver, won't you ask if my man is below, and send him here as quickly as possible?"

The clerk moved, without ruffling his dignity by undue haste, to the speaking-tube which communicated with the basement. In the course of half a minute a young Englishman, with a fore-and-aft cap in his hand, came running to the reception room, in the door of which Millard was standing.

"Robert," said Millard, "run to the stable and have them send my coupé on the jump. Come back with it yourself."

The well-trained Robert glided swiftly out of the front door, not even asking a question with his eyes.

"You'll go back with me in the coupé?" Millard said to Phillida, who had risen and now stood waiting in embarrassment to say good morning.

Phillida could not for a moment think of riding back with Millard, not so much on account of the conventional impropriety in it as because her visit was capable of misconstruction; and while she believed that Millard knew her too well to put any interpretation of self-interest on her coming, she could not have brought herself to return to Avenue C in his coupé. If for no other reason, she would have declined in order to avoid prolonging an interview painful and embarrassing to both. She was worn and faint from the fatigues of the night and the excitement of the morning, and she could not think of the right thing to say.

"No; I will go home," she said. Spoken thus, without calling him by name, the words had a severe sound, as of one mortally offended. A sudden access of fatigue and faintness reminded her that she had eaten nothing this morning.

"You will excuse me. I've had no breakfast yet. I've been at Mrs. Martin's since daylight. Good morning, Mr. Millard."

This explanation made her perfectly proper refusal somewhat less abrupt and direct; but the words were still cold and severe.

"I will call another coupé, and send you home. You are faint," he said.

"No, thank you," she said, and went out.

But Millard followed her into the street, and hailed a car, and assisted her to enter it, and lifted his hat and bowed in response to her

"Thank you," when she had gained the platform. As the car moved away he stood a moment looking after it, and then returned toward the sidewalk, saying softly to himself, "By Jove, what a woman! What a woman that is!"

XXXIII.

A FAMOUS VICTORY.

By the time the coupé reached the curb in front of the Graydon, Millard had fixed in his mind the first move in his campaign, and had scribbled a little note as he stood at the clerk's counter in the office. He handed the driver a dollar as a comprehensible hint that speed was required, and, taking Robert with him, was soon bowling along the yet rather empty Fifth Avenue. He alighted in front of a rather broad, low-stoop, brownstone house, with a plain sign upon it, which read "Dr. Augustine Gunstone." What ills and misfortunes had crossed that door-stone! What celebrities had here sought advice from the great doctor in matters of life and death! Few men can enjoy a great reputation and be so unspoiled as Dr. Gunstone. The shyest young girl among his patients felt drawn to unburden her sorrows to him as to a father; the humblest sufferer remembered gratefully the reassuring gentleness of his voice and manner. But Millard made no reflections this morning; he rang the bell sharply.

"The doctor has n't come down yet," said the servant. "He will not see patients before nine o'clock."

"At what time does he come down?"

"At a quarter to eight."

"It's half-past seven now," said Millard. "Kindly take this note to his room with my card, and say that I wait for an answer."

There was that in Millard's manner that impressed the servant. He was sure that this was one of those very renowned men who sometimes came to see Dr. Gunstone and who were not to be refused. He ran up the stairs and timidly knocked at the doctor's door. Millard waited five minutes in a small reception-room, and then the old doctor came down, kindly, dignified, unruffled as ever, a man courteous to all, friendly with all, but without any familiars.

"Good morning, Mr. Millard. I can't see your patient now. Every moment of my time to-day is engaged. Perhaps I might contrive to see the child on my way to the hospital at twelve."

"If I could have a carriage here at the moment you finish your breakfast, with my valet in it to see that no time is lost, could you give us advice, and get back here before your office hours begin?"

Dr. Gunstone hesitated a moment. "Yes,"

he said; "but you would want a doctor in the vicinity. I cannot come often enough to take charge of the case."

"We'll call any one you may name. The family are poor, I am interested in them, they are relatives of mine, and this child I have set my heart on saving, and I will not mind expense. I wish you to come every day as consultant, if possible."

Dr. Gunstone's was a professional mind before all. He avoided those profound questions of philosophy towards which modern science propels the mind, limiting himself to the science of pathology and the art of healing; on the other hand, he habitually bounded his curiosity concerning his patients to their physical condition and such of their surroundings as affected for good or ill their chances of recovery. He did not care to know more of this poor family than that he was to see a patient there; but he knew something of Millard from the friendly relations existing between him and younger members of his own family, and the disclosure that Millard had kinsfolk in Avenue C, and was deeply interested in people of a humble rank, gave Dr. Gunstone a momentary surprise, which, however, it would have been contrary to all his habits to manifest. He merely bowed a polite good morning and turned toward the breakfast-room.

These men in whose lives life and death are matters of hourly business — matters of bread and butter and bank-account — acquire in self-defense a certain imperviousness; they learn to shed their responsibilities with facility in favor of digestion and sleep. Dr. Gunstone ate in a leisurely way, relishing his chops and coffee, and participating in the conversation of the family who joined him one by one at the table, without once troubling himself that another family in Avenue C was in agonized waiting for his presence, and that haste or delay might make the difference between life and death to a human being. This was not heartlessness, but a condition of his living and working — a postponement of particular service, however important, in favor of the general serviceableness of his life.

Millard was not sorry for the delay; it gave him time to dispose of Miss Bowyer.

Seeing that Phillida had gone to seek reinforcements, Mrs. Martin had concluded that, in Tommy's interest, a truce would be the better thing. So, while Miss Bowyer was seeking to induce in little Tommy the impressible conscious state, — or, to be precise, the conscious, passive, impressible state, — Mrs. Martin offered to hold him in her arms. To this the metaphysical healer assented with alacrity, as likely to put the child into a favorable condition for the exercise of her occult therapeutic powers.

"Hold him with his back to the north, Mrs. Martin," she said; "there, in a somewhat reclining posture; that will increase his susceptibility to psychic influence. There is no doubt that the magnetism of the earth has a polar distribution. It is quite probable also that the odylic emanation of the terrestrial magnet has also a polar arrangement. Does the little fellow ever turn round in his bed at night?"

"Yes."

"That shows that he is sensitive to magnetic influences. He is trying to get himself north and south, so as to bring the body into harmony with the magnetic poles of the earth. You see the brain is normally positive. We wish to invert the poles of the body, and send the magnetism of the brain to the feet."

Miss Bowyer now took out a small silver cross and held it up before the child a little above the natural range of vision.

"Will you look at this, little boy?" she said.

She did her best to make her naturally unsympathetic voice persuasive, even to pronouncing the last word of her entreaty "baw-ee." But the "little baw-ee" was faint with sickness, and he only lifted his eyes a moment to the trinket, and then closed the eyelids and turned his face towards his mother's bosom.

"Come, little baw-ee. Look at this, my child. Is n't it pretty? Little baw-ee, see here!"

But the little baw-ee wanted rest, and he showed no signs of having heard Miss Bowyer's appeal, except that he fretted with annoyance after each sentence she addressed to him.

"That is bad," said Miss Bowyer, seeing that Tommy would not look. "If I could get him to strain the eyes upward for five minutes, while I gazed at him and concentrated my mind on the act of gazing, I should be able to produce what is known in psychopathic science as the conscious impressible state — something resembling hypnotism, but stopping short of the unconscious state. I could make him forget his disease by willing forgetfulness. I must try another plan."

Miss Bowyer now sat and gazed on the child, who was half-slumbering. For five minutes she sat there like a cat ready to jump at the first movement of a moribund mouse. She was apparently engaged in concentrating her mind on the act of gazing.

"Now," she said to Mrs. Martin in a whisper — for explication was a necessity of Miss Bowyer's nature, or perhaps essential to the potency of her measures — "now I will gently place the right hand on the fore brain and the left over the cerebellum, willing the vital force of the cerebrum to retreat backward to

the cerebellum. This is the condition of the brain in the somnambulist state and in ordinary sleep. The right hand, you must know, acts from without inwards, while the left acts from within outwards." She suited the action to the words; but Tommy did not take kindly to the action of her right hand from without inwards, or else he was annoyed by the action of the left hand from within outwards. Evidently Miss Bowyer's positive and negative poles failed to harmonize with his. He put up his hands to push away hers; but finding that impossible, he kicked and cried in a way which showed him to be utterly out of harmony with the odylic emanations of the terrestrial magnet.

With these and other mummeries Miss Bowyer proceeded during all the long hour and a quarter that intervened between Phillida's departure and the arrival of the reinforcement. Miss Bowyer was wondering meanwhile what could have been the nature of Phillida's conference outside the door with Mrs. Martin, and whether Mrs. Martin were sufficiently convinced of her skill by this time for her to venture to leave the place presently to meet certain office patients whom she expected. But she concluded to run no risks of defeat; she had left word at her office that she had been called to see a patient dangerously ill, and such a report would do her reputation no harm.

Mrs. Martin was driven to the very verge of distraction by the sense of Tommy's danger and the necessity she was under of suppressing her feelings, while this woman, crank or impostor, held possession of the child and of her house. Not to disturb Tommy, she affected a peaceful attitude toward the professor of Christian sorcery, whom, in the anguish of her spirit, she would have liked to project out of a window into the dizzy space occupied by pulleys and clothes-lines. Footsteps came and went past her door, but there was as yet no interruption to Miss Bowyer's pow-wow. At length there came a step on the stairs, and a rap. Mrs. Martin laid Tommy on the bed and opened the door. Charley beckoned her to be silent and to come out.

"What is the name of the faith-healer, Aunt Hannah?" he whispered.

"Miss Bowyer."

"Does she still refuse to leave?"

"Oh, yes! She declares she will not leave."

"You want her out?"

"Yes; I want a doctor," said Mrs. Martin, giving her hands a little wring.

"Tell Miss Bowyer that there is a gentleman outside the door who wishes to see her. Whenever the door is shut, do you fasten it inside."

"Miss Bowyer, there's a gentleman inquir-

ing for you outside," said Mrs. Martin when she returned.

Miss Bowyer opened the door suspiciously, standing in the doorway as she spoke.

"Did you wish to see me?"

"Are you Miss Bowyer?"

"Yes,"—with a wave inflection, as though half inquiring.

"Are you the Christian Scientist?"

"Yes," said Miss Bowyer, "I am."

"This is a case of diphtheria, is n't it?"

"It's a case of belief in diphtheria. I have no doubt I shall be able to reduce the morbid action soon. The child is already in the state of interior perception," she said, seeing in Millard a possible patient, and coming a little further out of the door.

"It's catching, I believe," said Millard. "Would you mind closing the door a moment while I speak with you?"

Miss Bowyer peered into the room, to see Mrs. Martin giving Tommy a drink. Feeling secure, she softly closed the door, keeping hold of the handle. Then she turned to Millard.

"Did you wish to see me professionally?" she asked.

"Well," said Millard, "I think you might call it professionally. I live over on the west side. Do you know where the Graydon apartment building is?"

"Yes, oh, yes; I attended a patient near there once, in one of the brownstone houses on the other side of the street. He got well beautifully."

"Well, I live in the Graydon," said Millard.

"Yes," said Miss Bowyer, with a rising inflection, wondering what could be the outcome of this roundabout talk. "Is some member of your family sick?" she asked.

A bolt clicked behind the metaphysical healer, who turned with the alarm of a trapped mouse and essayed to push the door. Then, remembering what seemed more profitable game in front, she repeated her question, but in a ruffled tone, "Some member of your family?"

Charley laughed in spite of himself.

"Not of my family, but a relative," he said. "It is my cousin who is sick in this room, and I called to get you outside of the door. I beg your pardon for the seeming rudeness."

Miss Bowyer now pushed on the door in vain.

"You think this is a gentlemanly way to treat a lady?" she said, choking with indignation.

"It does n't seem handsome, does it?" he said. "But do you think you have treated Mrs. Martin in a ladylike way?"

"I was called by her husband," she said.

"You are now dismissed by the wife."

"I will see Mr. Martin at once, and he will reinstate me."

"You will not see Mr. Martin. I shall not give you a chance. I am going to report you to the County Medical Society and the Board of Health at once. Have you reported this case of diphtheria, as the law requires?"

"No, I have not," said Miss Bowyer; "but I was going to do so to-day."

"I don't like to dispute the word of a lady," he said, "but you know that you are not a proper practitioner, and that in case of a contagious disease the Board of Health would put you out of here neck and heels, if I must speak so roughly. Mrs. Martin is my aunt. If you make any trouble, I shall feel obliged to have you arrested at once. If you go home quietly and do not say a word to Mr. Martin, I'll let you off. You have no doubt lost patients of this kind before, and if I look up your record—"

"My hat and cloak are in there," said Miss Bowyer.

"If you renounce the case and say no more to Mr. Martin I will not follow you up," said Charley; "but turn your hand against Mrs. Martin, and I'll spend a thousand dollars to put you in prison."

This put a new aspect on the case in Miss Bowyer's mind. That Mrs. Martin had influential friends she had not dreamed. Miss Bowyer had had one tilt with the authorities, and she preferred not to try it again.

"My hat and cloak are in there," she said, pushing on the door.

"Stand aside," said Millard, "and I will get them."

Somehow Millard had reached Miss Bowyer's interior perception and put her into the conscious, impressible, passive state, in which his will was hers. She moved to the other side of the dark hall in such a state of mind that she could hardly have told whether the magnetism of her brain was in the cerebrum or in the cerebellum or in a state of oscillation between the two.

"Aunt Hannah," called Millard, "open the door."

The bolt was shoved back by Mrs. Martin. Millard opened the door a little way, holding the knob firmly in his right hand. Mrs. Martin stood well out of sight behind the door, from an undefined fear of getting in range of Miss Bowyer, whose calm bullying had put Mrs. Martin into some impassive state not laid down in works on Christian Science.

"Give me Miss Bowyer's hat and cloak," said Millard.

The things were passed out by Mrs. Martin, who, in doing so, exposed nothing but her right hand to the enemy, while Charley took them in his left and passed them to Miss Bowyer.

"Now remember," he said, closing the door and holding it until he heard the bolt shoved to its place again, "if you know what is good for you, you will not make the slightest movement in this case."

"But you will not refuse me my fee," she said. "You have put me out of a case that would have been worth ten or twenty dollars. I shall expect you to pay me something."

Millard hesitated. It might be better not to provoke her too far; but on the other hand, he could not suppress his indignation on his aunt's behalf so far as to give her money.

"Send me your bill, made out explicitly for medical services in this case. Address the cashier of the Bank of Manhadoes. I will pay you if your bill is regularly made out."

Miss Bowyer went down the stairs and into the street. But the more she thought of it the more she was convinced that this demand for a regular bill for medical services from a non-registered practitioner concealed some new device to entrap her. She had had enough of that young man up-stairs, and, much as she disliked the alternative, she thought it best to let her fee go uncollected, unless she could some day collect it quietly from the head of the Martin family. Her magnetism had never before been so much out of harmony with every sort of odylic emanation in the universe as at this moment.

XXXIV.

DOCTORS AND LOVERS.

FAINT from the all-night strain upon her feelings, Phillida returned to her home from the Graydon to find her mother and sister at breakfast.

"Philly, you're 'most dead," said Agatha, as Phillida walked wearily into the dining-room by way of the basement door. "You're pale and sick. Here, sit down and take a cup of coffee."

Phillida sat down without removing her bonnet or sack, but Agatha took them off while her mother poured her coffee.

"Where have you been and what made you go off so early?" went on Agatha. "Or did you run away in the night?"

"Let Phillida take her coffee and get rested," said the mother.

"All right, she shall," said Agatha, patting her on the back in a baby-cuddling way. "Only tell me how that little boy is; I do want to know, and you can just say 'better,' 'worse,' 'well,' or 'dead,' without waiting for the effect of the coffee, don't you see?"

"The child has diphtheria. I don't know whether I ought to come home and expose the rest of you."

"Nonsense," said Agatha. "Do you think we're going to send you off to the Island? You take care of the rest of the world, Philly, but mama and I take care of you. When you get up into a private box in heaven as a great saint, we'll hang on to your robe and get good seats."

"Sh-sh," said Phillida, halting between a revulsion at Agatha's irreverent speech and a feeling more painful. "I'll never be a great saint, Aggy. Only a poor, foolish girl, mistaking her fancies for her duty."

"Oh, that's the way with all the great saints. They just missed being shut up for lunatics. But do you think you'll be able to save that little boy? Don't you think you ought to get them to call a doctor?"

"I? Oh, I gave up the case. I'm done with faith-healing once for all, Agatha." This was said with a little gulp, indicating that the confession cost her both effort and pain.

"You —"

"Don't ask me any questions till I'm better able to answer. I'm awfully tired out and cross."

"What have you been doing this morning?" said Agatha, notwithstanding Phillida's injunction against questions.

"Getting Miss Bowyer out of the Martin house. Mr. Martin was determined to have her, and he went for her when his wife sent him for a doctor."

"Miss Bowyer! I don't see how you ever got her out," said Agatha. "Did you get a policeman to run her into the station-house on the mortal plane?"

"No; I did worse. I actually had to go to the Graydon and wake up Charley Millard—"

"You did?"

"Yes; I could n't get a messenger, and so I went myself. And I put the case into Charley's hands, and he sent his man Friday scampering after a coupé, and I came home and left him to go over there and fight it out."

"Well, I declare!" said Agatha. "What remarkable adventures you have! And I never have anything real nice and dreadful happen to me. But he might have brought you home."

"It was n't his fault that he didn't. But give me a little bit of steak, please; I have got to go back to the Martins'."

"No, you must n't. Mother, don't you let her."

"I do wish, Phillida," said the mother, "that you would n't go down into the low quarters of the town any more. You're so exposed to disease. And then you're a young woman. You have n't got your father's endurance. It's a dreadful risk."

"Well, I'm rather responsible for the child, and then I ought to be there to protect Mrs.

Martin from her husband when he comes home at noon, and to share the blame with her when he finds his favorite put out and Charley's doctor in possession."

"So you and Charley are in partnership in saving the boy's life," said Agatha, "and you've got a regular doctor. That's something like. I can guess what'll come next."

"Hush, Agatha," said the mother.

Phillida's appetite for beefsteak failed in a moment, and she pushed her plate back and looked at her sister with vexation.

"If you think there's going to be a new engagement, you're mistaken."

"Think!" said Agatha with a provoking laugh, "I don't think anything about it. I know just what's got to happen. You and Charley are just made for each other, though for my part I should prefer a young man something like Cousin Philip."

Phillida was silent for a moment, and Mrs. Callender made a protesting gesture at the impulsive Agatha.

"I don't think you ought to talk about such things when I'm so tired," said Phillida, struggling to maintain self-control. "Mr. Millard is a man used to great popularity and much flattery in society. He would never stand it in the world; it would hurt him twenty years hence to be reminded that his wife had been a — well — a fanatic." This was uttered with a sharp effort of desperation, Phillida grinding a bit of bread to pieces between thumb and finger the meanwhile. "If he were to offer to renew the engagement I should refuse. It would be too mortifying to think of."

Agatha said nothing, and Phillida presently added, "And if you think I went to the Graydon to renew the acquaintance of Charley, it's — very — unkind of you, that's all." Phillida could no longer restrain her tears.

"Why, Phillida dear, Agatha did n't say any such thing," interposed Mrs. Callender.

"If you think," said Agatha, angrily, "that I could even imagine such a thing as that, it's just too awfully mean, that's all. But you've worried yourself sick and you're unreasonable. There, now, please don't cry, Philly," she added, going around and stroking her sister's hair. "You're too good for any man that ever lived, and that's a great misfortune. If they could have split the difference between your goodness and my badness, they might have made two fair average women. There, now, if you don't eat something I'll blame myself all day. I'm going to toast you a piece of bread."

In spite of remonstrance, the repentant Agatha toasted a piece of bread and boiled the only egg that Sarah had in the house, to tempt her sister's appetite.

"Your motto is, 'Hard words and kind

acts,'" said Mrs. Callender, as Agatha came in with the toast and the egg.

"My motto is, 'Hard words and soft boiled eggs,'" said Agatha, who had by this penance secured her own forgiveness and recovered her gaiety.

In vain was Phillida entreated to rest. She felt herself drawn to Mrs. Martin, who would, as she concluded, have got rid of Miss Bowyer, and seen the doctor and Charley, and be left alone, by this time. So, promising to be back by one o'clock, if possible, she went out again, indulging her fatigue so far as to take a car in Fourteenth street. Arrived at Mrs. Martin's, she was embarrassed at finding Millard sitting with his aunt. She gave him a look of recognition as she entered, and said to Mrs. Martin, who was holding Tommy:

"I thought I should find you alone by this time."

This indirect statement that she had not considered it desirable to encounter Millard again cut him, and he said, as though the words had been addressed to him, "I am expecting Dr. Gunstone every moment."

"Dr. Gunstone? I am glad he is coming," said Phillida, firing the remark in the air indiscriminately at the aunt or nephew, as either might please to accept it.

At that moment Millard's valet, Robert, in the capacity of pioneer and pilot, knocked at the door. When Millard opened it he said, "Dr. Gunstone, sir," and stood aside to let the physician pass.

Gunstone made a little hurried bow to Millard, and, without waiting for an introduction, bowed with his usual deference to Mrs. Martin. "Good-morning, madam; is this the little sufferer?" at the same time making a hurried bow of courtesy to Phillida as a stranger; but as he did so, he arrested himself and said in the fatherly tone he habitually used with his young women patients, "How do you do? You came to see me last year with —"

"My mother, Mrs. Callender," said Phillida.

"Yes, yes; and how is your mother, my dear?"

"Quite well, thank you, doctor."

The doctor despatched these courtesies with business-like promptness, and then settled himself to an examination of little Tommy.

"This is diphtheria," he said; "you will want a physician in the neighborhood. Let's see, whom have you?" This to Millard.

Millard turned to his aunt. She looked at Phillida. "There's Dr. Smith around the corner," said Phillida.

Dr. Gunstone said, "Dr. Smith?" inquiringly to himself. But the name did not seem to recall any particular Smith.

"And Dr. Beswick in Seventeenth street," said Phillida.

"Beswick is a very good young fellow, with ample hospital experience," said Gunstone. "Can you send for him at once?"

Robert, who stood alert without the door, was told to bring Dr. Beswick in the carriage, and in a very short space of time Beswick was there, having left Mrs. Beswick sure that success and renown could not be far away when her husband was called on Gunstone's recommendation, and fetched in a coupé under the conduct of what seemed to her a coachman and a footman. Beswick's awkwardness and his abrupt up-and-downness of manner contrasted strangely with Dr. Gunstone's simple but graceful ways. A few rapid directions served to put the case into Beswick's hands, and the old doctor bowed swiftly to all in the room, descended the stairs, and, having picked his way hurriedly through a swarm of children on the sidewalk, entered the carriage again, and was gone.

Millard looked at his watch, remembered that he had had no breakfast, and prepared to take his leave.

"Thank you, Charley, ever so much," said his aunt. "I don't know what I should have done without you."

"Miss Callender is the one to thank," said Millard, scarcely daring to look at her, as he bade her and Dr. Beswick good-morning.

When he had reached the bottom of the long flight of stairs, Millard suddenly turned about and climbed to the top once more.

"Miss Callender," he said, standing in the door, "let me speak to you, please."

Phillida went out to him. This confidential conversation could not but excite a rush of associations and emotion in the minds of both of them, so that neither dared to look directly at the other as they stood there in the obscure light which struggled through two dusty panes of glass at the top of the next flight.

"You must not stay here," he said. "You're very weary; you will be liable to take the disease. I am going to send a professional nurse."

This solicitude for her was so like the Charley of other times that it made Phillida tremble with a grateful emotion she could not quite conceal.

"A professional nurse will be better for Tommy. But I cannot leave while Mrs. Martin has any great need for me." She could not confess to him the responsibility she felt in the case on account of her having undertaken it the evening before as a faith-doctor.

"What is the best way to get a nurse?" asked Millard, regarding her downcast face, and repressing a dreadful impulse to manifest his reviving affection.

"Dr. Beswick will know," said Phillida. "I

will send him out." She was glad to escape into the room again, for she was afraid to trust her own feelings longer in Millard's company. The arrangement was made that Dr. Beswick should send a nurse, and then Millard and Beswick went down-stairs together.

Phillida stayed till Mr. Martin came home, hoping to soften the scene between husband and wife. In his heart Martin revered his wife's good sense, but he felt it due to his sex to assert himself once in a while against a wife whose superiority he could not but feel. As soon as he had accomplished this feat, thereby proving his masculinity, he always repented it. For so long as his wife approved his course he was sure that he could not be far astray; but whenever his vanity had made him act against her judgment he was a mariner out of reckoning, and he made haste to take account of the pole star of her good sense.

He had just now been impelled by certain ugly elements in his nature to give his wife a taste of his power as the head of the family, the more that she had dared to make sport of his new science and of his new oracle, Miss Bowyer. But once he had become individually responsible for Tommy's life without the security of Mrs. Martin's indorsement on the back of the bond, he became extremely miserable. As noontime approached he grew so restless that he got excused from his bench early, and came home.

Motives of delicacy had prevented any communication between Phillida and Mrs. Martin regarding the probable attitude of Mr. Martin toward the transactions of the morning. But when his ascending footsteps, steady and solemn as the Dead March in "Saul," were heard upon the stairs, their hearts failed them.

"How's little Tommy?" he asked.

"I don't think he's any better," said Mrs. Martin.

"Come to think," said the husband, "I guess I'd better send word to Miss Bowyer to give it up and not come any more, and then I'd better get a regular doctor. I don't somehow like to take all the responsibility, come to think."

"Miss Bowyer's given up the case," said Mrs. Martin. "Charley's been here, scared to death about Tommy. He brought a great doctor from Fifth Avenue, and together they sent for Dr. Beswick. Miss Bowyer gave up the case."

"Give up the case, did she?" he said wonderingly.

"Yes."

"Well, that's better. But I did n't ever hardly believe she'd go and give it up."

Mr. Martin did not care to inquire further. He was rid of responsibility, and, finding him-

self once more under the lee of his wife, he could eat his dinner and go back to work a happier man.

XXXV.

PHILLIDA AND HER FRIENDS.

THE appearance in the Martin apartment of the trained nurse, who was an old friend and hospital associate of Mrs. Beswick's, relieved Phillida of night service; but nothing could relieve her sense of partial responsibility for the delay in calling a doctor, and her resolution to stay by little Tommy as much as possible until the issue should be known. Every day while the nurse rested she took her place with the patient, holding him in her arms for long hours at a time, and every day Millard called to make inquiries. He was not only troubled about the little boy, but there hung over him a dread of imminent calamity to Phillida. On the fifth day the symptoms in Tommy's case became more serious, but at the close of the sixth Dr. Beswick expressed himself as hopeful. The next evening, when Millard called, he learned that Tommy was improving slowly, and that Miss Callender had not come to the Martins' on that day. His aunt thought that she was probably tired out, and that she had taken advantage of Tommy's improvement to rest. But when had Phillida been known to rest when anybody within her range was suffering? Millard felt sure that she would at least have come to learn the condition of the sick boy had she been able.

He hesitated to make inquiry after Phillida's health. Her effort to avoid conversation with him assured him that she preferred not to encourage a new intimacy. But though he debated, he did not delay going straight to the Callenders' and ringing the bell.

Agatha came to the door.

"Good evening, Miss Agatha," he said, presuming so much on his old friendship as to use her first name.

"Good evening, Mr. Millard," said Agatha, in an embarrassed but austere voice.

"I called to inquire after your sister. Knowing that she had been exposed to diphtheria, I was afraid—" He paused here, remembering that he no longer had any right to be afraid on her account.

Agatha did not wait for him to re-shape or complete his sentence. She said, "Thank you. She has a sore throat, which makes us very uneasy. Cousin Philip has just gone to see if he can get Dr. Gunstone."

When Millard had gone, Agatha told her mother that Charley had called.

"I am glad of it," said Mrs. Callender. "Did you ask him in?"

"Not I," said Agatha, with a high head. "If he wants to renew his acquaintance with Phillida, he can do it without our asking him. I was just as stiff as I could be with him, and I told him that Cousin Phil had gone for the doctor. That 'll be a thorn in his side, for he always was a little jealous of Philip, I believe."

"Why, Agatha, I'm afraid you have n't done right. You ought n't to be so severe. For my part, I hope the engagement will be renewed. I am sick and tired of having Phillida risk her life in the tenements. It was very kind of Mr. Millard to call and inquire, I am sure."

"He ought to," said Agatha. "She got this dreadful disease taking care of his relations. I don't want him to think we're dying to have him take Phillida off our hands." Agatha's temper was ruffled by her anxiety at Phillida's sickness. "I'm sure his high and mighty tone about Phillida's faith-cures has worried her enough. Now just let him worry awhile."

Certainly, Agatha Callender's bearing towards him did not reassure Millard. He thought she might have called him Charley; or if that was not just the thing to do, she might have made her voice a little less frosty. He could not get rid of a certain self-condemnation regarding Phillida, and he conjectured that her family were disposed to condemn him also. He thought they ought to consider how severely his patience had been tried; but then they could not know how Phillida was talked about. How could they ever imagine Meadows's brutal impertinence?

He was not clear regarding the nature of the change in Phillida's views. Had she wholly renounced her faith-healing, or was she only opposed to the Christian Science imposture? Or did she think that medicine should be called in after an appeal to Heaven had failed? If he had felt that there was any probability of a renewal of his engagement with Phillida, he could have wished that she might not yet have given up her career as a faith-doctor. He would then have a chance to prove to her that he was not too cowardly to endure reproach for her sake. But, from the way Agatha spoke, it must be that Philip Gouverneur was now in favor rather than he. Nothing had been more evident to him than that Philip was in love with his cousin. What was to be expected but that Philip, with the advantage of cousinly intimacy, should urge his suit, once Phillida was free from her engagement?

But all his other anxieties were now swallowed up in the one fear that she who had ventured her life for others so bravely might have sacrificed it. Millard was uneasy the night long, and before he went to the bank he called again at the Callender house. He was

glad that it was Sarah, and not Agatha, who came to the door. He sent in a card to Mrs. Callender with the words, "Kind inquiries," written on it, and received through Sarah the reply that Mrs. Callender was much obliged to him for inquiring, and that Miss Callender had diphtheria and was not so well as yesterday.

The cashier of the Bank of Manhadoes was not happy that day. He threw himself into his business with an energy that seemed feverish. He did not feel that it would be proper for him to call again before the next morning; it would seem like trying to take advantage of Phillida's illness. But, with such a life in jeopardy, how could his impatience delay till morning?

Just before three o'clock the Hilbrough carriage stopped at the bank. Mrs. Hilbrough had come to take up her husband for a drive. Hilbrough was engaged with some one in the inner office, which he had occupied since Masters had virtually retired from the bank. Millard saw the carriage from his window, and, with more than his usual gallantry, quitted his desk to assist Mrs. Hilbrough to alight. But she declined to come in; she would wait in the carriage for Mr. Hilbrough.

"Did you know of Miss Callender's illness?" he asked.

"No; is it anything serious?" Mrs. Hilbrough showed a sincere solicitude.

"Diphtheria," he said. "I called there this morning. Mrs. Callender sent word that Phillida was not so well as yesterday."

Mrs. Hilbrough was pleased that Millard had gone so far as to inquire. She reflected that an illness, if not a dangerous one, might be a good thing for lovers situated as these two. But diphtheria was another matter.

"I wish I knew how she's getting along this afternoon," said Mrs. Hilbrough.

"I would call again at once," said Millard, "but, you know, my relations are peculiar. To call twice in a day might seem intrusive."

"I would drive there at once," said Mrs. Hilbrough, meditatively, "but Mr. Hilbrough is so wrapped up in his children, and so much afraid of their getting diphtheria, that he will not venture into the street where it is. If I should send the footman, Mr. Hilbrough would not let him return to the house again. I'm afraid he would not even approve of communication by a telegraph-boy."

"A boy would be long enough returning to be disinfected," said Millard; but the pleasantries were all in his words; his face showed solicitude and disappointment. He could think of no one but Mrs. Hilbrough through whom he could inquire.

"Perhaps," he said, "you would not object to my sending an inquiry in your name?"

"Oh, certainly not; that would be a good plan, especially if you will take the trouble to let me know how she is. Use my name at your discretion, Mr. Millard. I give you *carte blanche*," said she, smiling with pleasure at the very notion of bearing so intimate a relation to a clever scheme which lent a little romance to a love-affair that was so highly interesting to her on all accounts. She took out a visiting-card and penciled the words, "Hoping that Miss Callender is not very ill, and begging Mrs. Callender to let her know." This she handed to Millard.

Mr. Hilbrough came out at that moment, and Millard bowed to Mrs. Hilbrough and went in. Hilbrough had been as deeply grieved as his wife to hear that the much-admired Phillida was ill.

"What are you going to do, my dear?" he said. "You cannot go there without risking the children. You can't send James without danger of bringing the infection into the house. But we must n't leave Phillida without some attentions; I don't see how to manage it."

"I've just made Mr. Millard my deputy," said Mrs. Hilbrough. "You see, he feels delicate about inquiring too often; so I have written inquiries on one of my cards and given it to Mr. Millard."

Hilbrough did n't like to do things in a stinted way, particularly in cases which involved his generous feelings.

"Give me a lot of your cards," he said.

"What for?"

"For Mr. Millard."

"I don't see what use he can make of them," said Mrs. Hilbrough, slowly opening her card-case.

"He'll know," said Hilbrough. "He can work a visiting-card in more ways than any other man in New York." Hilbrough took half a dozen of his wife's cards and carried them into the bank.

"Use these as you see fit," he said to Millard, "and if you need a dozen or two more let me know."

Under other circumstances Millard would have been amused, this liberal overdoing was so characteristic of Hilbrough. But he only took the cards with thanks, reflecting that there might be some opportunity to use them.

As he would be detained at the bank until near four o'clock, his first impulse was to call a district messenger and despatch Mrs. Hilbrough's card of inquiry at once. But he reflected that the illness might be a long one, and that his measures should be taken with reference to his future conduct. On his way home from the bank he settled the manner of his pro-

cedure. The Callender family, outside of Phillida at most, did not know his man Robert. By sending the discreet Robert systematically with messages in Mrs. Hilbrough's name, those who attended the door would come to regard him as the Hilbrough messenger.

It was about five o'clock when Robert, under careful instructions, presented Mrs. Hilbrough's card at the Callender door. Unfortunately for Millard's plan, Mrs. Callender, despite Robert's hint that a verbal message would be sufficient, wrote her reply. When Robert put the note into Millard's hands he did not know what to do. His commission did not extend to opening a missive addressed to Mrs. Hilbrough. His first impulse was to despatch Robert with the note to Mrs. Hilbrough. But he remembered Mr. Hilbrough's apprehension of diphtheria, and that Robert had come from the infected house. He would send Mrs. Callender's note by a messenger. But, on second thought, the note would be a more deadly missile in Hilbrough's eyes than Robert, who had not gone beyond the vestibule of the Callender house. He therefore sent a note by a messenger, stating the case, and received in return permission to open all letters addressed to Mrs. Hilbrough which his man might bring away from the Callenders'. This scheme, by which Millard personated Mrs. Hilbrough, had so much the air of a romantic intrigue of the harmless variety that it fascinated Mrs. Hilbrough, who dearly loved a manœuvre, and who would have given Millard permission to forge her name and seal his notes of inquiry with the recently discovered Hilbrough coat-of-arms, if such extreme measures had been necessary. Mrs. Callender's reply stated that Dr. Gunstone was hopeful, but that Phillida seemed pretty ill.

The next morning Millard's card with "Kind inquiries" was sent in, and the reply was returned that Phillida was no worse. Her mother showed her the card, and Phillida looked at it for half a minute and then wearily put it away. An hour later Robert appeared at the door with a bunch of callas, to which Mrs. Hilbrough's card was attached.

"Oh! see, Philly," said Agatha softly, "Mrs. Hilbrough has sent you some flowers."

Phillida reached her hand and touched them, gazed at them a moment, and then turned her head away, and began to weep.

"What is the matter, Philly? What are you crying about?" said her mother with solicitation.

"The flowers make me want to die."

"Why, how can the flowers trouble you?"

"They are just like what Charley used to send me. They remind me that there is nothing more for me but to die and have done with the world."

The flowers were put out of her sight; but Phillida's mind had fastened itself on those other callas whose mute appeal for Charley Millard, at the crisis of her history, had so deeply moved her, though her perverse conscience would not let her respond to it.

XXXVI.

MRS. BESWICK.

ABOUT the time that Phillida got her flowers Mrs. Beswick sat mending her husband's threadbare overcoat. His vigorous thumbs, in frequent fastening and loosening, had worn the cloth quite through in the neighborhood of the buttons. To repair this, she had cut little bits of the fabric off the overplus of cloth at the seams, and worked these little pieces through the holes, and then sewed the cloth down upon them so as to underlay the thumb-worn places. The buttonholes had also frayed out, and these had to be reworked.

"I declare, my love," she said, "you ought to have a new overcoat. This one is not decent enough for a man in your position to wear."

"It'll have to do till warm weather," he said; "I couldn't buy another if I wanted to."

"But you see, love, since Dr. Gunstone called you and sent a carriage for you, there's a chance for a better sort of practice, if we were only able to furnish the office a little better, and, above all, to get you a good overcoat. There, try that on and see how it looks."

Dr. Beswick drew the overcoat on, and Mrs. Beswick gave herself the pleasure of buttoning it about his manly form, and of turning the doctor around as a Bowery shopkeeper does a sidewalk dummy, to try the effect, smoothing the coat with her hands the while.

"That looks a good deal better, Mattie," he said.

"Yes; but it's fraying a little at the cuffs, and when it gives away there darning and patching won't save it. There, don't, don't, love, please; I'm in a hurry."

This last appeal was occasioned by the doctor's availing himself of her proximity to put his arm about her.

"Annie Jackson got twenty-five dollars for nursing the Martin child. Now, if I'd only done that."

"But you could n't, Mattie. You're a doctor's wife, and you owe it to your position not to go out nursing."

"I know. Never mind; your practice'll rise now that Dr. Gunstone has called you, and they sent a carriage with a coachman and a footman after you. That kind of thing makes an impression on the neighbors. I should n't wonder if you'd be able to keep your own car-

riage in a few years. I'm sure you've got as much ability as Dr. Gunstone, though you don't put on his stylish ways. But we must manage to get you a new overcoat before another winter. Take off the coat, quick."

The last words were the result of a ring at the door. The doctor slipped quickly out of his overcoat, laughing, and then instantly assumed his meditative office face, while Mrs. Beswick opened the door. There stood a man in shirt-sleeves who had come to get the doctor to go to the dry dock to see a workman who was suffering from an attack of cart-pin in the hands of a friend with whom he had been discussing municipal politics.

Fifteen minutes later Mrs. Beswick's wifely heart was gladdened by another ring. When she saw that the visitor was a fine-looking gentleman, scrupulously well-dressed, even to his gloves and cane, she felt that renown and wealth must be close at hand.

"Is Dr. Beswick in?" demanded the caller.

"He was called out in haste to see a patient, who—was—taken down very suddenly," she said; "but I expect him back every moment. Will you come in and wait?"

"Can I see Mrs. Beswick?" said the stranger, entering.

"I am Mrs. Beswick."

"I am Mr. Millard. My aunt, Mrs. Martin, referred me to you. The occasion of my coming is this: Miss Callender, while caring for my little cousin, has caught diphtheria."

"I'm so sorry. You mean the one they call the faith-doctor? She's such a sweet, ladylike person! She's been here to see the doctor. And you want Dr. Beswick to attend her?"

"No; the family have called Dr. Gunstone, who has been their physician before."

Mrs. Beswick was visibly disappointed. It seemed so long to wait until Dr. Beswick's transcendent ability should be recognized. She was tired of hearing of Gunstone.

"I would like to send a good nurse to care for Miss Callender," said Millard, "since she got her sickness by attention to my little cousin. My aunt, Mrs. Martin, said that the nurse Dr. Beswick sent to her child was a friend of yours, I believe."

"Yes; I was in the hospital with her. But you could n't get Miss Jackson, who nursed the little Martin boy. She's going to take charge of a case next week. It's a first-rate case that will last all summer. You could find a good nurse by going to the New York Hospital."

Millard looked hopeless. After a moment he said: "It would n't do. You see the family of Miss Callender would n't have me pay for a nurse if they knew about it. I thought I might

get this Miss Jackson to go in as an acquaintance, having known Miss Callender at the Martins'. They need n't know that I pay her. Don't you think I could put somebody in her place, and get her?"

"No; it's a long case, and it will give her a chance to go to the country, and the people have waited nearly a week to get her."

"I suppose I'll have to give it up. Unless—unless—"

Millard paused a moment. Then he said:

"They say you are a trained nurse. If, now, I could coax you to go in as an acquaintance? You have met her, and you like her?"

"Oh, ever so much! She's so good and friendly. But I don't think I could go. The doctor's only beginning, but his practice is improving fast, and his position, you know, might be affected by my going out to nurse again."

But Mrs. Beswick looked a little excited, and Millard, making a hurried estimate of the Beswick financial condition from the few assets visible, concluded that the project was by no means hopeless.

"I would n't ask you to go out as a paid nurse. You would go and tender your services as a friend," he said.

"I'd feel like a wretch to be taking pay and pretending to do it all for kindness," said Mrs. Beswick, with a rueful laugh.

"Indeed, it would be a kindness, Mrs. Beswick, and it might save a valuable life."

"I don't know what to say till I consult the doctor," she said, dreaming of all the things she could do towards increasing the doctor's respectability if she had a little extra money. "I cannot see that it would hurt his practice if managed in that way."

"Indeed, it might help it," said Millard, seeing Mrs. Beswick's accessible point. "You'd make the friendship of people who are connected with the first families of the city, and you'd make the acquaintance of Dr. Gunstone, who would recognize you only as a friend of Miss Callender's."

"I'll speak to the doctor. I'm sure I would n't do it for any one else. I could n't stay away all the time, you know."

"Stay whatever time you can, and it will give me pleasure to pay you at the highest rate, for the service is a very delicate one."

"I'll feel like a liar," she said, with her head down, "pretending to do it all for nothing, though, indeed, I would n't go for anybody else."

"Oh, do it for nothing. We'll have no bargain. I'll make you a present when you are done."

"That'll be better," she said, though Millard himself could hardly see the difference.

'ZEKI'L.

He lived alone in a weather-beaten log cabin built on the roadside at the edge of a rocky, sterile field, with a few stunted peach trees growing around it, and a wild grape-vine half covering the one slender oak shading the front yard. The house consisted of only one room, with a wide, deep fireplace in the north end, and a wide window to the south. The logs had shrunk apart, leaving airy cracks in the walls, and the front door creaked on one hinge, the other having rusted away.

But 'Zeki'l Morgan's ambition seemed satisfied when he came into possession of the house, the unproductive clearing around it, and the narrow strip of woodland bounding the richer farm beyond. From the cabin door could be seen the broken, picturesque hills marking the course of the Etowah River, with the Blue Ridge Mountains far beyond, and the Long Swamp range rising in the foreground.

Very little of 'Zeki'l's past history was known in Zion Hill settlement. He had walked into Mr. Davy Tanner's store one spring day, a dusty, penniless tramp, his clothes hanging loosely from his stooping shoulders, a small bundle in one hand, a rough walking-stick in the other. Mr. Davy Tanner was a soft-hearted old man, and the forlorn, friendless stranger appealed strangely to his sympathy, in spite of his candid statement that he had just finished a five-years' term in the penitentiary for horse-stealing.

"I tell you this, not because I think it's anything to boast of, but because I don't want to 'pear like I 'm deceivin' folks," he said in a dejected, melancholy tone, his face twitching, his eyes cast down. It was a haggard face, bleached to a dull pallor by prison life, every feature worn into deep lines. Evidently he had suffered beyond the punishment of the law, though how far it had eaten into his soul no man would ever learn, for after that simple statement of his crime and his servitude as a convict, he did not again, even remotely, touch upon his past, nor the inner history of his life. No palliative explanations were offered, no attempts made to soften the bare, disgraceful truth.

Mr. Davy Tanner was postmaster as well as merchant, and his store was the general rendezvous for the settlement. The women came to

buy snuff, and thread, and such cheap, simple materials as they needed for Sunday clothes; the men to get newspapers and the occasional letters coming for them, besides buying sugar and coffee, and talking over the affairs of the county and of Zion Hill church.

They looked on 'Zeki'l Morgan with distrust and contempt, and held coldly aloof from him. But at last a farmer, sorely in need of help, ventured to hire him, after talking it over with Mr. Davy Tanner.

"I tell you there ain't a mite o' harm in him."

"S'pose he runs away with my horse, Mr. Tanner?"

"I 'll stand for him if he does," said Mr. Davy Tanner, firmly. "I don't know any more th'n you about him, but I 'm willin' to trust him."

"That's the way you treat most o' the folks that come about you," said his neighbor, smiling.

"Well, I ain't lost anything by it. It puts a man on his mettle to trust him; gives him self-respect, if there's any good in him."

All the year 'Zeki'l filled a hireling's place, working faithfully; but the next year he bought a steer, a few sticks of furniture, and, renting the cabin and rocky hillside from Mr. Davy Tanner, set up housekeeping, a yellow cur and an old violin his companions. Then he managed to buy the place, and settled down. On one side he had the Biggers' place, a fine, rich farm, and on the other Mr. Davy Tanner's store and Zion Hill church. He attended the church regularly, but always sat quietly, unobtrusively in a corner, an alien, a man forever set apart from other men.

As the years passed openly expressed distrust and prejudice died out, though he was never admitted to the inner life of the settlement. He did not seem to expect it, going his way quietly, and ever maintaining an impenetrable reserve about his own private history. Not even Mr. Davy Tanner could win him from that reticence, much as he desired to learn all about those long years of penal servitude and the life concealed behind them. He seemed to be without any ties of kindred or friendship, for the mail never brought anything to him, not even a newspaper.

But he seemed a kindly natured man, with a vein of irrepressible sociability running through him, in spite of his solitary ways of

"A DUSTY, PENNILESS TRAMP."

life. There were glimpses of humor occasionally, and had it not been for that cloud of shame hanging forbiddingly over him, he would have become a favorite with his neighbors.

Across the road, opposite his house, he set up a small blacksmith shop, and much of his idle time he spent in there, mending broken tools, sharpening dull plows, hammering patiently on the ringing red-hot iron. The smallest, simplest piece of work received the most careful attention, and the farmers recognized and appreciated his conscientiousness.

One summer afternoon as he was plowing in his cotton-field, a neighbor came along the road and, stopping at the fence, hailed him. He plowed to the end of the row, and halted.

"Good evenin', 'Zeki'l," said the man, mounting to the top of the fence, and sitting with his heels thrust through a crack in the lower rails.

"Howdy you do, Marshall? What's the news down your way?" 'Zeki'l inquired, drawing his shirt-sleeve across his face, and leaning on the plow-handles.

"I don't know as there's much to tell. Billy Hutchins an' Sary Ann McNally run away an' got married last night, an' old Miss Gillis is mighty nigh dead with the ja'nders. A punkin could n't look yellarer." He opened his knife, and ran his fingers along the rail in

search of a splinter to whittle. "Old man Biggers has sold his place at last."

"Has he?"

"Yes; I met him down at the store, an' he said the trade had been made."

"He's bound to go to Texas."

"Yes; so he 'lows."

"Well, old Georgy is good enough for me," 'Zeki'l remarked, with a pleased glance at his sterile fields.

"An' for me," said Marshall, heartily. "Wanderin' 'round don't make folks rich. Biggers owns the best place in this settlement, an' he'd better stay on it. It won't do to believe all the tales they tell about these new States. I had a brother to go to Louisiana before the war. Folks said, 'Don't take anything with you; why, money mighty nigh grows on bushes out there.' His wife took the greatest pride in her feather beds, but what would be the use o' haulin' them beds all the way across the Mississippi, when you could rake up feathers by the bushel anywhere? Well, they went, an' for the whole endurin' time they stayed they had to sleep on moss mattresses, an' my brother 'lowed it was about the meanest stuff to hill he ever struck. If you did n't b'il it, an' hang it, an' do the Lord only knows what to it, it would grow an' burst out of the beds when you were sleepin' on them." 'Zeki'l's attention did not follow those reminiscent remarks. "Who bought the Biggers' place?" he inquired, as soon as Marshall ceased speaking.

"A man he met in Atlanta when he went down the last time, a man from one of the lower counties, an' his name—why, yes, to be sure, it's Morgan, same as yours—'Lijy Morgan. May be you know him," with a sharp, questioning glance.

But the momentary flush of emotion that the stranger's name had called to 'Zeki'l's face was gone.

"I don't know as I do," he slowly replied, staring at a scrubby cotton-stalk the muzzled ox was making ineffectual attempts to eat.

"I 'lowed may be he might be some kin to you," said Marshall, in a baffled tone.

"I don't know as he is," said 'Zeki'l, still in that slow, dry, non-committal tone, his eyes leaving the cotton-stalk to follow the swift, noiseless flight of a cloud-shadow across a distant hillside. "Morgan is n't an uncommon name, you know."

"That's so," reluctantly admitted Marshall.

"When does Mr. Biggers think o' goin' to Texas?"

"Oh, not until after crops are gathered."

"The other family is n't to come then right away?"

"No; not till fall."

After Marshall had whittled, and gossiped, and gone his way, 'Zeki'l stood a long time with his hands resting on the plow-handles, his brows drawn together in deep thought. Some painful struggle seemed to be going on. The crickets shrilled loudly in the brown sedge bordering a dry ditch; and a vulture sailed majestically round and round above the field, his broad black wings outspread on the quivering air. The cloud-shadows on the river-hills assumed new form, shifted, swept away, and others came in their places, and the vulture had become a mere speck, a floating mote in

Mr. Davy Tanner's store. He was a strong-looking, well-built man, with rugged features and hair partly gray. He looked curiously at the solitary, stooping figure inside the gate, his steps slackened, then he stopped altogether, a grayish pallor overspreading the healthy, ruddy hue of his face.

"'Zeki'l!"

'Zeki'l dropped the corn, and thrust open the gate.

"Howdy you do, 'Lijj?"

Their hands met in a quick, close grip, then fell apart.

"HOWDY YOU DO, 'LIJJ?"

the upper sunlight, before he turned the patient ox into another furrow, murmuring aloud:

"I did n't go to them, an' if they come to me, I can't help it. I am not to blame; the Almighty knows I'm not to blame"; and his overcast face cleared somewhat.

That night when Mr. Davy Tanner closed his store and went home he said to his wife:

"'Zeki'l Morgan must be lonesome, or pestered about somethin'. You'd think that old fiddle o' his could talk an' cry too from the way he's playin'."

The season advanced; crops were gathered, and the shorn fields looked brown and bare. A sere, withering frost touched the forests, and the leaves fell in drifts, while the partridge called to his mate from fence and sedgy court. A light snowfall lay on the distant mountains when the Biggerses started to the West and the new family of Morgans moved into Zion Hill settlement.

It was the third day after their arrival. 'Zeki'l leaned over the front gate with an armful of corn, feeding two fat pigs, when 'Lijj Morgan passed along the road on his way to

"I like not to have known you, 'Zeki'l, it was so unexpected seein' you here," said 'Lijj, huskily, scanning the worn, deeply lined face before him with glad yet shrinking gaze.

"An' twelve years make a great difference in our looks sometimes, though you are not so much changed," said 'Zeki'l, quietly. He had been prepared for the meeting, and years of self-mastery had given him the power of concealing emotion.

"Twelve years? Yes; but it has seemed like twenty to me since—since it all happened. Why did n't you come home, 'Zeki'l, when your time was out?"

"I'lowed the sight o' me would n't be good for you, 'Lijj; an'—an' the old folks were gone."

"Yes; it killed them, 'Zeki'l, it killed them," in a choked voice.

"I know," said 'Zeki'l, hastily, his face blanching; "an' I thought it would be best to make a new start in a new settlement."

"Do the folks here know?"

"That I served my time? Yes; but that's all. When I heard that you had bought the

Biggers' place I studied hard about movin' away, but I like it here. It 's beginnin' to seem like home."

'Lijy stared at the poor cabin, the stunted, naked peach trees, so cold and dreary-looking in the wintry dusk.

"Is it yours, 'Zeki'l?"

"Yes; it's mine, all mine. Come in and sit awhile with me, an' warm. It 's goin' to be a nippin' cold night."

He turned, and 'Lijy silently followed him across the bare yard and into the house. A flickering fire sent its warm glow throughout the room, touching its meager furnishing with softening grace, but a chill struck to 'Lijy Morgan's heart as he crossed the threshold, a chill of desolation.

"Do you live here alone?"

"Yes; all alone, except Rover and the fiddle."

The cur rose up from the hearth with a wag of his stumpy tail, and gave the visitor a glance of welcome from his mild, friendly eyes.

There were only two chairs in the room, and 'Zeki'l placed the best one before the fire for his guest, then threw on some fresh pieces of wood. Outside the dusky twilight deepened to night, the orange glow fading from the west, and the stars shining brilliantly through the clear atmosphere. The chill wind whistled around the chimney-corners and through the chinks in the log walls.

Between the men a constrained silence fell. The meeting had been painful beyond the open acknowledgment of either. The dog crept to his master's side and thrust his nose into his hand. The touch roused 'Zeki'l. From the jamb he took a cob pipe and a twist of tobacco.

"Will you smoke, 'Lijy?"

"I believe not; but I 'll take a chew."

He cut off a liberal mouthful, and then 'Zeki'l filled and lighted his pipe. It seemed to loosen his tongue somewhat.

"Is Marthy Ann well enough?"

"She 's tolerable."

"How many children have you?"

"Three; the girls, Cynthia an' Mary—"

"I remember them."

"An' little Zeke."

'Zeki'l's face flushed.

"Named him for me, 'Lijy?"

"Yes; for you. Cynthia 's about grown now, an' a likely girl, I can tell you."

His face softened; his eyes grew bright with pride and tenderness as he spoke of his children. 'Zeki'l watched him, noting the change in his countenance, and perhaps feeling some pain and regret that he had missed such pleasure. 'Lijy reached out his hand and laid it on his knee. "'Zeki'l, you must come live with us now. I 'll tell these folks we are brothers, an'—"

"I don't know as I would," said 'Zeki'l, gently. "It would only make talk, an' I 'm settled here, you know."

His unimpassioned tone had its effect on his brother. He protested, but rather faintly, finally saying:

"Well, if you 'd rather not."

"That 's just it. I 'd rather not."

They both rose, and 'Lijy groped uncertainly for his hat.

"Your life ain't worth much to you, 'Zeki'l. I know it ain't," with uncontrollable emotion.

"It 's worth more 'n you think, 'Lijy, more 'n you think."

He knocked the ashes from his pipe, and cleared his throat as though to speak again, but his brother had reached the door before he called to him.

"'Lijy."

"Well?"

"What became o' 'Lizabeth?"

"She 's still livin' with us."

He peered into the bowl of the pipe.

"She 's never married?"

"No. She had a fall about ten years ago which left her a cripple, an' she 's grayer than I am. You 're not comin' to see us, 'Zeki'l?"

"I reckon not, 'Lijy." And while 'Lijy stumbled through the darkness home—his errand to the store forgotten—'Zeki'l stood before the fire, one arm resting against the black, cob-webby mantel. "Crippled an' gray! O 'Lizabeth, 'Lizabeth!" he groaned, and put his head down on his arm, the twelve years rolling backward upon him.

"Where have you been, 'Lijy?" exclaimed Mrs. Morgan when her husband returned. "We waited an' waited for you, till the supper was spoiled."

"I met a man I used to know," he said, evasively, casting a wistful, troubled glance towards the corner where 'Lizabeth, his wife's sister, sat knitting, a crutch lying at her side.

Cynthia, a rosy, merry-eyed girl, laughed.

"Pa is always meetin' a man he knows."

Mrs. Morgan began hastily removing the covered dishes from the hearth to the table.

"Well, where is the sugar you went over to the store to get?" she demanded with some irritation.

"I forgot it, Marthy. I 'll go for it in the mornin'," in a confused, propitiatory tone.

She stared at him.

"I never! Forgot what you went after! You beat all, 'Lijy Morgan; you certainly do beat all."

"The man must 'a' sent your wits wool-gatherin', pa," cried Cynthia, jocosely.

'Lizabeth leaned forward. Her face was long, thin, and pale, and the smooth hair framing it glistened like silver in the firelight;

but her dark eyes were wonderfully soft and beautiful, and her mouth had chastened, tender lines about it.

"Are you sick, 'Lijy?" she inquired, in a gentle, subdued voice, a voice with much underlying, patient sweetness in it.

Morgan gave her a grateful look. "N-no; but I don't think I care for any supper," he said slowly. "I 'll step out an' see if the stock has all been fed."

When he returned Mrs. Morgan sat by the fire alone. He looked hastily about the room.

"Where is Cynthia?"

"Gone to bed."

"An' 'Lizabeth?"

"She 's off too."

He drew a sigh of relief, and stirred the fire into a brighter blaze.

"Marthy Ann, it was 'Zeki'l I saw this evenin'."

She dropped the coarse garment she was mending.

"'Zeki'l."

"Hush! Yes; he lives up on the hill between here an' the store"; and then he went on to tell her about their meeting and conversation. Her hard, sharp-featured face softened a little when he came to 'Zeki'l's refusal to live with them or to have their kinship acknowledged.

"I 'm glad to see he 's got that much consideration. We left the old place because folks could n't forget how he 'd disgraced himself; an' to come right where he is! I never heard of anything like it. Why did n't he leave the State if he wanted to save us more trouble?" wiping tears of vexation from her eyes.

"You spent nearly all you had to get him out of prison, an' when he had to go to the penitentiary it killed his pa an' ma, an —"

"Be silent, woman; you don't know what you are talkin' about," he said sternly, writhing in his chair like a creature in bodily pain. "God A'mighty forgive me!" He paused, smote his knee with his open palm, and turned his face away.

"Well, if I don't know what I 'm talkin' about, I 'd like to know the reason," she cried, with the same angry excitement. "You ain't been like the same man you were before that happened, you know you ain't. I 'll never be willin' to claim kin with 'Zeki'l Morgan again, never. Folks may find it out for themselves; an' they 'll do it soon enough, don't you be pestered, soon enough."

But not a suspicion of the truth seemed to occur to Zion Hill settlement. The Morgans were welcomed with great friendliness, and 'Zeki'l alone failed to visit them. Children sat around his brother's fireside, a wife ministered to him; but he had forfeited all claim to such

heavenly joys. The girls had evidently been informed of his relationship to them, for they looked askance at him as they passed along the road, pity and curiosity in their eyes. Once he came out of the blacksmith shop, and, meeting his sister-in-law in the roadway, stopped her, or she would have passed with averted head.

"You need n't be so careful, Marthy Ann," he said, without the slightest touch of bitterness in his calm tone.

"It is for the children's sake, 'Zeki'l," she said, her fallow face flushing with a feeling akin to shame. "I must think o' them."

He gave her a strange glance, then looked to the ground.

"I know; I thought o' them years ago."

"It 's a pity you did n't think before —"

"Yes, so it is; but some deeds are n't to be accounted for, nor recalled either, no matter how deeply we repent."

"We sold out for the children's sake, but, Lord! I 'm pestered now more than ever."

"Because I 'm here?"

"Well, it is not reasonable to think we can all go right on livin' here an' folks not find out you an' 'Lijy are brothers."

"What would you like for me to do, Marthy Ann?"

She hesitated a moment, then drew a little nearer to him.

"Could n't you go away? You 've got nobody but yourself to think about, an' I know in reason 'Lijy would be glad to buy your place," with a careless, half-contemptuous glance at the cabin.

A dull flush passed over his face; his mouth twitched.

"Does 'Lijy want me to go?"

"He ain't said so; but —"

"I 'll think about it," he said slowly, turning back to the smithy, where a red-hot tool awaited his hammer.

But thinking about it only seemed to bind his heart more closely than ever to the arid spot he called home. He had looked forward to spending all the remaining years of his broken, ruined life there, far from the world and from those who had known him in the past. Then a great desire had risen within him to remain near 'Lizabeth. He shrank from the thought of meeting her, speaking to her, and felt rather glad that she did not appear at church. A few times in passing he had caught a glimpse of her walking about the yard or garden in the winter sunshine, leaning on her crutch, and the sight had sent him on his way with downcast face. He had just sat down before the fire to smoke one evening when there came a timid knock on the door. It was just between daylight and darkness, and he

supposed it to be some neighbor on his way to or from the store who wished to drop in to warm himself and gossip a little.

"Come in," he said hospitably, and, reaching out, drew the other chair nearer the fire.

The latch was slowly lifted, the door swung open, and then he started to his feet, pipe and tobacco falling to the floor, while his face flushed and paled and his breath came in a sharp sigh. It was 'Lizabeth, her bonnet pushed back, her shawl hanging loosely around her shoulders.

"I've been to the store for Marthy Ann. I wanted to go to get out away from the house

by trial and conviction, had put an end to all hopes, all plans.

"You see I'm a cripple now, 'Zeki'l," she said to break the silence.

"An' I've grown old," he replied, and their eyes met again in a long, eloquent, steadfast gaze, and they knew that neither age, nor affliction, nor shame, nor separation had wrought any change in their love. It had only grown stronger and deeper. Her thin face flushed, her trembling fingers gathered up a fold of her gown.

"Why don't you come to see us, 'Zeki'l?"

"I can't, 'Lizabeth; I can't. It would n't be right. Don't you know I've been longin' to come, an' hungerin' an' hungerin' to see you?" He flung himself on the floor at her feet, his face hidden against her knees. "You don't know all; you don't know all." The words were wrung from him by an almost uncontrollable desire to tell her the story of his sufferings. She had not turned against him nor forgotten him. It was almost more than he could bear, to read in her eyes her faith and her pardon. He felt the touch of her hand on his bared head, and tears gushed from his eyes.

"Can't you tell me?" she whispered, her face, her eyes, illuminated by a pity and tenderness divine in their beauty.

"No, honey; it's somethin' I must bear alone, I must bear alone."

He rose to his feet again, brushing his sleeve across his eyes, and she stood up also, leaning on her crutch, the transient glow of color fading from her face.

"You should n't bear it alone if I did n't have this lameness. You—"

"Hush!" he said, and, taking her hand, pressed it against his breast. "Do you think your lameness would make any difference? Would n't I love you all the more, take care o' you all the better, for it? It's the disgrace, the shame, standin' between us. I'll never outlive it, get rid of it, an' I'll never ask any woman to share it. I could n't."

Her physical infirmity held her silent. She would be a care and a burden to him rather than a help. She drew up her shawl.

"The Almighty comfort you, 'Zeki'l."

"An' take care o' you, 'Lizabeth."

"DO YOU THINK YOUR LAMENESS WOULD MAKE ANY DIFFERENCE?"

a little while, and I thought I'd step in for a minute, 'Zeki'l, to see you."

"You are tired; come an' sit down," he said huskily, and led her to the chair.

What emotion those simple, commonplace words covered! They looked at each other, silently noting the changes time and sorrow had wrought. They had never been openly declared lovers, but words were not needed for them to understand each other, and they knew that they would marry when she had finished her term as teacher in the county school, and he had built a house on the lot of land his father had given him. But that shameful, undenied accusation of horse-stealing, followed swiftly

He took her hand in a grasp painful in its closeness, then he turned and leaned against the mantel, and she went softly out of the room.

WINTER passed. The frost-bound earth sent up faint scents and sounds of spring in fresh-plowed fields and swelling buds. 'Zeki'l wandered about his fields in idleness, striving to make up his mind to go away. It would be best, yet the sacrifice seemed cruel.

"It is more than I can bear," he cried aloud one night, and strained one of the violin-strings until it snapped asunder. He laid the instrument across his knees and leaned his head upon it. The candle burned dimly, and a bat flew in through the open door, circled around the room, at last extinguishing the feeble light with one of its outspread wings. But the unhappy man did not heed the gloom. Why should he care to have a light for his eyes when his soul was in such darkness? He groped his way to the bed, and fell down upon it. Rover came back from a nightly prowling, barked to let his master know of his presence, then lay down on the doorstep.

The sound of music vibrated through the air, and 'Zeki'l remembered that the young people of the settlement were to have a "singing" at his brother's that evening. He raised his head and listened. They were singing hymns, and many of them were associated with recollections of his own youth. A line of Tom Moore's "Come, ye disconsolate," once a special favorite when sorrow seemed far from him, was borne to his ears:

Earth has no sorrow that heaven cannot heal.

He lay down and slept.

At dusk the next evening, as he was heating a piece of iron in the blacksmith shop, a man stopped at the wide, open door.

"Will you give me a night's lodging? I have walked far to-day, and I'm a stranger in this part of the country."

'Zeki'l wheeled, the light from the forge shining across his face. It brought out the stranger's face and form in bold relief also.

"Why, it's Zeke Morgan," he cried, walking into the shop.

"Yes; I thought I recognized your voice, Miller," said 'Zeki'l, slowly, and without much pleasure at the recognition.

They had been in prison together, and 'Zeki'l had left Miller there. He had never felt any liking for the man, and less now than ever, as he looked at his ragged clothing and dissipated face. He had evidently been steadily sinking in vice, and its repulsiveness was impressed upon his outward being. But a certain pity stirred 'Zeki'l's heart. He remembered his own

friendlessness when he entered that settlement. Could he show less mercy than had been shown to him?

"Sit down, won't you?" he said kindly, blowing up the coals in the forge to a glowing heat.

"That I will. I'm footsore, and hungry as a bear. I'm in luck to meet with you, comrade," chuckling.

'Zeki'l winced. The man's familiarity grated upon him.

"Where are you goin'?" he inquired.

"Oh, nowhere in particular. I'm just out."

"Why, I thought your time would be up in two years after I left."

Miller shrugged his shoulders. "Yes; but I made so many attempts to escape that they kept adding extra time to my term."

He sat down while 'Zeki'l finished his work.

"You seem to be getting on pretty well," he continued, his restless eyes scanning the surroundings.

"Only tolerable."

Two or three of the neighbors dropped in, one to leave a broken plow, another to tell a bit of gossip. They stared curiously at 'Zeki'l's disreputable companion, who jocosely informed them that Morgan had once been his chum.

'Zeki'l felt annoyed, and, closing up the shop, invited his guest into the house. They had supper, then sat down and smoked. Miller talked a good deal, and asked many questions about the neighborhood and the store; but at last he fell asleep, huddled up on the bed, and 'Zeki'l lay down on a bench, recollections of his prison life keeping him awake far into the night. When he awoke the next morning his guest was gone. He was glad of it. The man's presence oppressed him, brought a sense of degradation. But what were his feelings when he heard that Mr. Davy Tanner's store had been robbed, the mail-box rifled, letters torn open, and various articles of wearing apparel taken!

He grew so pale, seemed so agitated and confused, that the man who had come up to tell the news stared wonderingly, half-suspiciously at him. He had brought the plow to the shop the evening before, and he now looked around for the stranger.

"Where is your friend?" he inquired.

"He is no friend of mine."

"But he 'lowed that he knew you."

"Yes."

"Where?"

"In prison," said 'Zeki'l, quietly, though he flushed with shame.

"Aha! I 'lowed so, I just 'lowed so, last night."

'Zeki'l tingled all over. He had never felt the degradation of being a convict more heavily

than at that moment. He suspected Miller of the theft, this man's tone implied that he suspected them both. It showed how slight a hold he had upon the trust of his neighbors if they could so readily believe that he would rob the best friend he had in the settlement. He went into the house, and sat down by the hearth, his head leaned between his hands.

News of the robbery spread, and men left their work to go over to the store, stirred up, pleasantly excited. It was not often that Zion Hill settlement could boast of having anything so important as this robbery take place within its limits, and it must be made the most of.

'Zeki'l held aloof from the store, where he knew a large crowd had collected, but later in the day a small delegation came up to interview him. He read suspicion in every face, indignation in every eye. His quiet, honest life among them had been forgotten; they remembered only that he had been a convict.

"Once a thief, always a thief, I say," one man cried loudly.

'Zeki'l clenched his hands, but what could he say in self-defense? He made a clear, straightforward statement of all he knew about Miller, earnestly denying all knowledge of the robbery, but he felt the slight impression it made on their doubting minds. They did not openly accuse him, but they asked many questions, they exchanged knowing glances, and when they went away he felt that he had been tried and condemned. The sheriff had gone in pursuit of Miller, and all day groups of men sat or stood about the store whittling sticks, chewing tobacco, and talking. It was a most enjoyable day to them. It afforded excitement, and gave an opportunity to air opinions, to bring forth old prejudices. There was almost universal condemnation of 'Zeki'l. He had entertained the thief, had given him all the information necessary, and the more bitter ones wagged their heads and said that no doubt he had shared in the spoils. Even Mr. Davy Tanner looked sad and doubtful, though he defended the unfortunate man.

"We've no right ever to accuse a person without evidence o' guilt. We don't know even that this other man had anything to do with it,—though circumstances do all p'int that way,—let alone 'Zeki'l Morgan. It's best to hold our peace till we find out the truth."

"But it looks mighty suspicious ag'in' 'Zeki'l."

"Because he's been in the penitentiary, an' we think he's got a bad name by it."

"Well, ain't that enough to set honest men ag'in' him?"

"Yes; but it ain't best to always judge a man by his misdeeds in the past, but rather by

his good deeds in the present, an' what they promise for the future."

"Why not, when it's accordin' to scriptur'?"

So the talk went on, while 'Zeki'l sat by his fireless hearth or walked aimlessly up and down the yard. At dusk his brother called, looking almost as haggard as he did.

"It's a bad thing, 'Zeki'l."

"Yes," said 'Zeki'l, listlessly.

"They are fools to think you had anything to do with it, plumb fools."

"It's natural they should, 'Lijy."

"I can't stand it, 'Zeki'l. Lord! I can't stand it."

He fell into a chair and covered his face with his hands.

"Chut, man! what does it matter?" said 'Zeki'l, bracing himself up and forcing a smile. "Don't let 'Lizabeth believe it, that's all I ask."

"She'll never believe it."

"It's all right then; I'll not care what the rest o' the world thinks."

"But I do," cried 'Lijy, starting up, "an' I'll put an end to it by —"

"You'll not do anything rash, 'Lijy," said 'Zeki'l, firmly, quietly, and laid his hand on the other's shoulder. "Recollect your family."

He looked slight and insignificant by the side of his brother, but his face had a strength and calmness which seemed to give it a power the other lacked. 'Lijy groaned, and turned tremblingly away.

A week passed, but Zion Hill settlement could not go back to its every-day vocations until somebody had been arrested for the robbery. The man Miller seemed to be wary prey, eluding his pursuers with the crafty skill of an old offender. It was a solitary week to 'Zeki'l. He had been completely ostracized by his neighbors. They openly shunned him, and no more work came to his forge. He stood in the empty shop one day wondering what he should do next, where he should go, when 'Lizabeth walked slowly, quietly in.

He flushed painfully.

"You see I'm idle," he said, pointing to the dead coals in the forge. "They don't think I'm worthy o' doin' their work any longer."

"I would n't mind," she said, tenderly, laying her hand on his arm. "They'll see they are mistaken after a while, and be glad enough to come back to you."

"I don't know," with a heavy sigh. "It's the injustice that hurts me, an' the lack o' faith in my honesty. The years I've lived here count for nothin' with them."

"I have faith in you, 'Zeki'l."

He laid his hand over hers.

"If I had you, 'Lizabeth, if I only had you to help me bear it."

"That 's what I 've come for, 'Zeki'l. I 'm crippled. It may be that I 'll turn out to be more of a burden than a comfort to you, but I can't sit down there any longer knowin' you are here slighted and sufferin' all alone. 'Zeki'l, have pity on me, if you 've none on yourself, and let me bear this trouble with you."

He trembled before the future her words conjured up.

such a conversation; but they paid little heed to their surroundings.

"Marthy Ann will never get over your marryin' me," said 'Zeki'l.

"Then she can make the best of it."

The next day was Saturday, and regular "meetin'" day at Zion Hill church. Everybody in the settlement who could attended services that day. The Morgans were all

"THE SHERIFF, TWO DEPUTIES, AND MILLER."

"Could you, would you, be willin' to bear my disgrace, share it, be shunned like a plague, have no company, no friend, but me?"

"What are friends to the one we love, or company? I 'd give up all the world, 'Zeki'l, willin'ly, willin'ly, for you."

He looked into her deep, earnest eyes, realized the full truth of her words, and drew her closer to him.

"It 's a great sacrifice, 'Lizabeth, an' I 'm wrong to let you make it; but—the Lord forgive me! I can't hold out alone any longer. My will an' my courage are all broke down. I need help, I need you."

After a momentary silence he dusted a bench, and they sat down to talk over their plans for the future. The shop, black with charcoal and iron dust, was a queer place for

there, even 'Lizabeth, and 'Zeki'l sat in his accustomed place, apparently unmindful of the cold, hostile glances and whispers around him. Through open doors and windows shone golden sunlight, floated spicy odors from the woods surrounding all but the front of the church, which faced the public road; and vagrant bees mingled their lazy hum with the champing of bits and the stamping of iron-shod hoofs in the thickets, where the mules and the horses were tied.

It was a quiet but alert congregation. A kind of expectancy, of suspense, filled the air. No telling what might happen before the day was over. The preacher made the robbery the theme of his discourse, and there were nods and approving looks when he referred to the punishment laid up for those who per-

sisted in doing evil. It was a fitting finale that just before the benediction was pronounced a small cavalcade rode up to the church door—the sheriff, two deputies, and Miller. A thrill ran through the church, a rustle, a whisper, and the preacher cried aloud to the sheriff:

"What do you want, Brother Mangum?"

"Zeki'l Morgan."

"Here he is, here he is," cried more than one voice, and men rose to their feet and laid eager hands on the unresisting 'Zeki'l.

"What do you want him for?" cried 'Lijj Morgan, rising from his seat in the deacons' corner. "What 's he done?"

"Helped to rob the store."

"We 've said so, we 've said so, ever since it happened," a chorus of stern but triumphant voices exclaimed.

"Bring up the witness ag'in' him, the man that says he did it," said 'Lijj, advancing to the open space before the pulpit.

"No man has said out an' out that he helped to do it, but Miller—"

"It 's a lie," cried 'Lijj, loud enough to be heard beyond the church door.

'Zeki'l's eyes were fixed anxiously, warningly, on his brother, and once he tried to throw off the hands holding him.

"Prove it then," a taunting voice cried out.

"I will," said 'Lijj, though he grew pale, and trembled strangely. "A more honest man than 'Zeki'l Morgan never lived."

"What do you know of him?"

Again 'Zeki'l strove to free himself, but failed.

"'Lijj," he called imploringly, "'Lijj, 'Lijj, mind what you say!"

'Lijj looked across at him.

"I will mind the truth, 'Zeki'l." He turned to the congregation.

"I came here with good recommendations,

brethren; I am a deacon o' the church; you have faith in my integrity, my honor." An approving murmur went up. "If a dozen thieves were to stop at my house there 'd be no suspicion against me." He paused, passed his hand over his face, then looked up again. "Years ago there were two brothers in this State who grew up together happy and contented. The elder one was always a little wild, and would get drunk sometimes, even after he 'd married and had a family to look after, but the younger was the steadiest, best boy in the settlement. One night the elder brother, in a fit of drunken recklessness, stole a horse from the camp of a Kentucky drover, an' nobody found it out but his brother, who undertook to return the horse, an' was arrested. He took the guilt, he stood the trial, an' went to the penitentiary. He lost his good name, the girl he loved, his home, everything in the world an honest man values. He serv'd his time, an' instead o' comin' home to be a reproach to his cowardly brother when free, he went away into a strange settlement to live. An' by an' by his brother moved there too, an' his conscience hurt him more an' more as he saw what a sad, lonesome life the convict lived. He was prosperous, he enjoyed the confidence of his fellow-men, while the other was shunned, and regarded with distrust." Emotion checked his utterance for a moment; then he turned and pointed to 'Zeki'l. "Brethren, look at that man; look without prejudice or suspicion, an' you 'll not see guilt in his face nor on his conscience. There never lived a truer hero than 'Zeki'l Morgan. Nobody should know it better than I, for I am the brother whose crime he suffered for."

Then he walked across the floor to 'Zeki'l's side in the midst of the deepest silence which had ever fallen upon a congregation in Zion Hill church.

Matt Crim.

DE MORTE BEATA.

I THINK, when Death's irrevocable touch
Shall find this heart and bid its fevers die,
I shall not meet him with brave words, nor sigh,
As others do, "Alas, I lose so much!"
Nor shall I grasp, as drowning men will clutch
A fellow struggler, some friend standing by,
And drag from sorrow—O base tyranny!—
The frantic vows which mourners make for such.
Rather, O Death,—who dost in silence lay
Upon our babbling lips thy potent kiss,
To quiet us, and soothe life's last fierce pain,—
Thy strong, strange love-touch I would meet again
With speechless passion, with responsive bliss,
And give thee all I have, thy love to pay.

THE GOVERNMENT OF CITIES IN THE UNITED STATES.

THE question of city government divides itself naturally into two parts. First, what ought a city to undertake to do? Secondly, under what form of organization ought it to try to realize the purposes of its existence? The first of these questions is pertinent, because in the eye of the law a city is altogether an artificial creation. It is in fact what it is sometimes called, a municipal corporation. Nothing is better settled in every State in the Union than that the legislature of the State, unless it be limited by the State constitution, has absolute and arbitrary control over a city's charter. The State may grant a city charter or revoke it. The State may enlarge the powers granted to the city or it may diminish them; it may assign duties under the city charter to officers elected by the people, or to officers named by the governor, or designated by itself. In other words, the municipal corporation is the creature of the legislative power of the State precisely as any other corporation is; though it must be admitted that powers are usually granted to municipal corporations as agents of the State different in kind from powers granted to other corporations. Both of these characteristics must be borne in mind because many of our misconceptions concerning cities have arisen from the absence of close thinking concerning their nature. It has been customary in popular thought to emphasize the aspects of a city in which it is merely an agent for the State almost to the exclusion of those aspects of the city in which it is merely a corporation organized to attend to its own business. In consequence, our cities have been organized as though they were, in themselves, little states. The business side of their activity has been almost lost sight of both in the framing of the charter and on election day. It is important, therefore, to remember that a city has not a single attribute of sovereignty. The legislature of the State has unlimited authority as representing the sovereignty of the people,

except where the authority is limited by the people speaking through the State constitution or through the Constitution of the United States. In other words, there is not the slightest resemblance between a city and the work which it is called upon to do under its charter, and the governmental work either of one of the States or of the United States.

A BOARD OF DIRECTORS.

It would clear away much misconception if the popular body in cities, instead of being spoken of and thought of as a local legislature, could be looked upon and considered as a board of directors. One of the most important grants wherein the powers of such a body in cities seem to pass beyond the functions of a board of directors is the right to adopt ordinances which are enforced by the police; but even as to this power it is to be borne in mind that city ordinances have no original authority. They are constantly declared invalid by the courts because they contravene statutes of the legislature or deal with matters not covered by the grant of power to the city corporation. The inferences to be drawn from this discussion are two. First, that the whole question as to what ought to be the business of the city, and as to the best method of conducting this business, is fairly open to discussion; second, that the question is one involving good judgment only. It does not involve the liberties of the people or touch any of the inherent rights of citizenship.

ATTITUDE OF LEGISLATURE.

MANIFESTLY there are three attitudes which the legislature may hold as towards the government of cities. It may devolve upon the people of the city, through their charter, complete control of all their affairs, including the right to borrow money, to undertake public

works, to carry on, as part of the business of the municipality, water-works, gas-works, street railroads, or, for that matter, anything which the broadest interpretation might conceive to be properly municipal business. A striking illustration of the extent to which a legislature has been willing to go in granting to a city unusual powers of a business character is afforded by Cincinnati. The city of Cincinnati, under the authority of the legislature of the State of Ohio, has constructed a railroad, the Cincinnati Southern, three hundred miles long, across the States of Kentucky and Tennessee from Cincinnati to Chattanooga, so that, of the whole road, a single terminus only is in the State of Ohio. Naturally the city of Cincinnati was obliged to comply with the railroad laws of Kentucky and Tennessee in securing the right of way and the like, precisely as any other corporation would have done; but the striking fact is that an Ohio city was authorized to expend eighteen or twenty millions of dollars outside of the limits of Ohio simply to enlarge its business facilities. Plainly this was a grant of business, not of governmental, powers. Again, the legislature may give to the city the smallest possible control of its local affairs, interfering arbitrarily in the details of its action, compelling the undertaking of public works by mandatory acts, appointing special officers or commissions for the discharge of local duties, and the like. In Tennessee the city of Memphis has surrendered its charter, and the business and governmental work of the former city are carried on by a State commission having charge of what is known as the Memphis taxing-district. Or yet again, the legislature may seek to find between these two extremes some mean which, taken as a whole, promises the best results. In Europe, both in England and on the continent, still another method has been resorted to. The local authorities have been given extensive powers the use of which is subject to review by a central administrative board. So far as I am aware, the American objection to centralization has prevented any resort here to this method.

It probably is a safe generalization to say that early American charters gave to the cities a large measure of home rule; in some cases, apparently, including the right to borrow money without specific authorization, and generally to control their local affairs pretty much as they pleased, though the business activities of such cities, so far as public works are concerned, were limited, for the most part, to the conduct of water-works and public markets. But these in the early days were almost the only business enterprises into which cities were likely to be tempted. No one will deny that a charter with large powers is the ideal charter, to be worthy

of which every city ought to strive. But it must not be forgotten that this type of charter has been largely abandoned in the United States, because experience has shown that under the conditions actually existing, certainly in our large cities, the city government has not shown itself worthy to be trusted with powers so extensive. The great failure, which has made every other possible, has developed in the popular body which men are so apt to speak of as the city legislature. Should men learn to think of the common council as a board of directors rather than as a legislature, much would be gained. The moment this name is given to the body it becomes apparent why the business of cities has been so frequently mismanaged. No business within the city could be successfully managed by the bodies to whom has been committed oftentimes the oversight of city affairs. Often they have been found wanting both in intelligence and in integrity, and until some way is discovered to procure for cities a popular body for the conduct of their business which will command public confidence and regard, it seems to be idle to claim that enlarged inherent powers should be intrusted to them. It is claimed, I know, that better men would be selected for these bodies if the work committed to them was of sufficient importance to be attractive to better men. There is doubtless an element of truth in this proposition. But the Biblical rule would appear to be the sound rule for cities as for individuals; one must be faithful over a few things before he is made ruler over many things; and until our American cities demonstrate their capacity to do a few things well, it would seem to be clearly unwise to enlarge their inherent powers upon the theory that because they have not done a little well they still would be able to do a great deal well.

HOME RULE FOR CITIES.

NEVERTHELESS the demand for home rule for our cities, within well-determined limits, is undoubtedly based upon experience, and ought to prevail. When city government first failed to give satisfaction, the earliest and not unnatural appeal of the inhabitants of the city was made to the State. Most of our States — perhaps all of them — have tried to remedy the miscarriage of city government in three ways. They have created special commissions having their authority directly from the State, to do local work which under a proper city government would be performed by city officials. The States have passed mandatory laws compelling localities to undertake public works whether they wanted to or not, and they have interfered generally in the details of city action

to an inconceivable extent. Sufficient experience has been had of each of these remedies to make it perfectly clear that the remedy is worse than the disease. It is distinctly worse, because, while it has worked no benefit in the long run to the cities, it has carried into the legislature, and spread measurably throughout the State, the corruption which might otherwise have been limited to the locality. These three points, therefore, appear to be clear: first, when unusual work is to be done which cannot readily be carried forward by the ordinary officials of the city, the city and not the legislature should determine the men by whom the work is to be carried on; secondly, the State constitution should prohibit the legislature from passing mandatory laws to compel a locality to undertake public works to be paid for by the locality; and thirdly, the legislature should not be permitted continually to interfere to suspend or alter the city charter. A commission appointed by the legislature is responsible to nobody but the legislature; neither the governor, nor the mayor, nor any other authority, can call it to account, and therefore a State commission for any purpose other than inquiry is one of the most dangerous of bodies, for the reason that it exercises authority unchecked by any effective responsibility. But while it seems clear that the legislature ought not to interfere in the details of city management, it seems equally clear that the power of the purse intrusted to cities should be closely limited and clearly defined. The commission on cities appointed in New York State by Governor Tilden called attention to the strange anomaly that, whereas in the town meeting money could not be borrowed without a vote of the taxpayers, the moment a town was converted into a city, and its borrowing capacity thereby increased, all checks and hindrances upon the exercise of the borrowing power were immediately abandoned. In other words, there appears to be necessity, under existing conditions, of limiting the amount of debt which a city may legally incur. I know of no better form for this limitation to take than a percentage on the assessed valuation, though the objections to this form are manifest and not without force. There is indeed the recourse which has been successfully practised in some places of permitting the creation of debt only after an affirmative vote by the people. In some communities this provision probably would stint more than the other, but there appears to be no other objection to it. It is a very difficult thing to convince an immense population of the necessity for a great public work, especially when, as is almost always the case, some parts of the city inevitably will benefit more directly from the undertaking than other parts. I am in-

clined therefore to favor rather, under existing conditions, the limitation of the city debt to a percentage on the assessed value for the purpose of taxation. But even within that limit it is not sure to be safe to give to the local authorities a free hand. Certainly they ought to be free to provide adequately for all the current and ordinary business of the city. But there will be times when public works of great desirability, not within the ordinary scope of the charter, must be authorized to be undertaken. In such cases, subject to the limitations upon the legislature already indicated, there appears to be no better way at present available than to secure from the legislature the special authority needed. Laws granting such powers ought always to be permissive, and should lodge with some authority within the city, which authority should be directly responsible to popular control, the duty of deciding whether or not action should be taken under the law.

It is not the purpose of this paper to discuss the question whether a city should or should not manufacture its own gas, and either build or conduct its own street railroads. These matters are altogether questions of expediency. The city surely is fortunate which is competent to do things of this sort for itself; but few American cities have manifested so great competency in other directions as to justify a very strong inference that they would administer successfully business of this kind. Yet the ideal doubtless is that they should do so. A city can borrow money so cheaply that the temptation is great to take the risk. The chief obstacle to movement in this direction is the spoils system, which makes even a messenger's place in the municipal service depend upon party victory. Selections for fitness and permanency of tenure based upon faithful service must become the rule in city employment, as it is in private employment, before cities can be wisely charged with duties on behalf of the public not absolutely essential. So much may be ventured as to the general powers to be intrusted to the municipal corporation.

FORM OF ORGANIZATION.

ATTENTION is asked now to the form of organization under which cities in the United States may hope to realize the best results in the conduct of the affairs committed to them. It is proposed to speak in particular concerning the financial and executive sides. All efforts to secure a common council composed of men who by character and experience are competent for the duties which ought to be committed to them thus far have been singularly unsuccessful. Aldermen have been elected on general tickets, on district tickets, and on

ward tickets. They have been elected to serve without pay and with pay, but under no system have satisfactory results been permanently achieved. Honorable exceptions there always are, but I speak of the bodies as a whole. It is easy to say that better results might be achieved if the representative were not compelled to reside in the district he represents, but it is not easy to point out an effectual remedy in the presence of American political habits for the restrictions which this demand imposes. Neither is it at all clear that under existing conditions men widely different in type from those to whom we are accustomed could be secured here by such a change. It has been suggested that a large body, say of one hundred members or thereabouts, might prove better than a small one, provided that none other than deliberative duties were demanded of it. The decision of such a body on matters requiring discussion might be more free and more intelligent, and less easily subject to manipulation from outside, than the decisions of a smaller body similarly composed. On the other hand, any attempt to secure good executive work from such a body would be worse than fruitless. This body ought, however, to have unlimited powers of inquiry, and the mayor and all other city officials ought to be obliged to answer any questions concerning the public business which such a body might be disposed to ask. It probably would work well to make it the duty of the mayor and of all other executive officers to attend the sessions of this body, to give to it such information as might be helpful in the conduct of its business, and to answer questions.

FINANCIAL METHODS.

ON the financial side of organization a system has been devised for New York and Brooklyn which has successfully overcome many of the evils from which those cities formerly suffered. At one time the common council had substantially complete control of the accounts. They could transfer balances from one account to another; they could increase appropriations at any time during the year; and they could authorize the incurring of debt with a free hand. The result was that favorite departments of the city government would be gorged and those not on good terms with the aldermen would be starved. The power to increase appropriations at any time resulted in wasteful extravagance, and the authority to borrow money was used to keep the tax rate down, while postponing the payment of current expenses through the issue of bonds. At the present time, in these two cities, there is a board of estimate consisting of three or four of the principal officers of

the city. This board annually prepares a budget for the ensuing year. The meetings of the board of estimate are public, and they have authority to summon before them for explanation of any estimate all city officers. This budget when prepared cannot be increased by the common council. In New York that body has no authority over it whatever. In Brooklyn the common council may reduce any item, but they cannot enlarge any item, neither can they introduce any new items. Obstruction of the public business, which the council, in former times, was inclined to resort to, by declining to approve any budget at all, has been made impossible through the provision that unless the common council act by the first Monday in October, the budget stands finally as submitted by the board of estimate. All authority has been taken from the common council to transfer money from one account to another, and all funds raised for administrative purposes are under the control of the head of the department without interference on the part of the common council; neither is there any power left anywhere to provide for current expenses otherwise than through the tax levy. The operation of this system has been good at every point. It has shown, among other things, that a very large part of the annual tax levy in these cities arises from items beyond the reach of a board of estimate, such as interest on the city debt, the State and the county taxes, although the provisions of the same system have been extended to the details of estimates for the two counties. On the other hand, as to those parts of the budget which are within the control of the board of estimate, a wholesome sensitiveness prevails that no extravagance shall be justly charged to the members of that board. The principle of responsibility has been brought to bear here with most wholesome effects. The board of estimate in Brooklyn, for example, consists of the mayor, the comptroller, and the city auditor, with two others representing the county, all of whom are elected officials, and every one of whom in case of renomination is liable to be compelled to defend his attitude in the board of estimate. Another good effect has been largely to relieve the executive departments from a kind of interference on the part of the common council which tended only to a division of responsibility and a loss of efficiency. This system and the beneficent results which have followed it are a striking commentary on what has been already said as to the failure of the representative body in cities to show itself worthy of any considerable deposit of power. It is to be remembered that this situation has grown up, not by intention, but by taking away from the common council, one after another, powers which it had abused. In Brooklyn only

two considerable powers of a financial character are left with that body: the first is the duty of ordering unusual work to be done, such as the extension of the water-works, or the erection of a building after the money has been raised for that purpose; the second is the right to grant franchises. In New York City the common council has been shorn of almost every power, in part even of this last. Since the scandal concerning the Broadway railroad it is now the law that all charters shall be sold at public auction. It is not entirely clear that either city would suffer, under existing conditions, by the abolition of its common council. It is certainly pitiful that this should be so, because the useful functions which such a body might discharge, if only it were competent and trustworthy, are many and various. In the matter of city franchises one radical change ought to be made. At present the attitude of the city in granting franchises is entirely negative. The city is allowed to give or to withhold consent to something which somebody wants to do. The proper attitude for the city is just the reverse of this. Its officials should determine what the city's interests demand, and be enabled to offer at public auction a perfected right to supply that demand. Such a sale should be, in fact, a lease for a term of years not exceeding twenty. The new Rapid-Transit bill for New York happily illustrates the proper course. It is mournful to reflect upon the opportunities for relieving the tax levy which have been lost in all our cities through the system of parting permanently with public franchises. It may be too late to remedy the evil as to franchises already granted, but it is not too late to change at once the policy of our cities for the future.

EXECUTIVE METHODS.

THE organization of the city on the executive side ought to proceed on parallel lines to those which prevail in other successful business organizations. The two principles bearing on this question which appear to be sustained by human experience are these: first, that responsibility must go with power; second, that for executive work one man is better than three men or any larger number. The second principle is merely a detail of the first. The reason why one man is more efficient in executive work than a larger body is that the one man can be held entirely responsible, while as to a larger number responsibility cannot be fixed. It is a curious and instructive fact that in the largest cities of the country the original charters have been in this respect the most radically changed. At first the effort was made to govern these cities through representative bodies to which were given great powers, while the mayor was made

little more than a figurehead. With the passage of time the mayor has become an officer of very great power, while the process which has already been described has stripped the representative body of its most important functions. The power of appointment lodged in the mayor was everywhere subject until recent years to confirmation by the common council. Theoretically such a check might have been expected to produce good results; practically, it has developed, very generally, if not everywhere, either dead-locks or deals; that is to say, the confirming power has either obstructed public business or it has demanded a share at least in the right of nomination. The result has been a loss of responsibility on both sides, the mayor claiming that he nominates the best men who can be confirmed, and the confirming body on the other hand claiming that they could confirm no better officials because none others were nominated. In the presence of this experience, pretty uniformly developed, the city of Brooklyn and some other cities have given to the mayor the absolute power of appointment. With this power ought also to go the power of removal. Certainly these are great powers, but if they are bestowed under such conditions as to maintain side by side with the power a corresponding responsibility, the result is believed to be safer than the situation that preceded it. For another strangely significant fact has been characteristic to a greater or less extent of every large city. Through the operation of party machinery one man from time to time has become so dominant in the councils of the majority party as really to be not merely the dictator of nominations but actually the controller of city officials. As a consequence there has been often seen in our cities the singular spectacle for democratic communities of one man entirely irresponsible to the citizens becoming in fact complete master of the city officials. In more cities than one the people have come to feel, in the presence of this persistent fact, that if under popular suffrage a single man must needs exercise so great power, that man had better be the mayor of the city and responsible to the people than some one entirely out of their reach. It may be claimed that even under this system the mayor may suffer himself to be guided in all important matters by the party autocrat. This is true; but in that case the responsibility of the mayor for such a failure to realize what is becoming cannot be shaken off upon somebody else, and through the mayor the autocrat can be dethroned. The mayor, under this system, is responsible for the administrative side of the city government. But it is important to the successful application of this principle that it should be followed logically to its conclusion.

In New York City the mayor is given the absolute power of appointment, but the officials he appoints serve for terms longer than his own. Such a system gives power without responsibility, and through its incompleteness is open to just and severe criticism. In Brooklyn, on the other hand, the mayor appoints absolutely all the executive officers of the city for a term coterminous with his own. As a consequence, every incoming mayor has an opportunity to make a city government in sympathy with himself, for which he not only may be asked to be responsible, but for which he must be responsible. This situation achieves another result of the utmost consequence to successful administration; it compels the city government to be operated as a unit. The importance of this will be made clear by a single illustration. The police department is expected to enforce ordinances which are essential to the effective administration of the department of city works, the health department, the fire department, and the building department. These departments, therefore, ought to work in harmony with one another. If the heads of these departments are appointed by the mayor, and are all responsible to him, this result follows as a matter of course. Under other systems every city has felt the loss of efficiency springing from feeling, which may range all the way from indifference to open hostility, between the different departments of the city administration. This is one of the great reasons why heads of departments should not be elected; because officials who receive their authority from a direct vote of the people are inclined to feel entirely independent of one another, and to look upon the popular vote as to a certain extent an authority to do what they please. The so-called "boss" sometimes has been the only force in a city to compel coöperation between the different city departments. It is far better that this coöperation should depend upon a common responsibility to the responsible head of the city than upon the unifying power of an irresponsible party magnate. In other words, the granting to the mayor of the power to appoint absolutely all the executive officers of the city for terms coterminous with his own has in substance no other effect than this, that it gives to a man who is responsible to the citizens the powers which have been exercised over and over again through other forms by individual men who were not responsible to the citizens.

POPULAR CONTROL.

THIS system also places the city government under the control of the people to an extent not otherwise attainable. Under such a charter, when the mayor is to be elected, the people

understand that they are determining the whole character of their city government. The incoming mayor has an opportunity to make the city government, on its administrative side, completely in harmony with himself. Under the usual system the people may elect a mayor, and yet succeed in accomplishing very little besides changing the incumbent of the mayor's chair. In the city of New York last year had Mr. Grant been defeated for reelection, a number of the largest executive offices within the city would still have remained for several years under the control of Tammany Hall, and out of sympathy in that event with the executive elected by the people. Under the system pursued in Brooklyn, on the other hand, no such miscarriage can follow an election by the people. Their will as expressed on election day is effective not only in the mayor's office but through every executive office within the city. Experience has demonstrated, furthermore, that while there are certain things which a public vote can do, there are other things which it cannot do. It is mighty to overthrow any official, no matter how firmly he may be entrenched, but it is not capable of electing one officer after another through a long series of years with a consistent movement towards a definite end. In other words, questions to be decided by the vote of an immense mass of men must be simple questions. The best informed men in the city, outside of those directly concerned with politics, have almost no knowledge of the bearing of one election upon another. The same system, therefore, which produces unity and responsibility of administration on the part of the mayor when he is elected, brings the entire city government into a more genuine responsibility to the people than any other system. The old idea in American communities was that safety is to be found at the hands of government through division of power. As applied to great cities it is not too much to say that this idea has broken down completely. One reason for the breakdown clearly is that the work of the city is in fact business more than it is government. The division of power has developed a loss of efficiency. On the other hand, it has been demonstrated over and over again that under any conceivable division of power there has been power enough left to do harm, even though there has not been sufficient positive power anywhere to accomplish much good. In other words, the absence of responsibility has shown itself more harmful and more dangerous under the conditions existing in large cities than the contrary policy which is here advocated. It may be urged that the experience of the new system is not extended enough to justify final conclusions. Possibly not; but this at least would

certainly be borne out by any intelligent citizen of Brooklyn, where the system has prevailed for eight years, that no one would willingly return to the former methods of city administration. It is not pretended that under any conditions perfection has been attained, but it will not be denied that the new system has shown a capacity for benefiting the city that could not possibly have been found under the old system; neither has the city realized evils as great or as burdensome as those which befell it when both power and responsibility were divided in the search for safety.

HONESTY IN EXPENDITURE.

ONE great problem before every city is to secure a dollar's worth for every dollar that is spent. To this end the system of giving large power to the executive, under conditions which compel him to accept corresponding responsibility, is an immense step forward on the line of correct organization. On the other hand, it must be remembered that the community at large is responsible for some of the evils which betray themselves in city government. So long as the city chooses its officials on party lines, it must expect to have officials with whom the interest of the party is first and the welfare of the city second. It is not reasonable to suppose that men who, as candidates, have found the citizens themselves completely indifferent to the city, but warmly interested in party success, can, as officials, successfully adopt and act upon precisely the opposite view. The best city government is not to be had until in the minds of all officials the city is the first thought. The spoils system, as applied to the administration of the city, is fatal to any high degree of efficiency. It is frequently said that the police force and the fire force in the city of New York are notable for their efficiency; certainly they have never failed the public in an emergency. It is worth while noting that in those two forces the tenure of place is secure. No man can be removed from the police force or from the fire force except upon charges and conviction on trial. It is pitiful to witness efficient clerks discharged from the service of the city because of their opinions. The spoils system is merciless. Not only clerks, but office-boys—all places that carry salaries—are considered fair game for the victors at the election. In pretty much every department some one man will be

kept whose training is essential to the performance of any sort of work by the department. But except for some such reason as this, no one is spared; not even the sick and the feeble and the destitute escape the consequences of this system. Nurses and physicians and matrons, storekeepers, and every one else hold their places not by reason of efficient service rendered to the city but by the chance of being on the winning side at the election, and it may even be added, on the further chance of being in with the dominant faction of the successful party. It is not reasonable to expect more than passable results in a business conducted under a system like this. Our people must be willing to accept longer tenure of office for subordinates, and security of position in return for faithful discharge of duty, before employees of the city will look upon the city government as an object of regard, entitled to their willing and best service.

CIVIL SERVICE REFORM.

THERE are many in these days who think that the range of municipal action could be beneficially extended; who believe that a bad tenement-house system deserves the consideration of the municipal authorities; that many evils connected with this system, and many other abuses, can be removed only by the agency of municipal authority. In every direction the opportunity for a city to benefit its citizens by a government able to command complete popular confidence is beyond description. All who so think, and all who believe that a city government unworthy of trust is a demoralizing influence in the community, ought to join hands in demanding the abolition of the spoils system in its application to the inferior places in the city departments. The heads of departments, and, if they wish it, their deputies, might reasonably change with the change of mayor; but changes carried below that point are certain to do harm unless they are changes made for cause. The day may even come when successful administrators at the head of a department will be rewarded by reappointment at the hands of a new mayor; but whether that day should come or not, the political evils of the system would be reduced to small proportions if the effects of victory were to be shown only in changes in positions such as these.

"THE BOATS WITH WING-LIKE MOTION."

A PAINTER'S PARADISE.

PLAY IN PROVENCE.

When Peace descends upon the troubled ocean,
And he his wrath forgets,
Flock from Martigues the boats with wing-like
motion,
The fishes fill their nets.

NE burning hot day in August we left the limited express at Arles to take the slowest of slow trains. It carried us in a gentle, leisurely fashion across the wide plain of La Crau and between the dark cypress avenues which line the embankment, stopping every few minutes, at one station for half an hour for a cargo of grapes, at another for three-quarters to let a fast train pass.

But we did not mind. We had now fairly begun the voyage of discovery which we had been planning for a year or more. We were on our way to discover the Étang de Berre and Martigues, the chief city on its banks, but one absolutely unknown to fame, apparently to the guide-book, and even to Mistral save as a peg on which to hang two beautiful lines. And as for the Étang de Berre, probably a thousand people go by it every day on the express between Marseilles and Lyons, but who ever looks at it except, perhaps, to wonder vaguely what this

great stretch of water is that follows the railroad almost from Marseilles well on to Arles? From our carriage-window we watched its olive-clad shores and its beautiful islands; we saw the towns upon its banks, perched up, as in medieval pictures, on high hilltops, or nestling low down on the very water's edge. And at last we came to Pas de Lanciers, where we once more had to change cars.

Again we set out, at a still more leisurely pace, through endless olive orchards. We stopped oftener. The stations degenerated into mere sheds, and at each women took the mail, collected the tickets, smashed the trunks; was this, then, a land of women's rights? And all the time we were talking of the lovely little town, like another Venice, which we were about to claim as our discovery, for already, one summer, I had been there to spy it out and had seen its loveliness. Just before we started we had read in *THE CENTURY'S* "Topics of the Time" that there was no place left in the world to be discovered. But that was true geographically, not pictorially; Martigues might be found on the map, but not in paint or in print; and we were in high spirits at the prospect.

It was dusk when the train finally crawled into Martigues. We were worried about our

AT THE FISH-MARKET DOOR.

ZIEM'S STUDIO.

baggage, uncertain whether, in so primitive a place, any one could be found to carry our heavy trunk and traps from the station to the hotel. We tried to consult our one fellow traveler, but he could speak only an unknown tongue, the Provençal, which some travelers have found phonetically intelligible, but of which we could hardly understand a word, and Martigues seemed more out of the world than ever. The train stopped; we got out, gave up our tickets, and passed through the station. At once three men wearing caps emblazoned with the names of hotels fell upon us, and each asked if we were not going to his house. Two stages and a couple of carriages were waiting in the little open square. No one to carry our trunks into the town indeed!

In our surprise we stood there a minute undecided. But a brisk little man with short black beard bustled up and took J——'s big white umbrella and camp-stool out of his hands.

"You must come to my hotel," he said; "it is there that all the painters descend."

And he helped us into the stage, hunted up our trunk, lifted it to the driver's seat, got in after us, and before we realized what had happened we were being jolted over the cobbles of narrow, dimly lighted streets.

"I can give you a room," he said, as we were driving along. "I am the *patron* [the proprietor]. Only yesterday six painters left me. I can give you the room a monsieur from Marseilles and his wife had."

Six painters! We had planned a brilliant pictorial discovery; was it possible that we were to find instead merely another popular painters' settlement? The blow was crushing.

There was no doubt about it when we reached the hotel, for the hall into which we were ushered was strewn from end to end with easels, and canvases, and all the usual studio litter, leaving but small space for the black brass-bound boxes of the commercial traveler. Madame, who at once bade us welcome, told us our room was not quite ready, but we could make our toilet for dinner here in the corner. And as we washed our hands at the big brass fountain or sink that stands in the hall of every French commercial hotel in came a man with pointed soft felt hat on the back of his head, a white umbrella under

one arm, a sketch-book sticking out of his pocket. Six painters had gone, but how many were left in Martigues?

We found that out very quickly the next morning when, after our coffee, we started to explore the town. In the walk of the 4th of September, in the long shady *Place* on which the hotel stands, the first person we met was a tall, good-looking man, in striped red and black jersey and huge straw hat, walking with military step, at whose heels followed a small boy in one of the funny little aprons all French boys wear, almost bent double under a load of canvas and camp-stool. And when we wandered to the canals which, as at Venice, run through the town, and when we crossed the bridges, we saw at every turn an easel, and behind it a man in white Stanley cap or helmet painting the very houses and water and boats which we had come to discover. And after our midday breakfast, when we went to the café next door to the hotel, there at a table under the trees were half a dozen helmets and Stanley caps, and a huge pile of canvases and umbrellas, and outside, playing leap-frog with a crowd of other urchins in aprons, was the little boy whom we had met earlier struggling beneath his burden. The proprietor of the café was sitting with the helmets, but he joined us presently, and asked if we were painters too.

"We always have painters here," he said;

YOUNG SAILORS

"they come even in winter. There are so many *motifs* for them in Martigues. Monsieur has not begun to see it yet. You must go this afternoon to the Bordigues, where every painter who comes to Martigues makes a picture, or else, perhaps, to the Gâcherel, where all these gentlemen," waving his hand to the helmets under the trees, "are at work in the afternoon. Yes; the *motifs* are many."

As we walked from the café down towards the water, J—— with a sketch-block under his arm, a little toddling child who could scarcely talk lisped "pinter" as he passed, as though, instead of being unknown in Martigues, the painter was one of the first objects to its children, his name the first on their lips. Before we had gone very far along the shore of the great lake that stretches between Martigues and the Mediterranean (the Étang de Caroute it is called on the map), we came to a little building with huge window opening upon the dusty road and facing northward, and in the garden beyond was something white and shining. A man was superintending some work close by, and we asked him whose house this was, for the window looked mightily like a studio.

"Don't you know?" he said in amazement. "It is there M. Ziem lives."

We had thought M. Ziem dead for years, and here he was alive in Martigues, which he had discovered before we were born.

"Here," the man went on, "he has painted all his Venices, and Constantinoples, and Cairos. Here is the Nile, or the Adriatic, or the Bosphorus, as he wishes, flowing past his doors. There on the near hillsides are the stone-pines and cypresses of the south and east; on the water beyond lies Venice; and in his garden are the mosques of Constantinople. *Allez!*"

We went and looked closer then, and we saw that the little white shining thing was a toy mosque with dome and minarets, that oriental pots and jars were scattered about in the garden, and that two or three men were putting up another and larger mosque, the framework of its dome and minarets lying with the stones and mortar below its unfinished walls.

Still farther down the road a man breaking stones by the wayside stopped to point out the Gâcherel, the great farm upon the lakeside, with beautiful cypress grove and sunlit garden, where the vines overshadowed an old stone well, and there, under the cypresses, were the easels and helmets in a row.

There were painters wherever we went: painters walking slowly down the blindingly white road under white umbrellas; painters staring at the sunset from the lower hilltops; painters under the olives; painters in the hotel

ÉTANG DE CAROUTE.

FISHING FROM BOATS.

dining-room. It was a town of painters. Where was our discovery? Was this the little city lying forgotten and unsought in a watery wilderness that we were to be the first to make known for the pleasure of all the world and our own great glory—this southern seacoast Barbizon?

Of course it was a disappointment. Fancy if in the heart of the African forest Stanley had met not pigmies but another Emin Relief Expedition. But now that we were there we might as well make the best of it. Though the explorer had been in Martigues before us, there was no reason why we should not enjoy the artist's life led in this remote painter's paradise—this paradise without drains or sewers, but a paradise for all that. On the surface there was an Arcadian simplicity in the painter's daily existence that was very charming. We began to talk about Murger's Bohemia, and Barbizon in the days before it had been exploited, and by our second morning we were really glad that, instead of making a pictorial discovery, we had found a well-established artist colony. We were quite ready to be friendly.

At first we thought the artists were too. After our second breakfast M. Bernard, our landlord, stopped us in the hall.

"These gentlemen, the painters," he said to J—, "are eager to do all they can for a colleague. There is one who offers you his boat; it is at your entire disposition. Among brother artists it is always so; take it when and where you want. There is another who wishes to fraternize with you; he will show you about Martigues; he knows it well, and Monsieur is still a stranger."

What could have been kinder?

"Where can I see these gentlemen to thank them?" asked J—.

"Oh," said M. Bernard, "be sure they will give you the chance at once. One Monsieur goes to the Café du Commerce, the other

to the Cascade. You will always find them there. And there are many painters still in my hotel. They, too, will wish to know and talk with Monsieur."

We were on our way to the Cascade when he stopped us, and now we hurried there all the faster, gay and smiling, prepared to meet the gentlemen, the painters, half way. The helmets and Stanley caps were under the same tree, but they stared vacantly over our heads as if they did not see us. It was not easy to go up and ask, "Which of you gentlemen is the one who would fraternize with me?" But we sat at a near table to give him every chance, and when the dog of one of the party came running up to us we patted it and fed it with sugar, though only the minute before we had seen it snapping at the tail of the pet goose of the café and at the legs of small boys in the street, and we should have preferred keeping it at a respectful distance. But no fraternal greeting had passed between us when the gentlemen, the painters, buckling on their knapsacks, and with wild, loud cries of "Black! Brosse! Black! Brosse!" for the dog and the little black-aproned boy, started in the hot sunshine for the Gâcherel.

In the evening, after dinner, we went to the Commerce. We wanted to thank the friendly artist who had offered us his boat. The café was crowded; men in fishermen's jerseys, men in velveteens, men in alpaca coats, were drinking coffee and playing dominoes. We sat down at a table in strong light and waited. No one noticed us; and here, if we were to make the first advances, we should have to begin by asking, "Which of you gentlemen are artists?" For at this café were no helmets and Stanley caps, no canvases and camp-stools, not so much as a piece of paper or a lead-pencil.

We waited quietly all the evening, but no fraternal sign was given. We waited the

A FAVORITE MOTIVE.

next day, and the next, and the day after that. We waited a week, two weeks. At the hotel the man in the big hat occasionally wished us a cold and non-committal "*Bon jour*" or "*Bon soir*"; the others never paid the least attention to us. On the streets and in the café the Stanley caps and helmets persistently stared over our heads. The owner of the boat modestly refused us the chance to thank him. We were left severely to ourselves. What would Murger have said to the good fellowship of this modern Bohemia?

However, though we were cast upon our own resources, there was much that was pleasant to see and to be done. Martigues, though it had not waited for us to discover it, was as picturesque as if none but its native fishermen had stepped upon its sea-washed shores. It was really the Provençal Venice, which we had not the satisfaction of being the first to call it. For scarcely had that too aggressively appropriate name occurred to us than we saw it in big letters on an old stage, and next on a café; while M. Bernard was quick to ask us if we did not find his town "*Vraiment une Venise Provençale ?*" Lying, as it does, just between the Étang de Berre and the Étang de Caroute, where their hill-girt shores draw close together and almost meet, the sea water runs between its white houses and carries the black boats with their graceful lateen sails to its doors. And only a step from its canals you wander through the silvery olive orchards of Provence, or climb the sweet lavender-scented hillsides, or follow a smooth, white road past an old red-roofed farmhouse, or a dark cypress grove, or a stone-pine standing solitary, or else a thick hedge of tall, waving reeds. And even while in the town you cannot help seeing the country as you never do in Venice. As the fishermen drew up their nets on canal-banks there would come rattling by the long Provençal carts drawn by the horses that wear the blue wool collar and high-pointed horn which

makes them look like some domestic species of unicorn. Or in the cool of the summer evening, after the rest during the day's heat, a shepherd, crushing a sprig of lavender between his fingers as he walked, would drive his goats and sheep over the bridges and start out for the long night's browse on the

LOOKING DOWN THE GRANDE RUE.

salt marshes by the lake or on the sparse turf of the rocky hillsides, or in the morning, just as the white-sailed boats were coming home, he would leave his flock huddled together on the church steps or in the little square.

But you could walk from one end of Martigues to the other without stumbling upon a single architectural or historical monument

GOING TO THE GÂCHEREL.

hopeless dirt, or making their own and their children's toilets on the doorsteps, or going with stone jars to the well, or marketing under the sycamores in front of the *hôtel de ville*; while the stage from near Port de Banc came rumbling over the bridges with loud blowing of bugles, followed, if it were Sunday or Thursday morning, by the street-car which, with its three horses, gave Martigues for a few minutes quite the air of a big town. As likely as not we chanced upon a white umbrella and an unopened sketch-book on the drawbridge over the main canal, where I loved to linger to watch the fishermen unloading their nets of the huge fish that looked so absurdly like pasteboard, raking up the bottom of the canal for mussels, and posing statuesquely with their *fichonaro*, as they call it in their impossible Provençal, the long pole, with row of sharp iron teeth at one end and string at the other, with which they spear the fish that escape the nets, bringing them up bleeding and writhing. And always at the Cascade, after breakfast, we found the same group under the trees, in striped jerseys and white Stanley caps or helmets on hot days, in overalls and straw hats when a light breeze freshened the air, in blue flannel and derby hat when the mistral blew—they were perfect little men of the weather-house!

Their arrival at the café was the great event in our square in the interval between the Sunday ball and the Thursday opera, which was so comic even when it was meant to be grand. The tall painter led the way, Madame at his side; at his heels two dogs and the small black-aproned boy laden with his tools; then came the short, fat gentleman, the painter, all his traps on his own stout shoulders, walking with his head thrown back, his fat little stomach

worth mention in the guide-book. It is not a place for the tourist. Even if its beauty alone could attract him, its unspeakable dirt would quickly frighten him away. And the blue waters of its canals reflect no palaces and churches which a Ruskin would walk a step to see; there is no St. Mark's, no piazza, no fair Gothic house like that of Desdemona. The only buildings with the slightest pretense to architectural distinction are the church, with the fine but florid Renaissance portal, which the architect would call an example of debased rococo, and the great square *hôtel de ville*, massive and simple as an old Florentine palace. The only building with the slightest suggestion of history or legend is a lonely little gray chapel which, from the highest hilltop near, overlooks the white town and its blue lakes; but when we asked about it, one man thought a monk lived up there, and another knew he had been dead for years, and all traces of its past had been lost with the keys of its several doors. Martigues may have a history, but we made no further effort to learn it.

All this time we saw a great deal of our brother artists, as M. Bernard pleasantly called them. How could we help it? Martigues was small; they alone shared it with the fishermen. Twice a day we sat face to face with them, though at separate tables, in the little hotel dining-room, which was so cool and quiet during the week, so crowded and noisy on Sundays, when excursionists—the cockneys of Marseilles, cyclists in red shirts and top-boots, peasants in their shirt-sleeves, beautiful Arlésiennes in the fichu and coif of Arles—descended upon it to eat breakfasts at M. Bernard's. Regularly we passed the same easels on our morning walk through the town, at the hour when women were bravely pretending to sweep away its

THE GÂCHEREL.

thrown forward, as if he carried with him wherever he went the consciousness of Salon medals to come and Albert Wolf's dearly bought puffs; then his thin, tall, gray-haired father-in-law, his stool and canvas, for variety, slung over one arm; then another manly back erect under heavy load; and on many days there were no less than six in this impressive party. But it was the setting out for afternoon work that we waited for with delight, even after we had drained our glasses of the last drop of coffee, and I had read every word of the four serial shilling shockers published in *Le Petit Provençal* and *Le Petit Marseillais*. For there would be first the wild, loud shouts of "Black! Brosse! Black! Brosse!" until the setter and the black apron would rush from some unseen haunt back to the café gate; there would be the buckling on of knapsacks, the lifting up of burdens, and then the brave march, three, four, five, or six, abreast, down the wide street to the lake in all the glare of two o'clock sunlight. At the foot they passed out of sight in the direction of the Gâcherel. Whoever chose to follow them would find them there still three, four, five, or six, abreast, easels set up under the shadow of the cypresses, six, eight, ten, or twelve eyes turned to where the white walls and red roofs of Martigues rose from the blue water. But the greatest sight of all was when a new canvas, on an arrangement that looked like a section of a four-posted bedstead, was borne in triumph by Brosse and two assistants in front of the procession. Who, after seeing that, would ever again say that the painter's life is all play?

During our afternoon rambles we usually had all to ourselves the olive orchards and the lavender-scented hillsides that looked seaward. But at the hour of absinthe, when, from the western ridge of hills beyond the lake, cypresses and olives rose black against the light, and all the bells of the town were ringing out the angelus, and the swift boats were sailing home-

ward along a flaming path across the waters, then we would again meet the party from the Gâcherel, their backs turned resolutely to the sunset, once more on their way to the Cascade; and we would overtake the white umbrellas, now folded, while their owners, sketch-

THE PORTAL OF THE CHURCH.

books sticking out of their pockets, hands behind their backs, strolled slowly towards the Mediterranean, gazing westward.

But, often as we saw our brother artists, they always passed us by on the other side.

I do not know how long this would have lasted if it had not been for Black, the dog we had fed with sugar. His master went away to near Avignon for a day or two, and poor Black was left tied to the café gate, while the goose cackled derisively just beyond his reach, and the small boys played leap-frog just within his sight. His eyes followed us so wistfully

THE HARBOR.

when we came in or out, that one morning I unfastened the strap and took him for a happy walk. That very evening his master returned to Martigues. J—— and I were sitting on the little bench in front of the hotel, alone as usual, when Monsieur, on his way to the Cascade, his only dissipation, stopped with Madame.

"I tank you, Madam," he said to me in excellent English, but with a charming accent, "for your kindness to my dog. You are very good."

"Vous êtes bien aimable!" ("You are very amiable") chimed in Madame, and we were friends on the spot.

And now, as Mr. Black would say, a strange thing happened. For one by one all the other gentleman painters began to speak to us. And, stranger still, all spoke in English, just as all wore English clothes, though it was only J—— in a French hat and necktie, always talking French,—even to a stray sailor who told him reproachfully, "Why, I thought you was an Amurrican!"—who was ever mistaken for an Englishman. And strangest of all was that they understood their own English so much better than ours that when it came to a conversation we had to fall back upon French, no matter what they talked.

It had been quite plain to us all along that something more than the length of the walk separated the artists of the Café du Commerce, whose sketch-books never left their pockets, from those of the Cascade, whose canvases were never put away. No one could have stayed in Martigues a week without seeing that

beneath the Arcadian surface of its artists' life all was not exactly as it should be. Sometimes we had thought it must be a matter of dress—a question between brand-new helmets and conspicuous Jerseys on the one side, very shabby ordinary hats and coats on the other—which kept the two groups as wholly apart as if their cafés represented the rival Salons. But now that both were equally cordial to us we saw into the true state of affairs quickly enough. Had we been more curious, we need have asked no questions. We had only to listen while they talked.

"Bah!" said one of the Commerce one evening as we walked together past the Cascade and saw the helmets over their absinthe—"Bah! the tricolorists! They always paint red roofs, white houses, and blue sky and water. But *que voulez-vous?* They see nothing else. They want to see nothing else. They make the grand machine! When sea and sky are most beautiful they go to the café. They care not for nature. But it is the way with the painters of to-day. They are all blind to nature's most subtle, most delicate effects. They come to a place; they wait never to learn its beauties, to know it really. They take out their canvas, and they make their picture *en plein air*, and think it must be fine because it is painted so, with nature before them for model. No good work was ever done like that."

"But Claude Manet?" we suggested.

He shrugged his shoulders. "But did even Claude Manet set up his easel in the morning at nine and paint steadily the same effect un-

til twelve, though shadows had shortened and the sun risen high in the heavens? Did he think the afternoon light the same as at five? No; I don't understand the modern school. When I was in Paris such masters as Rousseau, Corot, Ziem were respected, not triflers like Manet. And what their methods? They studied nature, they communed with her, they watched her every change, they saturated themselves with her. And then, with all this knowledge, all these memories, they went into the studio and composed a great picture; they were not content to make a painted photograph."

We had almost reached the Gâcherel by this time. Far out beyond the two lights of

tion seizes me. I must paint. I shut myself in my studio. I wrestle with color! That is art; not to cover so many inches of canvas every day, to use brushes for so many hours by the clock, as if I were but a weaver at his loom. *Allons au café!*"

The next day at noon we were drinking coffee with our friends at the Cascade.

"And your big picture?" we asked of one.

"It marches. Two weeks more, working every morning, and I shall have finished it. I begin another this afternoon at the Gâcherel; I must give it all my afternoons. It is my Salon picture. Every year I have had my Salon pictures on the line, every year I have sold one to

OLD HOUSES ON THE HARBOR.

Port de Banc the afterglow was just beginning to fade, the dusky grays were gradually creeping westward, a great rift of pale faint green showed beneath a ridge of still-flaming clouds. "Look at that!" he cried, standing still and pointing with arm extended to the west, while chattering girls from the washing-place, and children singing "*Sur le pont d'Avignon,*" and laborers starting homeward after their day's work, and priests out for their evening walk, passed down the road. But no one noticed him; he and the sunset were everyday occurrences at Martigues. "Look at that! Can I bring my canvas and paint here an effect which is gone in five minutes? No; but I come evening after evening at this hour. I look, I regard, I study, I learn. The inspira-

tion seizes me. I have always had a medal wherever I have exhibited. Albert Wolf has written about me. Reproductions of my paintings you will find in the Salon catalogues."

One from the Commerce sauntered by, his big white umbrella up, a fan in one hand, his tiny sketch-book, as usual, in his pocket.

"They never work, these men," the helmet said with a shrug; "and what can they expect? They stay in Martigues, they do not come to Paris, they do nothing. You never see them with paint or canvas. They never work out of doors; they are not *fin de siècle*. And then they do not like it when others get the good places and the medals. They think no one to-day does good work, no one after Corot, and Daubigny, and their eternal M. Ziem!

"IT IS AS GOOD AS VENICE."

not peace, at both cafés it was agreed that the town was a real painter's paradise.

"It is as good as Venice," they would say at the Commerce. "We have the boats, the canals, the fishermen, and the sunlight; in the morning even Port de Banc in the distance is as fine as the Venetian islands. And yet it is so much more simple. The effects at a certain hour are the same every day—every day. It composes itself; it is not too architectural. And it is small; you get to know it all. You must not always be studying new *motifs*, new subjects, as in Venice. That is why M. Ziem likes it better than all the other places where he has painted."

"It is as good as Venice," they would say at the Cascade, "and so much nearer for us. We lose less time in coming. And people who buy paintings and go to exhibitions are not fatigued with looking at pictures of Martigues, as they are with those of Venice. Every painter has not worked here."

They abuse everybody else. They loaf and talk only of themselves. *Mon Dieu*, it is two o'clock! We must be off. Black! Brosse!"

And down the wide street marched the procession of brave workmen, while over at the Commerce the idlers sat for a couple of hours playing with their dogs and talking about the greatness of art before the coming of the modern artist.

We heard much of this talk. Many an evening poor Désirée, carrying the soup from the kitchen to the dining-room, would have to force his way through the group listening to an impromptu lecture on true artistic methods; many a morning a little crowd assembled under the sycamores of the walk for a lesson in true artistic perspective without the aid of camera. And daily we watched the progress of the big canvases, and learned of the strifes and struggles of the artist in Paris, where the spoils of the art world must be intrigued for as are political spoils at home, and where a good coat and a swell studio are the artist's highest recommendations, even as in London or New York.

Art for art's sake was the creed held at the Commerce; art for a medal's sake at the Cascade.

I was glad that we were allowed to hold a neutral position, to be neither tricolorist nor romanticist, but independent, like the young painter who gave lessons to all the pretty girls in Martigues, and the old professor of drawing who sang such gay songs over his wine after dinner. I liked the methods of the communers with nature; to spend morning and evening studying her among the olives and from canal-banks, to do nothing and call it work, what could be pleasanter? And yet success is sweet, and successful artists do not always do the worst work. Was not Velasquez a courtier? and did not Titian live in a palace?

However, if all the ways of Martigues were

A MARTIGAU MENDING NETS.

nets hung in long lines and the boats lay finely grouped, and where young girls in Rembrandt-esque interiors and old men out in the sunshine chanting about "*pauvre Zozéphine*" made or mended nets and sails. We were no longer alone when we walked towards the sunset, no longer alone when we drank our midday coffee at the Cascade, or J—— smoked his evening pipe in front of the hotel. A space was found for his stool at the Gâcherel in the afternoons; Black followed Madame and me over the hills and under the pines. And we had made many other friends in the town: the builder of the mosque, who often consulted us about his dome and minarets—"what was the true Turkish form"; the shopkeepers, who would lean over their counters and call me "*Ma Bella*" when they asked what I wanted; the women who offered J—— a chair when he worked at their doors; the fishermen who invited us on their boats and into their kitchens. A little longer and we

should have been on intimate terms with all Martigues, even though we could not understand its language.

But the summer painting season came to an end with September. One by one the helmets deserted the Gâcherel and the Cascade; one by one the white umbrellas and fans disappeared from the shores of the lake. Gradually the studio litter was cleared from the hall of our hotel.

"These gentlemen, the painters, go now," M. Bernard said, when he would have induced us to stay on, "but others soon arrive for the winter. The house will be gay again."

Only over at the Commerce one or two remained faithful, waiting for the coming of their master, M. Ziem.

But we could not wait to see the great man nor to share the winter gaiety. We had had our summer in Paradise; the time had come to turn our faces northward from the sunshine of Martigues to the fog of London.

Elizabeth Robins Pennell.

ITALIAN OLD MASTERS.

FRANCIA, 1450-1518.

(FRANCESCO DI MARCO RAIBOLINI.)

THE name by which this painter was and is still generally known is not well accounted for, but is supposed to be simply the abbreviation of his christened name, Francesco, assumed afterward in all probability as a surname to distinguish him from some other Francesco, the recognition of the family name, except in noble families, not being customary in Italy till a late period, and in some regions not being habitual even now. His pictures are signed F. Francia Aurifex, or simply Francia Aurifex, and sometimes with the addition of *Bon* or *Bononiensis* (of Bologna), showing that he did not himself recognize the family name, and that in his own day he was better known as a goldsmith than as a painter. He is indeed the most remarkable instance of that versatility in the practice of the arts which arose from the broad and thorough method of education in general principles on which the art of the Renaissance is based. He was one of the most successful medalists of the time, and head of the mint of Bologna under the Bentivoglio family, the tyrants of that city; the medals and coins issued from its mint under his direction of it are amongst the most admirable that we possess. The art of the goldsmith was generally considered as extending to all branches of design, and the passage of the

pupil from the goldsmith's *bottega* to that of a painter was common at all times in the best period of the arts in Italy, as is shown by the example of Botticelli, Verocchio, and the Pollaiuoli. Vasari says that Francia, having known Mantegna and other painters, determined at a mature age to try his hand at painting. His training as a gold-worker, and the continual demand for the small figures which formed a great part of the more important works in gold and silver in an age when devotion combined with luxury to make the goldsmith the most important artisan of the epoch, made every apprentice of talent practically a sculptor, while the rules which directed the painter in all the stages of his work were so well settled, and the processes so systematic and direct, that they were acquired without the slightest difficulty by any good draftsman. What was most important was that he should draw with certainty, and the habit of working in metal with the graver is certainly the best of all trainings for this. With this general knowledge of all that art had to do, he was thrown into contact with Mantegna, who, being of all men of his time in the highest rank amongst painters, united with the gifts of the painter the feeling for form of the sculptor and the fertility of decorative design of the goldsmith, and was therefore probably the most sympathetic with the tenden-

cies of Francia of all his great contemporaries. Master in painting he cannot be said to have had, for while one authority attributes his instruction to Marco Zoppa, another assigns it to Lorenzo Costa, whose style his more resembles than that of any other of his early contemporaries. But in 1490 he was already recognized as one of the ablest draftsmen of that part of Italy to which he belonged. Bologna had in fact developed but slight artistic feeling in comparison with the Venetian or Tuscan regions, and the stimulus of a strongly artistic atmosphere was wanting to develop his tendencies. As was to be expected under the circumstances, he came under the influence of the most individual school amongst those around him, and this was the Umbrian. Cavalcaselle attributes to Perugino the shape which painting took in the hands of Francia as soon as he had determined his style.

The revolt of the Bolognese, or perhaps more properly the conquest of Bologna by Julius II., was a grievous loss to Francia, to whom Bentivoglio had been a patron and a friend, for though he remained as die-maker to the Pope, the new Lord of Bologna, the far-away encouragement of a sovereign who had the whole of Italy to draw from for his art was a slight recompense for the position he held under the Bentivoglios. But Italy was no longer so divided in its provincialism as it had been in the earlier days of art, and the fame and works of masters of one school were known and recognized in the others more frankly than in the century before. Pictures had become more a subject of private acquisition, mainly through the higher cultivation of the nobility and the encouragement given the painters through the purchase of panels for the decoration of their palaces, but also through the change wrought in the character of the works of art through the introduction of oil painting, which led to the greater attractiveness of the works themselves to the general amateur. It had become the practice for the wealthy to order pictures for their palaces from celebrated painters, as we have seen in the cases of Mantegna and Bellini at Mantua, and though there is no evidence that Francia ever left Bologna to study elsewhere, it is known that pictures of Perugino and Raphael went to Bologna;¹ and both in their turn influenced the manner of Francia.

The way in which Francia's acquaintance with Raphael began is not known, but it is likely

to have occurred through sight of the works of the latter, just as had been the case with Perugino. But Timoteo Viti, whom we now know to have exercised a great influence on Raphael, came from Urbino to Bologna in 1491, to study the art in which Francia was first in that city, and remained until 1495, when he returned to Urbino and settled there. It is probable that the pupil of Francia brought the work of his fellow Urbinate to the knowledge of his master, for it is certain that Giovanni Benvoglio had a picture of Raphael, and that a correspondence was carried on between Raphael and Francia, and that they exchanged portraits. Writing in 1508 Raphael acknowledges the receipt of the portrait of Francia, promises his own, and sends a drawing, desiring also to receive one from Francia. He adds that "Monsignor the Datario and Cardinal Riario were both expecting their Madonnas, which no doubt would be equally beautiful and well done as the previous ones." When we come to examine the dates of these occurrences we get a good light on the relations that must have existed between the two painters. Francia had begun painting about 1485, probably, as we find his style formed in 1490, and at the latter date he was forty years of age and Raphael was seven. At the date of the exchange of portraits, then, Francia was fifty-eight and Raphael twenty-five, both in the prime of their powers, but the elder painter had already surrendered himself to the influence of the divine Urbinate and from this he never emancipated himself. Raphael had been painting seven years as an independent master, and had already made his ineffaceable impression on the world's art; it was not surprising that Francia should have been carried away by him. The warmth of appreciation on the part of the younger and greater master will easily be accounted for by the flattery of imitation, which to ingenuous natures is a proof of superiority.

Francia painted till 1515, and died three years later on the 5th of January, leaving several sons, two of whom were painters of little importance. Of his frescos only two remain, in a much retouched condition, in the oratory of St. Cecilia at Bologna. His easel pictures and portraits in oil are numerous, and show the Peruginesque and Raphaellesque tendencies respectively so strongly that some of them have long been attributed to one or the other painter.

¹ Cavalcaselle. "From the day on which his [Francia's] name first emerged into notoriety he showed a distinct Umbrian character in the form of his art, and it has been justly said by Vasari that his panels and those of Perugino 'displayed a novel spirit and softness.' Of the mode in which this new spirit expanded

in Perugino, we have had occasion to speak; it was the fruit of a happy combination of Florentine and Umbrian habits. How it expanded in Francia would be a mystery if we did not know that towards the close of the 15th century the pictures of Perugino were carried to Bologna."

TCOLE-SO-FIRENZE

AN UNKNOWN MAN, BY FRANCIA.

NOTES BY T. COLE ON THE FRANCIA PORTRAIT.

THIS portrait of "An Unknown Man" by Francia is one of his very finest. It hangs in the Sala dell' Iliade of the Pitti Gallery, Florence. It is life size, painted on wood, and measures $27\frac{1}{4}$ inches high by $20\frac{1}{2}$ inches wide. It is wonderfully subtle and delicate in treatment, simple in its variety of tones, and mellow in coloring. The landscape background is warm and tender. The sky in color is something between a greenish blue and a warm gray, becoming of a golden hue toward the horizon. The distant hills are of warm bluish and greenish tones. The middle distance is warm and yellowish, grading down to the foreground into brown-

ish tints. The background of the other side of the head is of a soft neutral brown. The hat and cloak of the figure are black, but of a soft grayish tone—the hat being of the darker shade and having a velvety richness. The trimming of the cloak suggests gold. The flesh is pale and yellowish. The hair is reddish brown.

What a poetical personage it is—so tender, thoughtful, and serious! One cannot fail to be impressed by the portrait. And what a fine conception of a half length! It fully justifies Francia's reputation as a portrait painter.

GHIRLANDAIO, 1449-94.

(DOMENICO DI TOMMASO CURRADI DI DOFFO BIGORDI.)

THE career of Ghirlandaio must be considered one of the most brilliant of the Renaissance. Though educated in the midst of art influences, and probably always more or less given to the pursuit of some of its forms, his father being of that jeweler's craft which was the school of so many of the best artists of the time, he seems to have been slow to seek an independent career. The father's title *Ghirlandaio*, the garland-maker, was due to his distinction as a maker of the jeweled garlands which the fine ladies of Florence were in the habit of wearing, and not, as Vasari supposed, to his invention of them, for they had been the subject of sumptuary laws in the earliest and heroic days of the Republic. His being singled out for this title of distinction may be taken as proof of his supremacy in that branch of art, the more as it clung to his descendants, unlike the generality of those epithets. The qualities of the son are such as to show that he must have had early training in drawing and possibly in gold-work; for the facility and certainty of touch which are his distinguishing traits could not have been acquired late in life. We hear that he was put in his father's shop in boyhood, but that to his trade he preferred catching the likenesses of passers-by and customers, so that at length his father put him to the study of painting under Master Alessio Baldovinetti, where he must have progressed slowly, but where he acquired that solid and certain method which more than any other art-quality distinguishes him amongst his fellows of the Renaissance. At the age of thirty-one he is described by his father in an income-return preserved in Gaye as "without any fixed place of abode," which probably means that he had not yet set up a *bottega* of his own, nor was he recognized as a master until after he had executed the frescos in the church of the Ognissanti in 1480.

His pictures in the Vespucci chapel of the Ognissanti in Florence are destroyed, but there are others in the church which have been protected, and of which the St. Jerome, engraved by Mr. Cole, is an excellent example, though not a work of great pretension like the frescos in Sta. Maria Novella in the same city. The "Last Supper" in the refectory of the Ognissanti is considered the earliest composition we have by him. It is in the traditional form of the subject, the long table with two wings and with Christ in the middle, the grouping varied more than in the conventional representations by prior artists. A group on the left seems to be eagerly listening to the Saviour's words, and Peter points to Judas as if he would say: "Behold the villain who shall be our ruin!" There is an immaturity in the work as compared with the Sta. Maria Novella frescos which does not appear in the simpler subject of the St. Jerome, possibly painted afterward; but even the latter shows the hardness of a severe and painstaking student, and the precise execution of a methodical painter, rather than the power of a great master. It is, considering the epoch, a singularly elaborate work, and the accessories are rendered with a fidelity which is quite unique. Minute detail in design we have in earlier painters, especially in Mantegna and Gentile da Fabriano, though not in fresco; but here the effort for realistic fidelity is simply for the sake of detail, not of his own designing, and strikes one as somewhat mechanical and unfeeling. The firmness of hand is there, but the mastery of the larger qualities of art is not. About this time, and probably immediately after the Ognissanti frescos, he was commissioned to paint the story of S. Paolino in Sta. Croce, as well as a series of subjects in the Sala dell' Orologio of the Palazzo Vecchio; and other work for the Republic seems rapidly to have increased his reputation,

(ENGRAVED BY T. COLE FROM THE ORIGINAL PICTURE IN THE CHAPEL OF THE OGNISSANTI, FLORENCE.)

ST. JEROME, BY GHIRLANDAIO.

so that he was sent by the Pope, Sixtus IV., to assist in the decoration of the Sistine chapel. Before going to Rome, however, he painted at S. Gemignano in the oratory of S. Giovanni. The visit to Rome must have been about 1484, but how long it lasted, and whether it was a single visit or was repeated, is not ascertained. As, however, he seems, from the record of the work on the Palazzo Pubblico at Florence, to have drawn pay for every year from 1483 to 1485, inclusive, he could hardly have been away continuously for a year; and as in that interval he painted a second fresco for the Sistine, now destroyed, and decorated a chapel for the Tornabuoni family in Sta. Maria sopra Minerva in Rome, also destroyed, he probably made various visits as the state of the work he happened to be engaged on permitted. The frescos in Rome having been completed, as we must conclude, about 1484, he next undertook the decoration of the chapel of Sta. Fina at S. Gemignano, in which, as probably in most or all of his painting of this period, he employed the services of his brother-in-law, Sebastiano Mainardi, whose hand the discrimination of Cavalcaselle detects through the most important passages of it. Without some such coöperation it would indeed have been impossible for any painter to have executed so many important works as Ghirlandaio crowded into his short life. He repeated in S. Marco of Florence the subject of his "Last Supper" in the Ognisanti, of which Cavalcaselle says:

Less favorable in its impression on the spectator is the "Last Supper" in the convent of S. Marco at Florence, where Ghirlandaio, repeating the arrangement carried out at Ognisanti, gives evidence of his progress in the production of relief, but less happily renders animation and movement. Yet the dim tone and roughness of surface caused by time and damp may have a part in diminishing the sympathy that might otherwise be felt for this work.

I cannot in all cases accept so readily the esthetic judgments of Cavalcaselle as his technical opinions, but in general it can hardly be admitted that the damages of time can affect our sympathy with a work of art; and I am not disposed to accept with less reserve the great expert's estimate of the relative importance of the Sassetti chapel frescos. The condition, however, in which they are now seen, much covered with dust and otherwise obscured, may make my judgment less favorable than it might be if the conditions for their study were as satisfactory as is the case in the choir of Sta. Maria Novella. The former work has been for some time made difficult

of access by the restorations in progress in the church of the Santissima Trinità. Of these subjects Cavalcaselle says:

Seen from the necessary distance, the Sassetti chapel not only shows a complete unity of decoration, but charms beyond all other works hitherto carried out by Ghirlandaio, because, in addition to the known features of his style, a greater harmony of color is apparent, and because the just value of tones in contrast creates an impression almost equal to that produced in the same sense by the frescos of Masaccio. A surprising reality is represented, with the breadth and grandeur attained by Masaccio and Raphael, in the portrait of Sassetti, whose form and bald head are not more finely given than those of his wife [*sic*]. The treatment in the former is such that Ghirlandaio appears to surpass himself in the handling of the impasto, and disdains the usual minuteness of stippling. The simple flow of a lake-red drapery of solid stuff, the manly frame and fleshy hands, are nature itself.

The value of the chapel thus considered as an integral work in which the distinct compositions are only parts must be estimated differently from that of the compositions themselves. The intellectual and artistic power of the man are shown to much greater advantage in a work of this complexity carried out successfully than they could be in an individual picture, no matter how remarkable. In this, which may be considered a different type of genius from the simply artistic type as we have seen it in Bellini or Masaccio, there is something of the architect, and Ghirlandaio has shown the same quality in a similar combination in the Palazzo Pubblico of Florence, of which Cavalcaselle says: "Florentine artists have seldom been more happy in laying out architectural space than Ghirlandaio in this instance—the whole is distributed with such excellence of proportion, adorned with such taste, and realized with such a successful application of perspective, that nothing remains to be desired." But the estimate of the artist as a painter of a story, and as a decorator and architectural composer, must not be confounded. In the latter capacity he may be classed with Giotto perhaps, in the class at least, if not at the height; but in the former I cannot agree with some of the critics who have studied Ghirlandaio.

The execution of this great work was followed by the commission to paint the choir of Sta. Maria Novella, by his treatment of which he will probably be finally judged as a painter. The choir had been painted by Orcagna, but the rain filtering in from the roof had so damaged the frescos that "many enlightened citizens of Florence desired either to have these interesting works renewed or to see the choir adorned anew by some painter worthy of the

task. But the family of the Ricci, who had a proprietary right in this part of the church, which was considered as their chapel, were not only unwilling to incur the cost themselves, but even refused to allow others to do it for them, fearing lest their coats-of-arms and shields should be removed and their hereditary claims to the choir (the patronage of it, as Vasari states, *i. e.*, the nomination of the attendant priests) should be subsequently disputed." The difficulty was finally adjusted by the Tornabuoni, who promised the Ricci that their arms should be put in the most honorable part of the choir, and that they should be recompensed in some other way. And to this effect a "contract and instrument very rigorous," as Vasari has it, was drawn up, by which Giovanni Tornabuoni engaged Ghirlandaio to paint the chapel anew, "with the same stories which had been there before," and Tornabuoni was to pay 1000 golden florins (not 1200, as is said by Vasari), and in case of their giving complete satisfaction the painter was to receive a bonus of 200 more. The work was done in four years, according again to the historian; but he has given the date of finishing in place of that of commencing—that of the year after he had painted the fresco at the Sistine chapel, 1485—and Vasari says that he never stopped till the work was complete. Tornabuoni seems to have been a slippery customer; for he not only, while avowing his complete satisfaction with the decoration of the church, begged to be released from the payment of the bonus (which Ghirlandaio, "who esteemed glory and honor above riches," readily forgave), but he evaded his promise to the Ricci, putting their arms in an honorable place, it is true, for they were painted on the frontispiece of the tabernacle of the sacrament, but under an arch and in an obscure position and light, while he had his own arms and those of other branches of his family put on the pilasters and in other most prominent positions. Vasari proceeds, "And the fine part of the affair was on the opening of the chapel, because the Ricci, seeking with much clamor their arms and not finding them, went to the magistrate of the Eight with the contract. Whereupon the Tornabuoni showed that they had been placed in the most evident and honorable place in the chapel, and although the others exclaimed that they could

not be seen, it was said to them that they were in the wrong, and that the arms having been put in so honorable place as the neighborhood of the most holy Sacrament they ought to be satisfied; and so it was settled by that magistrate that the matter must stand as it does at present." It is almost impossible to determine the amount of credit to be given respectively to Ghirlandaio and to his brother David and his brother-in-law Mainardi, for they worked in such complete harmony and persistency that Domenico may almost be said never to have been alone in his work. Besides these his many pupils contributed to swell the immense amount of painting which is credited to him by the chroniclers, but of which of course the greatest part was done by his assistants, the cartoons being probably his own in all cases, as was the practice in the schools. His activity seems to have abated in the last years of his existence, the actual date of his death being March 25 (1493), 1494.¹

Ghirlandaio does not appear to have painted after 1491, and Vasari says that he devoted his time in the following years to mosaic. He was to have painted an altar-piece for the Franciscans of Falco, but it was done by Filippino; and Vasari tells also of a "Visitation," now in the Louvre, which was originally ordered for the church of Cestello, having been left unfinished. He went to Siena and Pisa for the mosaic work, but the story of Vasari that he was to have 20,000 ducats from Lorenzo dei Medici appears to be a fiction, for the documents show that not Lorenzo but Massaino di Goro Massaini was the patron who commissioned the work, and for a much smaller sum than that mentioned, but how much Milanese does not inform us. That he went to Pisa at that time is evident, and that he was ill there; for Tornabuoni sent him a hundred florins on account of his being ill and in need. There is no clear evidence of his having done anything after 1491. A single mosaic known to be his is that over the north side door of the Duomo of Florence, and the probability is that in the mosaics which were executed under his influence the work was really done by his brother David, who is ascertained to have worked on the Duomo of Orvieto and that of Siena in 1492-93. Ghirlandaio is said never to have employed oils, but many pictures were sent

It was a great loss [or perhaps the author of the note would have said "great shame," alluding to the obscure burial without the honors due to the dead, the words employed being *grandissimo danno*], because he was a man highly esteemed for all his qualities, and there was great general mourning." The date 1493, by the change of the beginning of the year from the 25th of March to the 1st of January which took place in 1750, becomes 1494. This change has, of course, nothing to do with the change of style from Greek to Gregorian of twelve days, commonly known as the change from old to new style.

¹ NOTE FROM MILANESI: In the register of the deceased brothers of the Company of St. Paul there is this mention of him: "Domenico, son of Thomas, son of Corrado Bigordi, painter, called the Grillandaio, died Saturday morning, the 11th of January, 1493, of pestilential fever, according to the report, because he died in four days; and those who had charge of the pestilence desired that the dead body should not be visited and that it should not be buried in the daytime. They buried him Saturday night between twenty-four [*i. e.*, the hour of sunset] and one o'clock; and may God forgive them.

out from his *bottega* painted in tempera, a process which suited far better the system of procedure to which he in common with the masters of his time adhered, namely, that of preparing a cartoon and then passing it over to the assistants to be traced and painted according to established practice, all the steps being prescribed, the qualities of execution being the same with all the pupils, and the color being almost conventional with all the men of the time. These various processes are laid down in the book of Cennini, who describes them as the settled practice of "good fresco" and tempera from the time of Giotto. Of the tempera pictures from the *bottega* of Ghirlandaio, that which is the most easily to be seen and studied, and is at the same time considered by the admirers of Ghirlandaio the best, is the "Adoration of the Magi" at the Lying-in Asylum of Florence known as the "Innocenti," which is not only far more brilliant in color than any other of the frescos of the school, but seems to be more directly the production of the master himself. He is reported to have said to his assistants that they were to refuse no commission, not even for the hoops by which the women carried their baskets (*cerchi da paniere di donne*)—an expression which Crowe, who is responsible for the English of the English edition of Cavalcaselle, translates "lady's petticoat panniers," not knowing that the practice of wearing hoops under the petticoats was centuries later than Ghirlandaio, and not stopping to reflect that it would have been absurd to ornament with painting hoops so worn even if they had been in fashion. This detail must not be taken to indicate avarice, but good nature and the desire to satisfy all demands on his art; for other incidents show that Ghirlandaio was not avaricious, as in his release of Tornabuoni from the bonus for the work at Sta. Maria Novella. Nor was he more inclined to exalt himself. He is reported by Vasari to have said to his brother David that he desired him to take charge of all the business details, so that he himself might be left free to devote himself to his work; "for now that I have begun to understand the manner of this art it vexes me that I cannot be commissioned to paint the entire circuit of the walls of Florence"—notwithstanding which we know that David was one of his most active assistants in the actual painting.

In estimating the art of Ghirlandaio, I feel a certain diffidence in putting my opinion beside those of Burton and Cavalcaselle, the latter of whom considers him the greatest of the painters of the fifteenth century. If we take art simply from the side of its technical qualities, the management of the broad surfaces of fresco, and the facility of composition involved in the decoration of the chapels in Florence, with the

precision of execution and certainty of his drawing, such an estimate of his relative rank as that of Cavalcaselle might be accepted without much hesitation, for as a composer of great stories, as the sacred subjects were then called, he had no superior between Giotto and Raphael. But when Cavalcaselle says, "The spectator's memory involuntarily reverts to the false and capricious extravagance of Filippino, the overcharged richness of Botticelli," and contrasts their efforts with "the purity exhibited here by Ghirlandaio," I am obliged to dissent from the standard of art implied, and I quote the remainder of the sentence to demonstrate what I consider the mistaken estimate of the Italian critic: "The whole is distributed with such excellence of proportion, adorned with such taste, and realized with such a successful application of linear perspective, that nothing remains to be desired." All this being admitted proves only that Ghirlandaio was a great master, perhaps a greater master of the learned side of the art of painting—of its academical qualities, for which a scientific acumen is indispensable—than were Filippino and Botticelli; but in the true passion of art, in that which lies beyond and behind technic and a simply correct eye, both those painters were superior to him, in common with many others of the long line from Giotto to Michelangelo. He had profited well by all the art before him and all that was being done around him, and his system, cold, intellectual, and correct, merits in the sense in which it can be applied to such work the epithet of masterly; but the unexpected discoveries, the enchanting underthoughts, the inspiring imaginative felicities of the others, he had not. He was not in the true sense of the word an imaginative painter, nor does his power touch the heart any more than his color the musical sense. His portraiture is not so affectionate or complete as that of Gozzoli, nor has he the tender expression of Mantegna; his work is rather composition than invention, great and harmonious and impressive in line and the distribution of masses, but simply learned.

The comparison of his "Death of St. Francis" in the Sassetti chapel with that of Giotto in Sta. Croce will illustrate what I mean more clearly than can any abstract comparisons. It will do so the better from the fact that Ghirlandaio's subject is borrowed in the main from Giotto. The general distribution of the groups and most of the figures are the same, and the composition is one of the noblest of the master in both cases. But in that of the pioneer of modern art there is a dramatic concentration, an imaginative unity which is wholly lacking in the later work. The additions are almost without exception variations which weaken the impression. In Giotto

the soul of the saint is seen carried away into the blue heavens above, and the only spectator who is not absorbed in the pathetic and awe-inspiring flitting of the soul of their master is one who has his spiritual vision open to see the apotheosis; all the others are intent on the face of the saint—one closely watching the face with a look of rapture in sympathy with the serenity of the dead, and three behind him awe-struck apparently by the glory; one at either hand and foot kissing the stigmata in them, while the abbot looks at the wound in the side as if to assure himself that it was there; but all, even the stolid attendants, three at the head to read the prayer, and three at the foot to hold the cross and tapers, all are intent on the face of the saint. In the composition of Ghirlandaio the general disposition is the same; the three at the head of the couch are the same except that the central one has become a bishop or abbot, but the three at the foot are looking all ways; the friar who is watching the face of the dead regards it not with Giotto's look of rapt wonder, but approaches his head closely with an expression which it is not too much to call a grin. Yet this grin, but for a knitting of the brows, as if of pain, in the monk who holds and kisses St. Francis's left hand, is the only expression of any kind to be found in the whole picture; the abbot who in Giotto's picture is looking at the wound in the side as if he meant to see it, is a layman, who from the further side of the bed puts his hand over the body and touches its side with an action of no significance whatever, unless it be that he is supposed to be a doctor feeling if the heart still beats; Giotto's monk who kisses the right foot has become a page in the costume of Ghirlandaio's time, who stands behind the attendants at the foot of the bed, so that the feet may be seen by the spectator, and all the other assistants are disposed in various and studied attitudes, with utter disregard of the dramatic unity of the subject, but with constant study of the effect of

the lines of the composition. While in the earlier picture the figures are all those of ecclesiastics, in that of Ghirlandaio half, nearly, are laymen, introduced probably to allow the painter to flatter his patrons by immortalizing their portraits. Giotto's open sky and its ecstatic vision of the flying soul and its attendant angels has given place to an elaborate architectural background of renaissance structure. Not only is the composition in all its main features borrowed directly from Giotto (which is however, *per se*, no fault in Ghirlandaio, for this was in accord with the recognized practice of the time), but the number of figures is the same, showing deliberate adaptation. In almost every case, however, the significance of the figure is lost—ignored so completely as to show that the dramatic insight of Giotto was thrown away on the later painter. All the greater refinements of grouping and line, all the added subtlety of naturalistic knowledge, all the higher mastery in technic are only so many more proofs that the copyist was insensible to the finest and rarest qualities of his original. Instead of the dramatic intensity of Giotto, he has given us only a masterly and refined *pose plastique*.¹

It is thus restricted, then, that we must accept the eulogiums of the contemporaries of Ghirlandaio and of his modern admirers, that as master of the academic qualities of the art of painting he surpassed all his predecessors and contemporaries, and even his successors, until Raphael. He was the master of Michelangelo; but I am disposed to doubt if he exerted any great amount of influence on his development, and, if he did, whether it was not merely to strengthen the scientific element already in excess in the character of his pupil. In all that is spontaneous, incommunicable, inexplicable in art; in what is the gift of the good fairy at birth, and which education may stifle or foster but cannot impart, Ghirlandaio was the inferior of many others in that greatest of all epochs of painting.

W. J. Stillman.

¹ The engraving of this subject by Mr. Cole in *THE CENTURY* for January, 1889, is so subtle even in its fidelity to the apparently rude execution of Giotto that it may be studied with the same confidence as the original. There is not a shade of expression on the faces of the actors in the scene which is not rendered with absolute truth. The rigidity of the draperies, the insistence on the expression in some of the faces of the attendants, and the naïveté of the effect of the

whole, are rendered with unswerving conscience. Those who wish to follow out the parallel I have drawn between the identical motive in the hands of the greatest masters in their respective veins in the development of Italian art can do so by a comparison with the photograph of Ghirlandaio's St. Francis, by Alinari of Florence, which shows the composition in the chapel of Sta. Maria Novella much more clearly than it can be seen in the original.

TREATMENT OF PRISONERS AT CAMP MORTON.

I. A REPLY TO "COLD CHEER AT CAMP MORTON."

HEADQUARTERS, DEPARTMENT OF INDIANA, GRAND ARMY OF THE REPUBLIC,

INDIANAPOLIS, June 13, 1891.

WE, the undersigned committee, appointed by a resolution passed by the Department Encampment of the Grand Army of the Republic, at its last session at Indianapolis, April 10, 1891, to investigate the statements contained in an article entitled "Cold Cheer at Camp Morton," written by John A. Wyeth, and printed in the April number of THE CENTURY MAGAZINE, have examined the evidence contained in a reply to said article, written by W. R. Holloway, entitled "Treatment of Prisoners at Camp Morton." Most of the witnesses quoted by Mr. Holloway are personally known to us, and the remainder are men of high character, who enjoy the confidence of the communities in which they reside. We therefore indorse and approve the article written by W. R. Holloway, entitled "Treatment of Prisoners at Camp Morton."

JAMES R. CARNAHAN,
JOHN COBURN,

CHARLES L. HOLSTEIN,
M. D. MANSON,
E. H. WILLIAMS.

LEW. WALLACE,
JAMES L. MITCHELL,

HEADQUARTERS, DEPARTMENT OF INDIANA, GRAND ARMY OF THE REPUBLIC,

OFFICE OF DEPARTMENT COMMANDER, INDIANAPOLIS, June 10, 1891.

THE committee appointed by order of the Twelfth Annual Encampment of the Department of Indiana, Grand Army of the Republic, to investigate the charges made against the official management at Camp Morton in the treatment of prisoners of war confined therein during the years 1862 to 1865 carefully examined, in my presence, the paper prepared by Col. W. R. Holloway in relation thereto, and verified all documents and data referred to in said paper, and found them to be correct.

I. N. WALKER, *Department Commander.*

THE April CENTURY contained an article entitled "Cold Cheer at Camp Morton," written by John A. Wyeth, which charged that the rebel prisoners confined in Camp Morton, at Indianapolis, during the war were starved and subjected to other inhuman treatment or neglect. It has long been a matter of pride to the people of Indiana that they gave freely of their time and goods to relieve the distresses of the half-clad and half-famished prisoners who were sent to Indianapolis for safe keeping during the Rebellion. They have asked no thanks for their humanitarian efforts, but they have the right, I think, to claim exemption from such acts of ingratitude as take a publicly defamatory form.

Mr. Wyeth's paper begins with a misstatement, viz., that the writer had been guarded after capture by a company under the command of his cousin Thomas W. Smith, of Jacksonville, Illinois (an officer who by the way had resigned sixteen months before that time), and ends with the libelous assertion that the 1763 deaths which occurred in Camp Morton were due largely to starvation and other inhuman treatment. If we may accept a statement made by an uncle of Mr. Wyeth, and now preserved in the files of the War Department, Wyeth, when confined in Camp Morton, was "not quite eighteen years old" and "rather delicate naturally." Young Wyeth had three aunts residing

at Jacksonville, Illinois, one of whom visited him at Camp Morton. Wyeth's uncle, Captain J. M. Allen, Provost Marshal of the Fifth District of Illinois, requested the Commissary-General of Prisoners that the boy "be removed to his care, or to the prison at Rock Island, which was near his home." But he adds: "If he cannot be removed as I suggest, I would be glad to have him kept and not exchanged. The dangers of the field service are much more than those of the camp." If prisoners were being starved, frozen, or cruelly maltreated at Camp Morton, it is not likely that this last request would have been made, particularly as young Wyeth would have disclosed such treatment to his aunt.

Young Wyeth seemed to forget that he was a prisoner of war, and was apparently much surprised to find that Camp Morton was not a hotel upholstered in modern style. With his long catalogue of inconveniences—floorless barracks, hard beds, lack of complete bathing appliances with hot and cold water attachments—I have nothing to do. These are the implied incidents of war, whether in the field or in the prison, and are not feared by those who think they are fighting for a principle, and should be kept in view in reading Mr. Wyeth's article. But against his charges of starvation and cruelty I set an explicit denial.

Mr. Wyeth's statements are purely *ex parte*, and abound in general assertions which are fortified neither by names nor dates. He has a case to plead. "The Southern side of prison

life has not yet been written. The reputation of the South has suffered, not only because the terrible trials of Northern prisoners in the Southern prisons have been so fully exploited, but because the truth of the Confederate prisons has not yet been given to the world." At last he consents to tell his "tale of woe," evidently thinking that he has only to speak to convince. If it were true, as he charges, that rebel prisoners confined in Camp Morton were deliberately starved to death, or otherwise inhumanly treated, the facts could not have been secreted during a quarter of a century; like the horrors of Andersonville, they would have obtained scandalous notoriety at the beginning. During the year 1862 the prison was a State institution, and was under the supervision of Governor Morton, its immediate superintendents being Colonel Richard Owen and Colonel D. G. Rose. I need not vindicate the reputation of the war governor of Indiana—a man who has been sanctified in memory as "the soldiers' friend." His nature was brave and generous, and his heart was as tender as that of a woman. The Union soldier was his peculiar care whether in the field, in the barracks, or in the hospital; and his solicitude extended to his captured foes as well, as many letters written to him by grateful ex-prisoners attested. Colonel Owen, who was a brother of the late Robert Dale Owen, the distinguished philanthropist, was the first commander of the camp, and was uniformly beloved by the Confederates under his charge. On June 10, 1862, his regiment was ordered to the front, and he was succeeded by Colonel D. G. Rose, who discharged his responsible duties with entire satisfaction. In August, 1862, a general exchange was effected, and soon after the camp was closed as a prison. In the following year it was reopened under the auspices of the general Government, but in the interim it was occupied by our troops as a barracks. The first commander of the prison in 1863 was Captain D. W. Hamilton, of the 7th Regiment, Indiana Volunteers, a well-known resident of Indianapolis. He served until November, 1863, when he was relieved at his own request and to the regret of many of the prisoners, by whom he was well liked. His successor was General A. A. Stevens, of the 5th Regiment, Veteran Reserve Corps. General Stevens was a man of high character and a brave soldier. As lieutenant-colonel of the 3d Michigan he was in all of the battles of the Potomac in 1861–2, was severely wounded, and was promoted for bravery to the colonelcy of the 21st Michigan Volunteers, when he was transferred to the Army of the Ohio. He was wounded at Perryville and at Murfreesboro, and was afterwards assigned to the Veteran Reserve Corps. The comman-

ders of the military district for Indiana were General H. B. Carrington, General O. B. Willcox, and General A. P. Hovey. The five gentlemen just named are still living, and will speak through me in the succeeding pages.

As private secretary of Governor Morton until June, 1864, and residing in Indianapolis during the war, it was a part of my duty to visit all of the camps and to learn something of their management. I talked with the prisoners in Camp Morton almost daily, visited their barracks, and ate of their food. I saw the bread baked in the bakery. Save the new arrivals at Camp Morton, most of whom were ill and ragged, the prisoners were in good health and comfortably clothed. If they were hungry, cold, or maltreated, they made no complaint to me, nor to any one of whom I ever heard. Any prison-house, no matter how well conditioned, will become irksome to those confined in it, although be it said the prisoners at Camp Morton were made as comfortable as circumstances would permit. They fared as well as the Union soldiers who guarded them, if not better, and surely this is all that could have been expected. Homesickness, as superinducing other ailments, and lack of occupation were leading causes of mortality in Northern prisons. Whenever opportunity offered work was given to the prisoners. They assisted in building the new barracks and hospitals, and in digging a ditch to prevent themselves from escaping—a labor which Mr. Wyeth seemed to regard in the light of a hardship. But as a rule the prisoners were indisposed to labor. In many cases they refused even to nurse their own sick, for which they were disciplined by being compelled to take wheel-barrows and assist in the sanitation of the camp.

The most efficient causes of death in Camp Morton were the insufficient food and the exposure from which the rebel soldiers had suffered *before they arrived at the prison*. Mr. Wyeth says he slept on the ground during his first night in the camp, that he was seized with a chill which resulted in pneumonia, and that he was sent to the hospital on the following day. Just why Mr. Wyeth was not assigned to quarters upon his arrival is not clear. With the incoming of himself and his associates, there were only 1819 prisoners in camp, although there were accommodations for 3945, and General Stevens says that he does not remember that prisoners were ever compelled to remain without shelter or cover over night, faring much better in this respect than soldiers in the field. But, accepting Mr. Wyeth's story as true, the statement of his illness should be read in connection with the fact that when he was captured, ten days or two weeks before,

THE GATE, CAMP MORTON, FROM A WAR-TIME PHOTOGRAPH.

his wardrobe was "slim and ragged"; and that rather than sleep in a stable he asked his captors to permit him to sleep in the open air even "without blankets." He says, also, that while confined in the State penitentiary at Nashville, Tenn., he was placed in a "narrow stone cell, which was damp and chilly, and being without blankets, bed, or heat was uncomfortable enough." In other words, he came to Camp Morton with the seeds of disease in him. No physician of Mr. Wyeth's acquaintance will say that pneumonia is likely to come on immediately after one night's exposure. What was true of Mr. Wyeth was true of hundreds of other prisoners. Of those who came from Fort Henry and Fort Donelson five hundred were immediately put into the hands of the surgeons, and the sick-list for some time increased rapidly. Says the report of the Adjutant-General of the State of Indiana :

Ample hospital arrangements were made. Everything that kindness or humanity could suggest was done to alleviate the distressed condition of the prisoners. The citizens of Indianapolis, as well as of Terre Haute and Lafayette, responded to the calls of the authorities, and did all that was possible to be done in furnishing suitable nourishment, delicacies, and attention. Many estimable ladies and gentlemen volunteered their services as nurses and attendants, and prominent members of the medical profession were particularly kind and attentive. Buildings were rented outside the camp and converted into infirmaries, with every convenience and comfort required by the sick. Despite all these efforts, the mortality was frightful during the first month or two. . . .

The prisoners themselves, very generally, were profuse in commendations of their treatment, and when the time came for their exchange, many of them preferred to take the oath of allegiance, remaining North, than to be sent back to fight

against the government that had manifested such kindness and magnanimity towards them.

A report from the War Department shows that 2684 prisoners of war were released upon taking the oath of allegiance at Camp Morton, and that of this number 620 enlisted in the United States service.

CAMP MORTON.

CAMP MORTON was a splendid grove adjoining the city of Indianapolis on the north, containing thirty-five acres, instead of twenty as stated by Mr. Wyeth. It was fitted up for the Indiana State Fair in 1860, but was used for that purpose during only one week of that year. It was occupied by the Union troops from the breaking out of the war until the 16th of February, 1862, when General Halleck, commanding the Department of the West, telegraphed to Governor Morton, asking how many prisoners he could provide for. The answer was 3000. The only place in the State well suited for the accommodation of the captives was this camp. It was located on high ground with good drainage and a light and porous soil. There was an abundance of pure water, supplied by a rapidly running stream which flowed through the camp and by a number of good wells. The camp was excellently shaded with walnut, maple, elm, and oak trees of the original forest, and it had formerly been a favorite locality for Methodist camp-meetings. There were a number of good and commodious buildings on the ground which had been erected for the exhibition of machinery, farm and garden products, and such articles as are usually under shelter at agricultural fairs. Captain James A. Ekin, U. S. Quartermaster, converted the existing buildings, which were

80x30 feet, into pleasant quarters. Bunks were arranged on the sides for sleeping, and long tables were placed in the center for the serving of rations. Stoves were set every twenty feet, and straw and blankets were furnished to make every man as comfortable as possible. The halls being insufficient to accommodate more than 2000 persons, other barracks were constructed out of the stock stalls adjoining the northern fence of the camp, and all were white-washed inside and out. Mr. Wyeth leaves the reader to infer that he was quartered in one of these stock stalls. Such was not the case. The barracks which he describes were the halls; but, in any event, be it said that the stalls had been occupied by our own troops and were considered comfortable. They were re-modeled for the prisoners so as to give six apartments for sleeping and one for eating purposes, the latter being made by throwing two stalls into one with the table in the center. The usual garrison equipage and cooking utensils, with regulation rations, and plenty of dry fuel — precisely identical with what was issued to our own troops — were furnished and were so disposed as to be convenient for messing. The barracks were closed at the sides with planks and the cracks were covered with strips. If any of the strips fell off or were pulled off by prisoners to make ladders by which to escape, no complaint was made to the authorities, and there was no reason why the prisoners should not have nailed others on. There were plenty of nails, tools, and materials at headquarters, and a number of prisoners were frequently employed in assisting to build and repair barracks, being paid for the same by the Government. In spite of inconsiderate or wilful mischief done by the prisoners there never was a time when the buildings occupied by them were not equal to any occupied by our troops who were guarding prisoners or who were quartered in the various camps near by.

HOSPITALS.

MR. WYETH spent several months in the hospitals in Camp Morton, and bears witness to the conscientious attention and kindly treatment accorded himself and comrades by the physicians and hospital authorities; but he says that "up to the fall of 1864 the facilities for treating the sick were wholly inadequate, and many deaths were doubtless due to the failure to provide the necessary quarters." He was taken with a chill during the morning after his arrival, and was admitted to the hospital at 2 o'clock P. M. He surely had no just cause for complaint. No deaths from disease are reported to have occurred in the barracks. He does not mention the city hospital, where the worst cases were sent from Camp Morton, when

there was room. The city hospital [see page 762] was an unoccupied building when the war broke out, and was taken possession of by order of Governor Morton, and continued during the war with Dr. John M. Kitchen, a leading physician, who still resides at Indianapolis, as surgeon-in-chief. Doctor Kitchen says:

Governor Morton ordered that there should be no distinction made between the Union soldiers and prisoners of war. All were treated alike; they had the same beds and bedding, clean underwear, nursing, and medical aid, food, etc., etc. No complaint was ever made of bad treatment of prisoners in the city hospital so far as I know, and I have letters from ex-prisoners, written since the war, expressing their gratitude for kindness and attention shown them while under my care. I removed the guard from the hospital, and only two prisoners embraced the opportunity to escape. The wooden addition to the building was built for the purpose of accommodating the prisoners. I also remember that when the prisoners were exchanged, their condition was better than that of the men who had guarded them.

The hospitals within the inclosure at Camp Morton were in charge of Dr. P. H. Jameson and Dr. Funkhouser (the latter is dead), from the time they opened until 1864. Colonel Charles J. Kipp, who now resides at 534 Broad Street, Newark, N. J., took charge of the hospitals inside of the camp January, 1864, and remained until June, 1865. He says:

During 1864 new hospitals were built after my own plans, with room for five hundred patients. The hospitals were furnished in the same style as the hospitals for our own men, and were provided with everything necessary for the proper care of the sick. The diet was the same as that given in the military hospital to our own men, and delicacies were given to all whose condition required them. The patients were under the care of skilful physicians, and were nursed by men selected from among their comrades by reason of their aptitude for their work. All army surgeons who visited us pronounced the hospital a model one.

General Stevens says:

I gave the hospitals my personal attention, and they were run on the best possible plan, and had the reputation of being the cleanest in the country outside of Washington.

Mr. Wyeth acknowledges that the hospitals were humanely and skilfully conducted, and inasmuch as the hospitals and barracks were under one management, it is inconsistent to impugn the policy governing the one and not that governing the other. It is absurd to suppose that the authorities made the prisoners alternately ill and well, and that any inconveniences which the prisoners may have suf-

ferred could have been otherwise than merely incidental and accidental in a well-intentioned management.

Mr. John A. Reaume, a well-known resident of Indianapolis, who was hospital steward at the city hospital, says:

In our hospital, so far as I ever knew or heard, the prisoners were delighted with their treatment. I often meet some of their number, especially in Kentucky, and they never fail to refer with gratitude to their treatment at our hospital.

COLD WEATHER.

MR. WYETH complains that he and his associates had no straw, and yet the official records at Washington show that during the months of February, March, October, November, and December, 1863, and January and February, 1864, 78,792 pounds of straw were issued to the prisoners at Camp Morton, and that the total amount issued during the winter months to the prisoners confined there was 234,272 pounds.

He says further: "The only attempt at heating this open shed [barracks No. 4] was by four stoves placed at equal distances along the passage-way, and that up to Christmas, 1864, I had not felt the heat of a stove." The building being eighty feet long, and the stoves being but twenty feet apart, it follows that the farthest a man could get from a stove was ten feet! Dr. P. H. Jameson, Surgeon-in-chief of Camp Morton, and still one of the most prominent physicians of Indianapolis, says:

I remember those stoves. They were of the regulation camp kind, large cast-iron box affairs taking in a four-foot stick of wood. There was a plentiful supply of wood in camp all the time. Prior to January 1, 1864, I went through those barracks often and had no difficulty in getting as close to the stoves as I wanted to, sometimes closer. When Wyeth came into camp he had the pneumonia as had hundreds of his comrades, and the seemingly high death-rate at that time was owing to that fact, as the high death-rate at Denver, Colorado, is owing to the fact that persons go there with the seeds of the disease in their systems so far developed as to render cure impossible.

Mr. Wyeth says: "A number were frozen to death, and many more perished from diseases brought on by exposure added to their condition of emaciation for lack of food. I counted eighteen dead bodies carried into the dead-house one morning after an intensely cold night."

In this statement he evidently refers to what is remembered in Indianapolis as "the cold New Year's day," viz., January 1, 1864. From

the "Indianapolis Journal" of January 5, 1864, I take the following:

The morning of New Year's day presented us with the coldest weather ever known here. On Thursday, December 31, at one o'clock P. M., the thermometer was 40 degrees above zero, at which time it began going down rapidly until it reached zero before eleven o'clock and 20 degrees below before daylight on New Year's morning. The most moderate temperature on New Year's day was 12 degrees below zero, and it did not rise above zero until Saturday afternoon, thus being more than 36 hours below zero.

The "Indianapolis Journal" of January 2, 1864, stated:

There was a rumor that several of the union soldiers belonging to the veteran reserve corps, who were guarding the prisoners at Camp Morton, were frozen to death on the night previous. Governor O. P. Morton requested General H. B. Carrington, United States Army, then on special duty in this State, to visit all of the camps and hospitals in and around the city, to inspect and report as to their condition and the amount of suffering that had resulted from the intensely cold weather. The following is an extract from his report:

"Troops on duty, the Invalid corps, Colonel Stevens. No deaths or serious injury from the extreme cold. All reports to that effect are without foundation. The guard is relieved hourly, and as much oftener as the soldier advises the corporal by call that he suffers in the least. Hot coffee is served to the men when relieved, and pains are taken to prevent suffering and needless exposure. . . .

"Among the prisoners there is less sickness than usual. I visited nearly every barracks and the hospitals. The men were cheerful and thankful; in fifty letters sent out nearly every one spoke kindly of their treatment. One prisoner said to me, 'It would be extravagant to ask for anything else.' Seven hundred extra blankets and many shoes had been issued. They lacked for nothing indispensable to their personal health and comfort."

The "Indianapolis Journal" of January 4, 1864, says:

We are pleased to state that the item in Saturday's journal relating to soldiers freezing to death at Camp Morton is incorrect. Although the late cold snap has been very severe on the guards on duty there, and quite a number have had their ears, noses, and feet nipped by the icy winds of the past few days, no fatality has resulted therefrom.

There was issued to prisoners at Camp Morton during January, 1864, 600 cords of wood, and in February of the same year 560 cords. There was issued in all 11,641 cords.

Mr. Wyeth was afflicted with double vision when he "counted eighteen dead bodies car-

ried into the dead-house." The coldest weather during his imprisonment was in the months of January and February, 1864. A letter from the War Department says that "during the months of December, 1863, and January and February, 1864, the records show that the mortality among the prisoners on no one day was greater than nine deaths. No one died from freezing." This statement corresponds with the books of the undertakers who buried the dead from Camp Morton. They show that the largest number of deaths that ever occurred among the rebel prisoners at

Mr. Elijah Hedges, a reputable citizen of Indianapolis, who resides at 305 East New York street, and now the oldest undertaker in the city, was an employee of the firm who buried those who died at Camp Morton. He says "there never were eighteen dead bodies in what was called the dead-house at one time."

Dr. J. W. Hervey, one of the oldest and most respectable physicians in Indianapolis, was surgeon-in-charge of "Burnside Barracks," which were occupied by the Veteran Reserve Corps, the principal guards on duty at Camp Morton. He says: "I remember the cold night, January 1, 1864. Our guards suffered fearfully, but no soldier or prisoner of war was frozen to death."

A. E. Winship, of the 60th Massachusetts Volunteers, now the editor of the "Boston Traveler," says: "There used to be some tall swearing by the sentries on those nights, as in their loneliness they braved the weather, while the prisoners were comfortably freezing to death, shut in by the high fence, amply protected by the barracks, with four stoves, and under three blankets."

OLD CITY HOSPITAL, INDIANAPOLIS. FROM A WAR-TIME PHOTOGRAPH.

Camp Morton in one day was nine, on the 25th day of January, 1864.

General A. A. Stevens says:

I remember the cold January very well, and worried a great deal about the men. Without authority I made a requisition on the Quartermaster for several hundred blankets. I was liable to be hauled over the coals for doing it, but something had to be done. Indianapolis never had such weather before nor since, and we were not prepared for it. I was so worried about the condition of the prisoners that I could not sleep and almost froze myself. They suffered no more than the rest of us after the new order for blankets was given out.

THE RATION.

MR. WYETH says that at no period during his imprisonment was the ration issued sufficient to satisfy hunger, and that he knew from personal observation that many of his comrades died from starvation. He does not give the name of a single person who died from starvation nor offer a particle of testimony to substantiate his remarkable statement. During the first half of his imprisonment the prisoners received the full army ration. But this being in excess of the needs of inactive men, it was slightly reduced June 1, 1864. The two rations are herewith subjoined, and each reader may de-

REDUCED RATION.

Hard Bread . . .	14 oz., or				
Soft Bread . . .	16 oz., or				
Corn Meal . . .	16 oz.

termine for himself whether men who should receive the reduced ration would starve or suffer from hunger.

A letter from the War Department says:

The difference between the ration as above established and the ration allowed by law to soldiers of the United States army constituted the "savings" which formed the "prison fund." With this fund was purchased such articles not provided by the regulations as were necessary for the health and proper condition of the prisoners, as well as table furniture, cooking utensils, articles for policing, straw, the means of improving or enlarging the barracks, hospital, etc.

That the Government did not intend to stint the prisoners is shown by the fact that the difference in the cost of the two rations was credited to the "prison fund," and that a ration about equal to the full army ration was given to such prisoners as were employed upon the public works, and by regulation No. 3: "If the ration of soap, salt, or vinegar is found to be insufficient, it will be increased in such proportion as may be deemed proper by the commanding officer of the post, not to exceed in quantity the ration allowed soldiers of the United States Army."

Tables prepared by Wm. H. Hart, Third Auditor of the Treasury, at Washington, D. C., in whose office the accounts of commissaries of subsistence are filed and settled, show that the whole number of rations issued to prisoners of war at Camp Morton from February 22, 1862, to July 31, 1865, was 2,626,684. I here-with append, as a sample exhibit, a statement for the year 1864, which shows in detail the kind and quantity of rations issued.

Mr. Wyeth states in a note that "it would be interesting to discover how many times the contract to feed the prisoners at Camp Morton was sublet. I have no doubt the Government intended to issue to each prisoner the regulation prison ration above given as official, but I know it never was received. I believe (in fact I heard while there) that it dwindled away under the contract system."

It is, perhaps, just as well that Mr. Wyeth did not make this charge more definite. It is no credit to his ability to judge what was done in Camp Morton, or to his subsequent information about army matters, to assert, or not to know that the Government did not let contracts to feed its soldiers or the prisoners of war. The Commissary of Subsistence for this department was required to advertise every sixty days for bids for such articles as he desired, and to let all contracts to the lowest responsible bidder. These goods were to be received and delivered at such times and places and in such quantities as the Commissary should direct. Every article

ABSTRACT OF SUBSISTENCE STORES ISSUED TO REBEL PRISONERS AT CAMP MORTON, DURING THE YEAR 1864, BY CAPT. L. L. MOORE AND CAPT. NAT. SHURTLEFF, A. C. S.

contracted for was to be the best in the market, and all goods received were to be carefully inspected, and if found to be below the standard were to be rejected. Were these requirements obeyed? Let us see. The rations for Camp Morton were issued by Captain Thomas Foster, now of Greenbrier, Tennessee, and Captain Joseph P. Pope, the present Quartermaster-General for the State of Indiana, and a resident of Indianapolis. These officers issued supplies direct to Assistant-Commissaries John J. Palmer, 60th Regiment, Indiana Volunteers, now a resident of Chicago; W. C. Lupton, 54th Regiment, Indiana Volunteers, long since dead; Captain L. L. Moore, now connected with the Quartermaster's Department, U. S. A., and Captain N. Schurtleff, of Peoria, Illinois. The rations were issued by these officers direct to the heads of the various divisions—who were prisoners—upon the order of the commander of the camp, who compared each requisition with the morning reports, to ascertain the number of prisoners present at roll-call. The following is an extract from a card published by Captain Foster in the "Nashville (Tennessee) Banner," April 8, 1891:

I was, during the most of the war, commissary-in-chief of the military district of Indiana and Michigan, and was stationed entirely at Indianapolis, where I had United States commissary warehouses, from which, on regular requisitions,

I issued the usual army rations of provisions to both the National troops and the Confederate prisoners. They fared exactly alike. The rations to each were the same in quality and quantity. There were no differences made between the prisoners and National troops in the field; the Camp Morton prisoners had even better fare, for instead of hardtack, a well-equipped bakery on the spot furnished them soft and fresh baker's bread daily, my commissary depot supplying a prime article of flour for the consumption of the bakery. The best bacon and fresh beef were issued to the prisoners, and coffee, sugar, beans, hominy, and rice. . . . Neither the troops nor the prisoners could consume the liberal rations furnished by the Government, and both made large savings, and the United States Commissary of Prisoners, in his frequent periodical rounds, was not slow to demand of me promptly in cash the value of the prisoners' savings, which he expended in getting them tobacco and various other comforts not in the line of regular rations. It is within my knowledge that the winter quarters and bedding were about as good as were enjoyed by the National troops in the camp who guarded them, and who really suffered hardships from the winter severities when mounted as sentinels on the high platform near the top of the fence of the corral. . . . Governor Morton was not the man to tolerate any but the most humane treatment of prisoners under his care and watchful eye, as were those of Camp Morton. . . . It is true the prisoners' camp was not a paradise—it was not a parlor, nor were feather-beds issued to them by the Quartermaster's Department, but they were made comforta-

ble, had plenty to eat, pure water to drink and for washing, and were urged to keep themselves in good health by athletic sports and ball-playing, which I have seen them engaged in and apparently much enjoying. Some of the prisoners thought trustworthy and honorable were allowed to go out on parole [returning at night] and to engage in pursuits by which they earned a little money to send to their families. I employed one or two clerks of this kind myself.

Captain Joseph P. Pope succeeded Captain Thomas Foster as Commissary of the Department of Indiana during the summer of 1864. Captain Pope says:

My purchases were made through public advertising every sixty days. The supplies bought were not surpassed in quality anywhere. The issues of flour reached one hundred barrels per day, which was made up in one-pound loaves of soft bread, unsurpassed in quality by any private family or public bakery. Samples of the baking were sent to my office daily. The bakery was within the inclosure where the prisoners were confined, and was under charge of State authorities, and to General Stone, who was directly in charge, there was paid by me from \$6000 to \$8000 every month for and on account of the "savings" on flour alone. This money was expended for supplies not furnished by the Government, and these supplies thus purchased were issued to the rebel prisoners as well as to the Union forces, including the guards. The rebel prisoners received better supplies than our own soldiers, owing to the fact that almost daily their "friends" were bearers of large hamper of provisions, etc., not embraced in our purchases or furnished by the Government, and these baskets of supplies were delivered to them. The only complaints ever reaching my ears came from our own soldiers in not receiving "outside supplies" in comparison.

Full rations were issued daily. The best quality of fresh beef was issued every other day, and it is a well-known fact that the "poor, emaciated" rebel prisoners left Camp Morton fat and in good condition. I was in this camp many times, and can testify to what I saw; there was no complaint of want of food; there were immense sugar caldrons into which the best quality of fresh beef by quarters was cut up and placed, making soup by the one thousand gallons. Potatoes by the carload were purchased and issued.

It is a significant fact that every officer connected with the subsistence department at Camp Morton during the war was then and still is a poor man, and no one has ever dared to impugn the integrity of any of their number.

General Stevens says:

I went to Camp Morton November 1, 1863, took command immediately, and remained there until the end of the war. The food was good and there was plenty of it. It is true the prisoners were not given ice-cream and pie, but they had bread, pork or bacon, fresh beef, beans or peas,

hominy, potatoes, besides vinegar, salt, and soap. We never heard any complaints of lack of food. There were no cases of starvation. The rations were served regularly, and every prisoner received his share. Wyeth tells of a man who used to eat out of the swill-barrel. There was such a case, but the man was a low-lived sort of a fellow, and the other prisoners when they found it out ducked him in the barrel. There was one instance of rateating, and I also heard of the men eating a dog-stew, but these cases were similar to that of swill-eating. We had thousands of prisoners, and among them were many of the dirtiest and lowest specimens of humanity possible to imagine.

Dr. Charles J. Kipp says:

I know that the refuse material of the swill-barrels of the hospital was often carried away by the prisoners. I reported this fact to the officers, and was assured by them that the men who did this had either sold their rations or lost them through gambling.

General A. P. Hovey, the present Governor of Indiana, was in command of this district from August 25, 1864. He says:

My headquarters were at Indianapolis, and Camp Morton, containing from 3500 to 4500 rebel prisoners, was under my command during all of that period. I visited and inspected the camp once or twice a week during the time of my command. The food of the prisoners was ample, and I never heard any complaint of the scarcity of provisions, or that the prisoners suffered from hunger. They fared better than our soldiers in the field, and many luxuries were sent them from their friends.

General H. B. Carrington, United States Army, a part of whose duty was to inspect and report on the condition of the camps and hospitals at Indianapolis, says:

There never was any restriction upon the prisoners receiving favors from friends nor upon correspondence except what was necessary to prevent plots to escape. There never was a time when a reasonable complaint as to rations or treatment was rudely or wrongfully disregarded. There never was a time when the rations were insufficient or unwholesome. The bread was of the best. No prisoner was either starved or frozen to death. On one occasion I made a visit to every barracks, and half a day was spent in inquiry as to their condition and wants; not a single complaint was made, except a suggestion, which was acted upon. . . . The complaint most common outside was that the prisoners were permitted too many favors from friends.

William J. Robie, a well-known and prominent citizen of Richmond, Ind., was a member of the 60th Massachusetts Volunteers, and a guard at Camp Morton. He says:

I talked freely with the prisoners, and never heard them complain that they did not receive the full ration ordered by the War Department.

... No one suffered from hunger or starved while I was there. I often saw men go about with three or four loaves of bread under their arms, offering to exchange them for tobacco. Hungry men would not trade off their rations in such manner. The story of Mr. Wyeth is absurd and untrue, as every one connected with Camp Morton during that period knows.

Captain Jordan M. Cross, ex-City Attorney of Minneapolis, Minn., and now a resident of that place, was an officer of the 5th Regiment, Veteran Reserve Corps, on duty at Camp Morton. He says:

The general appearance of the prisoners was that of men well fed, so much so that visitors and our own men often compared their condition to the well-known starved condition of our prisoners in the South. No prisoner at Camp Morton ever died from starvation. I often inquired of prisoners if their rations were good, wholesome, and sufficient. They never complained except at rare instances that they would like some delicacies, or possibly a greater change of diet.

Elijah Hedges says:

I was in Camp Morton almost every day during the time it was occupied as a prison. I talked with the prisoners a great deal, and I never heard one complain of not having sufficient to eat. Before the coffee ration was cut off by what was known as the retaliatory order, prisoners frequently offered to sell both myself and the driver of the dead-wagon whole buckets full of good coffee that they had saved from their rations, then worth from \$3 to \$4, for fifty cents. I remember how dejected, emaciated, and forlorn the prisoners looked when they arrived, and how fat and saucy they became long before they were taken away to be exchanged.

Captain James H. Rice, of the 5th Veteran Reserve Corps, now a retired officer of the army and a resident of Hartford, Connecticut, says:

No prisoners at Camp Morton between October, 1863, and May, 1865, died of starvation or were frozen to death. It is true that some of the prisoners traded their rations for tobacco and then gambled, using the tobacco as money; and to such an extent was this done that it became necessary to issue rations to those men, and then to see that they not only received but ate them under the supervision of the guards. There was a surplus of bread and no occasion for prisoners to be hungry, except from their own carelessness.

Mr. Wyeth omits all mention of the bakery in the prison. In September, 1862, Governor Morton ordered General A. Stone, Commissary-General of Indiana, to take charge of the bakery at Camp Morton that had been erected by the State some time before for the purpose of furnishing bread to the prisoners, guards, and troops in and about this city. It had been pre-

viously managed by a board of officers with indifferent success. Flour was furnished on requisition by the Commissary of Subsistence to prisoners, guards, and other troops at this point, as shown by the morning reports. The soldiers and prisoners being unable to prepare their own bread, the State issued to them one pound of bread instead of flour. A given number of pounds of flour will furnish an equal amount of bread and leave a surplus of say $33\frac{1}{3}$ per cent. of flour on hand. This surplus the Commissary of Subsistence purchased of the State at a price fixed by the flour contract then existing between the Commissary and the party furnishing it. The capacity of the bakery when General Stone took charge of it, in 1862, was between six and seven thousand loaves daily, but it soon was increased to eleven or twelve thousand loaves per day. The bread ration was much better, was subject to less waste, and in every respect was much more acceptable to the soldiers and prisoners than the flour ration. The money value of each loaf was six cents, and no man or officer who knew anything about Camp Morton can ever be made to believe there ever was any real scarcity of bread or food in that camp.

Charlton Eden, for thirty years a prominent builder in Indianapolis, says:

I had the contract for building most of the barracks and hospitals in Camp Morton, during the time the prisoners were there. I had formerly resided at Paris, Kentucky, and soon became acquainted with several prisoners whose homes were at or near Paris, including the sons of William Mitchell, Daniel Hilder, and William and Younger Churshire. . . . William Mitchell wrote me to supply such of the Kentucky boys as he named with whatever they might desire and draw on him for the amount. I furnished them a number of high top-boots that cost sixteen dollars a pair, soft hats, and excellent suits of clothes for which Mr. Mitchell honored my draft. The prisoners knew I was authorized to furnish them anything they needed, but not one of their number ever asked for anything to eat.

During the 1865 session of the Indiana Legislature, rumors reached Governor Morton that certain sympathizers with the South who were members of that body were circulating reports that the prisoners at Camp Morton were being badly treated, only half fed and clothed, and the sick were not properly cared for. Governor Morton, on the 14th of February, sent a communication to the Senate and House of Representatives, calling the attention of the members to said reports. He asked them not to appoint a committee of investigation, but to go in a body to Camp Morton and make a personal examination. The invitation was accepted, and the next morning at nine o'clock

every member of the House and Senate who was in the city visited Camp Morton, and remained there until 12 o'clock M. R. M. Lockhart, for several years President of the Indiana State Board of Agriculture, and now a resident of Waterloo, Indiana, and a member of the Legislature, speaking of that visit, says :

After our arrival inside the camp permission was given and the members were urged to visit every part of the grounds and talk to the prisoners without restriction. We visited the hospitals, sleeping quarters for the prisoners, and investigated the arrangements for furnishing provisions as well as the quality of food provided. Three hours were spent by us in camp, and at the conclusion of our visit not a single member had a word of censure for the management, or manner in which they found Camp Morton. The prisoners did not complain of their treatment, or of the want of food. From that date until the close of the session in March, we heard nothing more of bad treatment of the prisoners in Camp Morton.

Captain D. W. Hamilton says :

While I was in command of the camp, in addition to the regular rations, vegetables were often purchased from the prison fund, something our own soldiers did not get except when they purchased it with their own money. I permitted a gardener to drive into camp each day with vegetables, which the prisoners either purchased or exchanged their surplus rations for. A number of the prisoners had money in my hands sent by their friends, which I allowed them to draw at the rate of \$2.00 per week, with which sum they used to make such purchases as they desired.

Mr. Wyeth says: "During the first four or five months of our life in Camp Morton, prisoners who could obtain money from friends outside were allowed to purchase certain articles from the prison sutler. . . . We never ceased to regret the order which closed this source of supplies."

The records of the War Department show that the order closing the sutler's store in Camp Morton was issued December 1, 1863; but they also show that it was reopened March 3, 1864.

CLOTHING.

CLOTHING was issued to prisoners of war immediately upon the opening of the camp, as shown by the following extract from the report of the Adjutant-General of the State of Indiana :

When the fact was brought to the knowledge of Governor Morton that about 300 of the Fort Donelson captives were deficient in clothing, he telegraphed the Secretary of War for orders to have their wants supplied by the United States Quartermaster at Indianapolis, and the order was promptly given. After that, whenever a prisoner needed clothes, shoes, or whatever else was es-

sential for his health or comfort, the Government supplied it.

Under the twelfth paragraph of the rules governing the prison we read :

The commanding officer will cause requisition to be made by his quartermaster for such clothing as may be absolutely necessary for the prisoners, which requisition will be approved by him after a careful inquiry as to the necessity and submitted for the approval of the Commissary-General of Prisoners.

In reply to a letter addressed to J. N. Patterson, the Second Auditor of the Treasury, at Washington, D. C., for a detailed statement of the amount of clothing, number of blankets, shoes, etc., issued by the Quartermaster's Department to prisoners of war at Camp Morton, I am informed that "all returns for clothing, etc., covering the period of the late war have been disposed of as waste paper, under a provision of a recent Act of Congress"; hence I am unable to show what was issued. There is abundant evidence, however, that large quantities were given to prisoners. I find from an examination of the reports of the Quartermaster-General, for the years 1862-63-64-65, that there was disbursed by that department "on account of transportation and supply of prisoners" the sum of \$786,893.96. What portion of that sum was expended for clothing I am unable to determine. Captain D. W. Hamilton says: "Just before I was relieved a large number of blankets was issued to the prisoners. These I personally handed to those who needed them. A number had blankets and comforts of their own."

Mr. Wyeth says: "We had no way of letting those ready and willing to send us food know of our wants. Every line written was scanned by the Camp Post-office Department, and a letter containing any suggestion of the lack of food, or maltreatment was destroyed." The eighth rule of the order for the control of prisoners read as follows :

All articles contributed by friends for the prisoners, in whatever shape they come, if proper to be received, will be carefully distributed as the donors may request, such articles as are intended for the sick passing through the hands of the surgeon, who will be responsible for their proper use. Contributions must be received by an officer, who will be held responsible that they are delivered to the persons for whom they are intended.

Mr. John H. Orr, who was the agent for the Adams Express Company during the war, which company did the largest business between this city and the South, says :

I remember that there was scarcely a day that we did not have boxes and packages for prisoners at Camp Morton; they were delivered at the camp,

and I do not remember of ever having received a complaint that they were not received by the persons to whom they were addressed.

CRUELTY.

A NUMBER of charges of extreme cruelty and murder are made against the guards and non-commissioned officers. Mr. Wyeth reports that in January, 1864, in an attempt to escape two men were killed, one wounded, and four captured. As the official record shows but one prisoner was killed in January, 1864, this statement is incorrect. He also says the four men captured were tied up, their backs to a tree, the rope lashed to their wrists, and arms at full length above their heads, all through the remainder of the night. "I saw them taken down the next morning in a most pitiable condition of exhaustion," etc.

Mr. William J. Robie, one of the men who guarded the four prisoners, says :

They were not tied with their hands above their heads, but simply with their arms behind the tree. My orders were to make them "mark time" until further orders. I was on guard from the time of their capture each alternate two hours until they were relieved in the morning. We did not compel them to mark time steadily, gave them frequent rests, and plenty of water to drink. They did not seem especially tired when released, but did seem to feel that they had gotten off very easily. There had been a large number of tunnels started, and several completed. The officers were determined to put a stop to it, and when these prisoners were released the officer in charge told them that they must quit tunneling or the next one would be caved in on them. I remember the break that occurred when some fifty prisoners escaped. It was about 6 P. M., and I was in the guard-house near by. When the rush was made the guard fired one shot and called for help. The prisoners went over the fence like cats, and started down the bank for the woods. I was out all night hunting them. We did not use bloodhounds. Thirty-five men were reported captured and returned that night and the day following. There were only one or two prisoners wounded, as the guards could not fire either way without the danger of hitting our own men. The first one up the ladder was wounded in the knee by a bayonet, and another was knocked off by a blow. Not one of those captured was punished. I never heard of such a thing as a prisoner being shot for coming too near the dead-line. Some of the men were very vicious and were in the habit of throwing stones, bottles filled with water, or anything else they could get hold of, at the guards after night, and it is not improbable that some stray shots went flying around when they should not have done so.

General Stevens says :

There was no disposition on the part of the officers to misuse the prisoners. What they did

was in the way of discipline, that had to be enforced as it was everywhere in the army. If any of the prisoners suffered, it was either their own fault or the fault of their fellow-prisoners. It can be easily imagined that all did not belong to the best society. Some of them were as tough and depraved characters as I ever saw. The officers as a rule were sent to Johnson's Island, an officers' prison ; that left us a bad lot.

Dr. J. W. Hervey, Surgeon-in-charge of the Veteran Reserve Corps, says :

Some of the prisoners were very insulting to the officers and men over them. They would pelt the guards with stones and broken bottles after night, several being severely injured. The only prisoners that were ever shot were those who attempted to escape and who did not stop when they were commanded to halt.

Captain James H. Rice, 5th Regiment, Reserve Corps, says :

I was officer of the day every sixth day and a part of the time every fourth day, and the statement that two prisoners were "deliberately murdered" and another "brutally murdered" bears evidence of its untruthfulness on its face. I know of no case where prisoners were killed except in attempting to escape. I had charge of five hundred prisoners taken to Aikens' Landing near Richmond, Virginia, in February, 1865, for exchange. There were no half-starved prisoners in the lot. I delivered them in good condition, and with the exception of about thirty sick whom I took with me at their special request, all were ready for field duty, and I have no doubt were sent to their regiments at once. I met men who had been in Camp Morton as prisoners, at Lexington, Kentucky, in 1866-67 ; the manner of their treatment was discussed, and it was admitted that they had no just cause for complaint.

Captain James Todhunter, Assistant-Quartermaster, now a resident of Indianola, Iowa, was present at Aikens' Landing, Va., when these Camp Morton prisoners were exchanged, and says :

The rebel prisoners were in good condition as to clothing and health, but of all the distressed, filthy, ragged, poor, starved-looking men I ever saw, were the Union prisoners received in exchange. Many of them had neither hat, cap, shoes, nor socks, and a number had their feet tied up with rags and were unable to walk and had to be assisted.

In a letter written to General Winder by Colonel Robert Ould, Confederate commissioner for exchange of prisoners, March 17, 1863, the latter says :

The arrangements I had made for exchanging prisoners work largely in our favor. We get rid of a lot of miserable wretches and receive some of the best material I ever saw.

Colonel John H. Gardner, who now resides at 1624 Wilmington street, Philadelphia, an officer of the Veteran Reserve Corps, who was on duty at "Camp Burnside," adjoining Camp Morton on the south, says :

I had charge of 500 prisoners from Camp Morton, who were exchanged at Fort Delaware, Delaware Bay. They were the most debauched and demoralized set of men I ever saw; they had reduced themselves almost to the level of brutes, they were inveterate gamblers, and when they had nothing else they would gamble their rations away.

General Carrington says :

There may have been individual guards who were rude, but it was rare. The officers could scarcely ever visit the prisoners' quarters without rude reception by some, who in their security as prisoners indulged in irritating words at least. Against such temptations to be stern in reply, rigid orders were enforced never to answer back and never to use force except when violence was threatened. There never was a substantial departure from this rule worthy of notice. The police and guard reports were made daily and regularly, and reported fully upon the entire condition of men and quarters.

Mr. Wyeth relates an instance of how "five prisoners who were accompanying a garbage wagon to a creek outside of the camp by a preconcerted signal seized two guards, disarmed them, and escaped. At another time one of the detail broke away and was killed. On another occasion two prisoners who did not attempt to escape were mortally wounded by a ball, the assassin doing his work so well that the bullet went through both bodies." Wyeth says: "One of the wounded men in dying declared that they had made no effort to escape, and that he and his comrade had been deliberately murdered."

Now for the facts. The following order will show the course required to be pursued in all cases where prisoners were shot :

Office of Commissary-General of Prisoners, Washington, D. C., March 17, 1864. Colonel A. A. Stevens, Commanding Camp Morton, Indianapolis, Indiana. Colonel: By direction of the Secretary of War you will hereafter, when a prisoner of war is shot by a sentinel for violating the regulations of the post, immediately order a board of officers to investigate all of the circumstances of the case to show that the act was justifiable, a full report of which will be forwarded to this office with your remarks. It is necessary that both the guard and prisoners should be fully informed of the regulations or order by which they are to be governed, and when a sentinel finds it necessary to fire upon a prisoner he must be able to show that he was governed strictly by the orders he received, and that the prisoner, or pris-

oners, wilfully disregarded his cautions or orders. Rigid discipline must be preserved among the prisoners, but great care must be observed that no wanton excesses or cruelties are permitted under the plea of enforcing orders. Should a prisoner be wounded by a sentinel he will be immediately taken to the hospital, where he must have proper attention from the surgeon-in-charge. Very respectfully, your obedient servant, William Hoffman, Colonel 3d Infantry, Commissary-General of Prisoners.

The shooting referred to above occurred April 16, 1864. The prisoners were James Beattie, Company B, 4th Florida, and Michael Healy, Company B, 30th Mississippi. Beattie was instantly killed, and Healy lingered until the next day, when he died. Mr. William H. H. McCurdy, a reputable and well-known resident of this city, was clerk of the district court-martial that tried the prisoner. He says :

Several prisoners guarded by two members of the Veteran Reserve Corps, one of whom was William H. Allen, were sent out with a garbage wagon. Allen was a young and excitable man who had seen but little service. He was walking behind a detail of prisoners, who were required to march in the rear of the wagon. The prisoners stepped out of the road to the left and moved quickly up to the side of the vehicle. The guard ordered them to fall back to their places, and at the same time brought his musket to a "charge bayonets," cocking it with his thumb as he brought it down. He claimed that in the excitement of the moment his thumb slipped off the hammer and the piece was discharged. The two prisoners were in line with the track of the bullet, which went through both with the result noted above. The guard was arrested and tried for murder. The record was forwarded to the War Department, where the matter was investigated by the judge advocate, who decided that the evidence "did not sustain the allegation; that the homicides occurred at the hands of the accused, but that he shot the men while they were deliberately disobeying an order to halt, after he had commanded them to do so; and that a standing order had been given to fire on all prisoners who did not halt when commanded to do so."

The records of Camp Morton show that only seven prisoners of war were killed by sentinels between October, 1863 and September, 1865 : Goacin Arcemant, January 16, 1864; James Barnhart, February 11, 1864; James Beattie and Michael Healy, April 16-17, 1864; Henry Jones and R. F. Phillips, September 27, 1864; George T. Douglas, about October 1, 1864. They also show that in each instance the soldiers who did the shooting were ordered before the board of officers, who investigated the facts and circumstances that made it necessary for the sentinels to resort to such means.

Mr. Wyeth says: "I saw one Baker (every

person in Camp Morton, up to the time of this cruel man's death, will recall his name) shoot a prisoner for leaving the ranks after roll-call was ended, but before 'break ranks' was commanded, to warm himself by a fire a few feet distant."

General Stevens, in referring to this man, says:

I recollect Baker, who was a corporal, but I never heard of his shooting a man. I should have heard of it had it occurred, so I am not inclined to believe that he did. Baker had a pretty severe time with some of the prisoners. There were isolated cases of what might be looked upon as cruelty, but I don't see how they could have happened, as Mr. Wyeth claims, without an investigation.

A letter from the War Department says:

Corporal Augustus Baker, of Company G, 5th Regiment, Veteran Reserve Corps, who formerly served in Company A, 2d Indiana Cavalry, and as corporal of Company G, 5th Regiment, Reserve Corps, was on duty at Camp Morton during the period that his regiment was stationed at that camp. There is no record that he was tried for any offense, that he shot, or that he was accused of shooting, or of cruel treatment to, prisoners of war during his term of service.

Mr. Wyeth says: "Two men, for an infringement, were compelled to 'mark time' for more than one hour in the snow. One man's feet were frost-bitten; he lost both feet from gangrene, and died from the effects of this inhuman punishment while *en route* for exchange in February, 1865, and was buried just west of Cumberland, Md."

As no name is given, the statement cannot be verified, but the official report of the surgeon-in-charge of that particular exchange, while it mentions the deaths and names of nine persons who died *en route*, viz: six from chronic diarrhea, two from pneumonia, and one from dropsy, makes no mention of a prisoner dying from gangrene, nor is there any record of a death near Cumberland, Md.

General O. B. Willcox, U. S. A., now Governor of the Soldiers' Home, at Washington, D. C., writes:

I have read the Wyeth article in THE CENTURY. I am sure no such state of things existed at Camp Morton while I was in command of the district which included Indianapolis though not the prisoners' camp. This period was a part of the summer and autumn of 1863 during the Morgan raid.

There were a number of "trusties" in the camp who were permitted to visit the city, and even attend the theater, in company with non-commissioned officers. Persons who were known to be loyal, or who presented letters from persons personally known to the officer in charge of the camp, were permitted to visit the same at will. Newsboys visited the camp regularly with the leading daily papers, and many of them did a good business in purchasing the rings made of cannel-coal, and breast-pins made of bone, as well as small and curious articles carved out of wood by the prisoners, which they sold outside of camp, as relics. The prisoners played baseball, and had good dramatic and glee clubs, and gave entertainments in the dining-room of the largest hospital. Amusements of all kinds were encouraged by the officers, and everything possible was done to make the prisoners contented.

Mr. Wyeth seems to have been particularly unfortunate in his army career, having been twice captured and compelled to spend most of the term of his enlistment in prison. This half-frozen, half-starved, emaciated youth, whose mother and sisters were unable to recognize him upon his return to Georgia, after his exchange, was able to reënter the Confederate army within a month, and has lived to attempt a vicarious vindication of the horrors of Andersonville and other Southern prison-pens.

I regret that the space at my disposal will not permit the use of extracts from letters written by the Hon. A. J. Warner, the well-known member of Congress from the Marietta, Ohio, district; Colonel A. D. Streight; Hon. S. A. Craig, an ex-member of Congress from the Brookville, Penn., district; Judge L. W. Collins, Associate Justice of the Supreme Court of Minnesota; General Allan Rutherford, ex-Third Auditor of the Treasury, Washington, D. C.; Dr. G. C. Smythe, ex-President of the Indiana State Medical Society, Greencastle, Ind.; Captain J. B. Harris, Secretary of the Terre Haute Gas Works, Terre Haute, Ind.; Colonel E. J. Robinson, of Bedford, Ind., and Geo. Wagner, of Philadelphia, both of whom served as adjutants at Camp Morton; Captain E. P. Thompson, postmaster of Indianapolis; J. B. McCurdy, of Oskaloosa, Iowa; J. Gilford, of Minneapolis; Captain Robert Sears, of Indianapolis; Lieut.-Colonel C. H. Fredrick, Omaha, Neb.; Captain W. E. O'Haver, Lafayette, Ind., and Captain H. C. Markham, Mount Ayre, Iowa.

W. R. Holloway.

II. REJOINDER BY DR. WYETH.

Of all the United States soldiers held in prison by the Confederacy there died 153 for each 1000. Of all Confederate soldiers held in prison at Camp Morton 146 of each 1000 died — only a difference of 7 in each 1000. These are not my figures, or Southern figures, but are taken from the war records of the United States Government. Those who deny the truthfulness of my article on Camp Morton hope to weaken the force of these statistics by asserting that the Confederate soldiers, when brought to prison, were in such wretched physical condition that with “homesickness as superinducing other ailments and lack of occupation” they sickened and died!¹ And yet these men came direct from the battle-field to prison. Broken down, forsooth, the men who went with Pickett at Gettysburg or swept Rosecrans’s gallant veterans from the field of Chickamauga!

Even the apologist of Camp Morton corroborates much of my narrative, and where he fails my comrades, as it will be seen, make the proof of its truthfulness positive and complete. These survivors, scattered over a vast territory without the possibility of collusion, give the one experience of hunger, cruelty, and suffering for lack of clothing and proper protection from the rigors of the Northern winter. That the prisoners ate refuse matter from the hospital swill-tubs is acknowledged, for Dr. Kipp, the surgeon-in-charge,—a man whom every prisoner respects for his humane conduct,—is quoted as follows:

I know that the refuse material of the swill-barrels of the hospital was often carried away by the prisoners. I reported this fact to the officers, and was assured by them that the men who did this had either sold their rations or lost them through gambling.

General Stevens, commander of the prison, knew of “such a case” and “one instance of rat-eating,” and he “also heard of the men eating a dog-stew.” Can any one believe that men with a full prison ration would feed on decomposing slops and devour rats and dogs? The commander further shows how little he knew of the welfare of his prisoners when he

says: “I recollect Baker, who was a corporal, but I never heard of his shooting a man. I should have heard of it had it occurred!” On the other hand, I myself saw the pistol fire and the man fall, and I have the testimony of more than a dozen men who also saw this monster do this crime, and yet it was concealed. I have the proof that he shot a second prisoner after this; yet the commanding officer never heard of either case. What more proof is needed to show that we were hedged in from all hope of relief? Nothing is known of the poor fellow who was murdered in the tunnel. How easy to conceal cruelties and minor indignities inflicted on helpless prisoners when greater crimes were so successfully covered up. The statement that we had the privilege of communicating with our friends concerning affairs of the prison is untrue. My uncle, an officer in the Union Army, was not permitted to see me. He so informed me after the war. The aunt allowed to visit me in the hospital where I was ill was only permitted to converse with me in the immediate presence of an officer who could hear every word she said. Every line written was scanned, and of course, if it told of our sufferings, destroyed. I did not see a newspaper during the fifteen months of my imprisonment, and yet we are told that “newsboys sold papers in the camp every day.” Fitting absurdity to declare that the prisoners “fared as well if not better than the Union soldiers who guarded them.”

Equally absurd is the description of the barracks, which are called “good and commodious buildings” and “comfortable quarters.” Here is the report of the United States surgeon who inspected these “commodious quarters.” It is official, and can be found in the medical volume (part iii.) of the “Medical and Surgical History of the Rebellion,” issued from the Surgeon-General’s Office, U. S. A. They are described in July, 1864, as “nine dilapidated barracks.” “There were also two hundred and ten condemned tents in use. Nevertheless the quarters were much crowded, there being only sixty to eighty cubic feet per man in the barracks. This crowded condition continued until September, 1864,” etc.

Great stress is laid upon the prison ration. If the “regular ration,” or even the “reduced ration,” printed in the foregoing article had been daily given to each prisoner, no word of complaint would have been heard. With that quantity of food we could have withstood

¹ At Andersonville, Georgia, 333 Union prisoners, and at Elmira, New York, 245 Confederates out of every 1000 perished (War Department records).

cold and cruelty. With that ration the death-rate would have been materially lowered. *The Government issued it; the prisoners never got it.* Where did it go?

The "Buffalo Courier" of April 6, 1891, commenting editorially on my article, says among other things:

Painful as it is to admit, the presumption is in favor of the truth of his narrative. The ration for which the Government contracted and paid was sufficient and all that military prisoners had a reasonable right to expect, but, as Dr. Wyeth asserts for Camp Morton and Mr. Carpenter for Johnson's Island, the prisoners did not get it. And there never was a class of men who could be robbed with more impunity. Enemies in a strange land, their protests were easily suppressed. If any one inclines to disbelieve that men could be starved for profit under the United States Government, here is a bit of evidence. A gentleman now a resident of Buffalo was in the summer of 1863 one of 8000 Union soldiers in parole camp at Alexandria, Virginia, almost under the shadow of the Capitol. They had been prisoners, and released but not exchanged, and were awaiting exchange before being returned to their regiments. Here were Union men in Union hands; yet for two months they were nearly starved. They addressed petition after petition to the War Department, but got no redress. They became riotous and were suppressed by an armed guard.

And here is a bit of evidence from Indianapolis:

During the early winter of 1864, the grocery firm of P. M. Gapen & Co. of this city [Indianapolis], of which I was the senior member, purchased, through parties now deceased, twenty bags of coffee at twenty-one cents, twenty barrels of sugar, ten barrels of rice, and not less than forty boxes of candles at correspondingly low figures. Later, larger quantities were offered my firm at similar reductions from current wholesale prices. I then inquired where those goods came from, and was informed that they came from, or were supplies for, the prisoners at Camp Morton, and declined further offerings.

P. M. GAPEN.

In the limited space accorded me I will give a part of the corroborative testimony received from fellow-prisoners. The Hon. S. Pasco, U. S. Senator from Florida, says:

... I was sent to Camp Morton in May, 1864. I was first in the prison hospital and afterwards in Barracks No. 4, where I spent the winter. This building was little more than a shed. ... Some of the incidents of cruel and inhuman conduct which you mention occurred before my residence there, but were among the current traditions of the camp. I often heard of them from those who were in the prison; others of later date came under my personal observation. I was a prisoner in all seventeen months, and no clothing was ever issued to me. Scanty food, harsh

and brutal treatment, and insufficient shelter during the winter months were doubtless the cause directly or remotely of the large percentage of deaths which occurred during the ten months of my confinement in the camp. Your article is truthful, wholly free from exaggeration, and moderate in tone. As you have been attacked I feel bound to say this in the interest of truth. But I would gladly have remained silent, and wish I could wholly forget the misery and suffering and inhumanity which I saw and a part of which I experienced at the hands of the prison authorities.

Hon. C. B. Kilgore, Member of Congress from Texas, says:

I was a prisoner of war at Camp Morton for a few weeks in the winter of 1863-64. You have drawn a very moderate picture of the horrors of that horrible pen. I was in prison fourteen months in all, part of the time at Camp Morton, Camp Chase, and Fort Delaware.

Controversies which tend to engender bad feeling are much to be deplored, but exact justice should be done to both sides. Every ugly phase of the Southern prisons has been frequently made public. They were bad enough in all conscience, and neither side can scarcely justify the treatment given to prisoners of war.

Statement of Dr. W. P. Parr, Acting Assistant Surgeon, United States Army:

Your picture of the suffering of the prisoners falls short of the horrid reality. My blood gets hot, even at this remote day, when I recall those scenes of cruelty and cowardly brutality.

I was assigned to duty at Camp Morton February 12, 1864, and served till March, 1865, when I resigned. The prison barracks were boarded with planks nailed on upright, and these having shrunk left cracks through which the wind, rain, and snow blew in upon the men with freezing effects, as they had nothing to cover with but thin army blankets, with the hardboards beneath them. I asked those in authority to have the cracks closed by strips and plenty of clean straw put into the bunks, which would have made the men comparatively comfortable, but the reply was, "Damn them, let them freeze." And they did freeze; how many I do not now remember, but I do know that a great many of the frozen dead bodies were carried from their bunks to the dead-house, while many others died soon after they were brought into the hospital.

I felt then, as I do now, that it was a lasting shame upon our country that human beings, prisoners of war, should be thus forced to occupy a position where they must freeze to death, while ample means to prevent it were close at hand. When clothing was sent to the prisoners it was the practice to mutilate the coat by cutting off the skirt at the waist, allowing the owner to have the upper part. Boxes of provisions sent by friends to the hungry, half-naked prisoners were often not delivered.

One cold morning as I entered the camp I saw a lieutenant who had tied a prisoner by the thumbs

with a cord and suspended him by the cord being attached to a spike driven into a tree just high enough for the tips of his toes to touch the slanting roots of the tree. The poor fellow hung there till the pain caused him to swoon, when his whole weight broke the cord and he fell to the frozen ground in an insensible condition. This brave officer was preparing to hang him up again when I remonstrated with him so earnestly that he desisted. I was sent for to attend one of the men who was shot by the single guard. Talking with the poor fellow, his dying declaration was that they had committed no offense whatever. I believe he told the truth. It was a cold-blooded murder, so revolting and atrocious that the soldiers about camp would have lynched the miscreant if he had not been placed beyond their reach. This occurred just outside the camp as the prisoners were on their way to Fall Creek near by to load wagons with gravel. On one occasion the prisoners had completed a tunnel. One of their number turned informer, and a guard was secretly placed at the opening outside. As the first man put his head above ground the guard blew his brains out, instead of capturing and returning him to prison as a brave, humane soldier would have done.

To speak of the minor cruelties, such as "bucking and gagging," "marking time," carrying heavy pieces of wood till the men were ready to fall from fatigue, would fill a good-sized volume. I remember the shooting into the barracks at night and the wounding of prisoners as stated by you in *THE CENTURY*.

It was my privilege to help those under my care by lending them small sums of money to obtain articles for which they were in great need. In all this amounted to a considerable sum, and I never lost one dollar of the money thus loaned. I mention this fact to demonstrate the high sense of honor that characterized these men, surrounded by all the adverse circumstances and demoralizing influences calculated to tempt them to acts of dishonor.

Mr. C. S. S. Baron, of Portland, Indiana, lately of the Baron Manufacturing Company of Bellaire, Ohio, "for whom the works were named,"¹ appointed in 1877, by Governor T. L. Young of Ohio, colonel of the 2d Infantry, Ohio National Guard,² preludes his statement with this remark:

Like my honored old commander General James Longstreet, I have been a warm Republican ever since the war, believing that the reconstruction of the States and Government would be best accomplished by the party which had fought the war to a successful issue.

Continuing, he says:

I read your article in *THE CENTURY* to my wife, and it so closely resembled what I have been telling her for years that she declared you and I must

have been messmates. Arrived at Camp Morton late in autumn of 1863; when we filed in the cries of "Fresh fish!" came from a thousand throats all over the prison grounds as there came a mighty rush of prisoners around us. I took a look at this crowd and my heart began to sink. Although at the beginning of winter, very few had sufficient clothing, many had no coats, the pantaloons of many were greatly dilapidated, and with many the shoes were worn to such an extent that the feet were not protected. I know our army had hard times, but in the worst regiment I had ever seen in the Confederacy I had never seen such squalor as this. Before being distributed to the barracks we were searched, and about \$120 in United States currency was taken from me and my comrade. I succeeded in concealing \$24 in the waistband of my pantaloons. In our bunk we found a thin coating of straw, and as we were at that time pretty well clothed and each had a good blanket, we did not suffer for a while. There were two stoves for burning wood in our shed, and one of these was not far from our bunk, so considering all we did not start out badly. For a while the issue of flour, beef or bacon, with occasionally potatoes, while not a full army ration, seemed to be sufficient for our wants, considering that we had no work to do and took but little exercise. The tyranny of one Baker was at all times manifest. He would compel us to stand in line at roll-call in the coldest weather, not only until every prisoner was accounted for, but until he could go to headquarters and make out his report and return. One bitter cold morning in the winter of 1863-64, while we were nearly freezing in ranks waiting for Baker's return, one of the prisoners very poorly clad and shod slipped out of the ranks to warm by a fire in the yard near by. Baker, coming down from headquarters, keeping the barracks between him and the prisoners, came upon the poor wretch as he was crouching over the fire, drew his revolver, and with "Here, d— you, what are you doing out of line?" shot him. The poor fellow rolled over, and as he was carried off I am not sure what became of him. I see it stated that clean, fresh straw was issued with great frequency, which before God and man I pronounce untrue. Early in 1864 the falling-off in rations became very perceptible. About this time my money gave out. My friend B— grew peevish and irritable, and driven by hunger would sometimes eat the piece of bread I had saved for my supper.

During the period when the men were being vaccinated I saw a big brutal sergeant knock a prisoner down, place his knee on the man's chest, and present his revolver at him, because he protested against being vaccinated.

In 1864, one very cold night a prisoner of our barracks, who was in ill health, went to the stove to warm. He was discovered by the guard, who came up to him saying, "I'll warm you," and with this expression shot him. The poor fellow rolled off the box he was sitting upon. I do not think he even groaned.

One of the most brutal deeds I ever witnessed was that of Lieutenant or Adjutant D—. There was a small issue of condemned clothing,

¹ "History of Belmont and Jefferson Counties."

² Report of the Adjutant-General of Ohio, 1878.

a few light blouses, pantaloons, and shirts. Drawn up in line were from 75 to 100 men almost naked, one a boy of about 17 years, thin and delicate. Some wretch informed the adjutant that this boy had a jacket hid away in his bunk. The officer, a large man, jerked the boy out of line and threw him sprawling on the frozen ground. Terrified and hurt, the boy could only give stammering and incoherent answers to the officer's questioning, who unmercifully kicked and stamped him so that he was unable to walk to his quarters.

I think the two men you mention as being fatally shot through from behind were the two from my mess who met with that fate. They were detailed one morning for work outside the prison. They were brought in about noon and taken I think to a hospital tent, where some hours later they died. Knowing they were mortally wounded, they said that one of the guards made a threat to kill a rebel because a relative of his had been killed at the front by the rebels. Becoming alarmed, they complained to the sergeant that they were afraid that this man would do them harm, who however assured them there was no danger. The guard, awaiting his opportunity, got them in line and fired a ball through both.

As to eating rats, your statement can be sworn to by any survivor of that horrible pen. Every rat that was caught in Camp Morton was killed, cooked, and eaten by the prisoners. Was the dog your mess ate the adjutant's dog for which a number of men were tied up by the thumbs? This was December 27, 1864. On this day my father, looking out of headquarters, saw those men tied up by the thumbs to trees in the yard, just standing on the tips of their toes, and in great agony. Their shifting about, their groans, and their livid faces shocked him horribly. He had just arrived with a special pardon and order of release for me, signed by the immortal Lincoln at the intercession of Secretary Stanton, my father's schoolmate at Steubenville, Ohio. That is how I remember the date so well. My father lived then in Bellaire, Ohio. He was very poor, and could send me but little money. In September, 1864, I wrote him that my clothes, shoes, and hat were about gone. My mother sent me a coat, pantaloons, two shirts, two pairs socks, a pair of shoes, and a hat. They allowed me to have one shirt, the pantaloons, one pair of socks, and the shoes. The hat, coat, and other pair of socks I never got. When I entered Camp Morton I weighed 180 pounds. On the night of my arrival home I weighed 123 pounds. I had no disease; it was starvation pure and simple. For years past my weight has been over 200 pounds. The infernal mania for shooting into the barracks at night I could not understand. In closing let me say that if the good people of this country could have been convinced of the truth of one half of the tyranny, starvation, cruelty, and murder going on inside that fence, they would in their righteous wrath have leveled the whole thing to the ground, and probably would have visited lynch law upon those who were concerned in this great wrong.

Statement of Dr. J. L. Rainey, a practising physician of Cottage Grove, Henry County, Tennessee:

The attempt to refute your narrative, "Cold Cheer at Camp Morton," will be utterly futile. There are yet living hundreds of men who know that your statement falls short in details of many cruelties inflicted upon prisoners there by soldiers and officers, and many privations which were maliciously inflicted. As an individual I had little cause to complain (as I was made a dispensing clerk in the hospital), but I am bound in honor to say that no man can prove that there is a shadow of falsehood in your statement.

I well remember the man who, for attempting to escape, was tied up to a tree by a cord around each thumb, standing on tip-toe. The surgeon came in next morning and ordered him cut down. The man could not move his arms after he was cut down, until he was rubbed and stimulated. I was in the presence of the two men who were shot from behind and mortally wounded with the single ball, and heard the statement made by one of them that they were murdered. George Douglass, of Columbia, Tennessee, member of my company, who was nearly blind, was taken out on detail and shot. The guard said he tried to escape. He was so nearly blind that he could not have gotten home without aid had he been set at liberty. I examined the body at the dead-house. He was shot in the back, and it was murder.

The man shot in No. 7 for making a light to give a sick comrade some medicine had his arm amputated at the shoulder, and died. I was in the room when the operation was done.

The dire extremity to which some were reduced caused them to steal and to resort to the slop-barrels. I saw a poor, ragged, and emaciated prisoner ravenously devouring pieces of meat out of the slops, so rotten that it was thick with maggots. The eating of rats and dogs was well known.

I am not willing that it should be thought that all were like Baker, who to my knowledge did many more cruel things than you mention. Dr. Charles J. Kipp on taking charge made many valuable improvements in the care of the sick. I shall ever respect him as a kind, able, and honorable physician. Drs. Todd, Parr, Dow, Bingham, and Lindsey I remember with gratitude. Lieutenant Haynes, a one-armed officer, would not tolerate cruelties when he was on duty. I was released October 25, 1864, by order of President Lincoln, at the request of Andrew Johnson, then Military Governor of Tennessee.

Statement of Dr. W. E. Shelton, a practising physician of Austin, Texas:

I was confined at Camp Morton about June 1, 1863. In July or August I was assigned to duty as physician to the sick in quarters. My duties consisted in going through the barracks, prescribing for those not sick enough for the hospital, and sending the seriously ill to the wards. The sick were well treated. The treatment of prisoners in a great many instances was brutal and inhuman.

1 Dr. W. P. Parr. See Dr. Parr's statement.

During one very cold spell several prisoners froze to death, and many others died from the effects of cold. I have read "Cold Cheer at Camp Morton," and am prepared to swear that it is true.

The Rev. W. S. Wightman, pastor of the Southern Methodist Church, Bennettsville, S. C., writes:

I read with feelings of peculiar interest your most graphic description of the indignities, sufferings, and deaths that make up the history of that dreadful camp. I was taken to Camp Morton in July, 1864, and left there for exchange March, 1865. How I managed to stand the starvation and cold of that awful prison is something wonderful to me. My emaciation when I reached home was so great that my family scarcely recognized me. I can substantiate what you say in your article — the harsh treatment, the brutality, the horrible meanness. I suffered the pangs of hunger protracted through weeks and months, and of cold in those dreadful sheds for lack of bedding and clothes. I am witness to the fact that many a poor fellow perished from cold and starvation.

The Rev. W. H. Groves, a Presbyterian minister at Lynnville, Tennessee, who was in Camp Morton in 1864 and '65, says:

Dr. Wyeth graphically and truthfully describes Camp Morton. Every paragraph has the impress of truth, and will bear the scrutiny of the searcher of hearts. Think of men emaciated and exhausted by hunger, many of them with no clothing but the thin suits in which they were captured, standing that bitter winter cold — the long hours from dark till daylight, with only a single blanket, upon a bed of planks in an open cattle-shed. To strike a match to look at a sick or dying comrade was to be shot by the guards. Our rations were so meager that men became walking skeletons. No bone was too filthy or swill-tub too nauseating for a prisoner to devour. The eating of rats was common. I knew one of our men who was hung up by the thumbs for eating a dog. Some of the officials were very cruel, Baker in particular. God removed him, and we trust that he is in heaven. My feet were so badly frozen that I suffered intensely and could not wear my shoes for over a year. Our food was excellent in quality, at least the bread. We only got a small loaf a day. The meat was given in small quantity. We got about one third enough to eat. The mortality in consequence of short rations was very great. *Two of my mess of five died.* Dr. Wyeth has written no fancy sketch. It is what every living Confederate who was in Camp Morton the last year of the war will corroborate and which God will witness as true.

W. V. Futrell, orange-grower at Ozona, Florida, writes:

I can indorse all you say in regard to prison life at Camp Morton. Was there about twenty-three months, and suffered from hunger constantly. I was witness to the murder of one prisoner and the wounding of another by Baker. I saw dog-meat served at fifteen cents' worth of tobacco per pound. Many were frozen to death for want of proper clothing and cover. *My partner froze at my side one night, and I did not know he was dead until next morning.* The eating of rats and of scraps from the swill-tub at the hospital was of common occurrence. I have peeled potatoes for the hospital cook just to get the peelings to eat. I harbor no feeling of malice to any one, yet the officers and guards at Camp Morton were very cruel and allowed prisoners to starve.

The Rev. Samuel Tucker, preacher in the Cumberland Presbyterian Church, Springfield, Arkansas, says:

Was confined in Camp Morton from March, 1863, to February, 1865. I can fully corroborate your statements concerning the treatment of prisoners. There were fifty-one men in the squad I arrived with, and thirty-two of these perished there. I have seen the prisoners struggling with each other to devour the dirty matter thrown out of the hospital kitchen. Rats were eaten, and I have seen dog-meat peddled out by the prisoners. The murdering of prisoners, clubbing, tying them up by the thumbs was known to all there. I could put the entire piece of meat given me for a day's allowance in my mouth at one time.

The vast bulk of testimony, which fully sustains the charges of criminal neglect on the part of those whose duty it was to treat prisoners of war humanely, I cannot publish here for lack of space. The statements of Messrs. B. P. Putnam, Tullahoma, Tennessee; B. F. Erwin and T. W. Cowan, Gadsden, Alabama; S. H. Russell, Huntsville, Alabama; J. T. George, Clerk of the Court of Graves County, Kentucky; James A. Thomas, Nashville, Tennessee; John F. Champenois, ex-Mayor and County Commissioner, Shubuta, Mississippi; N. M. Smith, Caswell, Mississippi; R. M. Guinn, Alvarado, Texas; I. C. Bartlett, Louisville, Kentucky; J. N. Ainsworth, Smith County, Mississippi; A. W. Baxter, Fayetteville, Lincoln County, Tennessee; G. T. Willis, Greenville, South Carolina; S. W. Jacoway, South Pittsburg, Tennessee; J. A. Guy, Childersburg, Alabama; W. H. Carter, White County, Tennessee, and T. E. Spotswood, Fairford, Alabama, are, among others, important and interesting, and with much other valuable material will be reserved by me for future publication.

John A. Wyeth.

COUNTRY NEWSPAPERS.

BY THE AUTHOR OF "THE STORY OF A COUNTRY TOWN."

THE one thing about country newspapers that seems to be always true is that they are never satisfactory to the people who support them. Yet there is nothing so hard to kill as a country newspaper, however unpopular it may be. A paper that really does not amount to much ordinarily may amount to a good deal if an intruder comes into its field, and gentlemen looking for locations should be careful of starting new papers in towns for no other reason than that the people encourage them.

An ordinary business is rated a failure if it does not pay. There are plenty of country papers that have not made a dollar in twenty years, but the publishers hold on with foolish stubbornness, though they might succeed in some other calling; they seem to imagine that a little red man will wriggle up through their office floors some day, and make their "good will" as valuable as they believe it to be. I have heard many men say they were certain they could not succeed as doctor, lawyer, merchant, dentist, or what not, but I have never heard one say he could not succeed as an editor, particularly as a country editor. Really good newspaper men are scarce in the country, for a business man and a writer must be combined to insure success; but there is no lack of newspapers, and as half the people seem to be waiting to give the business a trial, I feel certain that the supply will always be considerably greater than the demand.

Although as a nation we are supposed to have unusual confidence in newspapers, I shall always believe that there is a strong undercurrent of opposition to them among our liberty-loving people. If all the papers in a town unite in favoring a measure, a large proportion of the people are sure to oppose it. The three papers of a certain small city once united in opposing a candidate for an important office, but the people elected the candidate by the largest majority ever heard of in that region. The candidate was elected to fill an unexpired term, and when he came up for the same office a year later, the papers all agreed not to mention his name, and the objectionable candidate was defeated. I have known so

many editors to fail in forcing the people into a particular way of thinking, that I am inclined to believe it is safest modestly to follow the best public sentiment. One of the best newspaper men I ever knew, and who had the reputation of being always original, once confessed to me that most of his matter was gleaned from others. He cultivated the bright men in the community, and his note-book was oftener used in taking down opinions and suggestions than in gleanings news items. I have heard of a bright fellow who went to Dakota with a printing outfit, but being unable to find a suitable town, he took up a claim. The crops failed, and he issued a small weekly paper from an imaginary town, giving it a name, and creating men and women, and institutions. His comments were very breezy, as I can well believe, since he was responsible to no one; somehow it is so much easier to say, "It serves him right," than it is to say, "It serves you right." He criticized imaginary plays at imaginary theaters; he criticized imaginary judges of imaginary courts; he ridiculed an imaginary society, and generally hit off popular delusions so well that his paper attracted attention, and a town was finally built on his farm. But this is a very rare case, even if it be true. The newspaper usually follows civilization, and the newspaper usually follows public opinion.

The longer a saying has been accepted and used, the greater the likelihood that it is true; therefore I have great confidence in the saying that "the voice of the people is the voice of God." It will be observed that I have used the English of this quotation, although I am perfectly familiar with the Latin of it, having seen it so much in country papers.

Country editors quarrel with one another too much; too many of them imagine that they are buzz-saws, and long for opportunity to prove it. The people are not interested in these quarrels, and as a rule do not like them. A tilt between editors may be occasionally interesting, but only when the parties to it are exceptionally clever. In a newspaper controversy an editor cannot defend himself; modesty will not permit it: he can only attack the other editor, so that while both are besmirched, neither is championed. There is one name that should be kept out of a newspaper, wherever published, and that is the name of the editor. A really good editor's name is seldom seen in print in the town where he lives, for

he cannot print it himself, and the other papers will not, except in a caricature. In a political controversy one paper attacks a candidate, and the other defends him, so that the character of the candidate is left in the end where it was in the first place, but when editors pummel one another they simply debase themselves in the eyes of the community. Lawyers are the most sensible class of men in the matter of quarreling; the reason probably is that their business throws them together a great deal, while other men nurse their professional hatreds in private.

There are many comfortably rich men in the country, but few of them are editors. There are many luxurious homes in the country, but few of them are occupied by editors. The fact is, there is little money in the business; for it is a curious fact that it costs more to produce the newspapers of America than the people pay for them. Running a newspaper is like rowing a boat up-stream. A man may pull his boat slowly against the current, if he works steadily, but he dare not rest, and he cannot anchor. Every time a newspaper goes to press the editor has the feeling that his sheet might have contained more news, and more advertisements, without a dollar of additional expense, and in this business more than in any other there is a constant clamor for more work, for harder pulling at the oars. The best weekly paper I know of is edited by an old man who is particularly clever as writer, publisher, and printer, and although he owns his own home and his own office building, he is compelled to work very hard every day. Younger men not half so industrious or capable have made a great deal more money. There may be an impression in cities that country editors might do very much better if they would, but the fact is that many a man has failed to make money at editing in the country who has succeeded in the city.

Although country editors are nearly always poor, there are plenty of persons who believe that half the paragraphs in a country newspaper are paid for with enormous bribes. There are always two sides to every question, and whichever side an editor falls on, the partisans of the other accuse him of being "bought." It is little wonder, therefore, that the editor is seldom a popular man; I never knew one who was, and I never knew one who was not often accused unjustly. Probably the people believe in bribes to editors because it is a very rare editor who does not accuse his opponent of being a bribe-taker, creating a prejudice against themselves and their calling. Lazy and incompetent editors nearly always explain the success of their more vigorous opponents by declaring that they carry on a system of blackmail. I once visited a large city

the newspapers of which I had long admired almost with reverence, and was surprised to hear a citizen say that what the city really needed was better papers; they would bring "eastern capital." Every citizen of a country town wants his locality "boomed," to the end that he may sell his fifty-dollar lot for five hundred; he can appreciate how a really good paper might aid him in this, and because his lot does not advance in value as he thinks it should, he has a grievance against the editor. He longs for an editor with some "snap" in him. I don't know what "snap" means, but I know this is the quality usually thought to be lacking. There are more great men in every country town than really exist in the entire nation, and if they are not recognized, the local papers are of no account. I was once bothered a good deal by a certain man who said he could clean more chickens in an hour than any other chicken-cleaner in the world, and he wanted the fact mentioned. Men who are never suspected of greatness by other people accuse themselves of it to the editors, and when they refuse to mention this greatness, they are told that their columns contain a great deal of stuff not half so interesting. It has occurred to me that when a citizen of a country town becomes drunk, the first thing he does is to hunt up the editor to tell him what is the matter with the community.

Probably the reason every citizen feels at liberty to find fault with the editor, and not with the banker or merchant, is that he regards his contribution to the paper as in some sense a gift. Most of the subscribers and advertisers of a country newspaper are coaxed into it. In some towns it is the rule for the principal merchants to take a half-double-column advertisement, for which they pay a hundred dollars a year, and very often these stand so long without change that in the middle of summer they announce the arrival of new winter goods. Advertising in country papers pays as well as advertising in the city papers, considering the difference in the charge, but country advertisers usually do not know how to use effectively the space they pay for. The merchant also feels that if he advertises in one, he must advertise in all the papers printed in his town, and this idea is so general that an energetic, pushing editor is often held back by his slower competitors. Many business men refrain from advertising in one valuable medium because they fear that the insertion of an advertisement will cause the solicitors of poorer papers to bother them. Many business men seem to be ashamed to have it known that they have been guilty of the weakness of advertising; and some do not believe in legitimate advertising, because they have noticed that most advertise-

ments are given as a sort of duty. They have an unnatural and foolish dread of seeing their names in the papers, regarding it as a system of puffing that modesty does not warrant. Farmers and town people alike are often reminded of their duty to the "local paper," and as a rule they do not do their duty without grumbling. The country newspaper is much like the country church in the matter of support, and the country editor much like the country parson in the particular that he never makes any money and is seldom satisfactory.

It is surprising to note how nearly alike all country newspapers are; likewise how nearly alike all country towns are. Take the average county-seat town in almost any State, and the population is nearly always the same. In the eastern portion of Kansas and Nebraska, for example, the average population in the county-seat towns is from fifteen to eighteen hundred. They usually have the same number of stores, the same number of banks, the same number of newspapers (almost invariably two), the same number of mills and elevators, the same number of railroads (almost invariably two), the same number of grain and stock buyers, the same number of doctors, hotels, dentists, etc. And it is also worth noting that the population of the counties in the eastern portions of Kansas and Nebraska is nearly always the same. This is true in most States, the exceptions being in counties where large cities make a difference.

In the average State dozens of papers published at different county-seat towns can be found that look almost exactly alike; every editor who looks over exchanges must have remarked this. Usually they are of four eight-column pages, with "patent outside." The same kinds of dashes separate the editorial paragraphs on the second page; the local news is arranged in about the same way on the third page; and the editorial and local paragraphs often concern the same topics. The weather is excessively hot in one county, and the editor remarks it; the weather is excessively hot in another county, and the editor remarks it. There is good sleighing in a certain district, and you will find mention of it in all the papers, very often in connection with the liverymen taking the editors out for a "spin." There is the same similarity in the editorial columns, for most editors, as well as most men, pay too much attention to politics, and in most political discussions the difference is that one man says yes, while the other says no.

You will find about the same class of advertisements in all the papers printed in towns of the same size. The bankers always advertise, and then in the list of probabilities come the storekeepers, the implement-dealers, the law-

yers, the doctors, the liverymen, the organ-dealer, and the blacksmiths, in about the order named; and another peculiar thing is that the advertisements are worded about the same. The papers all exchange, and every new idea in advertising goes the rounds.

Before "patents" were invented there was an individuality about most country papers that does not exist now. I am almost tempted to say that the country weeklies of twenty years ago averaged better than they do now; certainly in appearance, if not in ability. The influence of the country papers is more extensive at this writing than ever before, for they are constantly increasing in numbers, but certainly many strong, influential country papers of twenty years ago have lately lost prestige; it has been divided with new papers in their field, and with the big city publications, which are constantly increasing their circulation in the country.

The circulation of each country paper is about the same—usually less than a "bundle," or nine hundred and sixty, rarely fifteen hundred. The average circulation of six thousand of the country newspapers of America is not six hundred copies. Many of the patent medicine concerns in the east make their advertising contracts through experts, who travel from town to town. If these men understand their business, and they usually do, they know the circulation of the papers in a town before they reach the hotel; they get the information by looking at the town. When the agents call at the newspaper offices, the editors usually make a claim for their circulation that the agents know is ridiculous, but it always ends in the same way; the editors agree to the price offered by the agents, or no contracts are signed. The men who travel in advance of circuses have the same knowledge of the circulation of newspapers, but they are unable to use it, for they always pay at least treble prices for their advertising. Many editors demand a hundred dollars for a circus advertisement, whether the agent desires an inch or two columns, and the editors get their price, or no picture of an elephant goes in. But no editor exaggerates his circulation so much as the circus man exaggerates the attractions in his show, and the circus man knows it, so the difficulty is usually arranged. The circus advertising agent announces regularly every season that he is instructed to reduce the advertising expense at least one half; but he never does it.

There are four classes of men who usually own country papers: 1. Farmers' sons who think they are a little too good for farming, and not quite good enough to do nothing. 2. School-teachers. 3. Lawyers who have made a failure of the law. 4. Professional printers who have "worked their way." In nearly every case the

best country papers are conducted by the latter class, although they seldom have "backing," like the other three classes. You are always hearing men longing for "backing," though I believe it is usually a bad thing to have. Very few of the successful men ever had it; men worthy of "backing" usually do not need it; a man who has "backing" does not depend upon himself, and, after all, a man must make his own way. There are few city printers occupying the best places in the country. There are many country printers occupying the best places in the cities. The country seems to be the training-school of the profession. In most of the great newspaper offices there is a growing tendency to employ men who have had a training in the country, because they have a higher sense of duty and better habits than the city contingency. The demand in every newspaper office is for "all 'round men"; by this is meant men who know something of the business office, the press-room, and the composing-room: if they have no occasion to use this knowledge in any other way, they may use it in being fair with the other departments.

Very many of our noted publishers, writers, and editors are printers; I know of no class that has so much to say, and I believe that most of the printers who have amounted to a good deal began in the country towns, where a printer may become a publisher after he has saved a few hundred dollars. The town in which he buys an insignificant paper may become a city, and he may grow with it. In the larger cities there are few opportunities for printers to engage in business for themselves, whereas more than half of those in the country finally try it. Of noted men more have been printers than lawyers, or practitioners of any other profession or trade. Most of the unsuccessful newspapers are owned by inexperienced men; few practical men hold on to a failing paper long, for they do not believe much in "good will." If there are many poor papers in the country, it is because of the disposition of inexperienced men to rush into the business. Take a hundred of the poorest papers in any given region, and it will be found that ninety-five of them are owned by men of no practical knowledge, who believe that anybody can run a paper.

So many country papers are published by inexperienced men that there are numerous advertising agencies devoted to fleecing them. The usual method adopted is to offer them a trade. An article is priced at more than its actual value, and then the agent offers to take out one half or one third of its stated value in advertising, the publisher to pay the remainder in cash. I once knew a young lawyer who bought a paper, and soon after he received a propo-

sition from an advertising agent, offering in large, bold, honest-looking type to give him a \$300 fire-and-burglar-proof safe for half a column for one year. The advertisement was inserted, and the lawyer has confessed to me that in the darkness of his room at night he could see that safe, with his name over the door in plain but neat gilt letters. He could see visions of the door carelessly swung open, displaying to customers not only his full name at the top of the safe, but also the drawers inside, one of which bore his initials and the word "Private." Finally he thought of sending for the safe, the contract having about expired, so he looked up the original papers to get the necessary address. Then he noticed a lot of printing in small type, which he had never noticed before, which read as follows: "Providing the order is accompanied by \$200 in cash." This cash balance usually represents the wholesale value of the article, and while a good many publishers do this class of advertising, very few of them complete the trade by paying the cash difference.

This same lawyer-editor in his salutatory said something about mounting the editorial tripod. Now I have been connected with printing offices since I was ten years old, a period of twenty-six years, but I have never seen a tripod, although so many editors claim to mount them; nor have I ever heard of a man who has seen one. There may have been a three-legged stool in the temple of Apollo, and an oracle may have occupied it, but there are no three-legged stools in the offices of editors; even the stools used by the printer always have four legs, and consequently are not tripods.

Many country papers are largely controlled by the printers employed by the inexperienced editors. The only monument ever erected at public expense in Bethany, Missouri, was unveiled last year in memory of Edwin R. Martin, an old-fashioned printer who never owned a newspaper; but he had worked in the same town for thirty years. At no time did his pay exceed \$12 a week; sometimes it was only \$6 a week. During that time the paper he served had many owners, most of whom knew nothing of newspapers, but this old veteran was a fixture in the place, and had "boarded" with the family where he died for certainly twenty years. Every week he wrote for its columns, and he never wrote anything unkind. He was fond of the cherished idols of the people, and complimented them in a quiet way. For years his paragraphs were credited to the farmer who had last traded for the paper, but in time his kindly hand was recognized, and when he died the people expressed their appreciation of his honest service to the community. Of verses alone he wrote so many that they were

collected not long ago, and printed in book-form by another old-fashioned country printer of almost equal cleverness. I "learned my trade" with Mr. Martin, and though I left him when a very young man, and went to work elsewhere, I can trace in his poems the history of the town as I remember it. A pretty girl ran away with a dissolute fellow and married him; in a few years she was dead from worry and trouble. The story was gently disguised, and printed in the home paper in verse by the old printer. In every verse there was a moral, as there was in every other line he ever wrote. All the local events that touched the hearts of the people were celebrated by him, but he never wrote of the political or other broils that were nearly always going on in the columns of the paper. He was an old man when he died, but in his time he was the social leader of the town, and excellent social customs still exist there for which he was responsible. No social affair was satisfactory without his presence. He was the leader in dramatic and musical entertainments, and was always as gentle and pure as a good woman. Behind a curtain in the room in which the printing office was located he had his bed, and those apprentices who found his favor were permitted to spend occasional evenings with him, when they learned all sorts of astonishing secrets. One of them was that some of the stories and poems in the "New York Mercury" and "Godey's Lady's Book" were from his pen, and the extra money he thus earned was spent in helping his less fortunate friends. Judging him by his opportunities, he was the best printer I ever knew; I have learned little of his art since I left him that he did not know twenty years ago. He would have been helpless in one of the great offices, but a printer from the city would have been equally helpless in his modest position. The two press-days of the week—one for each side of the paper—were great events. The temperature of the room had to be exactly right, and cold draughts were avoided as in a sick-room. The inking roller had to be washed and softened by a certain formula, and making the tympan ready was a work of the greatest care and delicacy. Although he had old type, and a hand-press so old-fashioned that I never saw another like it, he printed a marvelously neat paper; the perfecting presses of to-day do not understand the art of printing better than he understood it, though they print 20,000 complete papers in an hour where he printed 400 sheets on one side in the same length of time.

Printers have greatly improved as a class. Peter Bartlett Lee, who was famous as a "tramp printer," is dead, and he has no suc-

cessor. It was said of Lee that he could name every county seat in the United States, and the papers published therein. It is probable that he had worked in every State in the Union, but during the latter years of his life he was not popular with his craft; his sort of printers had gone out of fashion, and came to be more and more unpopular. The printers gave their "subbing" to more industrious men, and Lee was supported by the reporters and editors, who wrote him up every time he appeared. The modern printer has an ambition above being a tramp; thousands of clever paragraphs are composed and set up every day by printers; for copy is always short in country offices, and editors are glad to accept these contributions. Printers are always handing the editor contributions, and many printers contribute regularly to the city papers, for which they receive good pay. In my experience as an editor I am often told interesting things by the printers, and I usually ask them to "set it up," which they do with good taste.

There is a musical strain in country printers; most of them belong to the town brass band or sing in a choir. Many printers play guitars, some of them flutes, and belong to serenading clubs, but for some reason they do not take to fiddles. Shoemakers seem to be fiddle-players naturally, and a fiddle can always be found for the serenading parties at some of the shoe shops; but a clarionet-player is rare, and if I were starting in the printer's trade again, I should learn to play a clarionet.

Boys seem to drift into printing offices naturally. I have seen hundreds of them learning the trade, but it seems to me that in all the towns in which I have lived I never knew any boys who were learning to be tailors, or blacksmiths, or painters. There are always boys around a printing office, and there is usually fairness in their promotion. In most of the offices where I have worked there has been a particularly good boy of whom all sorts of good things were predicted, but I never knew one to fulfil expectations. The best boy I ever knew is still setting type, aged forty-two.

It is possible for local papers to succeed if there is a possibility of success; the most energetic man in the world could not make money in the arctic regions putting up ice to sell to explorers. There are papers almost entirely local in their character which have a greater circulation in proportion to the population of the towns in which they are published than the best New York dailies. I personally know of a small daily that has a local circulation of 2500 in a town of 15,000 inhabitants. The commonly accepted estimate is that five persons see every paper that is printed. This country paper, therefore, is read by $87\frac{1}{2}$ per cent.

of the townspeople; excluding the children who cannot read, but who are enumerated in the census, the paper would appear to be read by every person in the town able to read. I believe most editors understand that next to energy and intelligence, their success must depend upon honesty and fairness; therefore this influence must be for good. Of course there are many careless editors, but the disposition of the people to criticize them severely will generally reform them.

The best country papers are usually owned by one man; I do not believe partnerships are desirable in small ventures of any kind. In the best country papers you will find few railroad advertisements, which mean free passes, for it takes time to use passes, and certain expenses are inevitable in traveling that may be avoided at home. Whenever you find a successful country newspaper, you will usually find the editor at home, and busy. Working is becoming eminently respectable; it is those who do not work who are objects of suspicion; a genius is simply an industrious man who tries so many ways that he finally finds a good one. Wherever you find a failing paper you will find an editor who does not attend to his business. There was a time when many papers were supported almost entirely by legal advertisements, but there are few such papers now; their proprietors have either gone to work or into politics.

In estimating the number of newspapers in the United States, which is something like eighteen thousand, the "Big City Thunderer," published in a village of four or five hundred people, counts for as much as the best New York daily. The "Thunderer" is responsible for most of the bad habits credited to country newspapers and to the craft in general. There are sharp writers on most of the better class of country papers, and writers of good sense and judgment. It is the editor of the "Thunderer" who says his latch-string is always out. He is the person who extends his hand to people and calls for turnips, and potatoes, and corn in the shock on subscription. I have spent fifteen years of my life in the offices of small weekly papers, but I believe I could carry on my back all the produce and wood I have seen taken in on subscription; there is really very little traffic of this kind. The editor of the "Thunderer" is also the person who returns thanks for a bouquet of flowers sent "our wife." He belongs to a mutual admiration society. When the other members refer to him as "a genial, warm-hearted gentleman, and about the best editor on earth," he reprints the notices, to the disgust of his readers, and to the disgrace of his profession. The poorest editor of the "Thunderer" class can get a living, for he has accounts to

"trade out" at the stores, and he can usually trade "orders" to his help, but the "patent outside" sheets on which he prints his paper must be paid for in actual money every week, for when the editor is poor they are sent C. O. D. These "patents" are usually sheets ready printed on two outside or inside pages; sometimes in cases of eight-page papers six pages are "patent." Most of them are printed on a sheet 26x40, which is an eight-column folio, or a five-column quarto. Ready-printed sheets are furnished from twenty-eight cities and towns in different parts of the country. The same forms were at one time used for hundreds of papers, the heads, names of publishers, mottos, etc., being changed for each customer, but of late it does not often occur that any two papers use ready-printed sheets that are exactly alike. The larger ready-print companies print one hundred editions weekly, so that publishers have a large list to select from. These sheets are furnished at about the actual cost of white paper and printing, the ready-print companies making their profit from the one hundred inches of advertising space reserved. Sheets without advertising may be obtained at an additional expense of about two dollars a week, but they are rarely used. It is said that "patent outsides" were in vogue in England in 1850, and in a solitary instance in the United States in 1851, but the father of the business was A. N. Kellogg, whose name is still at the head of one of the two principal ready-print concerns. In 1861 Mr. Kellogg was printing a weekly paper at Baraboo, Wisconsin, and his patriotic printers having enlisted in the army he was unable to print his usual paper, therefore he ordered of the "Daily Journal," at Madison, half-sheet supplements containing war news to fold with his own half-sheets. He soon saw that the two pages of his paper coming from Madison would look better printed on one side of a full sheet, and thus the ready-print idea was established. The Madison "Journal" received orders for similar sheets until it printed for thirty different offices; then the business went to Milwaukee and Chicago, and finally all over the country. Eight years after Mr. Kellogg's venture there were five hundred ready-printed papers in the country; to-day the company bearing his name prints nearly two thousand, and there are six thousand altogether. The Kellogg Company alone has eight different houses and sends ready-printed sheets into twenty-nine different States and Territories, the east and south being represented quite as well as the west and north.

It would be difficult to decide just when a country weekly becomes a country daily, though I believe it is a rule that when a town obtains a population of three thousand one of the weekly newspaper publishers attempts a

daily, and fails. Most towns in the west of ten thousand population have daily newspapers; in the east the case is different, for the proximity of large cities and fast trains is fatal to provincial dailies. Even in the west the big St. Louis dailies are delivered three hundred miles away by ten o'clock on the morning of publication. This ruins the business for hundreds of miles around St. Louis, and no creditable dailies are found until Kansas City is reached. The Chicago dailies are delivered on the Mississippi River by breakfast time, and except in the case of Milwaukee, there are no really creditable dailies within two hundred miles of Chicago. There are good newspapers in Omaha, Kansas City, St. Paul, and Minneapolis, but with an occasional exception, they ruin the field around them. The exceptions I think of are at State capitals, which usually afford at least one good paper. As a rule the great papers of a big city are issued in the morning; but evening papers do best in the smaller towns. A large majority of the country dailies appear at four o'clock in the afternoon, when there is no competition from the city.

In the smaller country dailies there is a tremendous amount of "padding," although the same thing may be found in the best metropolitan papers, and in magazines and books. Indeed, good "padding" is better than indifferent news, but when a man learns to "pad" well he is almost a genius, and it is difficult to keep him in the country. I have seen many small provincial dailies that did not contain on certain days a single paragraph of real local news, although there were several columns of alleged local news. It was all "padded," and read very well. A good local editor is a man who can make a good page when there is no local news, and there are many such. Every country newspaper office may be referred to as a manufacturing establishment, for much of the matter printed is manufactured, and much of it is good and useful. As a general proposition, it may be stated that a man cannot make a country daily a success unless he understands the art of "padding"; he must have padding, and if he cannot employ men who can furnish it, he must be able to furnish it himself. The modern system of plates makes it possible to run a very good evening paper with two printers, a foreman to set the advertisements, and a boy, but there should be two or three reporters, and all of them should be able to "pad" well. The reporters are also expected to look out for advertising, and if the publisher also does job printing they often solicit that. The most useless man on such a paper is the man who writes the editorials; in the country the demand is for good local news. I know one reporter who also collects and solicits; when

there is a rush, he sets type in the afternoon; when the pressman is sick, he goes down into the basement, and runs the press and engine. This young man is responsible for the following actual example of "padding" in the personal column:

December 8.—Miss Mary Smith, of Bevier, is visiting Miss Sarah Jones, at 108 North Adams street.

December 9.—Miss Sarah Jones will entertain at 108 North Adams street, this evening, in honor of her guest, Miss Mary Smith, of Bevier.

December 10.—A gay party of young folks went to the lake to-day, skating, to entertain Miss Mary Smith, of Bevier, who is the guest of Miss Sarah Jones, at 108 North Adams street.

December 11.—Miss Mary Smith, who has been the guest of Miss Sarah Jones, at 108 North Adams street, returned to her home in Bevier to-day.

In most small cities there is a "committee of safety" composed of a number of men who are always suggesting what the other citizens should do to help the town. The papers print these suggestions, and very often hundreds of columns are printed concerning an enterprise that is finally forgotten. In a town where I once worked the editors wrote every dull day about the necessity of mending the "Doniphan Road," the bad condition of which seriously interfered with the trade from a very important region, but I am lately informed that the "Doniphan Road" is still in wretched condition, although the papers have been inquiring who is responsible for at least twenty years.

All this is "padding," and it is so well received that the reporters look for it. In my own experience I have often gone out on the streets, not to find news, but to find suggestions for "padding." The never-failing source of it is the man with complaints.

A majority of the evening dailies printed in the country do not have much, if any, telegraph news sent to them direct; they have as a substitute a "plate telegraph," which service is supplied from most of the large cities. Of the six columns of "plate telegraph" usually printed in an evening paper to-day, three columns may have been set up from the city papers of the night before; the other three columns being set up at 5 or 6 A. M., from the morning papers. Stereotype plates of these six columns are then made, and sent out on the express trains, reaching their destinations in ample time for the provincial evening papers, which, as a rule, could not have had the information by any other means except the use of the telegraph, direct. The plates are made to fit metal bases kept in the office of each customer; the plate and base are exactly type-high, and as the plates come in column lengths, they may be cut in any way desired.

This service costs \$13.50 per week; \$12 for the plates, and \$1.50 for a week's expressage. Many head printers "make up" these plates as neatly as could be done with type, and while no pressman can disguise the fact that his is a "plate" paper, the reader does not seem to remark the difference. Five years ago there were many sneering remarks about this sort of matter, and it was claimed that the line between city and country papers could be drawn at "plates," but some very creditable morning papers now use them. The use of plates is an old newspaper principle. A paper that costs thousands of dollars to produce is sold for a penny, and the paper sold at this low price, in spite of the enormous original cost, is read by at least four persons who pay nothing at all for it. The reader in California does not find his paper less interesting because a copy of the same printing is being enjoyed also in New York.

It costs several hundred dollars to produce six columns of the best plates; yet a country publisher may buy stereotype duplicates of the six columns for two dollars. And the matter is not less interesting to his readers because many other publishers in many other States are using the same articles. The surprise is that, although stereotyping is an old process, stereotype plates have only been generally used eight or ten years. I sometimes doubt that ready-printed sheets have been of any great service to country newspapers, but the invention of plates was a long stride forward. By their use country newspapers may secure at small expense the services of the very best writers; by their use every country publisher may secure a great staff of special writers and artists. Every field except the local field is covered by the plates, and it is almost certain that the service will steadily improve.

E. W. Howe.

THE POSSIBILITY OF MECHANICAL FLIGHT.

BY THE SECRETARY OF THE SMITHSONIAN INSTITUTION.

THE publication by the press of a memoir I lately read to the National Academy of Sciences on the power required for mechanical flight has caused so much misapprehension, but also so much interest and inquiry, that I willingly accept the invitation of THE CENTURY to give here at least such an explanation as consists with the imperfection of a brief account in untechnical terms.¹

In the first place, let me explain that I have in no way said that man can fly by his own strength, nor have I ever described the details of any particular "flying-machine." What has been done is to demonstrate by actual experiment that we have now acquired the mechanical power to sustain in the air (and at great speeds) bodies thousands of times heavier than the air itself, and that as soon as we have the skill to direct this power we shall be able actually to fly.

As the distinction between the possession of sufficient mechanical power and the skill to use

it may not be clear, let us observe that an ordinary balloon is essentially lighter than the air and will float in it, moving only with it, at the mercy of the wind, like a log in moving water; while the flying-machine of the future that we now speak of is to be heavier than the air, and, being designed to glide on it somewhat like a skater on thin ice, will sink if it has not power to keep moving rapidly enough to make the air support it.

It seems at first incredible that any practically obtainable power can make the viewless air at the same time support a dense body like brass or steel, and cause it to run rapidly and securely along upon the thin element. Nevertheless I have seen it done; and for this best of reasons it has seemed to me that it can be done again, and that such a matter as mechanical flight ought not to be left to the opprobrium which past mistaken efforts and consequent failure have brought on it, but that it should be reinvestigated by scientific methods.

The distinctive mark of such methods is the primary importance attached in them to obtaining definite ideas about quantity, in order to state everything in number, weight, and measure, so that we may be able to prove, for instance, just how much power is demanded for such aerial transport, and if this be beyond the ability of a man's muscles to furnish, to prove definitely whether we can or cannot build an

¹ For fuller and exacter statement the reader is referred to a recent publication by the Smithsonian Institution, "Experiments in Aërodynamics."

engine at once strong and light enough to supply this power. Almost all notions about the capacity of the air for this kind of support have been and are very vague, and are in complete contrast to the precise ones science possesses on other matters. It is to furnish these exact data, it is to answer with certainty the question "How much?" that these new experiments have been made; and few things can, it seems to me, be of more interest than their results.

Above us is the great aerial ocean, stretching over all lands, and offering an always open way to them, yet a way that has never yet been thus trodden. Can it be that the power we have always lacked is at last found, and that it only remains to learn to guide it?

Let me, in answering, compare the case to that which would present itself if the actual ocean had never been traversed because it was always covered with fields of thin ice, which gave way under the foot, which indeed permitted vessels to be launched and to float, but which compelled them to move wherever the ice drifted. Such vessels would resemble our balloons, and be of as little practical use; but now suppose we are told, "The ice which has always been your obstacle may be made your very means of transport, for you can glide over the thinnest ice, provided you only glide fast enough, and experiments will prove not only how fast you must go to make the ice bear, but that it is quite within the limits of your strength to go with the requisite speed." All this might be true, and yet if no one had ever learned to skate, every trial of this really excellent plan would probably end in disaster, as all past efforts to fly have done. Indeed, in our actual experience with the air, men have come to the same kind of wrong conclusion as would have been reached in supposing that the ice could not be traversed because no one had the strength to skate, while the truth would be that man has plenty of strength to skate, but is not born with the skill.

The simile is defective so far as it suggests that man can sustain himself by his unaided strength on calm air, which I believe to be impracticable; but it is the object of these experiments to prove that he has now the power to sustain himself with the aid of engines recently constructed, and by means I indicate, as soon as he has skill to direct them.

All the time which I have been able to give to the subject during the past four years has been spent in continuous experiment in order to determine exactly how much power is required, and how it should be applied, to sustain in rapid motion quite dense bodies in the shape of plates or planes (somewhat as a skater is sustained on thin ice), by distributing their weight over a great mass of air, whose inertia

prevents it from getting out of the way, owing to the swiftness with which they can be made to glide over it.

The experiments were made with the aid of a steam-engine of ten horse-power, which put in horizontal motion a long arm at the end of which a great variety of specially devised apparatus was connected with such planes, which were made to advance with exactly measured speeds up to seventy miles an hour.

Beginning with the year 1887, many thousand experiments of this and many other kinds were made, of which only the general result can be stated here. In one class of these trials the plane was attached to a dynamometer, which showed, in connection with a chronograph, the amount of power which made the air just support the plane, so that it neither rose nor fell, but soared along horizontally; while among the first results of observation was a demonstration of the important fact that it takes less power to sustain such a body in horizontal motion than when it is suspended over one place—a conclusion the very reverse of that formerly reached by physicists, who, not having tried the actual experiment, started from the plausible assumption that we must first see how much power it will take to keep the body suspended over one spot, and then add to that power something very much larger to find what it requires both to suspend it and to move it along.

To mention a single experiment out of many bearing on this last point, a sheet of brass in the form of a plane was suspended from the horizontal arm by a spring-balance, which, when all was at rest, was drawn out to a distance corresponding to the weight. As soon as the arm was put in movement, however, and lateral motion began and increased, the spring (which now not only sustained the plane but pulled it along) *contracted* more and more instead of lengthening, showing that the pull diminished with each increment of speed and each corresponding diminution of the inclination. It is very interesting to see with what slight power the heavy metal, when in such rapid motion, can be made almost to float on the air, and one can be convinced by the evidence of the spring-balance or the dynamometer, combined with the record of the speed, that (within the limits of experiment) it requires less and less power to maintain this horizontal transport of the plane the faster it goes. The above experiment is given only as an illustration, but the important conclusion just mentioned was not accepted till it had been confirmed by hundreds of varied demonstrations.

In another class of experiment the plane is no longer attached to the balance, but is placed horizontally, and left free to fall through a constant small distance while keeping in that hori-

zontal position, but at the same time being urged forward. Since it is not inclined either way, or, as a physicist would say, since there is no visible component of pressure to increase or diminish the time of fall, this time might be supposed to be the same whether it were dropped from a position of rest, or in such motion. Actual trial, however, shows the contrary in a very striking manner, for a plate more than a thousand times denser than the air may under such conditions be seen to settle down with an extraordinary slowness, as if it had almost parted with its weight, or, rather, as if the air had hardened under it into a jelly-like condition. The fact established here is also an important one, for it shows not only that by moving fast enough on it, air can be made to offer support like an elastic semi-solid, but, taken in connection with other experiments, it elucidates the result already referred to, and which, in view both of its importance, and of what may perhaps appear to the professional reader its paradoxical appearance, I will (to leave no doubt about my meaning) ask permission to repeat here in carefully chosen language. This general result is that "if in such aerial motion there be given a plane of fixed size and weight, inclined at such angles and moved forward at such speeds that it shall always be just sustained in horizontal flight, then the more the speed is increased the less will be the power required to support and advance it, so that there will be an increasing economy of power with each higher speed, up to some remote limit not yet attained in experiment." This is in startling contrast to all that we are most familiar with in land and water transport, where every one knows the direct reverse to be the ordinary case.

A mechanism designed to secure artificial flight by thus taking advantage of the inertia and elasticity of the air I call an *aërodrome* (air runner). In order to give a specific example of the weights and speed actually tried, I will select one out of many hundred experiments. This showed that one horse-power could transport and sustain in such horizontal flight over two hundred pounds' weight of loaded planes at the rate of fifty miles an hour; by which is meant that such planes actually did rise up from their support, under the reaction of the air at this speed, while carrying weights in this proportion to the horse-power, and soared along under all the circumstances of actual free flight, except that they were constrained to fly horizontally.

Engines have very lately been made for a special purpose, to weigh, together with a supply of fuel for a short flight, considerably less than twenty pounds to the horse-power, everything movable included. Again, less than twenty pounds is actually necessary for the

weight of a system of planes strong enough to support the engine and accessories; so that less than forty pounds being sufficient for such power and support, while two hundred pounds can be carried, a wide margin remains for contingencies.

Now planes have only been used for the convenience of getting exactly comparable and verifiable values, and as other forms of surface will probably give better results in practice, there is reason to believe that still more weight than that here given can be transported at this speed by one horse-power—that is, in level flight.

The aerial journey in fact is in this respect somewhat like a terrestrial one, where the traveler can ride over a nearly straight and level path to his destination if he can but control his steed; which, if it ran away with him, over mountains and valleys, would be behaving like an *aërodrome* having sufficient power for proper flight, yet which, if not guided into such flight, would be wasting this power in aimless efforts.

These experiments also indicate in general what difficulties are to be avoided to secure such guiding, but the memoir confines itself mainly to showing the principles on which machines can be built, which will demonstrably fly with the power now at command if we can but thus guide it. The present memoir does not undertake to teach in detail how to steer a horizontal course, how to descend in safety, or the like,—all very important matters, but subordinate to the main demonstration.

If asked whether this method of flight will soon be put in practice, I should have to repeat that what has preceded is matter of demonstration, but that this is matter of opinion. Expressing, then, a personal opinion only, I should answer, "Yes." It is hardly possible that these secondary difficulties will not be soon conquered by the skill of our inventors and engineers, whose attention is already beginning to be drawn to the fact that here is a new field open to them, and though I have not experimented far enough to say that the relations of power to weight here established for small machines will hold for indefinitely large ones, it is certain they do so hold, at any rate far enough to enable us to transport, at speeds which make us practically independent of the wind, weights much greater than that of a man. Progress is rapid now, especially in invention, and it is possible—it seems to me even probable—that before the century closes we shall see this universal road of the all-embracing air, which recognizes none of man's boundaries, traveled in every direction, with an effect on some of the conditions of our existence which will mark this among all the wonders the century has seen.

S. P. Langley.

TOPICS OF THE TIME.

The Sub-Treasury Cheap Money Plan.

THE sub-treasury scheme of the Farmers' Alliance is in many respects the most extreme form in which the cheap money delusion in this country has manifested itself. It is so extreme, in fact, that many of the Alliance leaders have refused from the outset to give it their approval, and others of them who at first viewed it with favor, after examination and discussion of its provisions, have withdrawn their approval. At first it made great headway in the South, but earnest, intelligent, and courageous exposure of its dangerous fallacies by leading politicians and newspapers has so far educated the people upon the economic principles involved that it has been losing ground perceptibly during the past three months. A veritable campaign of education has been in progress in several Southern States, with this scheme as the text of public discussion, and the beneficial results afford a striking illustration of the high patriotic service of courage and conviction in politics and journalism.

The sub-treasury scheme made its appearance in the last Congress, when a bill embodying its principles was introduced in both houses, having been prepared by the National Legislative Committee of the Farmers' Alliance. Briefly summed up, it provided for the appropriation by the Government of \$50,000,000 to be used for the erection of warehouses in various parts of the country for the storage of cotton, wheat, oats, corn, and tobacco. Every county which had an annual production of these staples exceeding \$500,000 in gross value was to be entitled to a warehouse. A petition was to be sent to the Secretary of the Treasury asking for its establishment, accompanied by the title of a suitable site to be given to the Government. The Secretary of the Treasury was to appoint a manager, who should give bonds for the faithful performance of his duties, and should receive a salary of not less than \$1000 and of not more than \$2500, proportionate to the business done. Any owner of cotton, wheat, corn, oats, or tobacco might take his crop to the nearest warehouse, deposit it, and receive in return eighty per cent. of its market value in treasury notes, the manager deciding what that market value should be. These treasury notes were to be specially issued for this purpose by the Secretary, no note to be less than \$1 nor more than \$1000, to be legal tender for all public and private debts, and good as part of the lawful reserve of national banks. The manager was to give a receipt for every deposit of produce, showing its amount, grade, or quality, value at date of deposit, and amount advanced upon it, with rate of interest one per cent. per annum, and with insurance, weighing, warehousing, classing, and other charges deducted. These receipts were to be negotiable by indorsement. Produce deposited might be redeemed at any time by a return of the receipt and money advanced on interest, and the payment of all warehousing charges. The money returned was to be destroyed by the Secretary of the Treasury. If

there were no redemption of a deposit within twelve months, a sale was to be ordered for the reimbursement of the Government.

Let us see how this would work in practice. The warehouse managers, who are to decide upon the market price of the produce, would, in nearly all instances, be appointed through political influence, which is tantamount to saying that they would have little expert knowledge of the duties which they were to perform. These men would have absolute power to decide upon the sums of which the Government was to advance eighty per cent. There are, for example, eleven full grades of cotton, and about as many half grades, and there are about thirty grades of wheat. The manager must decide not merely the grade but the price as it is fixed in the markets of the world at the time. If he is an honest man and fairly capable, the opportunity for serious blunders would be very great. If he is a dishonest, or ignorant, or prejudiced, or malicious man, can any one estimate the evil and injustice of which he might be capable? He could overrate the produce of all his political and personal friends, and underrate that of all his enemies or rivals, and there would be no appeal from his decisions. The impossibility of having a just and uniform basis for the eighty per cent. advance in all the warehouses, or even in one of them, would from the outset throw fatal doubt upon the value both of the treasury notes and of the certificates of deposit, giving them at once a depreciated and uncertain standard.

The farmers who are misled into favoring the scheme think that they would receive at once a loan of eighty per cent. of the full value of their crop at only one per cent. interest, but they would pay much more than that. The warehousing, insurance, and other expenses for cotton, for example, are usually between eight and nine per cent. of its value. This would have to be paid to the Government, and would bring the interest up to nine or ten per cent. On wheat and other products there would be similar expenses, which would raise the interest on deposits of them to nearly or quite the same limits. The rate of interest, therefore, is not low enough to be beneficial to farmers who hope by this means to pay off existing debts at legal rates of interest. What a farmer would receive would be a loan for one year from the Government at the rate of nine or ten per cent. of a sum amounting to four-fifths of the total value of his crop paid to him in money of uncertain value. For the remaining fifth he would receive a certificate whose value would depend entirely upon what he got for it in open market. No buyer would ever offer him the full price as fixed by the warehouse manager, for there would be too many uncertainties about the crop's redemption to make the certificates a safe investment for anybody. They could only be negotiated at a heavy discount at best, and in many instances would scarcely be negotiable at all.

If warehouses were established, there would be a tendency among all farmers seeking an immediate market to put their produce into them. One of the advocates of the scheme estimated before a committee of the

Senate that the deposits would be so large as to require an addition of one thousand millions of dollars to the currency in January and February of each year. This flood of currency, all of which would be based upon uncertain and varying bases of valuation, would be accompanied by another flood of certificates of deposit. The Government would turn out these notes and certificates, and their receivers would at once put them in circulation. Their value would depend entirely upon the popular estimate which should be made of their purchasing power. The fact that the notes had been declared a legal tender would not add a particle to their value. The people would make their own estimate of the prospect for the fulfilment of the promise upon which they were based, and that estimate would fix their value.

What would be the prospect for this promise to be fully kept? If prices went down after the deposit, the produce would be left there till the very end of the year and sold for what it would bring. The effect of throwing a great mass of produce upon the market at one time would be to lower still further the price, and the result would be a great loss to the Government which must be made good by taxation. As the farmers of the country pay about half of the taxes, they would thus have to pay half of the cost of their own folly. From the nature of the case a falling-off in value would be almost inevitable, for speculators and purchasers would be interested in waiting for a forced sale, being thus certain of buying at a lower price. In case there should be a general rise after deposit, the chances would be that the farmers most in need of profiting by it would not be in a position to do so, for the poorer ones would have parted with their notes as soon as received, in payment of their debts, and would have also sold their deposit certificates at the first opportunity. Whatever rise there might be, therefore, would go to the advantage of the speculators in certificates.

As for the depreciated value of the notes issued in such volume, there can be no doubt upon that point. It would be fiat money of a more worthless kind than any which has hitherto been issued. It would be more worthless than the land-bank money of Rhode Island, because that was based upon the land of the State. It would be more worthless than that of John Law's bank in France, for that was based upon all the property of France. It would be more worthless than that of the Argentine Republic, for that was based upon all the landed property of the nation. In all these instances the fiat money was declared to be a legal tender and to be payable for public and private debts. In all of them it was issued for a term of years. But this warehouse-deposit money is based upon nothing except the arbitrary judgments of an irresponsible body of political appointees as to the value of products a year hence, and is to be destroyed at the end of a year. Nobody would ever consent to take it at its face value in payment of a debt, or in payment for goods, and it would be confined, as the Rhode Island paper money was, almost entirely to transactions among its original holders. It would enormously inflate prices in the communities in which it circulated, and thus make dearer everything that the farmer had to buy. But it would never be received elsewhere except at a discount, and consequently would have no effect in raising the price of the products of the farmer, which have to be sold in the markets of the world.

Then, too, each period of enormous inflation would be followed by a period of sudden and almost paralyzing contraction, for at the end of each year all the notes and certificates must be destroyed.

We have said nothing about the unconstitutional aspect of the proposition for the Government to go into the business of loaning money and speculating in crops—a form of paternalism the most extreme ever proposed in this country. One of the advocates of the measure, when asked at a hearing before a Congressional committee why its authors had not included wool, hops, rice, and cheese with the other produce specified for deposit, made answer that those staples were protected by a high tariff, 75 per cent. on wool alone, and were not entitled to further aid from the Government. Whatever virtues may reside in the protective system, it is unfortunately true that to the arguments advanced in defense of a high tariff we owe the impression, so strong among many portions of the population, that it is the duty of the Government to render assistance to all industries and occupations whose members are in distress.

Notable Civil Service Reform Gains.

WHILE the past year has not been marked by as much progress for civil service reform as its advocates hoped to see, there have been some advances made which are of great value. The first of these came in the form of two decisions by the New York Court of Appeals sustaining the constitutionality and validity of the State civil service law. The second was the order of Secretary Tracy, issued in April last, directing that the working forces of the chief navy yards of the country should be placed under civil service reform regulations.

The decisions by the Court of Appeals were on suits brought by the Buffalo Civil Service Reform Association to compel the municipal authorities of that city to obey the law and enforce faithfully its requirements. Two inspectors, one of streets and the other of health, had been appointed in utter disregard of the civil service law, and the city council had refused to allow the mayor's estimate for salaries and expenses attending the execution of the civil service law, cutting it down from \$1000 to \$50. The Civil Service Reform Association obtained an injunction restraining the inspectors from drawing any pay. The case was tried by the Supreme Court and decided in favor of the association. An appeal was taken to the General Term with the same result. The case was then carried to the Court of Appeals, and the judgments of the lower courts were affirmed without dissent. When the city council refused to allow the mayor's estimate for salaries and expenses, the clerk of the civil service commission, who had been appointed by the mayor, brought suit against the city to recover his salary. He also won his case in the lower courts, and the judgments were affirmed by the Court of Appeals, without dissent, as in the other case.

In delivering the two opinions in these cases the judges of the Court of Appeals took occasion to express their approval of civil service reform principles in the warmest terms. The opinion in each case was written by Judge Rufus W. Peckham, and as it was concurred in by all the other judges, it stands on the record as the unanimous expression of the views of the highest judicial body in the State. As such it is worthy of careful consideration, as showing the deep impression which the reform has made upon thoughtful and trained ju-

dicial minds. The opinion in the case of the two inspectors began with a comprehensive statement of the growth of the civil service reform movement, in which, after describing the condition to which the public service had been brought by adherence on the part of the appointing powers to the "semi-barbarous maxim that 'to the victors belong the spoils,'" the need of a better system was impressively stated as follows:

The chief reason for an appointment was the political work done by the applicant, and his supposed power to do more, and thus an appointment to an office in the civil list was regarded as a fit and proper reward for purely political and partizan service. No one can believe that such a system was calculated to produce a service fit for the only purpose for which offices are created, viz., the discharge of duties necessary to be performed in order that the public business may be properly and efficiently transacted. The continuous and systematic filling of all the offices of a great and industrious nation by such means became conclusive proof in the minds of many intelligent and influential men that the nation itself had not in such matters emerged from the semi-barbarous state, and that it had failed to obtain the full benefits arising from an advanced and refined civilization.

Seldom has the uncivilized aspect of the spoils system been more graphically portrayed than it is in this passage. Passing on to the steps which had been taken to secure laws bringing about reform, the court said:

The fact must be fully recognized that the duties connected with the vast majority of offices in both the Federal and State governments are in no sense political, and that a proper performance of those duties would give no one the least idea whether the incumbent of the office were a member of one political party or another.

And again, in speaking of the reform laws which had been enacted:

If the system were to be carried out to its fullest extent by appropriate legislation, and if the laws thus enacted were to be enforced *bona fide* and with cordial heartiness by the men to whose hands it would necessarily be confided, it has been confidently predicted that the improvements in our entire civil service would be such that no unprejudiced citizen would ever give his consent to return to the old order of things.

These are declarations whose truth no intelligent man can dispute, and it is of the highest public service to have them put forth from a body of such commanding influence. Reasoning from these premises, the court went on to overrule several specious pleas which had been advanced against the constitutionality of the civil service law, upholding the law at all points, and insisting upon its rigid enforcement.

In the case of the refusal of the city council to allow the appropriation for salaries and expenses, the opinion decided many questions of wide interest in connection with efforts which have been made in various legislative bodies, including Congress, to defeat the reform by cutting off appropriations for its maintenance. The court held that the refusal of the common council to place in the tax budget a merely nominal sum for carrying out the provisions of the law did not remove from the city its liability for the salary of an officer legally appointed under the law. On this point it held:

A failure between the mayor and common council to agree on any sum cannot and will not absolve the city from its obligation to pay a reasonable compensation for services thus legally rendered. . . . If it (the council) make the appropriation, well and good. If not, the officer can sue the city for the amount due, and may recover a judgment, which can be enforced like other judgments against

the city. . . . What an alderman of a common council might in good faith think was a reasonable sum is altogether too vague a basis upon which to rest a right to be paid what in fact is a reasonable sum. The proper enforcement of this general law cannot be made to depend upon the conduct of the common council or upon its consent to appropriate a sum sufficient to carry it into effect. The city may raise the proper amount if it choose to do so. It has the necessary machinery at hand for the purpose. If it choose otherwise, the law must still be executed, and, as has been seen, there is no other way so adequate or effectual for that purpose as to permit the institution of such an action as this and the recovery of a judgment with the inevitable costs and expenses which accompany such proceeding. The result will probably be that the members of a common council will in the end see that the laws of the State are certainly to be enforced, although they may run counter to the views or wishes of such members, and that the only effect of a persistent attempt on their part to obstruct or prevent their enforcement will be added expense to the municipality whose interests they misrepresent.

This emphatic and stern notification that the civil service law was not different from other laws, but must, like all others, be enforced strictly, was one which the professional politicians everywhere had long needed. They had from the time of the law's enactment looked upon it as being in some curious way a kind of statute which nobody need obey, and for the violation of which the courts would inflict no penalty. In Buffalo the city council had not only appointed the two inspectors in disregard of it, had not only refused to make appropriation for salaries and expenses under it, but for two years, while the suits growing out of their conduct were pending in the courts, they had refused to confirm veterans of the war who had passed the civil service examination and were entitled to appointments in the municipal service. As soon, however, as the decisions of the Court of Appeals were announced, all opposition to the law ceased, and from that time it has been enforced without serious antagonism in all branches of the service within its jurisdiction.

In regard to Secretary Tracy's order placing the navy yards of the country under civil service reform regulations, the effect of that and the need for it can best be stated in his own words. In a speech in Boston, delivered a few days before the order was issued, he said:

For fifty years the employment of labor at the navy yards has been the one weak spot in navy administration. Whatever the party in control of the Government, it seems hitherto to have been powerless to exclude political influence in the employment of navy yard labor. It is not enough apparently that the mechanics and workmen in the Government shops should be Republicans or Democrats; they must wear the collar of the ward bosses who run the local political machine. The practice is a source of demoralization to any party that attempts to use it, destructive to the Government services, and debauching to local and national politics. It is an ulcer on the naval administrative system, and I propose to cut it out.

In order to cut out the ulcer, the Secretary issued an order placing the force in the Brooklyn Navy Yard under the reform regulations after June 1, and the forces in the Norfolk, Portsmouth, Washington, and Mare Island navy yards after July 1. All positions of foreman and master mechanic were declared vacant on those dates, and were filled by men who passed the best examination designed to test their especial fitness for the work. The examinations were open to all American citizens, former employees entering upon the same footing as other competitors. It is obvious

that this extension of the civil service regulations, if carried out faithfully and made permanent, as there is every reason to believe will be the case, will prove to be one of the most important advances which the reform has made.

Progress of Ballot Reform.

THE year 1891 will be a notable one in the history of ballot reform, for it will mark the enactment of new ballot laws in fourteen States, bringing the number of States which have such laws up to twenty-nine, two-thirds of the entire number. We append the full list, with date of enactment and character of each law:

Arkansas.....1891	Good.	New Jersey.....1890	Poor.
California.....1891	Bad.	New York.....1890	Bad.
Connecticut.....1889	Poor.	North Dakota.....1891	Good.
Delaware.....1891	Good.	Ohio.....1891	"
Illinois.....1891	"	Oregon.....1891	"
Indiana.....1889	"	Pennsylvania.....1891	Bad.
Maine.....1891	"	Rhode Island.....1889	Good.
Maryland.....1889	Fair.	South Dakota.....1891	"
Massachusetts.....1888	Good.	Tennessee.....1889	"
Michigan.....1889	"	Vermont.....1891	"
Minnesota.....1889	"	Washington.....1890	"
Missouri.....1889	"	West Virginia.....1891	"
Montana.....1889	"	Wisconsin.....1889	"
Nebraska.....1891	"	Wyoming.....1890	"
New Hampshire.....1891	"		

Whole number.....	29
Enacted in 1888.....	1
" " 1889.....	10
" " 1890.....	4
" " 1891.....	14

In characterizing these laws as "good," "poor," "bad," and "fair" we have followed a very simple method. All the laws denominated "good" are modeled closely upon the original law in the series, that of Massachusetts, and are careful and thoroughgoing adaptations of the Australian system. They have the secret, official, blanket ballot, and they place independent and third-party nominations upon an equal footing with those of the regular parties. Fifteen laws follow the Massachusetts method in arranging the names of candidates in alphabetical order on the ballot, with the politics indicated after each name. Eleven arrange the names in party groups, with the title of the party at the top. There are twenty-three of the "good" laws, so that genuine ballot reform is an accomplished fact in one more than half the States of the Union. The Michigan law provided originally for separate party ballots to be distributed both in and out of the polling-places, but at the last session of the legislature it was amended so that at present it provides for the registration blanket ballot of the Australian system obtainable only inside the polling-places.

The remaining six laws we have put into three classes, that of Maryland being set down as "fair," those of Connecticut and New Jersey as "poor," and those of New York, Pennsylvania, and California as "bad." The Maryland law is good so far as it provides for a secret, official, blanket ballot, but it is defective in allowing any foreign voter to take a friend or interpreter into the booth with him to assist him in preparing his ballot, and in certain other provisions which are calculated to prevent entire secrecy in voting. The Connecticut and New Jersey laws are in no sense the Australian system, since they provide official ballots, but allow them to be circulated elsewhere than in the polling-places, and do not provide blanket ballots. The

Connecticut law is the cruder of the two, and it was to the defective and confusing character of its provisions that the prolonged contest over the governorship in that State, growing out of the last election, was mainly due.

The laws of New York, Pennsylvania, and California, which differ in many other respects, have the common characteristic of discriminating so heavily against independent and other third-party nominations as to pervert completely the leading principle of ballot reform. They mark a turning-point in the tactics of the professional politicians in opposition to the reform. Not venturing longer to resist the popular demand for the reform, its enemies pretend to grant it, but in doing so insidiously introduce modifications which destroy its vital principles. The foremost principle of the Australian system is that which places independent and third-party nominations on an equal footing with those of the regular parties. It was to give all candidates equal and exact facilities for having their ballots printed and distributed at the polls that the work and expense of the printing and distributing were taken from the political organizations or machines and put into the hands of the State. When the machines did the work and paid the cost they had such power over the ballots that independent nominations were beset on every side with obstacles which made their success at the polls virtually impossible except in the rare instances when they were sustained by great popular uprisings. So long as the machines paid the cost of the work it was difficult to deprive them of this dictatorial and corrupting control. By removing from them the expense and putting it upon the State, the way was open for removing from them also their exclusive control. Nobody presumed to say that they should be relieved of the expense and still be allowed to retain their control. In order to destroy their control the principle of nominations by petitions was introduced, and its justice was universally admitted. The people of the State were to bear all the expense of the election, and the State was to assure to all the people equal and exact rights under the system of voting by which the election was to be conducted.

The New York, Pennsylvania, and California laws seek to destroy this principle by placing such restrictions upon its exercise as are practically prohibitive. We speak of the New York law as it was amended at the last session of the legislature. In its original form it did not discriminate against independent nominations. We said of it, after its passage in 1890, that though it was the outcome of a compromise, it was "really an excellent measure," and that, taken in connection with the law requiring the publication of campaign election expenses, it supplied the State of New York with the "most thoroughly reformed electoral system of all the States in the Union." We did not mean by this that New York had a completely reformed electoral system, or one that could not be improved. It had the only corrupt practices act which had been passed, and a ballot law which gave the State a secret official ballot and put independent nominations on an equal footing with regular party ones. At its first trial in the election of November last the law worked well, and the chief point of criticism was the provision requiring a separate ballot for every party, instead of a blanket ballot for all. This provision led to a confusing number of

ballots, and there was a general demand for its repeal. It had been put into the law to satisfy the demands of opponents of the Australian system, and had been yielded reluctantly by the advocates of that system, who had grave doubts of its usefulness.

Instead of repealing this provision, the legislature passed a series of amendments, raising the number of signatures required for independent nominations, repealing a provision of the law which allowed an independent candidate to have his name printed upon the ballots of the regular parties as well as upon a separate ballot of his own, and substituting a provision which forbids him to have it printed upon more than one ballot. Another amendment permits any regular candidate to file a caveat forbidding the printing of an independent nomination upon his ballot. The combined effect of these changes is to make an aggregate of 10,000 signatures necessary for the nomination of a complete independent state ticket, and to make the nomination of independent candidates for separate offices in various parts of the State practically impossible, for such nominations will have to stand by themselves upon an incomplete ticket, which no voter ought to be asked to deposit.

In the Pennsylvania law the discrimination is brought about in a different but scarcely less effective manner. The signatures of three per cent. of the voters of the portion of the State over which the office to be filled extends

are required for any independent nomination, and all independent nominations must be filed so far in advance of election (49 days) as to be practically prohibitive. Then, as a still further obstacle, all independent and third-party nominations must be arranged together in alphabetical order at the end of the blanket ballot, while the regular party nominations are arranged in groups with the party title at the top. As the voter can indicate his choice for a party ticket by simply placing a mark opposite the title, but must check every name in the list of independent candidates in case he wishes to vote for them, it is obvious that the regular parties have all the advantages. The California law makes the number of signatures necessary for independent nominations five per cent. of all the voters, and requires all such nominations to be filed thirty days before election. This percentage is of itself tantamount to a prohibitive enactment.

These three laws, in fact, instead of aiding independent nominations, make them nearly or quite impossible, and thus destroy the leading principle of ballot reform, which is the facilitating of such nominations. These laws give the regular party machines a greater power than ever, for while, under the old system, they could make the printing and distributing of independent ballots difficult, under the new, as these laws pervert it, the use of all such ballots at the polls is practically forbidden by law.

OPEN LETTERS.

The Question of Pensions.

I.—A SOLDIER'S VIEW.

HAVING read with great care the article relative to pension matters prepared by Mr. Sloane and others, and published in the June number of your magazine, allow me to submit a few suggestions relative to that important topic as viewed from a pensioner's standpoint.

The article in question seems to be directed mainly against the action had in allowing arrears of pensions, and in passing what is generally known as the Dependent Pension Bill of June 27, 1890, and appears to be intended to convey the impression that our comrades who accepted the moneys granted as arrears, and those who accept the relief granted under the recent act, are unpatriotic. On their behalf I respectfully demur to the indictment.

As respects the first class I shall only ask to be shown why the comrade who waited from the time of his discharge until 1880 before asking for the pension due him at his discharge, and each year thereafter up to the time when he applied for it, and then accepted the amount found to have been due him under the law and the rulings and ratings fixed by the Department, without an allowance of one cent of interest on the amount which was legally due him during each of the several years since his discharge, is any less patriotic than I who applied for my pension promptly after my discharge in 1866, and have drawn it regularly since?

Many a comrade failed to apply from motives of the purest patriotism. He would not ask for a pension so long as he was able to support himself and family by his own exertions, because he knew that the nation was carrying an enormous debt, and its enemies were doing all they could to injure its credit and bring about the repudiation of the obligations issued during the war. After years of toil, by reason of increasing disabilities due to advancing age, he finds himself unable longer to continue the struggle unaided. He then asks for, and receives in a lump payment, the sum which is due him, and which would have been paid quarterly during the several years since his discharge had he seen fit to apply for it within one year after his discharge.

What is there unpatriotic in that case?

Nay, more; I personally know comrades to-day who were disabled during their army service, and who could be placed on the pension-roll at any time by simply filing a claim with proof of service and identity, and appearing before any examining board of surgeons north of Washington, who have never applied for pensions, and probably never will, because they know that the national debt is not yet paid, and they have been, and are, able to care for themselves and dependent ones without aid from any quarter. If the author of your recent article has any extended acquaintance among the survivors of the Union army, he doubtless knows of many such cases.

As regards the merits of the act of June 27, 1890, allow me to submit a few facts relative to the practical

working of that act which appear to have escaped entirely the notice of Mr. Sloane.

We will first note the existing conditions which prompted the action embodied in that bill. The lapse of years, the infirmities incident to age, and casualties of various kinds, had rendered large numbers of our old comrades incapable of self-support. The county poorhouses and other refuges were becoming crowded with such inmates. Their disabilities, being of a nature not directly connected with or chargeable to their army services, or perhaps due to accidental injury received since discharge, left them without the pale of relief afforded by existing pension laws. Hence the burden of their support was falling directly on the surviving comrades of the Grand Army of the Republic and other charitable organizations, and on the taxpayers of the several counties where these disabled ones had been forced to seek shelter in the county-houses.

In this manner the citizens of such counties as had been most patriotic and had furnished the largest quotas of their able-bodied sons for the defense of the nation were now being rewarded (?) by the assessment of extra heavy taxes for the support of their county poor. It was the intent and design of the act of June 27, 1890, to lift that burden from the shoulders of the taxpayers of such counties and place it upon the shoulders of all taxpayers, to the end that those who had made no sacrifice of life, blood, or treasure might contribute at least equally with those who had given of their best and bravest for the maintenance of the national life.

The practical working of the act is good. Many a comrade who had been forced to seek shelter in the poorhouse now finds that with the aid of the modest sum allowed under that act, and with what he is still able to do towards his own support, he can once more resume his place as a citizen and become again a worker among his fellows.

As the sums granted under said act cannot exceed \$12 per month, and no veteran is placed on the roll unless he is disabled to the extent of two-thirds of total disability and therefore entitled to a rating of \$6 per month or more, there appears to be but little chance for the undeserving or the malingerers to be successful in an effort to secure pensions thereunder. No pensions of from \$72 to \$100 per month can be paid thereunder to men who are able to earn salaries in positions worth \$4000 per annum, as occasionally happens under other pension acts, special and general.

It is not alone in the benefit conferred upon the disabled comrades included in the terms of this act, and upon the taxpayers resident in the several counties where they reside, that the most beneficent effects of this legislation are found. The widows of this class of comrades — where the death cause is not chargeable to their own vicious habits — are now promptly granted a pension of \$8 per month, and many are thus enabled to keep their children about them and to raise and to care for them as mothers. Otherwise they would be obliged to break up their homes, and see their children sent to charitable institutions or abandoned to the care and custody of strangers.

It is true that the large majority of our old comrades are poor men; as respects the accumulation of wealth, the man who gave from three to five of the best years of his life, generally between the ages of twenty and thirty, on returning to civil life found himself handi-

capped in the race. Where there is one among us with wealth enough to care for him and his, and also to share to aid a destitute comrade, there will be found in any large gathering of old comrades thousands who, like myself, are wholly dependent upon their pensions and their daily earnings for the support of their dear ones. It is dire necessity, not want of patriotism, that has at times prompted the "demands" for equitable pension legislation that are so severely animadverted upon by Mr. Sloane and his coadjutors in your recent article.

With a word as to my right to speak as a representative soldier I will close this already long protest. I served continuously from early in April, 1861, until July, 1866, during the late war; was shot through the lung at Antietam, in September, 1862, and lost a leg at Gettysburg in July, 1863. The first ten years after my return to civil life were spent in the office of the Second Auditor of the Treasury Department adjusting the claims of our comrades, their widows and orphans, for arrears of pay, bounty, etc. The next ten years were spent in the General Land Office adjudicating contests arising between the different claimants under the railroad grants, and the contests between the settlers on the lands within the granted limits and the railroad companies, etc. Numbers of those settlers were soldiers. Since then I have been employed as a special examiner of the Pension Bureau in the investigation of cases requiring special examination. I have worked in many different States both east and west of the Mississippi, and in Florida, Alabama, and Georgia; have always belonged to the G. A. R. since it was established, and have met many thousands of veterans at State encampments and G. A. R. camp-fires, etc. East, West, and South, and in the regular course of my business and duties. I have had ample opportunity to become well acquainted with the feelings and aims of my comrades of the late war, their desires, hopes, and aspirations. Having thus passed thirty years of my life in the service of my country and my comrades, I feel that if I am not, *I ought to be* qualified to speak as an expert on this matter.

I know that while it is true that some comrades will be found at times who are clamorous for the passage of a service pension bill, there are but few who will not listen to reason, and upon receiving an explanation of the probable expense and the increased taxation which would be necessary in such a case, and the fact that such a measure is in conflict with the very genius of our institutions, in that it tends to create a privileged class, etc., and that if we once admit the validity of a claim for pensions for service in the army, no valid objection can be made to a claim for distinguished service in the diplomatic corps or other branches of the Government service, and thus our nation would soon be burdened with a pensioned "civil list," as the British Empire is at present — when these facts are clearly placed before them, even the most thoughtless will promptly admit that it is safer to adhere to the governing rule, as heretofore established, and make disability the basis of all pension legislation. And *all* will admit that they do not want a service pension if it is to endanger the pensions allowed to their disabled comrades, or to the widows and orphans of those who have been mustered out and are now awaiting the final roll-call.

As a survivor of the late war I cannot but feel deeply when I see the motives of my comrades impugned, and

if I have used too strong language in their defense, I hope it may be pardoned. I frankly admit that I do feel proud of my comrades and their record in the war for the Union. The humblest one who volunteered and followed the old flag has thereby earned the right to have his name inscribed upon the roll of honor and to be cherished and remembered through all time and eternity; yea, even until the "heavens shall be rolled together as a scroll," and the universe shall be dissolved in showers of star-dust never again to be gathered.

Frank Bell.

II. — REJOINDER BY PROFESSOR SLOANE.

YOUR readers will doubtless admire, as I do, the repression and good temper of Mr. Bell's letter, but they cannot fail to note exactly the same unmoral pleas to which the article on "Pensions and Socialism" called attention.

1. He admits that right-minded veterans have not drawn the pensions they might legally have secured under the Arrears Act because disability through army service was not such as to prevent their earning a living for themselves and their families; but he can see no difference between these patriots and those who, taking the law as their only standard of right, clutch what they can get, without caring whether their disability was due to military service or to hereditary ailments and the ordinary risks and toils of the times of peace between the close of the war and 1880.

2. He also admits with creditable frankness that soldiers enfeebled by age, or sickness not due to military service, are, under the act of June, 1890, the recipients of alms disguised under the name of pension. But he says nothing of the dismay of the honest pensioner who sees the name prostituted to cover quite another thing, nor of the well-used opportunities for dishonesty which the bill created. I cannot hear of a single rural community where public morality has not suffered by the tolerance in it of men known to be drawing pensions (*sic*) they have not deserved, secured too often, alas! by false swearing.

3. It is not true that the soldier who returned from the war in good health was handicapped in the race. (The preference of veterans in the public service is well illustrated by the case of Mr. Bell himself.) On the contrary, the life of the moral soldier was a wholesome life; the training of the army made him more adaptable for all uses than other men, and it is generally believed that most of the fighting and exposure throughout the war fell on less than one-third of the total number enlisted. The general poverty of the so-called veterans to which Mr. Bell refers, if it exists at all, and its existence is certainly doubtful, is due to causes utterly unconnected with the war.

4. Your readers will also observe the phrases, "due him under the law," "legally due him," at the beginning of Mr. Bell's letter, and the very different ones, "inscribed upon the roll of honor," "cherished and remembered . . . until . . . the universe shall be dissolved in showers of star-dust," etc., which occur at the close. To him there appears to be some connection between them, as if the latter were the climax of the former. My object was to show that in yielding to temptation and taking advantage of public sentimentality and a fallible human law, the claimant so far destroyed his

own claim to either respect or honor, and, more heinous still, dragged in the mire the very name of veteran so cherished by the honest soldiers and the nation at large.

The generation of men now coming into the ranks of public service, while too young in 1861 to enlist, knew well the questions at issue and the horrors of the war. It yields to no older one in devotion to the principles for which the army fought, and cannot endure to endanger or lose those very jewels thirty years later by weakly yielding either to the threats of sturdy beggars or to the unconsidered requests of honest and honorable feebleness, which takes refuge too often with the former class instead of seeking help where alone it can be had without dishonor, among the Christian philanthropists who are abundant in all American communities, and who would gladly pay millions for their country's honor, but refuse one cent for tribute even to their loved veterans. It would be very instructive to print the letters which have been sent me within the last month by soldiers who fought for three years, or more or less, actually demanding the repeal for their sakes of the acts which disgrace their true manhood; but the space at my disposal of course forbids me to do so now.

William M. Sloane.

Weakness and Danger of the Single Tax.¹

FIRST.—The advocates of the single tax on land values, with one accord, emphasize the epithet "single." Their distinguished leader has declared all other taxes to be either stupid or unjust or both. To make room for this exclusive plan all existing ways and means of raising revenue, national, State, and local, must be cleared away. The tariff, the internal-revenue imposts, the liquor licenses of States and cities, any existing taxes on franchises, on railway receipts, on successions—all must be abandoned, and no other projects for raising revenue, such as an income tax, must be entertained. The single tax is nothing if not "single"; it is not one which might be engrafted upon the stock of an existing system, whose elements might gradually give place to its expanding efficiency. It calls for the obliteration of all our traditions and ideas regarding taxation; such as the idea that as all persons are under the protection of the state, so all persons may, if the public needs require, be called upon to contribute not only their services but their wealth to the support of government and its reasonable purposes. The single-tax doctrine is not to touch persons as such, but only as they are receivers of the public in the income and profit of land. There is an idea that as all forms of property are protected by the state, they may all be, of right, subjected to taxation, if the public needs require. The single-tax men know of only one kind of property which may be justly taxed. Again, there is the idea that as all industries and employments are protected by the state, the government may, if public needs demand, collect some fraction of the income and profit of industry. There is no possible room nor justification for an income or succession tax under the single-tax régime.

There is another idea which has played a great part

¹ The reader is referred to a discussion of "The Single Tax," by Henry George and Edward Atkinson, in *THE CENTURY* for July, 1890.—ED.

in the history of the Anglo-Saxon race, embodied in the epigram, "No taxation without representation." Defiance of this immemorial tradition cost one of the Stuart kings his crown, and his head to boot. "No taxation without representation" was the cry which nerved the hearts and steadied the aim of the embattled farmers at Lexington and Concord. Long usage has settled the import of this maxim. It imports not merely that they who are not represented are not to be taxed, but also that they who are *not taxed* ought not to be *represented*. In conformity with this established usage, and in obedience to universal sentiment, the framers of the national Constitution provided that representatives and direct taxes shall be apportioned according to population, and not according to property or values of any kind. Representation and direct taxation are, in the national code, coextensive and inseparable.

These ideas are embodied in our State constitutions, some if not all of which provide specifically that taxes shall be as nearly "equal" as may be. It will take a long time to persuade American taxpayers that "equal" may mean the laying of all taxes upon some one class of people or some one kind of property.

Supposing, however, that all such ideas and traditions had been by some magic eradicated, and a single-tax scheme to have been actually formulated, how would it work under a system of government as complicated as our own? We have three systems of taxation working side by side, and two independent government agencies of tax administration. We have a national system of indirect taxation by means of imposts on imported merchandise, and by internal-revenue excises on certain selected articles. We have State taxes and local taxes, mostly direct, administered by a mixed agency of State and local officials. The single-taxers demand a revolution of these systems. Suppose that possible, the question arises, What agency do they propose to employ? There would be no sense in using two or three agencies for administering a single-tax system. Some one of these must be made the primary agent for obtaining the single-tax revenue, and be required to pay over to the other one or two their respective shares as the same may be ascertained. Would the State government subordinate itself to town and city authorities in this matter? On the contrary, the power of local taxation by cities and towns would vanish away, and the municipalities would have to content themselves with such moneys as the legislature would dole out to them. Local government, the pride of American and Anglo-Saxon freemen, would of consequence disappear.

But how would the State governments fare when it came to the question whether they or the national Government should be primary collectors of the single-tax revenue? Does not every school-boy know that we changed the government of the United States one hundred years ago from a confederation to a national union chiefly because the States could not be persuaded nor compelled to collect and pay over the "single tax" on improved lands provided for in the Articles of Confederation?

The framers of the Constitution applied themselves to make a national government which should not need the interposition of any State to raise and collect its revenue. They put into that document a power to raise revenue, absolute, unassailable, irrevocable, and this

power has been defined and supported by a long course of supreme adjudication. The single-tax scheme, if worked at all, must be executed by the general Government and its agents, and the States and all municipalities throughout the States will enjoy only such revenues as Congress may see fit to apportion and pay over. Under such a scheme the forms of democracy might indeed survive, but the state and the government would, in essence, be imperial.

For these reasons, (1) the impossibility of clearing away at a single sweep all existing taxes, (2) the persistence of ancient custom and doctrine, (3) the peculiar and complicated nature of our American government — for these reasons, not to mention others, the exclusive tax on land values has no claim to consideration as a practical working scheme in this country in our day.

SECOND.—If the single tax be examined as a mere theory it will be found that its advocates make certain tacit assumptions which, when expressly stated, are seen to be false. They assume, for example, a state of universal and continuous peace. Deprived of every means of raising extraordinary revenue for war purposes, the nation, invaded and beleaguered, must lay down its arms and accept the terms of the foe at the point where the single-tax receipts shall have been exhausted. Were that the doctrine of the world, one single nation not so scrupulous about collecting taxes from persons, chattels, incomes, franchises, and successions, might soon dictate the conditions of existence to all the rest. The single tax thus endangers, if it does not deny, the right and power of nations to maintain their organized existence. The old common-law doctrine is safer and better, that a free and brave people may "rob the cradle and the grave" to recruit their defensive force, and throw the last dollar they can wring from the orphan and the widow into their military chest.

These single-tax dreamers assume the continuous and universal advancement of society — population always on the increase and evenly so, wealth increasing, intelligence and virtue always abounding more and more. The world does move, has moved, but never on any continuous line of advance by steady and unbroken march. The lot of civilized man in general has been painful and stormy. The progress of particular nations has been "by fits and starts"; periods of depression succeed epochs of advance as by a kind of rhythm. There have been times in the history of this country when the rental value of land in some States would not have paid the salaries of the town clerks. Fortunately our "unjust and stupid" taxes on imports and incomes, on property of many kinds, saved us from political marasmus.

The progress of wealth and population is not uniform in different parts of the country. Population shifts and industries migrate. Rents go down in New England and go up in the Dakotas. The census returns show that the population of counties in the older States, and even in some of the newer ones, is declining from decade to decade. In such counties the revenue from a single tax on land values might be a minus quantity. It may however be expected by the single-tax advocates that the great national taxing machine will in some way compensate for such inequalities.

The enthusiasts again make no allowances for those disasters which in every generation wreck cities, dis-

mantle provinces, and even involve continental areas in vast loss and ruin. Famine is chronic in India and China. In the latter empire only three years ago 1,500,000 people were homeless or starving from the overflow of a single great river. Would an exclusive tax on land values be the only appropriate source of revenue for the provinces thus desolated? It is only a few years since several counties of a Western State, on the eve of a promising harvest, were visited by the red-legged grasshopper and swept as clean of vegetation as the pavements of a city. Would the doctrine of the unearned increment have been a solace to those stricken farmers? Would a single tax on city lots have been a convenience and a boon, to the people of New Ulm and Rochester and Sauk Rapids after they had been swept by the tornado? States, like men, do wisely not to carry all their eggs in one basket. It is a principle of taxing systems to distribute the burden so that no one class, nor any one kind of property or industry, shall be ruined in case of disaster. There is no safety-valve to the single-tax boiler.

Passing by a group of other assumptions of interest to economists, such as that land is the only form of wealth which increases in value as population swells, that value and utility are interchangeable terms, and that value is a result of production and not an outcome of exchange, we reach the fundamental postulate of the single-tax optimists, which is that all land belongs to everybody. This statement is only the exaggeration and caricature of a doctrine that is true, but only true within reasonable limitations, and as understood by reasonable persons, who know the inadequacy of language to express all that is in the minds of men. We assert the equality of all men, and we understand that word in a certain reasonable way. We say, for example, that governments derive their just powers from the consent of the governed, and the statement is true, but only true in a reasonable sense. The words do not import that any individual or clique or party may withdraw consent, refuse to pay taxes or to serve on juries, nor that resident aliens, minors, paupers, and idiots may vote. The state in a certain true sense owns all its territory, but that truth does not conflict with the right of citizens also to own lands. The doctrine that the land of the world belongs to God's children is a harmless truism of no practical efficacy; "void," as lawyers phrase it, "for uncertainty." Property is an institution, an inheritance, not a theory. Rights, practical, reasonable, legal rights, do not descend from the clouds; they have grown up out of human experience and the nature of things. Finally (under this head), these amiable proselytes neglect to take any account of the probable political consequences of their scheme, provided it were possible to clear the way for it.

It is a common experience of nations that changes in their economic institutions are followed by totally unexpected consequences: so short is the sight of the wisest men. But there is one consequence of the scheme under discussion which experience may warn us from pursuing. Put all your taxes on any one class of persons and you at once consolidate the members of it into a compact body, ready either to embarrass and to oppose the government or to take possession of the powers of the state and to dictate the laws. If the class selected be the land-holding people,—and that class embraces a large majority of the voters,—all ex-

perience teaches that they will surely and rapidly establish themselves as the ruling class in the state. In this day of large production, when the fashion of large farms worked by machinery is coming so widely into vogue, we should not have long to wait before a landed aristocracy showed its powerful grip upon our legislative departments, placed its best man in the executive chair, and filled the bench of our supreme tribunal with judges whom it could depend upon. Mr. George himself suggests the best reason of all for expecting this result. On page 384 of "Progress and Poverty" he says: "The tax on land values is the only tax of any importance that does not distribute itself. It falls upon the owners of the land, and there is no way in which they can shift the burden upon any one else." He was thinking at the moment as an economist, not as a politician. Lay the taxes on landlords and you may trust the real-estate lawyers to find them a political way of escape from the burdens.

It is with difficulty that the people now submit to direct taxation in amounts sufficient to support the institutions which modern states must needs maintain. The public schools are ill equipped, the teachers poorly paid. Would things be bettered if the fortunes of the state were placed in the hands of the land-holding class? That class would name the assessors, dictate the rates and valuations and the purposes to which revenue should be applied, or human nature will have undergone a new creation.

THIRD.—Finally, the single-tax plan is not a plan of taxation at all in the proper and accepted sense of the word, and it was not originally proposed as a plan of taxation proper. There are two ideas inherent in the word tax, or rather two phases of one idea. The word, at bottom, means to apportion by cutting, and we have the principle on the one hand that taxes must be *proportioned* to the public needs, and on the other, *apportioned* equitably among the people who are to pay. These principles are reasonable, of universal acceptance, and of immemorial usage. No free people will for a moment consent that their agency, the government, may assess and collect taxes *ad libitum* and without regard to the purposes and duties of government. Nor will a wise people, by imposing the burdens of the state on any one class, lay the foundation for a claim by that class to rule the state. Exactions of money, goods, or services not proportioned to public uses, and not apportioned to private ability and interest, are not, in any just sense of the word, taxes. The proposed single tax is but a piece of remedial social policy. Its advocates hold that under existing conditions human progress is and must continue to be accompanied by poverty—deepening, widening, irremediable poverty. They refuse to admit that such means as better government, better education, better habits, coöperation, and so on, can have the least effect in counteracting this tendency, whose cause they find in the private ownership of land. Private property in land they declare to be a "bold, bare, enormous wrong, like chattel slavery"; for this alleged wrong they see but one remedy—the utter abolition of private property in land.

Mr. George is of opinion that it would be socially just and economically advantageous to abolish all private titles by a single stroke of legislation, but thinks it better to "accomplish the same thing in a simpler,

easier, and quieter way " In "Progress and Poverty," on page 364, he says, "It is not necessary to confiscate land; it is only necessary to confiscate rent." Here we have the core and essence of the single-tax philosophy — confiscation, frankly and for the moment boldly, confiscation: confiscation of rent, because that will lead to virtual confiscation of land. Thus without jar or shock land would "be really common property." How genial the suggestion of doing things in a simple, easy, and quiet way, instead of resorting to the honest but rough-and-ready plan of universal eviction!

Mr. George is indeed so mild-mannered a mutineer that he will not scare his fellow citizens with a naughty word. He hastens to replace that malodorous term with another which may hold up its head in any respectable circle. These comfortable words may be read on the page just quoted: "What I therefore propose as the simple yet sovereign remedy which will

raise wages,
increase the earnings of capital,
extirpate pauperism,
abolish poverty,
give remunerative employment to whoever wishes it,
afford free scope to human powers,
lessen crime,
elevate morals, and taste, and intelligence,
purify government, and
carry civilization to yet nobler heights, is

to appropriate rent by taxation."

Is this honest? Is it candid to say "appropriate rent by taxation" when confiscation of land is meant? Confiscation and taxation are not synonymous and interchangeable terms. They are diverse and irreconcilable terms. Taxation implies apportionment to public needs and private ability. Confiscation means seizure to the public treasury in an arbitrary way. In this case it is specifically insisted that the collection of rental value is not to be gauged by the regular and usual demands of the state. The whole or "nearly" the whole rental is to be extorted; for if not, the object in view, which is not revenue, but virtual confiscation of land, will not be effected. If more than a scintilla of rent remains in the hands of the landlords, they will have the advantage of society. It is admitted that the rental value of land "in well-developed countries" is now more than enough to support the government, and will increase with the progress of society. Confiscation, however, is to go on, and the swelling surplus is to be disposed of by the establishment of "public baths, libraries, gardens, lecture-rooms, music and dancing-halls, theaters, universities, technical schools, shooting-galleries, playgrounds, gymnasiums, etc." The end of the socialist is to be reached without alarm or violence. In a matter involving a revolution in government, the reconstruction of society, and the abandonment of immemorial institutions, the idea of effecting the object by indirections and the use of smooth words is amusing, not to say nauseous. No one will be deceived. The four millions of farmers in the United States, before they cast their ballots for "appropriating rent by taxation," will understand just as well as the most ardent apostle of the single tax that "this simple device of placing all taxes on the value of land" will "be in effect putting up the land at auction to whoever" will "pay the highest rent to the state." The object of this paper being simply to expose the true nature and original purpose of the so-called single tax, it is not necessary

to enter upon any defense of the institution of property in land, nor to apologize either for defects in our existing land laws or for acknowledged evils in our present system of taxation for revenue.

William W. Foltwell.

A British Consul's Confidence in the Union Cause.

THE following despatch (for a copy of which, made from the original in the British Foreign Office, THE CENTURY is indebted to Lady Archibald) was written by Sir Edward Archibald, Consul-General at New York, to Lord John Russell, "Her Majesty's principal Secretary of State," eleven days after the fall of Fort Sumter and three months before the first battle of Bull Run. It is remarkable for its estimate of the temper and resources of the North, for its prediction of the ultimate failure of secession, and for its advice to the British Government that from motives both of humanity and policy it should ally its influence and sympathies with the Union cause.

BRITISH CONSULATE, NEW YORK, April 24, 1861.

MY LORD: I have the honour to report to Your Lordship that there has been no communication by mail or telegraph to or from Washington since Friday afternoon. During the last two days we have had rumours that the authorities of the State of Maryland had undertaken to restore the railroad communication through Baltimore, and reestablish telegraphic communication with the national Capital; but thus far nothing appears to have been done in this respect, and as, in the sadly disturbed state of the country, the special messenger with Lord Lyons's despatches for this packet may possibly fail to arrive before her departure, it may perhaps be needful that I should give Your Lordship a brief review of the startling events of the past few days, and a report of the existing condition of public affairs in this country.

Your Lordship will have learnt from Lord Lyons of the bombardment of Fort Sumter by the forces of the Confederate States, and of its evacuation on Sunday the 14th instant. A full knowledge of the whole of this affair leaves no shadow of doubt that Major Anderson, and the very slim garrison under his command, displayed great courage and gallantry, and succumbed only when deprived of the capability of further resistance. Why the naval expedition sent from this port for the reinforcement of the Fort did not coöperate with its defenders or send them assistance has not yet been satisfactorily explained.

On Monday the 15th President Lincoln issued his proclamation calling out a militia force of 75,000 men to aid in executing the laws, and ordering the combinations of lawless men in the seceded States to disperse within twenty days, and at the same time summoning Congress to meet on the 4th July next in special session.

The ambiguity of the President's inaugural address, the subsequent vacillating and apparently objectless policy of his Government, and the useless efforts of the Peace Conference at Washington and of the Virginian Convention to establish a satisfactory basis of reconstruction of the Union, had combined to produce a state of apathy and indifference in the public mind, which seemed almost introductory to a recognition of the Southern Confederacy as the readiest solution of the complicated condition of public affairs.

But the attack upon and capture of Fort Sumter, followed by the President's proclamation, caused a sudden and complete transformation of public sentiment. The ulterior revolutionary designs of the Confederate leaders, and the sedulous preparation they had made to accomplish them, were now fully comprehended; and the stinging insult which had been inflicted on the national flag by the merciless bombardment of Fort Sumter and its starving garrison roused such a feeling of intense indignation throughout the entire North and West that the President's proclamation was responded to with an enthusiasm for which he himself could not have been prepared, and which it is hardly possible adequately to describe.

The whole population of the free States, as it were one man, sprang to its feet on the instant, determined to sustain the Government, vindicate the honour of the national flag, and effectually quell the rebellion. Political differences of every kind were at once hushed, and there was but one heart, and one voice, in the unmistakable declaration that not only should the Government be upheld, but the Union be preserved, at whatever cost of blood or treasure.

During the whole of the last week, and up to the time I now write, the most vigorous and energetic efforts have been made to push forward troops for the defense of the national Capital and other assailable points. The enrolment of volunteers has gone on without ceasing. The question is not who shall join the army, but rather who shall remain at home?

The most liberal contributions of money and means of all kinds have been made by public bodies and by private individuals.

This city has been, for the time, converted into a military camp. Business of every kind has given place to the needful military preparations. The clergy, the bench, the bar,—all classes,—men, women, and children, are fired with a patriotic ardour which the newspapers, filled as they are with details, still imperfectly describe. On Saturday a public meeting in support of the Government was held in this city at which not fewer than 100,000 persons were present, presided over by the leading and influential members of the community, and at which complete unanimity prevailed. A report of the proceedings and resolutions will be found in the newspapers which I transmit herewith. Day after day has only added to the excitement and to the earnestness of the movement.

To revert to the order of events, the President's proclamation was followed by one from General Davis inviting applications for letters of marque and reprisal against Northern commerce. This in its turn was followed by a proclamation of President Lincoln, dated the 19th instant, establishing a blockade of all the ports of the seceded States; and instructions have now been issued to the collectors of customs forbidding the clearance of any vessels for ports in the seceded States.

On or about Wednesday the 17th instant, the Convention of Virginia in secret session resolved to secede without submitting any ordinance for ratification by the people, as required by the Convention itself; and the leaders of the revolution in that State at once proceeded vigorously to coöperate with their more southern allies by organizing a large force, and seizing on Federal property. A body of some 2500 men despatched to seize the important United States Arsenal at Harper's Ferry, on the line of the Baltimore and Ohio Railroad, was defeated in its purpose only by the burning and blowing up of the arsenal by the detachment in charge of it, which then with difficulty effected its retreat.

Meantime Fort Pickens at Pensacola has been closely invested by the Confederate forces, augmented by some of those released from Charleston.

This fort was without doubt reinforced more than a week since by troops sent in the United States ship *Brooklyn*, and is said to be capable of effectively resisting the efforts of its besiegers. No intelligence whatever has been received from that quarter for several days, but it is believed the bombardment of the fort is now being prosecuted, and, whether successfully or not, it will be attended with great loss of life. Rumours prevail this morning that the fort has actually been captured. On the other hand, most serious apprehensions have been, and still are, entertained for the safety of Washington. The rapid advance of such a force as was known to be at the command of General Davis, with the active coöperation of the Virginians, it was fully feared might overpower the small body of troops defending that city under the command of General Scott. That this was the chief stroke of policy in the plans of the Confederate leaders is now well understood. The possession of the national Capital, and the belief of the existence of an extensive sympathy throughout the North with the Secessionists, or, at all events, of an indisposition to act coercively against them, were relied on to secure for the Confederate leaders such an ascendancy as would enable them to dictate the terms of the reconstruction of the Union.

I send inclosed a slip or two from the papers of to-day giving the latest reports from Baltimore and Washington. From these it appears that the Capital is yet in a critical condition. I have also addressed to the Foreign

Office the New York morning papers for the last four days.

In the absence of any positive intelligence of the movements of the disunionists, owing to the interruption of the telegraphs and mails, it remains at this moment uncertain whether they may not make, and possibly succeed in, an attack on the Capital. It is believed, however, that their delay before Forts Sumter and Pickens, the indecision of the Virginian Convention, and, above all, their entire miscalculation of the sentiments of the people of the North, have somewhat marred their plans; and it is hoped that by the forces already at the command of the President they may be kept in check until the overpowering numbers fast hurrying to the Capital can be mustered there.

The unexpected outbreak of the war had found the North and West, though abounding in men, money, and a spirit of hearty loyalty to the Constitution, still greatly unprepared in armament and equipment. Among the plans of the Secessionist leaders long since preconceived and executed, and now openly boasted of in the South, was the removal from the free States of arms and munitions of war. Already there is discovered an alarming deficiency of even small arms for the militia and volunteers.

The first movement of troops on the call of the President was from Massachusetts, followed by large levies from Pennsylvania, Ohio, and this State. On Friday last, while passing through Baltimore, a portion of a Boston regiment was attacked by a very numerous mob of sympathizers with secession, when the troops were enabled to force their way through the city only after a riot and a combat in which two soldiers and eleven citizens were killed, and many wounded on both sides. The city from thenceforth hitherto has been entirely under the control of the Secessionists, and mob law rules. The railway bridges in the neighbourhood of the city have been burnt or cut down, the telegraph seized and interrupted, and all regular communication through Baltimore with Washington suspended.

It appears to have been a preconceived but not suspected plan of the Confederate leaders to prevent, at the proper moment, the sending of any reinforcements to Washington through Maryland, in which State the Union party is for the present overpowered and silenced. In proof of this plan a body of some three or four thousand Virginians passing round by Harper's Ferry are reported to have advanced into Maryland, to overawe and operate in that State, but which, at last accounts, had not yet approached Baltimore. This unruly city is now kept in terror of bombardment from Fort McHenry, which is in possession of an adequate force of Federal troops. A few days, however, will see the Baltimoreans brought to their senses, for (from what is manifest of the deep indignation of the North at this obstruction of their highway to the national Capital) a further persistence in such a course of proceedings would, I verily believe, lead to the bombardment and probable destruction of the city.

Fort Monroe, commanding the mouth of the James River, one of the strongest forts of the country, and an important strategical position, has been fully garrisoned by Federal troops. The navy yard and stores at Norfolk, however, being incapable of defense, were the day before yesterday destroyed, and all the ships of war there were burnt to prevent their falling into the enemy's hands. At this port (New York) all vessels are prevented from proceeding to sea between sunset and sunrise, and guard-boats are stationed at the outlets to see that no provisions or munitions of war are allowed to be sent to the enemy's ports.

The ships at the navy yard at Brooklyn are being equipped for sea with all possible speed. These consist of the *Wabash* and *Roanoke*, screw steam frigates, and the *Savannah*. The *Perry* brig went to sea yesterday. Orders have been given to fit out a large number of gunboats of light draft; and the merchants of the Northern ports will supply numerous effective vessels to aid the blockade of Southern ports, and act in union with the Federal naval forces.

But now that this war has been provoked by the leaders of the secession movement, it is, I think, quite certain that the North will not allow it to be terminated until they have completely crushed the rebellious uprising against the authority of the Government, and either coerce the seceded States back into the Union, or dictate the terms and conditions of their separation from it.

Although the North has been taken at a disadvantage, has been by the wily plans and prearrangements of the Secessionists stripped of arms, of which they are now in great want for their volunteers, there cannot be a question that they will, nevertheless, effectually suppress the rebellion. They have, after long and patient forbearance, entered upon the struggle forced upon them with a determination never to bring it to a close until they shall have effectually prevented the possibility, for a long time to come, of the recurrence of any similar attempt to subvert the Constitution of the Republic.

For my own part, in this view of the case, I believe that the most merciful course and, in the end, the most salutary results will depend on the Federal Government placing itself as speedily as possible in such a commanding attitude of power as to render further resistance to its authority utterly hopeless. I believe that the escape of the white population of the South from the horrors of servile insurrections (of the commencement of which there are already rumours) renders it necessary that the Federal Government should put out its whole strength, as it is preparing to do, at the earliest moment, and thus anticipate the useless wasting by the Southern States of the strength and means which they will now, more than ever, require to keep their slave population in subjection.

The national honour vindicated, the Constitution upheld, and the Government established in its supremacy, I have no fears that the Southern States will be unfairly dealt with. Motives of interest, no less than magnanimity, under such circumstances, will secure to the Southern States, whether they continue in the Union or a separation be agreed on, everything to which they have a just right or claim.

A prolongation of the contest, I need hardly say, will be attended with most disastrous consequences to other nations, and especially to our own commercial interests. In view of this certainty, and under the consciousness of the vast importance of the crisis, pardon my presumption, My Lord, if I venture to suggest the consideration of the expediency of a prompt interposition by Her Majesty's Government by way, if not of a mediator (which perhaps would hardly now be accepted), then by affording to the lawful Government of the United States such a consistent and effective demonstration of sympathy and aid as will have the merciful effect of shortening this most unnatural and horrid strife. It is unnecessary to waste a word on the many considerations which I believe would influence Her Majesty's Government to adopt such a line of policy in so far as it consistently may; but of this I feel assured, knowing what I do of the American people of the North and West, that, whether countenanced by England or not, they will never lay down arms until they have entirely subdued and extinguished this rebellion. The issue raised, in fact, is one which leaves them no alternative; while, on the other hand, I need not say how adverse and revolting to the spirit and feelings of the age and of our own nation would be the triumph of the principles on which the founders of the new Confederacy have based their government.

Praying Your Lordship's pardon for these observations, which have run to greater length than I intended, I have, etc., E. M. ARCHIBALD.

A Brotherhood of Christian Unity.

ON the evening of April 20 a meeting was held in Orange, New Jersey, to consider the subject of Christian Unity. I had become so impressed, or, I may say, oppressed, by the lack of united feeling and united effort among the churches that I asked some friends to join me in issuing a call for such a meeting. It was not largely attended, but an earnest spirit was evident in those who were present. In the essay which I had prepared for the occasion I suggested as a possible solution of the difficulty, or as an effort at least to attempt to translate sentiment into some form of action, the formation of a Brotherhood of Christian Unity. Dr. Lyman Abbott, hearing of my plan, asked me to present it in the columns of "The Christian Union." In the editorial department of the issue of June 11, containing the article, Dr. Abbott wrote as follows:

Mr. Seward's article on another page affords another and a somewhat striking indication of that growing tendency towards the unity of faith which is characteristic of the present age. It is peculiar in that it distinctly recognizes and proposes to leave wholly undisturbed the difference in creed, ritual, and government which separates the denominations, and simply furnish a testimony to the unity of faith which is deeper than any creed. It is also peculiar in that it is based upon the principle that loyalty to Christ, not adhesion to a series of intellectual propositions, is the true and adequate basis of Christian Union. To what Mr. Seward's plan may grow it is not possible to foretell. It may be born before its time, and be only a precursor of a movement on similar principles, but possibly different in form, to follow hereafter. In any case the suggestion cannot be in vain, for it is never in vain for a prophet to familiarize the public mind with new ideas which it is not yet ready to receive. We commend Mr. Seward's simple pledge to the consideration of our readers as one step towards a realization of a fellowship which now has no symbol. Let them read his plan and then answer to themselves the question, Why not?

The response of the public to the suggestion is truly remarkable. Letters of inquiry pour in from all directions and from people of every Christian sect and of no sect. It indicates that the feeling of dissatisfaction with the present bondage to creeds is widespread and deep. Those who write usually express the opinion that the plan of a Brotherhood of Christian Unity is a practical movement in the right direction without undertaking too much. As its title implies, it is a fraternization rather than an organization. It is not proposed, at least for the present, to have any constitution, officers, or funds. Its purpose is merely to enable individuals to place themselves more definitely under the law of love. It goes back of the ecclesiasticism of the past eighteen centuries and accepts the creed of Christ and of the first century—love to God and love to man. It gives an opportunity for members of the Christian Church in all its various branches to acknowledge one another as brethren of one family, and not as belonging to distinct factions. It also gives an opportunity for those who are out of the churches and out of sympathy with the church creeds to step upon a Christian platform. The only qualification of membership of the Brotherhood of Christian Unity is signing the following pledge:

I hereby agree to accept the creed promulgated by the Founder of Christianity—love to God and love to man—as the rule of my life. I also agree to recognize as fellow Christians and members of the Brotherhood of Christian Unity all who accept this creed and Jesus Christ as their leader.

I join the Brotherhood with the hope that such a voluntary association and fellowship with Christians of every faith will deepen my spiritual life and bring me into more helpful relations with my fellow men.

Promising to accept Jesus Christ as my leader means that I intend to study his character with a desire to be imbued with his spirit, to imitate his example, and to be guided by his precepts.

I have prepared a pamphlet treating the subject more fully, which will be sent with two copies of the pledge for ten cents (to cover expenses). One pledge is in certificate form, illuminated and printed on bond paper. The other is note-size, to be signed and returned as a means of recording the membership.

EAST ORANGE, N. J.

Theodore F. Seward.

W. L. Dodge.

WILLIAM LEFTWICH DODGE, the painter of "David and Goliath," reproduced on page 665, is in his twen-

ty-fifth year, having been born in Virginia in the spring of 1867. His mother, herself an artist of talent, early discovered the boy's inclination towards art, and removed with him to Munich, and thence to Paris, where at the age of sixteen he entered the *École des Beaux-Arts*. During his school career he took several prizes, passed Number One in the competition for entrance to Gérôme's class, and six months after his admission won the third medal in the *Concours d'Atelier*. The next year he obtained an honorable mention and another medal, and in the third year (1888) the first prize, *Prix d'Atelier*.

Mr. Dodge first became known to Americans by his picture "The Death of Minnehaha," painted during the third year of his student course, and when he was but nineteen years of age. This picture was exhibited at the Prize Fund Exhibition of The American Art Galleries in 1886, and was awarded a gold medal. "David and Goliath" was painted in the year in which the artist achieved his majority. It was exhibited in the Salon in the spring, and at Munich in the fall of 1888, and received a medal at the Paris Exposition of 1889. The next year Mr. Dodge exhibited the largest picture and most important composition he had undertaken (36 x 18 feet)—"The Burial of the Minnisink"—in illustration of Longfellow's poem, together with a very clever study of the nude in sunlight, called "Water-lilies."

He returned to this country in the autumn of 1889, and in 1890 gave at the American Art Galleries an exhibition which awoke much criticism. It is but fair to say, however, that most of it was of a friendly nature, the critics probably bearing in mind that it was hardly to be expected that a boy twenty-two years of age would handle compositions covering hundreds of square feet of canvas, and in some cases containing more than fifty figures, without laying himself open to some adverse criticism. While it is true that art knows neither age nor nation, the fact of this lad having successfully handled pictures of such a size is certainly remarkable. I think that Mr. Dodge is far from having reached the fullness of his development, and that, could he be given large wall spaces to work on, we

should probably have in him an artist who would make his impression on the nation. He is versatile, and, although his facility of execution occasionally carries him away, is an excellent draftsman, ingenious in his arrangement of groups, and with a good eye for the discernment of character.

W. Lewis Fraser.

Greeley's Estimate of Lincoln.

UPON looking over the table of contents of the July CENTURY, just received, my eye fell upon "Greeley's Estimate of Lincoln—an unpublished address." I at once turned to it to see if it was the lecture I heard Mr. Greeley deliver in Washington a few years after the war. I looked first at the opening paragraph, for I had a distinct recollection of the pun on the words "attempts at the life of Abraham Lincoln." Sure enough, there it was, but with the foot-note doubting whether it was ever delivered. There is no doubt of it, and I presume you will receive other testimony to the same effect.

JAS. M. HUDNUT.

348 BROADWAY, NEW YORK, July 1, 1891.

MR. G. H. CRAWFORD writes to say that Mr. Greeley delivered the Lincoln lecture in New York, he thinks, about 1870.

MR. ROBERT E. DEYO points out an error on pages 373 and 379 of the Greeley lecture in the July CENTURY, where the name of Congressman Daniel Gott is printed Galt.

MR. SAMUEL SINCLAIR calls attention to a typographical error on page 375, in which the inauguration of Pierce is referred to the year 1856. Mr. Greeley properly wrote 1852.

Erratum.

THE picture on page 176 of the June CENTURY in Mrs. Harrison's article on "Colonel William Byrd of Westover, Virginia," was incorrectly entitled "The Hall at Westover," it being in reality a picture of the hall of the house of Dr. E. G. Booth, at the Grove, in James City County, Virginia. The mistake arose from its general resemblance to the hall at Westover.

EDITOR.

BRIC-À-BRAC.

To Jessie's Dancing Feet.

HOW, as a spider's web is spun
With subtle grace and art,
Do thy light footsteps, every one,
Cross and recross my heart!
Now here, now there, and to and fro,
Their winding mazes turn;
Thy fairy feet so lightly go
They seem the earth to spurn.
Yet every step leaves there behind
A something, when you dance,
That serves to tangle up my mind
And all my soul entrance.

How, as the web the spiders spin
And wanton breezes blow,
Thy soft and filmy laces in
A swirl around thee flow!
The cobweb 'neath thy chin that's crossed

Remains demurely put,
While those are ever whirled and tossed
That show thy saucy foot;
That show the silver grayness of
Thy stockings' silken sheen,
And mesh of snowy skirts above
The silver that is seen.

How, as the spider, from his web,
Dangles in light suspense,
Do thy sweet measures' flow and ebb
Sway my enraptured sense!
Thy flutt'ring lace, thy dainty airs,
Thy every charming pose—
There are not more alluring snares
To bind me with than those.
Swing on! Sway on! With easy grace
Thy witching steps repeat!
The love I dare not—to thy face—
I offer, at thy feet.

W. D. Ellwanger.

The Ill-Omened Crow.

(SINISTER CORNIX.)

DE jay he bow ter de bluebird,
An' de buzzard he say ter de crow,
"I gwine down in de holler,
You gwine pick down de row."

De jay am de feddered Eshaw —
Selled his birf-right fur sumpen ter eat;
But de plumb born t'ief er de cornfiel'
Am de 'Nias wid de ole crow feet.

So he fill up he craw twel hit hu't him,
An' he still lookin' roun' fur some mo',
Den he plume hisse'f in de tree-top,
'Ca'se he got mighty fur way ter go;

Fur de craw hit swell, keep er-swellin',
Twel hit' 'pear lack hit fitten ter bus'—
Haint no rock in de road do dat grin'in',
An' dat crow he jes light out an' dus'.

De debbil he stan' in er cabin,
Wid his hat pull ober one eye,
An' he call, "Misser Crow, how you make hit?"
An' de crow he cry, "Gwine die!"

An' de craw keep er-swellin' an' er-swellin',
Fur de corn he steal won't hide;
An' de debbil he grin twel hit busted,
An' de crow he laid down an' died.

Den de debbil he gadder up de inside,
An' plant dat corn in er row,
An' he chuckle an' he laugh in he in'ards,
Fur he layin' fur ernudder fool crow.

Den er crow come an' set on er fence-rail,
An' turn up he eye ter de sun,
Den couter erroon' 'mongst de green blades,
Jes lack de odder one done.

Den he fill up he craw lack de odder one,
An' de debbil pull he hat in he eye,
An' holler, "Misser Crow, how you make hit?"
An' de crow he cry, "Gwine die!"

Den de debbil he laugh an' he holler,
As de crow he shake lack er leaf,
"I has got de onliest pebbles
Dat 'll grine up de corn uv er t'ief!"

So dey bargains wid de def er-callin',
An' dey bargains wid de def 'longside,
An' der crow he go ter de debbil's,
Whar de pebbles am hot an' dried;

An' he sarve de debbil by night-time,
An' he sarve de debbil by day,
Twel de blood er de yeth dry in him,
Twel de fedders done drappin' erway.

Den de crow gwine pinin' an' honin',
Den de crow he gwine fur ter tire,
An' he flewed an' he flewed in de night-time,
An' he flewed froug de debbil's own fire.

Fur de debbil make er fire outen light-'ood,
Wid de pot er de hot pitch nigh,
An' de blaze hit clomb ter de house-top,
An' de heat hit clomb ter de sky.

But he flewed an' he flewed, dough hit scotch him,
An' de fedders dey sizzle an' fry;
Den de debbil let loose er de waters,
An' de flood er de weepin' rin high.¹

Hit 'pear lack de waters gwine drown him,
An' de debbil he gain on him fas',
An' he retch, but de crow keep er-duckin'
An' er-sheddin' twel he kim out at las'.

An' he flewed an' he flewed, dough he 's drippin',
An' he flewed an' he flewed, dough he 's wet;
Den hit 'pear lack de ole wings er-floppin',
Den hit 'pear lack de debbil git him yet;

Fur de debbil cotch holt er de fedders,
But de skeered crow he skim fur de lan';
De debbil he make fur de crow's ole naked,
But de crow lef' his tail in his han'.

An' he flewed an' he flewed, jes er-shiv'rin',
An' er-shakin' wid de debbil on his track;
But he winned in de race, an' dat make him cute,
But de fire make his fedders black.

Virginia Fraser Boyle.

Bouillabaisse.

(THE MARSEILLES RECIPE.)

- GARLIC? A bit, perhaps, merely to justify
The old tradition;
But just the tiniest shred — so small you might deny
Its breath's suspicion.
- Saffron? Yes, put some in; though of the saffron, too,
Be not unstinted —
And yet enough, so that your hands, when you get
through,
Are golden-tinted.
- Fish? Most assuredly. But it must be first-class,
Fresh, fine, *comme ça* —
Lobster, and whiting small, the kind we call *rascasse*,
Et cetera.
- Oil? That is needed too; but let it not exceed
A fair-sized drop.
You must know how to pour one globule, bird's-eye
bead,
And then to stop.
- Rosemary? fennel? thyme? fine herbs in general?
Naturally;
Tied in a little bag, clean, dainty, and withal
Tempting to see.
- Then let the whole thing boil. Meanwhile, of bread —
fresh, mind! —
Thick slices place.
[*Deprecatingly:*]
And so, if you 've good luck, you may produce a kind
Of bouillabaisse.
- But for the simon-pure, the grand, the marvelous dish,
Beyond compare,
Is needed, more than herbs, and even more than fish —
The Marseilles air!

Henry Tyrrell.

¹ According to the superstition, there is no water in the abode of the Evil One except a stream from the tears of the lost, which is salty and bitter. The victims are alternately scorched and drenched in the waters of tears, for they never dry up.

My Sweetheart.

WHENEVER I play on the old guitar
 The songs that my sweetheart taught me,
 My thoughts go back to the summer-time
 When first in her toils she caught me;
 And once again I can hear the sound
 Of her gleeful voice blown over
 The meadow, sweet with the scent of thyme,
 And pink with the bloom of clover.

The faded ribbon is hanging still
 Where her dimpled fingers tied it—
 I used to envy it stealing round
 Her neck, for she did not chide it;
 And the inlaid pearl that her ringlets touched
 As she leaned above it lightly
 Glows even now with a hint of gold
 That it once reflected brightly.

Whether her eyes were blue as the skies
 On a noon-day in September,
 Or brown like those of a startled fawn,
 I can't for the world remember;
 But when she lifted them up to mine
 I know that my young heart tingled
 In time to the tender tune she sang
 And the airy chords she jingled.

Yet now, though I sweep the dusty strings
 By her girlish spirit haunted,
 Till out of the old guitar there trips
 A melody, blithe, enchanted,
 My pulses keep on their even way
 And my heart has ceased its dancing,
 For somebody else sits under the spell
 Of the songs and sidelong glancing.

M. E. Wardwell.

That Note in Bank.

I SOUGHT to be the Bellamy of song,
 And in the year two thousand Anno Dom.
 My disembodied spirit made the tour
 Of these much swelled, still one, United States,
 And to the man of that now distant age
 I put forth certain inquiries. "Where 's Poe,
 And Whittier, and Dr. Holmes?" And so,
 Descending to the decades *quorum pars*
Fui, I softly breathed the names of those
 Whose songs of woods, and glens, and lady-loves,
 Had oftentimes adorned the boiler-plate
 In those now dim exchanges. Then they gaped,
 The men of this cold, self-admiring age,
 "Why, who were *they*? The esoteric cult,
 The age of transcendental tone in art,
 Has swept these dreamers into nothingness.
 Our poets do not sing of woods or glens,
 Of ravens, or of sea-shells, or of old
 New England elms and maples. Some write ads
 In verse, and hence are valued much
 Down in the business office; others sing
 Of this and that new enterprise that has
 The Mountains of the Moon for opening up.
 Some few o'er railroad tracks of distant age,
 Iviéd and broken like an olden fort,
 Pour forth their plaint—such fellows are too slow
 For this progressive age. No railroads now!
 We have the swift aerial express
 For Santiago, and for Melbourne too.
 The flag of these indissoluble States
 Floats from each citadel of old Cathay:
 Europe went under seventy years ago.
 Why, what is this Van Winkle stare about?
 Don't you read history? The planets all
 Within a radius of a million miles
 Are getting sore; to say 'One wants the earth'—
 Faugh! that is too antique for anything!

The men of this fast day don't comprehend—
We want the stars. Don't talk in ancient tongue
 If you would have this generation list.
 Alas! poor Rip, you don't know what you've
 missed."

"Well," gasped I, after pause, cold beads upon
 My mummied brow, "one thing I'd like to ask:
 Do people marry as they used to do?
 And does the butcher's and the baker's bill
 Come round with such persistent frequency?
 Do notes mature in bank?"

Here with a sound
 Somewhat resembling those old words of wrath
 Which issued from my dim composing-room
 Whene'er a form was pried, he bolted forth
 To take the next aerial express
 From Boston to St. Petersburg. All I could catch
 Was something of "a note in bank to-day
 On the great House of Romanoff which he
 Must hurry off to meet—'t was then near three!"

William B. Chisholm.

Exit.

"We are growing old," she cried;
 "We must stop this prancing.
 See, the world does not provide
 Music for *our* dancing.
 When we are young, and do not care,
 Of it there's a plenty.
 Ah, how much you have to spare,
 Sweet-and-twenty!"

"Now we ought to step aside
 For the coming dancers,
 Or march slow—to save our pride—
 Through a set of lancers.
 Jigs and springs, and heel and toe,
 Do not even name them!
 They are not for *us*, you know;
 Never claim them!"

"There are corners, safe and still,
 Left that we may fill them.
 Let those play the fool who will;
 Scorn will never kill them
 If they stay upon the floor
 Knowing they must chance it.
 Yet," she whispered, "if once more
 That old tune we knew before
 Heads were wise and hearts were sore
 Played, and we *might* have the floor,
 How we'd dance it!"

OCTOBER, 1891.

No. 6.

MY LAST DAYS IN SIBERIA.

MINUSINSK (Min-oo-sínsk), where we made our last stop in Eastern Siberia, is a thriving little town of 5000 or 6000 inhabitants, situated in the fertile valley of the upper Yenisei (Yén-iss-say), 3200 miles from the capital of the Empire and 150 miles from the boundary line of Mongolia. It corresponds very nearly with Liverpool in latitude and with Calcutta in longitude, and is distant from St. Petersburg, in traveling time, about twenty days. Owing to the fact that it lies far south of the main line of transcontinental communication, it has not often been visited by foreign travelers, and at the time of our visit it was little known even to the people of European Russia; but it had particular interest for us, partly because it contained the largest and most important museum of archæology and natural history in Siberia, and partly because it was the place of exile of a number of prominent Russian liberals and revolutionists.

We reached the little town about half-past five o'clock in the morning. The columns of smoke that were rising here and there from the chimneys of the log houses showed that some, at least, of the inhabitants were already astir; but as the close-fitting board shutters had not been taken down from the windows there were no lights visible, the wide streets were empty, and the whole town had the lonely, deserted appearance that most Siberian towns have when seen early in the morning by the faint light of a waning moon.

"Where do you order me to go?" inquired our driver, reining in his horses and turning half around in his seat.

"To a hotel," I said. "There's a hotel here, is n't there?"

"There used to be," he replied, doubtfully.

"Whether there's one now or not God knows; but if your high nobility has no friends to go to, we'll see."

We were provided with letters of introduction to several well-known citizens of Minusinsk, and I had no doubt that at the house of any one of them we should be cordially and hospitably received; but it is rather awkward and embarrassing to have to present a letter of introduction, before daylight in the morning, to a gentleman whom you have just dragged out of bed; and I resolved that, if we should fail to find a hotel, I would have the driver take us to the government post-station. We had no legal right to claim shelter there, because we were traveling with "free" horses and without a padarozhnaya (pah-dah-rózh-nah-yah); but experience had taught me that a Siberian post-station master, for a suitable consideration, will shut his eyes to the strictly legal aspect of any case and admit the justice and propriety of any claim.

After turning three or four corners our driver stopped in front of a large two-story log building near the center of the town which he said "used to be" a hotel. He pounded and banged at an inner courtyard door until he had roused all the dogs in the neighborhood, and was then informed by a sleepy and exasperated servant that this was not a hotel but a private house, and that if we continued to batter down people's doors in that way in the middle of the night we should n't need a hotel, because we would be conducted by the police to suitable apartments in a commodious jail. This was not very encouraging, but our driver, after exchanging a few back-handed compliments with the ill-tempered servant, took us to another house in a different part of the town, where he banged and pounded at another door with undiminished vigor and resolution. The man

who responded on this occasion said that he did keep "rooms for arrivers," but that, unfortunately, the full complement of "arrivers" had already arrived, and his rooms were all full. He suggested that we try the house of one Soldatof (Soll-dát-off). As there seemed to be nothing better to do, away we went to Soldatof's, where, at last, in the second story of an old, weather-beaten log building, we found a large, well-lighted, and apparently clean room which was offered to us, with board for two, at seventy cents a day. We accepted the terms with joy, and ordered our driver to empty the pavoska (pah-vóss-kah) and bring up the baggage. Our newly found room was uncarpeted, had no window-curtains, and contained neither washstand nor bed; but it made up for its deficiencies in these respects by offering for our

the character and disposition of the isprávník, or district chief of police. We therefore went to call first upon the well-known Siberian naturalist Mr. N. M. Martianof (Mart-yán-off), the founder of the Minusinsk Museum, to whom we had a note of introduction from the editor of the St. Petersburg "Eastern Review." We found Mr. Martianof busily engaged in compounding medicines in the little drug-store of which he was the proprietor not far from the Soldatof hotel. He gave us a hearty welcome.

The Minusinsk Museum, of which all educated Siberians are now deservedly proud, is a striking illustration of the results that may be attained by unswerving devotion to a single purpose and steady, persistent work for its accomplishment. It is, in every sense of the word, the creation of Mr. Martianof, and it represents,

A STREET IN MINUSINSK. (FROM OUR WINDOW AT SOLDATOF'S.)

contemplation an aged oleander in a green tub, two pots of geraniums, and a somewhat anæmic vine of English ivy climbing feebly up a cotton string to look at itself in a small wavy mirror. As soon as our baggage had been brought in we lay down on the floor, just as we were, in fur caps, sheepskin overcoats, and felt boots, and slept soundly until after ten o'clock.

A little before noon, having changed our dress and made ourselves as presentable as possible, we went out to make a call or two and to take a look at the place. We did not think it prudent to present our letters of introduction to the political exiles until we could ascertain the nature of the relations that existed between them and the other citizens of the town, and could learn something definite with regard to

almost exclusively, his own individual skill and labor. When he emigrated to Siberia, in 1874, there was not a public institution of the kind, so far as I know, in all the country, except the half-dead, half-alive mining museum in Barnaul (Bar-nah-oól), and the idea of promoting popular education and cultivating a taste for science by making and exhibiting classified collections of plants, minerals, and archæological relics had hardly suggested itself even to teachers by profession. Mr. Martianof, who was a graduate of the Kazan (Kah-zán) university, and whose scientific specialty was botany, began, almost as soon as he reached Minusinsk, to make collections with a view to the ultimate establishment of a museum. He was not a man of means or leisure. On the contrary, he was wholly dependent upon his little drug-

A KACHINSKI TATAR WOMAN AND CHILD.

store for support, and was closely confined to it during the greater part of every day. By denying himself sleep, however, and rising very early in the morning, he managed to get a few hours every day for scientific work, and in those few hours he made a dozen or more identical collections of such plants and minerals as could be found within an hour's walk of the town. After classifying and labeling the specimens carefully, he sent one of these collections

to every country school-teacher in the Minusinsk district, with a request that the scholars be asked to make similar collections in the regions accessible to them, and that the specimens thus obtained be sent to him for use in the projected museum. The teachers and scholars responded promptly and sympathetically to the appeal thus made, and in a few months collections of flowers and rocks began to pour into Mr. Martianof's little drug-store

A KACHINSKI TATAR.

from all parts of the district. Much of this material, of course, had been collected without adequate knowledge or discrimination, and was practically worthless; but some of it was of great value, and even the unavailable specimens were proofs of sympathetic interest and readiness to coöperate on the part not only of the scholars but of their relatives and friends. In the meantime Mr. Martianof had been sending similar but larger and more complete collections to the Imperial Academy of Sciences, to various Russian museums, to his own alma mater, and to the professors of natural history in several of the great Russian universities, with a proposition in every case to exchange them for such duplicates of specimens from other parts of the Empire as they might have to spare. In this way, by dint of unwearied personal industry, Mr. Martianof gathered, in the course of two years, a collection of about 1500 objects, chiefly in the field of natural history, and a small but valuable library of 100 or more scientific books, many of which were not to be found elsewhere in Siberia. In 1876 he made a formal presentation of all this material to the Minusinsk town council for the benefit of the public. A charter was then obtained, two rooms in one of the school buildings were set apart as a place for the exhibition of the specimens, and the museum was thrown open. From that time forth its growth was steady and rapid. The cultivated people of Minusinsk rallied to Mr. Martianof's support, and contributions in the shape of books, anthropological material, educational appliances, and money soon began to come from all parts of the town and district, as well as from many places in the neighboring provinces.

After making a comprehensive but rather hasty survey of the whole museum, Mr. Frost

and I decided that the departments of archæology and ethnology were its most striking and interesting features, but that it was a most creditable exhibition throughout, and an honor to its founder and to the town. Its collections, at the time of our visit, filled seven rooms in the building of the town council, and were numbered up to 23,859 in the catalogue, while the number of volumes in its library was nearly 10,000. All this was the direct result of the efforts of a single individual, who had, at first, very little public sympathy or encouragement, who was almost destitute of pecuniary means, and who was confined ten or twelve hours every day in a drug-store. Since my return from Siberia the directors of the museum, with the aid of I. M. Sibiriakof (See-béer-ya-koff), Inokenti Kuznetsof (In-nokén-tee Kooz-net-sóff), and a few other wealthy and cultivated Siberians, have published an excellent descriptive catalogue of the archæological collection, with an atlas of lithographic illustrations, and have erected a spacious building for the accommodation of the museum and library at a cost of 12,000 or 15,000 rubles. The catalogue and atlas, which have elicited flattering comments from archæological societies in the various capitals of Europe, possess an added interest for the reason that they are wholly the work of political exiles. The descriptive text, which fills nearly 200 octavo pages, is from the pen of the accomplished geologist and archæologist Dmitri Clements (Dmeé-tree Clém-ents), who was banished to Eastern Siberia for "political untrustworthiness" in 1881, while the illustrations for the atlas were drawn by the exiled artist A. V. Stankevich (Stan-káy-vitch). It has been said again and again by defenders of the Russian Government that the so-called "nihilists"

A SOVOTE.

whom that Government banishes to Siberia are nothing but "malchishki" (contemptible striplings), "expelled seminarists," "half-educated school-boys," "despicable Jews," and "students that have failed in their examinations." Nevertheless, when the directors of the

opinion abroad, but it no longer deceives anybody in Siberia. Siberians are well aware that if they want integrity, capacity, and intelligence, they must look for these qualities not among the official representatives of the crown but among the unfortunate lawyers, doctors, natu-

A FAMILY OF KACHINSKI TATARS.

Minusinsk museum want the services of men learned enough to discuss the most difficult problems of archæology, and artists skilful enough to draw with minute fidelity the objects found in the burial-mounds, they have to go to these very same "nihilists," these "contemptible striplings" and "half-educated school-boys" who are so scornfully referred to in the official newspapers of the capital and in the speeches of the Tsar's *procureurs*. Such misrepresentation may for a time influence public

realists, authors, newspaper men, statisticians, and political economists who have been exiled to Siberia for political untrustworthiness.

After leaving the museum we called with Mr. Martianof upon several prominent citizens of the town, among them Mr. Litkin (Léet-kin), the mayor, or head of the town council; Dr. Malinin (Mah-léen-in), an intelligent physician, who lived in rather a luxurious house filled with beautiful conservatory flowers; and a wealthy young merchant named Safianof (Saf-

yán-off), who carried on a trade across the Mongolian frontier with the Soyótes, and who was to accompany us on our visit to the Káchinski Tatárs. I also called, alone, upon Mr. Znamenski (Znáh-men-skee), the ispravnik, or

mounds, tumuli, and monolithic slabs that dotted the landscape as far as the eye could reach, and that were unmistakable evidences of the richness of the archæological field in which the bronze age collections of the Minu-

A TATAR INTERIOR—DISTILLING ARRACK.

district chief of police, but, failing to find him at home, left cards. About the middle of the afternoon we returned to Soldatof's, where we had dinner, and then spent most of the remainder of the day in making up sleep lost on the road.

Our excursion to the ulús of the Kachinski Tatars was made as projected, but did not prove to be as interesting as we had anticipated. Mr. Safianof came for us in a large comfortable sleigh about nine o'clock in the morning, and we drove up the river, partly on the ice and partly across low extensive islands, to the mouth of the Abakán, and thence over a nearly level steppe, very thinly covered with snow, to the ulus. The country generally was low and bare, and would have been perfectly uninteresting but for the immense number of burial-

sinsk museum had been gathered. Some of the standing monoliths were twelve or fifteen feet in height and three or four feet wide, and must have been brought, with great labor, from a distance. All of these standing stones and tumuli, as well as the bronze implements and utensils found in the graves and plowed up in the fields around Minusinsk, are attributed by the Russian peasants to a prehistoric people whom they call the Chudi (Chóo-dee), and if you go into almost any farmer's house in the valley of the upper Yenisei and inquire for "Chudish things," the children or the housewife will bring you three or four arrowheads, a bronze implement that looks like one half of a pair of scissors, or a queer copper knife made in the shape of a short boomerang, with the cutting edge on the inner curve like a yataghan.

We reached the Kachinski ulus about eleven o'clock. I was disappointed to find that it did not differ essentially from a Russian village or a small settlement of semi-civilized Buriats (*Boo-ráts*). Most of the houses were gable-roofed log buildings of the Russian type, with chimneys, brick ovens, and double glass windows, and the inhabitants looked very much like American Indians that had abandoned their hereditary pursuits and dress, accepted the yoke of civilization, and settled down as petty farmers in the neighborhood of a frontier village or agency. Here and there one might see a *yourt*, whose octagon form and conical bark roof suggested a *Kírg'his kubitka* (*kee-béet-kah*), and indicated that the builder's ancestors had been dwellers in tents; but with this exception there was nothing in or about the settlement to distinguish it from hundreds of Russian villages of the same class and type. Under the guidance of Mr. Safianof, who was well acquainted with all of these Tatars, we entered and examined two or three of the low octagonal *yourts* and one of the gable-roofed houses, but found in them little that was of interest. Russian furniture, Russian dishes, Russian trunks, and Russian *samovars* had taken the places of the corresponding native articles, and I could find nothing that seemed to be an expression of Tatar taste, or a survival from the Tatar past, except a child's cradle shaped like a small Eskimo dog-sledge with transverse instead of longitudinal runners, and a primitive domestic still. The latter, which was used to distill an intoxicating liquor known as *arrack*, consisted of a large copper kettle mounted on a tripod, and furnished with a tight-fitting cover out of the top of which projected a curving wooden tube intended to serve as a condenser, or worm. The whole apparatus was of the rudest possible construction, and the thin, acrid, unpleasant-looking, and vile-tasting liquor made in it was probably as intoxicating and deadly as the poison-toadstool cordial of the wandering *Koráks*. The interior of every Tatar habitation that we inspected was so cheerless, gloomy, and dirty that we decided to take our lunch out of doors on the snow; and while we ate it Mr. Safianof persuaded some of the Tatar women to put on their holiday dresses and let Mr. Frost photograph them. It will be seen from the illustration on page 805 that the Kachinski feminine type is distinctively Indian, and there are suggestions of the Indian even in the dress. All of the Kachinski Tatars that we saw in the Minusinsk district, if they were dressed in American fashion, would be taken in any western State for Indians without hesitation or question. They number in all about ten thousand, and are settled, for the most part, on what is known

as the Kachinski Steppe, a great rolling plain on the left or western bank of the Yenisei above Minusinsk, where the climate is temperate and the snowfall light, and where they find excellent pasturage, both in summer and in winter, for their flocks and herds.

Late in the afternoon, when Mr. Frost had made an end of photographing the women of the settlement, all of whom were eager to put on their good clothes and "have their pictures taken," we set out on our return to Minusinsk, and before dark we were refreshing ourselves with caravan tea and discussing Kachinski Tatars under the shadow of our own vine and oleander in Soldatof's second-story-front bower.

It must not be supposed that we had become so absorbed in museums, archæological relics, and Kachinski Tatars that we had forgotten all about the political exiles. Such was by no means the case. To make the acquaintance of these exiles was the chief object of our visit to Minusinsk, and we did not for a moment lose sight of it; but the situation there just at that time was a peculiarly strained and delicate one, owing to the then recent escape of a political named Maslof, and the strictness with which, as a natural consequence, all the other exiles were watched. The provincial procureur *Skrinikof* (*Skrée-nee-koff*) and a colonel of gendarmes from Krasnoyársk were there making an investigation of the circumstances of Maslof's flight; the local police, of course, were stimulated to unwonted vigilance by the result of their previous negligence and by the presence of these high officers of the Crown from the provincial capital; and it was extremely difficult for us to open communication with the politicals without the authorities' knowledge. In these circumstances it seemed to me necessary to proceed with great caution, and to make the acquaintance of the exiles in a manner that should appear to be wholly accidental. I soon learned, from Mr. Martianof, that several of them had taken an active interest in the museum, had been of great assistance in the collection and classification of specimens, and were in the habit of frequenting both the museum and the library. I should have been very dull and slow-witted if, in the light of this information, I had failed to see that archæology and anthropology were my trump cards, and that the best possible thing for me to do was to cultivate science and take a profound interest in that museum. Fortunately I was a member of the American Geographical Society of New York and of the Anthropological Society of Washington, and had a sufficiently general smattering of natural science to discuss any branch of it with laymen and the police, even if I could not rise to the level of a professional like Martianof. I

therefore not only visited the museum at my earliest convenience, and took a deep anthropological interest in the Kachinski Tatars, but asked Mr. Martianof to allow us to take a Soyote plow, a lot of copper knives and axes, and half a dozen bronze mirrors to our room, where we could study them and make drawings of them at our leisure, and where, of course, they would be seen by any suspicious official who happened to call upon us, and would be taken by him as indications of the perfectly innocent and praiseworthy nature of our aims and pursuits. The result of our conspicuous devotion to science was that Mr. Martianof kept our room filled with archaeological relics and ethnological specimens of all sorts, and, moreover, brought to call upon us one evening the accomplished geologist, archaeologist, and political exile, Dmitri Clements. I recognized the latter at once as the man to whom I had a round robin letter of introduction from a whole colony of political exiles in another part of Eastern Siberia, and also as the original of one of the biographical sketches in Stépniak's "Underground Russia." He was a tall, strongly built man about forty years of age, with a head and face that would attract attention in any popular assembly, but that would be characterized by most observers as Asiatic rather than European in type. The high, bald, well-developed forehead was that of the European scholar and thinker, but the dark brown eyes, swarthy complexion, prominent cheek-bones, and rather flattish nose with open, dilated nostrils, suggested the features of a Buriat or Mongol. The lips and chin and the outlines of the lower jaw were concealed by a dark brown beard and mustache; but all the face that could be seen below the forehead might have belonged to a native of any South Siberian tribe.

As soon as I could get my round robin certificate of trustworthiness out of the leather money-belt under my shirt, where I carried all dangerous documents likely to be needed on the road, I handed it to Mr. Clements with the remark that although Mr. Martianof had given me the conventional introduction of polite society, he could not be expected, of course, as a recent acquaintance, to vouch for my moral character, and I begged leave, therefore, to submit my references. Mr. Clements read the letter with grave attention, went with it to one corner of the room, struck a match, lighted the paper, held it by one corner between his thumb and forefinger until it was entirely consumed, and then, dropping the ash and grinding it into powder on the floor under his foot, he turned to me and said, "That's the safest thing to do with all such letters." I was of the same opinion, but I had to carry with

me all the time, nevertheless, not only such letters but letters and documents infinitely more compromising and dangerous. After half an hour's conversation Mr. Martianof suggested that we all come to his house and drink tea. The suggestion met with general approval, and we spent with Mr. and Mrs. Martianof the remainder of the evening.

On the following morning we had our first skirmish with the Minusinsk police. Before we were up an officer in a blue uniform forced his way into our room without card or announcement, and in rather an offensive manner demanded our passports. I told him that the passports had been sent to the police-station on the day of our arrival, and had been there ever since.

"If they are there the nadzirátel [inspector] does n't know it," said the officer, impudently.

"It's his business to know it," I replied, "and not to send a man around here to disturb us before we are up in the morning. We have been in the Empire long enough to know what to do with passports, and we sent ours to the police-station as soon as we arrived."

My aggressive and irritated manner apparently convinced the officer that there must be some official mistake or oversight in this matter of passports, and he retired in confusion; but in less than ten minutes, while I was still lying on the floor, virtually in bed, around came the inspector of police himself—an evil-looking miscreant with a pock-marked face and green, shifty, feline eyes, who, without his uniform, would have been taken anywhere for a particularly bad type of common convict. He declared that our passports were not at the police-station, and had not been there, and that he wanted them immediately. He had been directed, furthermore, he said, by the *ispravnik*, to find out "what kind of people" we were, where we had come from, and what our business was in Minusinsk. "You have been making calls," he said, "upon people in the town, and yet the *ispravnik* has n't seen anything of you."

"Whose fault is it that he has n't seen anything of me?" I demanded hotly. "I called on him the day before yesterday, did n't find him at home, and left my card. If he wants to know 'what kind of people' we are, why does n't he return my call in a civilized manner, at a proper time of day, instead of sending a police officer around here to make impertinent inquiries before we are up in the morning? As for the 'kind of people' we are—perhaps you will be able to find out from these," and I handed him my open letters from the Russian Minister of the Interior and the Minister of Foreign Affairs. He glanced through them, and then, in a slightly changed tone and manner, inquired,

"Will you permit me to take these to show to the *ispravnik*?"

"Certainly," I replied; "that 's what they are for."

He bowed and withdrew, while I went down to see the proprietor of the house and to find out what he had done with the passports. It appeared that they had been taken to the police-station at once, but that the police secretary could neither read them nor make anything out of them, and had stupidly or angrily declined to receive them; whereupon the proprietor had brought them back and put them away safely in a cupboard drawer. In the course of half an hour the inspector of police returned with the open letters, which he handed me without remark. I gave him the passports with a brief statement of the fact that his secretary had declined to receive them, and we parted with a look of mutual dislike and suspicion. We were destined shortly to meet again under circumstances that would deepen his suspicion and my dislike.

With the coöperation of Mr. Martianof and Mr. Clements we made the acquaintance in the course of the next three or four days of nearly all the political exiles in the place, and found among them some of the most interesting and attractive people that we had met in Siberia. Among those with whom we became best acquainted were Mr. Ivanchin-Pisaref (*Ee-ván-chin Pée-sar-eff*), a landed proprietor from the province of Yaroslav (*Yáhr-o-slav*); Dr. Martinof (*Mar-téen-off*), a surgeon from Stavropol (*Stáv-rah-pole*); Ivan Petrovich Belokonski (*Ee-ván Pe-tró-vitch Bel-o-kón-skee*), a young author and newspaper man from Kiev (*Keef*); Leonidas Zhebunof (*Zheb-oon-óff*), formerly a student in the Kiev university; Miss Zenaïd Zatsépina (*Zen-ah-éed Zah-tsáy-pee-nah*), and Dmitri Clements. The wives of Dr. Martinof and Mr. Ivanchin-Pisaref were in exile with them; both spoke English, and in their hospitable houses we were so cordially welcomed and were made to feel so perfectly at home that we visited them as often as we dared. Dr. Martinof was a man of wealth and culture, and at the time of his arrest was the owner of a large estate near Stavropol in the Caucasus. When he was banished his property was put into the hands of an administrator appointed by the Minister of the Interior, and he was allowed for his maintenance a mere pittance of fifty dollars a month. He had never had a judicial trial, and had never been deprived legally of any of his civil rights; and yet by order of the Tsar his estate had been taken away from him and he had been banished by administrative process, with his wife and child, to this remote part of Eastern Siberia. He was not allowed at first even to practise his profession; but this the

Minister of the Interior finally gave him permission to do. Some time in December, 1885, a few weeks before we reached Minusinsk, a man knocked at Dr. Martinof's door, late one night and said that a peasant who lived in a village not far from the town had been attacked in the forest by a bear, and so terribly mangled and lacerated that it was doubtful whether he could recover. There was no other surgeon in the town, and the messenger begged Dr. Martinof to come to the wounded peasant's assistance. At that late hour of the night it was not practicable to get permission from the police to go outside the limits of the town, and Dr. Martinof, thinking that he would return before morning, and that the urgency of the case would excuse a mere technical violation of the rule concerning absence without leave, went with the messenger to the suburban village, set the peasant's broken bones, sewed up his wounds, and saved his life. Early in the morning he returned to Minusinsk, thinking that no one in the town except his wife would be aware of his temporary absence. The *ispravnik*, Znamenski, however, heard in some way of the incident, and like the stupid and brutal formalist that he was, made a report to General Pedashenko (*Ped-ah-shén-ko*), the governor of the province, stating that the political exile Martinof had left the town without permission, and asking for instructions. The governor directed that the offender be arrested and imprisoned. Dr. Martinof thereupon wrote to the governor a letter, of which the following is a copy.

MINUSINSK, December 3, 1885.

TO HIS EXCELLENCY THE GOVERNOR OF THE PROVINCE OF YENISEISK: On this 3d day of December, 1885, I have been notified of the receipt of an order from Your Excellency directing that I be arrested and imprisoned for temporarily leaving the town of Minusinsk without permission. It seems to me to be my duty to explain to Your Excellency that I went outside the limits of Minusinsk for the purpose of rendering urgently needed medical assistance to a patient who had been attacked by a bear, and whose life was in extreme danger as the result of deep wounds and broken bones. There is no surgeon in the town except myself to whom application for help in such a case could be made. My services were required immediately, and in view of the oath taken by me as a surgeon I regarded it as my sacred duty to go, the same night I was called, to the place where the injured man lay. I had neither time nor opportunity, therefore, to give the police notice of my contemplated absence. Besides that, in the permission to practise given me by the Minister of the Interior there is nothing to prohibit my going outside the limits of the town to render medical assistance. If, notwithstanding this explanation, Your Excellency finds it necessary to hold me to accountability, I beg Your Excellency to issue such orders as may be

requisite to have me dealt with, not by administrative process, which would be inconsistent with section thirty-two of the imperially confirmed "Rules Relating to Police Surveillance," but by the method indicated in the "Remark" which follows that section, and which provides that a person guilty of unauthorized absence from his assigned place of residence shall be duly tried. In order that such misunderstandings may not occur in future, I beg Your Excellency to grant me, upon the basis of section eight of the "Rules Relating to Police Surveillance," permission to go temporarily outside the limits of the town to render medical assistance.

SERGE V. MARTINOF, M. D.

Governor Pedashenko did not condescend to make any direct reply to this letter, but merely sent the letter itself to the *ispravnik* Znamenski with the laconic indorsement, "Let him be tried." Of course an offender in Russia cannot expect to be tried in less than a year after the accusation is made, and up to the time of our departure from Minusinsk the accused in this case was still waiting for arraignment. Since my return to the United States I have been informed by letters from Siberia that five years more have been added to Dr. Martinof's term of exile. Whether this supplementary punishment was inflicted upon him because he dared to save a poor peasant's life without the permission of the *ispravnik*, or merely because his behavior generally was that of a self-respecting Russian nobleman, and not that of a cringing slave, I do not know. When the end of an exile's term of banishment draws near, the local authorities are called upon for a report with regard to his behavior. If the report be unfavorable, an addition of from one to five years is made to his period of exile. Perhaps the *ispravnik* Znamenski reported that Dr. Martinof was "insubordinate," and very likely he was insubordinate. He certainly had grievances enough to make him so. One peculiarly exasperating thing happened to him almost in my presence. There is an administrative regulation in force in most Siberian penal settlements requiring political exiles to appear at the police-station daily, semi-weekly, or weekly, and sign their names in a register. The intention, apparently, is to render escapes more difficult by forcing the exile to come, at short intervals, to the local authorities, and say, "I am still here; I have n't escaped." And as a proof that he has n't escaped they make him sign his name in a book. It is a stupid regulation; it affords no security whatever against escapes; it is intensely humiliating to the personal pride of the exile, especially if the authorities happen to be brutal, drunken, or depraved men; and it causes more heart-burning and exasperation than any other regulation in the whole exile code.

One morning about a week after our arrival in Minusinsk I was sitting in the house of Ivanchin-Pisaref, when the door opened and Dr. Martinof came in. For a moment I hardly recognized him. His eyes had a strained expression, his face was colorless, his lips trembled, and he was evidently struggling with deep and strong emotion.

"What has happened?" cried Mrs. Ivanchin-Pisaref, rising as if to go to him.

"The *ispravnik* has ordered Marya [his wife] to come to the police-station," he replied.

For an instant I did not catch the significance of this fact, nor understand why it should so excite him. A few words of explanation, however, made the matter clear. Mrs. Martinof was in hourly expectation of her confinement. I remembered, when I thought of it, that only the night before I had had an engagement to spend the evening at Dr. Martinof's house, and that he had sent me word not to come because his wife was ill. As it happened to be the day that all of the political exiles were required to sign their names in the police register, Dr. Martinof had gone to the *ispravnik*, explained his wife's condition, said that she was unable to go out, and asked that she be excused. The *ispravnik* made a coarse remark about her, which must have been hard for a husband to bear, but which Dr. Martinof dared not resent, and said that if the woman was not able to walk of course she could not come to the police-station. This was Friday afternoon, and it was on the evening of that day that Dr. Martinof sent word to me not to come to his house on account of his wife's illness. It turned out, however, that her suffering was not decisive, and early the next morning, by her husband's advice, she took a walk of a few moments back and forth in front of the house. The *ispravnik* happened to drive past, and saw her. He went at once to the police-station, and from there sent an officer to her with a curt note in which he said that if she was able to walk out she was able to come to the police-station, and that if she did not make her appearance within a certain short specified time, he should be compelled to treat her "with all the rigor of the law." The poor woman, therefore, had to choose between the risk, on the one hand, of having her child born at the police-station in the presence of the *ispravnik* and his green-eyed assistant, and the certainty, on the other, of having it born in one of the cells of the Minusinsk prison. If her husband should attempt to defend her, or to resist the officers sent to take her into custody, he would simply be knocked down and thrown into a solitary confinement cell, and then, perhaps, be separated from her altogether by a sentence of banishment

THE "PLAGUE-GUARD."

to the arctic region of Yakutsk on the general and elastic charge of "resisting the authorities." The stupid brutality of the *ispravnik's* action in this case was made the more conspicuous by the circumstance that Mrs. Martinof's term of exile would expire by limitation in about two weeks, and she would then be a free woman. Not only, therefore, was her condition such as to render escape at that time utterly impossible, but there was no imaginable motive for escape. Long before she would recover from her confinement sufficiently to travel she would be free to go where she liked. This made no difference, however, to the *ispravnik*. A certain administrative regulation gave him power to drag to the police-station a delicate, refined, and cultivated woman at the moment when

she was about to undergo the great trial of maternity; and drag her to the police-station he did. I think that his action was the result rather of stupidity and senseless formalism than of deliberate malignity. The rules and regulations which control the actions of a petty Russian bureaucrat — as contradistinguished from a human being — require the periodical appearance of every political exile at the police-station. No exception is made by the law in favor of women in child-birth, or women whose term of banishment is about to expire, and the *ispravnik* Znamenski acted in the case of the wife just as he had previously acted in the case of the husband; that is, obeyed the rules with a stupid and brutish disregard of all the circumstances.

The two weeks that we spent in Minusinsk were full of interest and adventurous excitement. The ispravnik was evidently suspicious of us, notwithstanding our open letters, and did not return our call. The green-eyed inspector of police surprised me one day in the house of the political exile Mr. Ivanchin-Pisaref, and doubtless made a report thereupon to his superior officer, and it seemed sometimes as if even science would not save us. I suc-

Minusinsk, I decided to get rid of all my note-books, documents, letters from political convicts, and other dangerous and incriminating papers, by sending them through the mails to a friend in St. Petersburg. To intrust such material to the Russian postal department seemed a very hazardous thing to do, but my friends assured me that the postal authorities in Minusinsk were honorable men, who would not betray to the police the fact that I had sent such

ceeded, however, in establishing pleasant personal relations with the colonel of gendarmes and the Government procureur from Krasnoyarsk, told them frankly all about our acquaintance with Clements, Ivanchin-Pisaref, and the other political exiles, as if it was the most natural thing in the world for us to meet them on account of our common interest in archæology, anthropology, and the museum, and behaved, generally, as if it afforded me the greatest pleasure to tell them—the colonel of gendarmes and the procureur—all that I was doing in Minusinsk, and to share with them all my experiences. What reports were made to St. Petersburg with regard to us I do not know; but they had no evil results. We were not searched and we were not arrested.

Upon the advice of some of my friends in

a package, and that there was little probability of its being opened or examined in St. Petersburg. They thought that the danger of losing my notes and papers in the mails was not nearly so great as the danger of having them taken from me as the result of a police search. The material in question amounted in weight to about forty pounds, but as packages of all sizes are commonly sent by mail in Russia, mere bulk in itself was not a suspicious circumstance. I had a box made by an exiled Polish carpenter, took it to my room at night, put into it the results of my whole Siberian experience,—most of the dangerous papers being already concealed in the covers of books and the hollow sides of small boxes,—sewed it up carefully in strong canvas, sealed it with more than twenty seals, and addressed it to a friend in St. Peters-

MERCHANTS' FREIGHT-SLEDGES RETURNING FROM THE IRBIT FAIR.

burg whose political trustworthiness was beyond suspicion and whose mail, I believed, would not be tampered with. Thursday morning, about half an hour before the semi-weekly post was to leave Minusinsk for St. Petersburg, I carried the box down into the courtyard under the cover of an overcoat, put it into a sleigh, threw a robe over it, and went with it myself to the post-office. The officials asked no question, but weighed the package, gave me a written receipt for it, and tossed it carelessly upon a pile of other mail matter that a clerk was putting into large leather pouches. I gave one last look at it, and left the post-office with a heavy heart. From that time forward I was never free from anxiety about it. That package contained all the results of my Siberian work, and its loss would be simply irreparable. As week after week passed, and I heard nothing about it, I was strongly tempted to telegraph my friend and find out whether it had reached him; but I knew that such a telegram might increase the risk, and I refrained.

On many accounts we were more reluctant to leave Minusinsk than any other town at which we had stopped on our homeward way, but as a distance of 3000 miles still lay between us and St. Petersburg, and as we were anxious to reach European Russia, if possible,

before the breaking up of the winter roads, it was time for us to resume our journey. Thursday, February 4, we made farewell calls upon the political exiles as well as upon Mr. Martianof, Mr. Safianof, and Dr. Malinin, who had been particularly kind to us, and set out with a troika (tróy-kah) of "free" horses for the city of Tomsk, distant 475 miles. Instead of following the Yenisei River back to Krasnoyarsk, which would have been going far out of our way, we decided to leave it a short distance below Minusinsk and proceed directly to Tomsk by a short cut across the steppes, keeping the great Siberian road on our right all the way. Nothing of interest happened to us until late in the evening, when, just as we were turning up from the river into a small peasant village, the name of which I have now forgotten, both we and our horses were startled by the sudden appearance of a wild-looking man in a long, tattered sheepskin coat, who, from the shelter of a projecting cliff, sprang into the road ahead of us, shouting a hoarse but unintelligible warning, and brandishing in the air an armful of blazing birch-bark and straw.

"What's the matter?" I said to our driver, as our horses recoiled in affright.

"It's the plague-guard," he replied. "He says we must be smoked."

The cattle-plague was then prevailing extensively in the valley of the upper Yenisei, and it appeared that round this village the peasants had established a sanitary cordon with the hope of protecting their own live stock from conta-

overtaken by a howling Arctic gale on a great desolate plain thirty or forty versts west of the Yenisei and about 150 versts from Minusinsk. The road was soon hidden by drifts of snow, there were no fences or telegraph-poles to

KIRGHIS CAMELS DRAWING SLEDGES.

gion. They had heard of the virtues of fumigation, and were subjecting to that process every vehicle that crossed the village limits. The "plague-guard" burned straw, birch-bark, and other inflammable and smoke-producing substances around and under our pavoska until we were half strangled and our horses were frantic with fear, and then he told us gravely that we were "purified" and might proceed.

On Friday, the day after our departure from Minusinsk, the weather became cold and blustering. The road after we left the Yenisei was very bad, and late in the afternoon we were

mark its location, we could not proceed faster than a walk, and every three hundred or four hundred yards we had to get out and push, pull, or lift our heavy pavoska from a deep soft drift. An hour or two after dark we lost the road altogether and became involved in a labyrinth of snowdrifts and shallow ravines where we could make little or no progress, and where our tired and dispirited horses finally balked and refused to move. In vain our driver changed them about, harnessed them tandem, coaxed, cursed, and savagely whipped them. They were perfectly well aware that they were

THE CITY OF TOBOLSK.

off the road, and that nothing was to be gained by floundering about aimlessly the rest of the night on that desert of drifted snow. The driver ejaculated, "Akh Bozhemoi! Bozhemoi!" ["O my God! my God!"], besought his patron saint to inform him what he had done to deserve such punishment, and finally whimpered and cried like a school-boy in his wrath and discouragement. I suggested at last that he had better leave us there, mount one of the horses, find the road, if possible, go to the nearest settlement, and then come back after us with lanterns, fresh horses, and men. He acted upon the suggestion, and Frost and I were left alone on the steppe in our half-capsized pavoska, hungry, exhausted, and chilled to the bone, with nothing to do but listen to the howling of the wind and wonder whether our driver in the darkness and in such weather would be able to find a settlement. The long, dismal night wore away at last, the storm abated a little towards morning, and soon after day-break our driver made his appearance with ropes, crowbars, three fresh horses, and a stalwart peasant from a neighboring village. They soon extricated us from our difficulties, and early in the forenoon we drove into the little settlement of Ribalskaya (Ree-bahl-skah-yah), and alighted from our pavoska after fourteen hours' exposure to a winter gale on a desolate steppe without sleep, food, or drink. When we had warmed and refreshed ourselves with hot tea in a peasant's cabin, we ate what breakfast we could get, slept two or three hours on a

plank bench, and then with fresh horses and a new driver went on our way.

The overland journey in winter from the boundary line of Eastern Siberia to St. Petersburg has often been made and described by English and American travelers, and it does not seem to me necessary to dwell upon its hardships, privations, and petty adventures. We reached Tomsk in a temperature of thirty-five degrees below zero on the fifth day after our departure from Minusinsk, renewed our acquaintance with the Tomsk colony of exiles, gave them the latest news from their friends in the Trans-Baikal and at the mines of Kara (Kah-ráh), and then continued our journey homeward. On the 22d of February—Washington's birthday—we reached Omsk, stopped there twenty-four hours to rest and celebrate, and then went on by what is known as the "merchants' short cut" to Tobolsk. We were again surprised in the vicinity of Omsk by the appearance of camels. We had of course reconciled our preconceived ideas with the existence of camels in Siberia during the summer, but we had never stopped to think what became of them in the winter, and were very much astonished one frosty moonlight night to see three or four of them drawing Kirghis sledges.

Beyond Omsk we began to meet enormous freight-sledges of a new type drawn by six or eight horses and loaded with goods from the Irbit (Eér-beet) fair. Some of them were as big as a cottage gable-roof with a little trough-shaped box perched on the summit for the

THE TOBOLSK CONVICT PRISON.

driver, the merchant, and his clerk. The great annual fair at Irbit in Western Siberia is second in importance only to the world-renowned fair of Nizhni Novgorod (Neézh-nee Nov-górod), and is visited by merchants and traders from the remotest parts of northern Asia. The freight-sledges that go to it and come from it in immense numbers in the latter part of the winter cut up the roads in the vicinity of Tiumen and Tobolsk so that they become almost impassable on account of deep ruts, hollows, and long, dangerous side-hill slides. We capsized twice in this part of the route notwithstanding the wide spread of our outriggers, and once we were dragged in our overturned pavoska down a long, steep hill and badly shaken and bruised before we could extricate ourselves from our sheepskin bag and crawl out. Rest and sleep on such a road were of course almost out of the question, and I soon had reason to feel very anxious about Mr. Frost's health. He was quiet and patient, bore suffering and privation with extraordinary fortitude, and never made the least complaint of anything; but it was evident, nevertheless, that he was slowly breaking down under the combined nervous and physical strain of sleeplessness, jolting, and constant fear of arrest. When we reached Tobolsk on the last day of February, and took off our heavy furs in the little log hotel under the bluff to which we had been recommended,

I was shocked at his appearance. How serious his condition was may be inferred from the fact that about midnight that night he crept noiselessly over to the place where I was lying asleep on the floor, pressed his lips closely to my ear, and in a hoarse whisper said, "They are going to murder us!" I was so taken by surprise, and so startled, that I snatched my revolver from under my pillow and had it cocked before I waked sufficiently to grasp the situation and to realize that Mr. Frost was in a high nervous fever, due chiefly to prolonged sleeplessness, and that the contemplated murder was nothing but an hallucination.

In the course of the next day I made, under the guidance of the chief of police, a very superficial examination of two convict prisons, but did not find much in them that was of interest. I also visited the belfry where now hangs the first exile to Siberia—the famous bell of Uglich (Oo-glitch), which was banished to Tobolsk in 1593 by order of the Tsar Boris Gudenof for having rung the signal for the insurrection in Uglich at the time of the assassination of the Crown Prince Dmitri. The exiled bell has been purged of its iniquity, has received ecclesiastical consecration, and now calls the orthodox people of Tobolsk to prayers. The inhabitants of Uglich have recently been trying to recover their bell upon the plea that it has been sufficiently punished by three

centuries of exile for its political untrustworthiness in 1593, and that it ought now to be allowed to return to its home.

Late in the afternoon I walked over to the little plateau east of the city where stands the

can appreciate who have traveled eight thousand miles in springless vehicles over Siberian roads.

We reached the Russian capital on the 19th of March, and as soon as I had left Mr. Frost

THE EXILED BELL OF UGLICH.

monument erected in honor of Yermak, the conqueror of Siberia, and then, returning to the hotel, paid our bill, ordered post-horses, and proceeded to Tiumen, reaching the latter place on the following day.

A week's rest at Tiumen, with plenty of sleep and good food, and the inspiring companionship of English-speaking people, restored Mr. Frost's strength so that we were able to start for St. Petersburg by rail Tuesday, March 9. How delightful it was to move swiftly out of Tiumen in a luxurious railroad car only those

at a hotel with our baggage, I called a droshky, drove to the house of the friend to whom I had sent my precious box of note-books and papers, and, with a fast-beating heart, rang the bell and gave the servant my card. Before my friend made his appearance I was in a perfect fever of excitement and anxiety. Suppose the box had been opened by the post-office or police officials, and its contents seized. What should I have to show for almost a year of work and suffering? How much could I remember of all that I had seen and heard?

What should I do without the written record of names, dates, and all the multitudinous and minute details that give verisimilitude to a story?

My friend entered the room with as calm and unruffled a countenance as if he had never

Again my heart sank; evidently he had not received it. "Oh, yes," he continued, as if with a sudden flash of comprehension; "the big square box sewed up in canvas. Yes; that 's here."

YERMAK'S MONUMENT, TOBOLSK.

heard of a box of papers, and my heart sank. I had half expected to be able to see that box in his face. I cannot remember whether I expressed any pleasure at meeting him, or made any inquiries with regard to his health. For one breathless moment he was to me merely the possible custodian of a box. I think he asked me when I arrived, and remarked that he had some letters for me; but all I am certain of is that, after struggling with myself for a moment, until I thought I could speak without any manifestation of excitement, I inquired simply, "Did you receive a box from me?"

"A box?" he repeated interrogatively.

I was told afterward that there was no perceptible change in the gloomy March weather of St. Petersburg at that moment, but I am confident, nevertheless, that at least four suns, of the largest size known to astronomy, began immediately to shine into my friend's front windows, and that I could hear robins and meadowlarks singing all up and down the Nevski Prospect.

I sent the precious notes and papers out of the Empire by a special messenger, in order to avoid the danger of a possible search of my own baggage at the frontier, and four days later Mr. Frost and I were in London.

George Kennan.

WAS IT AN EXCEPTIONAL CASE?

THE Capelles were Louisianians, of French descent, and before the war lived in New Orleans, occasionally visiting their plantations on the Red River. But Anthony Capelle was killed in the battle of Vicksburg, and after the surrender Mrs. Anthony Capelle sold the Red River plantations for about half their value, placed her New Orleans property in the hands of a lawyer, gathered up some of her household stuffs, books, and other things she prized, and with her little daughter Madeline, and one old negro who had spent his life in the service of the Capelles, removed to Marietta, Georgia. Those were days of change and great confusion, and she disappeared from New Orleans and the knowledge of old friends without calling forth comment or question, and she was received into the social life of Marietta in the same way. It was not the time to sit in judgment on one's neighbors, to probe for secret motives or purposes. A common woe made all akin. From a merchant and planter who wished to sell out and go west to recuperate his broken fortunes Agnese Capelle bought a house and lot on the northeast side of the town, and with her small family settled quietly down. It was a picturesque old house, built after the colonial fashion, and set back from the street in the seclusion of an oak grove. In the early spring the graveled walks were bordered with jonquils and mountain pink, and from April to December the roses bloomed along the garden fence and around the piazza.

The tumult following the war died away. People ceased to go about with a helpless, bewildered look as they learned to adjust themselves to the new conditions of life, and realized that the negro could no longer be regarded as a slave, but as a free citizen, with all the rights and privileges of citizenship. The laws of the country made white and black equal, but there was some bitter triumph in the consciousness that the unwritten social laws would hold them forever apart, two distinct races, one degraded by color and past servitude. On the surface of life the agitations and thrills of the strong undercurrents ceased to make much impression; they had sunk too deep. The country at large settled to outward peace, and from politics and social questions attention turned to commerce and manufacture, to the development of rich mineral resources, and to literature. But the

years passed quietly enough over the Capelles. They were so strongly fixed in their pride and prejudices against social equality that they pursued their own gentle, even way untouched by the convulsions and throes of fierce indignation around them. Their servants were treated with kindness and consideration, and when the old man who had clung to them with unbroken faith through slavery and freedom died, they wept over him, and felt that a noble friend had been lost, though also a negro and a servant. And Madeline developed into womanhood, beginning her education at her mother's knee, and finishing it at a college in Virginia.

She was gifted above the average girl in wit and beauty, and possessed not only fascinating, lovely manners, but the tenderest heart and the finest sympathies. She was a girl of ardent temperament, but refined and delicate in all her tastes, and pure in thought and aspiration. She had strong convictions and opinions of her own, read and reflected more than the ordinary Southern girl, and loved music passionately. The simplest strain could make her eyes kindle, her color come and go, in a sort of silent rapture, and the pathos of a negro song moved her heart deeply. In person she was slightly above medium height, and held her head with an imperial grace not at all unsuitable to her youth and her French ancestry. Her hair was burnished brown, with a crisp wave in it, her eyes blue-gray and brilliant. But she lacked the clear, thin, transparent skin usually accompanying such hair and eyes, the blood pulsing through it pink as a rose. Hers was soft as velvet, with an opaque creamy tint, and only the faintest suggestion of color ordinarily. She had scores of friends, and in her own small family circle was looked upon as the most beautiful and lovable girl in the world. In Agnese Capelle's love for this fair daughter there was a passionate protective tenderness, a subtle quality one would have called pity, had not such a thing seemed absurd in connection with Madeline. While not betraying any undue anxiety over her marriage and settlement in life, she studied each suitor that appeared on the scene, and, if eligible, gave him a gracious welcome. But Madeline's heart remained in her own possession until she met Roger Everett.

Marietta was just attracting the attention of the Northern invalid and also the Northern capitalist. A few delicate, weak-lunged people had found their way to it, and a company

of enterprising men had projected a railroad to pass through the north Georgia mountains, across the Blue Ridge, and into North Carolina and Tennessee. Along the line of this road marble quarries were being opened and gold and talc mines discovered; but Marietta still preserved its provincial ways and appearances, its best houses the old colonial mansions, its churches overgrown with ivy, Cherokee-rose hedges bounding the pastures and gardens on the outskirts of the town and inclosing the neglected-looking graveyard. Its picturesque hills were overshadowed by Kennesaw Mountain, with the solitary peak of Lost Mountain rising far to the south, and the dim, broken outline of the Blue Ridge range bounding the northern horizon. The hills and the mountains are still there, but the town has caught the spirit of progress sweeping with electrical effect over the South. Handsome modern residences are springing up, hotels and boarding-houses are being opened, and on the northeast side of the town a beautiful national cemetery has been laid out, where the Union soldiers who fell in the battles around Atlanta lie buried. The public square is still the scene of lively traffic in the fall, when the streets are crowded with wagons heavily loaded with cotton, the farmers, white and black, standing around, clothed in jeans and homespun, while the buyers go about thrusting sampling-hooks into the great bales to test the quality of the cotton and to determine its market value. But these brown, tobacco-chewing countrymen jostle the New Yorker, the Bostonian, and, indeed, people from all parts of the Union, seeking health and fortune.

Roger Everett was one of the first New England men to find his way to Marietta and to invest in the Pickens County Marble Works. He belonged to the Everetts of Massachusetts, a family of strong abolitionists, and possessed his share of the traditional New England reserve and the deeply rooted New England pride. For a year or two he devoted himself almost exclusively to business, making only occasional visits to Marietta; but his circle of acquaintances widened, and, being young and handsome and cultivated, he was at last drawn into the social life of the town, and few parties or picnics were complete without him. He and Madeline met at one of the picnics, danced together once at one of the parties, but their acquaintance really began the day a large party went up the new railroad to the marble works. It fell to Everett to play the part of cicerone, and though Madeline shrieked less and asked fewer questions than the other girls, there was an intelligent comprehension in her eyes when he explained the process of getting out the marble from the quarries,

and the machinery used for cutting it into blocks, that made him feel that he was talking directly to her. They lunched on the bank of Long Swamp Creek, with the purple shadows of the mountains falling over them, and mountain laurel in bloom all about them. Then Madeline and the young Northerner strolled away down the stream to look for maidenhair ferns. They talked at first on general topics, and then the girl asked some questions about the North, drawing in her breath with little quivering sighs as he told her of frozen rivers, of snows so deep one could scarcely walk through them, of sleighing and skating.

"And—and is it true what they say about the negroes?" she questioned hesitatingly, curious to hear with her own ears the opinion of one of these rabid abolitionists—at least she had read in the papers that they were rabid.

He smiled, broke off a bit of laurel, pink and fragrant, and offered it to her.

"What do they say, Miss Capelle?"

"That they are equal—that we should recognize them. Oh, I hardly know how to explain it," breaking off with a little laugh, not caring to tread too boldly on delicate ground for fear he should feel wounded.

"We respect them where they deserve it, just as we do all men," he said calmly.

"Regardless of color?"

"Yes. What has the color of a man's skin to do with the question of his worth?"

"Everything, if he is a negro. Could you—I beg your pardon for asking the question—sit at the table with a *negro*, actually break bread with him as your equal?"

"If he were a gentleman, yes," firmly, his blue eyes meeting hers fearlessly.

"Oh, oh! how could you? I cannot understand it. I am fond of some negroes. I loved Uncle Sam, I like Aunt Dilsey, and I'm sorry for them as a race, but meet them on common ground I could not." And then they drifted away from the dangerous topic.

He walked with her and her mother to the train that evening, and Mrs. Capelle invited him warmly and graciously to call upon them when he came to Marietta again.

"He is interesting," she said to Madeline, with a backward glance through the car window at his tall, slight figure as the train swept them away from the station.

"Do you think so, *chérie* mama?" indifferently, *her* eyes looking down upon her lap.

"He is handsome and well-bred."

"Oh, he is a Yankee," maliciously.

"He is a gentleman."

And then they looked at each other and laughed gently, and Madeline held up a little paper-weight of pale pink marble, veined with

threads of white, that he had selected and ordered polished for her as a souvenir of the day.

From that day it was a clear case of strong mutual attraction. What though they had been differently trained, and their opinions clashed on some points? They came out of wordy controversies firmer friends than ever. There was never-ending interest in their combats, and the lightest jest or banter held a fascination keen as the brightest wit. He called Madeline a narrow-minded, illiberal provincial, for holding such fierce prejudices against the colored people, and she retorted that the negro had become a sentiment to the North, and that if they, the Yankees, would give some of their attention and pity to the poor white people crowding their large cities, the South would solve its own great problem. Sometimes they parted in anger; but it was short-lived, for love drew them with irresistible force, and if they disagreed on a few questions, how many hopes, thoughts, and desires they had in common, what taste and sympathy!

Mrs. Capelle looked on, sighed, and smiled, but waited in silence for Madeline's confidence. And one evening she came in, knelt at her mother's feet, put her arms around her, and pressed her flushed, tremulous, radiant face against her bosom. Mrs. Capelle flushed and trembled herself, and gathered that proud young head closer to her heart.

"You have promised to marry him," she said in a whisper.

"He asked me again this evening. I could not put him off," Madeline confessed, also in a whisper.

"Coquette! Did you want to put him off?"

"N—no."

"Oh, oh! he is a Yankee."

"I love him."

"He may take you away to his hard, his cold New England."

"We are to live here with you."

"Without consulting me? Fie, what aggressive children!"

"You are glad, mama. Why are you so glad I'm to be married?"

"I am longing to see you safe, my darling," dropping her teasing tone, and speaking with sudden agitation.

"Am I not safe with you?" lifting her head, and looking tenderly into the delicate face above her.

"But I am not strong, sweet, and I may be called suddenly from you some day, and it is not good for girls to be alone. It will be comforting to leave you in such hands. He is noble, he is good, and will love you faithfully. Ah, Madeline, he is strong and firm; he will rule my wilful girl."

"I should not love him if I could rule him," said Madeline, proudly.

Mrs. Capelle laughed, and kissed her. "Tell me all about it," she said softly. They talked until the hand of the clock pointed to twelve, and only the barking of a dog or two pierced the silence resting upon the town.

"We have no secrets—no secrets from each other, have we, mama?" said Madeline with a happy laugh.

"No secrets, sweet? No, no; there should be no secrets between mother and child," said the elder woman; but her eyes fell, a paleness swept over her face. It was a swift, subtle change, unnoticed by the girl in the delicious absorption of her thoughts.

That was a winter to live in the memory of those lovers as long as they lived. Every one of the swiftly flying days seemed to have its own special joy, its own sweet experiences. When apart, there were long letters written out of the fullness of their hearts; when together, long talks, or delicious silences in which it seemed enough that they could be together.

And there were letters from his New England home to her, one from his mother as sweet and gentle as her own mother could have written.

"She must be lovely, Roger," she said to her lover.

"She is," he replied with proud loyalty. "I am longing for you to see her."

"I shrink from it, for if she should not be pleased with me—"

"She must, she cannot help it, dearest. Ah! you know that you'll charm her," putting his hand under her chin, and turning her face upward to his eyes, its palpitant color, proud, shy eyes, and lovely tremulousness, a tacit confession of his power.

Before she could elude him—for with all her caressing ways and southern temperament, lending itself so naturally to demonstrativeness, she was very chary of her favors—he drew her into his arms against his heart, and kissed her.

Mrs. Capelle spent those winter days sewing on fine linen, cambric, sheer muslin, and lace, stitching many loving thoughts into the dainty garments intended for Madeline's wardrobe. Imperceptibly, as it were, she had grown very fragile, and the least excitement caused her to palpitate and tremble, with flushed face and hand pressed upon her heart.

She had been a devout Catholic in her youth, and though removed from her church, she still occasionally attended mass in Atlanta, and went to confessional. But as the winter passed her thoughts turned longingly to Father Vincent, her old father confessor, and one day in the early spring she received a letter from him. He would in a short time pass through Marietta on his way to the North. Could he stop

for a day with them? It seemed such a direct answer to her secret desire for his counsel that she joyfully hastened to reply, telling him how she needed his advice and his blessing.

She had rejoiced over Madeline's engagement, but as the time set for her marriage drew near some secret trouble seemed to wear upon her, much to the girl's distress.

"What is it, mama?" she asked, sitting at her feet, and taking her hand and laying it against her cheek.

"What can it be but the loss of you, sweet?" she replied quickly. "You must allow me to be jealous and foolish."

"But you are not going to lose me, dearest mama, and are you sure—I have fancied there must be something else troubling you."

"Indeed you must not think so; I am selfish to—"

"Selfish! You, the best and sweetest woman in the world, selfish! I'll not believe that." Still she did not feel satisfied, and felt greatly relieved when Father Vincent came, and she saw her mother brighten and look like her old self. It was about two weeks before the wedding that he came, and was persuaded to stop with them two days instead of one. He was an old man, small, slender, and ascetic-looking, with clear, calm eyes, and a sweet voice.

It was the afternoon of his arrival that Madeline went out to make some calls, but after one visit changed her mind, and returned home. She did not at once go to her mother, knowing that she and Father Vincent would probably have much to say to each other, but turned into the parlor, cool, dusky, and deserted, and went to the little alcove, where she had left her embroidery and the last letter from her lover. It was simply a corner of the big room, furnished with a lounge and a small table, and shut in by soft silk curtains. How long she had been there, re-reading that letter, dreaming over her work, she could not tell, when roused by footsteps and voices in the room—her mother and the priest.

"You hinted at some special cause for trouble in your letter," he said, as they sat down in close proximity to those curtains and Madeline's retreat.

"Yes; it concerns Madeline."

"What of her? I thought her future had been settled. Is she not to be married in a short time?"

"Yes; but, Father, she is not my child, and I am growing doubtful of the honor of my course in regard to this marriage."

"Not your child!" exclaimed Father Vincent in surprise, for he thought that he knew all the Capelle secrets.

"No. I would to God that she were," she said with deep emotion, "for I love her so

well that I'd gladly give my life to know that pure, unmixed blood flowed in her veins."

His chair creaked as he drew it a little nearer hers; his voice sank to a low key.

"You do not mean—"

"Yes; her mother was a quadroon," in a trembling whisper.

Did he hear that strange gasping sigh, as of a dumb creature struck by a mortal blow, that he so quickly and abruptly exclaimed:

"Where is she now?"

"Out calling. I did not dare speak of this while she was in the house, for fear the very walls would betray the secret. She must never know it, never. It would ruin her life, kill her, my poor, proud child."

Her voice broke in tears.

"Tell me the whole story," said the priest gently, but with authority.

"Yes, yes; that is what I am longing to do. The secret has become a burden to me; I want to be assured that I have acted rightly about her marriage. You remember my husband's brother, Lawrence Capelle?"

"Well, very well; a handsome young fellow, but rather wild."

"And lovable with it all. He died while my husband and I were in France,—we were there three years,—and before his death he wrote to Anthony, begging him to look after the welfare of a child, a baby, and giving the history of his attachment to a beautiful quadroon in New Orleans. Her mother had been a slave, but this girl had been born free, received a very good education, and grew up superior to her class. She had loved him with rare faith and tenderness, and died at the birth of their child."

"They were not married, of course."

"Married? Oh, no; but he had really been quite fond of her, and he dwelt at length upon the beauty and intelligence of the child. We came home very quietly, and before going to our own house, or betraying our presence to even intimate friends, we sought her out, and the moment I took her in my arms, looked into her eyes,—Lawrence's own beautiful gray eyes, smiling with innocent fearlessness straight into my own,—my heart went out to her in such a gush of love, pity, tenderness, I did not feel that I could ever be parted from her. Father, she was the loveliest, most lovable child I ever saw. We adopted her, we made her our very own, and no one knew that she had not really been born to us abroad. Not even to you, Father, did we confess the truth. The war came then, and Anthony died at Vicksburg; but I could not feel utterly alone, utterly bereft, while I had Madeline. I made plans for her; I said that she should never know that she was not truly my own child. Her training, her educa-

tion, became the absorbing interest of my life. After the close of the war I thought it best for her sake to leave New Orleans, to seek a new and more obscure home, away from old friends, old ties. If we remained there she might in some way learn the truth. We came here, you and my lawyer alone knowing where to find us. I have brought her up most carefully. She is refined, beautiful, accomplished, and innocent as a young girl should be, but you can see for yourself what she is. I instilled the strongest race prejudices into her mind. I impressed it upon her that the negro is an inferior creature, a servant of servants, to be treated with kindness, but never to be considered an equal; for a morbid fear that her mother's blood would betray itself in some coarse or degraded taste haunted me. But I am no longer afraid for her. Have I acted with wisdom? Have I done well to lift her up?"

"Assuredly; only"—he reflected a moment—"only your extreme course in regard to color prejudice would make the truth a hundred-fold harder to bear should she discover it."

"But she shall not discover it. In two weeks she will be married to this young Northerner, her life merged into his, her very name lost. Is it right, is it cheating him?"

"If you cannot tell her, then you must not tell him, for it would only be to raise a barrier of secrecy between them."

"Tell me there is no dishonesty, no sin in it, and my heart will be at rest."

"According to my understanding, Agnese Capelle, there is none, but the highest human understanding is at best but poor authority. You have rescued this child from the common fate of her class, elevated her, thrown around her love, protection, the honor of a good name. You save her from the consequences of her father's sin. Be contented with your work. For marriage will be the crowning of it, and if she is noble, neither origin nor birth can make her less precious to her husband. I only wish there were more women like you in this country."

She drew a long breath of relief, but humbly said:

"Do not credit me with being a humanitarian. It was simply for love of her I did it all, and lately I have craved your blessing on it, Father Vincent, for I have developed the heart-disease hereditary in my family, and look any hour to be called hence."

A little longer they talked, and then went away, Mrs. Capelle to seek some repose after the excitement of the interview, and the priest to stroll about the grounds in prayer or meditation.

When the last sound of their footsteps and voices died away, the curtains were drawn aside, and Madeline came out of her retreat. She

looked wan and ghastly, and groped her way across the room and up to her own apartment as though stricken with sudden blindness.

She closed and locked the door, then flung herself prone upon the floor. She felt like writhing and screaming aloud instead of lying there like a senseless log, only her tongue seemed paralyzed, her body numbed. And yet she could think, think with burning, agonizing intensity. Could it be true or only a hideous nightmare out of which she would presently wake? Her mother a quadroon, her grandmother a slave! She wondered that the very thought of it did not kill her. Her name, her pride, everything that she had cherished, had been torn from her, and she—she had been hurled down into a black abyss where she must grovel and suffer until death set her free. Strange visions seemed to come before her out of the remote past, visions of African jungles, of black, half-naked savages borne across the seas to be bought and sold, to pine and fret in bondage, longing for the freedom which never came to them.

They were her ancestors; their blood, degraded by generations of slavery, flowed in her veins. Her education, her refinement, her prejudices would only be instruments of torture now, with that secret consciousness of shame and degradation underlying them. It was as cruel, as complete, as if it had been planned with Machiavellian art to this ending, and through the confused misery of her thoughts ran a sensation of pity for her mother, that she had so unconsciously spoiled her work. Presently the stunned feeling passed, and she rose to her feet again, and walked about the room. On the bed and chairs were strewn the pretty things belonging to her wedding outfit. Half unconsciously she folded and put them away. She would not need them now. Once she went to the mirror, and, leaning close to it, looked at herself, seeking for traces of that race she had been taught to regard as the lowest on earth. Did that soft fullness of lip, that crisp wave in her hair, that velvety, opaque skin come from her mother? A momentary savage rage thrilled her. She struck the glass so fierce a blow with her closed hand that it cracked from bottom to top. Then her eyes fell on her lover's picture, placed in an open velvet frame, and she paled and shuddered. She did not touch it, though a hundred times it had been pressed to heart and lip, but gazed at it with that intense parting look we give the dead before they are hidden forever from us; then she leaned over the bureau, her head bowed upon her folded arms.

The afternoon passed; twilight crept into the room. Faint sounds of life came up from the lower part of the house, the tea-bell rang at last, some one came slowly, heavily up the stairs,

shuffled across the hall, and knocked on her door.

"Miss Mad'line, Miss Mad'line." She opened the door, and found Aunt Dilsey standing there, a big, coffee-colored mulatto woman, panting from the exertion of mounting the stairs, the wrinkles in her fat neck filled with little streams of perspiration. "Miss Agnese an' de priest man air waitin' fo' yo' to come down to supper, honey, an' Miss Agnese say hurry, de cakes gwine git cold," she said in a full rich voice; but Madeline only caught her by the shoulder, and stared at her thick brown skin, her coarse crinkled hair, her protruding lips, and broad figure. So her grandmother might have looked. "Fo' mercy's sake, honey, what's de matter? Air yo' sick?" cried Aunt Dilsey in a frightened, anxious tone; but the girl only turned from her, and fell upon the bed with a moan of despair.

She heard the old negress hurrying downstairs, and then her mother's light, swift steps, and tried to compose herself.

"My darling, what is the matter?" cried Mrs. Capelle, bending tenderly, anxiously over her.

"It is only a—a—headache," said Madeline, glad that the twilight hid her face from those loving, searching eyes.

"Are you sure? Dilsey frightened me so."

"Dilsey is a foolish old creature."

Mrs. Capelle felt of her hands, her face.

"You are feverish. You were in the hot sun too much this afternoon."

"Yes; that was it, the sun. Don't be anxious, mama. It is nothing. Go back to Father Vincent, and I'll sleep, and be well to-morrow."

"But I do not like to leave you."

"You must, *chérie*. Remember your guest."

"Yes, yes; so I must. I will come up again presently."

She stooped to arrange a pillow, and to kiss her, and Madeline raised herself up, threw her arms around her.

"My own good, sweet mama, my dear, lovely one!" she murmured. "You do everything for my comfort and happiness. You would not hurt me for the world, would you?"

"Hurt you, sweet?"

"I know you would not. I—I like to tease you a little. Kiss me good-night and go. *Poor mama!*" she murmured under her breath, as they held each other, in a love no bond of flesh and blood could have made stronger.

"How can I tell her that I know! How can I!" Madeline moaned when left again alone.

BUT she did not have that cruel task, for sometime during that night, while she turned wakefully on her bed, or paced softly about the room, Agnese Capelle received the summons

she had been so long expecting. Next morning only her fragile body lay between the white sheets of her bed, the life, the spirit, gone.

Madeline was strangely calm through all the excitement and confusion following, and went herself to select a sunny open spot in the neglected little cemetery for her mother's grave.

"She loved sunshine," she said to Everett and Father Vincent, "and she wished to be buried here."

She preserved the same stony quiet through the funeral and burial, and friends commented and wondered, and Roger watched her anxiously. He felt an indefinable change in her, but attributed it to the shock of her mother's sudden death. Father Vincent studied him with keen eyes, but could find no fault. He was a manly man, and a tender, considerate lover.

It was the third evening after her mother's burial that Madeline called Father Vincent into the little study adjoining the parlor. The New Orleans lawyer had come up, held a private interview with her, and had gone away again, and she had sent off her wedding trousseau to a young girl in a distant town, and certain things belonging to her mother she had carefully collected and put together. So much Aunt Dilsey, the priest, and a kind old lady who proposed to stay with her a few days knew; but she offered no explanation, and gave no clue to her plans for the future.

"She acts for all the world like she did n't expect to get married, herself," the old lady confided to a friend or two. "I can't understand what she intends to do."

Father Vincent felt some curiosity too, and went into the little room rather eagerly. She sat before her mother's desk with a lot of papers open before her. It came upon him with the force of surprise that she had changed greatly in a few days. Her features were sharpened, her eyes had purplish hollows under them, and the dull black gown she wore only brought out the intense pallor of her face.

"My child, where did you get those papers? You must let me examine them. There are some your mother wished destroyed," said the priest, hastily.

"I know, Father; I know," she said in a dull tone.

"Have you—"

"Read them? No; but I heard all that she told you that day."

"Ah!" he exclaimed, understanding why she looked so changed, and his eyes rested pityingly upon her. A fiery blush burned her throat and face for a moment, leaving her paler than ever when it receded.

"Yes; I know," she said, and clasped her hands together on her lap. "Father, will you tell Mr. Everett?"

"But—"

"I cannot do it; help me, will you?"

It was a piteous appeal, and his heart melted at the sight of her anguished eyes.

"You think he ought to know it?"

"He must, of course," she said, and he felt satisfied that she had not, for a moment even, been tempted to keep the truth from him. "He is in the parlor," she continued after a slight pause; "tell him all, spare nothing," her tensely drawn lips quivering, her hands tightly clenched.

"My child, you take it too hard," laying his hand on her head. "I am grieved for you, but do not let it spoil your peace."

"How can I help it, Father, with the training I have had? I cannot change my beliefs in a day. Oh, you know how my friends would shrink from me if they knew the truth; and I—I cannot blame them. I should do the same. There is no help, no comfort, for me."

"There is the comfort of the Church, the help of Heaven."

"Ah, yes; I forget—I forget."

"But hear your lover before you decide your future. He has a right to it, remember."

"Tell him, Father, tell him."

He went away, and, turning the light a little lower, she waited. He made the story short, for in a few minutes the door opened again and her lover entered. She rose to meet him, determined to be brave and self-possessed, but that new, bitter sense of shame again overpowered her. She seemed to shrink and shrivel under his tender eyes, and sank down with bowed head. But he knelt by her chair with his arms around her, and drew that proud, averted face against him.

"Dearest, dearest," he whispered, the very tone of his voice carrying to her his sympathy, his unshaken love.

"I thank God that I learned the truth in time," she said faintly.

"In time for what, Madeline?"

"To save you."

He raised her face, forced her to look at him.

"Do you believe my love has changed?"

"It has an element of pity now."

"But pity for your suffering, and not because I hold you less noble. I can take care of myself and you also, my darling. Father Vincent and I agree that it will be best for you to go North, get away from old associations, old ideas; so we'll be married quietly, and leave here at once." He rose, and she stood up also, facing him, looking straight into his eyes.

"Did Father Vincent tell you *all*? Do you realize just what I am?"

"Yes; you are the woman I love, my promised wife. Can I hold you blamable, dearest, or unlove you simply because—come, Made-

line, put all the past behind you, and we will never speak of this again."

"Impossible, Roger. You are generous, and I'm not afraid that you would ever reproach me, but it is not worth while for us to argue the matter. We cannot marry. In my own sight I have been humbled into the dust, and as your wife I should always have a cringing, cowardly feeling of unworthiness. I could not be happy myself, and my misery would only overshadow you. Don't think me unreasonable or lacking in love. Love! It fills all my heart, pervades every atom of my being. I loved you at once, the first moment, I think, that my eyes rested upon you. The prejudices which seem so foolish, so false, are interwoven, blended with life itself. We, here, call them instincts, holding us apart from the lower order of man, and my education only fostered, developed them to the utmost in me."

"If your mother had only—"

"Don't think hardly of her, my dearest. She is not to blame. She brought me up as she believed best, and implanted the principles and beliefs she thought would be my surest safeguards. As she grew weak and ill the secret burdened her, and for fear that she might be wronging you she sought Father Vincent's advice. How I thanked God that she died without knowing that her work was all undone." She flung herself again into the chair, and he saw that she was too excited, too overwrought, to be reasoned with.

She looked up at him.

"Had you known my birth, my parentage, from the first, could you have loved me?"

"I do not know," he said candidly; "I only know that I do love you, and that I will not give you up." His face flushed, his eyes kindled. "You must, you shall, be my wife. But we will not talk of it any more to-night; you need rest, and time to recover from the double shock which has come upon you. To-morrow, every day, I shall come, until you learn to look at this as I do. Good-night, Madeline. Think wisely, reasonably, dear."

"I will try; and you will know my decision to-morrow, Roger."

He bent over her, kissed the bright waves of her hair; but she started up, and clasped her arms about him, drawing his lips down to hers in an abandonment of love she had never shown before. Tears rained from her eyes, the stony curves of her mouth melted, and he felt that it was a tacit surrender.

"To-morrow you will listen to me, Madeline," he said with the certainty of conviction.

"Yes; to-morrow," she replied, and turned, weeping, from him.

But when he came next morning Father Vincent met him at the door, while the old

lady and Aunt Dilsey hovered in the hall with frightened, excited faces. Fear, vague, indefinite, but chilling, fell upon him. He had spent half the night in thinking and planning, he had felt assured that it needed only time and change of scene to restore Madeline to her former brightness; but even if a cloud should always hang over her, he wished to share its gloom. He could not fully appreciate her position, because he could not look at it from her standpoint. He could understand that it had been a cruel blow to her, but he could not understand how tragical. He felt very hopeful as he walked over to her home, but the face of the priest, those women in the background, startled him.

"What is the matter?" he cried sharply.

"She is gone," said Father Vincent.

"Gone!" he echoed, paling suddenly, and half reeling.

"Yes."

"Where? In God's name, where?"

"That is what we do not know. She must have gone away on the early train this morning."

The blood came back to the young man's face, a hideous fear lifted from his mind.

"You do not think then—"

"No; a Capelle would never seek self-destruction."

Everett stood still and looked about the hall and through the open doors into the silent rooms yesterday filled with the sweet influence of her presence, to-day empty, desolate, and a terrible sense of loss swept over him. Her words, "You will know my decision to-morrow," came back to his memory with crushing significance.

"Fool, fool that I have been," he groaned aloud, and the priest took him by the arm and led him into the parlor.

"The women think her mind has been upset by her mother's sudden death. It is well; let all her friends think so. But we must find her, Mr. Everett."

"Yes; I will go at once," said Roger, rousing himself. "It is to hide from me that she has gone away; but I shall find her, I shall certainly find her."

He spoke firmly and quietly, but the task before him proved very hard, for she had left no written message, no clue to her plans or destination.

It was a spring day in the year 1886 that Roger Everett turned aside from the beaten track of the tourist in New Orleans to visit a school in the old quarter of the city — a school maintained by a few New England philanthro-

pists for colored children exclusively. He lost his bearings in the narrow streets among the quaint old-fashioned houses, and stopped to make inquiries at a small building opening on the street. He rapped on the half-closed wooden shutter with his stick, his eyes meanwhile wandering up and down the silent, sunny street, absently noting the scant, picturesque attire of some brown-faced children at play on the sidewalk and the pathetic figure of an old negro sitting on a doorstep. His failure to find Madeline Capelle had left its traces upon his face. Five years had elapsed since her disappearance, and though he had not ceased to look into every woman's face he met, he had given up hope of finding her. A serene-eyed woman in a black gown and cap came to the door, and he instantly recognized the dress as the uniform of some religious order or sisterhood.

"Come in," she said in a gentle, subdued tone.

"I beg your pardon. I merely wished to—"

"It will not be an intrusion. Many have already come to-day to see her, for you know many love her. This way, please," she said, and without waiting for him to speak again, she turned and walked through two rather bare, dusky rooms into a small one opening on a green, magnolia-shaded court. He followed her, puzzled, but with a touch of curiosity, wondering how he should explain himself; but the moment he crossed the threshold he understood the mistake that she had made, for in the center of the room stood a white-draped bier, and through the unfolded linen he could trace the outline of a rigid human form.

"See the flowers," his conductress whispered, pointing to the masses of cape jasmines, roses, and smaller flowers. "Sister Christiana loved them, but she loved all things beautiful and good. They were brought this morning by negroes she has been kind to. To teach, to elevate, and to nurse them has been her mission. No service seemed too humble, no duty too hard for her. She did indeed 'belong to Christ.'"

Her mild eyes kindled, her hand instinctively sought the cross at her side.

"She died calmly and with joy, and knew us until the last moment."

He followed her across the room, treading softly as we always do in the presence of death. With reverent hand she laid aside the shielding linen, and he leaned forward — the past once more a vivid reality and not a memory, not a dream vanishing from him, for the face he looked down upon was the face of Madeline Capelle.

AËRIAL NAVIGATION.¹

THE POWER REQUIRED.

IN February, 1879, there appeared an article in this magazine entitled "Aërial Navigation (*a priori*)," by Edmund Clarence Stedman, in which certain suggestions were made in regard to the possibility of navigating the air by means of fish-shaped or cigar-shaped balloons operated by screw-propellers driven by some species of motor. The writer did not claim to be an engineer; he only held out to engineers certain suggestions which he believed were possible of attainment. Since that time, however, the identical apparatus which he suggested has been very extensively experimented with by the French Government. The culmination of all these experiments has resulted in the construction of the fish-shaped balloon called *La France*, which is propelled by a screw driven by an electric motor, the source of electricity being a storage-battery. This balloon has actually ascended several times, and has returned and landed at its starting point. But this was in a dead calm; only on rare occasions has it been possible to return to the starting point.

The experiments on *La France* have really been conducted by the French War Department with the view to obtaining a balloon which could be controlled sufficiently to reconnoiter an enemy's position and return within the lines. These experiments have been conducted by the ablest of French engineers, supplied with unlimited means and with all the resources of science at their disposal; every advantage has been taken of all the experience of those who have conducted similar experiments before them. They have probably worked out the problem to as high a state of efficiency as it will ever be possible to arrive at with a balloon; still the result is most unsatisfactory. A balloon must of necessity be of less density, considered as a whole, than the air in which it floats, and consequently must be of an extremely bulky and fragile nature. It is quite as impossible to propel a balloon with any considerable degree of velocity through the air as it is for a jelly-

fish to travel through the water at a high rate of speed.

All recent attempts in this country to navigate the air, of which so much has appeared in the newspapers, have simply been imitations of the French balloon *La France*, and very sorry imitations at that. In all nature we do not find any bird or insect which navigates the air after the manner of a balloon.

Every living creature, bird, or insect which has been able to raise itself from the earth and to propel itself through the air has a body many hundred times heavier than the same volume of air,² and is endowed with the power of exerting great mechanical force in proportion to its weight. It is the expending of this physical force upon the surrounding air that enables it to fly. But the actual force required by birds in their flight has until recently been largely a matter of conjecture. Many unsatisfactory attempts have been made with dynamometers attached to the bird itself to measure the force of its muscles, but very little of value has been accomplished in this direction. Mathematicians without number have invented formulæ and discussed the question of flight, but the most remarkable feature has been the difference in the results arrived at. Many years ago a mathematician in France wrote a treatise in which he proved that the common goose in flying exerted a force equal to 200 horse-power; another proved that it was only 50 horse-power, and he was followed by still another who proved very much to his own satisfaction that it was only 10 horse-power. Later on others have written to prove that a goose expends only about 1 horse-power in flying. At the present time, however, many mathematicians can be found who are ready to prove that only one-tenth part of a horse-power is exerted by a goose. I do not know on what basis the earlier writers came to their conclusions. Those who proved the flight of a goose about 1 horse-power in energy have figured it on the following basis: Suppose a goose to weigh 12 pounds, the wing surface being only slightly over 3 square feet—the wings alone being the only supporting power

600 to 700 times heavier than air, the feathers which cover the body, and increase the apparent bulk, not being a factor, because they give no buoyancy and are not a source of energy.

¹ Perhaps "navigation" is not the correct term to use in connection with a machine for traveling in the air. The French, I believe, have agreed on the term "aviation" in case they ever succeed in flying.

² The body of a bird without its feathers is from

while flying. Such a goose would fall through the air, provided it made no motion with its wings, at the rate of about 26 miles per hour, or say 2300 feet per minute. They claim that the goose in flying must therefore perform work which is equal to raising its body 2300 feet per minute, or as fast as it would fall if it made no motions with its wings. It is quite true if a plane having a surface of 3 square feet should be loaded with 12 pounds that it would fall through the air at the rate of 2300 feet per minute, and if air was propelled by mechanical energy against the bottom side of this plane with sufficient force to hold it in equilibrium and prevent it from falling, the energy required to propel this column of air would be equal to lifting 12 pounds 2300 feet per minute. The conventional unit of energy in England and America is 1 pound raised 1 foot high; we should therefore have 12 pounds \times 2300 as the energy in foot-pounds, which would be 27,600 foot-pounds in 1 minute of time. Now as it requires 33,000 foot-pounds for 1 horse-power, they claim that it follows that a 12-pound goose flying exerts $\frac{12 \times 2300}{33,000} = .83$ horse-power. This, however, is wide of the truth. In my experiments I have found that the advantages arising from moving forward on to new air, the inertia of which has not been disturbed, would reduce the energy required to less than one-tenth part of this, because the air under the wings would not yield one-tenth part as much if the goose were moving forward at a high velocity, as it would if the goose remained in the same position and flapped its wings with sufficient energy to sustain itself in the air without moving ahead at all. The goose would, therefore, exert no more than .083 of a horse-power, which is rather more than half a man-power, and is at the rate of 144.5 pounds to the horse-power.

With other birds, such as the albatross and the turkey-buzzard, where the wing-surface is very much larger in proportion to its weight than that of a goose, and where the angle of the wing is much flatter, the amount of power actually required, per pound of weight, is much less. Professor Richard A. Proctor wrote an article, which appeared in the "British Mechanic" some years ago, in which he assumed a certain hypothesis in the flight of birds, and which was widely copied and created a great deal of interest in Europe. He claimed that birds in flying did not exert anything like the power which some scientists had supposed, and that the advantages of moving rapidly forward on to new, undisturbed air were such that a bird did not exert power greater than that used by some land animals in running. He did not attempt to give the exact amount of energy expended, but his reasoning was very near the truth.

Later on Professor Proctor visited America, and while in Florida had ample opportunities of observing and studying the flight of the turkey-buzzard. He then wrote another article, which appeared in the "Boston Globe," in which he proved that the flight of the turkey-buzzard could not be accounted for except upon the hypothesis that its wings did not rest upon the same air a sufficiently long time to have that air perceptibly set in motion. He claimed that he had observed these birds rest for many minutes at a time upon the air without any perceptible motion of their wings. They were, however, continually moving forward through the air at a high rate of speed. The same phenomena in regard to the flight of birds have been carefully observed and noted in all parts of the world by many engineers and scientists, and they have all arrived at the same conclusions. While all recent scientific observers have practically agreed with Proctor, none have experimentally proved the exact amount of power required to perform flight.

The wings of a bird in flying perform a two-fold function. They form primarily an aëroplane which supports the body after the manner of a kite, and, secondarily, a propeller for driving the aëroplane forward. I think all scientists are agreed that if we are ever able to navigate the air it must be on the aëroplane system; that is, the weight of the machine and passenger or passengers must be carried by a large plane driven at a high velocity through the air. There is, however, some difference in opinion in regard to the proper manner of propelling these planes. Some of the less scientific, who wish to imitate nature as far as possible, think it would be necessary to imitate the wings of a bird, while others propose the use of a screw similar to those used in propelling steamships, but of course made much lighter in proportion to their size. I am in favor of a screw-propeller, because with it I find a high degree of efficiency, and the possibility of applying a large amount of force in a continuous manner without any vibration or unsteadiness in action. The unscientific man claims that all birds and insects fly by flapping their wings; consequently, the successful flying-machine will have to be provided with wings that flap. Others claim that in all nature we do not find birds which weigh over fifty pounds; consequently, no successful flying-machine will ever be made that weighs over fifty pounds.

In answer to this it might be said that the horse as well as the bird is a very beautiful and highly organized animal, and in its motions we observe the highest degree of efficiency for the power expended; still, if we had attempted to build our locomotives on the plan

FIG. 1. A MACHINE FOR TESTING THE EFFICIENCY OF THE SCREW-PROPELLER AND THE LIFTING POWER OF THE AÉROPLANES.

In this machine power is transmitted from the horizontal main shaft and upward through the vertical steel spindle and through the two members of the long arm. A is a scale showing miles per hour and B a scale divided into feet per minute; C, Dynamometer for recording the push of screw; D, Dynamometer showing the lift of the aeroplane.

of a horse, and had limited ourselves to the weight of the largest quadruped, we should probably have succeeded in making locomotives which would weigh five tons—the weight of an elephant—and walk five miles an hour. By the use of the rotating wheel on the locomotive, together with its great weight and size, we have been able to apply an enormous amount of power in a continuous manner, and the result is that we not only equal the horse but we very much surpass him both in power and speed. The nautilus, which weighs only a few ounces, is the only animal known which sails upon the face of the water after the manner of a ship. Nevertheless, sailing ships which are successful in a very high degree weigh thousands of tons. The largest animal which swims in the sea weighs seventy-five tons, and is probably able to travel at the rate of twenty miles an hour for twenty-four hours at a time, while we have many steamships which weigh 10,000 tons, and which are able to travel at an equally high rate of speed for fifteen days at a time.

It is quite true that artificial machines do not develop so much power per pound of carbon or food consumed as do animals or natural machines; still the highly concentrated character of the fuel—such as coal or petroleum—employed in artificial machines more than compensates for this difference. It is safe to say that there is twenty times as much energy in one pound of petroleum as in twenty pounds of vegetation, fish, or animal matter.

In order to ascertain the amount of energy required for flying, and also to ascertain what influence, if any, the factor of size has upon flight, I have constructed a very elaborate apparatus by which I am able to test the efficiency of various kinds and forms of screws, and the lifting power of aeroplanes of various sizes and shapes set at various angles. My apparatus consists of an arm 31 feet 9.9 inches long, mounted upon a strong vertical steel tube, provided with ball bearings so as to eliminate as far as possible the element of friction. The arm, as will be seen in the engravings, is made double, the edges being sharp, so as to offer as little resistance as possible to the air. To the end of this long arm is attached what might be termed a small flying-machine, which is provided with a shaft, the center of which is exactly 31 feet 9.9 inches from the center of the steel tube on which the long arm revolves. It would, therefore, describe a circle exactly 200 feet in circumference. The power to operate the screw-shaft of the flying-machine is transmitted by suitable gearing through the central tube and the two members of the long arm, the screw-shaft being free to move in a longitudinal direction, its movement, however, being opposed by a spiral spring. Upon attaching a screw to the shaft, and rotating it at a high rate of speed, the flying-machine was free to move around a 200-foot circle. Whatever the push of the screw was, the spiral spring was correspondingly compressed, and suitable apparatus recorded the

push in pounds on a large scale attached to the framework which carried the arm, and which could readily be observed while the apparatus was in motion. Attached to the flying-machine was a series of levers arranged after the manner of platform scales, and to which the *aéroplane* could be attached at any desired angle. A small steam-engine, which could be readily run at any desired speed, furnished the power. A tachometer recorded the number of revolutions made, and a dynamometer the amount of energy expended. In order instantly to observe

was attached at the desired angle, the corners being stayed with wires to prevent twisting or breaking. It was not attached in the middle to the machine, but the inside end was longer than the outside end, just sufficiently so to make both ends lift equally. The levers to which the plane was attached were connected to a dynamometer arranged in such a manner that the lift could be observed while the apparatus was running. In order to arrive at the amount of power required to drive the plane, correct observations were made be-

FIG. 2. THE MANNER OF CONNECTING THE AËROPLANES AND ATTACHING THE SCREWS.

A is a casing partly wood and partly brass which carries a horizontal steel shaft; B, The screw-propeller; C, The *aéroplane*; D, D, Two bars of steel operating freely in a vertical direction, being supported by four horizontal bars pivoted at G, G; E, H, H, Indices showing the angle of planes; E and F, Steel plates to which *aéroplanes* are attached; L, Long horizontal bar of steel and wood to the ends of which steel wires are attached to prevent the twisting of the machine while in motion (see figure 1); I, Chain connecting the *aéroplane* with the dynamometer; K, K, Wires for relieving the parts from strains set up by centrifugal action.

the speed, or to be able instantly to arrive at any desired speed, the machine was provided with a large glass tube connected in such a manner that as the speed increased red liquid rose in the tube. On one side of the tube was a scale divided into miles per hour, and on the other a scale divided into feet per minute.

When the screw was attached and the engine started, the arm at once began to travel around the circle, and by manipulating the throttle-valve of the engine any desired speed could be obtained up to ninety miles an hour. By allowing the arm to travel, the push of the screw while advancing into fresh air could also be accurately obtained. In order to ascertain the lifting power of an *aéroplane*, it

fore the plane was attached. In this way I was able to ascertain the exact amount of energy required to drive the arm and all its attachments through the air, and then, by attaching the plane and running the machine until exactly the same speed was attained, the difference in the readings showed the exact amount of energy required to drive the plane. The screws used were of wood and varied in diameter from 17.5 inches to 25.4 inches. About fifty different forms of screws were experimented with, some with four blades, some with two, some plain, and others with increasing pitch. The whole apparatus to which the flying-machine was attached, including the long arm, its counterweight, stays, dynamometer, levers, etc.,

A, Pulley secured to shaft; B, Steel plunger; C, Screw-propeller; D, Spiral spring; E, Cord; F, Electrical attachment; G, Driving-belt; H, Brass frame. In this apparatus the push of screw is opposed by spring D, which records the push on a dynamometer through the cord E. The electrical attachment is connected so as to ring a bell every time the shaft makes 200 turns. In this way one is able to ascertain if the belt G slips on the pulley.

weighed about 800 pounds and offered considerable resistance to the air.

An *aéroplane* made of thin wood 12 feet 10 inches long and 26 inches wide, driven side-wise, having the under side curved a quarter of an inch and placed at an angle of 1 in 13, and driven at a rate of 3500 feet per minute, lifted a load of 53 pounds,¹ the push of the screw being 8 pounds. Upon removing the plane and running the machine at exactly the same speed, the push was reduced to $4\frac{1}{4}$ pounds; the difference between 8 and $4\frac{1}{4}$ pounds was, therefore, the amount of energy consumed in driving the plane, which would be $3\frac{3}{4}$ pounds. The energy in the difference of push was 13,125 foot-pounds, which is at the rate of 133.2 pounds to the horse-power. The same *aéroplane* placed at an angle of 1 in 12, and driven at the rate of 4400 feet per minute, carried a weight of 100 pounds, and upon attempting to increase the speed the wire stays which held the ends down were broken. The plane was very much distorted while traveling at this speed, so that the actual angle could not be definitely determined. It carried 60.9 pounds to the horse-power.

With an *aéroplane* 6 feet long and 12 inches wide, placed at a very flat angle and driven at a very high speed, as much as 250 pounds were carried to the horse-power. But the angle was so flat that it was difficult to maintain it, as the plane trembled, and at times was badly distorted by the air-pressure. All the experiments went to prove that the most favorable results were produced when the angle was flat and the speed high.

In regard to the efficiency of screws, it was found that a two-bladed wooden screw, 25.4 inches diameter, of slightly increasing pitch,—the mean pitch being 36 inches,—when driven at a speed of 2333 turns per minute, pushed 11 pounds through a distance of 5700 feet per minute. A similar screw, $17\frac{1}{2}$ inches diameter, with a mean

pitch of 24 inches, driven at a speed of 2800 turns a minute, gave a push while standing still of 8 pounds, and when allowed to advance at the rate of 3700 feet per minute gave a push of 5 pounds. All well-made screws were found to be efficient. The screw which gave the worst results was made exactly like those employed in the experiments

of the French Government.

In conducting my experiments I found that if I multiplied the pitch of the screw in feet by the number of turns made in a minute and by the push of the screw in pounds, and divided this product by 33,000, it corresponded exactly with the readings of my dynamometer on the main shaft. This led me to believe that there was very little or no skin friction. I accordingly made what might be called a screw without any pitch at all, that is, blades of the exact shape, size, and thickness of one of the screws experimented with, but instead of being twisted and set at an angle, they were flat blades, each blade forming a sector of a disk, both edges being made very sharp, exactly like the blades of a screw. Upon testing this, I found, notwithstanding that my apparatus was so delicate that the touch of the end of the finger to the screw-shaft perceptibly moved the pointer on the dynamometer, that the force required was so small that the dynamometer failed to record it. It would therefore appear that the skin friction between the air and the polished surface is so small that it need not be taken into consideration, which is quite the reverse of what takes place with screws running in water. This may be accounted for as follows: water wets the screw and sticks to the surface no matter how highly polished,

FIG. 4. CROSS-SECTION OF THE TWO MEMBERS OF THE LONG ARM.

A, Wire connecting the *aéroplane* and the lift of the dynamometer; B, Wire running to the push dynamometer; C, Electrical wires.

¹ It will be observed that the lift was 14 times the push, while the mean angle of the plane was 1 in 13; but the plane was curved so that the front part of it, which lifted the most, was nearer 1 in 15 than 1 in 13. Moreover, the *aéroplane*, being held down by the corners, bagged slightly, and this accounts for its lifting more than it should have done theoretically.

while air, by not sticking to the surface, offers practically no resistance. In trying my experiments, notwithstanding that the circle around which the planes traveled was 200 feet in circumference, it was found, after the aëroplanes had been running a few minutes, that the air under them was perceptibly traveling downward around the whole circle, especially so when large planes were run at a high speed. I am therefore of the opinion that if my apparatus had been running in a straight line, so that the air was wholly undisturbed, the angle could have been much less, and the power consumed correspondingly reduced. Experiments which were tried while the wind was blowing went

would be apt to suppose that the same laws came into play in navigating the air as in navigating the water. This, however, is not true. It is a well-known fact that if it requires 10 horse-power to drive a steamboat 10 miles an hour, it will require 80 horse-power to drive it 20 miles an hour. This may be accounted for in the following manner. If the speed of a boat be 20 miles an hour, it will strike twice as many pounds of water per minute, and each pound twice as hard, as when driven 10 miles an hour. It will consequently require four times the amount of energy to drive the boat a given distance, and as the engine only has half as much time to develop four times as much

energy, it follows that it must be eight times as strong. In navigating the air, however, we may reason as follows: if we make no allowance for skin friction and the resistance of the wires and framework passing through the air,—these factors being very small indeed at moderate speeds as compared to the resistance offered by the aëroplane,—we may assume that with a plane set at an angle of 1 in 10, and with the whole apparatus weighing 4000 pounds, the push of the screw would have to be 400 pounds. Suppose now that the speed should be 30 miles an hour; the energy required from the engine in useful effect on the machine would be 32 horse-power. (30 miles = 2640 feet per minute. $\frac{2640 \times 400}{33000} = 32$.) Adding 20 per cent.

FIG. 5. DYNAMOMETER AND TACHOMETER ATTACHED TO THE MAIN SHAFT.

A, Dynamometer recording amount of power consumed in tenths of a horse-power at a speed of 600 turns per minute; B, Tachometer for showing the number of turns per minute; C, Hydraulic apparatus connecting with the dynamometer; D, Counter weight. With this apparatus it was possible to determine readily the exact number of turns and the amount of power consumed.

to prove the correctness of this theory. Often when the wind was blowing, the lift of the planes was sufficient to break the stays which secured them to the machine, and this notwithstanding that the angle was very flat at the time. This was especially observed while the aëroplane was passing over the windward side of the circle where the air had not been disturbed, a plane 8 feet long and 3 feet wide often lifting momentarily as much as 200 pounds.

Professor Langley, in discussing the question of flying, is reported to have said that *with a flying-machine the greater the speed the less would be the power required*. Some engineers less scientific than the professor have attacked him upon this point. Engineers familiar with the science of navigating water by steam-power

for slip of screw, it would be 38.4 horse-power. Suppose now that we should increase the speed of the machine to 60 miles an hour, we could reduce the angle of the plane to 1 in 40 instead of 1 in 10, because the lifting power of a plane has been found to increase in proportion to the square of its velocity. A plane traveling through the air at the rate of 60 miles an hour, placed at an angle of 1 in 40, will lift the same as when placed at 1 in 10 and traveling at half this speed. The push of the screw would therefore have to be only 100 pounds, and it would require 16 horse-power in useful effect to drive the plane. Adding 10 per cent. for the slip of the screw, instead of 20, as for the lower speed, would increase the engine-power required to 17.6 horse-power. These figures of course make no allowance for any loss by atmospheric

FIG. 6. THE EXPERIMENTER AND ASSISTANTS TESTING AND MARKING OFF THE DYNAMOMETER.

The main shaft was run at exactly 600 turns a minute and the friction-brake applied to the screw-shaft in the manner shown, A being the friction-brake and B the weight lifting, the friction-brake being attached to the shaft in the same manner that the screws are attached and the engine running at exactly the same speed. The dynamometer being marked at this speed, it was possible to eliminate completely the element of friction and to determine the exact amount of power applied to the screw. The dynamometer, therefore, recorded not the total amount of energy consumed but the amount of energy consumed in driving the screw.

friction. Suppose 10 per cent. to be consumed in atmospheric resistance when the complete machine was moving 30 miles an hour, it would then require 42.2 horse-power to drive it. Therefore at 30 miles an hour only 3.84 horse-power would be consumed by atmospheric friction, while with a speed of 60 miles an hour the engine-power required to overcome this resistance would increase eight-fold, or 30.7 horse-power, which, added to 17.6, would make 48.1 horse-power for 60 miles an hour.

It would therefore stand as follows:

FOR 30 MILES PER HOUR.

Power required to overcome angle of plane . . .	32.
" " " compensate for loss in slip of screw	6.4
" " " overcome atmospheric friction	3.84
Total horse-power	42.24

FOR 60 MILES PER HOUR.

Power required to overcome angle of plane . . .	16.
" " " compensate for loss in slip of screw ¹	4.
" " " overcome atmospheric friction	30.7
Total horse-power	50.7

¹ The additional resistance offered by atmospheric friction would increase the slip of screw to about 4 horse-power.

² The friction referred to here is not only the skin

If, however, the element of friction² could be completely removed, the higher the speed the less would be the power required. My experiments go to show that certainly as much as 133 pounds can be carried with the expenditure of 1 horse-power, and under certain conditions as much as 250 pounds. Some writers who have based their calculations altogether on mathematical formulæ are of the opinion that as much as 500 pounds can be carried with 1 horse-power.

From the foregoing it would appear that if a machine with its motor complete can be made to generate 1 horse-power for every 100 pounds, a machine might be made which would successfully navigate the air. After studying the question of motors for a good many years, and after having tried many experiments, I have come to the conclusion that the greatest amount of force with the minimum amount of weight can be obtained from a high-pressure compound steam-engine using steam at a pressure of from 200 to 350 pounds to the square inch, and lately I have constructed two such engines each weighing 300 pounds. These engines, when working under a pressure of 200

friction which occurs in a very slight degree on both sides of the aeroplane, but also the resistance offered by the framework, the machinery, and the numerous wire stays which have to be driven through the air.

pounds to the square inch, and with a piston speed of only 400 feet per minute, develop in useful effect in push of screws over 100 horse-power, the push of the screws collectively being over 1000 pounds. By increasing the number of turns, and also the steam-pressure, I believe it will be possible to obtain from 200 to 300 horse-power from the same engines and with a piston speed no greater than 850 feet per minute.¹ These engines are made throughout of tempered steel, and are of great strength and lightness; the new feature about my motors, however, is the manner of generating steam. The steam-generator itself, without the casing about it, weighs only 350 pounds; the engine, generator, casing, pumps, cranks, screw-shaft, and screws weigh 1800 pounds, and the rest of the machine as much more. With a supply of fuel, water, and three men, the weight will not be far from 5000 pounds. As the foregoing experiments have shown that the load may be fourteen times the push of the screw, it would appear that this machine ought to carry a burden, including its own weight, of 14,000 pounds, thus leaving a margin of 9000 pounds, provided that the steam-pressure is maintained at 200 pounds to the square inch. The steam-generator is self-regulating, has 48,000 brazed joints, and is heated by 45,000 gas-jets, gas being made by a simple process from petroleum. When the machine is finished, the exhaust steam will be condensed by an atmospheric condenser made of a great number of very thin metallic tubes arranged in such a manner that they form a considerable portion of the lifting surface of the *aëroplane*. The greater part of the machine is constructed from thin steel tubes. I found that these were much more suitable for the purpose than the much-talked-of aluminium; still I believe that if I should succeed in constructing a successful machine it would lead to such improvements in the manufacture of aluminium products that it will be possible to reduce greatly the weight of the machine.

The questions of keeping the machine on an "even keel," of steering, and of landing, have been duly considered and provided for, but a description of these would be premature before the machine has actually been tried.

Of course I hope to succeed, and from the data obtained from the foregoing experiments, and from the information I have obtained from

¹ The piston speed of an express locomotive is about 1000 feet per minute.

other sources, it seems almost certain that I shall do so; still I may not. It may, however, be remarked that for many years engineers and scientists have admitted that the navigation of the air is certain to come so soon as a motor could be discovered which had sufficient energy in proportion to its weight. This motor has been found, its power has been tested, and its weight is known. It would therefore appear that we are within measurable distance of a successful machine for navigating the air, and I believe it is certain to come within the next ten years whether I succeed or not. Many ask what use it will be put to in case it does succeed. To this I would reply, Certainly not for carrying freight, and not, for a considerable time at least, for carrying passengers. When the first flying-machine succeeds, its first great use will be for military purposes. It will at once become an engine of war, not only to reconnoiter the enemy's positions as has been attempted with the so-called dirigible balloons, but also for carrying and dropping into the enemy's lines and country large bombs charged with high explosives. It does not require a prophet to foresee that successful machines of this character would at once make it possible for a nation possessing them to paralyze completely an enemy by destroying in a few hours the important bridges, armories, arsenals, gas and water-works, railway stations, public buildings, etc., and that all the modern means of defense both by land and sea which have cost untold millions would at once be rendered worthless.

Of course this mode of warfare would not do away completely with all forms of small firearms, which would still have to be used in order to enable these future engines of war to combat one another; but it is safe to assert that none but small and light guns would be used.

Flying-machines of the future will of necessity be of a complicated and delicate nature, and will require the very highest order of scientific and mechanical skill to construct and operate them. France is to-day the only country in the world which has the plant and in which it would be possible to manufacture all the material and to construct a machine such as I am now experimenting with. Flying-machines will therefore be employed only by the rich and highly civilized nations. Small nations and half-civilized tribes will still have to content themselves with their present mode of warfare.

Hiram S. Maxim.

BESIEGED BY THE UTES.

THE MASSACRE OF 1879.

ON THE DEFENSIVE—THE CARTRIDGE BAG.

IN the summer of 1879 trouble occurred between the White River Utes and their agent, N. C. Meeker. The cause is not important, but the trouble finally became serious enough to warrant the call upon the Secretary of War for the support of troops to repress turbulence and disorder amongst the Indians of that nation. In September an expedition was organized in the Department of the Platte, and the following troops were ordered out: one company of the 4th Infantry under Lieutenant Butler D. Price; Troop E, 3d Cavalry, Captain Lawson commanding; and two troops, D (Lt. J. V. S. Paddock) and F (Captain J. S. Payne), of the 5th Cavalry. Major T. T. Thornburgh, 4th Infantry, commanded the whole, and Acting Assistant-Surgeon Grimes was the medical officer.

This command was concentrated at Fort Steele, Wyoming, on the Union Pacific Railroad, and marched south from that point towards White River Agency about the 21st of September. Nothing of an unusual character occurred during the first few days of the march, nor was it supposed that anything of a serious

nature would happen. The agent had asked for one hundred soldiers and more than double that number were in this column. The troops were *en route* to a certain point to preserve order, not expecting to make war. The Utes understood that, and the very evening preceding their attack upon the troops, the chiefs entered the soldiers' camp, partook of their hospitality, and assured them of their friendship. The report of General Crook says, "The last message Meeker ever sent to Thornburgh was to the effect that the Indians were friendly and were flying the United States flag. Yet, in the face of all this, the very next morning these Indians, without provocation, treacherously lay in ambuscade and attacked the troops with the result already known." This, General Crook says, is not war, it is murder; and the General, as usual, is correct. But is it not strange that, with all the horrible examples furnished us in past years, we have never been in the habit of preparing for murder as well as war? It seems at

least unfortunate that all our Indian wars must of necessity be inaugurated with the massacre or defeat of the first detachment. It may be interesting, if not instructive, to give a few examples.

The Modoc War of 1872, in which so many valuable lives were lost, was begun by the advance of half a troop of the 1st Cavalry. This force rode up to the Indian camp, dismounted, and were standing to horse, with probably no thought of being murdered or of any serious trouble. It is reported that while the officer in command was talking to the chief a rifle was discharged by an Indian, either accidentally or as a signal, and that instantly thereafter firing on the troops took place and a number were killed and wounded. The Indians, about sixty in number, taking advantage of the confusion among the troops, retired to their stronghold in the lava beds, murdering every white man *en route*. In this stronghold they defied the Government, massacred a commission composed of prominent men sent to them in peace, and withstood the attacks of 1300 soldiers for months, and until both food and water gave out.

ON OUTPOST DUTY.

The Nez Percés War in 1877 commenced in about the same way. Two small troops of cavalry, marching down a deep and long cañon, presented themselves before the camp of Chief Joseph, as if a display of this nature was all that was necessary to capture a force of two hundred and fifty warriors. The Indian, always quick to see an advantage and to profit by it, was not slow in this instance, and the first few shots from the enemy on the left and rear of the line caused a hasty retreat of the soldiers, who no doubt up to that time thought there was to be *nothing serious*.

The Little Big Horn fight in 1876, where General Custer and most of his command were massacred, was surely the result of overestimating one's strength and underrating that of the enemy.

Other examples could be furnished, but are not these, with their attendant losses and failures, sufficient to prove that with the Indian as a foe we must always be prepared, and especially careful when he seems most friendly and still holds on to his rifle? On the other hand, many instances are known where troops have met and overcome at the start more serious obstacles than those mentioned above, and without a shot being fired. A column on the march, prepared to fight if necessary, is not likely to be disturbed, and it is almost

certain that no Indians will be seen or heard from unless they have all the advantages, and unless certainty of success follows their first efforts.

This Ute campaign was a repetition of all the other sad occurrences in Indian warfare. Major Thornburgh, the commander, as noble and brave a man as ever marched with troops, fell as others had, having ignored an enemy in the morning who had the power to defeat him before noon. The march through these mountains and into the valley of Milk River, as described, was made as any march would be conducted on a turnpike through a civilized country and among friends. No danger had threatened; on the contrary, the Indians appeared friendly, and assuring messages had been received from the agent.

Thornburgh, not having had experience with Indians and trusting to appearances, anticipated no trouble, and consequently was wholly unprepared when the attack was made. We can in a measure account for such action on the part of a commander when it is remembered that with some men the desire to appear before their troops free from undue anxiety is greater than their sense of caution. Considering the number of troops in this command, and the fact that not half that number of Indians were opposed to them, it is fair to presume that with

proper precaution the command might have gone through to the agency without losing a life, or even hearing a shot; but the officers and men following Thornburgh doubtless like him had no thought of danger to such a column; and had the colonel made sufficient preparation to secure his command, and reached his destination safely on that account, he would have been pronounced an "old granny" for having unduly harassed his troops when no enemy appeared.

The employment of the chiefs, ostensibly as guides, but really detaining them as hostages, would have insured the peace as well as the safety of the command beyond a doubt.

But to go more into details: Thornburgh, after leaving his infantry company at a supply camp, pushed on with his three troops of cavalry, and while on the march on the 29th of September, at 10 A. M., at the crossing of Milk River, the Indians opened fire on the column from all directions, and from what followed

where Lieutenant Paddock, in command of D Troop, 5th Cavalry, and the wagon train, had corralled his train, formed his troop, and was prepared to receive and shelter his comrades.

It is not known what orders Lieutenant Paddock had from his commanding officer as to his duties with the rear guard and wagon train, but it is supposed that as no precautions were being taken in front, none were ordered in rear, so that the prompt action of this young officer in arranging his wagon train and troops for a stand, and holding every man to his duty there, was praiseworthy, and was the means of saving many lives. This afforded shelter and a rallying place for the scattered troopers, then being outflanked and driven back by the enemy; indeed, Paddock's command was even receiving attention from the Indians in the way of rifle-balls, for the Indians knew if they could get the train, they could capture or kill the rest of the command before it could escape from the valley. Here there was a halting place, and the

BEHIND THE BREASTWORK.

it would appear that the command was completely surprised, or sufficiently so to make some confusion among the troops. F Troop, 5th Cavalry, and E Troop, 3d Cavalry, were quickly brought into line, and for some time fought well and bravely, but the superior tactics of the Indian, in his usual rôle of turning the flanks, and the loss of many brave men including the commander, soon caused a retreat, and these two troops fell back perhaps half a mile to a point

whole command was concentrated behind and about the wagons. The Indians then surrounded the soldiers, fired upon them from all directions, and, setting fire to the grass, advanced to within a short distance of the wagons, being screened by the thick smoke from the fire of the troops.

In this situation the battle was carried on for the rest of that day, the troops being strictly on the defensive, and keeping behind the wagons, while the Indians, lying close to the

THE RIDE OF PRIVATE MURPHY.

ground and concealed as much as possible, were able to kill most of the animals and occasionally to pick off a soldier or teamster.

The loss of the animals and the number of wounded men to be cared for and protected made any movement from this spot out of the question. There was nothing to do then but fight it out and hold on until reinforcements could reach them. However, the longest day must have an end, and the sun aided these harassed soldiers by disappearing behind the hills and affording them, under cover of darkness, an opportunity to prepare for the morrow. This first night was employed by the troops in building a breastwork near the water, and in caring for the wounded.

There being no timber within reach, shelter had to be constructed from such material as was at hand. The wagons were unloaded and spare parts used, bundles of bedding, sacks of grain, cracker-boxes and bacon sides were piled up, but this not being sufficient, the bodies of dead horses and mules were dragged to the line and made use of for defense. A pit was sunk in the center of the square, and in this hole in the ground the surgeon placed his wounded, himself being one of the unfortunates. This, then, was the situation of a command of able-bodied, well-equipped soldiers, strong men every one, which, a few hours previously, had struck its camp and marched in all confidence into this valley of death. Where were now the flaunting guidons and the rude jokes about cowardly redskins? Instead thereof, many were mourning the sudden taking away of beloved comrades, whose bodies were left on the plain

to the savage enemy, and all bemoaned the fate of their noble commander, also left on the field. He had proudly led them forward, and when the unlooked-for attack fell upon them still kept at the front; perhaps, having recognized too late the error of over-confidence, he determined to repair the fault even at the sacrifice of his life.

Thornburgh was a noble man, and beloved by all. The troops following him were as good as any in the army, and would have proved more than a match for the enemy if they could have gone into the fight on anything like equal terms.

After dark on this first night a volunteer was called for to take one of

the horses yet left alive and if possible steal his way through the enemy's line to the nearest telegraph station. From several volunteers Private Murphy of D Troop, 5th Cavalry, was selected to take this desperate ride, and he accomplished the distance of 170 miles to the railroad in less than 24 hours.

The place selected or rather forced upon Captain Payne, 5th Cavalry, now the senior officer, for the defense of his command, was near the battle-field, and fortunately within reach of the stream called Milk River. It was in a small round valley or opening in the mountains, and within easy rifle range of the tops of the nearest hills surrounding it. On these hills the Indians took position, and while being concealed and well protected themselves, the Indians were able to pick off any soldier showing himself above the breastwork, or while moving about inside of it. The soldiers returned the fire occasionally, but it is not known that an Indian was injured during the siege. The enemy, however, was kept down close behind the ridge, and no advance or open attack on the intrenchment was at any time attempted. The position taken was on a rise or table, and was about two hundred yards from the stream. No water could be obtained during the day, but after dark a party started out to fill their buckets and canteens. They were almost immediately fired upon by the enemy, who, anticipating their necessities, had found concealment on the further side of the river in the thick underbrush. As some of the party were wounded, they returned to the breastwork unsuccessful. Water being an absolute neces-

sity, even if it cost life, another party was sent out, this time under escort of armed men. As soon as the party was fired upon, the escort discharged their guns, and although firing in the dark and at random, it is supposed that one or more of the enemy were wounded; at any rate the Indians fled, and the troops were not prevented after that from getting water at night sufficient for the next day.

With the dawn of the second day commenced the firing upon the troops from the hill-tops. Not an Indian could be seen on whom to return the fire; only a puff of white smoke indicated from time to time

part of the breastwork, and were used to protect the living.

Exciting accounts have been published of the situation of a party of our countrymen held fast by the ice of the frozen north. It may be said that they had rations, were comparatively comfortable, and had only to wait for a return

UTES WATCHING FOR THE RELIEF COLUMN.

where the bullet came from; and as there was little chance of finding the Indian at the spot from which he had fired, there seemed to be no use wasting ammunition on space, and firing by the troops was kept up only to prevent open attack. On this day nearly all the animals remaining alive were easily disposed of by the enemy, and some men were killed and wounded. Among the latter were Lieutenant Paddock and Surgeon Grimes. The long weary hours of this day must have been trying indeed to the besieged. The suffering and groans of the wounded seemed more terrible than the sight of the bodies of the dead, which could not be removed except at the expense of other lives. It is said that after night these bodies became

of the sun to thaw their prison doors and set them free. But these soldiers, although nearer home, were brought to a stand where a life was called for at every crack of the rifle, and where to them the light of day was the season of distress. From the number of lives already lost in this short time, and the number of wounded requiring care and increasing the anxiety, and considering the time that must elapse before help could possibly reach them, an hour here contained more real suffering than could be felt in many days of waiting only for the sun to shine.

Aside from being constantly harassed by the enemy from the outside, an incident occurred on the inside of the works this day that came near finishing the lives of some of the wounded. One of the horses was shot in such a manner as to make him frantic and unmanageable. He charged about the inclosure in a furious way until exhausted, and then fell into the pit among the wounded. Fortunately no one was injured, but some of the men said that in their nervous

CAPTAIN DODGE'S COLORED TROOPERS TO THE RESCUE.

condition they thought the whole Ute nation had jumped from the tops of the hills to the bottom of the pit.

At an early hour on the morning of October 2d, the sentinel heard the approach of a column of horsemen, and the besieged soon welcomed Captain Dodge, 9th Cavalry, at the head of his troop. The captain, having heard of the situation, came at once to the assistance of his comrades, and managed to get through to the intrenchment without losing any of his men. This reinforcement of two officers and fifty enlisted men added materially to the fighting strength of the command, and they brought with them also the cheering news that the courier had passed through safely. The horses upon which this party rode were soon disposed of by the enemy, and Dodge and his troop became as much of a fixture as any of the besieged. The gallant dash made by these colored troopers brought them into high favor with the rest of the command, and nothing was considered too good for the "Buffalo" soldiers after that. Captain Dodge almost immediately received well-merited promotion, and was the hero of the campaign.

Leaving the besieged to worry through the days and nights that are to pass before relief can reach them, we will go with the swiftly riding courier, and see what follows his arrival at the railroad.

On the morning of October 1st, our quiet garrison at Fort D. A. Russell, near Cheyenne, Wyoming, was aroused by the information received from Department Headquarters, that Thornburgh and most of his command had been massacred by the Ute Indians, and that the few officers and men remaining were intrenched, protecting the wounded and fighting for their lives. The commanding officer, General Wesley Merritt, fortunately possessing all the characteristics of a true cavalryman, always had his command well in hand. At this time he had four troops of the 5th Cavalry and one company of the 4th Infantry, and when this sudden call reached him all that was necessary was to sound "boots and saddles" and go.

The order to take the field reached us about 8 A. M., and at 11 A. M. we had saddled up,

TIDINGS OF THE RELIEF COLUMN—LISTENING TO OFFICERS' CALL.

had marched two miles, and were loaded on the cars,—horses, equipments, pack-mules, rations and all,—and were under way. We reached Rawlins Station, our stopping place, about 1 A. M. next morning, and met there four companies of the 4th Infantry, also ordered for field service under General Merritt. The rest of that night was spent in preparing for the march. The infantry, in wagons, were on the road by 10 A. M.; the cavalry marched a little later, but overtook the infantry about twenty-five miles out at 5 P. M. Then all pushed on together until 11 P. M., when it became necessary to halt and rest the animals. At 7 A. M. we were on the road again, and continued marching until 11 P. M., at that time reaching the camp of the infantry company left behind by Major Thornburgh. Here a short rest was taken, and at dawn of day we resumed the march, reaching the entrance to Big Bear Cañon about 4 P. M. This was a rough, ugly looking place to enter with a command at night, especially with the knowledge of disaster in front and not far off. But the situation called for the greatest exertion, as well as the taking of all the chances, and although we had already made an unheard-of march that day, and on previous days, every man was anxious to go on, and even the animals seemed to be under the influence of the hour. While they were being rubbed down and fed, the men had their coffee and hardtack, and just at dusk we started

off for the last march, hoping soon to reach those we knew to be in distress, and who could only be saved by our coming. Getting through that cañon at night was a desperate undertaking, leaving the Indians entirely out of the question, and on looking at the breakneck places afterwards by daylight, over which we had passed, it seemed a miracle that we succeeded in getting through without losing all the wagons carrying the infantry, and some of the horsemen as well. The cavalry was in the lead, but the "charioteers," as the infantry were called, followed close behind, and on the down grade occasionally ran into the rear of the cavalry column. On the ascent the infantrymen

General Merritt at this time was some distance ahead with the cavalry, and crossing the last hill he entered the valley just at dawn of day. It was yet too dark to see the intrenchment, but the column, while pressing on, was soon brought to a halt by a challenge from the besieged. A trumpeter was then summoned and officers' call sounded. This brought all hands to the top of the breastwork, and a lively cheer answered the last note on the trumpet. A wild scene followed this coming together of old comrades, and while it was going on, the enemy, although at their posts within easy range, did not fire a shot. Nor did they seem to be alarmed by the arrival of this overpower-

FREDERIC REMINGTON

THE RELIEF COLUMN.—I.

jumped from their wagons and pushed horses, wagons and all up the grades. On reaching the summit each party boarded its wagon, and, with a cheer, away they went down the grade on the run. All were under so much of a strain that fatigue or sleep was not thought of. Thus it was, up one hill and down another all night, and no light-artillerymen were ever more expert at mounting their limbers, than these infantrymen in getting out of and into those wagons on the run. Between 4 and 5 A. M. we reached a point about four miles from the intrenchment, and at that hour saw a sight that made the blood run cold. A citizen wagon train, hauling supplies to the agency, had been captured by the Indians, and every man belonging to it had been murdered, stripped, and partly burned. As we had had no news from the front since leaving the railroad, this was something of a surprise, and as may be imagined, at that hour in the morning, not a pleasant opening for the day. The wagon train, for the last few miles, had been stretching out a little, but on reaching this spot it was observed that all intervals were rapidly closed up and kept closed. But notwithstanding this depressing sight, some rude jokes were made, as usual, by the old soldiers in passing, and recruits were made to fear that before another sun should rise they would be broiled in like manner.

ing force, but were for the time being quiet spectators of this grand reunion, their portion of the fun probably being in the supposition of "more horses, more shoot him."

The General, having the responsibility, was probably the only one of the party in accord with the Indian idea, and consequently, not wasting much time on congratulations, he immediately set to work to prevent the loss of more men or horses.

The rear was safe in the hands of the infantry, and the cavalry was ordered to take the nearest hills on the flanks. This accomplished, the General moved out a short distance to the front, having a troop of cavalry as escort, but did not advance half a mile before being fired upon. We, however, recovered the body of Major Thornburgh, which up to that time had lain upon the battle-field of the first day. Under existing circumstances, a civilized enemy, or such an one as we are taught to fight in textbooks and in field manœuvres, would have made a hasty retreat over the mountains, and any strategist in command could have made certain calculations, but these Ute Indians, instinctively brave and not at all instructed, had the utmost confidence in their power to resist any number of soldiers attacking them in their mountain homes.

The Sioux Indian, on the open plains, likes

to show himself as much as possible, thinks to intimidate his foe by such display, and by showing himself at different points in a short space of time, to make several Sioux out of one. On the contrary, the whereabouts of the Ute Indian amongst the rocks of the mountain side, nearly his own color, can not easily be discovered; he is not known until the crack of his rifle is heard and his enemy falls, and even then the smoke covers a change of position. It is therefore impossible ever to get a Sioux into the mountains to fight, or to get a Ute out on the plains for the same purpose.

General Merritt, on seeing that the Indians were still determined and prepared to dispute

bearer of the flag was allowed to cross the valley and enter our lines. He proved to be an employé of the Indian Department, and had been sent up from the Uncampahgre Agency to stop the war, the White River Utes, with whom we were fighting, being in a way under the control of Colorow, the chief of the Uncampahgres. It is supposed the Indians were ready to stop anyhow, seeing the amount of force now on the ground and prepared to punish them.

This virtually raised the siege and ended the war. Leaving a light picket line to watch the enemy, the rest of the troops were withdrawn and marched back to the intrenchment,

THE RELIEF COLUMN.—II.

any advance on the part of the soldiers, ordered three troops of cavalry and all the infantry deployed to the front at once. Notwithstanding the fatigue of the long march and no breakfast, the men sprang to their feet and moved forward as if for the first time that day. Quite an exciting skirmish resulted from this advance, and the enemy went dancing round on the hill-tops like monkeys, under the short-range fire of the cavalry carbines; but when the infantry battalion, which had deployed behind the crest, came up to the top and opened fire, a change of scene was at once perceptible. The first volley from the infantry rifles made a rolling sound through the mountains like artillery; the Utes ceased the ballet performance and disappeared behind the hill, but still kept up their fire on both infantry and cavalry. The troops, however, adopting the Ute tactics, kept quite as well sheltered, and as it was not the intention to advance further that day, everybody being worn out, the tired soldiers actually went to sleep on the line of battle, a few men being on the lookout and firing occasionally.

About noon there seemed to be some excitement going on among the Indians, and a large white flag was displayed to view. Field-glasses were at once brought to bear, and it was discovered that a white man was waving the flag. Firing on both sides ceased, and the

where a jollification was now in order. The wounded were taken out of the loathsome place where they had suffered so many days, and made comfortable. Those who had not been able to wash since the first day's fight now made themselves more presentable and showed their true faces.

The fearful stench from the intrenchment, owing to the material used in its construction, was such as to necessitate a change of camp, and the whole command, accompanied now by the rescued party, moved back on the road about one mile, to clean ground and plenty of pure water.

An unconquerable desire to sleep and rest then overtook these worn-out soldiers. All forms and ceremonies for the rest of that day were dispensed with, and the valley, lately ringing with the sound of men in combat, was now as quiet and still as was its wont.

In this short campaign there were 13 men killed and 48 wounded, out of a command 150 strong.¹ The papers throughout the country mentioned it for a day or two as "the Ute affair," and there it rests, being one of several instances where the percentage of loss is greater than that experienced in battles of which monuments are being erected and elaborate me-

¹ Killed 8 $\frac{2}{3}$ per cent., and 32 per cent. wounded.

INFANTRY COVERING THE WITHDRAWAL OF CAVALRY.

monials published to commemorate deeds of bravery.

AFTER the command brought down by General Merritt had been well rested and was ready for another advance, it proceeded through the mountains to White River and the agency. It was a beautiful bright morning in October when we bade good-by to the rescued command under Captain Payne, whose faces were turned towards home, while we marched south to rescue the employés at the agency. The infantry and wagon train marched on the road, while the cavalry were well out on the flanks and in advance. The white horses of B Troop, 5th Cavalry, could be seen now and then winding along the crests of the hills on one side, while the blacks of A Troop kept pace with them on the other. No attack could have been made on that column without due warning, and the result was we crossed the high hills and wound through cañon after cañon, reaching the valley of White River and the agency without hearing a shot or, to my knowledge, seeing an Indian.

At the agency a horrible sight presented itself. Every building had been burned, the bodies of all the male employés were stretched upon the ground where they had been murdered a few days before, and the women had been carried off into a captivity worse than death. After the dead had been buried, the command went into camp on White River.

The Indians had taken to the mountains, and in order to follow them it was necessary to abandon wagon transportation and fit up pack trains. While these preparations were going on, we had still another sad experience, and a reminder that the Utes were still near us and relentless enough to take any advantage presenting itself.

A party under Lieutenant Hall, regimental quartermaster, was sent out to reconnoiter and look for a trail across the mountains from White River to Grand River. With this party was Lieutenant William Bayard Weir, of the Ordnance Department, and his sergeant, Humme. Weir went out as a volunteer to accompany Hall, and to hunt. As the party were riding along on the trail, a small herd of deer was discovered off to the left in a ravine. Weir and Humme went after them, while Hall kept on to the front. He had not gone far, however, before he saw fresh Indian signs, and soon afterwards heard sharp firing to his left and rear. On turning back to ascertain the cause and to help Weir if he should be in trouble, he was fired upon himself, and discovered that he was surrounded by Indians. He covered his party as quickly as possible in the dry bed of a stream near at hand, and kept the Indians off until after dark. Then riding into camp he first discovered that Weir had not come in, and reported that he was probably killed. The battalion of the 5th Cavalry was turned out at once, and, as it was 10 P. M., we had an all-

night march ahead of us. Just at dawn we reached the place where Weir had left Hall, and we took his trail and followed it up until we found his dead body lying cold and stiff on the mountain side. This seemed indeed an unnecessary sacrifice. Weir was a noble fellow, beloved by all, and the gathering of that sorrowing crowd of soldiers about his body was a sad experience even to the oldest of them. His face still bore the familiar and kindly expression we knew so well. An overcoat was wrapped around the body, and it was then strapped on a cavalry horse. We returned to camp as sad a funeral procession as one could well imagine.

The country through which we were then operating was a howling wilderness; it is now traversed by railroads and covered with vil-

lages and farms. Children at play unwittingly trample the grass over the graves of soldiers who gave their lives that they might live and thrive, and communities throughout the West generally send representatives to Congress, some of whom, in the peace and plenty of their comfortable homes, fail to recognize, in Washington, the hardships, privations, and sacrifice of life suffered by the army, before their prosperity could be possible or the lives of their constituents assured.

In this the simple duty of soldiers was performed, and no credit is claimed, but should not the record of past deeds such as these, accompanied by the prosperity that has followed, at least guarantee a more generous feeling for the army by all citizens, more especially by those who are called upon to support it?

E. V. Sumner,

Lt.-Colonel 5th Cavalry, U. S. A.

ON A BLANK LEAF IN "THE MARBLE FAUN."

I CANNOT tell why these sad oaken groves
Should bring to mind the gay and mystic glades
Where Donatello danced;

I dare not guess, while my eye, restless, roves
This stormy lake, and daylight fades,
Why I have chanced

To dream of some bright pool where shimmering lie
The tender shadows of the Tuscan sky.

I sing no songs that are not grave and old!
Why should the merry Tuscan haunt my dreams?

How light of foot was he! —
The sky is dun, the wind is wet and cold,
Dead, drear, and dull each swelling sand-dune seems;
What then to me

Is all this wild, midsummer fantasy,
This mellow, mad, and witching mockery?

'T was something in your eyes — I swear it, friend,
For you seemed part of stream, and wood, and field.

I've watched your soul grow young!
On days of sun, into the joy you blend,
On days of shade, into the grief you yield;
The balance hung
On perfect scale, which lightest touch might sway,
The perfect glass reflect the palest morning ray.

Oh, learn no wisdom, for that may bring grief;
And love no woman, for 't will sure bring pain;
Be Donatello still!

Believe me, friend, this learning is a thief,
And where it thrives the simple joys are slain.

Ah, drink your fill
Of sky and hill, of sun and wind and sea;
Be thou my faun, but I no Miriam to thee.

Elia W. Feattie.

STARTING FROM MARTIGUES.

A WATER TOURNAMENT.

PLAY IN PROVENCE.

IT was easy to see that it was a feast-day in Saint-Chamas the morning we arrived from Martigues. In the main street, in cool shadow under the awnings of every shape and color that stretched over it from house to house, Japanese lanterns were strung up in long lines and many festoons about every café door; the trash that only holiday-makers buy was displayed lavishly in gaudy little booths under the arches of the high aqueduct that crosses the town; a merry-go-round close by threatened at any moment to fill the place with the stirring sounds of its steam music; while by the water-side—for Saint-Chamas straggles down from its cliff dwellings to the shores of the Étang de Berre—one drummer was drumming vigorously, and half the town had gathered in the fierce ten o'clock sunlight to watch first two boys and then four men race each other in big black fishing boats well ballasted with stones.

And there was a holiday strength in the smell of absinthe that hung over the town towards noon, a holiday excellence in the good breakfast we ate at the Croix Blanche,—and, for that matter, in the price we paid for it,—and a holiday leisure in the time given to coffee afterward. Gentlemen in high hats and decorations, boys testing syrups, yellow, red, and green, workmen in their Sunday best, all sat

in pleasant good-fellowship in the deep black shadows under the awnings.

While we lounged with the rest in front of the principal café, the doors of the hôtel de ville opposite opened, and two men brought out a pile of large square wooden shields painted white with a red or a blue bull's-eye in the center, and several heavy wooden lances decorated in the same colors and about eight or ten feet long, with three spikes at the end. All these were promptly carted off in the direction of the lake.

There was no need to ask what they were

UNDER THE AWNINGS.

for. We knew at once. They were the arms of the combatants in the coming jousts, on the Étang de Berre. For it was really to see the jousts, the great event of the second day of the autumn feast, that we had driven over to Saint-Chamas. We had heard that tournaments were still held on Provençal waters, though exactly what they were we had never been able to discover. No book we had read about Provence had described them; indeed, no writer whom we had then consulted even

Chamas is so near that there are always a few to joust on its waters as on their own canals.

Three was the hour announced for the tournament, and about half-past two the people began trooping down to the shore near the little harbor. While the men had been drinking their coffee, the women had been making their toilets, for they had not troubled to change their working dress for the morning regatta. The jousts, though, were as worthy of all their bravest finery as a bull-fight. In Saint-Chamas they wear, with a coquetry all their own, the lovely Arlesian dress—the little Quaker-like shawl and fichu, the plain skirt, and the black ribbon wound about the little square of white lace for a cap. And very charming they looked, the older women in black or brown or gray, the young girls in pink or blue or mauve, a ribbon tied in a coquettish bow just under their chins, their hair waved and curled over their pretty foreheads, and on their hands long *Suède*

gloves of the most modern shape, just to show that they knew well enough what the fashions in Paris were, and that it was choice alone that made them keep to one of the most becoming costumes ever invented for women. The jousting ground, or rather water, was about a mile from the town, and we watched the groups of pretty girls, their dresses carefully lifted above stiff white petticoats, embarking in the big black boats waiting in the harbor. And other groups wandered down the hot dusty road, past the cliffs which make a background for the town, and in which houses have been burrowed out, doors and windows cut in the soft rock, even as they may have been by Gauls of old before a Greek had come to Marseilles or a Roman been seen in Saint-Chamas. But never did Gaul or Greek or Roman take part in a gayer scene than this starting for the jousts, the lake glittering in sunlight and dotted with black boats, the banks brilliant with color, and every one in fine holiday humor, all the merrier because of the good breakfast, the absinthe, and the coffee, and each woman's consciousness of looking her best.

When we had seen the last boat-load of pretty girls rowed briskly away, we hurried

referred to them, except Mistral, who, in "*Mirèio*," makes the little *Andreoun*, boasting of the immensity of Rhone River, say that

Betwixt Camargue and Crau might holden be
Right noble jousts!

Several times that summer we had seen them announced on the irresistible program of some great festival of the Midi. But hitherto we had always managed just to miss them. We had come to Certe too soon, to Martigues too late. And it is not in every town by lake or water-side that they are given nowadays, however it may have been of old. Often the Provençal himself who lives in one of the larger towns, in Avignon, Nîmes, or Arles, has not seen them, for of all the great Provençal cities, Marseilles, we were told, alone still holds its tournaments, though at rarer intervals as the years go on. But throughout Provence the fame of the jousts is great, and but few of the Provençal sports are in such high favor on the Étang de Berre, the great salt-water lake far wider than the stream that flows betwixt Camargue and Crau. The strong, finely built fishermen of Martigues excel in the tilting, and Saint-

"THE TWO BOATS DREW NEARER AND NEARER."

down the white road to where the crowd had collected. Far on the other side of the lake was a circle of gray hills; the black fishing craft had anchored in a long line about half way across; and between it and the shore were the two boats—the two water steeds—of the knights of the tournament. From each boat two long beams rose in an inclined plane away out beyond the stern and above the water, and placed on them, at their extreme end, was a narrow board, on which presently stepped a man in shirt and breeches, with a big wooden shield strapped to him, and covering him in front from the neck to the knees, and a wooden

boats drew nearer and nearer with ever increasing force, while an expectant silence fell upon all the waiting crowd. As the two bows crossed, the oarsmen stopped rowing in order to steady the boats, which, however, by this time had got up such speed that they passed each other at a tremendous rate. At the moment of meeting, each of the combatants, who had long since dropped their banners and lifted their lances, aimed at the target on the other's shield. There was a crash of boards that could be heard a mile away, and, head over heels, shield and all, one man went into the water, and a great shout rose from the black line of fishing craft and from the crowded banks. Then in the blue lake a shield was seen floating in one direction, a man swimming vigorously in the other, and on the winning boat the victor stood high above the oarsmen, his arms extended, strong and athletic as a young Hercules.

"A CRASH OF BOARDS."

lance in his hand. There were twelve rowers and twelve oars in each boat; in the stern stood the steersman, his hand on the tiller; and in the prow were trumpeter and drummer.

At the first blast of the trumpet, the first roll of the drum, the two boats took up their position about two hundred yards apart. At the second, each competitor waving his little banner as if victory were already his, the rowers dipped their oars together, pulled with all their might, the steersman encouraging them, and the drummer beating louder than ever, and the two

up and down and in and out, and on land syrups were drunk at the cafés set up for the occasion, and the prettiest girls, arm-in-arm, strolled under the trees until the next combatant had buckled on his armor, and the trumpet and the drum once more heralded a coming combat. At once all the spectators hastened to their places, and the two boats rowed to the required distance. Again, at the second summons, oarsmen pulled till bows crossed; again lance clashed against shield in the duel of a second; and again a head and a board were seen on the surface of the water

"ONE MAN WENT INTO THE WATER."

THE VICTOR.

as the conqueror stood on high waving his arms in triumph.

All the afternoon, one after another, the fishermen tested their prowess, while the sun sank towards the opposite hills. There was no want of variety in the tournament, though each meeting lasted only a moment and only one stroke with the lance could be given by each combatant. The constant movement of the boats, the water dancing beneath them, filled the lake with life and action. Sometimes before the two boats met, while rowers were pulling their hardest, one of the champions would suddenly lose his balance and sit down on his lofty perch or drop into the water, and then it would all begin again; or else both duelists, at the clash of their weapons, tumbled into the water together, amid loud splashing and laughter. Indeed, it seemed as if there were always three or four men swimming about in the lake or stepping, wet and dripping, on the bank. And it was funny to see how indifferent everybody was to the vanquished in the tourney. As a rule, absurd though they looked when they walked ashore, the water pouring off them, in delicious contrast to the people in their Sunday best, they passed unnoticed. Only once I heard a pretty girl call out after a stalwart young fisherman, "Has it been raining where you came from?" A bed of the tall Provençal reeds just below served as dressing-room, and from behind it they would emerge again, spruce, and neat, and jaunty, with only their soaked hair and the bundle of wet clothes in one hand to bear witness to their late defeat and ducking.

Often one of the assailants tried to cheat. They have a sad reputation for cheating, the Martigaux, and must be watched closely. They do not always aim fair; if they can, they hit below the board. We saw one such flagrant case that the whole audience protested and there was a consultation among the umpires. The losing man, as he tumbled, turned, and, catching hold of his victorious opponent, pulled him over into the water after him. But nothing could be done until his victim had been re-

instated on his high board and re-armed with shield and lance amid ringing cheers.

It is a favorite fallacy that the French are without athletics, that they have no outdoor sport worthy of the name. But nowhere have I seen a finer game than this, or one that requires greater art, and skill, and strength. For it takes no little art for a man to balance himself on that narrow ledge, no little skill to hit the enemy's target, no little strength to withstand the blow that crashes upon his shield. I am sure that the old tournament in the ring was not a better test of a man's valor and daring. The horses in heavy armor, carrying heavily armed knights, could never have approached each other with the momentum of boats pulled by twelve men; steel lance seldom struck steel breastplate with a mightier blow than that of wooden lance upon wooden shield. And the luckless knight scarcely ran more serious risk than the conquered fisherman who tumbles, with his clumsy shield still buckled to him, into the deep waters of the Étang de Berre. More than once the jousts, like the tournaments of yore, have ended with the death of the conquered. A slip of the lance, and its pointed

prongs may strike into the throat of an opponent instead of into his shield, or may fall with a force that will bring his tilting in this world to a close forever more. At Martigues they had told us of several such fatal accidents in their canals. But perhaps this very element of danger only doubles the people's pleasure in the jousts, for, with so

many other things that have remained as an inheritance from their Roman ancestors, there is a certain cruelty, modified, it is true, in their sports.

I do not believe that medieval tournament ever made a lovelier or more brilliant pageant than these modern contests on the waters of Saint-Chamas. I know that on the Étang de Berre there is no flashing of steel or sheen of helmet and hauberk, no waving plumes or rustling silks; to many the scant bathing costume of the combatants might seem but a burlesque substitute for knightly armor. But then, on the other hand, shirt and breeches and wide sash are not, as was the knight's steel raiment, a clumsy disguise for men who are Greek-like in virile beauty of form. Nothing could be finer

"LANCE CLASHED AGAINST SHIELD."

BOTH FELL TOGETHER.

A QUESTION FOR THE UMPIRE.

than the amphitheater of low, gray hills, one far down to the right crowned with the walls and houses of Miramas; nothing brighter or more glowing with color than the shores and the black boats in line in the center of the lake, crowded with fair women in Arlesian dress.

It was at the hour of sunset, when all were going homeward, that the picture they made was loveliest to look upon. Often the jousts last until the afterglow has faded, and they are not yet finished when darkness comes to separate the combatants. The rules of the jousting, as far as we could learn, are simple enough. Each man tilts for himself alone; so long as he can hold his own on his high post he meets opponent after opponent very much as

the batsman in cricket meets ball after ball in his innings. But once he is overthrown all chance for him is gone, and another takes his place. The last to stand firm with shield and lance is the victor. The length of time the jousts last, therefore, depends upon the number and skill of competitors. That afternoon at Saint-Chamas again and again both men fell together, so that the lists were exhausted more speedily than usual. The sun was setting behind the far hills when the last two were rowed toward each other at the loud trumpet call and the last head was seen bobbing up and down in the lake. And then, in the golden

light, every one set out for home: on the banks a long procession of men and women chattering and laughing with all the pleasant noise and exuberant gaiety of the Midi; on the water a long procession of boats, their lateen sails raised—for a light breeze was now blowing—and leading the way one of the big black barges with the twelve rowers, the drummer drumming in the bow, and high above stern the hero of the jousting, erect and triumphant, waving a flag, his statuesque form silhouetted against the evening sky.

When we got back to the town the cafés were already crowded, and lamps were being lighted for the evening ball as we drove away in the starlight.

Elizabeth Robins Pennell.

RETURNING HOME.

IN ANSWER TO A QUESTION.

YOU ask if I can love you as you are,
As I with all my faults am loved by you.
Since you see heaven shine in a drop of dew,
Could I then, dearest, miss it in a star?

Lilla Cabot Perry.

THE PRESS AND PUBLIC MEN.

HE relations between the press and that ever-changing and evanescent political population known as public men are peculiar. With the press there is unusual permanence of tenure. For the great body of public men there is swift rotation, with a hurried march towards political oblivion.

As every district in the nation is directly represented in Washington both in congressional and executive place, and as every journal of consequence has its correspondent at the national capital, the position affords excellent opportunities for observing the relations which exist between the press of the country and public men. On a smaller scale similar conditions will be found to obtain at the capitals of the States, and so, speaking in the broad sense, the situation at Washington is a representative one.

During the past thirty years there have been four periods within which the relations under consideration have been very different and distinctly marked. These are: first, the war period; secondly, the post-bellum period up to the times of the *Crédit Mobilier* and kindred scandals; next, the long period reaching on through continued friction between Congress and the press representatives, embracing the days of the premature publication of the Treaty of Washington down to recent years; and lastly, the present, which may be designated the era of restoration of friendly relations.

The period before the war may properly be denominated the days of ancient history in American journalism. The telegraph had not introduced its quickening influences, and the mails were slow. Letter-writing from the capital was polished, and editorials in the administration journals at Washington—for there were such journals in those days—were works of political art. Instead of the dash of this later day, and the flavor of the very hour of going to press, they partook more of the deliberation and genius of the sculptor, and when unveiled—a fitting term to use in designating their publication—never failed to partake of the chilling influence of marble. Those were the days when our early orators had time to rewrite and adorn their extempore efforts, quicken the flow of rhetoric when its first movement was sluggish, strengthen faulty logic, and finally send out by the waiting mails the deliberate work of a master. These are now held up as models

of a standard not reached in modern days. But who shall say how many of those old masters would have stood the modern test of the stenographer and the telegraph, whereby the remarks of a speaker are often half in type in the leading cities of the land before he has yielded the floor? This is a test which should not be ignored in comparing the great men of the present day with those of an earlier and more deliberate time. When words, as actually uttered, fly at once to the extremes of the land beyond recall or revision, oratory is dampened to a degree which all must appreciate.

The press of the country first sent its representatives to Washington in numbers upon the outbreak of the war. Since then there has been a journalistic congress constantly in session considering the doings of the Government. As the main duties of the one have been to originate and carry forward public business of every nature from the exercise of the war power to the smallest details of the public service, and those of the other to inform the people of everything on the surface, and beneath the surface, of public affairs, and freely to criticize the whole, the general situation between these two congresses has of necessity been one of antagonisms. During the first period to which reference has been made, however, these differences were largely held in abeyance by the fact that the press and public men joined hands loyally in the cause of the Union, and the dominant and overshadowing influence of the press in awakening and solidifying patriotism at home, and encouraging the armies in the field, was recognized and cordially appreciated by every public man.

Throughout the war the press of the country held its position at the national capital in high esteem. It sent its ablest men there. Up to the close of the war its correspondents numbered about fifty, but these, by the system of combinations which then prevailed among leading journals, represented all the principal dailies of the North. A few names will show the character of the men. There were Henry Villard, Horace White, Samuel Wilkeson, Joseph Medill, George W. Adams, Whitelaw Reid, James E. Harvey, D. W. Bartlett, Joseph B. McCullagh, Benjamin Perley Poore, and a dozen others of high standing.

The influence of this press congress was pronounced and general, both in the national

capital and in the country at large. Even with less able men this could not have been otherwise, since Washington was in every sense the headquarters of the army and the navy, whence orders proceeded to the various armies and fleets, and to which came all news of battle, and of the attitude of foreign nations—in short, reports of everything which affected the progress of the war. So loyally did all branches of the Government work together for the general good, that it may be said that each of them was upon the staff of the President acting in his constitutional capacity of Commander-in-Chief of the army and navy.

A body of men already trained in journalism, enthusiastic in their work, and intensely loyal in their performance of it, standing thus between the public and all sources of news, for which the country constantly waited with breathless attention, could not but possess an influence which was everywhere felt, and the value of which was everywhere recognized. With their advent came the general use of the telegraph to give still greater impetus to the work of journalism, and thus this body of men was placed in hourly communication with the entire population of the land. It was a time when the condition approached as nearly to universal concord as can ever be possible between the press and public men. So long as active war was waged along the Union front, those who were upholding the hands of the nation, both in the Government and in the press which encouraged the people to its support, stood bound together in common and unceasing effort for the salvation of the country.

The Washington press contingent was also a flying force for field service, and upon the occasions of great battles in the region about Washington some of its members were always upon the field in the service of their journals. The work of many of them as war correspondents stands out as the best and most brilliant of their careers. Among the latter there was one who enjoyed the confidence of Secretary Stanton, that unbending man of iron purpose, to a degree greater than that attained by most of those in the highest civil and military positions. This was the war correspondent of the Philadelphia "Inquirer," Mr. U. H. Painter. He had under his direction in all the Eastern armies probably a larger force of correspondents than was employed by any other journal. He early secured the confidence of Mr. Stanton. He was constantly along the front in all times of active movement, and by use of the skilful methods of obtaining news and reaching correct conclusions known to those well versed in the work of reliable correspondence, he often became informed of the intentions and movements of the enemy before these were unfolded

at headquarters in the field and transmitted to Washington. By several remarkable successes of this kind he established himself in the confidence of Mr. Stanton, and thereafter the use of military telegraph lines and of the Secretary's cipher were open to him. There was probably no other man in the field, and no other man in Washington in any department of public life, in whose statements the Secretary placed more implicit reliance and by whose information he was more frequently guided. On one occasion, after Mr. Painter had partly secured this standing at the War Department, his relations were put to a test which for the moment seemed to end them. He sent a despatch from the Virginia front, immediately after the battle of Chantilly, that Lee's army would shortly invade Maryland. Secretary Seward insisted that Mr. Stanton should arrest the author of the despatch, as it was evidently intended for effect abroad, and was therefore treasonable. Mr. Stanton sent for Mr. Painter, explained the situation, and said he must stay in Washington. The Secretary of War could not believe the report, since none of the officers of the army had even surmised that such a movement of Lee's army as Mr. Painter had announced, and still insisted upon, was in progress. The latter thereupon started an assistant to Edward's Ferry on the upper Potomac with instructions to watch for the head of the rebel column at that ford, and, when it crossed, to telegraph him in care of the Secretary of War. The next day a despatch came that the rebels were crossing the Potomac, and thus the War Department received the first positive news of the invasion of Maryland previous to the battle of Antietam.

Thereafter there was much official correspondence which took rank after Painter's with the Secretary of War. Several others of the journalists named, though in less degree, were constantly relied upon by the authorities for early news from the armies, and these facts well illustrate the importance of their work and its consequent influence.

Mr. Lincoln himself, and the leading men of his Administration, and those powerful leaders in Congress whose exertions and whose accomplished labors should take rank in their general results with the best services of the great commanders in the field, each maintained close and friendly relations with these representatives of the press, and looked upon the facilities of the latter for reaching the whole loyal public of the land as scarcely second to any other appliance under the control of the Government for securing support in the war.

Throughout the first years of Mr. Lincoln's term the leading press influences at Washington, without regard to party, gave strong and

active support to all war measures of the Administration. The attempt to nominate Mr. Chase in place of Mr. Lincoln, the military and political controversy over General McClellan, and his final appearance in the political field as a presidential candidate, somewhat disturbed this journalistic unanimity. The defection of President Johnson from the Republican party caused still further divisions, and while the millions from the field were quietly reëntering the walks of private life, and presenting such a spectacle in this regard as the world had never seen before, the situation at Washington, both among journalists and public men, became one of many divisions and most excited controversies. The general relations of friendship between the two classes continued, however, without marked interruption to the days of the explosions over *Crédit Mobilier* and kindred scandals. Up to that time Newspaper Row was daily and nightly visited by the ablest and most prominent men in public affairs. Vice-presidents, the heads of departments, heads of bureaus, the presiding officers of the two houses of Congress, and the strongest and most noted men of the Senate and of the House in this grandest period of the Republic's life, were frequent and welcome visitors in the Washington offices of the leading journals of the land. Suddenly, with the *Crédit Mobilier* outbreak, and others of its kind which followed it, these pleasant relations began to dissolve under the sharp and deserved criticisms of the correspondents.

To this situation succeeded long years of estrangement. Newspaper Row was gradually deserted by the class named. Intercourse between the press and the legislative branches of the Government became more formal, and each assumed relations bordering upon a warlike attitude towards the other. The executive branches of the Government shared this feeling, though in less degree, except where the scandals exposed by the press reached into some of these departments of the public service.

This condition of affairs at Washington caused corresponding changes to be gradually effected in the home offices of the leading journals, until these, upon their editorial pages, became almost as critical as their representatives in Washington felt obliged to be, and could not but be, with any regard to their duty to furnish the public with truthful news.

The climax was reached in the contest which the whole press, through its representatives at the capital, waged upon the Senate at the time of the premature publication of the Treaty of Washington. Upon this occasion the press and the Senate first joined issue in a battle over the inviolability of the executive session. It must be confessed that the Senate had as good

a case as could possibly arise in such a controversy, and the press was at a corresponding disadvantage, except that the Department of State desired to have the text of the treaty made public in order that the opinion of the country upon it might be obtained. As the representative of the President in the negotiation of the treaty, this claim of the Department to a control over its text had great weight. It was, in fact, this position which made possible the procurement of the treaty for advance publication. But, as will be remembered, the press joined hands without regard to party, both in Washington and throughout the country, and drove the Senate, by mere force of bitter fighting, to abandon its case through a formal vote by yeas and nays in the presence of the nation. The victory was as if the presiding officer of the Senate had passed the venerated emblems of Senatorial prerogative into the press gallery over his head.

The bitterness engendered so many years ago was long in passing. In fact its effects remain to the present day, chiefly, however, as scars, and not any longer as irritating wounds.

There have been two rebellions on the part of the Senate against this victory for the freedom of the press in dealing with executive business, one led by Mr. Salisbury of Delaware, which ended in defeat, and a more recent one, which brought its originator and his handful of supporters something much worse than disaster; namely, failure and unmeasured ridicule. But, of recent years, the old order of things is being rapidly restored. The press congress has tripled the number of its representatives. The newspaper press of the country, without regard to party, has become, in the main, thoroughly independent in its criticisms of all public affairs and public men. In case of unjust attacks, and inaccurate news concerning matters of any moment, there are so many channels of correction open to every one that increased care is observed in the collection and dissemination of news by all journals claiming respectability.

This restoration of relations between Congress and the press began a few years since with the undertaking of regular entertainments given frequently by a club of the leading correspondents, at which, in turn, the most influential men in public life were the guests. These entertainments have now become a prominent feature of the season in the national capital. The invitations of this club to the highest in power and influence are seldom declined. This has brought about social relations which are of mutual benefit to each of these influential parties in public affairs. To be plain about the situation; public men, or rather those who control among them, are coming to their senses again.

It has been for many years a singular fact that comparatively so few of the able men of the land, in spite of their moving in daily contact with the work of the press, acquire an adequate knowledge of its machinery, and, above all, of the proper methods by which it can be used to promote their interests, by giving them the prominence before the public which they really deserve, both in their general work and in those countless minor matters which concern their immediate constituency. It seems almost incredible that this can be so, in view of the fact that there is never a day in the year when a public man cannot through Washington despatches secure the attention of the entire reading public of the land for anything which he may do which is worthy of national notice. Yet, with a machine at their command which gathers the intelligence of the Republic into one vast daily audience, not one in fifty of that unending column of public men which marches continuously through Washington—and, for the most part, on and on to political forgetfulness—ever apprehends the advantages freely extended by the press. In this respect public men are probably more ignorant than upon any other subject which so intimately concerns their political welfare. An excellent illustration of this want of ordinary knowledge will be found in the following incident. During General Grant's administration there was a senator of several years' service who had been the governor of his State, a successful general in the field, and a member of the House of Representatives. He was acquainted with many correspondents, but had never taken the trouble to familiarize himself with press methods, or the relation of specials to the Associated Press reports. The question of his reelection was coming on, and it seemed to him that a general public notice would do him good. So he went to his old commander, the President, and obtained a very valuable interview upon a live subject of international affairs. He spent the next day in making the circuit of Newspaper Row, giving each correspondent notice, in the strictest confidence, of course, of the choice news he would bring the next day. He ended his tramp by promising the same matter to the Associated Press and its rival association. True to his promise, he made his second rounds, and dictated his interview in the same language to each. That evening the Associated Press and the specials sent the interesting matter to all parts of the country. As a result, every correspondent duplicated the matter of the Associated Press. As telegraph tolls were then three cents a word, and each newspaper had an extra bill for about twenty-five dollars for this special, the private despatches of the next morning from the home offices to the corre-

spondents in Washington were very emphatic, but not of a complimentary character. While this is an extreme case, it well illustrates a kind of ignorance which, though not epidemic, is still prevalent.

There is a widespread idea among those in the public service that cultivating the press, as they are pleased to term it, is something very far beneath their notice. On the other hand they seem to think it the special business of the press to cultivate them, and when they find themselves left to the pale vegetation which belongs to the shadows into which they withdraw, they deem themselves ill used, and declare favoritism to be one of the most glaring faults of the press. These gentlemen of narrow vision never appreciate the fact that the field of journalistic work is far too wide to admit of many visits to individuals, and when the mountain does not come to them they never avail themselves of the plainest alternative.

In going to the mountain lies what has been referred to as the proper use of the press. If a man in the public service does anything which interests his constituents, it is to his advantage and to theirs that they should know it. The press stands ready to make it known, and finds itself repaid in having the news. If the act performed is of national interest, the Associated Press will carry it to every corner of the land. If it is local or needs comment, the specials will use it. If it is partizan, the specials of the party press will take it. In all this there is mutual advantage. On one side desires the publication, the other wishes the news. But if the public prophet, in his suicidal pride, waits till his news is found by gleaners, and habitually refuses to go to the mountain, he becomes the only sufferer, since the world will manage in some way to wag on without any information about him, and meantime he will remain in comparative obscurity.

Of that small body of public men who make up the most successful class, it may, however, be said that, with few exceptions, they have made the closest study of the machinery of the press and the facilities which it offers. It is also true that this appreciation of the press, and this knowledge of its methods and advantages for communication with the entire nation, are rapidly growing among the public men of the day. This is perhaps best illustrated in the universal use of the interview by those in most prominent positions. As a general rule this is no longer the haphazard affair which it has often been. The interviews of the present, if upon subjects of any moment, are almost invariably prepared with care by those from whom they purport to come. In the rush of Congressional business, and of public affairs in general, the difficulties of obtaining hearings in the regu-

lar order are continually increasing. This has turned attention to the ease with which the country can be reached upon any subject of importance. Thus every man whose abilities give him power to command public attention finds the means of securing it at his disposal, and so the value and importance of the press are beginning to be better understood by men in the public service, and its power and influence are correspondingly increasing.

The wisest politicians are beginning to see that the old method of standing together shoulder to shoulder for the protection of those who chanced to be exposed by the press was short-sighted in a party sense and of serious injury to their own personal interests. When the party press first began its exposures of party men the serious blunder was very widely committed by the latter of rallying their forces to every possible effort in shielding and defending those whom the public had promptly adjudged guilty. From this sprang that almost universal sneering at the press on the part of public men, and especially those whose shortcomings formed the subject of criticism. To sneer at newspapers as sensational, and at truthful reports as newspaper lies, was the common form of defense for the guilty. This rapidly became the sole defense which politicians felt called upon to make even to the most specific charges. From this, in turn, arose the idea which became far too common in the land, that public men, as a class, were corrupt. While they bitterly complained of this, they failed to see that it was the legitimate result of their own prompt defense of the few whom the press justly exposed. The public reached the natural and logical conclusion that, since the majority of public men saw little to criticize in these flagrant shortcomings, and were even ready to defend them, the mass could be no better than those who had been detected and exposed. But for this mistaken policy the country never would have been misled as to the general wholesomeness of public life. An observation in Washington of more than a quarter of a century warrants the declaration that a very large majority of public men of all parties, and in all branches and grades of the public service, are strictly honest, and that the public business in all of its divisions, and under each party management, has been as honestly, as promptly, and as efficiently conducted as the most respectable private business in the land. The excuses pleaded and the defenses made for the few exceptions to this rule, on the part of political associates, have caused the opposite opinion to prevail. Public men, therefore, and not the press, have been mainly and justly responsible for any erroneous opinions which the country may have formed upon the subject.

The usual criticism of the average public man upon the newspaper press is that it is both inaccurate and sensational. As to the sensational in journalism — what the representatives of the press know in regard to the inside of national affairs and the doings of public men, and do not print, would constitute the real sensations. If any half dozen of the older correspondents in Washington should agree to sit down and send to the country upon any given night their knowledge of such affairs as are here alluded to, their narratives, which should not vary from the truth in any particular, or be in any sense exaggerated, would come as near pulling down the very pillars of the temple as anything that could be put in print. It is because of the confidence placed in men of this class of long standing and influence here that these things have never been allowed to go to the American public to shake its beliefs in men of high position, and to bring mortification and shame where it has not been necessary to inflict these in the proper discharge of duty to the public. At times party loyalty has had much to do with these suppressions; but in respect to many things known to those whose daily duties give them an insight into affairs closely hidden from the public at large, a regard for the public welfare, proper respect for exalted public office, if not for the incumbent, and pride in republican government, have each and all at times held back the hands of those who with the scratch of a pen could have unmade administrations, cabinet officers, party leaders, diplomatists in high stations, and soldiers of renown.

It is within the experience of every correspondent that many of the solemn denials made to meet charges which in their essentials were true, and which have contributed largely to the prevailing idea of inaccuracy in the press, were false denials, verging in their falsity upon moral perjury. Denials are a matter of course. Their truthfulness in a majority of cases is a matter of doubt. A large proportion of the denials to which the public is treated are themselves inaccurate, many more are quibbles, and many are false. Witness every one of the *Crédit Mobilier* denials. And yet, from time to time, those journalists acquainted with the facts where true statements in regard to important matters have been denied, and who were in position to establish them before the public, have for various reasons — embraced in those presented above — allowed such denials to pass without putting them to the proof.

The press makes many mistakes. The wonder is that in the rush of its presenting an epitome of the world's daily doings at each breakfast-table it does not make a thousand errors for one. It makes very few deliberately.

And many of those statements concerning which loud-mouthed and quibbling denials are often accepted are true in their essentials.

Three examples will serve to throw light on this branch of the subject. Said a man of national fame who had commanded one of the Union armies, and had been the governor of his State, and had served with distinction in Congress, in furnishing some sensational but true statements for publication: "This is exact; but if you ever give me as authority I will publicly deny your despatch."

Said a former dean of the Diplomatic Corps, in presenting a story of deep interest: "If you allow this to be traced to me, I will promptly deny any connection with it over my official signature, and leave you in the lurch."

Said a senator of many years' service both in and out of Congress, after talking at length for publication: "Yes; write it up, and print it. But be careful. If I don't like it, I will deny the whole of it."

False denials contribute quite as much to the impression which many share of the inaccuracy of journalistic work as its actual errors. The press is not immaculate, but it has as few unworthy men in its prominent positions as any other profession or occupation in the land. The work of no other is so open to publicity. There is no veil, as there is for all others, under which the press can hide its shortcomings. The sunlight by day and the search-light by night illumine the paths of all its known workers.

Instead of public men, as a body, having to complain of the inaccuracies of the press, they are, as a whole, constantly under obligation to those representatives of the press whose positions are the most prominent and best established here for the painstaking efforts to secure accuracy which characterize the greater part of journalistic work performed at the national capital.

The flippancy with which a large class of public men dismiss what they call the attacks of the press, and the superciliousness with which so many are accustomed to announce in their places, or declare in their interviews, that it is not their habit to take notice of what the newspapers may say, is but another form of the only defense which very many of them are able to make against just criticism. There is nothing truer in regard to public life in Washington, as is known to all who have facilities for closely observing it, than this, that, as a general rule, those who protest to the public the oftenest and the loudest that they pay no attention to the press are the very ones who watch its utterances most closely, and generally with more nervousness and with more cause for apprehension than any others. As a general rule, the best men,

the ablest men, and all men of all parties who are straightforward in their purposes and in their lives, who perform their duties with due regard to their responsibilities and their oaths of office, are those who trust the representatives of the press the most implicitly. These, as a class, never suffer from the criticisms of the press, and it would be very difficult to point to a single man among them who has ever been persistently and unjustly misrepresented, or to whose defense the great majority of Washington writers have not constantly rallied whenever his public acts have been untruthfully assailed. As a rule, and a rule with few exceptions, those whose course will not bear the light, and who cannot stand upon their real records, are the sole ones in public life who either dread the press or suffer from it.

In the face of a very wide belief that the press observes no confidences, and that it is necessary to keep everything from its representatives with most scrupulous care, lest the public should become informed in cases where such information would be most embarrassing, it is scarcely too much to say that the only class of men in Washington who year after year are trusted implicitly, and who year after year become acquainted with matters of the greatest moment upon the condition that this knowledge shall only be used as a guide and shall not go beyond them, are the journalists.

The best illustration of the known observance of confidences of public men in high position is well illustrated by the farce of executive session. Here the Senate of the United States as a body is bound by the solemn individual oaths of its members, and by its rules, which provide expulsion as a punishment for any violation of them, not to disclose the secrets of executive session. And yet, as every correspondent of experience knows, any fact of importance can be readily and easily obtained, and no such fact has ever been divulged from the executive session except through the intentional or indiscreet talk of the Senators themselves. All efforts, and they have been many and persistent, to make it appear that the press obtains its news of executive sessions by surreptitious methods, by eavesdropping, or through the officers of the Senate, are absolutely misleading. Whatever becomes known—and, as the public is well aware, everything of consequence becomes known—escapes through the Senators in spite of the fact that they are bound by their oaths, and by the severe rules of the body, to abstain from communicating executive business to outsiders.

There is scarcely an exception to the rule that party secrets of the higher order are known to the leading representatives of the party papers, and it is a rare thing that any of

these are ever communicated beyond the circles which are the proper custodians of them. A striking example can be given to illustrate this fact.

Since the contest over the election of President Hayes was decided in his favor there have been four journalists in the United States, whose names are prominently known, who have been fully possessed of all the facts connected with the real negotiations which settled that controversy in his favor.

They have had in their possession not only what might be called the verbal knowledge of this case but documents which contain the exact propositions which led to the result then reached. No intimation of these things has ever reached the public, though there has never been a day since the decision of the matter when any one of the four could not have given all the facts to the public, and could have done this without the least violation of good faith towards the others who acted with him. It will be seen that this is a matter of no ordinary moment, and it is not too much to say in regard to it that the result finally reached in the counting of the electoral votes would surely have been attained if there had been no electoral commission, and if the much-talked-of Wormley Hotel conference had not been held. These are grave statements, but they are made with great deliberation, and with a fair knowledge of the ordinary meanings of words, and, furthermore, they are not exaggerated.

While many other striking illustrations of this branch of the subject could be given by any press representative of long service in Washington, no better one than this perhaps could be cited to prove the truth of the assertion that what the press knows and does not print infolds and veils the real sensations in American public life.

Apothor instance to illustrate this branch of the subject presented itself in Secretary Bristow's able and crushing campaign against the gigantic Western Whisky Ring. Fortunately, just before he undertook it, he discovered that the cipher of the department had been betrayed to members of this ring. It was impossible to fix the responsibility, and this uncertainty caused both uneasiness and perplexity. The remedy devised was to limit the knowledge of what was intended, and of all preliminary movements, to the Secretary himself and his solicitor, Major Bluford Wilson. It was further agreed that the despatches of the Department to and from St. Louis should pass in an arbitrary cipher prepared and held by two journalists, one in Washington and the other in St. Louis, and that no copy of that cipher should be furnished to any one, not even

to the Secretary or the solicitor. And so it came to pass that all orders and directions which were given by the Treasury Department in regard to preparations for surprising the Whisky Ring at its work, and all information received by it from St. Louis up to the moment that the Government was ready to make seizures, were first sent to the journalists for translation and transmission in their cipher. As a result, a ring of immense proportions and influence was broken, millions were recovered by the Government, and other millions saved. Later in the case guilty men escaped because a President and Cabinet officials did not observe confidence in regard to vital points of the Government evidence.

To those unacquainted with the Washington situation it may seem strange that all matters of public concern drift with rapidity and great certainty into the hands of the press. The explanation is simple. No question can arise, even of ordinary importance, which does not affect two parties, one of them bent upon success in the matter in hand, and the other equally interested in opposition. It is almost always the case that one party or the other regards it as important to conceal the character of the transaction from the public until results are assured. On the other hand, there is generally a stage at which publicity will either insure delay or defeat, and at this point in the negotiations or proceedings the representatives of the press are almost certain to receive such portions of the case at least as will best serve the purpose of those imparting it. If the case happens to be one of moment these early and incomplete communications in regard to the matter are promptly given to the public. They cannot, of necessity, in the first instance be full, and they are not likely to be either accurate or unexaggerated. It often happens that even these partial presentations of the case secure the ends of those who are attempting to defeat proceedings, and the whole matter falls. In such case it is easily seen how such results give those who have been defeated the opportunity to make great outcry against the inaccuracies of the press, and this illustration will serve to indicate how easy it is to create impressions against its reliability.

Many public men talk glibly of the attacks of the press, as if merely to mention the matter were ample defense. The least reflection will show this use of the term to be a misnomer. Public men, through a variety of shortcomings, attack themselves. Whenever these departures from duty are accurately made known, the press is simply the mouthpiece of what the public has a right to know, and what the press is in duty bound to communicate. The so-called attacks are by public men themselves, and are

directed against themselves. The press simply records the varied attempts which these men make upon their own political lives and fortunes.

One of the most curious institutions with which the press has to deal, and with which it is continually annoyed beyond endurance, is that nondescript conglomeration in Washington which calls itself "Society." This is something entirely apart, and, generally speaking, far beneath that large number of intelligent people of common sense and permanent standing, both within and without official circles, with which the capital is more than ordinarily blessed. The small men and women who attain temporary position in the various orders of this kaleidoscopic conglomeration are perhaps those who are most deeply sensitive of the shortcomings, the exaggerations, and the inaccuracies, of the press. With these, belaboring the press is one of its callisthenics. The whole body is an auxiliary force for the common defense against the press by the use of that weapon heretofore referred to; namely, universal and persistent sneering. And so Mr. and Mrs. Fresh, glorifying themselves throughout the few months of their public existence, rapidly marching the while towards the shadows of that oblivion from which voters unexpectedly raised them, and into which voters so speedily replunge the majority of them, are often heard to remark sneeringly upon the absence of the representatives of the press from noted social occasions. The favorite form of shielding themselves is to be continually asking, whenever the paragraphs which they have written in regard to their dresses, and eyes, and hair, and general beauty, appear in the local prints, why there cannot be some decency on the part of those who conduct the press, and why people cannot be let alone, and not be given this unpleasant notoriety. It will probably never come to the knowledge of the Hon. Mr. and Mrs. Fresh that the representatives of the press whose duty it is to see everything have long since been through this dismal round, and long since abandoned its pathways as the most senseless use of time to which it can be put even in the national capital. These worthies will never believe that the scrap-baskets of the representatives of the press contain each month throughout the season more invitations to what is most prominent in desirable society than those who are loudest in their sneers at the press see throughout the entire term of their butterfly existence. That which gives the most curious aspect to all these outbreaks from these lower orders of society's habitués is the fact that the very large proportion of the personal notices, of which they are sure to complain in public to their friends with the air of those whose pri-

vacy has been invaded, are prepared in the handwriting of those to whom they relate. There is not a newspaper office in Washington that has not voluminous collections of this sort, wherein the only changes made before their appearance in print have been the necessary corrections in orthography and grammar. There is scarcely ever an exception to the statement that the descriptions of prominent social occasions are prepared in advance down to the minutest details of dresses, trousseaus, and presents. These paragraphs, thus furnished, are generally a wondrous alchemy which transforms everything into forms of beauty. Ordinary costumes become superb, corpse-like complexions take on the auroral glow, non-classical noses are reduced to at least bewitching retrousse forms, and generally to Grecian outlines, red hair becomes the golden auburn of ideal painters, and so down the list the various commonplace features of professional society habitués become smooth, and beautiful, and altogether lovely.

There is one class of public men who deserve especial notice. They are always numerous, though generally the least influential. They came into public position through the sufferance of their fellow men, either as elective or appointive officers, and their duties are to perform the business of the public. They immediately withdraw themselves from their creators, and in their discharge of the business assigned them proceed upon the false theory, a theory natural enough to small minds, that they are conducting their own affairs; that any inquiries in regard to the matters with which they are charged are as much an impertinence as if one should walk into a private business man's office and ask about his transactions. These look upon any knowledge communicated to the public in regard to their official duties as a sort of sacrilege, and they can never be persuaded that the public, and those whose news for it, are not impudent to the last degree when they ask to be informed in regard to public affairs. While this is a very considerable class both in legislative and executive circles, it is fair to say that it seldom includes those in chief charge of the public business, or those who originate and shape it. It is rather confined to those who seldom have any other opportunity to make known to such as approach them that they are revolving on the wheel of the government machine. Speaking generally, the higher the rank of public men in any field of public duty, and the abler those who hold place in its various branches, the closer, more cordial, and more confidential are their relations with the public through the representatives of the press. As a rule, presidents, cabinet officers, chief clerks, the heads of important bureaus, and the

fifty or sixty men in Congress who originate and carry forward the great business of the nation, are men who at all times are approachable in the interests of the public, and who communicate, with little or no reserve, all that is proper for the public to know, and give most of the rest in confidence to all trusted representatives of the press for their personal guidance. Of late years this intimacy between those most prominent in public life and the representatives of the press has been steadily strengthening.

Through the last quarter of a century the relations of the press to the various administrations have greatly varied. While Mr. Lincoln's term was one requiring the greatest watchfulness in regard to its daily operations, and while the war, of necessity, imposed restraint of no ordinary character upon news, it is probably true that there has never been an administration which more thoroughly appreciated the advantages of the press, which confided more fully in its patriotism and its discretion, than did this Administration of the war days of the Republic. Its policy on the vital national questions then pending was generally made known in advance to those whose trustworthiness had been proved, in order that the public might be prepared for what lay in the immediate future. Often undecided questions of policy were placed before the public, in order that the Administration, before reaching its final decision, might be made aware of the sentiment of the people, and so be able to judge of the degree of support which could be depended upon if the policy in contemplation should finally be adopted. It is probably true that this wise and constant use of the press as a valuable adjunct in the conduct of public affairs was more common during Mr. Lincoln's Administration than during any one which has followed it.

As to Mr. Johnson's term, there was little cause for a definite policy on his part in regard to the treatment of the press, as there was no attempt to conceal anything. It was a rough-and-tumble, hurly-burly time, in which each day's events and each day's contests with Congress presented a mass of interesting facts which gave the press an endless variety of material from which it was free to choose the particular dishes which it would daily set before its readers. The fierce conflict between this Administration and the Republican Congress, in which the latter mainly occupied its time in attempts to chain the former securely, was as public in all its features as the struggle of the gladiators in the Roman arenas. It is, however, fair and just to the Johnson Administration to say that the press was always treated with consideration, and there was a frankness

and fullness in response to all proper inquiries that left little to be desired on the part of seekers after information.

Of General Grant's long term, while it is true that a large representation of the press in Washington began its experiences with his Administration with those sentiments of high regard and patriotic pride which could not but attach to the man who had led the Union armies to final victory, it is further true that the respect of the press steadily and constantly diminished under the treatment which its representatives received, until during the closing year of his Administration there was only one Washington representative of the press, out of the hundred or more who resided permanently in the capital, who maintained cordial personal relations at the White House, or even visited it except when it became necessary.

The Administration of President Hayes in all its dealings with the press of the country was courteous and free to the last degree. There has never been a President who was more willing to furnish information upon questions of his public policy, and upon matters which he designed to communicate to Congress, than he. And while it does not follow that other administrations which were more reticent were so because of the fear that the public might learn too much of their inside transactions, it is true of Mr. Hayes that this freedom arose from the knowledge on his part that there was nothing connected with his administration of public affairs which he had any desire to conceal from the country.

General Garfield was not spared long enough to give any indications of what his policy in dealing with the public would have been.

Of President Arthur it can be said that he was always accessible, and that his relations were cordial, and in many instances extremely friendly, with the representatives of the press, and that he was credited among all of them, without regard to party, with being a faithful and excellent executive.

It is but just to President Cleveland to say that he always received its representatives with dignity and courtesy, and that there were no questions connected with his policy, or the management of public affairs in the various departments of the Government, concerning which he was not always ready to give free and full information up to the last limit of proper regard for the efficient conduct of the particular affair which might be pending.

Of President Harrison it is emphatically true that he has seriously suffered from his reluctance to have the prominent and influential part which he has exercised over public affairs from the first days of his Administration made known through the press. While no question

of public policy has engaged the attention of Congress since he took the oath of office in which he has not taken personal and active interest, and in which he has not been signally influential in shaping results, this fact, throughout the first two years of his Administration, was known to but few, and these never felt themselves at liberty to comment freely upon the subject. Hence it resulted that, until a very recent date, the impression has been widespread in the country—an impression which dissatisfied public men have not been slow to encourage—that President Harrison simply sat quietly in his office exercising the routine duties of an executive, without much further effort in the direction of originating and shaping the public policy on those grave questions of national concern which have been so numerous throughout his Administration. This false impression, shared so widely by the press of the country, has not resulted from any reticence on his part in talking with its representatives, for they always find ready access to him, and such as he has learned to trust invariably find him a free talker upon all questions of public policy, but it has arisen from the undue reluctance which he has exhibited from the first to have his own part in public affairs made the subject of free discussion. Of late there has been a wholesome change in this respect, which has resulted at once in its becoming generally known that in every prominent question of party policy President Harrison has been from the beginning of his Administration a most active, intelligent, and influential promoter of the results that have been attained.

Is the press immaculate? By no means. Do all connected with it appreciate the grave responsibilities which their limitless facilities for reaching the public should impose upon them? Again the answer must be an emphatic no. Have public men no reasonable grounds of complaint? Undoubtedly they have. But the sweeping judgment which too many of them pass upon the representatives of the press as a body has in it the same elements of unfairness and injustice as exist in the wide opinion that public men as a class are corrupt. With the latter the exact opposite is true. As a class they are honest. So with journalists; as a class they are careful and conscientious.

The erroneous judgments of public men and of members of the press spring from the same cause; namely, visiting the shortcomings of the few upon the many. In the one case the fact that party men, as a rule, unite to shield those detected in wrong creates a general opinion that the class is corrupt. In the other the fact that there is too much toleration by the

press of its libelers and sensation-mongers gives excuse to public men for their sweeping charges. In a word, the most effective foes of the press are those of its own household. It is fully able to deal successfully with all others; it should be abundantly able to crush these.

It is not fair to judge the great mass of faithful, honest, and patriotic public servants by the shortcomings of the few. It is equally unjust that the body of able, painstaking, and conscientious journalists should have imposed upon it the stamp of its despicable orders. This would be as unfair as to judge the legal fraternity by its shysters, the pulpit by those who dishonor it, the earnest and honest leaders of parties by their criminals, or the magnificent courage of great armies by their cowards.

The journalistic situation in Washington is doubtless fairly representative in character. Aside from the great news associations, about a hundred leading newspapers of the country have special representatives at the national capital. As a body they have attained and deserve enviable rank for ability, for wide knowledge in the intricacies of public affairs, for high purpose, and for honest and courageous work. Unfortunately, in their ranks are a few shysters, lobbyists, and sensationalists. The latter are mainly cheap scribblers for a class of cheap newspapers whose managers regard cheapness and sensation as the chief essentials of journalism. While the general standards of correspondence are constantly improving, this latter element, which is of recent growth, is demoralizing to the last degree. Because this handful of men is tolerated by second-class newspapers, journalism as a whole is lowered in the estimation of public men. The press has the remedy in its own hands, and it should remorselessly apply the caustic which will cleanse this ulcer.

The press is constantly improving its facilities for dealing with national topics. Very little Washington correspondence in regard to live matters any longer goes by mail. The number of journals which lease special wires is increasing. The leading cities are now thus connected with the capital. This brings the editor's rooms at home and the Washington offices into as convenient relations as if they were adjoining. Editorials on national subjects now go by wire to many journals as fully as news. Thus the field of journalism and the springs of its influence are rapidly enlarging. Its daily audience embraces the readers of the Republic. To these, year after year, it carries a daily message. It does the thinking for many millions of them. With all its imperfections, who shall calculate its vast influence for good?

AN ESCAPADE IN CORDOVA.

HE first day he contented himself with merely glancing my way as I emerged from the door of my lodging, following me with his eyes until I disappeared around the corner of the narrow street that leads to the Moorish mosque.

Then he took to raising his hat with quite the air of a hidalgo, standing uncovered on the narrow sidewalk until I passed, expressing by this simple courtesy a sort of silent apology for occupying my premises.

I always returned his salute, wishing him good day with great gusto, adding occasionally the desire that the good God would go with him during its sultry hours. Such graceful compliments tend to make life more enjoyable in old Spanish cities.

But he never addressed a word to me in reply, only bowed the lower, his eyes fixed upon mine, his whole manner suggestive of a wistful desire for closer acquaintanceship. To this was added a certain fearless independence which banished at once all thought of offering him alms.

I began to wonder who this very courteous, very silent, and very friendly young man might be. I began also to count over the various possible and impossible motives which might influence him to become a fixture on the right of my doorstep every morning when I started out with my empty sketch-trap.

It was plainly evident that he belonged to the better class of Spaniards and not to "the people." You could see that in his finely chiseled features, and in the way his clothes, though slightly the worse for wear, fitted his graceful, slender figure. You saw it also in his winning mouth, full of white teeth, shaded by a dark mustache with just curl enough to suggest the Don Juan—ready for fan, slipper, or blade. And yet with all this there was a certain air of sadness about him that enlisted your sympathy at sight.

The swarthy landlady who peered through the lattice-blinds had never seen him before, and expressed, rather pointedly, I thought, the hope that she never would again. The picador who during the bull-fights occupied a room on the floor above mine charged down upon him very much as he would on a wounded bull, and returned to me, waiting behind the half-open door, with a shrug of his broad shoulders,

a lifting of his eyebrows, and the single word, "Nada!" ("Good-for-nothing").

Still the silent young man continued to occupy my sidewalk, to bow with his hat to the ground, and to follow me with his eyes around the corner of the narrow street that led to the Moorish mosque.

Then a break occurred in the daily program. I had forgotten my brush-case, and ran back into the house, leaving my white umbrella and trap on the doorstep. When I emerged again into the blinding sunlight they had disappeared. I instinctively sought out my silent young man. He was standing in his customary place, hat off, my trap in one hand, the umbrella under his arm.

"My friend, you have my trap."

"Yes, señor."

"Why?"

"It is too heavy for the painter. Let me carry it."

His voice was so gentle, his face so honest, his manner so courteous, his desire to serve me so apparent, that I surrendered the brush-case at once; had it been filled with doubloons I would have done the same.

"What is your name?"

"Manuel."

"Why are you always here?"

"To wait upon you."

"For what?"

"To keep from starving."

"Have you had no breakfast?"

"No; nor supper."

Below the mosque there runs a crooked street lined with balconies hooded with awnings shading tropical plants, and now and then a pretty señorita. At the end of this street is an arcade flanking the old bull-ring. Through one of its arches you enter the best café in Cordova.

To see a hungry man eat has always been to me one of the most delightful of all the expositions of the laws of want and supply, to assist in equalizing these laws the most exquisite of pleasures. I exhausted my resources on Manuel.

He had a cup of coffee as big as a soup-bowl. He had an omelet crammed full of garlic. He had a pile of waffles smothered in sugar. He had chicken livers broiled in peppers and little round radishes, and a yard of bread, and, last of all, a flagon of San Vicente. All these he ate and drank with the air and

manners of a gentleman, smoking a cigarette throughout the entire repast, as is the custom, and talking to me of his life — his people at home, his year at the military school at Toledo, of the unfortunate scrape which ended in his dismissal, of the anger of his father, of the beauty and devotion of the girl who caused it all, and of his coming to Cordova to be near her. Who does not recollect his own shortcomings in the hot, foolish days of his youth? I could see it all; hardly twenty, straight as an arrow, lithe as a whip, eyes like coals of fire, cheeks like a rose, and his veins packed full of blood at fever-heat.

He had watched me painting in the plaza the week before and had followed me to my lodgings, hoping I would employ him to carry my trap, but had been too proud or too timid to ask for it until chance threw it in his way. He would be glad to carry it now all day to pay for his breakfast.

Manuel was a prize. He would supply the only thing I lacked in this most charming of Spanish cities — a boon companion with nothing to do. I made a bargain with him on the spot — so many pesetas per week, with three meals a day, he to occupy the other side of the table.

It was delightful to see him when the terms were concluded. His face lighted up, and his big brown eyes danced. Now he could hold his head up. His father perhaps was right, but what could he do? Florita was so lovely! Some day I should see her; but not now; I would not understand. His father by and by would relent and send for him. Then he would take my hand and place it in his father's and say, "Here is the good painter who saved my life and Florita's."

We ransacked Cordova from end to end: into the mosque at twilight, sitting in the shadows of the forest of marble columns stretching away on every side; up into the tower, where the pigeons roost; across the old Roman bridge; along the dusty highways on the outskirts of the old city crowded with market people; through the streets at night, listening to the tinkling of guitars and watching the muffled figures under the balconies, and the half-opened lattices with the little hands waving handkerchiefs or dropping roses; everywhere and anywhere; in every nook and crack and cranny of this once famous home of the hidalgo, the cavalier, and the innamorata with the eyes of a gazelle and the heart of fire.

Manuel loved it all. He loved, too, strange to say, all things quaint and odd and old, and in his enthusiasm had rummaged every sacristy and priest's house for me in search of such treasures. Indeed there was hardly a purchasable vestment or bit of embroidery in the city that

he had not bargained for, and my rooms gave daily evidence of his success. One morning he came dancing in, bubbling over with delight, and swinging around his head a piece of brocade that would have made the mouth of an antiquary water. This he gravely informed me had once belonged to the figure of the good saint, the Santa Teresa, who had worn it for some hundreds of years and who had parted with it the night before for ten pesetas. The sacristan who acted as her agent had replaced the exquisite relic with some new, cheap lace, explaining that it was the good saint's feast-day, and he therefore was especially desirous of presenting her properly to her devout admirers.

One subject, however, by common silent consent was tabooed — the whereabouts of the sweetheart who had made him an exile. I knew that she was young, graceful as a doe, seductive as a houri, and beautiful beyond compare. I knew that she loved Manuel wildly, that he idolized her, and would starve rather than desert her. I knew also that she lived within a stone's-throw of the café; for Manuel would leave me at breakfast to kiss her good morning, and at midday to kiss her again, and at sundown to kiss her once more good night, and would return each time within ten minutes. I knew also, of course, that her name was Florita. All this the young fellow told me over and over again, with his face flushed and his eyes aflame; but I knew nothing more.

One night of each week was always Manuel's. Any part of any other night, or all of it, for that matter, was mine, and he was at my service for sight-seeing or prowling; but Saturday was Florita's.

Except on festival nights, Saturday, of all nights in the week, is the gayest in all the Spanish cities, for then the cafés are in full blast, filled not only with the city people, but with the country folk who come to market on that day. These cafés have raised platforms, are edged by a row of footlights, and hold half a dozen chairs for as many male and female dancers. Here you see on gala nights the most bewitching of all the sights of Spain — the Spanish dances.

What music is to the Italian dancing is to the Spaniard. Float along through any of the canals of Venice and listen: everybody is singing. The woman in the window of the wine-shop over the way is humming Verdi's "Miserere." The idler on the quay below joins in the anthem, and in five minutes more the whole water-way is ringing with the sublime harmony of that masterpiece. Turn out into the Grand Canal and so on into the Lido. The boats from Chioggia, fish-laden, are drifting up to the marble front of the Public Garden, and the air is filled with the melody of some refrain a hundred

years old. It is the language of the people; they think, talk, vibrate in music.

In Spain the outlet is through the toes, and not only through the toes, but the feet, the ankles, legs, up and through the spinal column, out along the arms to the very finger-tips, every nerve, tissue, muscle, and drop of blood in their swinging, pulsating bodies tingling to the rhythm of the dance. Under the influence of this magic spell a man with one eye and a crooked leg, head bound with a red handkerchief, jacket and waistcoat off, will transform himself into an embodiment of grace and expression. He will give you whole columns of description with his legs, avenge the forlorn heroine with the small of his back, and deal death and destruction to the villain with a twist of his head. It is the condensation of the opera, the drama, the pantomime, and the story-teller. Pictures, harmonies, books, the platform, and the footlights have their own well-worn roads to your brain; this language of the toes plows a furrow of its own.

On this particular Saturday night Manuel had taken himself off as usual, and I was left to follow my own free will alone. So I strolled into the garden of the mosque, sat me down on one of the stone seats under the orange trees, and watched the women fill their water-jars at the old Moorish well, listening meanwhile to the chatter of their gossip. When it grew quite dark I passed out through the Puerta del Perdón, turned to the right, and wandered on aimlessly down a narrow street leading to the river. Soon I heard the click of castanets and the thrum of guitars; there was a dancesomewhere. Pushing aside a swinging door, I entered a small café. The room was low-ceiled, apparently without windows, and the air stifling with cigarettes. The customary stage occupied one corner of the interior, which was crowded to the very walls with water-carriers, cargadors, gipsies, hucksters, and the young bloods of the town. They were cheering wildly a black-eyed señorita who had just finished her dance, and who was again at the footlights bowing her acknowledgments. She made a pretty picture in her short yellow skirts trimmed with black, her high comb, and her lace mantilla, her bare arms waving gracefully. I found a seat near the door, called for a bottle of San Vicente, and lighted a cigarette. At the adjoining table sat a group of young fellows drinking *Aguardiente*. It is a villainous liquor, and more than a thimbleful sets a man's brain on fire. They were measuring theirs in tumblers. When at a second recall the girl again refused to dance, the manager explaining that she was very tired, the young caballeros began pounding the table with their glasses, shouting out in angry tones, "*La señorita! la señorita!*" When for the third

time the tired girl advanced to the platform's edge and bowed her regrets, one of the group sprang forward, leaped upon a table, and with an oath dashed the contents of his glass over her bare shoulders. A frightened shriek cut the air, and the next instant a heavy carafe filled with wine grazed my head, struck the ruffian full in the face, and tumbled him headlong to the floor.

Instantly the place was in an uproar. Half a dozen men sprang past me, one waving an ugly knife, made a rush for the table in my rear, and threw themselves on a young fellow who had thrown the carafe, and who stood with his back to me swinging its mate over his head like a flail. Then came a crash, another Spaniard sprawled on the floor, and a flying figure dashed past and bounded over the footlights. As he plunged through the curtain in the rear I caught sight of his face. It was Manuel!

Grasping the situation, I sprang through the door and reached the sidewalk just as the police forced their way past me into the scattering throng. A few sharp orders, a crash of breaking glass, a rattling of carbines on the floor, and the tumult was over.

Humiliated at Manuel's deception, and yet anxious for his safety, I hid myself in the shadow near a street-lamp with my eye on the swinging door, and waited. The first man thrust out was the ruffian who had emptied his glass over the dancer. His arms were pinioned behind his back, his head still bloody from the effects of Manuel's carafe. Then came a villainous-looking cutthroat with a gash across his cheek, followed by three others, one of whom was the manager.

The mob surrounded the group, the prisoners in front. I crouched close until they disappeared in a body up the street, then crossed over, and swung back the door. The place was empty. A man in his shirt-sleeves was putting out the lights.

"There has been a row?" I said.

"Unquestionably."

"And some arrests?"

"Yes, señor."

"Did they get them all?"

"All but one."

"Where is he?"

The man stopped, grinned the width of his face, and, thrusting up his thumb, waved it meaningly over his left shoulder.

Manuel had escaped.

For half the night I brooded over the unfaithfulness of human nature. Here was my hero telling lies to me about his Florita, spending his Saturday nights in a low café engaged in vulgar brawls, and all over a dancer. I began to consider and doubt. Was there any such fair creature at all as Florita? Was there

any implacable father? Had Manuel ever been a student? Was it not all a prearranged scheme to bleed me day by day and, awaiting a chance, rob me, or worse? A man who could escape unhurt, surrounded as he had been, was no ordinary man. Perhaps he was simply a decoy for one of the numerous bands of brigands still infesting the mountains; and I remembered with a shudder the forefinger of the Englishman forwarded to his friends in a paper box as a sort of sight-draft on his entire bank-account. I began to bless myself that mere accident had warned me in time. I would pick up no more impecunious tramps, my heart and pocket-book wide open.

When the day broke, and the cheery sun that Manuel always loved streamed in my windows, the situation seemed to improve. I thought of his open, honest face, of his extreme kindness and gratitude, of the many delightful hours we had spent together. Perhaps, after all, it was not Manuel. I saw his face only for a moment, and these Spaniards are so much alike, all so dark and swarthy. He would surely come in an hour, and we would have our coffee together. I dragged a chair out on the balcony and sat down, watching anxiously the turn of the street where I had so often caught sight of him waving his hand.

At eight o'clock I gave him up. It was true; the face was Manuel's, and he dared not show himself now for fear of arrest. Then a new thought cheered me. Perhaps, after all, he was waiting at the café or, it being Sunday, was late, and I would meet him on the way. I ran downstairs into the sunlight and stopped at the corner near the church, scanning the street up and down. There was no one I knew except the old bare-headed beggar with the withered arm. Manuel often gave him alms. He bowed as I passed, stood up, and put on his hat.

Near the café at the bottom of the hill stands a half-ruined archway. It can be reached by two streets running parallel and within a stone's-throw of each other. As I passed under it the beggar, to my astonishment, started up as if from the ground. He had followed me.

"You are the painter, señor?"

"Yes."

"And Manuel's friend?"

"Certainly; where is he?"

He glanced cautiously about, and took a scrap of paper from inside the band of his hat. It bore this inscription,

"I am in trouble; follow the beggar."

The old man looked at me fixedly, turned sharply, and retraced his steps through the arch. My decision was instantaneous; I would find Manuel at all hazards.

The way led across the plaza of the bull-ring, through the market, up the hill past the

little mosque,—now the church of Santa Maria, the one with the red marble altar,—and so out into the suburbs of the city, the beggar keeping straight ahead and never looking behind. At the end of a narrow lane dividing two rows of old Moorish houses the mendicant tarried long enough for me to come nearer, glanced at me meaningly, and then disappeared in a crack in the wall. I followed, and found myself in a square patio, overgrown with weeds, half choked by the ruins of a fountain, and surrounded by a balcony supported by marble columns. This balcony was reached by a stone staircase. The beggar crossed the overgrown tangle, mounted the steps, swung back a heavy green door with Moorish hinges, and waited for me to pass in. I drew back. The folly, if not the danger, of the whole proceeding began to dawn upon me.

"I will go no further. Where is the man who sent you?"

The beggar placed his fingers to his lips and pointed behind him.

At the same instant a blind opened cautiously on the floor above, and Manuel's face, pale as a ghost, peered through the slats. The beggar entered, closed the heavy door carefully, felt his way along a dark corridor, and, knocked twice. A shriveled-up old woman with a bent back thrust out her head, mumbled something to the beggar, and led me to an opening in the opposite wall. Manuel sprang out and seized my hand.

"I knew you would come. Oh, such a scrape! The police searched for us half the night. But for old Bonta, the beggar here, and his wife we would have been caught. It would kill my father if anything should happen now. See, here is his letter saying we can come home! Oh, I am so grateful to you! You see it was this way. It was Florita's night, and I—"

My heart turned sick within me. Florita's night! If the poor girl only knew.

"Don't say another word, Manuel; you are in a scrape, and I will help you out, but don't lie about it to me of all men. If you love the dancer, all right; breaking a carafe over a fellow's head in a café, and all for a pair of ankles, may be—"

"Lie to you, señor!" said Manuel, flushing angrily, and with a certain dignity I had not seen in him before; "I could never lie to you. You do not know."

"I do know."

"Then Bonta has told you?" and he looked towards the beggar.

"Bonta has not opened his lips. I saw it all with my own eyes, and you may thank your lucky stars that you were not sliced full of holes. What would Florita say?"

"Florita? Ah, I see!" said Manuel, springing forward, pushing open the door, and calling out:

"Florita! Are you there? Come quick!"

A hurried step in the adjoining room, and a young girl came running in.

It was the dancer!

"What could I do, señor? What would you do if your own wife had been so insulted? See how lovely she is!" And he kissed her on both cheeks.

What would I have done? What would you have done, my friend, with that startled shriek in your ears, and that frightened face appealing to you, her great eyes wet with tears, her white arms held out to you?

My hair is not quite so brown as it was, and the blood no longer surges through my veins. I am cooler and calmer, and even phlegmatic at times; and yet had Florita been mine, I would have broken a carafe over every head in Cordova.

While he was calming her fears, kissing her cheeks, and patting her hands, the whole story came out. Day after day he had hoped that his father would relent. One word from him, and then I need never have known how the dainty feet of his pretty young wife had helped them both to live. This is why he had kept it from me.

That night a painter, with a pretty Spanish cousin, and a servant carrying his coat and traps, occupied a first-class carriage for Toledo. The painter left the train at the first station out of Cordova, shouldered his trap and coat himself, and took the night express back to his lonely lodgings. The servant and the señorita went on alone. When the train reached Toledo an old Spaniard with white head and mustache pushed his way through the crowd, took the servant in his arms, and kissed the pretty cousin on both cheeks.

Then a high-springed old coach swallowed them up.

MASKS.

A CERTAIN friend of mine whose daily praise
Was in the mouths of men once startled me
By what he said when I, like all the rest,
Cried up his virtues and his blameless life.
In this wise speaking: "Stop! you madden me.
You and the crowd but look to what I do,
And when you find me righteous and the law
Ne'er broken, why, you make a loud acclaim,
Holding me guiltless and a perfect man.
But tell me, friend, whether of two is best:
To let a spite eat slowly to the heart,
Making no outward sign, rebelling not,
Or, by an honest spurt of wrathful blood,
To mass the hate of many brooding years
Into one right-arm blow, and so be quits?
To speak in terms immaculate and nice,
Yet curse in speechless thoughts, to clean forswear
All lewdness, yet go lusting secretly?
To render weight for weight, yet grudge the coin
Flung to a beggar-lad — in brief, to find
My soul the nesting-place for divers sins,
And still walk on in smug and seemly guise?
I tell thee, there are times I hear a voice
Say very clear, though softly, in myself:
'T were better if you sinned right openly
Than let the vileness stew within your mind
And pass your properness upon the world,
Knowing the while the arch hypocrisy
That takes the name of angel where, instead,
Devil hits nearer to the truth.' Ah me!"
Here, staying words, he sighed a heavy sigh;
And, musing on, I strolled, debating how
Mere masking tricks us all, and somewhat sad
To learn the inner history of one
Whose common title with the world was "saint."

Richard E. Burton.

PRO PATRIA.

IN MEMORY OF A FAITHFUL CHAPLAIN.¹

I.

EREWHILE I sang the praise of them whose lustrous names
Flashed in war's dreadful flames;
Who rose in glory, and in splendor, and in might
To fame's sequestered height.

II.

Honor to all, for each his honors meekly carried,
Nor e'er the conquered harried;
All honor, for they sought alone to serve the state—
Not merely to be great.

III.

Yes, while the glorious past our grateful memory craves,
And while yon bright flag waves,
Lincoln, Grant, Sherman, Sheridan, the peerless four,
Shall live forever more;

IV.

Shall shine the eternal stars of stern and loyal love,
All other stars above;
The imperial nation they made one, at last, and free,
Their monument shall be.

V.

Ah yes! but ne'er may we forget the praise to sound
Of the brave souls that found
Death in the myriad ranks, 'mid blood, and groans, and stench—
Tombs in the abhorred trenches.

VI.

Comrades, to-day a tear-wet garland I would bring,
But one song let me sing,
For one sole hero of my heart and desolate home;
Come with me, Comrades, come!

VII.

Bring your glad flowers, your flags, for this one humble grave;
For, Soldiers, he was brave!
Though fell not he before the cannon's thunderous breath,
Yet noble was his death.

¹ The chaplain referred to lost his life through taking upon himself the visitation of the army smallpox hospital near the camp of his regiment, the 40th N. Y. Volunteers, at Brandy Station, Virginia, April, 1864.

VIII.

True soldier of his country and the sacred cross,
He counted gain, not loss,
Perils and nameless horrors of the embattled field,
While he had help to yield.

IX.

But not where 'mid wild cheers the awful battle broke,—
A hell of fire and smoke,—
He to heroic death went forth with soul elate —
Harder his lonely fate.

X.

Searching where most was needed, worst of all endured,
Sufferers he found immured,—
Tented apart because of fatal, foul disease,—
Balm brought he unto these:

XI.

Celestial balm, the spirit's holy ministry,
He brought, and only he;
Where men who blanched not at the battle's shell and shot
Trembled, and entered not.

XII.

Yet life to him was oh, most dear,—home, children, wife,—
But dearer still than life,
Duty—that passion of the soul which from the sod
Alone lifts man to God.

XIII.

The pest-house entering fearless—stricken he fearless fell,
Knowing that all was well:
The high, mysterious Power whereof mankind has dreamed
To him not distant seemed.

XIV.

So nobly died this unknown hero of the war;
And heroes, near and far,
Sleep now in graves like his unfamed in song or story —
But theirs is more than glory!

R. W. Gilder.

THE AUTHOR.

HE author turned on his couch uneasily as he was dictating the final paragraphs of his story. His wife sat writing at a table by the window. In the little square far down below them there were signs of spring; the first touch of warmer weather had been felt, and the trees were beginning to bud out timidly. The afternoon sun fell aslant the floor in long lines of feeble light. The invalid looked out towards the west and caught a glimpse of the floating clouds reddening as the day waned. He gazed at them as though anxious to borrow their golden hues to color his words.

His wife finished setting on paper the last sentence he had dictated. She waited silently for the next, but in a moment she looked up. "What is it, dear?" she asked, when she saw the look on his face.

"We shall have another glorious sunset to-day," he answered. "How lucky it is that we live so high up in the air that we can see them."

"Shall I raise you up?" she inquired hastily.

"Not yet," he responded; "I must finish the story first. Where was I?"

She took up the sheets of manuscript which lay before her and replied, "I had just written this: 'In morals, as in geometry, the straight

line is the shortest distance between two points; and John Strang never swerved from the swift path. He was alone, but a true hero needs no other witness than his own conscience —'"

"I know, I know," the author interrupted; "a couple of hundred words more and the work is done. I'm going to wind it up short and sharp, and give the reader a real surprise. 'He strode forward fearlessly. Out of the darkness there came to meet him —'"

Having begun again to dictate, the sick man with an obvious effort braced himself as he lay, and continued until he reached the end of the tale, pausing but for an instant now and again to find the fit word, at once simple and strong, to carry his meaning. The last few sentences fell from his lips swiftly, tumbling one over another in the haste of their maker to be at the goal of his desires; and his amanuensis had to let her pen speed over the paper to keep pace with her husband's rapid speech. At last the story-teller concluded, "So it came to pass that John Strang conquered himself, and thus he was spared the knowledge that the saddest of all joys is a satisfied vengeance." The tension of his task relaxed all at once, the author fell back on his pillow, and the westering sun cast a rosy light on his pale, thin face, with its eager eyes and its determined mouth. He watched his wife while she wrote this final sentence, and then he said, "That is all."

She numbered the page she had just completed, and laid it on top of the others.

His eyes followed her movements wistfully, and then he looked anxiously into her face, as though waiting for her judgment on his labor.

When he found that she was intent on sorting the pages in order and did not speak, he broke the silence himself.

"I'm afraid it is not very good?" he said tentatively.

She looked up and smiled at him proudly.

"It is one of the best things you have ever done," she declared.

The color on his cheeks deepened a little,—but perhaps the sun was responsible for this,—and the light came back to his eye.

"I'm afraid that it is not very new," he returned doubtfully.

"It is the old, old story," she rejoined firmly, "and that is always new and always true; and it always will be as long as there is an honest man and woman in the world."

"The whole thing is so fresh to me now," he said, with a hint of rising confidence in his weary voice, "that I don't know anything at all about it. By to-morrow I shall be ready to call it poor stuff, I suppose. If it is good for anything, I shall not find it out until I get the proof from the magazine."

"Where are you going to send it?" asked his wife.

"To 'The Metropolis,' I think," he responded. "They read there more promptly than anywhere else, and they pay better, too."

"They did n't give you much for that last story of yours they took," she rejoined.

"Well, they did n't like that story very much, and perhaps they were right," he said. "After it had been out a month or so I went in and looked over the scrap-book of newspaper notices, and hardly one of them said a word about my story."

"What does a newspaper man know about literature?" asked the author's wife, indignantly.

"You know that they spoke to me about writing a serial for them; that shows that they like my work," said the author, "and perhaps this story will please them better. I think the fight ought to be popular; I tried to make it a good fight—"

"And you did," she interrupted; "I got so excited over it I could hardly write."

"I wished to have it a good fight in itself," he continued, "and at the same time typical of the eternal strife of good and evil. Yet I don't know whether I really want anybody to suspect the allegory or not. I think I like stories best when the moral is quite concealed."

"You have n't flouted your moral in the reader's face, if that's what you mean," she returned. "But it's there all the same; and I don't doubt it'll do good too. I like the man; he's a gentleman and a man at the same time. And I could fall in love with the heroine; she's lovely, and noble, and womanly, and feminine, too!"

He looked her full in the face, and there was a touching sweetness in his voice as he said, "How can I ever draw any other kind of woman—when I have so fine a model before me?"

She rose from the little table by the window and crossed over to his couch. He held out his hand,—a long, delicately modeled hand,—and she clasped it. Then she bent over and kissed him.

The author smiled up at her again, though a sudden twist of pain stiffened the lines of his face, and beads of chill perspiration began to form on his brow. She knew the signs of coming suffering, and her heart sank; but she still smiled at him with her mouth and her eyes as she moved away to prepare the medicine it was now time for him to take.

THE EDITOR.

THE ample offices of "The Metropolis," an illustrated monthly magazine, filled a floor of a broad building in Broadway. The publisher, with his assistants and with half a score of book-keepers and clerks, occupied the front of the loft, and the editorial rooms and the art department were crowded together in the rear of the building. The private office of the editor-in-chief was to be reached only by passing through the rooms in which sat his associates, and he was thus in a measure protected from the intrusion of the bores and the cranks.

One Monday morning towards the latter part of May, two or three weeks after the author had made an end of dictating the story to his wife as he lay on his customary couch of pain, the editor sat in this inner office in consultation with his principal assistant.

"Have you got the schedule for the midsummer number there?" asked the editor.

His assistant, whose duty it was to "make up" the magazine, handed the editor a sheet of paper strangely ruled and half covered with penciled notes.

"I want to see if we can't make room for this story," said the editor, taking a folded manuscript from the little hand-bag he always carried to and from his own house, where he absented himself often that he might read the more important contributions at leisure.

"How long is it?" asked the assistant.

"Between eight and nine thousand words," the editor answered. "It is a breezy, outdoor thing, well suited to a summer number, and there's a fight in it that will be a relief to the quietness of the serial. In fact, this story will help to balance the midsummer fiction in a way I like."

"Well," responded the subordinate, "we can get it in, if you insist, although it will be a tight

squeeze to pack in ninthousand words. Must it be illustrated? That 'll make it all the harder."

"One picture will be enough, at any rate," the editor rejoined.

"Then I think I see how to work it," said the assistant, after consulting the schedule. "We 'll put the picture at the end of the second cut form and run in a plain form next. That ought to do it nicely; and of course we can tuck in a poem to fill up the last page if we have to."

"All right," assented the editor.

The assistant added a few suggestions, words and figures, to the schedule; and then he looked up and remarked: "The artist will have to hump himself if we are going to get the plate in time for the midsummer. That comes out the last week in July, and here we are near the end of May. All the other cuts are done; at least they told me yesterday they expected the last one in to-day."

"There 's that new man just back from Paris," said the editor, "that pupil of Gérôme's they have been talking about in the art department. They might let him do it."

"I don't believe that the public really likes those impressionist scratches," the assistant responded; "but they say this man is a quick worker, and he is anxious for a job. I suppose we can risk it."

"Then you had better talk to them about it this morning," the editor declared, "and see that he gets the manuscript at once."

The assistant took the flat package of folded paper and began to discuss another subject: "Don't you think we ought to have a taking title for that yarn about yachting in the Pacific? How would 'From China to Peru' do?"

THE ARTIST.

THERE is a little restaurant in a little house on a little street not far from a cluster of studio-buildings, and one of the many young artists who intermittently frequent it once called it "The Fried Cat," and by that picturesque but doubtful name the little restaurant has ever since been known.

The specialty of "The Fried Cat" was a fifty-cent dinner, wine and coffee included. This was served in three little rooms, opening one into the other and containing perhaps a score of small square tables.

On a rainy evening in the last week of May a dozen or so of these tables were occupied. At one of them, near the open French windows that looked into the little yard behind the

restaurant, sat three young men smoking their cigarettes with their coffee. The tallest of them was the artist who had recently returned from Paris, where he had studied at the Beaux Arts under M. Gérôme.

"I hear you are working for 'The Metropolis,'" said one of his friends, a young poet who supported himself by editing a society weekly.

"They 've been after me to do something for them ever since I got back," responded the artist, rolling a fresh cigarette and lighting it with the stump of the old one. "I don't care much to do black-and-white. Color is my stronghold, you know, though I 'm not afraid of line. But I wanted to collar the dollars, and besides it 's good practice."

"What is the story like?" asked the poet.

"The story?" echoed the artist. "Oh, the story is n't much. At least I don't care for that kind of stuff—heroism, you know,—Romeo and Juliet, and all that sort of thing. But there's a fight in it, a fight on a lot of sand-dunes, and I 've done them a regular Cazin. It is n't easy to get real *plein-airiste* effects into a black-and-white, but I think I 've got 'em this time."

"Is it done already?" inquired the third man at the table, a sad-looking young fellow who wrote comic sketches for the weekly papers.

"Oh, yes," answered the artist. "I glanced over the story last night, and this morning I got me a model, and I knocked off the sketch in two or three hours."

"Oils or pen-and-ink?" the poet queried.

"Oh, oils, of course," the artist responded; "and they are going to process it like those 'Tartarin' things, you know."

"How will it come out?" the humorist asked.

"Oh, I don't know," said the artist, "and I don't much care. I 'm to have my sketch back, and if the cut is n't good I can make a water-color of the subject for one of the fall exhibitions. I believe I could make a lovely water-cooler of it—*tout pourri de chic*, you know."

THE PRINTER.

EARLY in June there came a spell of intensely hot weather such as often lends unexpectedness to the New York spring. Nowhere were the effects of the heat more unpleasant than in the long, low rooms where worked the compositors employed by the company that printed "The Metropolis." Pending the completion of a spacious building in the course of construction next door, the whole force of the large printing establishment was crowded into

three adjoining private houses hastily and in-commodiously altered to serve as a makeshift while the new edifice was going up. Even at midday in June, when the longest day in the year was close at hand, the light was insufficient; and the men who stood in their shirt-sleeves at the tall cases near the middle of the narrow room had to rely for illumination on flaring gas-jets that added to the heat of the loft and to the foulness of the air.

When the shrill whistle announced the end of the noon hour of rest, a huge, blond German printer took his place beneath one of these gas-jets and grumbled as he gazed down at the sheets of manuscript he had taken from the copy-hook. These were pages of the story the author had dictated to his wife.

"Was fur schreiben sind diese?" he growled as he examined the fine and delicate calligraphy of the lady. "Himmel! vy don'd dese Amerigan women write like Ghristians? Vas dere effer such scribeben als diese? Ugh! Und I come in late, dinkin' I might ged a fat take on dat cyglobedia! Vell, I must vollow gopy, I suppose; it is bud four or five schdigs I have."

Still grumbling, he hung the sheets of manuscript on a hook at the head of his case and took up his composing-stick. As he was adjusting his broad spectacles over his solid nose to see what he was to set up, the gas-jet over his head flared up and then went out suddenly.

"Ach, himmel!" cried the printer in disgust, as he tried to set the gas-fixture in order. "Das arbeitet nicht. Muss mann es fixiren!"

THE PUBLISHER.

On the last day of June a full set of sheets of the midsummer number of "The Metropolis" were laid on the desk of the publisher of that magazine; and he spent an hour or more in examining them carefully and in deciding upon the best means of calling to them the attention of the public.

Three or four times the publisher came back to the story which the author had dictated and which the artist had illustrated. At last he touched a bell and told the boy who came in response to this summons to go to the assistant editor and to request that the assistant editor would please be so kind as to come in to see the publisher on his way out to lunch.

Towards one o'clock, when the assistant editor came in, the publisher asked, "When do you send out your literary notes about the midsummer number?"

"Between the 15th and 20th, I suppose," answered the assistant editor. "There are lots of good things in the midsummer to hang a note on."

"If it's just the same to you," the publisher continued, "I wish you would n't send out a note about the story this picture illustrates," and he pointed to a full-page drawing wherein two men were engaged in deadly combat on a strip of sand running out into the sea.

"We don't often make any preliminary announcement of mere short stories, you know," the assistant editor explained.

"Then that's all right," said the publisher. "You see I don't want to seem to bear down too hard on any one thing. Now I like this picture. It will make a first-rate poster."

"That's so," assented the assistant editor, seeing at once the effectiveness of the scene for the purpose of arresting the vagrant attention of the casual magazine-buyer at a news-stand or in a book-store.

"And if I use the picture on all our posters," the publisher explained, "it seems to me better to say nothing about the story in the advance notes."

THE CRITIC.

The night before the midsummer number of the magazine was published, copies were sent out to the daily newspapers for review. In the office of the "Gotham Gazette" the magazines of the month were regarded not as literature but as news. They were not criticized by one of the literary critics of the journal, but by one of the minor editorial writers of the paper, who was wont to run rapidly over the pages of every review and monthly magazine as it arrived, submitting to the managing editor any article which seemed likely to furnish a text for a column of brevier, and penning a hasty paragraph or two in which he recorded the impressions of his cursory perusal.

Thus it was that on the morning of August 1st the "Gotham Gazette" printed upon its editorial page in solid minion these words:

The midsummer number of "The Metropolis" is neither better nor worse than the conductors

of this admirably illustrated magazine have accustomed us to. The frontispiece is a portrait of William Dunlap, who helped to found the National Academy of Design and who wrote a history of the theater in America; the face of the picture is interesting but rather weak, and the accompanying article is weak and not interesting. "From China to Peru" is the illustrated record of a daring voyage in a ten-ton sloop, almost as good as one of Mr. Robert White's delightful marines. An anonymous writer discusses "The Natural History of Games," and shows how modern scientific theories account for the survival of the sports best fitted for a given people at a given time; thus the game of poker, for example, seemingly invented by brave fellows of Queen Elizabeth's day (when it was known as *Primer*), was revived in the very nick of time to serve the needs of the Argonauts of Forty-Nine. The "Hills of the Sky" is a pleasantly written and amply illustrated account of the colony of authors and artists at Onteora in the Catskills. Under the modest and somewhat misleading title of "The Strange Misadventures of a Blue Pencil" a member of the staff of the "Gotham Gazette" contributes a fresh and picturesque description of the making of a great daily newspaper. In "Pasticcio" — the new department for humorous odds and ends — there is a rather pretentious screed, "On the Wise Choice of a Mother-in-Law," which some readers will doubtless consider funny.

Mr. Rupert de Ruyter continues his serial, "The Poor Islanders," which is now seen to be a rather bitter attack on British "society"; Mr. de Ruyter is best known as a poet, but this novel shows that he is a master of prose as well. The rest of the fiction in this number of "The Metropolis" does not call for comment; perhaps the best of the three short stories is a rather high-flown, semi-realistic tale of young love triumphant, an old enough story, but yet told with a certain freshness.

TWO YOUNG READERS.

On the first Saturday evening in August there was a gathering of young people in a house built on a rock and projecting its deep piazzas over the waters of Narragansett Bay within sight of Point Judith. The owner of the place had sons and daughters, and these sons and daughters had each a friend; and so it was that there was a houseful of company, and that the easy laughter of young men and maidens filled the broad hall and the wide parlors. There had been lawn-tennis all the afternoon on the smooth sward which sloped gently

away on one side of the house, with its grass almost as greenly beautiful as the close-cropped turf of England; then there had been a late dinner enlivened by the humor of a young lawyer, a comrade of the eldest son, and able to leave the city only from Friday to Monday; and now there was a little music in one of the parlors, where a group was gathered about a piano singing the old war-songs and the older college-songs, and changing from "Marching through Georgia" to "Lauriger Horatius."

The young lawyer from New York had strolled out on the piazza with the eldest daughter of the house, his junior by two or three years. The young people walked to and fro before the open window of the parlor where the others were making merry. He was a handsome young fellow, with hopeful eyes and a resolute mouth. She was a good-looking girl, thoughtful and yet lively.

As they walked they talked of trifles — of the weather, of the tennis that afternoon, of the city election the next fall, of the moonlight which silvered the waves that washed the rocks below them.

"There is the night boat," he said, pointing to a dark shape in the distance sparkling with electric lights and speeding swiftly over the water towards Point Judith.

"Is n't this like a scene in the theater?" she returned. "It is so beautiful that it seems unreal."

"Suppose we go out to the summer-house and take it all in?" he suggested.

One of the piazzas extended beyond the house to the very verge of the rocks, and here there was a summer-house, with a hammock swung from a pair of its posts.

"Hadn't you better get into the hammock?" he asked when they had reached the summer-house. "You have been playing tennis all the afternoon."

"But I'm not a bit tired," she responded as she settled herself in the network and began to swing lazily in the moonlight. "And yet this is restful, I confess."

Just then the group about the piano in the parlor a few yards behind them changed from "Rally Round the Flag" to "Come where my love lies dreaming."

The moonbeams fell on the clear, pale skin of the girl in the hammock, and the young man thought he had never seen her look so lovely; and the desire to tell her how much he loved her, and to tell her that very evening, at once, and without dangerous delay, arose within him irresistibly.

"This is really delightful," she said, when the silence had lasted a minute or two, "to swing here in the moonlight on a Saturday night,

when the work of the week is done. Don't you like it?"

"I?" he responded. "Don't I!"

"Then take a chair and sit down to enjoy it."

"To hear is to obey," he answered, and he drew forward a camp-stool. As it came out of the shadow something fell from the seat. He stooped and picked it up.

"It's only a magazine," he explained.

"Oh, yes," she returned, as a faint flush came into her cheeks. "It's 'The Metropolis,' is n't it?"

"Yes," he answered, glancing down at the magazine in his hand; "it's the August number."

"I had it out here this morning," she continued hastily, "to read that story you were speaking about last night."

"The one I had read in the train coming here?" he returned. "I remember now. And how did you like it?"

"It was splendid," she responded with interest. "There was too much fighting, but it was thrilling, and the hero was a real hero."

"Well, I thought he was more of a real man than most of the heroes we see in books," the young lawyer replied.

"Of course the girl was a goose," the young lady went on.

"Oh!" cried the young man, a little taken aback. "Do you know, I rather liked that girl?"

"Oh, no!" persisted the occupant of the hammock, sitting up suddenly. "I'm sure you did n't! I don't see how any man could ever love a creature like that. Could you?"

"It is easy to answer that question," said the young man, as his heart gave a bound. "I could love only one woman in the world; I do love only one woman; I can never love any other."

Then he paused for a moment. The color went out of her face, but she said nothing.

"You know who she is," he went on passionately; "you are not blind. You know that I love you."

Here he dropped on his knees beside the hammock and seized her hand.

"I love you!" he repeated fervently. "Can you love me a little?"

She made no answer in words, but there was a clasping of the hand he held. Then he threw his arms about her as she lay in the hammock and kissed her.

The music still went on in the parlor; the moonlight still danced across the waves; the night boat was still visible in the distance; the external world was still what it had been but a minute ago; yet to the young people in the summer-house life had never seemed so fair before.

ONE OLD READER.

THE next Saturday was a day of intense heat; it was the last and worst of five days of inexorably rising temperature; it was a day when every man who could fled from town as from a fiery furnace. In the afternoon, as the great stores closed, tired shop-girls and salesmen came forth limply rejoicing that their half day's work was done. In the side streets, where the tall tenement houses towered aloft, weary mothers strove in vain to soothe their fretful children. The horses of the street-cars staggered along hopelessly, as though they knew that for them there was no surcease of labor. Even when the fleeting twilight began to settle down upon the city there was no relief from the heat.

About seven o'clock that evening a little old maid was riding in a car of a line which twisted about through noisome neighborhoods, ill-kept and foul even in winter, and now well-nigh suffocating. She was a trim little old woman, neatly dressed, well shod, properly gloved. She was obviously well-to-do, and if she lingered in town in the thick of the heated term it was at the call of duty. Ever since a rebel bullet had made her a widow before she was a wife the little old maid had given herself to works of charity; and it was in midsummer, when most of the charitable people are away, that she had the heaviest demands upon her. She took but a scant vacation every year, and it was taken always in Lent.

On that hot and intolerable Saturday evening in August the little old maid was returning from a day of unselfish and unpleasant toil in a tenement house where she had been serving as a volunteer nurse. She was worn with the work and glad of the restful motion of the car. She held in her hand a magazine—the midsummer number of "The Metropolis": but the jaded horses had drawn her for nearly half a mile before she opened its pages. Even when she finally took it up she turned the leaves with tired inattention until a chance sentence in a short story caught her eye:

"The future is not rosier to youth than is the past to age."

Then the little old maid turned back to the beginning of the story which the author had dictated to his wife, and she read it through with unflagging interest. When she had come to the end at last she laid the magazine on the

seat beside her and looked out of the window in front of her. But she did not see what was before her eyes—the high tenements, the enticing bar-rooms, the scrap of green square. She was not conscious of those who rode with her. She never noticed when her neighbors left the car, and when the vacant place on her right was taken by a small boy.

Her thoughts were over the hills and far away—over the hills of the years and far away in the past. A tale of youth and love, of bravery and manhood, had carried her back to her own brief love-story—to her own hero who had gone to the war a score of years before—who had gone and never come back. She lived over again that final parting with her young soldier-lover, whose unfound body was lying in a nameless grave in a hollow of Malvern Hill.

A sudden jolting of the car as a truck crossed the track, and the little old maid awoke from her day-dream. A glance at the street told her that she had come too far, and that she had passed the point where she wished to alight full fifteen minutes before. She signaled to the conductor to stop the car again.

As she rose she recalled the story which had thus entranced her, and she turned back to the seat where she had left it. But it was no longer there. The small boy had seen his opportunity; he had seized it; and he and the little old maid's copy of the midsummer number of "The Metropolis" had gone off together.

She sighed, and then she smiled; and on her way home on foot she stopped at a newsstand and bought another copy for the sake of the story she had read already.

ANOTHER READER.

IN those days—for it was some fifteen years after the war that the story which the author had dictated to his wife was printed in the midsummer number of "The Metropolis"—there was a certain Indian reservation stretching for a hundred miles and more on each side of a great stream. Through the reservation and down this river one day towards the end of August there came floating a birch-bark canoe paddled by two stalwart Indians, and containing also two white men. They were young fellows, both of these, and they had come to spy out the land. They were engineers—the pioneers of civilization in the new West.

There had been heavy rains, and the river was high in its banks. A last shower had passed over them only an hour or so before. From the

woods on each hand came the delicious fragrance of the forest after a rain, and a fresh breeze blew down with the current.

"How much further is this blacksmith's ranch?" asked one of the young men, who had spent two years on the Pacific coast, where everything is a "ranch," from an orange grove to a hennerly.

He was the elder of the two, a tall, handsome young fellow; his companion was thick-set and red-haired.

The Indian paddling at the bow turned to his comrade in the stern and spoke a few words in his guttural vernacular, and when he had received a monosyllabic answer, more of a grunt than an articulate sound, he replied:

"Soon be there now. 'Bout a mile more, think."

"The sooner the better," the young engineer returned. "I sha'n't be sorry to get my head under a roof for one night, even if it does n't rain again as it did last evening when we camped. There were times then when I thought the bottom had dropped out of the sky."

"Are you sure the blacksmith can take us in?" asked the other white man.

"Sure," replied the Indian, never pausing in his rhythmic paddling.

In the heart of the reservation there lived one white man, a blacksmith, paid by the United States Government to do such odd jobs as the Indians might desire. His cabin was high up on a bluff almost hidden by clustering trees from the eyes of the young engineers in the birch-bark even when their Indians ceased paddling and tied the canoe to the bank.

"Does he care for company?" one of them asked, as the four men stepped out of the light craft.

"How?" inquired the Indian who answered most of the many questions the young men were forever putting.

"Will he want to see us?" said the white man, shaping his inquiry anew to suit the mind of the red man.

"Sure," the Indian answered. "Want to see me sure. I am brother of one of his wives."

"One of his wives?" cried the Californian engineer. "How many wives has he, then?"

"Two now. Three once. One dead," was the sententious response.

"Oh!" said the engineer, thinking it best to push his inquiry no further.

Although concealed from sight, the log cabin of the bigamist blacksmith was scarce a hundred feet from the bank of the river. Half way up the Indian brother-in-law gave a peculiar cry.

In less than a minute a young and rather pretty Indian woman came flying down the

path in eager delight. A second and older squaw also advanced to meet them, and offered to carry the guns the young men had on their shoulders. The two engineers of course refused, but the two Indians allowed the women to relieve them of their burdens.

Brother and sister exchanged a few brief sentences, and then the Indian turned and said: "He home. He glad to see you."

And the blacksmith was glad to see them — glad as only a white man can be who does not gaze on a face of his own color a dozen times a year.

"Come right in, boys," he cried as soon as he caught sight of them. "Come right in an' make yerselves at home. I am, an' I want ye should be. Put down yer traps, and the women shall get ye somethin' to eat. Ye won't be goin' on again this evening?" he added anxiously.

"Not if you 'll keep us all night," answered one of the young men.

"That 's hearty," he responded cordially. "I 'll keep ye a week ef only ye 'll stay. It 's glad I am to see ye. These women o' mine are sosherville enough,—they 're ez sosherville ez they know how,—but after all they ain't white."

He was a large man, tall and generously built; his voice was deep and full; his ample beard was streaked with gray, and so was his shock of hair. He was perhaps fifty years old.

"An' what might you two boys be a-doin' here?" he asked after he had made them comfortable.

"We are engineers," one of them answered, "and we are —"

"Engineers, eh?" he interrupted. "Well, I worked in a machine-shop myself once. But what are ye doin' out here — there 's no engines out here?"

The young man who had been in California explained that although they were employed by a railroad they did not run a locomotive.

He listened intently, but obviously failed to understand.

"Well," he said at last, "whatever ye 're here for, ye 're welcome. An' now we'll have supper, and a snifter of old rye and a pipe after it."

When they had finished supper the blacksmith pushed aside the largest log on the hearth, and, taking up a burning stick, belighted his pipe and settled back for an evening of enjoyment.

Unfortunately the two young men had been kept up for several preceding nights and they were overburdened with sleep. The warmth of the fire, the ample meal, and the glass of liquor had weighted their eyelids despite their desire to keep awake for the sake of their host.

After he had been answered at random once or twice, as one or the other of the engineers roused himself with an effort, the blacksmith saw what the matter was.

"You two boys are sleepy," he cried, "an' here I am, like a hog, a-keepin' ye up."

"We are a little drowsy, I confess," admitted one of them; "but we can sit up with you as long as you like."

"I allow I 'd better get ye off to bed ezsoon ez I can, or else I 'll have to carry ye," he returned, mastering his disappointment with easy good nature. "Here 's the bunk the women have got fixed for ye; turn in now, an' turn out early in the mornin', an' we 'll have a talk then."

The young men thanked him and made ready for sleep. The old man stood over them as though there was something more that he wished to say. At last he remarked, in a deprecating way: "Ye have n't, either of ye, a paper ye could lend me overnight — a paper or a book? I ain't had anythin' to read for a mighty long while now. Ef ye 've got anythin' let me have it now, an' I 'll give it back to ye in the mornin'. I ain't sleepy to-night, an' I 'll take it all in — ef ye 've got anythin'."

The engineers felt in their pockets, and the young man who had been in California drew from his overcoat a copy of the midsummer number of "The Metropolis."

"We have n't this morning's paper, I 'm sorry to say," he answered, smiling as he proffered the magazine, "but here 's the last 'Metropolis,' if you 'd like to see it."

"The Metropolis?" queried the old man.

"It 's a magazine," explained the engineer; "there are stories in it, and pictures, and all sorts of things."

"Thank ye," the blacksmith rejoined as he took the thick pamphlet. "Pictures, eh? Well, I like pictures too. Sometimes these newspapers and books are chock full of long-tailed words that get away from me."

With that the young men bade him good night, and as they turned into their bunk they saw him sitting by the fire with "The Metropolis" open in his hand.

And when they arose in the morning there sat the blacksmith by the fire still grasping "The Metropolis," still intent upon its pages.

When he saw them he got up and came forward.

"There 's a power of good readin' in this magaziny o' yours, an' there 's one story there done me good to read."

The young man who had been in California pondered for a moment and then said, "The story with a fight in it? — the one about the seashore and the hillside?"

"That 's it," the blacksmith declared. "I

ain't read any other, an' I don't want to—now. That 's a story, that is, a real story, like the stories I used to hear as a boy—out of the Bible, mostly. I 'd like to have met the man that fought that way."

"The hero of the story?" asked the inquirer.

"Well, he was a hero, for a fact," the old man responded; "he had sand in his craw, that fellow. He was a man ye could tie to. Of course the girl was true to him; she could n't help it. A girl that would n't wait for a man like him would n't be any good."

This assertion was emphasized by a resounding slap on the thigh of the speaker.

"The editor of 'The Metropolis' is my cousin," said the younger of the engineers. "I 'll ask him to tell the author that his story has found appreciation out here in the backwoods."

"The author?" repeated the blacksmith. "That 's the fellow who wrote it, eh? Well, he 's a man, too! And he ain't any city fellow either, I 'll bet ye. He knows the woods too well for that. He 's lived out-doors, he has."

Then the pretty little squaw appeared and stood shyly before them.

"That means breakfast 's ready, I reckon," said their host.

After they had broken their fast the young men lingered a while, smoking with the blacksmith and enjoying his talk.

When they were about to push off the engineer who had been in California handed "The Metropolis" back to their host, saying, "I wish we had something better to leave with you to remember us by. But won't you keep this?"

"I 'll take it and thank ye," answered the blacksmith, heartily. "Now I can read that there story again."

A READER OF ANOTHER SORT.

EARLY on the morning of the last day in August, in the huge yard outside of the railroad station at Buffalo, two women were engaged in cleaning out a parlor car which had arrived from New York late the night before, and which was to start on its return journey at ten o'clock that forenoon.

In a dark corner of the car, where the sleepy porter might easily overlook it, one of the women found a magazine. It was a worn and ragged copy of the midsummer number of "The Metropolis." The woman took it to

the window and turned its leaves with unintelligent looks.

"What 's that ye have?" asked the other woman from the far end of the car, pausing a moment in her task of polishing the windows.

"It 's a paper or a book, I don't know," responded the finder of the magazine. "It 's pictures into it. I 'll be takin' it home to the boy. He do be wild now and then readin' a piece in the paper."

This was said not without a certain maternal pride.

"An' can the boy read?" asked the other cleaner, going back to her work.

"He can that!" responded the boy's mother, folding the magazine and thrusting it into the huge pocket of her dress. "He reads as fast and as easy as the teacher herself, and him only going to school this six months."

"An' how old is the boy now?" inquired the other, crossing over to polish the windows on the opposite side of the car.

"It 's fourteen he 'll be this next week," the mother replied. "He 's the only one of six that 's left to me now, and it 's a good lad he is too, barring a bit of wildness now and then that he gets from his poor father."

And with that she went out on the platform to polish the nickel-plated ironwork. She was a woman of fifty or thereabouts, good-natured and plain-featured, hard-working and worn by hard work.

When her long day's labor was over she went home to her boy. They lived together in two little rooms in a shanty over a grog-shop not far from the yard of the railroad. As she mounted the rickety stairs, she was surprised at the unwonted silence in the room that served them for kitchen. Generally the boy was home before her, and he had the fire started in the stove and the water in the kettle to boil; and often he came to the yard to meet her. When she entered the kitchen that last hot evening in August, when even the sunset breeze from the lake was sultry and feeble, there was no boy waiting for her, no fire laid, no water a-boiling.

But she had scarce taken off her bonnet when there was an eager footstep on the trembling stairs, and the boy broke into the room joyously.

"I could n't help being late, mother," he cried; "I got a job from a gentleman down on Main street, and he kept me till now. And, just think! He gave me half a dollar—a silver half-dollar, all in one piece."

And with that he took the coin from his pocket and tossed it in his mother's lap.

"It is a half-dollar, sure enough," said his mother, after biting the edge of the coin with Old World caution.

"And this is Saturday night, mother," her

son went on hastily, "and you won't have to go to work till Monday, so I want you to spend part of this money for yourself and get something good for to-morrow's dinner—a steak, for instance—a steak and onions! You will, won't you, mother?—just to please me?"

The mother smiled back at him. "Well," she said, "I'll see what I can get when I do be going out the while."

"And I've got good news too, mother," the boy continued. "I've got a place!—at least I think that I'm going to get one. The gentleman I did the errand for—he's a lawyer—asked me if I wanted a steady job, and I said yes, and I'm to go to his office on Monday at nine o'clock, and he'll see if I suit."

"That's good news, for a truth," she returned. "An' I've got something you'll be liking to see, too."

"What is it?" he cried, slipping his arm around her and kissing her.

She put her hand into her pocket and took out the magazine and handed it to him. "It's something to read," she said.

He opened it eagerly and turned the pages with delightful anticipations. "There's a lot of reading here, and I'll have such a good time a-reading it."

Seeing his ardent pleasure, the mother busied herself about the supper, lighting the fire in the stove and filling the kettle herself. When the meal was ready she called him; for a moment he did not hear, so absorbed was he with the magazine.

"There's all sorts of good things in that book," he said as he took his place at the table—"pictures, and poetry, and how a man sailed across the Pacific—don't they have big waves out there! Ever so much bigger than I've seen on the lake! There's stories, too. I'd just begun one of them. I picked it out because there was the picture of a fight in it and I wanted to know which licked."

As soon as he had eaten his supper the boy lighted the little kerosene lamp and sat down again at the story, losing himself in it at once and becoming wholly oblivious of all things else.

The mother cleared off and washed up, and then went out to buy their Sunday's dinner with the money he had given her.

When she returned he was still intent on the story, and in a few minutes more he came breathlessly to the end.

"O mother," he cried, "this is a splendid story! It's the best story I ever read!"

"Is it, lad?" she answered wearily, but smiling.

"Sit down and let me read it to you," he went on.

"Not to-night," she answered. "I'm that sleepy I could n't listen to anything."

"To-morrow, then," he urged.

"To-morrow, if you like," she rejoined.

And when to-morrow came the boy read her the story as best he could, puzzled now and again by a chance polysyllable, but struggling through bravely.

"He do read beautiful," was the mother's comment, more interested in the reader than in what he was reading.

When he had made an end and looked up all aglow with enthusiasm, she said, "It's a fine story, no doubt."

"A fine story, mother?" he echoed. "It's great. It's true. That's the kind of man I'd like to be. That's the kind of man I mean to be, too."

"I hope you won't be fighting a duel then with swords, and getting killed."

"He was n't killed," the boy retorted: "he killed the other man. And he did n't want to fight either, only he had to. He was a hero, that man. I can't fight, I suppose; but I can try to be as noble as he was, and as good."

"You are a good boy now," said his mother, kissing him.

On that Sunday afternoon the boy read the story again, for the third time, all to himself, and he made a solemn resolution to model himself on the hero. He felt as though the vision of that ideal would nerve him for the battle of life.

And so it came to pass. The boy went to the lawyer's office on Monday, and he stayed there till he grew to be a man. That story lingered fresh in his memory, and its hero was as the young man's guardian angel.

He developed true manliness, energy, character, and ability. He became a lawyer himself, and on the death of the senior partner of the firm to whose office he had come as a boy he was taken into partnership, although he was scarcely of age. Outside of his profession he broadened also and grew in stature. At a time of trouble he made himself the mouthpiece of the railroad men, whose claims he knew to be just, though the directors of the company refused to accede to them. To profit by the popularity thus obtained his party nominated him for the Assembly. By the advice of his partners he accepted the nomination, and by the help of the independent voters of his district, by whom he was known and respected, he was elected. His first thought was for his mother; he wished that she had lived to see him thus honored by his fellow men; he knew how happy and how proud it would have made her.

The boy had grown to be a man, yet he was the youngest member of the Assembly that year; indeed he was hardly old enough to vote. When he came to clear up his room before going to

Albany he found in the bottom of a drawer in his desk an old, worn, frayed magazine—the midsummer number of “The Metropolis” that his mother had brought home for him from the parlor car. He sat down and read the story again, for perhaps the twentieth time; and he recognized again that it had been the inspiration of his life. Then there came to him a desire to tell the author all that the story had been to him, how it had molded his whole life.

The boy went to New York as soon as he could spare time from his new duties at Albany and inquired for the author, only to find that he had died suddenly a fortnight after his story had been printed in the midsummer number of “The Metropolis.”

Then the boy, a boy no longer, sat down and wrote a long letter to the author's widow; and she thrilled with pleasure when she heard how her husband's last work had been as a lamp to a man's feet.

Brander Matthews.

THE WOOD-MAID.

WHY will ye bring me your bold, brown faces,
Crowned with the leaves of my plundered wood?
Why will ye lurk in the low, leafy places,
Peering and jeering, and wooing me rude?

You frighten the bee from the linden blossom,
The doe in the dell, and the shy wooddove,
The hare in its haunt, and the heart in my bosom,
With all your talking of love, love, love.

Here I live merry until you beset me;
What the birds sow is the harvest I reap.
Here I live merry till you come to fret me;
The heart in my bosom I keep safe asleep.

With the wit of your words to your will you would bind me,
As you bind the wings of the meek wooddove;
In a snare, like a hare, you would wound me and wind me,
And bind me to the service of love, love, love.

Is love as sweet as the bloom the bee knoweth?
Is love as deep as the deep streams run?
Is love as pure as the wind when it bloweth?
Is love as true as the shining o' the sun?

I 'll loose my locks to the free wind's blowing,
I 'll give my cheek to the sun and the rain,
I 'll give my image to the clear stream's showing,
But I 'll give not my lips to the lips of a swain.

Go hunt the bee with the sweet spoil laden!
Go hunt the hare, and the doe, and the dove!
Come not a-hunting a poor, merry maiden,
With all your mocking of love, love, love.

Come, Wind, kiss me! kiss and forsake not!
Smile to my smiling, thou constant Sun!
Heart in my bosom, wake not, wake not,
Till streams in the forest forget to run!

Helen Thayer Hutcheson.

WHO WAS EL DORADO?

WITH ILLUSTRATIONS FROM THE RUIZ-RANDALL COLLECTION.

"Yet unspoil'd
Guiana, whose great city
Geryon's sons
Call El Dorado."
Paradise Lost. Book XI.

THERE is nothing obscure in the etymology of this Spanish phrase, which means literally "The Gilded"; yet to such an extent has it been abused that few know that it originally related to a man and not to a country. In the latter sense it has been applied to almost every gold-bearing

were collected by Mr. Gonzalo Ramos Ruiz, an enthusiastic archæologist of Bogotá, who has devoted many years to the study, and a small fortune to the acquisition, of the antiquities of Colombia. His valuable collection, comprising 2,000 pieces of pottery, 300 images of gold or copper and 80 of wood or stone, was recently purchased by Mr. W. W. Randall, late United States Consul at Sabanilla.

The rich regions of the Aztecs were discovered in 1519, and the conqueror of Montezuma was already returning to Spain when Pizarro set sail for Peru. In 1532 the empire of the Incas was entirely overthrown; while in 1536 there still existed, unknown to the world, upon the high tablelands of the eastern cordillera of the Andes an agricultural people composed of more than a million souls, possessing populous cities, fortified places, and paved roads; an established priesthood with temples, altars, and sacrifices; an organized, hereditary government and a standing army; an approximate computation of time; and various industries, and no little intelligence in husbandry. Over this growing civilization of the Chibchas the conquest swept like a hurricane, devastating villages, archives, manufactures, and cultivated fields — dispersing the

ing district encountered in America since the discovery; and there is scarcely a mining camp in our Far West but has named its richest lode or most popular resort, whether grog-shop, billiard-saloon, or theater, Eldorado. As early as the sixteenth century it served to designate an imaginary region abounding in gold and precious stones in the interior of South America; but prior to this acceptance it had become a synonym for the most remarkable legend of the New World, the supposed eastern proximity of which invested its unexplored territory with the glamour of Oriental romance. The term was, indeed, an appellation of royalty, and El Dorado, perhaps, a veritable king, whose daily attire is said to have been a simple coating of aromatic resins followed by a sprinkling of gold-dust blown through a bamboo cane. But before we examine further the origin of this splendid fable, let us make a brief research into the times of the gilded monarch, which will be found illustrated by engravings of various products of the skill and industry of his people. These unique objects

tions, their descendants were condemned to complete oblivion of their origin, while the antiquarian was left in the doubt and confusion of fabulous ages with respect to events which immediately preceded this epoch. The hurriedly written narratives of the conquerors speak of the grandeur of the "Valley of Castles"—Bogota, so called because of the high edifices of its cities; of the extensive salt mines of Zipaquirá; of the potteries of Tinjacá, and especially of the great riches, the golden decorations, and the upright mummies covered with fine mantles, that were inclosed in the temple of Suamoz, the principal sanctuary of the Chibchas. Nor were these descriptions exaggerated. In our day there have been found in ancient sepulchers the most delicate cotton fabrics, well-preserved mummies, elaborately carved wooden articles of furniture, exquisite vases of baked earth, often imitating the human form and the figures of animals, and an infinite variety of golden ornaments and images. Beyond doubt the Chibchas had attained the third place in the civilization of aboriginal America; yet volumes have been written upon the Aztecs and Incas, while the name of this enlightened contemporary is almost unknown. They are said to have been denominated Chibchas because of the frequent recurrence of the syllables "chi" and "cha" in their tongue, but Humboldt calls them Muisca or Moscas. According to the distinguished historian Acosta (whose excellent work has been freely consulted and often translated in the preparation of this paper), the term *muiscas* merely signified "people" in their language, and *mosca* (Castilian for "fly") was probably a corruption of the former, or may have been applied to these In-

bones and annihilating the traditions of the miserable Indians. In the course of a few years they were deprived of their independence, their chiefs, their liberty, and even of their language, at the hands of the most cruel, blind, and persistent persecution; their very name was stricken from the catalogue of existing nations.

dians because of the great number that appeared before, and endeavored to stay the progress of, the handful of Spaniards led by Quesada. As successful as Cortes or Pizarro, unlike them, this famous captain was never rewarded with the coveted marquisate of Spain, and has lacked the master hand of Prescott to portray the thrilling incidents of his no less remarkable conquest.

Upon the arrival of Quesada, the principal ruler of the Chibchas was the *zipa*, whose capital was near the present city of Bogota; but each province or tribe had its *zaque*, which title was corrupted by the Spaniards into the *cacique* of the Antilles, perhaps from a fancied similarity of both to *sheik*, and their belief in the Eastern rather than the Western origin of these tribes indicated by the ancient Mexican and Peruvian traditions. The government of these chiefs was despotic and the sovereignty hereditary, but the succession was established in a sister's sons to the prejudice of their own, which, Irving observes of a similar practice in Hispaniola, was "a simple but sagacious mode of maintaining, in some degree, the verity of descent." The *zipa*, although rivalling King Solomon in the number of his *thigayes*, had only one legitimate wife, to whom the law gave the dying privilege of exacting from her royal husband an oath of chastity for five years—a power of posthumous revenge which is said to have secured her affectionate regard during life. Upon his death his eyes, nose, ears, and mouth were filled with emeralds, his richest ornaments were hung about his neck, and the body was placed in the trunk of a palm tree lined with sheet gold; but after six days of mourning he was secretly buried by the oldest priests, with provisions, arms, clothing, and such of his women and slaves

GOLDEN IMAGE.

as, having first been asphyxiated, desired to accompany him. A like regard for the fancied material comfort of the departed obtains to-day among the North American tribes; and Ovid writes of his time, that "Wreaths, a few grains of salt and corn scattered in the earth, a bit of bread moistened in wine, and violets planted above the tomb, were sufficient to appease the shadows." And all are familiar with the immolation of the Indian

GOLDEN IMAGE.

widow upon the funeral-pile of her husband. The modern Hindu is content to offer a bit of thread to the dead, saying, "May this mantle, woven of wool, prove an acceptable offering in thine eyes."

The successor to the zipa was closely confined in his youth and carefully educated, and before

being permitted to exercise certain preliminary functions vested in him was more severely tempted than good St. Anthony. The Chibchas considered licentiousness the worst enemy of justice, and the ability to control his passions the greatest virtue in a prince. They likewise declared that those who offered sacrifices to the gods should be free from all sensuality, and their priests were required not only to vow eternal celibacy but to submit rigorously to the laws of chastity. They were subjected to a harsh diet and frequent fasting in the *cuca*, or seminary, where they were instructed in their national traditions, the computation of time, and the meaning and purpose of their religious ceremonies.

According to the Chibchas the creator of the world was Chim-inigagua, who, though obscure and indescribable himself, caused enormous black birds to fly throughout the universe and to distribute light, which they carried in their beaks. Then there came out of Lake Igagué, near Tunja, a beautiful woman called Bachue, carrying a male child in her arms, from which pair all mankind are descended—the Chibchan Eve, it was said, giving birth to many children at a time in order to populate the world quickly. Their principal deity was Bochica, whom they considered the universal god, while Chibchacum was the especial protector of their nation. When the latter, becoming offended with his chosen people because of their excesses, produced a disastrous flood, Bochica appeared, heralded by a rainbow, and, striking the environing mountains with his golden rod, made an outlet for the angry waters by forming the celebrated cataract of Tequendama. He then compelled Chibchacum to bear the enormous mass of rock thus dislodged, and the earthquakes that are so common in these regions

were long said to be caused by the shifting from one shoulder to the other of poor Chibchacum's burden. This tradition, as related by Humboldt, attributed the flood to Chía, the beautiful but malignant wife of Bochica, who was punished by being converted into the moon; and as Xue, one of the names of the god, signified the sun, and Chía the moon, these two celestial spheres may be considered as embodying the good and evil principles of their theology.

Nencatacoa was the Chibchan Bacchus, and presided over their orgies. They made no offerings in his service other than *chicha*, an undistilled liquor of fermented corn and honey still a favorite beverage, which they drank; and as a birth or a death, a feast or a famine, a victory or a defeat, were indifferently signalized by a general debauch, it is inferred that, like his Roman and Greek prototype, he was

the most popular of gods. In their principal fêtes, buffoons were employed to divert the multitude; but the music furnished upon these occasions was of so mournful a nature that the entire assemblage often wept. To-day the native airs of the Indians retain this characteristic, and their *bambucos*, either played upon a Pandean pipe of reeds and other national instruments or sung, are of the most melancholy and weird description.

Their betrothal and marriage ceremonies were quite as rational as modern usage in this respect. The aboriginal Corydon sent Phyllis one or more mantles, and if the gift was received, he seated

himself in the doorway of her house until she brought him a gourd of *chicha*, which she first tasted and afterward gave him to drink as a sign of acceptance. They were married by a priest, and during the ceremony were required to stand face to face, with their hands upon each other's shoulders. The bride was asked if she would prefer Bochica to her husband, the latter to her children, and if she would love these better than herself; also if she would abstain from eating if her lord were hungry, and go to him without being called. These questions having been answered affirmatively, and the groom having

GOLDEN IMAGE.

GOLDEN IMAGE.

said that he would take the woman, they were pronounced man and wife. Both sexes wore mantles and painted, but the mantles were differently arranged. Upon special occasions the women are said to have confined their naked bodies in golden corsets, like their sisters of Cueva; while the bright plumage of tropical birds, which adorned their heads, vied in brilliancy with ear- and nose-rings of solid gold, bracelets and breastplates of the same metal, and necklaces of jaguar and puma teeth. The priests dressed always in black.

Their principal arms were slings, and swords or javelins made of an extremely hard wood, often tipped with stone. Cowardice in battle was punished by the forcible wearing of female

beard, and of a different race from the Chibchas, whom he taught agriculture and how to spin and weave and to build cities. It was said that he introduced the worship of the sun, yet the early Spanish-American ecclesiastics claimed that he was one of the twelve apostles, and declared that his footprints were to be seen in the solid rock in various parts of the country. Not the least singular feature of this remarkable tradition was its agreement with that of the Mexicans concerning Quetzalcoatl and of the Peruvians with respect to Manco-Capac, and that the appearance of all three civilizers was fixed at about the beginning of the Christian era. There even existed among the Chibchas a tradition of an immac-

GOLDEN MINIATURES.

attire, and robbery by stripes for the men and by cutting off the hair of the women. The latter, if suspected of adultery, were compelled to eat red pepper until they confessed or endured the torture for a stated period. The latter caused death, but this was accepted as a proof of innocence.

The Chibchas venerated peculiarly a mysterious civilizer known as Chinzapagua (Sent by God), who was said to have entered the country from the east and to have vanished in Suamoz, the present town of Sogamoso, from which point to the plains the inhabitants had constructed a broad paved road, the ruins of which were still visible at the close of the seventeenth century. At the time of his appearance he was an old man with a long white

ulate conception. A certain zaque who had two beautiful daughters and desired to make one of them the object of this miracle caused her to ascend daily a hill to the eastward of the palace, where she might greet the first rays of the morning light. At the end of the usual period she gave birth to an emerald, which, being wrapped in cotton and carried in her bosom during five days, developed into a handsome lad who was universally acknowledged the child of the Sun. After beginning a magnificent temple to his reputed father,—of which, it is said, there are ruins near Tunja,—this prince, having predicted the coming of a strange and cruel race that would conquer the country, mysteriously disappeared.

Paravey, who cites the finding of a junk

CARVED WOODEN CHAIR.

upon the west coast of South America, has compared the language of the Chibchas with the Sewa dialect of the Japanese tongue, and finds many philological analogies between them, with almost complete identity of their respective numeral characters. Like other American tribes, they counted with the fingers, and when these were numerically exhausted, had recourse to the toes; upon reaching twenty, they began anew, and continued thereafter to reckon by scores. A similar method obtains among the nations of eastern Asia. Three of our days made a Chibchan week, and ten of their weeks formed a month. The vulgar or civil year was composed of twenty months, and twenty years made a cycle, which was marked by the sacrifice of the *Guesa*. Perhaps nothing illustrates better the enlightenment of the Chibchas than their stone calendars, which, with certain ingenious intercalations necessary to make coincident the course of the heavenly bodies (sun and moon) that governed their seed-time and harvest, were greatly superior to the *quipus*, or knotted cords, of the Incas, if not to the paintings employed for a similar purpose by the Aztecs. The one represented on page 889 is a dark and extremely hard argillite of an irregular form approximat-

ing that of a parallelepiped, with a base of two and a half by four inches and a varying altitude of half an inch. It was found near Sopó, in the former territory of the Guatavitas, one of the principal tribes of the Chibchas, and contains eleven distinct figures in bas-relief, which were regarded as hieroglyphical signs of the lunar calendar.

The antiquities pertaining to the Chibchas are derived from three principal sources, viz. *guacas*, or ancient sepulchers, *adoratorios*, or artificial places of worship, and natural sanctuaries. The former are often so rich in golden images that their search has become a recognized and lucrative employment, and those who follow it are called *guaqueros*. The wanton destruction begun by the conquerors is continued to-day by their descendants, and the finest productions of aboriginal art, often of inestimable archæological value, are ruthlessly sent to the smelting pot. The temples of the Chibchas, with the exception of that of Suamoz, which was accidentally burned by the Spaniards or, as some historians assert, purposely destroyed by its officiating priests, were neither large nor sumptuous. They preferred to worship in the open air and upon the summits of high mountains, because, they said, so great

ORNAMENT FOR PIERCED EAR OR NOSE.

and benignant a god as the sun could not be confined within walls. In assigning the origin of the human race to water, they but followed the example of the Greeks, Hindus, and other primitive nations. Manco-Capac was said to have come out of Titicaca, and, according to the ancient Mexican traditions, the germs of moral, if not of material, existence proceeded from this great element, to which the principal offerings of the Chibchas were made. Their most famous natural sanctuary was Lake Guatavita, situated about eight leagues from Bogota and upon the very summit of the Andes. It is almost perfectly circular in form, less than a mile in diameter, and nearly ten thousand

ORNAMENT FOR NOSE.

MASSIVE ORNAMENT FOR PIERCED NOSE. ACTUAL SIZE OF ORIGINAL IS 4IN. WIDE.

feet above the sea. The sequestered location and picturesque surroundings of this lovely sheet of water are suggestive of the supernatural or romantic; and it was reputed to have hidden both within its limpid depths, and is supposed to have been the scene of the remarkable ceremony which originated the legend of El Dorado. The zaque of the Guatavitas had a young and beautiful wife, of whom he was greatly enamored and correspondingly jealous. Fleeing from his reproaches of infidelity, with their only child in her arms, she plunged into the placid bosom of the lake and sank beneath its surface. The royal husband, who was soon apprised of this dreadful event, hastened to the banks of the ancient sanctuary and commanded his retainers to recover his beloved wife and son. After many incantations, a priest boldly entered the water and disappeared, but presently returned with the marvelous tale of having encountered at the bottom of the lake a magnificent palace in which the late unhappy cacica was living contentedly as the wife of an immense serpent, the god of the waters. This accident and its wonderful sequel greatly enhanced the estimation in which Lake Guata-

vita was held, and exalted, if it did not originate, the peculiar rites of which it was the object. Father Simón relates this impious fable, and in the quaint style which characterizes the Castilian of the seventeenth century, and which defies translation, sums up the differently narrated stories of El Dorado as follows:

All the foundation there was, then, for these alterations was after this fashion. The city of San Francisco del Quito having been recently founded by Captain Sebastián de Belalcázar, said captain, proceeding with care, inquiring, without loss of opportunity, upon every side, about all the countries and provinces of which he might obtain information, heard from the Indians of whom he was seeking news that there was a stranger in the city who, being asked about his country, replied that it was Thizquitá and his cacique Bogota, which is, as we have said, this new kingdom of Granada that the Spaniards called Bogota; and upon being asked if there was any metal in his country like that shown him, and

ORNAMENT FOR NOSE NOT PIERCED.

which was gold, he answered that there was a great deal, with many emeralds, which he called "green stones." And he added that there was a lake in the land of his cacique, which the latter entered several times a year, upon well-made

GOLDEN GORGET.

GOLDEN BREASTPLATE.

rafts, as far as its center, he being naked and his entire body covered from head to foot with an adhesive turpentine upon which had been sprinkled much gold in fine powder, which, sticking to the turpentine, became a coating, or second skin, of gold, that, upon a clear day, shone resplendently in the rising sun, this being the hour selected for the ceremony; and entering as far as the middle of the lake, he made sacrifices and offerings, throwing into the water some pieces of gold, and emeralds, with certain words—so they said. And presently causing his whole body to be washed with saponaceous herbs, all the gold he brought on his back fell into the water; with this the ceremony concluded, and he came out of the water and resumed his mantle.

This news was so welcome to Belalcázar and his soldiers, who were firmly bent upon greater discoveries than they had made in Peru, that presently they determined to attempt this one of which the Indian had given them tidings. And consulting among themselves as to the name they should give said province in order to understand one another and distinguish it from the remainder of their conquests, they resolved to call it "La Provincia del Dorado," that is to say, the province where the man, or cacique, gilds his body

before offering sacrifices. And this is the root and branch of the story that has gone out into the world under so many different forms of the fame of El Dorado.

In the valley of Tayrona there was believed to be a golden mountain which received the name of El Dorado, and later the Spaniards sought for El Dorado de Daybaybe, an imaginary solid gold idol of huge proportions, in the present state of Antioquia. Expedition succeeded expedition, and an immense sum of money was expended and countless lives were lost in this vain search. Even the sober English imbibed something of the enthusiasm, and Sir Walter Raleigh made four unsuccessful attempts to penetrate the valley of the Orinoco, the supposed kingdom of his gilded majesty, whose dazzling toilet is described in his "Discovery of the Large, Rich, and Beautiful Empire of Guiana." It was in the center of this region that was said to exist the Manoa

GOLDEN BREASTPLATE.

del Dorado, a city constructed entirely of gold, the last asylum of the remnant of the persecuted Incas. From Bogota itself the brothers Quesada sallied forth in renewed search of El Dorado eighteen years after the conquest; and penetrating as far as the existing frontier of Brazil, they returned with the scarcely less celebrated fable of the Amazons—a tribe of beautiful and warlike women said to inhabit the valley of the great river named after them, who perpetuated their race through their enslaved captives, killing all their male children. This was also one of the delusions of Columbus inspired by Marco Polo.

But scientific research is the unrelenting enemy and ruthless destroyer of these fabulous stories, and Dr. Crevaux, the distinguished young French explorer who was recently assassinated by Indians as he was about to embark in the Pilcomayo, has well-nigh effected the disenchantment of El Dorado by advancing the hypothesis that the wonderful

GOLDEN BREASTPLATE.

city so-called was simply a group of inhabited bluffs and caves with walls of mica which sparkled in the sunlight, and that the gilded monarch himself was merely incrustated with the glittering scales of this insignificant mineral, so abundant here that it goes by the name, more expressive than cleanly, of *caca-sol* (sun excrement).

The ancient chronicles of Santa Fe de Bogotá record that during the reign of Philip II., king of Spain, a contract was made with the crown to drain Lake Guatavita, in which operation, although only partly successful, a valuable emerald and about twelve thousand dollars in golden images were secured; and various like attempts, with similar but inferior results, have been made in recent times. Among the objects recovered there is one of more than ordinary interest which is composed of ten images rudely imitating the human form, and firmly attached to a solid, circular disk, which, at first sight, appears to be an Archimedes spiral strengthened by wires, at right angles, projecting beyond the outer circumference. The shape and apparent construction of this base resemble those of the peculiar rush rafts fashioned by the Indians after the manner of a spider's web, upon which gossamer fabric, according to their belief, the

dead were ferried across a dark and turbulent river, somewhat as Mussulmans were said to skate over Al Sirat, the bridge of spider's thread — whence this insect was superstitiously venerated by the Chibchas. The central and principal figure of this group is three inches

A GOLDEN FACSIMILE.

high, bears a scepter, and is surmounted by the casque which was distinctive of a cacique; while its companions, wearing the rectangular miter of the priests, are symmetrically disposed as if to balance and propel the raft. This interesting relic is an alloy of gold and copper more than nineteen carats fine, weighing about a pound, and probably represents El Dorado in the act of his oblation. A careful examination of this and similar work by the Chibchas would seem to warrant the belief, not only that they practised wire-drawing but that they had acquired the most difficult part of the goldsmith's art — soldering. The trunks of their images representing the human form are usually of thin plate, with the features, limbs, and adornments of fine wire, sometimes plaited or twisted and often

forming minute spirals not dissimilar to modern filigree; but occasionally the figure is homogeneous, either solid or hollow, with flat or rounded surfaces. Doctor Zerda, an eminent native antiquarian whose researches have contributed not a little to these pages, supposes that even the finest threads were cast, like the heavier parts, to which they were affixed, perhaps, in a state of semi-fusion. A model was probably made of wax, from which a mold was presently formed with a highly plastic clay, the wax being expelled by heat. Subsequent to casting, the metal may have been hammered between stones or copper tools, and many pieces clearly evince this process, in which they had evidently obtained great dexterity. The ornamentation, when not foreign to the object proper, was effected by cutting or embossing, and occasionally facsimiles apparently made by hammering the metal into stone molds are found. The manufacture without steel instruments of a spiral forming a perfect golden spring several yards in length is altogether problematical. Iron was entirely unknown to the Chibchas, whose incipient civilization, like

CHINZAPAGUA (GOLD).

A STONE CALENDAR.

1. *Ata*, a small frog in the act of leaping. This animal was the base of the system, and in this attitude denoted the abundance of water. 2. *Basa*, a rectangular figure with various divisions imitating cultivated fields. It referred to the preparation of the ground for sowing. 3. *Mica*, a bicephalous figure with the eyes distended, as if to examine minutely. It signified the selection and planting of seed. 4. *Muthica*, similar to the preceding, but with the eyes almost closed. It represented the dark and tempestuous epoch in which, favored by the rain, the seed began to sprout. 5. *Hisca*, resembling numbers 3 and 4 of the stone, but larger, with no division between the heads. It was the symbol of the conjunction of the sun and moon, which the Chibchas considered the nuptials or actual union of these celestial spouses—one of the cardinal dogmas of

their creed. 6. *Ta*, almost identical with No. 2. It represented the harvest month. 7. *Cuhupcua*, an earless human head upon one of the lateral faces of the stone. It was the symbol of the useless or so-called deaf mouth of the Chibchan year. 8. *Suhuza*, perhaps a tadpole, and probably referred to the generation of these animals. 9. *Aca*, a figure of a frog larger than No. 1, but in a similar posture. It announced the approach of the rainy season. 10. *Ulchitica*, two united rhomboids—a fruit or seed, and perhaps an ear. It referred to their invitations and feasts. 20. *Gueza*, a human figure in a humble attitude, the hands folded and a halo about the head. It is supposed to represent the unfortunate youth selected as the victim of the sacrifice made every twenty Chibchan years to the God of the Harvest.

that of the Aztecs and Incas, pertained to the neolithic epoch of the age of stone or to the beginning of the European age of bronze, with which alloy they were likewise unacquainted, because of the absence of tin. They understood, however, the process of alloying, for, according to Boussingault, the native gold of these regions contains no copper.

These images of the Chibchas differ from those found in Mexico and Peru, and are said to resemble Egyptian antiquities of a similar character. Many of them are of a nature that will not permit illustration, and generally the sex is indicated. The illustration which is supposed to represent Chinzapagua is an example of their often complicated and difficult workmanship. Both upper lip and chin appear to be bearded, and so tradition affirmed of their mysterious civilizer. The low barrier surrounding him would seem to bespeak his lofty and unapproachable character, and the triple scepter in his right hand the tripartite nature of his administration. It has also been suggested that this image represents Bochica, and that its treble emblem of authority refers to his three names or to another fact. The Chibchas associated with him two brothers or

companions, which led Father Duquesne to compare him to the Hindu Trimurti, the mythological trinity of the Vedas. In the left hand of this figure there is a diminutive rectangular pan, a utensil that is supposed to have been used in the sacrifice of parrots, one of which birds, when viewed in profile, is plainly recognized in the heart-shaped object upon its left shoulder. Upon the back there is represented a primitive embarkation, which, with its trident, may also warrant our calling this image a Chibchan Neptune.

The notable artistic difference existing between these golden objects, even when apparently from the same source, is not sufficiently explained by a greater or less degree of skill in the individual makers nor by diversity in their dates of manufacture, although some pieces are almost wholly archaic. The Chibchas were certainly inferior in this respect to several of their neighbors, since, unlike these tribes, they possessed no alluvial deposits of gold and could obtain the precious metal only in exchange for their staple products, mantles and salt. The Guatavitas, however, were famous goldsmiths, and this fact was the means of depriving them of their ancient in-

dependence. So highly was their work esteemed in the adjacent villages that the zaque forbade them to quit his dominions unless doubly replaced from among the subjects of the cacique whom they desired to serve; availing himself of which order, the astute zipa succeeded in establishing within the city a large number of confidential retainers by whose assistance it was captured and its haughty ruler, El Dorado, reduced to a state of vassalage. Acosta asserts that the Chibchas

indeed, was the case. Allusion has already been made to the terra-cotta objects exhumed from their ancient sepulchers, and which, for quality of materials, elegant and symmetrical shape, and complicated adornment, are veritable works of art, affording ground for the belief that the Chibchas used the potter's wheel. They are ornamented with curious and capricious designs—spirals, arabesques, and even the rectangular Grecian pattern; but time and exposure have destroyed the continuity of this

EL DORADO.

were the only aborigines who had a regular circulating medium or metallic money; but Squier describes Chimu coins both of gold and silver.

The ceramic art is one of the first domestic industries which signalizes the transition of a primitive people from a nomadic to a sedentary life, and much time must elapse before it begins to employ the metals for similar purposes. Having seen that the Chibchas knew not only how to fuse and alloy gold and copper but to cast and forge them into various intricate if not beautiful forms, we might confidently expect to find them well advanced in the manufacture of earthenware. And such,

delineation. The correct and chaste outlines of the water-bottles found near Fontibón are remarkable. Perhaps the masterpiece of this collection is the so-called "God of Silence," two and a half feet high, from the ancient territory of the Guatavitas. A plate suspended from the nose covers the mouth, and the image was most probably placed in the gate of the temple to impose silence, or may have served this purpose in the initiation into some mysterious rite or order of their religion—an interpretation which Codazzi has given to similar statues of stone found near San Agustín. Much of their pottery was ideographic, and a curious exposition has been made of a pair of

identical bowls, united by a tube, so that any liquid poured into or abstracted from the one will reciprocally affect the contents of the other. On each vessel there is a toad, the Chibchan emblem of happiness, and surmounting both, a monkey, their symbol of generation. The whole has been said to represent matrimony. Thus the Chibchas learned, from natural laws, that prosperity and misfortune should be shared alike in wedlock.

They were not happy in their portrayal of the human form. A notable artistic exception is observable, however, in the image found near Barragán, the ancient territory of the Pijáos. It represents a muscular woman with folded arms, wearing a nose-ring, necklace, and bracelets, and seated upon a rude pedestal with four legs and a bear's head. A certain air of complaisance would seem to proclaim her a cacica. The Indians who dwell

FIGURE FOUND NEAR BARRAGÁN.

THE GOD OF SILENCE.

to-day upon this bleak and inhospitable cordillera wear hoods like that indicated upon this figure.

The hollow idols of baked earth which the priests deposited by the roadside as receptacles for the golden offerings of pilgrims were called by the Spaniards *gazofilacios*, which were made in the form of pachyderms with almost human faces. The bodies are two feet long, with a circular opening in the back of each, covered by the second head, through which the offerings were introduced.

The Chibchas made musical instruments of baked earth, from which a hollow yet not unpleasing sound is emitted. Their gamut would seem to have been limited in extent, since, from a number of specimens, but three distinct tones have been produced.

Doctor Crevaux relates that in his navigation of the Orinoco he encountered a village of Guahibos upon their *general painting day*. He adds that this operation was effected by applying to the naked person wooden stamps dipped in rocou, thus executing the process of wood-engraving upon the human skin. A similar practice obtained among the Chibchas; but their stamps were made of baked earth, and were also employed to decorate other pottery with their corresponding bas-reliefs, by application, accompanied by pressure, to the unburnt clay.

Ours has not improperly been called the day of "high artistic craze," in which sober intellects become disordered over an Etruscan

vase, an Egyptian water-bottle, a bit of Spanish faience, of Palissy or of Henri Deux crockery; and the most prominent characteristic of this pretended art epidemic is the renewal of old forms and styles of decoration to such a degree as almost to constitute, in this, the nineteenth century, a second though spurious Renaissance. Our republican simplicity has become sorely affected by the disease, and in order to find favor among us objects of art or luxury must hail from beyond the seas. If from Mycenæ or Idalium, though it be never so unsightly, it will acquire additional value; and the discoverer of Troy and the excavator of Cyprus are assigned a place among the heroes of Arctic research

and the explorers of the "Dark Continent." Now the writer would not detract from their just fame, nor from the importance of their great work—the popular concern therein is only unreasonable in so much as it withdraws attention from our own shores. For if, as Squier writes of the antiquities of Peru, "even the physical features of the ancient inhabitants—their architecture, arts, customs, and religious notions find illustration and record in these fragile yet almost imperishable remains," they can no longer be considered mere curios of a remote past, but become the only means of supplying what history and tradition have failed to transmit, and as such are pregnant with meaning and interest.¹

Henry Rowan Lemly.

¹ Of interest in connection with this paper is the following letter, written by William H. Prescott to the historian Acosta, which has been sent to us by Lieutenant Lemly. The original is pasted in the back of one of the volumes of Prescott's "Conquest of Peru" presented by Acosta to the National Library in Bogota.—EDITOR.

BOSTON, August 28, 1847.

MY DEAR SIR: I received by the last steamer your letter in which you give me an account of your historical labors in respect to the ancient race of the Muiskas, and to the occupation of the country by the Spaniards. At the same time you place at my disposal your rich collection of original materials for the illustration of this subject.

I am deeply sensible of the compliment conveyed by this offer, and of the generous spirit which prompted it, for I well know how hard it is for the scholar to part with materials which he has assembled with so much care, cost, and difficulty. But I have now a great historic work before me which must engage my exclusive attention (if I have the health to pursue it) for many years to come. This is the reign of Philip the Second of Spain, for which I have been several years collecting a large mass of origi-

nal documents from the public archives and private libraries in the different capitals of Europe, and especially of the peninsula. But now that I consider this collection as complete my eyes are so much enfeebled by my literary labors that I have scarcely any use of them. Whether this will deter me from accomplishing my object I cannot now say, though my progress, at all events, must necessarily be very slow.

For these reasons it will not be in my power, as you perceive, to avail myself of your disinterested offer; and I can only wish you the success you deserve in the prosecution of your enlightened labors to exhibit the history of a race which seems to have been inferior to none other on the American continent in civilization and historical interest.

[Up to this point the letter was evidently written by a female amanuensis. Here follows the handwriting of Prescott, small and somewhat illegible, but perhaps characteristic, indicating rapidity and firmness.]

I pray you, my dear sir, to accept the assurances of the esteem and gratitude with which I remain

Your obt. sert.,

WM. H. PRESCOTT.

SEÑOR DN. S. ACOSTA, etc.

A STAMP OF BAKED EARTH.

THE ROBBER.

AY, he hath stolen her sweets and gone;
The robber bee, upon his quest
For honeyed booty, from the breast
Of yon fair lily now hath flown.
In vain the south wind wooes;
In vain the ringdove cooes;
Like unto some pale maid
The lily stands betrayed,
Her nectared bosom pillaged and undone.

Ah, sad so white a breast should lie,
With all its stores of virgin sweet,
Thus to be prey for plundering feet,
And spoil for any wanton eye!
Yet many a bosom chaste
Hath been by love laid waste—
Light love that came and went,
And left a life forspent
Beneath a far, serene, and mocking sky.

James B. Kenyon.

T. COLE UFFIZI FIRENZE

ENGRAVED BY T. COLE, FROM THE ORIGINAL PAINTING IN THE UFFIZI GALLERY, FLORENCE.

PORTRAIT OF VERROCCHIO, BY LORENZO DI CREDI.

ITALIAN OLD MASTERS.

LORENZO DI CREDI. 1459-1537.

HE life of Lorenzo di Credi is one of the least interesting as biography, and perhaps the most satisfactory as existence, of those older masters of whom we have the record. He was the son of a goldsmith. As we have seen, the art of the goldsmith was often the first school of the painter, and Lorenzo is said to have excelled in the paternal occupation, studying drawing, meanwhile, in the Brancacci chapel, where the frescos of Masaccio brought together all the rising Florentine painters of the time. On his father's death he passed into the workshop of Verrocchio, and in a tax-paper given in by his mother in 1480-81 he is described as "employed in painting" at a salary of twelve florins a year. He was, therefore, then of age, and his yearly salary would have been in our money, supposing it to be of gold florins, less than the wages for one month of a journeyman bronze-worker of to-day. He was simply a good workman, following the conventions of the school and the manner and methods of his masters, for he followed, at times, more than one. In the studio of Verrocchio he caught what of inspiration his mechanical nature allowed him to absorb from the greater men with whom he was in constant and friendly contact, Leonardo and Perugino, his fellow pupils, and Ghirlandaio, and the Pollaiuoli, and probably many others of the time. He seems to have remained with Verrocchio until the death of the latter in 1488, and so great was the confidence of his master in his technical abilities that he made him his executor, and, as was shown in the sketch of Verrocchio, designated him as the artist who should complete his *Colleoni*, the casting of which cost its author his life. He was also made the heir of all Verrocchio's art remains at Venice and Florence.

Lorenzo's work is always of a religious character, and if he had been drawn away by the fashion for the classical and licentious subjects which the loose morals and manners of the time made attractive, he burned the pictures in the *auto da fe* of Savonarola, as he had enrolled himself with the *piagnoni*. He painted mainly in oil and on wood, which latter detail makes it evident that his manner was only an advance on the usual one of the chief painters before him, but with more importance, rela-

tively, given to the after-painting and still working on the gesso ground. He executed many altar-pieces, and Cavalcaselle puts only one fresco in the list of his known work, and this on a pilaster in Or San Michele. On the death of Verrocchio he succeeded to much of his authority in the craft, and was called in council for the deliberations on the completion of the Duomo of Florence, on the placing of the "David" of Michelangelo, on the pricing of the mosaics of Monte and Gherardo, and had Perugino as one of his colleagues in these deliberations; and he was called in as one of the arbiters in the dispute between the convent of San Marco and Bernardo del Bianco for the price of the picture painted to the order of the latter, the "Vision of San Bernardo," as was mentioned in the life of Fra Bartolommeo. In 1514 he was chosen to appraise the work of Ghirlandaio in the Palazzo Vecchio at Florence, and in 1517 a statue of Bandinelli. These instances of the confidence felt in him by such different characters, ranging from the brutal Bandinelli to the Prior of San Marco, show the moral solidity of the man. He does not appear to have ever been drawn away from Florence, as were most of the clever painters of the day, but this is probably mainly due to the limitations which he seems to have put on his talent, confining himself to easel work, which could always be done in his *bottega*, and sent where wanted. In the Archivio Storico dell' Arte there is a letter which accompanied the *envoi* of a picture of Lorenzo's to the Duchess of Mantua, then the most distinguished of collectors of works of art. He was in the city of Florence during the siege of 1527, and retired to Sta. Maria Nuova on a pension in 1531, and died there in 1537.

He is an excellent example of the results of good training on mere talent in the production of works of permanent value, and of such character as often to be mistaken for those of his greater masters. At one time his pictures were confounded with those of Leonardo, and at others he seemed to be inspired by Perugino. Vasari says that it was impossible to distinguish Lorenzo's copies of the drawings of Leonardo from the originals, and the influence of Leonardo was the strongest of all that bore on him. His method of execution was that of Da Vinci, and is carried to the extreme of elaboration, so as to be metallic in its finish at times. As he grew older the manner hardened into

ENGRAVED BY T. COLE, FROM THE ORIGINAL PAINTING IN THE ACCADEMIA DI BELLE ARTI, FLORENCE.

ST. MICHAEL, BY PERUGINO.

DETAIL FROM "THE ASCENSION OF THE VIRGIN."

a certain stiffness, as is always the case with the mechanical painters in whom method serves when inspiration or enthusiasm is gone. Cavalcaselle, whose judgment of the art of this epoch is always discriminating and appreciative, even if one must differ from him occasionally in his estimation of the relative position of painters, considers the finest of the altar-pieces

of Lorenzo to be that of the chapel of the Holy Sacrament in the cathedral of Pistoia. There are pictures by him in the galleries of the Uffizi, Pitti, and Accademia at Florence, and in the National Gallery, the Louvre, the galleries of Berlin, Munich, etc.; so that he is more generally represented by good examples of his work than most of his contemporaries.

PERUGINO. 1446-1523.

(PIETRO VANNUCCI.)

VASARI opens his life of Perugino with one of the exaggerations of which he was so fond, exaggerations which are so effective in biography, making genius come from the depths of poverty and social insignificance, in order to exalt its achievements. He makes him a native of Perugia, "the son of a poor individual of Castello della Pieve, named Christofano, who [the future painter] at baptism was called Pietro, and, reared in misery and want, was given by the father to a painter of Perugia as a shop-boy," and again, "who, going from extreme misfortune in Perugia to Florence, desiring by means of his abilities to arrive at distinction, continued for many months to sleep in a box, not having any other bed, turned night into day, and with the greatest fervor devoted himself continually to his profession, and, having so formed the habit, knew no other pleasure than to weary himself in that art and paint incessantly." The facts are, however, that his father was a respectable citizen of Perugia, the little town of Castello della Pieve being an appendage of that city, and the Vannucci family having been inscribed on the roll of citizenship as early as 1427; and though his native town had a painter of its own whose name is preserved by a picture still in existence as Francesco, of whom nothing more is known, Pietro was sent to Perugia to learn painting, which goes to disprove the fable of his having been given away from poverty to a painter of Perugia for want of a nearer opportunity. The usual course seems to have been taken with the boy, and he was apprenticed to a painter whose name is not preserved, but of whom Vasari says that, though not very clever in the craft, he held in great veneration both the art and those who excelled in it. "Nor did he ever talk of other things with Pietro than how much profit and honor were brought by painting to those who did well in it, and, recounting the prizes won by ancients and moderns, stimulated Pietro in the study of it." The general opinion is that the first master of Perugino was Benedetto Buonfigli, who though not a great was an able painter.

That Perugino could have passed the period of his life in which the habit of work is definitely formed under the instruction of a man of no mastery of the art is impossible. The history of art teaches us that it is better for the pupil to have a master who has a firm and sound style and method of working without great personal qualities, which are less influential in forming the art of the pupil than a correct technic. The method of Perugino is too sound, and his training evidently too scholarly, to have been left to the teaching of a painter who had no distinct excellence as a master, and Buonfigli is the only man who answers to the requisition of the forerunner of Perugino. Piero della Francesca was later his associate, and may have been of great advantage to him in teaching him the best manner of using oil color, in which he was almost the earliest complete master in the Tuscan schools. That he was under the instruction of Verrocchio does not seem doubtful, and the fact that nothing of the style of that great master should appear in Perugino to proclaim the relationship is not in the least strange, for the temper of the master was of that severely scientific character which deals in principles rather than in details of manner. It had not that fascination of individual quality which so bewilders and misleads the pupil, and in the cases of Giotto, Mantegna, Botticelli, Da Vinci, Raphael, Michelangelo, and Titian, made imitators rather than scholars of their pupils; and the fact that Da Vinci and Lorenzo di Credi, so different from the master and from one another, were both pupils of Verrocchio makes it certain that Perugino, too, might have been his pupil without being his mimic, and destroys the argument drawn from the want of similarity in style. Besides, the testimony of Vasari, in the lives both of Verrocchio and of Perugino, is too positive to be put aside among the vague assertions which we have too often the right to complain of in his biographies. He seems first to have worked awhile with Luca Signorelli under, or rather in company with, Piero della Francesca at Arezzo [M. Jordan; v. "Doehme's Lives"]; and Vasari mentions two frescos (now perished)

at that place, which he attributes to Perugino when he was working with Piero. In the studio of Verrocchio he had the influence of the two most remarkable minds of the epoch in so far as the intellect of that time is shown in its art, that of his master and of his fellow pupil Da Vinci. The scientific temper of the master, and his severity in drawing and painting, with his great insight into the facts of nature, a gift not so universal then as we generally suppose, would be seconded by the equally scientific temper of the fellow pupil and the still more direct way of seeing nature of which Da Vinci was the first example. The curiously precise and naturalistic drawing of Verrocchio and his firm and simple execution united, with the studies of Da Vinci into the methods of painting and the uses of mediums, to develop in Perugino the study of landscape and the facile and masterly use of oil color, both of which he carried to an excellence not hitherto known. Cavalcaselle says justly:

For chemical researches he could not find a better place than Verrocchio's shop. He would be the companion of Leonardo, to whom the science of art owes its chief progress, and to whom the perfection of the innovating system of mediums at Florence is due. Both might labor simultaneously to fathom the secrets of colors and mediums, the one with the precision of a trained mathematician, the other with the feeling of a colorist. Both would necessarily go deep into the *technica*, seeking and searching like the Van Eycks and applying the results according to the powers with which nature had endowed them. It would thus happen that Leonardo would add to the imperfect method of Piero della Francesca the atmosphere in which it was wanting, and ascend to the culminating point of his career in the production of the *Mona Lisa*, whilst Perugino would arrive at a height almost equally surprising in the *Madonna of the Certosa*.

¹ Perugino prepared flesh with a warm, brown tone, which he worked into rotundity by successive strata, leaving the high lights for the close. [I am quoting the English version of Cavalcaselle, which owes its bungling and inexpressive manner of speech to the barbarous translation of his colleague Mr. Crowe, of which it would be hard to find the equal for inaccurate use of technical terms of painting.] These strata were such that each should be lighter in color, yet fuller in body than the last, and therefore the final and most substantial one was the high light which occupied the least space in the picture. Care was taken in laying the second not to lose all trace of the first but to let its value appear through the superposed color. This in a few words was the technique of the Van Eycks. It created flesh tints, merging from thin to full body in proportion as the parts fell out of shadow, receiving light from without, and transparency from within. The consequence was a somewhat unbroken surface with insufficient half tone; but this disadvantage was corrected, *ex. gr.* in the *Madonna of the Vatican*, by strengthening the darkest spots with a final scumble which remained higher on the panel than the rest; and the result was a clear and lucid enamel betraying

This combination of educational influences made of Perugino such a master of the technical qualities of painting that the training which he in turn gave his pupils was probably the best that at any time the Renaissance imparted, and the distinction of being the master of Raphael is in the general estimation, even of to-day, greater than any which is accorded his own work. There are no exact parallels to be found in the history of art; but a near approach to one will be seen in the relations between Bellini and Titian in the Venetian school, and Perugino and Raphael in the Umbrian. Perugino, having begun his training with those admirable training processes of fresco and tempera, which are to painting what pen-drawing is to design, took up oil painting with a certainty of hand and a habit of precision which the later oil painters lost, and with those qualities the later painters lost also the solidity of color which is one of the merits of Perugino and the earlier pictures of Raphael. When we speak of the color of the Umbrian or of the Florentine school (if indeed to the general student of art the two and all their branches, including the Sieneese, should not be regarded as one when taken in distinction to the Venetian), we consider this quality from a different point of view from that in which we look at Titian and Giorgione. The position which we accord to Perugino as colorist does not bring him into the region of the true colorists, but assigns to him a vividness of color and a naturalness which we do not find in the earlier men or in the majority of his school. His method of painting in oil as described by Cavalcaselle is the opposite of that which has been followed by the great Venetians¹ and recognized as the true one by subsequent students of the Italian methods. We do not judge the Venetian and the Tuscan schools by the same standard. The distinction between the

less of the secrets of manipulation than the painting of the earlier innovators. To complete a picture by these means was a matter of calculation and certainty of hand, an undertaking in which a false step involved absolute failure. But the method was perfectly familiar to Perugino, and was invariably used during his transition from this period to the more advanced one in which he carried out the altar-piece of the National Gallery. In draperies, the processes varied. All cold mixtures were put in first with warm substrata, covered over like the flesh tints, and glazed. Vice versa, warm or glowing colors were rubbed on with cold undertones; and this method was followed with unwavering consistency even in changing hues. Reds and lake-reds alone were sometimes laid on above cool preparations in half body with high surface lights and shadows, and glazed; sometimes the lights were furnished by the undertone. In general all colors except lake-reds were opaque and of solid impasto, receiving light from without, with shadows superposed and occasional hatching in the projections. The brightest shades were invariably chosen for the foreground, changing hues for the middle distance.

various schools of design, Sienese, Umbrian, Florentine, Lombard, etc., are as nothing when put by the side of the wide distance of motive which separates the Venetian school, that of Bellini, from that of Perugino, in their later development especially.

Perugino seems to have led a wandering life, looking for work wherever it was to be found, painting in Siena, Florence, Cerqueto, Arezzo, and wherever he might be called. In 1484 he went to Rome, at the call of the Pope, to assist in the decoration of the Sistine Chapel. He has been credited with the three frescos of the "Delivery of the Keys," "Moses and Zipporah," and the "Baptism of Christ," but it is not certain that the last two are either of them his, and the Moses has been equally credited to Signorelli and to Botticelli.¹ He also painted the altar end of the chapel with three subjects, a kneeling portrait of Sixtus, a "Nativity," and a "Finding of Moses"; but these were destroyed to make a space for the "Last Judgment" of Michelangelo. The "Delivery of the Keys" is a work which perhaps may be considered the gage of Perugino's force as a wall-painter, and is accepted as one of his best works. It preserves all the formality of composition which distinguishes the purely religious schools down to Raphael, and is one of the most striking examples of it. The apostles form a procession across the picture, Christ at the left of the center giving the keys to Peter, who kneels to receive them at the right; behind Christ are six apostles in a line, five ranging behind Peter on the other hand, with a few persons to fill out the space; all carefully studied and gracefully posed, but, to my mind, with much less art, using the word in its finer sense, than in the companion subjects by his rivals. Less majestic in the arrangement of his composition than Ghirlandaio and Signorelli, and less imaginative in the conception of the theme than Botticelli, there is still a grace in his artificiality which prophesies Raphael and recalls faintly Masaccio. He seems to have been fond of perspective, and the background of the "Delivery of the Keys" is formed by an octagonal temple of the type of the Baptistery at Florence, flanked on each side by a triumphal arch apparently suggested by that of Septimius Severus at Rome. The perspective is not by any means clear, but shows knowledge of the rules, if little inventiveness. The naturalness of which we give him credit must not be mistaken for dramatic quality, of which he had none, but is referable to the delineation of the individual figures, which are well posed, carefully studied, and always graceful even to the folds of their drapery. The "Delivery of the Keys" is the type of the spectacular

composition, and there is in it no hint of a community of action. The "Pietà" of the Pitti Gallery is, again, the type of the Peruginesque composition for altar-pieces, of which it is considered his most successful work. Without avoiding the *pose plastique*, from which few of the painters of this epoch are free, he has grouped the characters with entire subordination to the central idea. The dead body of Christ is supported in a half-sitting position on a heap of stones arranged as a seat, with the legs extended, Joseph of Arimathea holding the torso in a nearly erect attitude, while the Magdalen holds the head up, and the Virgin, looking earnestly into Christ's face, supports the left arm, the right hanging free so as to express the supineness of death before the *rigor mortis* has set in, and to show the hole in the hand. A young man holds the corners of the white cloth on which the body rests. He is placed at the feet, looking into the face of the Saviour, while a second line is formed by the subordinate characters of Mary Cleopas and Mary Salomé, with another woman; behind Joseph is an apostle in an attitude of grief, and at the extreme right is a group of three men, two of whom are apostles, one holding the nails of the crucifixion for the third to see. The space is filled gracefully, and if the figures, with one or two exceptions, betray consciousness of the posed model, the composition, on the whole, is one of the most facile and pleasing of its kind in the work of the pre-Raphaelitic period. The landscape is elaborate and full of feeling for air and sunshine. This picture seems to me the acme of Perugino's attainment.

Perugino was of an avaricious temper, and the later phases of his art show more desire to get over his canvas than to develop his art. He was called to Orvieto in 1489 to finish the chapel which Fra Angelico had abandoned, and seems to have coquetted for several years with the Chapter, and, having made an offer to paint the whole chapel for 1500 ducats, the lime, gold, ultramarine, and scaffoldings being provided, he accepted one to paint the ceilings for 200, took the earnest money, 10 gold pieces, and went his way never to put his foot again on the pavements of Orvieto, though the Chapter continued for years to repeat their call. Vasari says of him that he was "a person of little religion and who could not be persuaded of the immortality of the soul, even with words appropriate to his brain of porphyry [sic]; he most obstinately repelled all good ways. He put all his hope in the goods of fortune and for money would have made any evil agreement." Mariotti, in his "Lettere Pittoriche Perugine," repels these accusations of impiety, and Délécluze in

¹ The fact that the critics attribute the "Moses and Zipporah" to Signorelli, to Perugino working with his pupil Pinturicchio, and to Botticelli, shows how little difference

there can be to the common eye between the various schools of Central Italy, all developments from Giotto's principles.

his essay on Leonardo da Vinci appeals to the "religious elevation of his work" to refute them. But the argument from the works has too little pertinence, when we know something of the lives of the great painters, to weigh against the general tradition which Vasari reposes on. And though in many things Vasari is not a secure authority, he is not a depreciator of Perugino, but on the contrary one of his most constant admirers, and as such would not readily accept an accusation which disparages him, the more as he insists on showing his honesty in his business transactions. He appears, however, in connection with a proved murderer before the tribunal of eight in Florence to answer to a charge of conspiracy for assault and battery — which his associate wished to carry to murder — on some person who had offended him. That he was avaricious appears from many instances, and in the latter part of his career he was content to repeat his old designs and get over his work with as little effort as possible, and to have as much done by his assistants as might be.

The great work of his life, taken all in all, is doubtless the decoration of the Sala di Cambio in the city of Perugia. It is fertile in invention, and varied in its demands on his powers, and he seems to have been stimulated by the honor done him in the commission to do his best. Raphael was then his pupil, and it is not improbable that in the mixture of the profane and the sacred which the Sala di Cambio shows, he formed the tendency to pagan illustration that chilled the inspirations of his later life. There was a universal tendency to classical design dating back to Gozzoli, but it does not in the earlier classicists fail in the severe dignity which was supposed to be the chief virtue of the ancient character. The subjects of the Sala were to a large extent chosen for the painter, and the choice shows that the popular mind was deeply affected by the work of the classicists. The planets were symbolized by the heathen gods, and the heathen virtues were mixed with the Christian, prophets with sybils; Christ and Cato preside in turn. Perugino accepted the vein of his employers, the money-lenders of Perugia, and did his best to glorify the Exchange.

His influence over Raphael seems to have

been so great that for a long time the ideals of the master apparently shaped the vision of the pupil. Perugino was unindividual in his types; his women have a sweet sameness which Raphael refined and perfected, but his men are weak and often effeminate; he clearly shows that the technical attainments were those which most employed his powers, and in these lay his efficiency as a teacher, as was evinced in the popularity of his school. He had more to do with the triumph of oil painting in the schools of Central Italy than any other painter, and the tendency to superficial charm and to types in which prettiness rather than refined beauty is the chief quality, was, perhaps, with the smoothness of his surfaces, the cause of his popularity and of that denunciation of his art as "absurd and antiquated" by Michelangelo, which induced Perugino to bring an action for slander against his critic, in which he was of course cast with costs. In his conceptions, as distinguished from his treatment, he is scarcely more naturalistic or imaginative than the later Giotteschi; he borrows the old symbolism and renders it with a realistic treatment which makes it less mystic and pathetic than that in the earlier art, and in his sacred subjects he is more careful of his properties than of the dramatic proprieties. He was a master of all the processes then in use, and turns from fresco to oil with an equal facility, but the qualities which have more than any other distinguished him in the later centuries are those which are found in his oil pictures. His precise and solid system, which I have quoted from Cavalcaselle in a note, prevents his work from blackening, as have some of the pictures of that better colorist, Fra Bartolommeo; and to the fact that this system was taught to Raphael is due our privilege of having his pictures in a purity and solidity of color of which few contemporary works can boast.

Perugino died of a pestilence which raged in Umbria in 1423,¹ and was buried hastily, like the other victims, we know not where. He outlived his great pupil, and finished his frescos at San Severo in Perugia, but he shows in this work that he had also outlived his own art. The admirable quality of his method of instruction is shown in the difficulty found in distinguishing his work from that of his pupils.

W. J. Stillman.

¹ From a petition of Giovanni Battista, the eldest of the sons of Perugino, offered 4th November, 1523, that he might be constituted guardian of his

brother Michelangelo, still a minor, we gather that Pietro was dead about nine months before [Milanesi's notes].

RUDYARD KIPLING.

TWENTY years ago there was suddenly revealed to us, no one seems to remember how, a new star out of the East. Not fewer distinguished men of letters profess to have "discovered" Mr. Kipling than there were cities of old in which Homer was born. Yet, in fact, the discovery was not much more creditable to them than it would be, on a summer night, to contrive to notice a comet flaring across the sky. Not only was this new talent robust, brilliant, and self-asserting, but its reception was prepared for by a unique series of circumstances. The fiction of the Anglo-Saxon world, in its more intellectual provinces, had become curiously feminized. Those novel-writers who cared to produce subtle impressions upon their readers, in England and America, had become extremely refined in taste and discreet in judgment. People who were not content to pursue the soul of their next-door neighbor through all the burrows of self-consciousness had no choice but to take ship with Mr. Rider Haggard for the "Mountains of the Moon." Between excess of psychological analysis and excess of superhuman romance, there was a great void in the world of Anglo-Saxon fiction. It is this void which Mr. Kipling, with something less than one hundred short stories, one novel, and a few poems, has filled by his exotic realism and his vigorous rendering of unhackneyed experience. His temperament is eminently masculine, and yet his imagination is strictly bound by existing laws. The Evarras of the novel had said:

Thus gods are made,
And whoso makes them otherwise shall die,

when, behold, a young man comes up out of India, and makes them quite otherwise, and lives.

The vulgar trick, however, of depreciating other writers in order to exalt the favorite of a moment was never less worthy of practice than it is in the case of the author of "Soldiers Three." His relation to his contemporaries is curiously slight. One living writer there is, indeed, with whom it is not unnatural to compare him—Pierre Loti. Each of these men has attracted the attention, and then the almost exaggerated admiration, of a crowd of readers drawn from every class. Each has become

popular without ceasing to be delightful to the fastidious. Each is independent of traditional literature, and affects a disdain for books. Each is a wanderer, a lover of prolonged exile, more at home among the ancient races of the East than among his own people. Each describes what he has seen, in short sentences, with highly colored phrases and local words, little troubled to obey the laws of style if he can but render an exact impression of what the movement of physical life has been to himself. Each produces on the reader a peculiar thrill, a voluptuous and agitating sentiment of intellectual uneasiness, with the spontaneous art of which he has the secret. Totally unlike in detail, Rudyard Kipling and Pierre Loti have these general qualities in common, and if we want a literary parallel to the former, the latter is certainly the only one that we can find. Nor is the attitude of the French novelist to his sailor friends at all unlike that of the Anglo-Indian civilian to his soldier chums. To distinguish we must note very carefully the difference between Mulvaney and *mon frère Yves*; it is not altogether to the advantage of the latter.

The old rhetorical manner of criticism was not meant for the discussion of such writers as these. The only way in which, as it seems to me, we can possibly approach them, is by a frank confession of their personal relation to the feelings of the critic. I will therefore admit that I cannot pretend to be indifferent to the charm of what Mr. Kipling writes. From the first moment of my acquaintance with it it has held me fast. It excites, disturbs, and attracts me; I cannot throw off its disquieting influence. I admit all that is to be said in its disfavor. I force myself to see that its occasional cynicism is irritating and strikes a false note. I acknowledge the broken and jagged style, the noisy newspaper bustle of the little peremptory sentences, the cheap irony of the satires on society. Often—but this is chiefly in the earlier stories—I am aware that there is a good deal too much of the rattle of the piano at some café concert. But when all this is said, what does it amount to? What but an acknowledgment of the crudity of a strong and rapidly developing young nature? You cannot expect a creamy smoothness while the act of vinous fermentation is proceeding.

Wit will shine
Through the harsh cadence of a rugged line;
A noble error, and but seldom made,

When poets are by too much force betray'd;
 Thy generous fruits, though gather'd ere their
 prime,
 Still show a quickness, and maturing time
 But mellows what we write to the dull sweets of
 rime.

In the following pages I shall try to explain why the sense of these shortcomings is altogether buried for me in delighted sympathy and breathless curiosity. Mr. Kipling does not provoke a critical suspension of judgment. He is vehement, and sweeps us away with him; he plays upon a strange and seductive pipe, and we follow him like children. As I write these sentences, I feel how futile is this attempt to analyze his gifts, and how greatly I should prefer to throw this paper to the winds, and listen to the magician himself. I want more and more, like *Oliver Twist*. I want all those "other stories"; I wish to wander down all those by-paths that we have seen disappear in the brushwood. If one lay very still and low by the watch-fire, in the hollow of Ortheris's greatcoat, one might learn more and more of the inextinguishable sorrows of Mulvaney. One might be told more of what happened, out of the moonlight, in the blackness of Amir Nath's Gully. I want to know how the palanquin came into Dearsley's possession, and what became of Kheni Singh, and whether the seal-cutter did really die in the House of Suddhoo. I want to know who it is who dances the *Halli Hukk*, and how, and why, and where. I want to know what happened at Jagadhri, when the Death Bull was painted. I want to know all the things that Mr. Kipling does not like to tell—to see the devils of the East "rioting as the stallions riot in spring." It is the strength of this new story-teller that he re-awakens in us the primitive emotions of curiosity, mystery, and romance in action. He is the master of a new kind of terrible and enchanting peepshow, and we crowd around him begging for "just one more look." When a writer excites and tantalizes us in this way, it seems a little idle to discuss his style. Let pedants, then, if they will, say that Mr. Kipling has no style; yet if so, how shall we designate such passages as this, frequent enough among his more exotic stories?

Come back with me to the north and be among men once more. Come back when this matter is accomplished and I call for thee. The bloom of the peach orchards is upon all the valley, and *here* is only dust and a great stink. There is a pleasant wind among the mulberry trees, and the streams are bright with snow-water, and the caravans go up and the caravans go down, and a hundred fires sparkle in the gut of the pass, and tent-peg answers hammer-nose, and pony squeals to pony across the drift-smoke of the evening. It is good in the north now. Come back with me. Let us return to our own people. Come!

I.

THE private life of Mr. Rudyard Kipling is not a matter of public interest, and I should be very unwilling to exploit it, even if I had the means of doing so. The youngest of living writers should really be protected for a few years longer against those who chirp and gabble about the unessential. All that needs to be known, in order to give him his due chronological place, is that he was born in Bombay in Christmas week, 1865, and that he is therefore only in his twenty-sixth year yet. The careful student of what he has published will collect from it the impression that Mr. Kipling was in India at an age when few European children remain there; that he returned to England for a brief period; that he began a career on his own account in India at an unusually early age; that he has led a life of extraordinary vicissitude, as a journalist, as a war correspondent, as a civilian in the wake of the army; that an insatiable curiosity has led him to shrink from no experience that might help to solve the strange riddles of Oriental existence; and that he is distinguished from other active, adventurous, and inquisitive persons in that his capacious memory retains every impression that it captures. Beyond this, all that must here be said about the man is that his stories began to be published—I think about eight years ago—in local newspapers of India, that his first book of verse, "Departmental Ditties," appeared in 1886, while his prose stories were not collected from a Lahore journal, of which he was the sub-editor, until 1888, when a volume of "Plain Tales from the Hills" appeared in Calcutta. In the same year six successive pamphlets or thin books appeared in an "Indian Railway Library," published at Allahabad, under the titles of "Soldiers Three," "The Gadsbys," "In Black and White," "Under the Deodars," "The Phantom Rickshaw," and "Wee Willie Winkie." These formed the literary baggage of Mr. Rudyard Kipling when, in 1889, he came home to find himself suddenly famous at the age of twenty-three.

Since his arrival in England Mr. Kipling has not been idle. In 1890 he brought out a Christmas annual called "The Record of Badalia Herodsfoot," and a short novel, "The Light that Failed." Already in 1891 he has published a fresh collection of tales called (in America) "Mine Own People," and a second miscellany of verses. This is by no means a complete record of his activity, but it includes the names of all his important writings. At an age when few future novelists have yet produced anything at all, Mr. Kipling is already voluminous. It would be absurd not to acknowledge that a danger lies in this precocious fe-

cundity. It would probably be an excellent thing for every one concerned if this brilliant youth could be deprived of pens and ink for a few years and be buried again somewhere in the far East. There should be a "close time" for authors no less than for seals, and the extraordinary fullness and richness of Mr. Kipling's work does not completely reassure us.

The publications which I have named above have not, as a rule, any structural cohesion. With the exception of "*Badalia Herodsfoot*" and "*The Light that Failed*," which deal with phases of London life, their contents might be thrown together without much loss of relation. The general mass so formed could then be re-divided into several coherent sections. It may be remarked that Mr. Kipling's short stories, of which, as I have said, we hold nearly a hundred, mainly deal with three or four distinct classes of Indian life. We may roughly distinguish these as the British soldier in India, the Anglo-Indian, the Native, and the British child in India. In the following pages I shall endeavor to characterize his treatment of these four classes, and finally to say a word about him as a poet.

II.

THERE can be no question that the side upon which Mr. Kipling's talent has most delicately tickled British curiosity, and British patriotism too, is his revelation of the soldier in India. A great mass of our countrymen are constantly being drafted out to the East on Indian service. They serve their time, are recalled, and merge in the mass of our population; their strange temporary isolation between the civilian and the native and their practical inability to find public expression for their feelings make these men — to whom, though we so often forget it, we owe the maintenance of the English Empire in the East — an absolutely silent section of the community. Of their officers we may know something, although "*A Conference of the Powers*" may perhaps have awakened us to the fact that we know very little. Still, people like Tick Boileau and Captain Maffin of the Duke of Derry's Pink Hussars are of ourselves; we meet them before they go out and when they come back; they marry our sisters and our daughters; and they lay down the law about India after dinner. Of the private soldier, on the other hand, of his loves and hates, sorrows and pleasures, of the way in which the vast, hot, wearisome country and its mysterious inhabitants strike him, of his attitude towards India, and of the way in which India treats him, we know, or knew until Mr. Kipling enlightened us, absolutely nothing. It is not surprising, then, if the novelty of this portion of his writings has

struck ordinary English readers more than that of any other.

This section of Mr. Kipling's work occupies the seven tales called "*Soldiers Three*," and a variety of stories scattered through his other books. In order to make his point of view that of the men themselves, not spoiled by the presence of superior officers or by social restraint of any sort, the author takes upon himself the character of an almost silent young civilian who has gained the warm friendship of three soldiers, whose intimate companion and chum he becomes. Most of the military stories, though not all, are told by one of these three, or else recount their adventures or caprices. Before opening the book called "*Soldiers Three*," however, the reader will do well to make himself familiar with the opening pages of a comparatively late story, "*The Incarnation of Krishna Mulvaney*," in which the characteristics of the famous three are more clearly defined than elsewhere. Mulvaney, the Irish giant, who has been the "grizzled, tender, and very wise Ulysses" to successive generations of young and foolish recruits, is a great creation. He is the father of the craft of arms to his associates; he has served with various regiments from Bermuda to Halifax; he is "old in war, scarred, reckless, resourceful," and in his pious hours an unequaled soldier." Learoyd, the second of these friends, is "six and a half feet of slow-moving, heavy-footed Yorkshireman, born on the wolds, bred in the dales, and educated chiefly among the carriers' carts at the back of York railway-station." The third is Ortheris, a little man as sharp as a needle, "a fox-terrier of a cockney," an inveterate poacher and dog-stealer.

Of these three strongly contrasted types the first and the third live in Mr. Kipling's pages with absolute reality. I must confess that Learoyd is to me a little shadowy, and even in a late story, "*On Greenhow Hill*," which has apparently been written in order to emphasize the outline of the Yorkshireman, I find myself chiefly interested in the incidental part, the sharp-shooting of Ortheris. It seems as though Mr. Kipling required, for the artistic balance of his cycle of stories, a third figure, and had evolved Learoyd while he observed and created Mulvaney and Ortheris, nor am I sure that places could not be pointed out where Learoyd, save for the dialect, melts undistinguishably into an incarnation of Mulvaney. The others are studied from the life, and by an observer who goes deep below the surface of conduct. How penetrating the study is, and how clear the diagnosis, may be seen in one or two stories which lie somewhat outside the popular group. It is no superficial idler among men who has taken down the strange notes on

military hysteria which inspire "The Madness of Ortheris" and "In the Matter of a Private," while the skill with which the battered giant Mulvaney, who has been a corporal and then has been reduced for misconduct, who to the ordinary view and in the eyes of all but the wisest of his officers is a dissipated blackguard, is made to display the rapidity, wit, resource, and high moral feeling which he really possesses, is extraordinary.

We have hitherto had in English literature no portraits of private soldiers like these, and yet the soldier is an object of interest and of very real, if vague and inefficient, admiration to his fellow-citizens. Mr. Thomas Hardy has painted a few excellent soldiers, but in a more romantic light and a far more pastoral setting. Other studies of this kind in fiction have either been slight and unsubstantial, or else they have been, as in the baby-writings of a certain novelist who has enjoyed popularity for a moment, odious in their sentimental unreality. There seems to be something essentially volatile about the soldier's memory. His life is so monotonous, so hedged in by routine, that he forgets the details of it as soon as the restraint is removed, or else he looks back upon it to see it bathed in a fictitious haze of sentiment. The absence of sentimentality in Mr. Kipling's version of the soldier's life in India is one of its great merits. What romance it assumes under his treatment is due to the curious contrasts it encourages. We see the ignorant and raw English youth transplanted, at the very moment when his instincts begin to develop, into a country where he is divided from everything which can remind him of his home, where by noon and night, in the bazar, in barracks, in the glowing scrub jungle, in the ferny defiles of the hills, everything he sees and hears and smells and feels produces on him an unfamiliar and an unwelcome impression. How he behaves himself under these new circumstances, what code of laws still binds his conscience, what are his relaxations and what his observations, these are the questions which we ask and which Mr. Kipling essays for the first time to answer.

Among the short stories which Mr. Kipling has dedicated to the British soldier in India there are a few which excel all the rest as works of art. I do not think that any one will deny that of this inner selection none exceeds in skill or originality "The Taking of Lungtungpen." Those who have not read this little masterpiece have yet before them the pleasure of becoming acquainted with one of the best short stories not merely in English but in any language. I do not know how to praise adequately the technical merit of this little narrative. It possesses to the full that masculine buoyancy, that power of sustaining an extremely spirited narrative in

a tone appropriate to the action, which is one of Mr. Kipling's rare gifts. Its concentration, which never descends into obscurity, its absolute novelty, its direct and irresistible appeal to what is young and daring and absurdly splendid, are unsurpassed. To read it, at all events to admire and enjoy it, is to recover for a moment a little of that dare-devil quality that lurks somewhere in the softest and the baldest of us. Only a very young man could have written it, perhaps, but still more certainly only a young man of genius.

A little less interesting, in a totally different way, is "The Daughter of the Regiment," with its extraordinarily vivid account of the breaking-out of cholera in a troop-train. Of "The Madness of Ortheris" I have already spoken; as a work of art this again seems to me somewhat less remarkable, because carried out with less completeness. But it would be hard to find a parallel, of its own class, to "The Rout of the White Hussars," with its study of the effects of what is believed to be supernatural on a gathering of young fellows who are absolutely without fear of any phenomenon of which they comprehend the nature. In a very late story, "The Courting of Dinah Shadd," Mr. Kipling has shown that he is able to deal with the humors and matrimonial amours of India barrack-life just as rapidly, fully, and spiritedly as with the more serious episodes of a soldier's career. The scene between Judy Sheehy and Dinah, as told by Mulvaney in that story, is pure comedy, without a touch of farce.

On the whole, however, the impression left by Mr. Kipling's military stories is one of melancholy. Tommy Atkins, whom the author knows so well and sympathizes with so truly, is a solitary being in India. In all these tales I am conscious of the barracks as of an island in a desolate ocean of sand. All around is the infinite waste of India, obscure, monotonous, immense, inhabited by black men and pariah dogs, Pathans and green parrots, kites and crocodiles, and long solitudes of high grass. The island in this sea is a little collection of young men, sent out from the remoteness of England to serve "the Widder," and to help to preserve for her the rich and barbarous empire of the East. This microcosm of the barracks has its own laws, its own morals, its own range of emotional sentiment. What these are the new writer has (not told us, for that would be a long story) but shown us that he himself has divined. He has held the door open for a moment, and has revealed to us a set of very human creations. One thing, at least, the biographer of Mulvaney and Ortheris has no difficulty in persuading us, namely, that "God in his wisdom has made the heart of the British soldier,

who is very often an unlicked ruffian, as soft as the heart of a little child, in order that he may believe in and follow his officers into tight and nasty places."

III.

THE Anglo-Indians with whom Mr. Kipling deals are of two kinds. I must confess that there is no section of his work which appears to me so insignificant as that which deals with Indian "society." The eight tales which are bound together as "The Story of the Gadsbys" are doubtless very early productions. I have been told, but I know not whether on good authority, that they were published before the author was twenty-one. Judged as the observation of Anglo-Indian life by so young a boy, they are, it is needless to say, astonishingly clever. Some pages in them can never, I suppose, come to seem unworthy of his later fame. The conversation in "The Tents of Kedar," where Captain Gadsby breaks to Mrs. Herriott that he is engaged to be married, and absolutely darkens her world to her during "a Naini Tal dinner for thirty-five," is of consummate adroitness. What a "Naini Tal dinner" is I have not the slightest conception, but it is evidently something very sumptuous and public, and if any practised hand of the old social school could have contrived the thrust and parry under the fire of seventy critical eyes better than young Mr. Kipling has done, I know not who that writer is. In quite another way the pathos of the little bride's delirium in "The Valley of the Shadow" is of a very high, almost of the highest, order.

But, as a rule, Mr. Kipling's "society" Anglo-Indians are not drawn better than those which other Indian novelists have created for our diversion. There is a sameness in the type of devouring female, and though Mr. Kipling devises several names for it, and would fain persuade us that Mrs. Herriott, and Mrs. Reiver, and Mrs. Hauksbee possess subtle differences which distinguish them, yet I confess I am not persuaded. They all—and the Venus Annodomini as well—appear to me to be the same high-colored, rather ill-bred, not wholly spoiled professional coquette. Mr. Kipling seems to be too impatient of what he calls "the shiny toy-scum stuff people call civilization" to paint these ladies very carefully. "The Phantom 'Rickshaw," in which a hideously selfish man is made to tell the story of his own cruelty and of his mechanical remorse, is indeed highly original, but here it is the man, not the woman, in whom we are interested. The proposal of marriage in the dust-storm in "False Dawn," a theatrical, lurid scene,

though scarcely natural, is highly effective. The archery contest in "Cupid's Arrows" needs only to be compared with a similar scene in "Daniel Deronda" to show how much more closely Mr. Kipling keeps his eye on detail than George Eliot did. But these things are rare in this class of his stories, and too often the Anglo-Indian social episodes are choppy, unconvincing, and not very refined.

All is changed when the central figure is a man. Mr. Kipling's officials and civilians are admirably vivid and of an amazing variety. If any one wishes to know why this new author has been received with joy and thankfulness by the Anglo-Saxon world, it is really not necessary for him to go further for a reason than to the moral tale of "The Conversion of Aurelian McGoggin." Let the author of that tract speak for himself.

Every man is entitled to his own religious opinions; but no man—least of all a junior—has a right to thrust these down other men's throats. The government sends out weird civilians now and again; but McGoggin was the queerest exported for a long time. He was clever—brilliantly clever—but his cleverness worked the wrong way. Instead of keeping to the study of the vernaculars, he had read some books written by a man called Comte, I think, and a man called Spencer, and a Professor Clifford. [You will find these books in the Library.] They deal with people's insides from the point of view of men who have no stomachs. There was no order against his reading them, but his mama should have smacked him. . . . I do not say a word against this creed. It was made up in town, where there is nothing but machinery and asphalt and building—all shut in by the fog. . . . But in this country [India], where you really see humanity—raw, brown, naked humanity—with nothing between it and the blazing sky, and only the used-up, over-handled earth underfoot, the notion somehow dies away, and most folk come back to simpler theories.

Those who will not come back to simpler theories are prigs, for whom the machine-made notion is higher than experience. Now Mr. Kipling, in his warm way, hates many things, but he hates the prig for preference. Aurelian McGoggin, better known as the Blastoderm, is a prig of the over-educated type, and upon him falls the awful calamity of sudden and complete nerve-collapse. Lieutenant Golightly, in the story which bears his name, is a prig who values himself for spotless attire and clock-work precision of manner; he therefore is mauled and muddled up to his eyes, and then arrested under painfully derogatory conditions. In "Lispeth" we get the missionary prig, who thinks that the Indian instincts can be effaced by a veneer of Christianity. Mr. Kipling hates "the sheltered life." The men he likes are those

who have been thrown out of their depth at an early age, and taught to swim off a boat. The very remarkable story of "Thrown Away" shows the effect of preparing for India by a life "unspotted from the world" in England; it is as hopelessly tragic as any in Mr. Kipling's somewhat grim repertory.

Against the régime of the prig Mr. Kipling sets the régime of Strickland. Over and over again he introduces this mysterious figure, always with a phrase of extreme approval. Strickland is in the police, and his power consists in his determination to know the East as the natives know it. He can pass through the whole of Upper India, dressed up as a fakir, without attracting the least attention. Sometimes, as in "Beyond the Pale," he may know too much. But this is an exception, and personal to himself. Mr. Kipling's conviction is that this is the sort of man to pervade India for us, and that one Strickland is worth a thousand self-conceited civilians. But even below the Indian prig, because he has at least known India, is the final object of Mr. Kipling's loathing, "Pagett, M. P.," the radical English politician who comes out for four months to set everybody right. His chastisement is always severe and often comic. But in one very valuable paper, which Mr. Kipling must not be permitted to leave unprinted, "The Enlightenment of Pagett, M. P.," he has dealt elaborately and quite seriously with this noxious creature. Whether Mr. Kipling is right or wrong, far be it from me in my ignorance to pretend to know. But his way of putting these things is persuasive.

Since Mr. Kipling has come back from India he has written about society "of sorts" in England. Is there not perhaps in him something of Pagett, M. P., turned inside out? As a delineator of English life, at all events, he is not yet thoroughly master of his craft. Everything he writes has vigor and picturesqueness. But "The Lamentable Comedy of Willow Wood" is the sort of thing that any extremely brilliant Burman, whose English, if slightly odd, was nevertheless unimpeachable, might write of English ladies and gentlemen, having never been in England. "The Record of Badalia Herodsfoot" was in every way better, more truly observed, more credible, more artistic, but yet a little too cynical and brutal to come straight from life. And last of all there is the novel of "The Light that Failed," with its much-discussed two endings, its oases of admirable detail in a desert of the undesirable, with its extremely disagreeable woman, and its far more brutal and detestable man, presented to us, the precious pair of them, as typical specimens of English society. I confess that it is "The Light that Failed" that has wakened me to the fact

that there are limits to this dazzling new talent, the *éclat* of which had almost lifted us off our critical feet.

IV.

THE conception of Strickland would be very tantalizing and incomplete if we were not permitted to profit from his wisdom and experience. But, happily, Mr. Kipling is perfectly willing to take us below the surface, and to show us glimpses of the secret life of India. In so doing he puts forth his powers to their fullest extent, and I think it cannot be doubted that the tales which deal with native manners are not merely the most curious and interesting which Mr. Kipling has written, but are also the most fortunately constructed. Every one who has thought over this writer's mode of execution will have been struck with the skill with which his best work is restrained within certain limits. When inspiration flags with him, indeed, his stories may grow too long, or fail, as if from languor, before they reach their culmination. But his best short stories—and among his best we include the majority of his native Indian tales—are cast at once, as if in a mold; nothing can be detached from them without injury. In this consists his great technical advantage over almost all his English rivals; we must look to France or to America for stories fashioned in this way. In several of his tales of Indian manners this skill reaches its highest because most complicated expression. It may be comparatively easy to hold within artistic bonds a gentle episode of European amorosity. To deal, in the same form, but with infinitely greater audacity, with the muffled passions and mysterious instincts of India, to slur over nothing, to emphasize nothing, to give in some twenty pages the very spicy odor of the East, this is marvelous.

Not less than this Mr. Kipling has done in a little group of stories which I cannot but hold to be the culminating point of his genius so far. If the remainder of his writings were swept away, posterity would be able to reconstruct its Rudyard Kipling from "Without Benefit of Clergy," "The Man who Would be King," "The Strange Ride of Morrowbie Jukes," and "Beyond the Pale." More than that, if all record of Indian habits had been destroyed, much might be conjectured from them of the pathos, the splendor, the cruelty, and the mystery of India. From "The Gate of the Hundred Sorrows" more is to be gleaned of the real action of opium-smoking, and the causes of that indulgence, than from many sapient debates in the British House of Commons. We come very close to the confines of the moonlight-colored world of magic in "The Bisara of Pooree." For pure horror and for the hopeless

impenetrability of the native conscience there is "The Recrudescence of Imray." In a revel of color and shadow, at the close of the audacious and Lucianic story of "The Incarnation of Krishna Mulvaney," we peep for a moment into the mystery of "a big queen's praying at Benares."

Admirable, too, are the stories which deal with the results of attempts made to melt the Asiatic and the European into one. The red-headed Irish-Thibetan who makes the king's life a burden to him in the fantastic story of "Namgay Doola" represents one extremity of this chain of grotesque Eurasians; Michele D'Cruze, the wretched little black police inspector, with a drop of white blood in his body, who wakes up to energetic action at one supreme moment of his life, is at the other. The relapse of the converted Indian is a favorite theme with this cynical observer of human nature. It is depicted in "The Judgment of Dungara," with a rattling humor worthy of Lever, where the whole mission, clad in white garments woven of the scorpion nettle, go mad with fire and plunge into the river, while the trumpet of the god bellows triumphantly from the hills. In "Lispeth" we have a study—much less skilfully worked out, however—of the Indian woman carefully Christianized from childhood reverting at once to heathenism when her passions reach maturity.

The lover of good literature, however, is likely to come back to the four stories which we named first in this section. They are the very flower of Mr. Kipling's work up to the present moment, and on these we base our highest expectations for his future. "Without Benefit of Clergy" is a study of the Indian woman as wife and mother, uncovenanted wife of the English civilian and mother of his son. The tremulous passion of Ameera, her hopes, her fears, and her agonies of disappointment, combine to form by far the most tender page which Mr. Kipling has written. For pure beauty the scene where Holden, Ameera, and the baby count the stars on the housetop for Tota's horoscope is so characteristic that, although it is too long to quote in full, its opening paragraph must here be given as a specimen of Mr. Kipling's style in this class of work.

Ameera climbed the narrow staircase that led to the flat roof. The child, placid and unwinking, lay in the hollow of her right arm, gorgeous in silver-fringed muslin, with a small skull-cap on his head. Ameera wore all that she valued most. The diamond nose-stud that takes the place of the Western patch in drawing attention to the curve of the nostril, the gold ornament in the center of the forehead studded with tallow-drop emeralds and flawed rubies, the heavy circlet of beaten gold that was fastened round her

neck by the softness of the pure metal, and the clinking curb-patterned silver anklets hanging low over the rosy ankle-bone. She was dressed in jade-green muslin, as befitted a daughter of the Faith, and from shoulder to elbow and elbow to wrist ran bracelets of silver tied with floss silk; frail glass bangles slipped over the wrist in proof of the slenderness of the hand, and certain heavy gold bracelets that had no part in her country's ornaments, but, since they were Holden's gift, and fastened with a cunning European snap, delighted her immensely.

They sat down by the low white parapet of the roof, overlooking the city and its lights.

What tragedy was in store for the gentle astrologer, or in what darkness of waters the story ends, it is needless to repeat here.

In "The Strange Ride of Morrowbie Jukes" a civil engineer stumbles by chance on a ghastly city of the dead who do not die, trapped into it, down walls of shifting sand, on the same principle as the ant-lion secures its prey, the parallel being so close that one half suspects Mr. Kipling of having invented a human analogy to the myrmeleon. The abominable settlement of living dead men is so vividly described, and the wonders of it are so calmly, and, as it were, so temperately discussed, that no one who possesses the happy gift of believing can fail to be persuaded of the truth of the tale. The character of Gunga Dass, a Deccanee Brahmin whom Jukes finds in this reeking village, and who, reduced to the bare elements of life, preserves a little, though exceedingly little, of his old traditional obsequiousness, is an admirable study. But all such considerations are lost, as we read the story first, in the overwhelming and Poe-like horror of the situation and the extreme novelty of the conception.

A still higher place, however, I am inclined to claim for the daring invention of "The Man who Would be King." This is a longer story than is usual with Mr. Kipling, and it depends for its effect, not upon any epigrammatic surprise or extravagant dénouement of the intrigue, but on an imaginative effort brilliantly sustained through a detailed succession of events. Two ignorant and disreputable Englishmen, exiles from social life, determine to have done with the sordid struggle, and to close with a try for nothing less than empire. They are seen by the journalist who narrates the story to disappear northward from the Kumharsan Serai disguised as a mad priest and his servant starting to sell whirligigs to the Ameer of Kabul. Two years later there stumbles into the newspaper office a human creature bent into a circle, and moving his feet one over the other like a bear. This is the surviving adventurer, who, half dead and half dazed, is roused by doses of raw whisky into a condition which permits him to unravel the squalid and splendid chron-

icle of adventures beyond the utmost rim of mountains, adventures on the veritable throne of Kafiristan. The tale is recounted with great skill as from the lips of the dying king. At first, to give the needful impression of his faint, bewildered state, he mixes up his narrative, whimpers, forgets, and repeats his phrases; but by the time the curiosity of the reader is fully arrested, the tale has become limpid and straightforward enough. When it has to be drawn to a close, the symptoms of aphasia and brain-lesion are repeated. This story is conceived and conducted in the finest spirit of an artist. It is strange to the verge of being incredible, but it never outrages possibility, and the severe moderation of the author preserves our credence throughout.

It is in these Indian stories that Mr. Kipling displays more than anywhere else the accuracy of his eye and the retentiveness of his memory. No detail escapes him, and, without seeming to emphasize the fact, he is always giving an exact feature where those who are in possession of fewer facts or who see less vividly are satisfied with a shrewd generality.

v.

IN Mr. Kipling's first volume there was one story which struck quite a different note from all the others, and gave promise of a new delineator of children. "Tods' Amendment," which is a curiously constructed piece of work, is in itself a political allegory. It is to be noticed that when he warms to his theme the author puts aside the trifling fact that Tods is an infant of six summers, and makes him give a clear statement of collated native opinion worthy of a barrister in ample practice. What led to the story, one sees without difficulty, was the wish to emphasize the fact that unless the Indian government humbles itself, and becomes like Tods, it can never legislate with efficiency, because it never can tell what all the *jhampanis* and *saises* in the bazar really wish for. If this were all, Mr. Kipling in creating Tods would have shown no more real acquaintance with children than other political allegorists have shown with sylphs or Chinese philosophers. But Mr. Kipling is always an artist, and in order to make a setting for his child-professor of jurisprudence, he invented a really convincing and delightful world of conquering infancy. Tods, who lives up at Simla with Tods' mama, and knows everybody, is "an utterly fearless young pagan," who pursues his favorite kid even into the sacred presence of the Supreme Legislative Council, and is on terms of equally well-bred familiarity with the Viceroy and with Futteh Khan, the villainous loafer *khit* from Mussoorie.

To prove that "Tods' Amendment" was not an accident, and also, perhaps, to show that he could write about children purely and simply, without any after-thought of allegory, he brought out, as the sixth instalment of the "Indian Railway Library," a little volume entirely devoted to child-life. Of the four stories contained in this book one is among the finest productions of its author, while two others are very good indeed. There are also, of course, the children in "The Light that Failed," although they are too closely copied from the author's previous creations in "Baa, Baa, Black Sheep"; and in other writings of his children take a position sufficiently prominent to justify us in considering this as one of the main divisions of his work.

In his preface to "Wee Willie Winkie" Mr. Kipling has sketched for us the attitude which he adopts towards babies. "Only women," he says, but we may doubt if he means it, "understand children thoroughly; but if a mere man keeps very quiet, and humbles himself properly, and refrains from talking down to his superiors, the children will sometimes be good to him, and let him see what they think about the world." This is a curious form of expression, and suggests the naturalist more than the lover of children. So might we conceive a successful zoölogist describing the way to note the habits of wild animals and birds, by keeping very quiet, and lying low in the grass, and refraining from making sudden noises. This is, indeed, the note by which we may distinguish Mr. Kipling from such true lovers of childhood as Mrs. Ewing. He has no very strong emotion in the matter, but he patiently and carefully collects data, partly out of his own faithful and capacious personal memory, partly out of what he observes.

The Tods type he would probably insist that he has observed. A finer and more highly developed specimen of it is given in "Wee Willie Winkie," the hero of which is a noble infant of overpowering vitality, who has to be put under military discipline to keep him in any sort of domestic order, and who, while suffering under two days' confinement to barracks (the house and veranda), saves the life of a headstrong girl. The way in which Wee Willie Winkie—who is of Mr. Kipling's favorite age, six—does this is at once wholly delightful and a terrible strain to credence. The baby sees Miss Allardyce cross the river, which he has always been forbidden to do, because the river is the frontier, and beyond it are bad men, goblins, Afghans, and the like. He feels that she is in danger, he breaks mutinously out of barracks on his pony and follows her, and when she has an accident, and is surrounded by twenty hill-men, he saves her by his spirit and

by his complicated display of resource. To criticize this story, which is told with infinite zest and picturesqueness, seems merely priggish. Yet it is contrary to Mr. Kipling's whole intellectual attitude to suppose him capable of writing what he knows to be supernatural romance. We have therefore to suppose that in India infants "of the dominant race" are so highly developed at six, physically and intellectually, as to be able to ride hard, alone, across a difficult river, and up pathless hilly country, to contrive a plan for succoring a hapless lady, and to hold a little regiment of savages at bay by mere force of eye. If Wee Willie Winkie had been twelve instead of six, the feat would have been just possible. But then the romantic contrast between the baby and his virile deeds would not have been nearly so piquant. In all this Mr. Kipling, led away by sentiment and a false ideal, is not quite the honest craftsman that he should be.

But when, instead of romancing and creating, he is content to observe children, he is excellent in this as in other branches of careful natural history. But the children he observes, are, or we much misjudge him, himself. "Baa, Baa, Black Sheep" is a strange compound of work at first and at second hand. Aunt Rosa (delightfully known, without a suspicion of supposed relationship, as "Antirosa"), the Mrs. Squeers of the Rocklington lodgings, is a sub-Dickensian creature, tricked out with a few touches of reality, but mainly a survival of early literary hatreds. The boy Harry and the soft little sister of Punch are rather shadowy. But Punch lives with an intense vitality, and here, without any indiscretion, we may be sure that Mr. Kipling has looked inside his own heart and drawn from memory. Nothing in the autobiographies of their childhood by Tolstoi and Pierre Loti, nothing in Mr. R. L. Stevenson's "Child's Garden of Verses," is more valuable as a record of the development of childhood than the account of how Punch learned to read, moved by curiosity to know what the "falchion" was with which the German man split the Griffin open. Very nice, also, is the reference to the mysterious rune, called "Sonny, my Soul," with which mama used to sing Punch to sleep.

By far the most powerful and ingenious story, however, which Mr. Kipling has yet dedicated to a study of childhood is "The Drums of The Fore and Aft." "The Fore and Aft" is a nickname given in derision to a crack regiment, whose real title is "The Fore and Fit," in memory of a sudden calamity which befell them on a certain day in an Afghan pass, when, if it had not been for two little blackguard drummer-boys, they would have been wofully and contemptibly cut to pieces, as they were

routed, by a dashing troop of Ghazis. The two little heroes, who only conquer to die, are called Jakin and Lew, stunted children of fourteen, "gutter-birds" who drink and smoke and "do everything but lie," and are the disgrace of the regiment. In their little souls, however, there burns what Mr. Pater would call a "hard, gem-like flame" of patriotism, and they are willing to undergo any privation, if only they may wipe away the stigma of being "bloomin' non-combatants." In the intervals of showing us how that stain was completely removed, Mr. Kipling gives us not merely one of the most thrilling and effective battles in fiction, but a singularly delicate portrait of two grubby little souls turned white and splendid by an element of native greatness. It would be difficult to point to a page of modern English more poignant than that which describes how "the only acting-drummers who were took along," and—left behind, moved forward across the pass alone to the enemy's front, and sounded on drum and fife the return of the regiment to duty. But perhaps the most remarkable feature of the whole story is that a record of shocking British retreat and failure is so treated as to flatter in its tenderest susceptibilities the pride of British patriotism.

VI.

MR. KIPLING'S début was made in a volume of verse, called "Departmental Ditties," which has continued to enjoy considerable popularity and has frequently been reprinted. This collection of comical and satirical pieces representative of Indian official life has, however, very slight literary value. The verses in it are mostly imitations of popular English and American bards, with but here and there a trace of the true accent of the author in such strong though ill-executed strains as "The Story of Uriah," and "The Song of the Women." In other cases they follow, but more faintly, the lines of the author's prose stories. It cannot be said that in this collection Mr. Kipling soars above the "Ali Babas" and "Aliph Cheems" who strike an agreeable lyre for the entertainment of their fellow Anglo-Indians. No claim for the title of poet could be founded on literary baggage so slight as "Departmental Ditties."

Of late years, however, Mr. Kipling has put forward, in a great variety of directions, essays in verse which deserve much higher consideration. He has indulged the habit of prefixing to his prose stories fragments of poems which must be his own, for there is nobody else to claim them. Some of these are as vivid and tantalizing as the tiny bits we possess of lost Greek tragedians. Among them is to be found

this extract from a "barrack-room ballad" used to introduce the story of "The Madness of Private Ortheris":

Oh! where would I be when my froat was dry?
Oh! where would I be when the bullets fly?
Oh! where would I be when I come to die?

Why,

Somewheres anigh my chum.

If 'e 's liquor 'e 'll give me some,
If I 'm dying 'e 'll 'old my 'ead,
An' 'e 'll write 'em 'ome when I 'm dead.
God send us a trusty chum!

There must have been not a few readers who, like the present writer, on finding this nugget of ballad-doggerel, felt that here was a totally unworked field just touched by the spade, and left. Happily, Mr. Kipling has dugged farther and deeper, and he has written a series of barrack-room ballads which are quite unique in their kind, and of which scarcely one but is of definite and permanent value. The only writer who has, to my mind, in any degree anticipated the mixture of vulgar and realistic phraseology with the various elements of pathos combined in the lives of rough young men exiled from home is the Australian poet Adam Lindsay Gordon, whom Mr. Kipling greatly excels in variety of meter and force of language. Except in its sardonic form, humor has never been a prominent feature of Mr. Kipling's prose. I hardly know an instance of it not disturbed by irony or savagery, except the story of "Moti Guj," the mutineer elephant. But in some of the "Barrack-room Ballads" there is found the light of a genuine humor. What can be more delightful, for instance, than this appreciative description of Fuzzy-Wuzzy, by one of the Soudan force who has had to deal with him in the bush?

'E rushes at the smoke when we let drive,
An', before we know, 'e 's 'ackin' at our 'ead;
'E 's all 'ot sand and ginger when alive,
An' 'e 's generally shammin' when 'e 's dead.
'E 's a daisy, e' 's a ducky, 'e 's a lamb!
'E 's a' injia-rubber idiot on the spree;
'E 's the on'y thing that does n't care a damn
For a regiment of British Infantee.

So 'ere 's to you, Fuzzy-Wuzzy, at your 'ome in
the Sowdan;
You 're a pore benighted 'eathen but a first-class
fightin' man;
And 'ere 's to you, Fuzzy-Wuzzy, with your 'ay-
rick 'ead of 'air—
You big black boundin' beggar—for you bruk a
British square.

But more often, underneath the rollicking storm of the verses, there may be heard the melancholy which is characteristic of so much of the best modern writing, the murmur of that *Weltschmerz* which is never far off, at all events, from Mr. Kipling's verse. It sometimes seems as though it were the author himself who speaks to us in the soldier's impatience at the colorlessness and restraint of Western life. And it is with the exquisite melody of his own ballad of "Mandalay" that we leave the author who has so strangely moved and fascinated us, who has enlarged our horizon on one wholly neglected side, and from whom, in the near future, we have a right to expect so much imaginative invigoration. But what is he saying?—

Ship me somewhere east of Suez where the best
is like the worst,
Where there are n't no Ten Commandments,
an' a man can raise a thirst;
For the temple-bells are callin', an' it 's there
that I would be—
By the old Moulmein Pagoda, lookin' lazy at
the sea—
On the road to Mandalay,
Where the old flotilla lay,
With our sick beneath the awnings when we went
to Mandalay!
Oh, the road to Mandalay,
Where the flyin'-fishes play,
An' the dawn comes up like thunder out er
China 'crost the bay!

Ah, yes! Mr. Kipling, go back to the far East! Yours is not the talent to bear with patience the dry-rot of London or of New York. Disappear, another Waring, and come back in ten years' time with a fresh and still more admirable budget of precious loot out of Wonderland!

Edmund Gosse.

LOVE.

LOVE came at dawn when all the world was fair,
When crimson glories, bloom, and song were rife;
Love came at dawn when hope's wings fanned the air,
And murmured, "I am life."

Love came at even when the day was done,
When heart and brain were tired, and slumber pressed;
Love came at eve, shut out the sinking sun,
And whispered, "I am rest."

William Wilfred Campbell.

TARRYING IN NICARAGUA.

PLEASURES AND PERILS OF THE CALIFORNIA TRIP IN 1849.

IN the last days of 1848 a number of young Yale graduates, bound together by almost brotherly friendship and the intimate association of long years of school and college life, were suddenly seized with a longing to join the throng that from all parts of our country was working its way by every known and unknown route to the newly discovered gold-fields of California.

They did not go primarily to dig for gold. With some of them that was but a remote contingency. But their professional studies were completed, their old companionship was broken up, and they were feeling the sense of isolation and discouragement inevitable to the early months of professional life, when all business worth having seems already captured by the older and more experienced. In this transition state, and with warnings for some that eyes or health were giving way, they were prepared, like tinder for the steel, to take fire at the enticing stories, then filling our papers and flying from mouth to mouth, of this new region of fabulous wealth, with its fruitful ranches and wonderful scenery, its free, adventurous life, its genial climate, and its golden opportunities for each in his own line, and to respond to its call to come in and possess the land, and to help in the founding of a great State.

There is no corner of the earth that seems now so remote as California then seemed. To go by the Howland and Aspinwall steamers, then sailing with tolerable regularity to Chagres once a month, would involve long delay, for they found that every passenger-ticket had been sold for many months ahead. Moreover, there was often great detention in crossing the Isthmus, and always fever there. But there were plenty of other ways to choose from. The daily papers were crowded with advertisements of new and much-lauded routes, for which enterprising men were getting up companies to be put through safely "in sixty days," the "rapid transit" of the time. Brigs and schooners from the smallest to the largest were withdrawn from other work and hastily cleaned and fitted up for "a limited number of passengers" to go round the Horn, or to some one of the many ports on the Atlantic from which a quick cut

across to the Pacific, and to whatever vessel chance might there bring them, was feasible.

At length the interesting character of the region to be crossed, together with the pleasing address and beguiling promises of the projector of the enterprise, led the Yale men to decide on Gordon's Passenger Line via Nicaragua and Realejo.

The story of this trip is given in extracts from letters written home at the time chiefly by one who went to California only to find an early grave. We give below a copy of the receipt given him with a statement of Gordon's plan.

State Room Passage.

GORDON'S PASSENGER LINE

TO

SAN FRANCISCO, via LAKE NICARAGUA AND REALEJO.

Received of ROGER S. BALDWIN, JR., the sum of one hundred and thirty dollars being in part for his passage to SAN FRANCISCO, in the above line.

On payment of Balance, One Hundred and Thirty Dollars, this Receipt secures to him passage in the *Mary*, Captain Hayes, from New York to San Juan De Nicaragua, from thence per Steam Boat *Plutus* to GRANADA, on Lake Nicaragua; or, navigation permitting, to Managua, Matiares or Nagarote on Lake Leon, as may be most convenient for landing; and a passage from Realejo, on the Pacific, to San Francisco, with Hammock, Bed, and Bedding for the voyage, and Camp accommodations during detention on land, *en route*.

The following provisions will be provided, viz:

FOR BREAKFAST.—*Coffee and White Sugar—Ham, Fish, Sausages—White Biscuit—half a pound Preserved Fruit to each ten persons.*

FOR DINNER.—*One third of a quart of Soup made from Kensett & Co.'s preserved Soups—Salt Beef or Pork—Potatoes, Hominy, Peas, or Rice—Rice or Flour Puddings.*

FOR SUPPER.—*Tea and White Sugar—Ham, Fish, or Sausage—White Biscuit—half a pound of Fruit Marmalade to each ten persons.*

The above is to be served up during the voyages, and on the Lake and Land transit, circumstances permitting.

Saloon Passengers will be expected to form into Messes, and the Gentlemen in rotation to receive and serve up their own meals from the Cooks (in the manner pursued in the U. S. Service). Passengers who take State Rooms will have a Steward provided who will expect a fee of \$5 from each passenger. The provisions are alike in both cases.

One Hundred Pounds of personal Baggage will be carried free if packed in round covered Valises or Bags weighing not more than 125 lb. each package; freight above that weight taken at \$6 per 100 lb. Passengers

are expected to assist in packing, stowing and unloading Baggage and provisions if necessary.

Any extra charges for passports, or transit Duties to be borne by each passenger. The general Customs Business will be transacted by an agent of the Line at San Juan or San Carlos without charge.

Gentlemen Passengers, if required, will have to walk from Granada or Lake Léon to Realejo (1½ or 3 days' march).

The Line provides an agent to charter vessels at Panama, Acapulco, and other Pacific Ports, so as to avoid detention at Realejo.

In the *unexpected* event of Vessels not being procured, \$75 of the passage money and 60 days' provisions will be refunded to each passenger at Realejo, which will procure passage in the Mail Steamers which touch there.

On the arrival of the passengers at San Francisco each passenger will have handed to him

1 Barrel White Biscuit.

½ Barrel Flour.

1½ lb. of Tea, in ½ lb. leaden packages.

6 lb. of Ground Coffee, in 1 lb. leaden packages.

15 lb. White Sugar.

1 Cheese (boxed up) about twenty pounds.

Which will furnish one person with all necessary provisions, except meat, for three months.

Every Gentleman passenger is required to provide himself with a Rifle or Musket. All Powder must positively be placed in the hands of the Agent of the line.

GEO. GORDON.

They were to leave New York the first week in February, and before the second week of April to be in San Francisco, ready, among the earliest, to seize the opportunity and to take the tide of fortune at its flood. Day after day they met the brig at an appointed hour, but nearly three weeks dragged on before she sailed.

SAN JUAN DE NICARAGUA [GREYTOWN],
March 20, 1849.

DEAR M——:

We left New York the morning of the 20th of February in a fine little brig with one hundred and thirty-six passengers, bound to California by the untried route of Nicaragua, and under contract to be put through in sixty days. After pitching about in a gale which caught us off Bermuda, one fine morning we awoke and saw Hayti lying on our right, and all day were sailing under its bold, beautiful shores.

From that time we scarcely moved a sail, but came across the Caribbean Sea direct to San Juan, with a wind always just aft, clear skies by day, and bright moonlight nights. More delicious weather I never experienced. On the morning of March 12 we made the land of the Mosquito Coast, and, running down twenty or thirty miles, came to anchor in the afternoon in a snug little harbor at the mouth of the river San Juan. I never was more surprised than at my first view of this place. I had expected it would be like Chagres, a collection of huts on some low, marshy point, and utterly destitute of everything like beauty or

interest; but I found it one of the prettiest and most charming little places it was ever my happiness to fall into. As we came in it looked just like a picture. The little bay with its three or four islands, skirted by a fine beach, on the outside of which a heavy surf was rolling, while within all was calm and still; the steep, thatched-roofed cane houses clustered together at its head relieving the dense forest behind; and the dimly seen summits of the far-off mountains of Nicaragua, made to me one of the most beautiful landscapes that I ever beheld. My heart fairly bounded with delight, and in these forests I had many a fine ramble. How strange it seems to be walking under orange, and lemon, and tamarind, and palm trees; to be picking guavas and mangos; to be breakfasting on alligator steaks and dining on wild boar! You should have seen me this morning, sitting under a cocoanut tree, from which I had shot a nut of just the right size, cutting the end with my machete, and drinking the rich, pulpy milk, watching with one eye a couple of suspicious-looking lizards and with the other a troop of some fifty monkeys who were performing all kinds of antics for my sole amusement. I went some four or five miles into the forest, and everything about me was so strange, so different from our New England woodlands through which I have been accustomed to wander, that I felt really inclined to doubt my own identity. On one hand would be a great cactus with leaves fifteen or twenty feet long and full of bright crimson flowers, on the other long trailers hanging sixty feet from great tamarind and dyewood trees. Palms were about me the buds of which were five or six feet long. In the little swamps some beautiful varieties of calla were in bloom, and in the branches of the trees were some of the most brilliant birds you would ever see — macaws and paroquets. Now and then I would start a wild turkey, and about noon had a double shot into an immense drove of wild hogs, but both unsuccessful. I take great delight in these rambles. Every day, while some of our party are reclining in their hammocks and complaining of the heat of the sun, I am tramping through the woods with my rifle or fowling-piece on my shoulder, or paddling about the bay with fishing-rod, or exploring among the islands or up the river, getting as much enjoyment as I can out of our detention here. We have hired a little piragua by the week, and a number of pleasant days I have spent in it on the water. All kinds of fish abound here, both in the river and in the beautiful lagoon back of the village, and if I tire of catching them I can have a hunt after guavas or a shot at a pelican, or into a flock of ducks by way of variety. I doubt if I ever was in better health in my life. The mercury rang-

GOING UP THE SAN JUAN IN A BUNGO.

ing from seventy at night to eighty or eighty-five at noon, and the sea and land breezes blowing with refreshing regularity. Every morning we are down from our hammocks by sunrise and in for a bath, not regarding in the least the sharks and alligators, which may be floating within twenty feet of us.

CITY OF GRANADA, CENTRAL AMERICA,
May 24, 1849.

You will be surprised to receive this letter bearing this late date and written by me still

most efficient, and we were considered the most fortunate of the company. What to many of our party was a voyage full of hardships and danger to us was the pleasantest part of our journey. The San Juan is a fine, noble river, abounding in fish, dotted with islands, and lined on each side for its whole extent with forests the exceeding beauty of which no pencil could paint or pen describe. The deep verdure of the foliage, the many brilliant flowers, the long waving palm leaves, the graceful festoons of the vines and mosses intertwining themselves in a

UPPER CASTILLO, LOOKING DOWN THE SAN JUAN RIVER, CASTILLO RAPIDS IN THE CENTER.
(FROM A PHOTOGRAPH BY O'NEIL.)

thousand different ways, we were never weary of admiring. At night our piragua would be drawn up by some sandy beach, and we would spend an hour hunting turtle or iguana eggs and catching fish, which with coffee made us excellent meals, and easily cooked. For two or three hours we would walk up and down in the moonlight; then rolling ourselves in our blankets and lying down among the boatmen, we would sleep as soundly amid the roaring of alligators and cougars, as ever I did in my bed at home. At dawn we would be wakened by the matin song of the boatmen, and during the day, when we were not gazing at and conversing about the strange sights and scenes through which we were passing, reading and study made the hours glide pleasantly away. So passed eight days, when we came to San Carlos, where the lake meets the river. Here we changed piraguas, and after two days' detention set sail for Granada. We were sorry enough to part from our captain, Mercedes, who had really quite endeared himself to us; and his crew were all a fine set of fellows. We soon found we had not bettered ourselves, for scarcely three hours out there had like to have been a pitched battle between the bungo men with their machetes and the passengers, now increased in number to eight, and all well armed. A few well-directed blows, however, settled the matter.

It was the 13th of April when we entered Granada—but I will give you an orderly, book-like description of the place where it has been my unexpected lot to tarry the last five or six weeks. The first object which indicates its vicinity to the traveler who may be navigating the clear waters of the lonely mountain-girt lake of Nicaragua is a high volcanic peak which rises five thousand or six thousand feet boldly from the shore, with, when we saw it, every rocky point sharply defined against the western sky, but which, at this season, night and morning veils its head in clouds. On a nearer approach he sees running northwardly from its base a long, wide beach of very fine sand with a ruined fortress standing midway upon it. This beach seems to him to be of a curiously variegated black and white color, and he gazes at it with wonder; but as he draws still nearer these appearances resolve themselves into piles of clothes and groups of tawny-skinned

women vigorously engaged in restoring the clothes to purity. Their process of doing this is somewhat peculiar. The women seat themselves in about knee-deep water, and, taking the clothes as they are passed to them by little

FORT SAN CARLOS AND LAKE NICARAGUA. (AFTER A PHOTOGRAPH BY O'NEIL.)

naked children, rub them over with a saponaceous herb, and then, after soaking, pound the clothes on flat stones with all their strength—and here they are by no means the weaker sex—until not only every vestige of impurity leaves them, but, if any fine or delicate fabric comes into their hands, until its substance often vanishes in passing through the ordeal. It needed only the loss of a few shirts and handkerchiefs to convince me of this. These washerwomen are the first sign of the city, for as yet no mark of habitation is visible. The piragua nears the shore, and an anchor is thrown out. A bold bungo man leaps into the water, the stranger places himself on his shoulders,

and, if not a long-legged man, is borne dry-shod to the land. At this moment a dozen men on fine horses come rushing by at full speed in a torrent of dust and exclamations. The traveler is somewhat surprised, and, seeing at a distance twenty or thirty others likewise bearing down upon him, begins to grow un-

LANDING AT GRANADA.

easy; but being told that they are passing only for amusement, his fears are quieted, and he admires the grace of the riders and the spirit of the steeds. Then, leaving the lake directly behind

WASHING ON THE SHORE OF THE LAKE.

him, he passes up some one of half a dozen roads leading to the city, bordered on each side by hedges of prickly cactus inclosing fields of plantains and pines, and he smiles to think how precious in our northern conservatories would be the very weeds he is treading under his feet. As he ascends the gentle rise he meets long files of women walking along with a firm, erect step, balancing on their heads large earthen jars of the capacity of from two to four

gallons, with which they wade into the lake, and, filling them, return to the city, oftentimes singing as they go, and forming in their singular costume a scene quite interesting. At the distance of half a mile from the lake the stranger enters the suburbs, and begins to see before him the broken towers of the old time-worn churches, from which, at any hour of the day, a dozen clear-toned bells are chiming. In the suburbs live the lower classes or laboring

A STREET IN GRANADA.

population, if they may be called so in a country where a man rarely works if he has a "peseta" in his pocket to buy him his dinner. The houses are mere huts of cane thatched with palm leaves, many of which a strong man might carry away on his shoulders. All colors may be seen, but most are of the Indian shade, and of children and dogs there appears to be an infinity. Most of the young ones have their hair cropped to within a sixteenth of an inch of the skin, with the exception of a few locks in front, and it makes them look like little fighting cocks.

but the sidewalks are only about two feet wide, and are raised high up from the streets, which are inundated in the rainy season. Moreover, as the windows of all the houses project a foot or so from the side of the walk, an inexperienced passenger in the night is apt to return home with several depressions in his hat and corresponding elevations on his head. These houses, in consequence of their being built directly on the street, with walls three or four feet thick, large heavy gates, and iron-barred windows without blinds or glass, give the streets a somber and

THE SUBURBS OF GRANADA.
(AFTER A PHOTOGRAPH BY O'NEIL.)

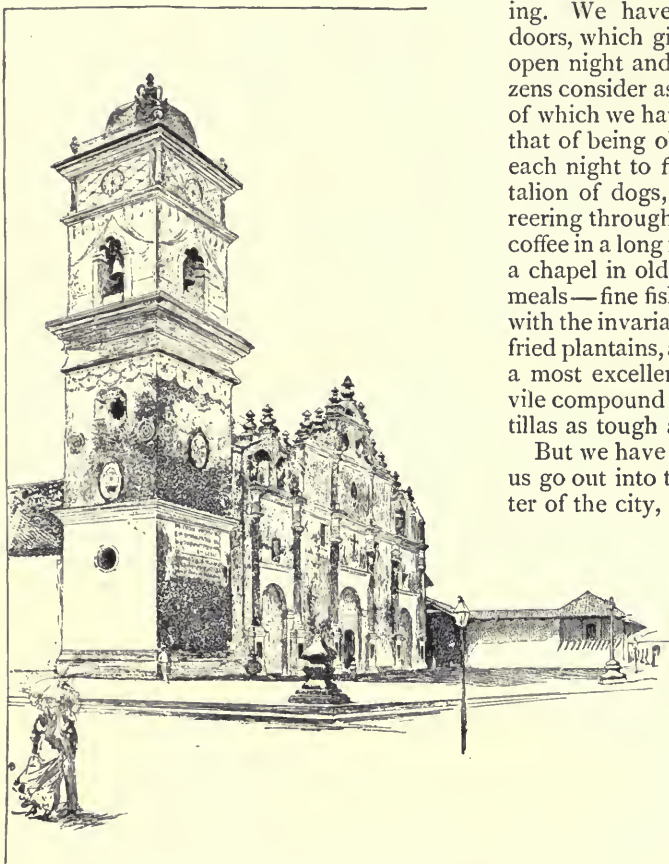

They roll about naked in the dust till they are eight or ten years of age, when their mother puts scanty garments upon them and sends them to school. Still farther on, adobe houses begin to be mixed with those of cane, but all are small and unconnected until the city proper is entered. Then the streets, which are regularly laid out at right angles, are entirely built up with blocks of heavy-looking one-story adobe and stone houses, all stuccoed and painted white, with tiled roofs projecting six or eight feet over the street, forming an agreeable shelter for the person who is obliged to walk out under the rays of an almost vertical sun. The streets are about as wide as Nassau street, New York, sufficiently so for carts easily to pass one another;

prisonlike appearance, which the white stucco with which all are covered vainly strives to relieve. But within they are more comfortable for this warm climate than I should have supposed. The dwelling-apartments, kitchens, and stables form a hollow square inclosing a court, generally well planted with flowering and fruit trees. All the interior roofs project ten or twelve feet, forming a shady corridor, where it is very cool and delightful to lie swinging in one's hammock. Very little furniture is used, a few chairs and tables, beds and hammocks sufficing. The city rejoices in two pianos, but, I believe, contains no carpet. The floors are generally of brick, kept clean and bright, and are much cooler than ours, and rarely wear out. I have

not seen a pane of glass in Central America, which is indeed almost useless, for, owing to the lowness of the long, projecting roofs, sun and rain can never enter, while the cool breeze is always invited. Our Venetian blinds, however, would be very agreeable. There are, only heavy-barred shutters, which in early evening, owing to the fear of revolutions, are shut and locked, and the whole city seems deserted. One of these houses, strongly built of stone and heavy wood, is at present our abiding place. It is a house larger than the ordi-

gether it is perhaps the best house for hotel purposes in the city, and we live in it with a good degree of comfort. It was here that we came when we first landed in the city, and it immediately went into operation with twenty boarders at a dollar a day each. We were satisfied with our fare, but, thinking it too high a price, they concluded after a few days to reduce it one-half, keeping us for three dollars and a half a week. So thus we live, sleeping in our hammocks or on hide beds, as the fancy takes us, in a large paved room, open to the roof, where at any time a dozen bats may be seen hanging. We have no windows, but have two doors, which give us a good draft, being kept open night and day, a measure which the citizens consider as the extreme of hardihood, but of which we have felt no inconvenience except that of being obliged to turn out once or twice each night to fire a volley of pistols at a battalion of dogs, who take great delight in careering through. Twice a day we are called to coffee in a long room which may have served for a chapel in olden times, and twice more to our meals—fine fish from the lake, flesh, and fowl, with the invariable accompaniments of tortillas, fried plantains, and frijoles. The plantains were a most excellent dish, but the frijoles were a vile compound of beans and lard, and the tortillas as tough and hard as sole leather.

But we have stayed long enough inside; let us go out into the plaza. This is the main center of the city, a square about half the size of the New Haven Green, but without a tree or a blade of grass. Looking towards the east front, where our street enters, we have just before us the principal church, a fine-looking edifice which appears venerable more from decay than from years. On one side of it is a long, low town hall or court-house; on the left are dwelling-houses, and on the right the arsenal and quarters for the soldiery. The remaining side is mostly given

CHURCH AND CONVENT DE LAS MERCEDES.

nary size, on a corner two squares from the plaza, and was the old Convent de las Mercedes, from which the inmates were driven in a revolution some years ago. And now where formerly the nuns chanted, told their beads, and did penance, some fifteen or more "Norte-Americanos" eat, sleep, and make themselves as cool and comfortable as possible. A fine, wide corridor runs about the house, both inside and outside, where a regiment might sit at ease in the shade, and within is a large court planted with mango trees, for the rich fruit of which I have acquired a decided taste; alto-

gether it is perhaps the best house for hotel purposes in the city, and we live in it with a good degree of comfort. It was here that we came when we first landed in the city, and it immediately went into operation with twenty boarders at a dollar a day each. We were satisfied with our fare, but, thinking it too high a price, they concluded after a few days to reduce it one-half, keeping us for three dollars and a half a week. So thus we live, sleeping in our hammocks or on hide beds, as the fancy takes us, in a large paved room, open to the roof, where at any time a dozen bats may be seen hanging. We have no windows, but have two doors, which give us a good draft, being kept open night and day, a measure which the citizens consider as the extreme of hardihood, but of which we have felt no inconvenience except that of being obliged to turn out once or twice each night to fire a volley of pistols at a battalion of dogs, who take great delight in careering through. Twice a day we are called to coffee in a long room which may have served for a chapel in olden times, and twice more to our meals—fine fish from the lake, flesh, and fowl, with the invariable accompaniments of tortillas, fried plantains, and frijoles. The plantains were a most excellent dish, but the frijoles were a vile compound of beans and lard, and the tortillas as tough and hard as sole leather.

But we have stayed long enough inside; let us go out into the plaza. This is the main center of the city, a square about half the size of the New Haven Green, but without a tree or a blade of grass. Looking towards the east front, where our street enters, we have just before us the principal church, a fine-looking edifice which appears venerable more from decay than from years. On one side of it is a long, low town hall or court-house; on the left are dwelling-houses, and on the right the arsenal and quarters for the soldiery. The remaining side is mostly given up to stores and shops, but with one or two dwelling-houses, and one just where we are standing is where I have passed as pleasant hours as any in the country. If it is morning, and especially of a Sunday, the plaza is in the full bustle of a market. The Indians come in from all the country round, some on donkeys, some riding or driving mules, but more on foot, and these mostly women, walking many miles with loads of fruit and vegetables which it would seem must about break their backs, and returning perfectly satisfied with a silver real (12½ cents) for their load. Many seat themselves in

rows at the sides of the square, while others go about from one place to another with their wares, chattering and bargaining, and, as their costumes are often quite gay, it presents a very lively and animated scene. At noon not a soul is to be seen; everything is taking its "siesta." In the evening the scene is changed. A few market women who have their wares undisposed of still remain, and groups of men are at the corners talking over the news, but it by no means presents the animation of the morning. We cannot stay long, however, before from the belfries of the church chime out the bells, the doors open, and forth issues some baptismal or extreme unction procession, with music, torches, bells, and soldiers, the priest in a kind of sedan chair, borne by some half-dozen stout men, and followed by a train of women and children, gesticulating and singing at the top of their voices. At this, all in the plaza and up all the streets within sight go on their knees, "los Norte-Americanos" excepted, who take off their hats and moralize on the procession as it sweeps along.

But the place to go for amusement in the evening is the lake. There come down, when the day grows cool, the young men of the city, and dash about over the fine beach on their spirited horses, oftentimes having with them their young lady companions, seated before them on the saddle, while hundreds—and, if it be Sunday or a feast-day, often thousands—of others are bathing, walking about, or seated in groups under the trees, enjoying the breeze, which is always blowing over the lake with the most refreshing coolness. Many very delightful hours have I passed there, often alone, seated on the ruins of the old fortress, gazing out over this most lovely lake, with its clear waters, its islands, and high mountain shores, and admiring the wonderfully perfect and symmetrical outlines of lofty Ometepe and its sister volcano, which rise up out of its very bosom; sometimes with my Granadian friends promenading the beach on foot or on horseback, or seated under the trees eating watermelons, which the country bingos bring in great abundance, and chatting in broken Spanish, to their no small amusement. If a violin happens to be near, it is a very easy matter to get up a dance under the shade of some of the large, wide-spreading trees which border the shore, or if a guitar is present, the girls are always ready to sing. The Nicaraguan ladies—at least those of Granada—are very fine-looking, and they seem inclined to do all in their power to make our stay agreeable. We are indeed a great novelty to them, for this is a country through which foreigners very rarely pass, and almost every house is open to us and at our service. Granada used to be, they tell us, a very gay place, with

music and dancing every night in all the streets; but of late, owing to the dread which the numerous revolutions have inspired, the spirits of the place have departed, and after dark, when we first arrived, every house was closed and double-barred, and the whole city as silent as a church-yard. The presence of so large a number of Americans in the place seems to have given the inhabitants a greater sense of security. But we have decided to start to-morrow, and, as I have my farewell calls to make, for the present good-by.

LEÓN, June 1, 1849.

HERE we are now living as systematically as the oldest inhabitant, in León, the metropolis and now the capital of the sovereign state of Nicaragua, having reached the third station of our journey—*quién sabe* how many more there may be before we pass the golden gates of San Francisco Bay? Eight or ten of us are occupying a large and comfortable house two blocks from the plaza, and we live in peace and quietness, under the auspices of a fine old priest on one side, who sends us little gifts, and always makes it a point to be at his window to greet us with "gun morning," and of an equally fine old lady on the other, who gets up our meals in the approved style of the country at a real and medio (18¾ cents) a head. The main body of our company are in Chinandega, a large town twelve leagues nearer California; but they are in much discontent, and we prefer keeping quiet and cool by ourselves. We have a large court, with four rooms on one side of it, where from one wall to the other we sling our hammocks, which serve as seats, lounges, and beds. Here we receive with proper dignity our numerous visitors, and here, I think, we shall stay till a vessel can be chartered, or everything comes to a winding-up, which is equally probable. But I must tell you how we got here. Imagine me on a delightful morning, the 21st of May, bidding farewell to my kind friends in Granada, getting my pockets full of cigarritos and cakes for the journey made by their fair hands, and walking round to the hotel. Directly arrived our muleteer, with six animals in a row, each one with his head tied to the tail of the one before him. Then there was a rush for the choice. Destiny marked out as mine a little black mule, sleek, well-trained, and with quite an intelligent, animated countenance. On the Alvarado I placed my alforjas and hammock behind, my spyglass, haversack, and rifle before, my blanket over all, and lastly myself. It seemed load enough to crush the little fellow, but he bore up nobly. Imagine the others performing the same operations, and finally, all being equipped, amid the acclamations of a street full of spectators, filing up the Castle Real, and singing at the top of our voices

DANCING ON THE SAND AT GRANADA.

to the tune of "Oh! Susannah" a little song made on our departure —

Me voy á California
A tierra muy lejana, etc.

It would have been a queer procession to move down Broadway, some on horses and some on mules, each with his pistols and knife belted around him and his rifle or gun slung to his saddle-bow, and the animals themselves half buried under a weight of blankets, alforjas,

ponchos, water-calabashes, and the like. But we went on bravely for a league, when adventure the first greeted us. One of our party got off his horse to pick up his pouch, which had dropped, and, he being some time about it, the animal began to walk off; the walk was soon changed to a trot, and then to a gallop, and the horse disappeared in the bushes, having first relieved himself of the greater part of his cargo by a kick and a shake. Two of us, being behind and seeing the mishap, dashed into the woods in pursuit, but soon lost the track in a

maze of paths, and returned to the road to search out Andrés, our guide. We went on to join the rest of the party, who had dismounted, and were seated comfortably under the dense shade of a cotton tree, regaling themselves on wild plums. In half an hour Andrés came back, saying that the beast could not be found, and that he had probably gone back to Granada, whither he would go in pursuit. We then went up to a little hacienda near, and, ordering dinner, awaited his return, sending out also the men of the place under the inducement of a reward of three dollars for the gun and fishing-rod, which had been so securely fastened that they had not been thrown off. Meanwhile we lay under the shade, some sleeping, some chatting, and some eating different unknown fruits, which the little naked children delighted to bring us. In an hour our repast was brought to us on a large tray — six gourds containing a curious compound, mush, chopped onions, eggs, and a rather suspicious substance which from the spotted appearance of the skin we at first thought snake, but which the conformation of the bones proved to be lizard, and which was very sweet and delicate. We were all hungry, so the gourds soon went away empty. Late in the afternoon the guide returned without the horse, but with a note from a friend advising us to go back and take a fresh start in the morning. This, however, we were unwilling to do, not wishing to lose a day; and who likes to bid good-by twice? We therefore decided to take the guide's horse, while he, notwithstanding his earnest remonstrances, was to go afoot. But, fortunately, just as we were issuing into the road the hacienda man appeared with the runaway, though minus the gun. The change was made to the satisfaction of all, and onward was the word. Andrés, however, was in a very ill humor, and his temper was by no means improved by the threatening appearance of the clouds, which had begun to gather around the mountains of Granada in a very ominous manner. He obstinately refused to let his horse take a faster gait than a walk, and we, being inexperienced on the road, kept the same pace. In about two hours — long enough to have brought us to our first stopping-place, though we were not more than half way — on came the rain. It grew dark as suddenly as shutting your eyes, and amid the most vivid flashes of lightning and terrific crashes of thunder a deluge of water descended that seemed as though it would beat us off our saddles. By this time we had left the main road for a shorter mule-path, which led through a series of ravines in which our mules so pitched, slipped, and jumped about that it appeared certain that in some of them we must all roll over together to the bottom.

We kept close together, singing and whistling to indicate our whereabouts, for we could not see a foot before us except during the flashes of lightning. Once we had a regular stampede. One of the party attempting to open his umbrella, every animal started with a jump. Mine leaped on a high bank and plunged headlong into a jungle, where I really thought he had stuck fast. Altogether it was a hard ride, and as we were obliged to go slowly it was nine o'clock before we reached Masaya. For once I listened with satisfaction to the distant barking of the dogs, and soon we were riding through a long street of Indian huts. At one of these our guide stopped, and, after some conversation with its inmates, informed us there was no *posada* in the place, and that all the houses were shut up through fear of a revolution; nevertheless we were obliged to stop there. He himself was in mortal fear, and kept telling us to talk loudly in English, that we might not be mistaken for a party of revolutionists, and be shot in the dark. We held a consultation, and were more than half inclined to start again in search of some place which might promise better accommodations. But then we considered that we were wet and weary, in a strange place, and understanding little of the language, and any shelter seemed agreeable. A fresh shower coming down just then decided the question at once, and in a moment every one was off his saddle. A glance into the house showed us that little was to be hoped for there. It was only a little cane hut about twelve feet square, and already contained at least a dozen men, women, and children, with the usual complement of an ill-looking dog apiece. One look was sufficient, and we left for the kitchen. This was a similar structure, but smaller, and, finding it unoccupied, we took immediate possession. There was room, by close squeezing, for four of us to sling our hammocks from the poles of the roof; the other three made their couches on bundles of reeds. I must say, however, that the people of the house could not have treated us more kindly. They did everything in their power: took care of our beasts, and would freely have given up their own poor beds; but suspecting fleas, we thanked them, which is here equivalent to a polite refusal. They also got us a much better supper than we could have expected, charging us only the prices of the articles; and for half the night a crowd of naked boys and girls were at our door, waiting to attend to anything we might require. Imagine us, four in a row, suspended over the three others beneath, hanging in nets of grass, midway between the ground and the roof of the little hut, half afraid to move for fear of bringing the whole down on our heads, and with the smoke of the fire gracefully curling around

us, which, though it offended our eyes, answered the excellent purpose of keeping off the mosquitos. We slept well and soundly, and the next morning rose early, and saddled our animals, and set out for the plaza. Our guide suddenly changed to be one of the best-tempered men in the world, and for the rest of the journey he continued so. Nothing could put him out of temper, and there was nothing he thought would please us, or be of service to us, that he would not do. But we did not thank him much this morning when he led us to the door of a fine posada fronting the plaza where we might have stayed the night before. We ordered as good a breakfast as they could give us, and while it was being prepared went out for a little walk about the town. Masaya is a place of more inhabitants than Granada, but of a very different appearance. Granada is more compact than any city I have ever seen, while Masaya is scattered about, all the houses disconnected and standing among a profusion of palm, cocoa, and fruit trees. We had hardly gone four squares before we were obliged to return, being loaded down with presents of fruit. The plaza of Masaya is very large, and presented a very lively scene as we rode through it. The market was in full operation, and I should think at least a thousand men and women, in costumes gayer than any I have seen in any other place, were busily engaged in exchanging their wares. . . . Two miles [from Masaya] we came to a little village the remembrance of which is like that of a beautiful poem. Said B——, "I could live here forever," and we all felt saddened as a turn in the road cut off our parting glances.

A little farther on a magnificent scene awaited us. We came to where the road crossed a vast stream of black lava, which had rolled down from Masaya mountain overwhelming and destroying everything in its course, and had passed down as far as we could see towards Lake Nicaragua, which, with its sister lake of Managua and their connecting river, lay in the distance, the high range of mountains which separate them from the Atlantic bounding the view. About two leagues on we came to an open plain on which many cattle were feeding, and stopped for half an hour to let our mules and horses graze, while we ourselves dined on pines and oranges which we had brought with us.

From this point the road led through the forest four leagues to Managua, and here we were called upon to admire a new kind of beauty — large trees of the size of our elms, with not a leaf upon them, but covered in their place with flowers, some of a bright yellow and others clear red and white. When I say covered, I mean all covered, like the stem of a

hyacinth, a hundred on a twig. Where they overhung the road, our horses often would be fetlock deep in the blossoms which had dropped, and yet there was apparently no diminution on the branches above. They were not coarse and ugly, but delicate and fragrant, the kind which the ladies of this country most delight to entwine in their hair. One sight I saw which I could only stand and gaze upon with delight — one of the largest of these trees, and one of the richest in this new kind of foliage, with an immense vine covered with blue and purple flowers winding up to its topmost boughs, and hanging thence in long and rich festoons, forming a most complete bower. As if to make perfection more perfect, among the branches were perched two macaws, the most beautiful birds of the country, with the richest red and blue plumage, and drooping tails a yard long. About sundown we reached Managua, a large town and the true capital of the State. It is situated on Lake Managua, where we had a delightful bath, and then returned to the posada, the best in the State, and kept by a man who owns a plantation some leagues square on the Pacific, from the products of which he set us out a most excellent supper. We slept here between sheets, and on pretty fringed pillows, which were so soft we were loath to leave them in the morning. But in this country the time to travel is the early morning or the cool of the evening, the middle of the day being very hot. Our forenoon's ride was to Matiares, six leagues. The road crossed a mountain from which there was a superb view of Managua Lake with its numerous bays, promontories, and islands, with Momotombo and Momotombito rising in full view, the loftiest volcanoes in the country, visible fifty leagues away on the Pacific. To-day we met numerous travelers and long trains of freight-mules. Troops of monkeys and apes and flocks of parrots enlivened the way, and now and then a deer would start up and bound away through the bushes. We took our siesta on the plaza of Matiares, the town itself, which has been pretty much destroyed in a late revolution, offering no accommodations for us. In the afternoon we went four leagues farther to Nagarote, a large place, where we passed a comfortable night in the house of the schoolmaster. Much of our way was along the borders of the lake, heavy traveling for our animals, but from the change of scenery pleasing to us. The next day twelve leagues brought us to León. You see I am running on, for if I should describe minutely all the incidents of the way, both you and I would be well tired. . . .

June 26. Twenty-five days later from Central America: as many more, and we may

MARKET AT MASAYA.

call ourselves old citizens, and, for aught I know, be entitled to vote at the next election. We are still living at León, nine of us, enough to keep one another in countenance in this strange city. A week since I rode over to Chinandega to look after our baggage, and spent a day there to see what was going on and to watch the course of things; and I returned very well satisfied to remain where I was. Though we have been detained in this country more than three and a half months,—it may be a month longer before a vessel will arrive at Realejo to take us up the Pacific,—still we

by priests and in fear of a vagabond soldiery. But here reside the British and the American consuls, the bishop, the general, the director, and all the dignitaries of state. Two gentlemen from New York are also here, engaged about the canal treaty. We are on somewhat intimate terms with a number of families residing here, going in and out when we please, as the custom of the country is. The posada has been a favorite place of resort for us. The landlord and the landlady are a perfect study for a seeker of "characters." But they are very kind to us, and are exceedingly anxious to have

A STREET IN LEÓN. (FROM A PHOTOGRAPH BY O'NEIL.)

have passed through a land full of interest, at least to a young traveler. The natural features of the country mingle beauty and sublimity to the highest degree, and the climate must be one of the most delightfully salubrious and healthful in the world. Much of my stay has been made exceedingly pleasant by the hospitality of the people, particularly in Granada, where I became really quite attached to many kind friends.

León is a city of much more pretension than Granada, but of not half the stamina and respectability. Granada is sound and whole; León is decayed, prostrate, its people overridden

their daughters learn English. One of their sons, a little fellow of fourteen, is an ensign in the army, and a daughter is married to General Muñoz; so they are all very patriotic, and heartily hate the "Colandrakes," as the opposition party are called. We have called once or twice on the General, and have been received very courteously. He is a gentlemanly man, and looks just like the lithographs of Santa Ana, La Vega, or any other of the Mexican chieftains, mustachios and all. But whatever may be his military qualifications, he must test them now, for he is required to go down with his army and to face Samosa, an assassin and leader of

the opposition, who has just taken and burned the city of Nicaragua, committing there the most terrible atrocities. We went up into the plaza this afternoon to see them off, and, notwithstanding the uniformless and ragged appearance of the troops, it was really a solemn spectacle when the bishop with his retinue of priests, after preaching them a sermon, gave them his blessing, and bade them go and fight for their country. Meanwhile Samosa was being excommunicated in the cathedral, the bells were clanging, cannon were firing, and all León was in commotion.

After they had filed up the street the General and his staff came out from his quarters in the posada, and there was another scene, his wife and sisters in tears, bidding him goodbye, and lamenting that they should never see him again. Soon all galloped off, and we followed to the river, and in the distance it

sponse always is, "*Muy bien*," and we pass where we please.

About a week ago a messenger came up from the Sovereign Director of the State, asking us to change houses with him, as he wished to fortify ours. We answered, "With pleasure," and at evening a cart and an escort came for our baggage. We loaded it and, taking our guns and rifles, marched down with it to the plaza, singing as we went, for it is a custom with us when we find ourselves in queer situations, which is often the case, to sing certain songs at the top of our voices. As soon as we reached the plaza up came a file of soldiers and a full band of music with torches and lanterns, and escorted us down in the most triumphal way. At the door they gave us a serenade ending with the "American March," the little boys cheered, and we entered. The President set out a table for us, and we were waited on as quite a dis-

THE SEAPORT OF REALEJO.

was quite a striking sight to see the troops marching up the long, broken hill, the horsemen bringing up the rear with a blood-red pennon streaming from the point of each lance. Nothing will give you a better idea of the political condition of this country than to tell you that since we have been here there have begun and ended in the different parts of the country seven or eight revolutions. Each city has one on its own responsibility, and the authorities are in nightly fear that one will break out here. These revolutions have kept us in an interesting state of excitement. The city is under martial law, police orders are read daily at the different corners, sentries are doubled, and it is half what a native's life is worth to go wandering about after dark. But we Yankees are privileged. We have dropped the regular passwords, and answer to the challenges, "*Americanos del Norte*"; and the re-

tinguished party. What to make of it all we hardly knew, but the next day we were informed that we were considered as a guard of honor to defend the President's house in case of a rising. We laughed heartily, but congratulated ourselves on the exchange, as we had, rent free, a fine, spacious house on the best street in the city. Nine rooms, one for each of us, surround the principal court, and in the rear are two others, where are the stables and the kitchens, all well planted with lime, orange, mumbro, and fig trees, and the main one possessing a splendid jasmine bush, fully twelve feet in diameter, and geraniums and heliotropes all in full flower. We have each selected a room and hung our hammocks, and I feel quite as if I had a home.

July 13. Chinandega. There is really now some prospect of our getting off. Two vessels are lying in the harbor of Realejo, and when

A NICARAGUAN EXECUTION.

you receive this you may think of me as far up the Pacific, if not already within the promised land. We have spent more than four months in this strange country. So far as regards myself, I have enjoyed it highly; the constant novelty, the singularity of our position, our manner of life, and the continual succession of strange scenes through which we have passed, have prevented anything like stagnation. We are now in Chinandega—but I must tell you of a little trip we made before we came here. On the day after my last page was written letters came from our *chargé d'affaires*, Mr. Squier, who had arrived at Granada, informing us that, on account of the turbulent state of the country and the interruption of communication on the highways, fears had been entertained, if not of the personal safety of himself and suite, at least of a long detention, and requesting us to form a party and be in readiness to march peaceably down and escort him from Granada to León. Soon after came other letters to our consul giving him the information that Masaya was occupied by Samosa's troops. On this he thought that, although he had sent to Chinandega for others to come and join us, it would be best, on the whole, for us who were in León to go down at once. We therefore repacked our movables and went up to the consul's house, leaving the President's mansion with the fig trees and lime trees as a guard of honor.

The next day we spent in procuring horses. Four or five very fine ones were brought in from a hacienda a few leagues out, and the complement was made up from the *cuartel*, where we had the liberty of choosing from a hundred or more. Behold us then in the service of our own Government, and going down to the wars to escort our *chargé d'affaires*. The next morning we started, ten of us, all capably mounted, and in an extemporized though better uniform than had yet been seen in Nicaragua—red shirts and white trousers, with pistols and knives belted around us, and short carbines obtained from the President's private armory at the pommels of our saddles. As the government had been trying in every way to procure our services, it seemed the universal opinion, as we dashed through the streets, that we were the advance guard of a party going down to assist the General, and great was the sensation it excited. Our consul intended to be of the party, but the night before was taken down with fever. We crossed the river, and entered upon the Camino Real. This was a very different way from that in which we traversed the country before. Then we were going slowly from one town to another, loaded down with baggage and obliged to assume an easy traveling gait. Now we were free and unencumbered, our spirits high, and our horses fresh, and we could gallop and race along as we liked. In three hours we made Pue-

blo Nuevo, eight leagues away, but not without an accident on the way. One of our party had a sunstroke. At Pueblo we stopped two or three hours in the heat of the day to dine and give our horses "zacate." It was St. Peter's day, and all the young men of the place were on horses racing through the streets like madmen. Two days in the year they have this custom, which is amusing to see. We proceeded thence to Nagarote, where one of our party who was taken with the country fever on the road had to be left. We were detained till after dark, but decided on pushing on to Matiares that night. It was a lovely moonlight evening, and you may believe that our ride by the side of the lake shadowed by old Momotombo was enchanting enough. It was late when we reached Matiares, a miserably poor town, where the best house could show us no better accommodation than

for them all through Central America.) Even- ing brought us to Masaya, where, as we had made fourteen leagues, and it looked like rain, we concluded to stop for the night. We found here the General and his troops, but aside from them a more deserted-looking town I never beheld. It was in Masaya that this latest revolution was plotted, and the richer portion of the inhabitants had in alarm retired to their haciendas or had gone to Granada, the stronghold of the "Timbucos," who are the aristocracy, while, on the approach of Muñoz, the lower classes—the "Colandrakes"—had gone off to join Samosa, or had scattered themselves through the country. We had met numbers of them on the way. All the houses about the plaza were closed, the posada included. But on applying to the General, he quartered us without any ceremony in a house near the cuartel,

THE JOURNEY IN THE MARKET-CART.

one hammock, one table, a bench, and the floor. On the latter I laid myself, wrapped in my blanket, and, in spite of the opposition of a legion of fleas and biting ants, gained a few hours of good sound sleep after my ride of fifty-one miles. At sunrise our horses were saddled, and after a bowl of coffee we went on to Managua to breakfast. During the time we stopped here I went with a Granadian friend to visit some of his relatives, as beautiful girls as one would see in any country. (Managua is famous

and gave orders in another direction to have supper prepared for us. The next difficulty was the impossibility of buying fodder for our horses; but on further application a file of soldiers were sent who came with a supply, probably taken from the nearest cornfield. Riding through the plaza the next morning at sunrise, we saw the troops drawn up in long ranks, and a few people standing about in groups as if awaiting some event. Stopping our horses a few moments, there came out from the cuartel a mel-

A POOR SUBSTITUTE FOR BEEF. (SEE PAGE 931.)

ancholy procession headed by a man dressed in coarse white shirt and drawers, and with ropes around his ankles and wrists. He was carrying a large black crucifix, and was flanked by two priests reading aloud out of large books; behind came a file of soldiers with loaded muskets. Just then the bells began to chime a funeral dirge, and we knew that a military execution was about to take place. I will not describe it to you, for it was barbarously done; but the prisoner met his death like a brave man.

He was one of the plotters of the revolution, and a bad character generally. General Muñoz had caught him here, and gave him but a short time to prepare for his fate. . . .

It was very delightful to walk once more through the streets of the old city, for we all felt a kind of affection for Granada, the place where we had experienced so much kindness and hospitality. And it was very pleasant also to bathe once more in the bright waters of the lake. Cool and refreshed, we returned in time

to see the grand entrance of Muñoz into the city, which brought out all the people and set all the bells to ringing. He brought in five more prisoners, all of whom, I presume, have before this shared the fate of the poor man at Masaya.

The two days that we passed in Granada flew away very agreeably. In the early morning of our departure the General held a review of his troops, about a thousand in number, preparatory to marching down towards Managua, where we have since heard that he has beaten Samosa in one battle, and now has him penned up in a little town by the lakeside. About ten in the morning we collected at the house where Mr. Squier was stopping, and, our party being increased to over twenty in number by the addition of Mr. Squier and his suite, and some others, we rode into the plaza. There an officer met us and invited us to the residence of the General, who with his staff was anxious to escort us out of the city. Meanwhile merchants and other citizens were continually riding up, and soon we were more than fifty in number. We had a beautiful United States flag of silk, and with that streaming ahead we made a gallant show as we passed up the street leading to the highroad.

Night brought us to Managua, and we galloped through its principal streets, four abreast and flag waving, to the posada. We had scarcely disposed of our animals and seated ourselves to a quiet supper when we heard musket-shots and exploding rockets, and saw many people running by with arms in their hands. We hardly knew what to make of it, but soon a great company with soldiers and music came to our door, and then we learned that on our entrance, our numbers being magnified by the darkness, we had been mistaken for an army from Granada come to attack the place. The inhabitants had rushed together in alarm, but on finding out the true state of the case they had come to invite us to march about the town in procession. So out we went, unfurling our banner, and with that and the music in advance, Mr. Squier and his escort following, and with a train of three or four hundred Managuans behind, kept in good order by the soldiers, we passed through all the principal streets. We were greeted at every turn by loud cheers of "Vivan los Norte-Americanos!" "Vivan los Estados Unidos!" "Vivan el ministro de los Estados Unidos!" "Vivan las Banderas!" etc., to which we responded in our best Spanish, "Vivan the brave Managuans!" "Viva the fine ladies of Managua!" and fifty other vivas, always giving the real Yankee "hurrah," which greatly pleased them. Rockets were going up, guns were firing along the whole line, and all the señoritas of Managua seemed to be out in the moonlight. The crowd would

not release us till very late, and then not until we should give them "a patriotic song," with which they seemed perfectly delighted.

The next day was the glorious Fourth of July. We had intended to have some little celebration of it among ourselves, but, circumstances requiring the early presence of Mr. Squier in León, we passed the whole day upon the road. Often, however, a shout or a snatch of "Hail Columbia" attested that we were not unmindful of its presence. The night we spent in Pueblo Nuevo, where we found the friend we had left ill recovering, and so far upon his return route. At eight the next morning we continued, and in less than three hours were at the "Old Convent," a league from León, where a large escort was awaiting us — all the military and civil officers, the President and his cabinet, the bishop and his retinue of clergy, and a large number of the most respectable citizens, more than a hundred in all. Here we stopped a few moments, while Mr. Squier changed his traveling dress for his official uniform, and we washed and brushed ourselves a little; then our banner was unfurled, and the whole cavalcade started. We went on at full gallop across the plain of León, down the hill, across the little river, and up into the city. My little horse, notwithstanding the long journey, was fairly dancing with excitement. Entering the city we found the streets crowded with people, who all kneeled as the bishop passed, and then rose and shouted "Viva! Viva!" to the Minister. The bells of all the churches that we passed rang their gayest peals, cannon thundered in the plaza, and all the soldiers were drawn up to receive us with presented arms. And thus we concluded our second trip across the country.

We stopped for a day at our consul's, and then with two others I came on to Chinandega. For the sake of variety, and in order to be with our baggage, we made the journey in a market-cart, and it beat all kinds of traveling that I ever saw yet, bingos not excepted. I will not attempt to describe it, except to say that beside us three the cart contained two women, two babies, one man, and three boys; that we had one upset in a thunder-shower down a steep bank, and those who were not rolled out into the mud were nearly suffocated in the cart; and that we were all night on the road, during the whole of which the women amused themselves with singing the queerest, strangest songs that I ever yet listened to.

The English consul, who has always shown us great civility, offered to our immediate party the use of his house in Chinandega, altogether the finest in the place, and we have been here a week or two very comfortably situated. The consul's proper residence being at León, we

have the whole house, with two or three attendants to wait upon us.

SAN FRANCISCO, ALTA CALIFORNIA,

October 4, 1849.

THE main part of our company finally left Realejo in the brigantine *Laura Ann* on the 20th of July. At different times several small parties branched off from us, and more than once I was strongly urged to try my fortunes with them; but for reasons which satisfied me I steadily declined, notwithstanding one long and most vexatious and outrageous detention, and the result showed that I was right in my determination, as you shall shortly learn.

First, however, for our voyage. For the first month we met with the usual succession (in those seas) of calms and heavy squalls, for days together rocking in the long swell and not making a mile, the surface of the ocean without a ripple, and the sails flapping idly against the masts. Then suddenly in the night would come up a squall which would make the ocean seem a sea of fire and, perhaps with the loss of a sail, drive us many miles on our course, for all came from the eastward. All of that time I slept on deck, for you may believe that with 120 men on a vessel of only a little over 100 tons burden, the accommodations below were very limited.

We had not long left port before it was discovered that much of our water had leaked from the tank in which, in lieu of casks, it had been placed, and, in addition, that a large share of the provisions had actually spoiled, and the best were hardly eatable. Indeed, so long as the meat lasted, not a piece was put upon our table the smell of which would not have sickened any but a California immigrant. On this part of our voyage a strange sickness appeared among us, which in one night attacked nearly every person on board, and afterward not a person escaped. It was akin to the influenza, but with peculiar symptoms, and though, as it seemed, not dangerous, yet an exceedingly troublesome complaint. For some days not a sailor was fit for duty, and the passengers worked the ship. I had it somewhat severely, and for more than ten days. It was determined to put in at Mazatlan or San Blás for water, after we had been three weeks on an allowance, and had found that it would not be possible to make San Francisco with the stock that we had; but off Cape Corrientes a southeaster came up which bore us before it to Cape St. Lucas. . . . As day after day and week after week passed by, and we were making almost no progress against the constant northwester which blew down the coast, pint after pint was knocked off our allowance, and our provisions became exhausted, one kind after another, until finally they had

become reduced to bread, rice, and beans, with one quart of water a day for each man, for cooking as well as for drinking. The bread was full of worms and defiled with cockroaches; the rice was of a quality that would not bring one cent a pound in the States, half hulls, and with as many weevils as kernels; the beans were of a peculiar kind, and the more they were boiled the harder they became. There was no water to be wasted on them. So that my fare was half a pint of water's worth of boiled rice morning and evening. That left a pint for drinking during the twenty-four hours, and little enough we found it too. On this diet I lived for about two weeks, and like the prodigal son would have been thankful enough for the mush with which grandfather's hogs are fed, and many nights would have been glad to get my mouth into the dirtiest puddle that Chapel street ever saw. At length, finding it impossible to make San Diego, the port we were aiming at, we ran into shore at a venture one evening in September, and, coming on soundings in a thick fog, anchored, having then but eighty gallons on board. This time we were truly favored. The second boat sent on shore quickly returned, bringing the news that directly opposite was a basin of pure fresh water not ten steps from the beach, and that the surf was not so high but the casks could be floated off. What rejoicing there was! If it had been broad daylight, and if the captain had known of this water, he could not have placed the ship in a better situation than he did, running in to an unknown shore in the night, with imperfect charts and in a thick fog.

But now read the most remarkable thing! We had not lain thirty-six hours in this out-of-the-way spot when a vessel which was also out of water, passing by, saw us, stood in, and anchored alongside; and this vessel proved to be a Peruvian brig loaded with provisions for the California market, and with the owner of the cargo on board, who, having become dispirited by the length of his voyage, which had already exceeded four months, and having heard at the ports below that prices in California had gone down, was disposed to sell us all we wanted on very reasonable terms. So we bought of him flour, cheese, sugar, and lard of most excellent quality—a providential supply indeed, for, after getting our water, we should soon have been put to great straits for food, having in fact nothing eatable on board. The place where we were, a bight in Lower California, abounded also in fish, and several barrels of fine mackerel were caught and salted down, a fine bed of rock salt having been discovered on shore. Some cattle were driven down from a farm twenty or thirty miles back, three of which were bought and killed, so that from a state of absolute want

we suddenly found ourselves in the midst of plenty. . . .

At night we could camp on the shore, the wreck of a whaleboat which was found near supplying the wood for our fires. While here the supercargo, both mates, and all the sailors but two ran off and went up the country. The supercargo was a knave; he took with him all the charter money, and probably never intends to show his face in San Francisco. The first mate was a villain, had been a pirate, a wrecker, and a murderer, and had made any amount of trouble on board. We were glad to get rid of him. The others were good men, and were seduced by the mates and the supercargo. But the places of all were well supplied by members of our company who had been sailors before, and with a new crew we again set sail. Still the northwest winds continued, and it was not until more than three weeks, and when we were threatened with still another deficiency, that of fire-wood, that the hills which encompass the magnificent bay of San Francisco appeared in sight.

We thought all this bad enough, but what was it compared to what the parties who left us have undergone? The little sloop which I mentioned to you in a former letter as having left Realejo about the beginning of May, with nine of our company and some fifteen of the shipwrecked party, arrived here but the day before yesterday, having been 144 days on the route, 32 days becalmed in one spot under an almost vertical sun. They had only a pint of water apiece a day, much of the time almost perishing for want of food. Once they ran on the coast at a venture, as we did, but found no water. They dug for it, and searched the interior for thirty or forty miles, but in vain, and at length were obliged to put to sea with only a bottle of water apiece, their only chance being to fall in with a vessel, or to make some port within five days, at the end of which time they expected to perish. But the lucky thought of distilling entered their minds. A rude still was made out of a tin boiler and a gun-barrel, salt water was put in, and, to their great joy, it trickled down fresh. For twenty-two days they lived on what they could thus manufacture, averaging half a pint a day to each man, their only food three mussels a day. Some endeavored to walk up the coast, and found themselves in lonely deserts, obliged for days together to live on cactus, and were almost beside themselves for joy when they found a poor,

broken-down mule that had been left by the wayside. Others of our company joined a party which came up from Panama in an iron boat. For months they suffered everything. At length speaking a steamer, one leaped into the water, crying that he was perishing. A rope was thrown to him, and he was dragged on board the steamer; the others have never yet been heard from.

A bungo was also fitted out from Realejo many weeks before we left. The fate of that, too, is unknown, and probably none live to reveal it.

Here the most thrilling tales of sufferings hourly meet the ear. But, so far as we know with certainty, not a death nor even a dangerous attack of illness has occurred in all our company which left New York. Hardships, however, and peril and hunger and thirst, all have been common.

October 7. I will not attempt to convey to you any idea of this most indescribable place, nor to give you my impressions of it—I have not the time, being too busy in arranging and landing my baggage. You already know more of it than I myself do. Such another city never was and never will be. Sharps, swindlers, speculators, gamblers, and rogues of every nation, clime, color, language, and costume under the sun are here gathered together, and no words can convey a true idea of the result. I do not meet many of my friends on shore; they are mostly in other parts of the country.

SACRAMENTO CITY, October 22, 1849.

I THANK you often from the depths of my soul for the many letters your kind hearts prompted you to write. They were better than all the gold of the mines. By and by I will do my part, but if you knew the whirl my brain has been in ever since I landed in this strange country you would excuse me now. I am like one who is looking on an ever-shifting panorama, and cannot find time to say even a word to the one who sits beside him. Never expect to see me come back rich. I shall not make much money here, except by a streak of good luck. I am here so late, and every avenue is now filled up; but I do hope to get together enough to carry me back richer in experience, to be with you all again. You can conceive nothing of this country. No account that you have ever read can give you half an idea. Double everything, and believe that then you know not the half.

Roger S. Baldwin, Jr.

LINCOLN'S PERSONAL APPEARANCE.

PARTLY as a blind inference from his humble origin, but more from the misrepresentations made, sometimes in jest, sometimes in malice, during political campaigns, there grew up in the minds

of many the strong impression that Mr. Lincoln was ugly, gawky, and ill-mannered; and even in recently written reminiscences the point is sometimes insisted on. In one of the little bits of autobiography which he wrote in the campaign of 1860 at the request of a friend, he thus describes himself: "If any personal description of me is thought desirable, I am in height six feet four inches, nearly; lean in flesh, weighing, on an average, one hundred and eighty pounds; dark complexion, with coarse black hair and gray eyes."

To these points we may add the other well-known peculiarities of Lincoln's form and features: Large head, with high crown of skull; thick, bushy hair; large and deep eye-caverns; heavy eyebrows; a large nose; large ears; large mouth; thin upper and somewhat thick under lip; very high and prominent cheek-bones; cheeks thin and sunken; strongly developed jawbones; chin slightly upturned; a thin but sinewy neck, rather long; long arms; large hands; chest thin and narrow as compared with his great height; legs of more than proportionate length, and large feet.

The reader's first impression will naturally be that a man with such long limbs and large and prominent features could not possibly be handsome; and this would be true of a man of ordinary height. But it must be borne in mind that Lincoln's height was extraordinary. A six-footer is a tall man; put four inches on top of that and you have a figure by no means common. Long limbs and large and strong features were fitted to this unusual stature, and harmonized perfectly with it; there was no effect of disproportion or grotesqueness. The beholder felt that here was a strong man, a person of character and power. As an evidence of this I cite two opinions concerning his personal appearance, made by impressions upon observers who noted not only the general effect, but somewhat minute details. The first is from a Philadelphian who visited him at Springfield, soon after his election to the presidency, and wrote this description, which was printed in the Philadelphia "Evening Bulletin," under date of November 14, 1860:

He is about six feet four inches high, and about fifty-one years old. Unfortunately for his personal appearance his great height makes his lankness appear to be excessive, and he has by no means been studious of the graces; his bearing is not attractive, and he does not appear to advantage when standing or walking. Seated, and viewed from the chest up, he is fine looking. His forehead is high and full, and swells out grandly. His eyes are deeply set, and, when his face is reposeing, are not remarkable for brightness, but kindle with his thoughts and beam with great expression. His eyebrows are heavy, and move almost incessantly as he becomes animated. The lower part of his face is strongly marked by long angular jaws; but, unlike such a formation generally, his chin is broad and massive. His prominent cheek-bones, angular jaws, heavy chin, and large, full, but closely compressed mouth, with the deep lines about it, impress one with vivid ideas of his sternness, determination, and will. The hollowness of his cheeks gives him a somewhat haggard look, but as he is now cultivating whiskers and a beard, his appearance in that respect will soon be improved. His hair is very dark, almost black; is luxuriant, and falls carelessly but not ungracefully around his well-formed head. No facial muscles show more mobility than his, and consequently his face is an ever-varying mirror in which various expressions are continually flashing. Unlike most very tall men, he is lithe and agile and quick in all his movements and gestures. He talks fluently, uses good strong Saxon, avoids all attempts at display and affectations of any kind. His voice is strong and clear, and his articulation is singularly perfect.

My second citation is from a personal description of him written by Thomas D. Jones, the Cincinnati sculptor, who went to Springfield in December, 1860, and made a bust of Mr. Lincoln. This description was printed in the Cincinnati "Commercial" of October 18, 1871. Doubtless the lapse of years had somewhat dimmed the writer's first impressions; yet as the sculptor's profession had trained him in the art and habit of critical examination of lines and proportions, we may trust his statement both in whole and in detail as that of an accomplished expert.

Soon after reaching Springfield I attended one of Mr. Lincoln's evening receptions; it was there I really saw him for the first time to please me. He was surrounded by his nearest and dearest friends, his face illuminated, or, in common parlance, lighted up. He was physically an athlete of the first order. He could lift with ease a thousand pounds, five hundred in each hand. In

height, six feet four inches, and weighed one hundred and seventy-six pounds. He was a spare, bony, lean, and muscular man, which gave him that great and untiring tenacity of endurance during his laborious administration. Mentally he reasoned with great deliberation, but acted promptly, as he did in all of his rough-and-tumble encounters in the West. His arms were very long and powerful. "All I had to do was to extend one hand to a man's shoulder, and with weight of body and strength of arms give him a trip that generally sent him sprawling on the ground, which would so astonish him as to give him a quietus." Well might he "send them sprawling." His great strength and height were well calculated to make him a peerless antagonist. Get any man out of balance and he will lie down of his own gravity. His head was neither Greek nor Roman, nor Celt, for his upper lip was too short for that, or a Low German. There are few such men in the world; where they came from originally is not positively known. The profile lines of the forehead and nose resemble each other. General Jackson was one of that type of men. They have no depression in their foreheads at that point called eventuality. The line of the forehead from the root of the nose to the hair above comparison is slightly convex. Such men remember everything and forget nothing. Their eyes are not large, hence their deliberation of speech; neither are they *bon vivants* nor baldheaded. Mr. Lincoln was decidedly one of that class of men. His habit of thought and a very delicate digestion gave him a lean face and a spare figure. He had a fine suit of hair until the barbers at Washington attended to his toilet.

Mr. Jones adds a strong emphasis to his word-picture by recording how Mr. Lincoln's coming official responsibilities, growing into an overwhelming burden through the serious beginnings of southern secession, wrought an impressive change in his looks.

About two weeks before Mr. Lincoln left Springfield for Washington, a deep-seated melancholy seemed to take possession of his soul. . . . The former Mr. Lincoln was no longer visible to me. His face was transformed from mobility into an iron mask.

In the first of the extracts quoted, mention is made of the fact that he did not appear to advantage when walking or standing. This was not due to any disproportion in his figure, but to the general western habit of an easy-going, loose-jointed manner of walking—a manner necessarily acquired by the pioneers in their forest life, where their paths over inequalities of ground, over logs and stones, made impossible the stiff, upright carriage of men on the unobstructed pavements of cities. So also the sedentary habits which Lincoln's occupation as a lawyer brought upon him in later years had given him what appeared to be a slight stoop of the shoulders, though in reality it was

little else than the mere forward inclination of the head common to nearly all studious and reflective men. As a standing figure he was seen to best advantage on the orator's platform. At certain moments, when, in summing up a connected series of logical propositions, he brought them together into a demonstration of unanswerable argument, his form would straighten up to full height, the head would be slightly thrown back, and the face become radiant with the consciousness of intellectual victory, making his personal appearance grandly imposing and impressive.

Again, the question of looks depended in Lincoln's case very much upon his moods. The large framework of his features was greatly modified by the emotions which controlled them. The most delicate touch of the painter often wholly changes the expression of a portrait; his inability to find that one needed master touch causes the ever-recurring wreck of an artist's fondest hopes. In a countenance of strong lines and rugged masses like Lincoln's, the lift of an eyebrow, the curve of a lip, the flash of an eye, the movements of prominent muscles created a much wider facial play than in rounded immobile countenances. Lincoln's features were the despair of every artist who undertook his portrait. The writer saw nearly a dozen, one after another, soon after the first nomination to the presidency, attempt the task. They put into their pictures the large rugged features, and strong prominent lines; they made measurements to obtain exact proportions; they "petrified" some single look, but the picture remained hard and cold. Even before these paintings were finished it was plain to see that they were unsatisfactory to the artists themselves, and much more so to the intimate friends of the man; this was not he who smiled, spoke, laughed, charmed. The picture was to the man as the grain of sand to the mountain, as the dead to the living. Graphic art was powerless before a face that moved through a thousand delicate gradations of line and contour, light and shade, sparkle of the eye and curve of the lip, in the long gamut of expression from grave to gay, and back again from the rollicking jollity of laughter to that serious, far-away look that with prophetic intuitions beheld the awful panorama of war, and heard the cry of oppression and suffering. There are many pictures of Lincoln; there is no portrait of him. In his case there was such a difference between the hard literal shell of the physical man, and the fine ideal fiber, temper, and aspiration of his spirit; the extremes were so far apart that no photograph or painting of the former could render even an approximate representation of the latter.

There were also current many flippant and

ill-natured remarks concerning Mr. Lincoln's dress, giving people the idea that he was either very rude by nature, or given to hopeless eccentricities. Nothing could be more untrue. If in so trivial a matter the exact state of his mind is thought worth analyzing, it can be done by recalling the conditions and surroundings under which he grew up.

From his birth until he became of age, his home was a rude frontier log cabin. These cabins were far from being desirable schools of elegant dressing. As a rule they had only a single room, in which the whole family cooked, ate, and slept. They contained only the most indispensable articles of furniture. Changes of clothing were managed when the greater part of the household was out of doors, as was almost constantly the case. Even a tin wash-basin was a rare luxury. Young readers of *THE CENTURY* will no doubt wonder how the ordinary ablutions were performed. The devices were simple enough; the grown men went to the spring or creek, and the women and children brought the coöperative system into requisition. One person would go to the water-pail, fill the gourd dipper, step a few yards outside the cabin door, and pour water on the hands of the other; and so each was helped in turn. Such a thing as shoe-blackening was rarely to be obtained, except as an article of home manufacture, burnt straw being sometimes mixed with grease into a paste for the purpose. But had there been a ton of blacking, it would have been of little general service, even to those who had shoes; for there were no pavements or sidewalks, and everybody's walk was necessarily either in the mud or in the dust.

Yet it must not be hastily inferred that frontier people were habitually slovenly or always dirty. As a rule they did the very best with their poor facilities for personal neatness and adornment; and in this, as usual, the women were the more enterprising and persistent. According to their means they "tidied up" their bare little households, scrubbed their puncheon floors, washed, mended, knit, spun, and in many instances wove, with such skill and application as to contribute materially to the health, comfort, and cleanliness of the family, and often of the neighborhood.

Thus two influences contributed to the formation of Mr. Lincoln's habits and ideas about dress. The principal one was, of course, that of necessity. As a boy in Indiana, as the youth who drove one of the ox-teams that moved the family to Illinois, and cleared and fenced their first field for cultivation, he no doubt wore the ordinary pioneer garb; which in the warm summer weather was reduced to the shirt of coarse unbleached cotton, then commonly called "do-

mestic," trousers of butternut or blue jeans, and coarse cow-skin shoes; and no doubt, like other country boys, he was often compelled to substitute for missing suspender-buttons "pins" of the sharp thorns of the honey-locust, or little wooden pegs whittled out with his jack-knife. For head-covering, home-made caps of coon-skin were common in winter, and for summer hats of braided oat-straw, which every boy and girl knew how to make.

So long as he remained in his father's family he was necessarily subjected to these pioneer conditions. When he finally floated down the Sangamon River in his canoe to New Salem in 1831, there were doubtless chances for improvement, for New Salem had ten or fifteen houses and a store; and every self-respecting young stripling, launching out into the world as Lincoln did, paid an intuitive tribute to society even in this early form, by making himself presentable to the utmost extent of his means. But day labor in flatboat-building could not immediately furnish him either time or means for personal adornment. His opportunity probably came after the flatboat had arrived in New Orleans, the cargo had been sold, and he had received his pay. We may reasonably surmise that he wore a new suit of clothes when in June he returned by steamboat up the Mississippi to St. Louis, and walked thence to his father's home; and this betterment in his dress was probably continued, as far as might be, when he returned to become a permanent citizen of New Salem, first as the clerk in Offut's store, and later as one of the partners; for the inquisitive eyes of the country beauties who came to trade at his counter, or whom he saw at the little church gatherings on Sunday, could not fail to prompt an ambitious young fellow, early in his twenties, to such care of his person as he could afford.

But circumstances also followed to moderate this temptation. The Clary's Grove boys would not have tolerated any pronounced form of country dude; the store soon failed; the Black Hawk campaign gave him fresh experience in habits of primitive living; and on his return from soldiering, the occupation of deputy surveyor compelled him to a daily routine of encounter with brushwood, briars, and stones, in which his clothing, of whatever texture or cut, suffered the brunt of the battle. It is therefore likely that when he first went to Vandalia, as member of the legislature, the economy of his wardrobe was as remarkable as its neatness.

Here at Vandalia he saw a convocation of samples of all the good clothes and good manners in the State; but this showing could not have been very imposing. The settlement of northern Illinois was scarcely begun. Chicago had only a population of 550, but 27 of whom

were voters, while two years before New Salem precinct alone had given Lincoln 277 votes. The lead-miners who made up the settlement of Galena had reached that place by ascending the Mississippi River. The southern end of the State contained the bulk of its population, largely made up of pioneers from Virginia, the Carolinas, and Kentucky, and had St. Louis, Missouri, for its metropolis; though that city contained only six to eight thousand inhabitants, and did not as yet shed a very wide radiance of refinement in dress and manners, being more than anything else a flourishing *entrepôt* of the western fur-trade. Society, therefore, as Lincoln found it at Vandalia, was, as afterwards at Springfield, of the make-up and spirit of slave-State pioneers—Virginia customs and ambition modified by the tedious filtration through Kentucky and Indiana forests, and tempered by the craft and the sturdy personal independence taught by the use of the rifle and the ax. They were men generally well through the transition from buckskin to blue jeans, but not yet far on the road from blue jeans to broadcloth. They valued dress and costume as a means, not as an end; they looked more closely at the light in the eye of the neighbor or stranger, than at either the cut or texture of his garb, or the form or gesture of his salutation.

In fact there was such an absence of need for fine dress, that external display, except in men of position and well-established reputation, was rather regarded with suspicion. Western river commerce was just beginning a remarkable era of expansion and prosperity, fed by a constantly growing immigration; and river steamboats were haunted by a class of gamblers expert in the various games of cards, who made inexperienced or careless travelers their easy prey. These gamblers as a rule wore extra good clothes—shining silk hats, fine broadcloth coats, sparkling diamond breastpins; and they assumed all the elegance of manner compatible with their want of breeding and character, and the recklessness and desperation of their vocation. When an over-dressed individual appeared in a western village or community, it was all right if the people knew him to be Governor A. or Judge B. or General C., but if his name and standing were unknown, public opinion was quite sure to set him down as some accomplished professor of draw-poker.

The analysis thus far made of the surroundings and probable impressions of Mr. Lincoln during the pioneer period, which lasted, with but slight modifications, from his birth in Kentucky, through the days of his boyhood and youth in Indiana, the trip of emigration to Illinois, his experiences at New Salem, including the flatboat trip to New Orleans and the Black Hawk campaign, and his mixed occupation as

legislator at Vandalia during the winter, and practical surveyor of roads, farm lines, and town sites during the summer, covering in all a period of about thirty years, may seem somewhat prolix, but is very essential because those experiences and surroundings formed the solid and enduring elements of his character. It was this thirty years of life among the people that made and kept him a man of the people—which gave him the characteristics expressed in Lowell's poem:

New birth of our new soil; the first American.

Or, rather, it would be more accurate to say that there was an inborn quality in the individual, a finer essence, a nobler spirit which absorbed and combined in his character the people's virtues, while remaining untouched and untarnished by the people's vices. There is the constant manifestation of the nobler traits, the steady conquest of adversity through industry, patience, courage, self-denial, cheerfulness, ambition, and study.

A champion wrestler among the Clary's Grove boys, he did not become a braggart and bully. His trip to New Orleans gave him no allurements to cards or petty gambling. In his New Salem store he neither learned to chew tobacco nor to drink whisky. His Black Hawk captaincy created no craving for military titles. His appointment to the New Salem postmastership failed to make him a chronic office-seeker. His work of surveying did not convert him into a land speculator. Sorely harassed by debt, he employed no subterfuge that savored of repudiation, but allowed even his surveying instruments to be levied upon by his exacting creditor. He overcame his want with persistent work, and subdued his constitutional melancholy with genial, hopeful cheerfulness. Nay, more, while bearing his own sore privations, he was constantly helpful to others. His popularity was not accidental. He was always and everywhere in request, because he could always and everywhere render a service. The idle crowds wanted him because he could tell a good story. Horse-races and wrestling-matches wanted him as a just and fair umpire. The weak and defenseless wanted his stalwart frame and strong arm. Cross-roads disputants needed his intelligence and reading for explanation or instruction. The volunteers needed him to command them. Politicians needed his advice in caucus, and his speeches on the stump. Everywhere it was actual service rendered that yielded him leadership and influence.

This same clearness of apprehension, this same solidity of judgment, this same intuitive selection of that which was better and higher, which made him so useful to others, served him in directing his own career. He had read

law in borrowed books during the moments of leisure which he could find between his duties as legislator at Vandalia, his work of practical surveying, and the time necessarily devoted to electioneering and speech-making to secure his reelection to the legislature; and at the age of twenty-eight secured his license and moved from New Salem to Springfield to enter on a new career as a lawyer. A law had already been passed, largely through his own exertions, changing the capital of Illinois from Vandalia to Springfield; and the removal of the archives of the State government took place in 1839.

This removal of Lincoln's residence from a village of 20 houses to a "city" of 2500 inhabitants placed him in strikingly new relations and necessities as to dress, manners, society, and politics; and yet here again, as in the case of his removal from his father's cabin to New Salem six years before, peculiar conditions rendered the transition less abrupt than would appear at first thought. Springfield, notwithstanding its greater population and prospective dignity as the capital, was in many respects no great improvement on New Salem. It had no public buildings; its streets and sidewalks were unpaved; its stores, in spite of all their flourish of advertisements, were staggering under the hard times of 1837-39; and general stagnation of business imposed a rigid economy on all classes. If we may credit tradition, this was one of the most serious crises in Lincoln's life. His intimate friend, William Butler, related to the writer that, having attended a session of the legislature at Vandalia, he and Lincoln returned together at its close to Springfield, by the usual mode of horseback travel. At one of their stopping-places over night, Lincoln in one of his gloomy moods told Butler the story of the almost hopeless prospects which lay immediately before him—that the session was over, his salary all drawn, and his money all spent; that he had no resources, and no work; that he did not know where to turn to earn even a week's board. Butler bade him be of good cheer, and without any formal proposition or agreement took him and his belongings to his own house, and domesticated him there as a permanent guest, with Lincoln's tacit compliance, rather than any definite consent. Later Lincoln shared a room and genial companionship, which ripened into closest intimacy, in the store of his friend Joshua F. Speed, all without charge or expense; and these brotherly offerings helped the young lawyer over present necessities which might otherwise have driven him to muscular handiwork at weekly or monthly wages.

From this time onward, in daily conversation, in argument at the bar, in political consultation and discussion, Lincoln's life gradually broadened into contact and contest with the

leading professional minds of the growing State of Illinois. The man who could not pay a week's board bill was twice more elected to the legislature, was invited to public banquets and toasted by name, became a popular speaker, moved in the best society of the new capital, made what was considered a brilliant marriage, grew to important party influence, and was sent to Congress. His congressional service, though restricted by the traditions of his district to a single term, again widened his influence. He became a force in the nomination and election of General Taylor, made campaign speeches for him, not only in Illinois, Indiana, and Kentucky, but also in the eastern States; and easily maintained his position as a leader in politics, while rapidly growing into fame as a leader at the bar.

Here we must turn back and again take up the analysis of his personal traits. And first as to dress and manners. It is a significant fact that the only alleged descriptions of his appearance in those early days (and they are evidently inferential rather than literal) are those which represent him as the tall, raw, country stripling in the pioneer garb in which he made his advent in Illinois and New Salem. And according to the rule that he is the best dressed man whose costume is the least noticeable, we must conclude that Lincoln's dress was always, both by compulsion and choice, of that commonplace respectability equally free from shabbiness on the one hand, and pretentious effort at display of gentility on the other. We may also draw the same inference from the character of his contemporaries and associates. Stuart, Logan, Browning, Douglas, Trumbull, Shields, Baker, Hardin, Peck, Davis, and a host of other prominent Illinoisans were his friends, companions, opponents, rivals; and there is neither record nor tradition that in society, or on the stump, or in the local or superior courts of the State, there was any marked distinction or contrast between him and them. Several of these passed through gradations of privation, fortune, and influence similar to his own; and if we would institute a closer comparison, any old inhabitant of Springfield could testify that his first law-partner, John T. Stuart, was always a better, and his second law-partner, Stephen T. Logan, always a worse dressed man than Lincoln himself. The simple truth is, that with those men, in those days, dress was a matter of altogether minor consideration, and played a very unimportant part as the measure of a man's worth or influence. Convenience and comfort, not display, were its ends. These early law-practitioners, who followed circuit courts from county to county, worrying through snow and mud, fording swollen streams, sleeping on cabin floors, could not remain fastidious about cos-

tume; and the judges and juries were more impressed by the wit or argument of counsel than by the condition of his toilet.

And following Lincoln's career from his congressional service onward, through the years when he devoted himself exclusively to law, through the slavery discussion provoked by the Nebraska bill, through the great senatorial campaign with Douglas, through the campaign of 1860, and all his presidential service at Washington, we find, as to dress, that he simply continued the habits which the conditions of his early life impressed upon him. Always and everywhere he was sufficiently well-dressed to command the respect of those before whom he appeared; and quite as certainly he was never clad to that degree of fastidious elegance which would have entirely satisfied the superior being whose dictum regulates the curve of a trouser-leg. Standing side by side with Douglas in the joint debates, or on the platform of the Cooper Institute under the critical eyes of William Cullen Bryant, who presided, or towering before the multitude of great soldiers and civilians on the battlefield of Gettysburg, pronouncing his memorable address, he suffered no wise in comparison as to personal appearance with Douglas the senator, or Bryant the poet, or Edward Everett the polished statesman, diplomat, and orator.

If a few instances occurred where visitors found him in a faded dressing-gown and with slippers down at the heel, such incidents were due, not to carelessness or neglect, but to the fact that they had thrust themselves upon him at unseasonable and unexpected hours. So also there were some critics who, coming with the intention to find fault, could see nothing but awkwardness in his movements and wrinkles in his clothes. In the fifteen hundred days during which he occupied the White House, receiving daily visits at almost all hours, often from seven in the morning to midnight, from all classes and conditions of American citizens, as well as from many distinguished foreigners, there was never any eccentric or habitual incongruity of his garb with his station.

There, as in his father's cabin, or New Salem, or Vandalia, or Springfield, the man Lincoln never gave a fraction of thought or a moment of care to any question of dress. He followed the ordinary fashion and wore what the tailor, hatter, and boot-maker made for him. And so clad, the humblest citizens stood in his presence without awe, and the highest dignitaries with perfect respect. The world has yet to learn that General Scott, or Lord Lyons, or Bishop Simpson, or Prince Napoleon, or Archbishop Hughes, or the Comte de Paris, or Chief-justice Taney ever felt humiliated by the dress or want of dignity of President Lincoln in state

ceremonial or private audience. The eyes of these men were not upon the tailor's suit of broadcloth, but upon the President and the man, and in such a scrutiny Lincoln outranked any mortal who ever questioned him eye to eye in his long and strange career from New Salem to the Blue Room of the White House.

As with his dress, so with his manner. Tempered and modified by the gravity of added years, and an ever-widening experience among varied social classes and conditions in many parts of the Union, it nevertheless retained to the last a strong impress of the essential characteristics of the frontier—simplicity, directness, and sincere heartiness. He never learned and never used meaningless or misleading conventional phrases. He would say, "I am glad to see you." He would never say, "I am charmed to see you." He always greeted his visitors with a cordial shake of the hand and a winning look or smile, unless, as very rarely happened, his mind was weighed down with a preoccupation of overwhelming care and suspense. He always listened with patience, even when the request of his petitioner might be frivolous or foolish. That he was fond of wit, and jest, and laughter, the world already knows. He gave others courtesy, kindness, and consideration to the last degree, and never by word or look assumed that he demanded them for himself.

In saying that Lincoln never gave a thought to personal appearance, I must not omit to mention that this, like all rules, has at least one exception. During the month of October in the campaign of 1860, he received a letter from a little girl twelve years old, then residing at Westfield, New York, which he read with unusual interest. How it came to be written was pleasantly narrated by the person who wrote it, and was printed in the newspapers about a dozen years ago. She says:

My father, who was a stanch Republican, brought one day to me—who followed in his footsteps and was a zealous champion of Mr. Lincoln—a picture of "Lincoln and Hamlin," one of those coarse, exaggerated likenesses which it seems to be the fate of our long-suffering people to have thrust before them in such contests. You are familiar with Mr. Lincoln's physiognomy, and remember the high forehead over those sadly pathetic eyes, the angular lower face, with the deep-cut lines about the mouth. As I regarded the picture I said to my mother: "He would look better if he wore whiskers, and I mean to write and tell him so." She laughingly consented, and I proceeded to give him my name, age, place of residence, my views of his fitness for the presidency, opinion of his personal appearance, and that I thought it would be much improved if he would cultivate whiskers, adding, as an inducement, that if he would, I would try my best to coax my two Democratic brothers to cast their

votes for him. In my heart of hearts I feared that this rather free criticism might give offense, and so tried to soften the blow by assuring him that I thought the "rail fence around his picture looked real pretty," and ended by asking him if he had no time to answer my letter, to allow his little girl to reply for him.

Mr. Lincoln's heart was touched by the unaffected, sincere kindness of this childish prattle, and he sent her the following equally genuine and sympathetic little note in reply:

Private.

SPRINGFIELD, ILLINOIS, October 19, 1860.
MISS GRACE BEDELL:

MY DEAR LITTLE MISS:

Your very agreeable letter of the 15th is received. I regret the necessity of saying I have no daughters. I have three sons — one seventeen, one nine, and one seven years of age. They, with their mother, constitute my whole family.

As to the whiskers, having never worn any, do you not think people would call it a piece of silly affectation if I were to begin now?

Your very sincere well-wisher,

A. LINCOLN.

It is probable that he thought little of following Miss Grace Bedell's advice at the mo-

ment, but the suggestion tempted him to the experiment; and once begun, it was continued, and a three-months' growth of his beard no doubt convinced him of her good taste.

On his memorable journey to Washington in the following February, the train which bore him passed through Westfield, and made the usual stop to enable the crowd which had collected to see and hear their President-elect. The lady's narrative continues:

Mr. Lincoln made a short speech from the platform of the car, and concluded by saying that he had "a little correspondent at Westfield called Grace Bedell, and if she were present he should like to see her." I was present, but the crowd was so great that I had neither seen nor heard the speaker; but a friend helped me forward, and Mr. Lincoln stepped down to the platform where I stood, shook hands and kissed me, saying, as he touched his beard, "You see I let these whiskers grow for you, Grace"; shook my hands again cordially, and reëntered the cars, and that was the last I ever saw of this hero and martyr. That he did not forget me I received occasional assurances, though small would have been the wonder had I been forgotten in those dreadful days which followed.

John G. Nicolay.

A SUMMER POOL.

THIS is a wonder-cup in Summer's hand.
 Somber, impenetrable, round its rim
 The fir trees bend and brood. The noons o'erbrim
 The windless hollow of its irised strand
 With mote-thick sun and water-breathings bland.
 Under a veil of lilies lurk and swim
 Strange shapes of presage in a twilight dim,
 Unwitting heirs of light and life's command.
 Blind in their bondage, of no change they dream;
 But the trees wait in grave expectancy.
 The spell fulfils, and swarms of radiant flame —
 Live jewels — above the crystal dart and gleam,
 Nor guess the sheen beneath their wings to be
 The dark and narrow regions whence they came.

Charles G. D. Roberts.

THE FAITH DOCTOR.¹

BY EDWARD EGGLESTON,

Author of "Roxy," "The Circuit Rider," "The Hoosier Schoolmaster," "The Graysons," etc.

XXXVII.

DR. GUNSTONE'S DIAGNOSIS.

RS. BESWICK, at the cost of a little persistence and a good many caresses, succeeded in getting the doctor to consent that she should go to the Callenders. The risk of contagion she pooh-poohed. She called at

Mrs. Callender's, and again by a little persistence succeeded in laying off her hat and sack and establishing herself as a volunteer nurse to Phillida. It seemed a case of remarkable disinterestedness to the Callenders, and a case of unparalleled hypocrisy to Mrs. Beswick; but she could not be dissuaded from staying from the early morning to bedtime, assuring Mrs. Callender that she would rather care for her daughter than for any one else. "Except the doctor, of course," she added. She was always pleased when she could contrive to mention the doctor; no topic of conversation brought her so many pleasurable emotions. Phillida became fond of her, and whenever she went away was impatient for her return.

Robert brought flowers every day in Mrs. Hilbrough's name, and Millard called to inquire as often as he thought proper. The tidings secured on the third and fourth days indicated that the attack would prove a lighter one than that which had almost cost the life of Tommy. On the fifth day it was reported that Phillida was convalescent. Dr. Gunstone had announced that he would come no more unless there should appear symptoms of temporary paralysis, such as sometimes follow this disease, or unless other complications should arise. Millard thought it would be more prudent and, so to speak, realistic, to make Mrs. Hilbrough's inquiries and his own less frequent after this. He and Robert, therefore, called on alternate days. On Monday it was Mr. Millard who called, on Tuesday came a bunch of flowers and inquiries in Mrs. Hilbrough's name. But Phillida's progress was so slow that it seemed doubtful after some days whether she made any advancement at all. The disease had quite dis-

appeared, but strength did not return. At the end of a week from Dr. Gunstone's leave-taking the family were in great anxiety lest there might become obscure malady preying on her strength, and there was talk of taking her to some southern place to meet half-way the oncoming spring. But this would have drawn heavily on the family savings, which were likely to dwindle fast enough; the appearance of diphtheria having vacated all the rooms in the house at a time when there was small hope of letting them again before the autumn.

Milder measures than a trip were tried first. The armchair in which she sat was removed into the front parlor in hopes that a slight change of scene might be an improvement; the cheerful sight of milk-wagons and butcher-carts, the melodious cries of old clo'es buyers and sellers of "ba-nan-i-yoes," and the piping treble of girl peddlers of horse-red-deesh, were somehow to have a tonic effect upon her. But the spectacle of the rarely swept paving-stones of a side street in the last days of March was not inspiring. Phillida had the additional discomfort of involuntarily catching glimpses of her own pallid and despondent face in the pier-glass between the windows.

As for the life of the street, it seemed to her to belong to a world in which she no longer had any stake. The shock of disillusion regarding faith-healing had destroyed for the time a good deal besides. If mistaken in one thing, she might be in many. However wholesome and serviceable a critical skepticism may prove to an enthusiast in the full tide of health and activity, to Phillida, broken in heart and hope, it was but another weight to sink her to the bottom. For now there was no longer love to look forward to, nor was she even able to interest herself again in the work that had mainly occupied her, but which also she had marred by her errors. Turn either way, she felt that she had spoiled her life.

Looking out of the window listlessly, late one afternoon, her attention was awakened by a man approaching with some cut flowers in his hand. She noticed with a curious interest that he wore a cap like the one she had remarked in the hands of Millard's valet. As he passed beneath the window, she distinctly recognized Robert as the man Millard had sent

to hasten the coming of the coupé, and when he mounted the steps she felt her pulses beat more quickly.

Her mother entered presently with the flowers.

"From Mrs. Hilbrough, with inquiries," Mrs. Callender read from the card as she arranged the flowers in a vase on the low marble table under the pier-glass.

"Mrs. Hilbrough?" said Phillida, with a feeling of disappointment. "But that was Charley Millard's man."

"No, that is the man Mrs. Hilbrough has sent ever since you were taken ill," said the mother. "He speaks in a peculiar English way; did you hear him? You've got a better color this evening, I declare."

"Mama, that is Charley's man," persisted Phillida. "I saw him at the Graydon. And the flowers he has brought all along are in Charley's taste—just what he used to send me, and not anything out of Mrs. Hilbrough's conservatory. Give me a sip of water, please." Phillida's color had all departed now.

Having drunk the water, she leaned against her chair-back and closed her eyes. Continuous and assiduous attention from Mrs. Hilbrough was more than she had expected; and now that the messenger was proved to be Millard's own man, she doubted whether there were not some mystery about the matter, the more that the flowers sent were precisely Millard's favorites.

The next day Phillida sat alone looking into the street, as the twilight of a cloudy evening was falling earlier than usual, when Agatha came into the room to light two burners, with a notion that darkness might prove depressing to her sister. Phillida turned to watch the process of lighting the gas, as an invalid is prone to seek a languid diversion in the least things. When the gas was burning she looked out of the window again, and at the same moment the door-bell sounded. To save Sarah's deserting the dinner on the range, Agatha answered it. Phillida, with a notion that she might have a chance to verify her recognition of Millard's valet, kept her eyes upon the portion of the front steps that was visible where she sat. She saw Millard himself descend the steps and pass in front of her window. He chanced to look up, and his agitation was visible even from where she sat as he suddenly lifted his hat and bowed, and then hurried away.

The night that followed was a restless one, and it was evident in the morning that Dr. Gunstone must be called again. Mrs. Callender found Phillida so weak that she hesitated to speak to her of a note she had received in the morning mail. It might do good, it might do harm, to let her know its contents. Agatha

was consulted, and she turned the scale of Mrs. Callender's decision.

"Phillida dear," said the mother, "I don't know whether I ought to mention it to you or not. You are very weak this morning. But Charley Millard has asked for permission to make a brief call. Could you bear to see him?"

Phillida's face showed her deeply moved. After a pause and a struggle she said: "Charley is sorry for me, that is all. He thinks I may die, and he feels grateful for my attention to his aunt. But if he had to begin over again he would never fall in love with me."

"You don't know that, Phillida. You are depressed; you underestimate yourself."

"With his advantages he could take his choice, almost," said Phillida. "It's very manly of him to be so constant to an unfortunate and broken-hearted person like me. But I will not have him marry me out of pity."

"I'm afraid you are depressed by your weakness. I don't think you ought to refuse to see him if you feel able," said the mother.

"I am not able to see him. It is easier to refuse in this way than after I have been made ill by too much feeling. I am not going to subject Charley to the mortification of taking into his circle a wife that will be always remembered as—as a sort of quack-doctor."

Saying this, Phillida broke down and wept.

When Agatha heard of her decision she came in and scolded her sister roundly for a goose. This made Phillida weep again; but there was a firmness of will at the base of her character that held her determination unchanged. About an hour later she begged her mother to write the answer at her dictation. It read:

"Miss Callender wishes me to say that she is not able to bear an interview. With the utmost respect for Mr. Millard and with a grateful appreciation of his kind attention during her illness, she feels sure that it is better not to renew their acquaintance."

After this letter was sent off Phillida's strength began to fail, and the mother and sister were thrown into consternation. In the afternoon Dr. Gunstone came again. He listened to the heart, he examined the lungs, he made inquiry for symptoms, and paused baffled. The old doctor understood the mind-cure perfectly; balked in his search for physical causes he said to Mrs. Callender:

"Perhaps if I could speak with Miss Callender alone a few moments it might be better."

"I have no secrets from mama," protested Phillida.

"That's right, my child," said Dr. Gunstone, gravely; "but you can talk with more freedom to one person than to two. I want to see your mother alone, also, when I have talked with you."

Mrs. Callender retired, and the doctor for a minute kept up a simulation of physical examination in order to wear away the restraint which Phillida might feel at being abruptly left for a confidential conversation with her physician.

"I'm afraid you don't try to get well, Miss Callender," he said.

"Does trying make any difference?" demanded Phillida.

"Yes, to be sure; that's the way that the mesmerists and magnetizers and the new faith-cure people work their cures, largely. They enlist the will, and they do some good. They often help chronic invalids whom the doctors have failed to benefit."

Dr. Gunstone had his hand on Phillida's wrist, and he could not conjecture why her pulse increased rapidly at this point in the conversation. But he went on:

"Have you really tried to get well? Have you wanted to get well as soon as possible?"

"On mama's account I ought to wish to get well," she said.

"But you are young and you have much happiness before you. Don't you wish to get well on your own account?"

Phillida shook her head despondently.

"Now, my child, I am an old man and your doctor. May I ask whether you are engaged to be married?"

"No, doctor, I am not," said Phillida, trying to conjecture why he asked this question.

"Have you been engaged?"

"Yes," said Phillida.

"And the engagement was broken off?"

"Yes."

"Recently?"

"Yes, rather recently. This last winter."

"Now, tell me as your doctor whether or not the circumstances connected with that interruption of your love-affair have depressed you, have made you not care much about living?"

Phillida's "I suppose they have" was almost inaudible.

"Now, my child, you must not let these things weigh upon you. The world will not always look dark. Try to see it more lightly. I think you must go away. You must have a change of scene, and you must see people. I will find your mother. Good morning, Miss Callender."

And with that the doctor shook hands in his half-sympathetic, half-reserved manner, and went out into the hall.

Mrs. Callender, who was waiting at the top of the stairs, came down and encountered him.

"May I see you alone a moment?" said the doctor, looking at his watch, which always seemed to go too fast to please him.

Mrs. Callender led the way to the basement dining-room below, beckoning Agatha, who sat there, to go up to her sister.

"Mrs. Callender, there is in your daughter's case an interrupted love-affair which is depressing her health, and which may cut short her life. Do you think that the engagement is broken off for all time, or is it but a tiff?"

"I hardly know, doctor. My daughter is a peculiar person; she is very good, but with ideas of her own. We hardly understand the cause of the disagreement, or why she still refuses to see the young man."

"Has the young man shown any interest in Miss Callender since the engagement ceased?"

"He has called here several times during her sickness to inquire, and he sent a note this morning asking to see her. She has declined to see him, while expressing a great esteem for him."

"That's bad. You do not regard him as an objectionable person?"

"Oh, no; quite the contrary."

"It is my opinion that Miss Callender's recovery may depend on the renewal of that engagement. If that is out of the question,—and it is a delicate matter to deal with, especially as the obstacle is in her own feelings,—she must have travel. She ought to have change of scene, and she ought to meet people. Take her south, or north, or east, or west—to Europe or anywhere else, so as to be rid of local associations, and to see as many new things and people as possible. Good morning, Mrs. Callender."

Having said this, the old doctor mounted the basement stairs too nimbly for Mrs. Callender to keep up with him. When she reached the top he had already closed the front door, and a moment later the wheels of his barouche were rattling violently over the irregular pavement that lay between the Callender house and Third Avenue.

To take Phillida away—that was the hard problem the doctor had given to Mrs. Callender. For with the love-affair the mother might not meddle with any prospect of success. But the formidable barrier to a journey was the expense.

"Where would you like to go, Phillida?" said her mother.

"To Siam. I'd like to see the objects and people I saw when I was a child, when papa was with us, and when it was easy to believe that everything that happened was for the best. It would be about as easy for us to go to Siam as anywhere else, for we have n't the money to spare to go anywhere. I sit and dream of the old house, and the yellow people, and the pleasure of being a child, and the comfort of believing. I am tired to death of this great, thinking, pushing, western world, with its restlessness and

its unbelief. If I were in the East I could believe and hope, and not worry about what Phillip calls 'the immensities.'"

XXXVIII.

PHILIP'S CONFESSION.

It was evident that something must be done speedily to save Phillida from a decline that might end in death, or from that chronic invalidism which is almost worse. All sorts of places were thought of, but the destination was at last narrowed down to the vicinity of Hampton Roads, as the utmost limit that any prudent expenditure would allow the Callenders to venture upon. Even this would cost what ordinary caution forbade them to spend, and Phillida held out stoutly against any trip until the solicitude of her mother and sister bore down all objections.

Not long after Dr. Gunstone's visit Mrs. Callender received a letter from Mrs. Hilbrough expressing solicitude about Phillida, and regretting that her husband's horror of diphtheria still prevented her from calling. She continued:

"I very much wish to do something by which I can show my love for Phillida. Won't you let me bear the expense of a trip southward, if you think that will do good? If you feel any delicacy about it, consider it a loan to be paid whenever it shall be convenient; but it would give me great happiness if I might be allowed to do this little act of affection."

Mrs. Callender showed the note to Phillida. "It would save our selling the bonds," she said; "but I do not like to go in debt, and of course we would repay it by degrees."

"It is a trifle to her," said Phillida, "and I think we might accept two hundred dollars or more as a loan, to be repaid."

"Well, if you think so, Phillida; but I do hate to be in debt."

Phillida sat thinking for a minute. Then her pale face colored.

"Did the letter come by mail?" she asked.

Mrs. Callender examined the envelope. "I thought it came from the postman, but there is no postmark. Sarah brought it to me."

"Suppose you ask Sarah to come up," said Phillida.

On Sarah's arrival Phillida asked her who brought this letter.

"It wuz that young man with the short side-whiskers just under his ears, and a cap that 's got a front before and another one behind, so 't I don't see for the life of me how he gets it on right side before."

"The man that brought flowers when I was sick?"

"That very same, miss."

"All right, Sarah. That 'll do." Then

when Sarah had gone Phillida leaned her head back, and said:

"It won't do, mother. We can't accept it."

It was a tedious week after Dr. Gunstone's last visit before a trip was finally determined on and a destination selected, and Mrs. Callender, who had a genius for thoroughness, demanded yet another week in which to get ready. Phillida meanwhile sat wearily waiting for to-morrow to follow to-day.

"Mother," she said one day, rousing herself from a reverie, "what a good fellow Cousin Philip is, after all! I used to feel a certain dislike for what seemed to me irresolution and inactivity in him. But ever since I was taken sick he has been just like a brother to me."

"He has taken charge of us," said Mrs. Callender. "He has inquired about board for us at Hampton, and he has worked out all the routes by rail and steamboat."

Philip's kindness to his aunt's family was originally self-moved, but as Phillida convalesced his mother contrived to send him with messages to her, and even suggested to him that his company would be cheering to his cousin. Philip sat and chatted with her an hour every day; but the exercise did not raise his spirits in the least. For his mother frequently hinted that if he had courage he would be more prompt to avail himself of his opportunities in life. Philip could have no doubt as to what his mother meant by opportunities in life, and he knew better than any one else that he was prone to waste his haymaking sunshine in timid procrastinations. But how to make love to Phillida? How offer his odd personality to such a woman as she? His mother's severe hints about young men who could not pluck ripe fruit hanging ready to their hand spurred him, but whenever he was in Phillida's presence something of preoccupation in her mental attitude held him back from tender words. He thought himself a little ridiculous, and when he tried to imagine himself making love he thought that he would be ten times more absurd. If he could have got into his favorite position in an armchair, and could have steadied his nerves by synchronous smoking, as he was accustomed to do whenever he had any embarrassing business matters to settle, he might have succeeded in expressing to Phillida the smoldering passion that made life a bitterness not to be sweetened even by Caxton imprints and Bedford-bound John Smiths of 1624.

He always knew that if he should ever succeed in letting Phillida know of his affection it would be by a sudden charge made before his diffidence could rally to oppose him. He had once or twice in his life done bold things by catching his dilatory temper napping. With this idea he went every day to call on Phillida,

hoping that a fit of desperation might carry him at a bound over the barrier. At first he looked for some very favorable opportunity, but after several visits he would have been willing to accept one that offered the least encouragement.

There were but a few days left before Phillida's departure southward, and if he should allow her to escape he would incur the bitter reproaches of his own conscience, and, what seemed even worse, the serious disapproval of Mrs. Gouverneur.

Phillida and her mother were to leave on Friday afternoon by the Congressional Limited for Baltimore, and to take boat down the bay on Saturday. Philip had arranged it all. It was now Tuesday, and the time for "improving his opportunity in life" was short. On this Tuesday afternoon he talked an hour to Phillida, but he could not possibly cause the conversation to swing around so as to be able, even with considerable violence, to make the transition he desired. He first let her lead, and she talked to him about the East and the queer ways of the yellow Mongolians she remembered. These memories of early childhood, in the blessed period when care and responsibility had not yet disturbed the spirit's freedom, brought her a certain relief from gnawing reflections. When she grew tired it was his turn to lead, and he soon slipped into his old grooves and entertained her with stories of the marvelous prices fetched by Mazarin Bibles, and with accounts of people who had discovered "fourteeners" in out-of-the-way places, and such like lore of the old book-shop. All the time he was tormented by a despairing under-thought that love-making was just as far from book-collecting as it was from Phillida's Oriental memories. At length the under-thought suppressed the upper ones, and he paused and looked out of the window and drew his small form down on the chair, assuming his favorite attitude, while he supported his right elbow with his left hand and absent-mindedly held the fingers of the right hand near his lips as though to support an imaginary cigar.

"Philip," said the invalid, embarrassed by the silence, "I envy you your interest in books."

"You do?" Philip moved his right hand as he might have done in removing his cigar from the mouth, and turned to Phillida. "Why?"

"It saves you from being crushed by the im-mensities, as you call them. I suppose it has con-soled you in many a trouble, and no doubt it has kept you from the miseries of falling in love." She laid her thin hand on the arm of her chair as she spoke.

"Kept me from falling in love," gasped Philip, aware that his now-or-never had arrived. "How do you know that?"

"I never heard that you were in love with

anybody. Excuse me if I have trodden on forbidden ground."

"I never loved but one woman, and I'm such a coward that I never had the courage to tell her," he said abruptly, at the same time restoring his imaginary cigar to his mouth.

"That's a pity," she said.

"What a figure I'd cut as a lover! Little, lank, nervous, eccentric in manner, peculiar in my opinions, lacking resolution to undertake anything worth while, frittering away my time in gathering rare books — what woman would think of me?"

"Philip, you have many excellent qualities, and I would n't wonder if marriage would be good for you," said Phillida, in that motherly tone that only a young woman can assume easily.

"You'd laugh at me as long as you live if I should tell you whom I have dared to love without ever daring to confess." His face was averted as he said this.

"You poor fellow," said Phillida, "you are always doubtful of yourself. Come, I think you had better tell me; maybe I can encourage you, and it will give me something to think about and keep away thoughts that I don't wish to think."

Philip drew a long breath, and then said slowly and with a firm voice, but with his eyes on the window-fastenings:

"The woman I love and have loved for a long time is my Cousin Phillida."

"You are joking, Philip," said Phillida; but her voice died as she spoke.

"Yes," said Philip, in his old desponding tone, "I knew it would seem ridiculous to you. That's why I never spoke of it before."

He looked out of the window in silence, and presently became aware that Phillida was weeping.

"O God, let me die!" she murmured in a broken voice. "I am doomed to work only misery in the world. Is n't it enough to have blighted the happiness of Charley, whom I loved, and still love in spite of myself? Must I also plunge Philip into misery, who has been more than a brother to me? If I could only die and escape from this wretched life before I do any further harm."

"I am sorry that I said anything, Phillida. Forget it. Forget it, please," he said in an alarmed voice, rising as he spoke.

"Cousin," said Phillida, "you are the best friend I have. But you *must not* love me. There is nothing left for me — nothing, but to die. Good-by."

That evening Philip did not appear at dinner, and his mother sent to inquire the reason.

"Mr. Philip says he has a headache, and will not come down," said the maid on her return.

After dinner the mother sought his room with a cup of coffee and a bit of toast. Philip was lying on the lounge in his book-room with the gas turned low.

"What's the matter, Philip? Is your throat sore? Are there any signs of diphtheria?" demanded his mother, anxiously.

"No; I am all right. A little out of sorts. Only just let me be quiet."

"Has anything gone wrong?"

"Nothing more than common."

"Something has worried you. Now, Philip, I can see plainly that you are worrying about Phillida. Why don't you speak your mind if you care for her, and have it over with?"

"It is over with, mother," said Philip.

"And she refused you?" said Mrs. Gouverneur, with rising indignation, for she thought it rather a descent for Philip to offer himself to Phillida or to anybody else.

"No, she did n't refuse me. I did n't formally offer myself. But I let her know how I felt towards her. She'll never accept me."

"Maybe she will," said the mother. "Girls don't like to accept at the first hint."

"No; she was kind and even affectionate with me, and broke her heart over my confession that I loved her, so that I'm afraid I have done her a great deal of harm."

"How do you know she will never accept you, you faint-hearted boy?"

"She let me see her whole heart. She loves Charley Millard as much as ever, but, I think, for some reason she does n't expect or wish a renewal of the engagement. She called me the best friend she had in the world next to Charley Millard. That's an end of it. A good deal more of an end of it than a flat refusal might have been."

"She's a foolish and perverse girl, who has compromised her family and ruined her own prospects," said Mrs. Gouverneur. "Your aunt told me to-day that Dr. Gunstone thinks she is going to die of her disappointment about Charley unless the engagement can be renewed. But Phillida has determined not to allow a renewal of it. She's always doing something foolish. Now, eat a little dinner, or take your coffee, at least."

"Leave the things here, mother. Maybe I'll eat after a while."

Half an hour later Mrs. Gouverneur, uneasy regarding Philip, returned to his library to find the food as she had left it.

On inquiry she learned that Philip had just gone out. Whither and for what purpose he had sallied forth dinnerless she could not divine, and the strangeness of his action did not reassure her. She was on the point of speaking to her husband about it, but he had so little in common with Philip, and was of a temper so

fixed and stolid, that his advice would not have availed anything. It never did avail anything certainly in the first hour or two after dinner.

XXXIX.

PHILIP IMPROVES AN OPPORTUNITY.

THE intimacy between Millard and Philip Gouverneur had long languished. Philip was naturally critical of Charley after he became the accepted lover of Phillida, and their relations were not bettered by the breaking off of the engagement. Phillida's cousin felt that he owed it to her not to seem to condemn her in the matter by a too great intimacy with the lover who had jilted or been jilted by her, nobody could tell which, not even the pair themselves. Moreover Philip had for years taken a faint pleasure in considering himself as a possible suitor to Phillida. He found the enjoyment of a solitary cigar enhanced by his ruminations regarding the possibilities of a life glorified—no weaker word could express his thought—by the companionship of Phillida, little as he had ever hoped for such a culmination of his wishes. But this love for Phillida served to complicate his relations with Millard. So that it had now been long since he had visited the Graydon. Nevertheless on this evening of his sudden and dinnerless departure from home the night clerk remembered him and let him go up to Apartment 79 without the ceremony of sending his card.

Millard, who was writing, received Philip with some surprise and a curiosity mixed with solicitude regarding the purpose of his call. But he put up his pen and spoke with something of the old cordial manner that had won the heart of Gouverneur some years before.

"I'm glad to see you again, Philip. I began to think you were not coming any more. Sit down," said Millard. "How is book-collecting? Anything startling lately?" he added by way of launching the talk, as he usually did, on the favorite subject of his companion.

"No, no," said Philip, seating himself.

"I've not seen much of you lately, anywhere," said Millard, making a new start. "But that is my fault. I've pretty much cut general society this spring, and I think for good. I've been busy and tired, and, to tell the truth, I don't care for society much any more. You still go out a good deal. Is there anything interesting?"

"Oh, no," said Gouverneur.

Seeing that Philip was preoccupied and that all attempts to give him direction and set him in motion were likely to prove futile, Charley concluded to let him start himself in whatever direction his mood might lead him. He did this the more readily that he himself found talking

hard work in his present mood. But by way of facilitating the start, Millard held out to Philip a bronze tray containing some cigars.

"No, thank you, Charley. I don't feel like smoking."

To Millard's mind nothing could have been more ominous than for Philip Gouverneur to refuse to smoke.

"I suppose I might as well begin at once," said Philip. "If I wait I never shall get the courage to say what I want to say. I ought to have waited till morning, but if I once put off a good resolution it is never carried out. So I came down here on a rush, Charley, resolved not to give myself time to think what a piece of impertinent impudence I was going to be guilty of." Then after a pause he said: "If you turn me out of the apartment neck and heels, I sha'n't be surprised."

"Pshaw, Philip, you excite my curiosity," said Millard, trying to smile, but yet a little aghast at seeing his old friend in this unusual mood, and divining that the subject would be disagreeable.

"I come to speak about Phillida," said Philip.

Ever since Millard's hopes had received their quietus from Mrs. Callender's note in which Phillida declined to receive a visit from him, he had recognized the necessity for getting Phillida out of his mind if he were ever again to have any sane contentment in life. If Phillida did not any longer care for him, it would be unmanly for him to continue brooding over the past. But he found that exhorting himself to manliness would not cure a headache. There was nothing he could have dreaded so much at this time as a conversation about Phillida, and of all people he most disliked to speak of her with Philip Gouverneur. He made no reply at all to Philip's blunt statement of the subject on which he proposed to converse. But Gouverneur was too much absorbed in holding himself to his plan of action to take note of his companion's lack of responsiveness.

"I want to ask whether you still love her or not, Charley," said Philip, with a directness that seemed brutal, his eyes fixed on the wall.

"I have no claims upon her," said Millard, "if that is what you want to know."

"That is n't what I want to know. I asked if you still loved her?"

"I don't know whether even you have a right to ask that question," said Millard with manifest annoyance.

"I am her cousin," said Philip, looking up at Millard with eyes strangely unsteady and furtive.

"If there were any charge that I had wronged her, you, as her cousin, might have a right to inquire," said Millard, who fancied that Gouv-

erneur had a personal end in making the inquiry, and who at any rate did not care to be known as a discarded and broken-hearted lover. "I'll tell you plainly that it is a subject on which I don't wish to speak with anybody. Besides, it's hardly fair to come to me as Phillida's cousin, when there is reason to believe your feelings towards her are more than cousinly. I have no claims on Phillida, no expectation of a renewal of our engagement, and I certainly have no complaint to make of her. Nobody has any right to inquire further."

Charley Millard got up and walked the floor in excitement as he said this.

"You're plaguey cross, Charley. I never saw you so impolite before. Did n't know you could be. I suppose you're right, by Jupiter! I went too straight at the mark, and you had a right to resent it. But I had to go at it like a man having a tooth pulled, for fear I'd back out at the last moment."

There was a ten-seconds' pause, during which Millard sat down. Then Philip spoke again:

"I know, Charley; you have misunderstood. You think I wish to get a disclaimer that will clear the way for me. Charley,"—Philip spoke now in voice low and just a little husky,— "if I loved Phillida, and believed she could love me, do you think I'd wait to ask your permission? If I wished to marry her, and she loved me, I would n't ask any man's permission! And I came here not in my own interest, nor in your interest either. I am here only for Phillida's sake, and as her cousin, and I want to know whether you love her?"

"If you want me to do anything for her, I am ready. That is all I ought to be required to say," said Millard, softened by Philip's evident emotion, but bent on not betraying his own feelings.

"I suppose that means that you don't care for her," said Gouverneur. Then he went on, still staring at the wall: "Well, that's an end of it. What an idiot she has been! She has thrown you over, and alienated your affections, and made herself the talk of the streets. You would n't think such a fine-looking woman could make herself so utterly ridiculous. She is a mortification to her relations, and—"

"Now, Philip, stop," said Millard, with heat. "You are in my house. No man shall say a word against that woman in my hearing while I live. I tell you that even her mistakes are noble. If her relatives are ashamed of such as she is, I am sorry for her relatives." Millard made an effort to say more, but his utterance was choked.

Philip laughed a sardonic little laugh.

"Charley, before God, I was not sincere in a word I said against Phillida. I lied with deliberate purpose. Now I know that you love her. That's what I wanted to find out. I only

denounced her to get at your feelings. You would n't tell me; I had to resort to a ruse."

"Do you think it—do you think it's the thing to pry into my feelings?" said Millard, still speaking hotly.

"Yes, I do, under the circumstances. In return I'll tell you something worth your listening to, if you'll only cool off enough to hear it."

Millard's curiosity was excited by this, but he made no reply; he only sat still with Philip's eyes fixed upon him.

"Phillida loves you," said Philip.

Millard looked steadily at the smallish figure of his old friend, not shrunken into the chair as usual now, but sitting upright and looking straight at him with a strange look he had never seen before.

"Philip," he said softly, "how do you know this? Tell me, for God's sake!"

"I must not betray confidence," said Philip. "You know me, your friend and Phillida's. I am here to-night—I might say heart-broken, I can hardly say disappointed. I don't blame Phillida for not caring for me except as a cousin, or for preferring you. On the whole, if I were in her place I'd do the same, by George!"

Philip laughed again, that little laugh which pained his friend.

"Why did you come to tell me this, Philip?" Millard was sitting now with his elbows on the table, and the fingers of his right hand supporting his cheek, as he regarded Philip steadily.

"Well, if one cannot contrive to do what one wants, he should, I suppose, do the second best thing. The only thing for me to do—the thing that it'll be a comfort for me to look back on—is to render Phillida some service. In short, to save her life and make her happy."

"How do you propose to do that?" asked Millard.

"I've already done it, old fellow," said Philip, with a mixture of triumph and regret in his voice. "Dr. Gunstone said to Aunt Callender, after talking with Phillida, that unless her engagement with you were renewed she would probably not recover. I would n't have told you this for the world if I had found you did n't love her. She'd better die now than marry you and discover that you married her from pity."

Millard went to his desk and took out the note from Mrs. Callender in which Phillida had refused to see him. He handed it to Philip.

"I got that last week, and it seemed final," he said huskily. "I have found life almost more than I could carry since, Philip."

Philip read the note, and then returned it to Millard.

"That's some of her confounded scruples," he said, "She told me that she had ruined

your life. She thinks you wish to marry her from pity, and she'd rather die like a brave girl than consent to that. But she loves you and nobody else."

"I wish I were sure of it," said Millard.

Philip sat a good while silent.

"Charley," he said, "the end I have in view justifies the breach of confidence, I hope. I have the assurance of her feelings towards you from her own lips, and that not many hours ago. She would have died rather than have told me had she thought it possible I would tell you. And I would have died rather than have betrayed her if I had n't believed your feelings towards her unchanged."

Saying this, he helped himself to a cigar from the tray on the table, and lighted it, and then rose to leave.

"What can I do, Philip? I seem absolutely shut out from making any further advances by this note."

"You must n't expect any further aid or advice from me. I've done all you can expect," said Gouverneur. "Good-by."

And without shaking hands he went out of the door into the main hall. Millard followed him and, as they reached the elevator, said with emotion:

"Philip, you have done one of the bravest acts ever done."

"Pshaw! Charley," said Philip, half-peevishly and looking over his shoulder at his companion as he pressed the button, "don't put any heroics on it. There is n't enough of me to play such a part. Such talk makes me feel myself more ridiculous than ever."

XL.

THE RESTORATION.

How many scores of devices for securing a conversation with Phillida Millard hit upon during the night that followed Gouverneur's visit he could not have told. He planned letters to her in a dozen different veins, and rejected them all. He thought of appealing to Mrs. Callender once more, but could not conceive of Mrs. Callender's overruling Phillida. His mind perpetually reverted to Agatha. If only he might gain her coöperation! And yet this notion of securing the assistance of a younger sister had an air of intrigue that he did not like.

About nine o'clock the next morning there was handed to Mrs. Callender a note from Millard inclosing an unsealed note which Mr. Millard desired Mrs. Callender, if she saw fit, to hand to Miss Agatha. Mrs. Callender gave it to Agatha without opening it.

AGATHA: I wrote to your mother the other day, begging permission to call on your sister, and

received a reply expressing Miss Callender's desire to avoid an interview. That ought to have put an end to my hope of securing your sister's forgiveness, and for a while it did. But on reflection I am led to believe that her decision was based not on a lack of affection for me but on a wrong notion of my feeling towards her. She probably believes that I am actuated by gratitude for her attention to my relatives, or by pity for her sufferings as an invalid. She holds certain other erroneous notions on the subject, I think. I give you the assurance with all the solemnity possible that my devotion to her is greater to-day than ever. Her affection is absolutely indispensable to my happiness. I will undertake to convince her of this if I am once permitted to speak to her. Now if you think that she would be the better for a renewal of our old relations, will you not contrive in some way that I may see her this afternoon at three o'clock, at which hour I shall present myself at your door?

I hope your mother will pardon my writing to you; persuasion exerted by a sister has less the air of authority than that of a parent. I leave you to show this letter or not at your own discretion, and I put into your hands my whole future welfare, and, what is of a thousand times greater importance in your eyes and in mine, Phillida's happiness. Whatever may be your feelings towards me, I know that Phillida can count on your entire devotion to her interests.

CHARLEY.

The only thing that seemed to Millard a little insincere about this rather stiff note was the reason assigned for writing to Agatha. Her persuasions, as Millard well knew, did not have less of authority about them than her mother's. But this polite insincerity on a minor point he had not seen how to avoid in a letter that ought to be shown to Mrs. Callender.

Agatha gave her mother the note to read, telling her, however, in advance that she proposed to manage the case herself. Mrs. Callender was full of all manner of anxieties at having so difficult a matter left to one so impetuous as Agatha. For herself she could not see just what was to be done, and two or three times she endeavored to persuade Agatha to let her consult Phillida about it. A consultation with Phillida had been her resort in difficulties ever since the death of her husband. But Agatha reminded her that Mr. Millard had intrusted the matter to her own keeping, and expressed her determination not to have any more of Phillida's nonsense.

Phillida observed that Agatha was not giving as much attention to preparations for the journey as she expected her to. Nor could Phillida understand why the parlor must be swept again before their departure, seeing it would be snowed under with dust when they got back. But Agatha put everything in perfect order, and then insisted on dressing her sister with a little more pains than usual.

"I should n't wonder if Mrs. Hilbrough calls this afternoon," said the young hypocrite. "Besides, I think it is good for an invalid to be dressed up a little—just a little fixed up. It makes a person think of getting well, and that does good, you know."

Agatha refrained from the allusion to faith cure that rose to her lips, and, finding that Phillida was growing curious, she turned to a new subject.

"Did mama tell you what Miss Bowyer says about your case, Philly?"

"No."

"Mrs. Beswick told mama that she had it from Mr. Martin. Miss Bowyer told Mr. Martin the other day that she knew you would get well because she had been giving you absent treatment without your knowledge or consent. Did n't you feel her pulling you into harmony with the odyllic emanations of the universe?"

Phillida smiled a little, and Agatha insisted on helping her to creep into the parlor. She said she could not pack the trunk with Philly looking on. But when she got her sister into the parlor she did not seem to care to go back to the trunks.

The door-bell rang at three, and Agatha met Charley in the hall.

"She does n't know a word of your coming," said Agatha in a low voice. "I will go and tell her, to break the shock, and then bring you right in."

She left Millard standing by the hat-table while she went in.

"Phillida, who do you think has come to see you? It's Charley Millard. I took the liberty of telling him you'd see him for a short time."

Then she added in a whisper, "Poor fellow, he seems to feel so bad!"

Saying this, she set a chair for him, and without giving Phillida time to recover from a confused rush of thought and feeling she returned to the hall saying, "Come right in, Charley."

To take off the edge, as she afterward expressed it, she sat for three minutes with them, talking chaff with Millard; and when she had set the conversation going about indifferent things, she remembered something that had to be done in the kitchen, and was instantly gone down-stairs.

The conversation ran by its own momentum for a while after Agatha's departure, and then it flagged.

"You're going away," said Millard after a pause.

"Yes."

"I know it is rude for me to call without permission, but I could n't bear that you should leave until I had asked your forgiveness for things that I can never forgive myself for."

Phillida looked down a moment in agitation, and then said, "I have nothing to for-

give. The fault was all on my side. I have been very foolish."

"I would n't quarrel with you for the world," said Millard, "but the fault was mine. What is an error of judgment in a person of your noble unselfishness! Fool that I was, not to be glad to bear a little reproach for such a person as you are!"

To Phillida the world suddenly changed color while Charley was uttering these words. His affection was better manifested by what he had just said than if he had formally declared it. But the fixed notion that he was moved only by pity could not be vanquished in an instant.

"Charley," she said, "it is very good of you to speak such kind words to me. I am very weak, and you are very good-hearted to wish to comfort me."

"You are quite mistaken, Phillida. You fancy that I am disinterested. I tell you now that I am utterly in love with you. Without you I don't care for life. I have not had heart for any pursuit since that evening on which we parted on account of my folly. But if you tell me that you have ceased to care for me, there is nothing for me but to go and make the best of things."

Phillida was no longer heroic. Her sufferings, her mistakes, her physical weakness, and the yearning of her heart for Millard's affection, were fast getting the better of all the reasons she had believed so conclusive against the restoration of their engagement. Nevertheless, she found strength to say: "I am quite unfit to be your wife. You are a man that everybody likes and you enjoy society, as you have a right to." Then after a pause and an evident struggle to control herself she proceeded: "Do you think I would weight you down with a wife that will always be remembered for the follies of her youth?"

Phillida did not see how Charley could answer this, but she was so profoundly touched by his presence that she hoped he might be able to put matters in a different light. When she had finished speaking he contracted his brows into a frown for a moment. Then he leaned forward with his left hand open on one knee and his right hand clenched and resting on the other.

"I know I gave you reason to think I was cowardly," he said, "but I hope I am a braver man than you imagine. Now if anybody should ever condemn you for a little chaff in a great granary of wheat it would give me pain only if it gave you pain. Otherwise it would give me real pleasure, because I 'd like to bear it in such a way that you 'd say to yourself, 'Charley is a braver man than I ever thought him.' " Millard had risen and was standing before her as he finished speaking. There was a pause, during which Phillida looked down at her own hands lying in her lap.

"Now, Phillida," he said, "I want to ask one thing —"

"Don't ask me anything just now, Charley," she said in a broken voice full of entreaty, at the same time raising her eyes to his. Then she reached her two hands up toward him, and he came and knelt at her side while she put her arms about his neck and drew him to her, and whispered, "I never understood you before, Charley. I never understood you."

XLI.

AS YOU LIKE IT.

THE next morning Agatha went over to Washington Square to let Philip know that the trip southward had been postponed for a week or so. And Philip knew that the trip southward would never take place at all, but that drives with Charley in Central Park would prove much better for the invalid.

"Oh, yes; it's all right then. I expected it," he said.

"Yes," said Agatha; "it's all right. I managed it myself, Cousin Philip. I brought them together."

"Did you, Agatha?" he said with a queer smile. "That was clever."

"Yes; and they have not thanked me for it. Phillida wishes to see you. She told me to tell you."

"I don't doubt she can wait," said Philip, smiling; "seeing me is not important to her just now. Give her my love and congratulations, and tell her I 'll come in the day before she starts to Hampton. There 'll be time enough before she gets off, Agatha." This last was said with a laugh that seemed to Agatha almost happy.

Phillida's recovery was very rapid; it was all the effect of driving in the Park. Perhaps also the near anticipation of a trip to Europe had something to do with it, for Millard had engaged passage on the *Arcadia* the first week in June. To Mrs. Callender this seemed too early; it gave the mother and her dressmaker no end of worry about the wardrobe.

Two weeks after her reconciliation with Charley, Phillida demonstrated her recovery by walking alone to her aunt's in Washington Square. She asked at the door to see Mr. Philip, and when she learned that he was in his book-room she sent to ask if she might n't come up.

"Busy with my catalogue," said Philip as Phillida came in. He had been busy making a catalogue of his treasures for two years, but he could not get one to suit him. "I hate to print this till I get a complete 'De Bry,' and that 'll be many a year to come, I 'm afraid. I could n't afford the cost of a set this year nor next, and it's hardly likely that there 'll be one for sale

in ten years to come. But it will give me something to look forward to."

All this he said hurriedly as though to prevent her saying something else. While speaking, he set a chair for Phillida; but she did not sit down.

"Cousin Philip," she said, "you might just as well hear what I've got to say first as last."

"Hear? Oh, I'm all attention," he said; "but sit down." And he set the example, Phillida following it with hesitation.

"If you had pulled me out of the water," she began, "and saved my life, you'd expect me to say 'Thank you,' at least. Charley has told me all about how you acted. We think you're just the noblest man we have ever known."

"Ah, now, Phillida," protested Philip, quite bewildered for want of a lighted cigar to relieve his embarrassment, "you make me feel like a fool. I'm no hero; it is n't in me to play any grand parts. I shall be known, after I'm dead, by the auction catalogue of my collection of rare books, and by nothing else. 'The Gouverneur Sale' will long be remembered by collectors. That sort of distinction fits me. But you and Charley are making me ridiculous with all this talk."

"Phil, you dear fellow," said Phillida, passionately, rising and putting her hands on his shoulder, "you saved me from lifelong misery, and maybe from death, at a fearful sacrifice of your own feelings. I'll remember it the longest day I live." And she leaned over and kissed him, and then turned abruptly away to go down-stairs.

Philip trembled from head to foot as he rose and followed Phillida to the top of the stairs, trying in vain to speak. At last he said huskily: "Phillida, I want to explain. I am no hero. I had made a fool of myself, as I knew I should if I ever—ever spoke to you as I did that day. Now, of all things I don't like to be ridiculous. I thought that evening if I could be the means of bringing you two together it would take the curse off, so to speak. I mean that it would make me cut a less ridiculous figure than I did, and restore my self-respect. I wanted to be able to think of you and Charley happy together without calling myself bad names, you know."

"Yes, yes," laughed Phillida. "I know. You never did a generous thing in your life without explaining it away. But I know you too well to be imposed on. I shall always say to myself, 'There's one noble and disinterested man under the sky, and that's my brave Cousin Philip.' Good-by." And standing on the first step down she reached him her hand over the baluster-rail, looked at him with a happy, grateful face which he never forgot, and pressed his hand, saying again, "Good-by, Philip," and then turned and went down-stairs.

And Philip went back and shut his library

door and locked it, and was vexed with himself because for half an hour he could not see to go on with his cataloguing. And that evening his mother was pleased to hear him whistling softly an air from the "Mikado"—he had not whistled before in weeks. She was equally surprised when a little later he consented to act as Charley's best man. To her it seemed that Philip ought to feel as though he were a kind of pall-bearer at his own funeral. But he was quite too gay for a pall-bearer. He and Agatha had no end of fun at the wedding, she taking to herself all the credit for having brought it about.

In the middle of the August following, Philip, having come to town from Newport to attend to some affairs, found a notice from the custom-house of a box marked with his address. He hated the trouble of going down town and making affidavit to get it out of the hands of the United States. But when he opened it he found on top a note from Millard explaining that he and Phillida had chanced upon a complete set of "De Bry" at Quaritch's, and that they thought it would be a suitable little present for their best friend.

Philip closed the box and took it to Newport with him. He explained to himself that he did this in order to get an opinion on the set from two or three collectors whose acquaintance he had lately made in lounging about the Redwood Library. But the fact was, his Newport season would have been ruined had he left the volumes in town. The books were spread out on his table, where they held a sort of levee; every book-fancier in all Newport had to call and pay his respects to the rare volumes and to the choice English bindings.

"A nice present that," said Philip's father, as he sipped his champagne at dinner on the day after the son's return with the books. "I've been looking them over; they must have cost, binding and all, a hundred dollars, I should think, eh?"

"More than that," said Philip with a smile.

"About what?" demanded his father.

"Considering that the set includes both the Great and the Little Voyages, it could n't have cost less than twenty times your estimate," said Philip.

"Millard must be richer than I supposed," said the father. "A man ought to have millions to make presents on that scale."

But after supper, when Philip and his mother sat on the piazza, she said: "I never could tell how things were managed between Charley Millard and Phillida. But since your books came I think I can guess who did it."

"Guess what you like, mother," he said; "I did improve my opportunity once in my life."

TOPICS OF THE TIME.

"The Century" a National Magazine.

THE CENTURY MAGAZINE with the present number closes its twenty-first year, and announces in its advertising columns some of the main features of the new year, which begins with November. While THE CENTURY'S main lines of policy will be adhered to, our readers will, we think, find a certain novelty in the new announcements.

Fiction in great strength and variety is a special feature of these announcements. The one partly foreign story, that by Messrs. Kipling and Balestier, is in fact, if anything, the most American of the four principal serials. Aside from these serials we have waiting for the new year a great number of shorter stories of American life, most of them single-number stories, which cover a large part of the continent in scene, and which in depiction of character and social phenomena seem to us to be very remarkable, and to prove again the truth of most of those appreciative and enthusiastic things said by American and foreign critics of the American short story—or short-story, as Mr. Brander Matthews calls it.

In the best of ancient and the best of modern art the new volumes of THE CENTURY will be especially strong. Mr. Cole's "Old Masters," engraved from the originals in the European galleries, have now reached their culmination in the work of Michelangelo, Titian, Raphael, and others of the greatest. No process of equal artistic results can yet reproduce for the masses of the people the great masterpieces of the world's art as can the exquisite engravings on wood of a master of his own craft like Mr. Cole—the American engraver who for so many years and with such devotion and intelligence has studied the old Italian painters. As for modern art it will be our chief concern to keep before the public the best attainable examples of American paintings and sculpture, along with the finest of modern European art.

If we were presenting here a summary of the new announcements we should have to dwell upon the papers having to do with the coming Columbus celebration, and upon the various series on farming, music, poetry, etc. But this was not our intention. Rather we would speak of a peculiarity of THE CENTURY with which its older or more continuous readers are well acquainted, but which is sometimes lost sight of by casual inspectors of its contents. This peculiarity, if so it may be called, resides in the fact that THE CENTURY is a national magazine—not an international, not a sectional magazine. As between East and West it knows no difference; as between North and South it knows no difference. And yet in being national it assumes on the one hand that America has a great deal to do with Abroad, and on the other that *America is a nation*. It assumes this against the few and far between, but extremely excitable, Southern irreconcilable. It assumes this also against the exuberant Northern irreconcilable. It assumes this in the range of discussion and narration it allows its contributors, and in its own

editorial puttings-forth. Meanwhile it sometimes has the amusement of reading the simultaneous remarks of the Southern and the Northern irreconcilable to the effect that THE CENTURY is the enemy of the South, and of the North, and of Heaven only knows what.

The Southern irreconcilable disregards, or is ignorant of, the "Great South" papers of THE CENTURY, entered upon at a time soon after the war, when, in the interest of the whole country, the Southern States most needed just such recognition. He ignores the well-known relations of the magazine to the brilliant group of writers of the New South; he ignores the fact that it was THE CENTURY that spread before the whole civilized world, in its war series, the story, by Southern generals, of the prowess of the Southern soldier in the civil war; and, too, the fact that THE CENTURY has not shrunk, in fairness, from allowing Southern soldiers to give—along with a fearless depiction by Northern prisoners of the horrors of Andersonville and other Southern prisons—their own views of the inside of the prisons for Confederates in the North. The Northern irreconcilable sometimes shows an equally culpable ignorance or narrowness when he forgets that always and everywhere THE CENTURY has stood against sectionalism and for the Union; has upheld the fame and the honor of the Union general and the Union private, and has placed Lincoln and the cause for which he labored and died before the American people, and the world at large, more fully, accurately, and effectively than was ever done before. And both these irreconcilables forget that THE CENTURY has constantly appealed to the broadest patriotism, and love for the reunited nation, by preaching the duty of the day and the hour, the setting aside of sectional and past issues, and attention to present and necessary reforms, and to all the immediate and pressing duties of good citizenship in this our great and common country.

After all, it speaks well for the fairness, good feeling, and common sense of the reading public of America that the illustrated magazine that deals most constantly with recent and mooted periods of domestic history, and with the burning questions of the day, has the wide, we may say the phenomenal, reception in every part of the country which is so generously accorded to THE CENTURY.

A Cheap Money Retrospect.

THOSE of our readers who have followed the series of articles upon cheap money experiments which have appeared in this department of THE CENTURY during the past eight months cannot fail to have observed that we have arranged the order of the series upon a cumulative plan. We began in March last with a plain exposition of the imperative need on the part of the people of this country of a clear conviction that no money except the best was worth the having, and that "cheap money," in any and all forms, is a delusion from which all people should pray to be delivered.

From this we passed to a historical survey of the more notable of the many experiments which have been made in various countries and times to improve the condition of States and nations by making money cheap and plentiful. We purpose now to recapitulate briefly the chief points in this survey in order that the full moral force of its teaching may not be missed.

We should say, perhaps, at the outset that no formal reply has been made to numerous letters that have come to us questioning in one way or another statements which had been advanced in some of the earlier articles of the series, for the reason that all the objections raised by these letters have been most effectively answered by subsequent articles. For example, when objection was made that we took too emphatic ground in favor of the best money and too extreme ground against "cheap money," it seemed to us better to show by human experience that our position was the only safe or tenable one than to argue that it must be so. So with other objections that the first historical cases which we cited covered only a part of the problems of our own country to-day. We preferred to answer these by giving further citations which did cover the points of the problem not reached by the first.

The first historical experiment recalled by us was that of the English Land Bank of 1696. This was the most formidable project ever broached for the establishment upon private capital of a bank which should lend money on land as security. The Government granted a charter on condition of the requisite amount of capital being subscribed, and the King subscribed £5000 as an example to the nation; but beyond that the Government was in no way identified with the bank. The subscription-books were opened with entire confidence that the necessary £1,300,000 would be obtained within a few days. At the end of the period allowed for raising it only £2100 had been subscribed by the entire nation. It was thus shown that private capital was not eager to enter into the business of lending money on land. The country gentlemen, who had been eager for the establishment of the bank, were not in position to subscribe to its capital, since their sole purpose in wishing for it was to be able to borrow money from it on their land, and, wishing to borrow, they of course were not able to lend. The capitalists would not put their money into it because its avowed object was to injure them by lowering the rate of interest and lessening the demand for existing money. The result was complete failure to establish the bank.

Passing from this failure of 1696, we took up a notable attempt which was made in Rhode Island about a century later to establish a Land Bank as a State institution, which should lend money on land as security, and pledge the faith of the State for its redemption. We showed that from the outset this experiment was a failure; that the money which the State declared to be a legal tender for public and private debts never circulated at par, but was depreciated from its first issue; that it paralyzed the industries and commerce of the State; that the whole power of the State Government was not sufficient to make it circulate at par; that it led to the repudiation of the greater part of the State debt, giving to Rhode Island the name of "Rogues' Island" throughout the land; that it dropped steadily during the three years of the bank's existence till one

dollar in coin was worth fifteen of the Land Bank issue, and that the end was a collapse of credit and business so complete that years were required for the State to recover from it.

Criticism was made upon our citation of the Rhode Island experiment that it was attempted in a small and struggling State, at the close of the exhausting Revolutionary War, and that it could not be taken as a criterion of what would be the outcome were the United States Government to go into the business of loaning money on land. It was argued that the wealth of this mighty and prosperous nation was so great, as compared with the resources of Rhode Island, that any attempt to make the experience of one apply to the other was absurd. As an answer to this objection we cited the famous John Law experiment in France in 1718. This was the Rhode Island principle applied to a great nation, and, as a basis for its operation, the entire property of the nation was brought into the bank and used as security for its loans. Law's idea was to have all France as a mortgage, and he carried out the idea to its fullest extent. Our readers have not forgotten the details of his experiment as we set them forth in *THE CENTURY* for July. Only two years were necessary for him to lead the nation at a headlong gallop to overwhelming disaster, in which all credit was destroyed, all industrial values ruined, and everything except landed property left worthless.

Finally, lest some critics might say that all these unsuccessful attempts had been made in times long past, and under different economic and industrial and commercial conditions from those which obtain in our own time, we took up the case of the Argentine Republic, giving in much detail the efforts of that country to obtain prosperity under the same system of finance that had failed in Rhode Island and in France. That it was the same system was recognized in Buenos Ayres by sound financial thinkers, who opposed its adoption. After our article on Law's experiment was in press, and the article upon the Argentine experience had been completed, we found in the "Buenos Ayres Standard" an editorial article upon John Law from which we quote the following passages:

The calamity brought on France by John Law was the most tremendous that can be imagined; it has no parallel in history except the present crisis in Buenos Ayres. But in many respects Law's crisis was less disastrous than that which has now commenced in our city, the outcome of which nobody can venture to predict.

If Argentine statesmen really believe that they can issue notes at will, they will find that they are sadly mistaken. We must come, some day, to a grand wind-up, and the convulsion that must ensue will eclipse anything before seen in the world. Men and women will go mad in the streets, and no government will be able to face the hurricane of popular indignation.

We cannot resist the wish to send all our shinplaster advocates to Venice, to end their days in obscurity, like Law. It is only fair to Law's memory to say that he admitted the error of his theories before his death, and regarded shinplasters as a calamity of the greatest magnitude.

In the September number of *THE CENTURY* we showed that the sub-treasury scheme of the Farmers' Alliance was more dangerous than Law's, because the money which it called for would be issued upon a far less certain and stable foundation of values than his plan provided. In future numbers of *THE CENTURY*

we may recall the experience of other States and governments for the purpose of showing still more plainly that human experience has been uniform in this matter. Michigan's experience with "wildcat banks" between 1837 and 1843 is very instructive, and we shall make it the subject of our next article. Like every other cheap money experiment which has been made, it ended in disaster. In every case the final result has been ruin, and the wider the field of trial, the more desolating has been the calamity. The Argentine Republic believed itself an exceptional nation, rich and powerful enough to change this unbroken current of human experience, but its people know now how terribly mistaken they were. We do not believe it possible that the American people will ever be capable of such folly.

Presidential Voting Methods.

No student of our system for the election of President and Vice-President can fail to be impressed with its lax and antiquated character. In fact, from the earliest period of our Government we have gone about this most important of all our elections in a happy-go-lucky style which has more than once brought us to the verge of serious complications. The electoral college system was the outcome of a prolonged and earnest discussion in the convention of 1787 which adopted the Constitution. Upon no other subject was there greater diversity of opinion. Hamilton favored the selection of President by secondary electors, chosen by primary electors, chosen by the people. Gouverneur Morris wished to have the President chosen by popular vote of the whole people *en masse*. Another delegate favored giving the power of selection to the governors of the several States. Another favored popular election by districts. Another wished the power to reside in Congress. Popular election and choice by electors were both voted down on one day, and choice by Congress adopted. These votes were reconsidered subsequently, and choice by electors chosen by the State legislatures was adopted. This in turn was reconsidered, and choice by Congress again adopted. Finally the convention reconsidered this vote, rejected all former plans, and adopted the present system, introducing for the first time the office of Vice-President.

The language of the provision of the Constitution in which the final verdict of the convention was set forth precludes all doubt as to the meaning of the system's framers: "Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress," etc. That leaves no possibility of doubt that the convention gave the absolute control of the appointment of electors to the State legislatures, for, as Alexander Johnston says in his history of the system, "the words 'in such manner as the legislature thereof may direct' are as plenary as the English language could well make them."

When, therefore, the last legislature of Michigan passed a law providing for the choice of presidential electors by districts,—twelve of them by the congressional districts, and two by districts dividing the State on a line running through the center, north and south,—it was exercising an undoubted right given it by the Constitution. In fact, in the first quarter of the pres-

ent century many States chose electors by popular vote in the districts precisely after the Michigan plan. In other States, including New York, the legislature chose all the electors. New York followed this practice as late as 1824, when she changed to the plan of election by popular vote in the districts, observing it only in the election of 1828. South Carolina maintained election by the legislature as late as 1860, and Maryland maintained election by popular vote in the districts as late as 1832. But after the election of 1832 all the States except South Carolina adopted the present plan of choosing all the electors on one ticket by the vote of the whole State.

There is nothing in the Constitution, therefore, to prevent all other States in the Union from following the Michigan example. Neither is there anything in it to prevent the legislature of any State, New York for example, in case there be a legislative majority and a governor of the same political faith, from reverting next winter to another old method and appointing outright by legislative act all the State's electors for the Presidential election of 1892. If any State were to do that, it would be impossible to contest successfully the legality of its action. The only restraining influence is the knowledge that such arbitrary and partizan action would arouse an amount of popular disapproval which might prove fatal in the national election to the prospects of any party which should be guilty of it. In this, as in many other respects, the conduct of our electoral system is regulated by usage and restrained by public opinion and not by law. There is no penalty to be inflicted upon electors for improper performance of duties, or for refusal to perform them at all. If there should be a general refusal of all the electors, or of a majority of them, to perform their duties, the election of President and Vice-President would devolve upon the House of Representatives and the Senate respectively, but the defaulting electors could not be punished save by popular disapproval. If an elector who had been chosen to vote for Republican candidates were to betray his trust and vote for Democratic candidates, or *vice versa*, there would be no legal penalty and no method by which his vote could be changed. It would have to be counted as cast, and in casting it he would be exercising his constitutional rights in precisely the way in which the first electors chosen under the system exercised them. Usage has changed the method of carrying out the system, but the system itself is unchanged. It is a signal evidence of the faith of the American people in their own honesty and fair dealing that they are willing to continue to conduct their Presidential elections under a system so lax as this.

The return to an old method of choosing electors in Michigan attracts great attention because of the effect which it has in unsettling calculations about the next Presidency. It makes certain a division in the electoral vote of the State, preventing the candidates of either party from getting the entire fourteen. Under the new apportionment the electoral college of 1892 will have 444 members, making 223 necessary for a choice. If all the States which voted for Mr. Cleveland in 1884 were to be carried by the Democrats in 1892, the total Democratic electoral vote under the new apportionment would be 225, just two more than a majority. With the vote of Michigan cast by districts the Democrats are certain of getting at least two electors from

that State, hitherto solidly Republican, a gain which might be of great importance to them in a close contest. In short, it is easy to see how it would be possible for a Presidential election to be decided by the divided vote of Michigan.

At the first glance it might appear that the election by popular vote in districts was a step towards election by popular vote in the whole country. This would be the case were the congressional districts not so often laid out on gerrymandering principles. There are many States so completely "gerrymandered" that they have a majority vote in favor of one political party, and a congressional delegation with a majority in favor of another political party. It is unnecessary to point out that in States of this kind an election by congressional districts would be less of an election by popular vote than one under the system of a State electoral ticket. Suppose, furthermore, that in 1892 all the States were to follow the Michigan plan. One effect would be to give the Farmers' Alliance or some other third party an opportunity to secure several members of the electoral college, for while such a party might have much difficulty in carrying any entire State, it might succeed in carrying a considerable number of congressional districts. Let us, for example, suppose that one party, say the Republican, secured 222 electors, one less than a majority, that the Democratic party had 210, and the Farmers' Alliance had 12. The result would be that neither of the great parties would have a majority; the election would devolve upon Congress as elected last fall; the House would choose a Democratic President, and the Senate a Republican Vice-President. Results of this kind would be possible in every election, for the district system would always work in the interest of third parties.

There has been perceptible, in the discussion aroused by the Michigan law, a growing tendency to advocate the election of President by popular vote. This would be a complete abandonment of the fundamental idea of the present system, which is that the States vote as individuals and have absolute power as to the manner in which they shall vote. A change to popular vote by the whole country could of course be made only by constitutional amendment ratified by two-thirds of all the States. It is to be said of this change that if the whole country were to vote *en masse*, the States serving merely as great election districts for the counting of the votes, there would probably be an end at once of all efforts to influence the result by corrupt or unworthy means. When the vote of no particular State could be said to have a deciding weight in the result, there would be no effort made to carry any State by dishonest means. The whole country would have to be appealed to by open arguments and methods, and the manifest impossibility of close calculations as to the division of a poll of such gigantic proportions would preclude all idea of either side seeking to purchase a majority. On the other hand, it is to be said that until all parts of the country can be heard from within about the same period after election, decision by popular vote might introduce a new and serious element of uncertainty. Three or four weeks are usually required, for example, to obtain full official returns from Texas, and the vote of that State is sufficiently large to have been the deciding factor in every Presidential election that we have had in recent years if the election had been decided by popular vote.

The Key to Municipal Reform.

IT was made evident by the legislation of the year now drawing to a close that an unusual amount of attention was given to the subject of reform in municipal government. Many of the State legislatures passed new charters for their larger cities, and many others spent much time in the discussion of such measures. In Ohio home rule was granted to all the large cities of the State, and new charters, embodying that and other important principles, were granted to four of them, Cleveland, Cincinnati, Springfield, and Youngstown. In Indiana a new charter was granted to the city of Indianapolis. In all these cities confident hopes are entertained that the new forms of government will sweep away some abuses, modify others, and give the people better government than they have hitherto enjoyed.

It is not our purpose to enter upon a discussion of the provisions of these new charters, or to consider the relative merits of their leading features. Some of them aim at divided responsibility, others at concentrated power and direct responsibility. In these and other respects they are like charters which have been tried in other cities, and the results attained under them will not differ much from those attained hitherto elsewhere. In the last analysis the character of the results will be determined by the character of the men who administer the system. No charter has been drawn, or can be devised, which will give a city good government when its offices are in the hands of incompetent and dishonest men.

As the readers of THE CENTURY are aware, we have for a long time held the opinion that the only way by which reform in municipal government can be secured is by getting it into the hands of intelligent, honest, and experienced men. The system which will put men of this character into office and keep them there is the only one that will meet the emergency. Is there such a system, and what are its leading features? What is wanted is, in the first place, fitness combined with character, and, after that, permanent tenure. This is civil service reform in its essence, and it follows that we can never have genuine and lasting municipal reform until we put the entire municipal system of government upon a civil service reform basis.

The unwillingness of the better classes of the community to enter into active political life is notorious. Not only do they decline to take any part in the primaries and nominating conventions, but they refuse to accept nominations for office. It frequently happens that a promising reform movement is delayed and its enthusiasm hopelessly chilled by the failure of its promoters to find an eminent and suitable person who is willing to make the sacrifice of becoming its chief nominee for office. This indifference and unwillingness cannot be overcome by appeals to civic pride and sense of public duty, except in very rare instances, for reasons which are not difficult to find. Public life offers only temporary and uncertain occupation, and the man who enters it must do so at the peril of being left without means of support at the end of his first term of office. We cannot expect that young men of talent and character will enter into the public service until they are offered inducements to do so which are, to some extent at least, as attractive as those offered by professional and

business life. What every man who is of any account in the world seeks at the opening of his career is a profession or calling which promises to give him sure employment with a prospect of wealth, or at least a competence, as the years go by. If he could find such promises in the public service as are held out in the model cities of Berlin, Paris, Glasgow, Birmingham, Manchester, and Liverpool, he would enter into it eagerly enough. As Mr. Shaw pointed out in his Paris and Glasgow articles, and as we have repeatedly pointed out in this department of *THE CENTURY*, in these cities the highest expert talent is sought for the heads of departments, is paid handsomely, and is kept in office for life or during good behavior. It is this policy which gives the city good government and at the same time secures the interest of the intelligent and moral portions of the community in public affairs.

In American cities the opposite policy prevails. Not only is no inducement offered for expert intelligence to seek place in the public service, but every obstacle is raised to prevent its finding an entry there. If by chance any man possessing it gets office, he is certain to be turned out at the end of a very brief period. The result is that every young man of first-rate intelligence shuns political life and public service and seeks for his occupation in other directions; while the men of inferior intelligence, unstable character, and flabby morality turn to politics as offering them a better chance of success than they could hope for in the severer competition of private occupations. It is not surprising that under such conditions we have bad municipal rule in all our large cities; that municipal indebtedness rolls every year into larger and more portentous dimensions, and that all efforts to bring about a better state of affairs, by amending existing charters or enacting new ones, result in failure or only partial and temporary improvement. Reform of a thorough and lasting kind will be attained only when we get a system which will give us in all the departments of our municipal service the kind of officials which Mr. Shaw in his article on Paris, in *THE CENTURY* for July, described as controlling the police department of that city. "Every one of the numerous bureaus," he said, "is manned with permanent officials who have entered the service upon examination and who are promoted for merit." This system prevails throughout the service, making every bureau of the executive municipal government, according to Mr. Shaw, "a model of efficiency." The same system would produce similar results in American cities, making them as well governed as any in the world, instead of standing, as at present, among the worst governed in the world. It will be a slow and arduous task to educate public sentiment to a realization of this truth, but it must be accomplished before we can hope for genuine municipal reform.

James Russell Lowell, Poet and Citizen.

No name among those familiar to the late generations of Americans has done more to make our country respected and believed in abroad and to uphold the faith and courage of patriotic Americans than that of James Russell Lowell. It behooves us not so much to grieve for his untimely death,—for he was the youngest of the distinguished New England group of men-of-letters, and yet not the last to go,—but rather

to rejoice at the noble, salutary, and inspiring career of the great poet, humorist, essayist, scholar, diplomatist, politician, statesman, and citizen.

As a poet, whatever comparisons may be made with his predecessors or contemporaries, at home or abroad, whatever just criticisms may be recorded, we believe it will be found at the end that a large part of his verse has passed into literature, there to remain. The originality, vitality, intensity, and beauty of the best of it are self-evident. Although a true, spontaneous poet, his life had other strong interests and engrossing occupations, and the volume of his verse does not equal that of others whose careers have extended beside his own; his impression as a poet upon his time has not equalled that of others. It may, indeed, be said that if as strongly poetic in nature as they, he would have been dominated as exclusively as were they by the poetic mood. However this may be, the quality of his genius, as shown in his best work, was, we believe, quite as fine as that of any poet writing English in his day. No one can read his last volume of verse without being impressed anew by the vigor, variety, and spontaneous character of Lowell's poetic gift. Even his literary faults are of such a nature as to testify to the keenness of his thought and the abundance of his intellectual equipment.

But, after all, perhaps the most striking thing in Lowell's career was not the brilliancy of his mind, his many-sided and extraordinary ability,—but the fact that in every department of his intellectual activity was distinguished the note of the patriot. He loved letters for art's sake; he used letters for art's sake—but also for the sake of the country. His poetic fervor, his unique humor, the vehicle of his pithy and strenuous prose, his elegant and telling oratory—all these served fearlessly the cause of American democracy, of which he was the most commanding exponent in the intellectual world of our day. His keen sense of the responsibilities of citizenship, added to his native genius, made him from early life—in the true and undegraded sense of the word—a politician, and an effective one, as well as a statesman whose writings are an arsenal of human freedom.

A few years ago, as our readers will remember, it was the good fortune of *THE CENTURY* to bring out the record of Lowell's relation to Lincoln. It will be remembered that he was one of the first, in fact he himself believed that he was the very first, of the so-called "Brahman class" of New England to discover and widely proclaim the peculiar virtues and political abilities of Lincoln, at a time when many, even among the good, were suspicious or scornful of "the rail-splitter." Cordial recognition of good intent, as well as of natural gifts, was, indeed, one of Lowell's most admirable traits. American literature and American politics owe much to him, not only for inspiration and example, but for most cordial encouragement, both private and public.

Lowell passes from us in the very year of the establishment in America by statute of the principle of International Copyright, a cause of which he was the official leader as the president of the American Copyright League. He brought to the agitation all the stored-up wealth of his great reputation, the total result of a spotless and noble life, all the forces of his literary skill, his biting wit, his oratory, his moral en-

thusiasm, and his statesmanlike judgment. His appearance in person before a committee of Congress in 1886 was a great historical event of the triumphant war for the rights of the intellect before the law. Unlike other and younger literary men, it was not necessary for him to spend laborious and continuous days, weeks, or months in the conflict. Such was the power of his name, and the trenchancy of his occasional blows, such

the cumulative impulse of his fame and abilities, that his work, though done with apparent ease, was great and effective.

And now this immense intellectual and moral force is with us only as a memory and a record. Yet for many a day and year the name and words of Lowell will light the path of the republic of which he was the lover and laureate.

OPEN LETTERS.

"Laurels of the American Tar in 1812."

I. CRITICISM BY MR. POWELL.

THE article written by Edgar S. Maclay on the "Laurels of the American Tar in 1812" which appeared in *THE CENTURY* for December last is well written and well illustrated, but contains several statements needing correction.

1. It fails to set forth the great difference in size, 40 to 50 per cent., which prevailed between the combatants in most of the actions. For instance, the American 44-gun frigates which severally captured three British 38-gun frigates in single fight were each superior in size to their adversaries. The "load displacement" of the *Constitution* is always stated in American navy lists at 2200 tons, but the load displacement of British 38's was only about 1500 tons. As to the "tons burden" there is a large mistake in that entered to the English frigates in Emmons's "History of the United States Navy." It is almost ludicrous to compare the action of the *Levant* and the *Cyane* with the *Constitution* as at all between equal forces. The two small British ships only averaged 500 tons burden each, and the American over 1500; the short carronades of the former were nearly useless against the heavy long guns of their opponent.¹

2. The statement that English shot always were of full weight, and American generally seven per cent. under weight, is more than doubtful. Simmons in *Heavy Ordnance*, 1837, states that English shot were under the nominal weight, and Colonel Owen, Professor of Artillery to Woolwich College, gives tables showing that when the shot, long after the war of 1812, had been rather increased in size, they were still below weight, so that an eighteen-pound ball weighed, even then, only seventeen pounds and eleven ounces. Sir Howard Douglas in "Naval Gunnery" remarks that the English cannon had more windage than the French and American; hence the ball would be rather smaller.

3. It is exceedingly improbable that the *Guerrière* in 1812 would have on board French guns and shot since her capture so long before as 1806. The utmost precision and uniformity in the naval and military services is necessary for supply and mutual exchange and support with cannon, shot, ammunition, etc., and those

points are carefully attended to in all regular services. How could one ship supply another with guns or shot if they did not exactly match the regulations?

4. Mr. Maclay, again, has not mentioned the respective complements of men. The American large frigates had 470 men; the British 38's had but 300 regular complement, all told; as often less as more. He is mistaken in giving the *Chesapeake* only 340; Admiral Preble, U. S. N., writing in the American magazine "United Service," acknowledges she had 390, but he overrates the crew of the *Shannon*. The total number of persons on board the *Shannon* of every grade was 330, and there is no mystery how it was composed, namely 300 full complement, 8 lent by her consort, and 22 Irish laborers or passengers only just pressed out of a merchant ship. Owing to Captain Broke's being wounded and temporarily unable to attend to business, his friends wrote the official report for him, and unfortunately were not sufficiently precise in their inquiries; but the report, notwithstanding, is abundantly correct for all practical purposes, the errors being of no importance. It is alleged by James that the *Chesapeake*, far from having a "scratch crew," retained on board the greater part of the men that had served the two years on her previous voyage, and the officers were most fastidious in picking out none but the best men to fill up with. See, in Mr. Maclay's own article, his reference to "picked seamen," page 207. It seems unlikely that when sailing out to meet the *Shannon* the men would dare to annoy Captain Lawrence with an ill-timed application for the prize money of the previous cruise, unless the spokesman at all events represented a large proportion of the complement. Out of the *Shannon's* "52 guns" four were mere boat guns or exercising pieces, and two of those fitted as stern-chasers were not once fired in the action.

5. The artist has taken poetical license in depicting the American ships as rather smaller than the British instead of much larger; the *Constitution* is drawn with three or four ports on the quarter-deck instead of eight or nine.

6. I refuse to believe that the *Constitution* in two or three hours' close action with the *Java* was hulled only four times. The official report allows 34 killed and

given as varying from 150 to 155 feet long and most nearly 40 feet or 12½ meters in extreme breadth. Some recent transatlantic writers make the length more by measuring in the projection of the counter; but that is contrary to rule. Any one who really understands the subject of tonnage is invited to explain how such dimensions could possibly give a total of much more than 1100 tons Congress measure or 1030 Philadelphia measure. But the American frigates by the former rule, being of 1576 tons, were 43 per cent. larger than British or French.—H. Y. P.

¹ The official records of the English Admiralty and of the French Marine have clear evidence of the exact size of their 38- and 40-gun frigates at the commencement of this century; the large national collections of naval models in London and in Paris agree with these records, and the scientific works of both countries on naval architecture support the same facts. Adding the historical works of James and Brenton, we get an accumulation of evidence which must be absolutely conclusive to unbiased minds. Thus all this evidence has the remarkable quality of entire agreement as to the dimensions of the frigates, which are

wounded, and the British account says many more. Professor Frost in his history of the United States Navy says "the shattered and decayed state of the *Constitution* required her return to port." What does "shattered" mean? By the way, Fenimore Cooper remarks that Captain Hull wrote two reports of the action with the *Guerrière*, and suggests the other should be published also. Why not?

I shall not attempt to deny that the British in 1812, after twenty years of victories, had become careless and over-confident, while the Americans exhibited much efficiency in profiting by prearranged superiority of force, a superiority more generally confessed now than at the time of the war itself.

Not wishing to occupy too much of your space, I will only refer readers who wish for further evidence to the "Illustrated Naval and Military Magazine," London, for September, 1890; to the "Army and Navy Journal," New York, during the autumn of 1889; to the new appendices to the last edition of James's "Naval History," 1886, Volume VI, and to Colburn's "United Service Magazine," London, of April, 1885.

LONDON, January, 1891.

H. Y. POWELL.

II. MR. MACLAY'S REJOINER.

IN answer to H. Y. Powell's criticism on my article I will say in brief (referring to his numbered paragraphs):

1. The "load displacement" is not a fair comparison because the American frigates were more heavily built, had heavier stanchions, thicker masts, heavier armaments, etc., all of which, of course, made a greater "load displacement," but does not show that there was "40 to 50 per cent." difference in size. I call Mr. Powell's attention to an article written by himself in the September (1890) number of the "Illustrated Naval and Military Magazine" of London, in which he says that the American 44-gun frigates were about 175 feet long and 45 feet beam while the British 38-gun frigate of the war of 1812 was 155 feet length and 40.3 feet beam. This certainly is not the "40 to 50 per cent." difference in size which Mr. Powell speaks of. But according to American accounts the *Constitution* was only 12 feet longer and had a trifle more beam than the *Guerrière*. I frankly admitted in my article that the American frigates were much better, perhaps "40 to 50 per cent." better, if Mr. Powell chooses, but I do not admit that difference in size as commonly understood.

I also call Mr. Powell's attention to Captain Dacres's opinion of the relative force of the two frigates, and I think Mr. Powell will admit that Captain Dacres is something of an authority on the subject, as he commanded the *Guerrière* when captured by the *Constitution*, and afterward was many days in the latter frigate, thereby having a better opportunity than either myself or Mr. Powell could ever have of judging the two ships. I think also Mr. Powell will admit that Captain Dacres had far more interest in discovering a "40 to 50 per cent." difference between the two frigates, if such difference existed, than either Mr. Powell or myself. That before this engagement Captain Dacres considered the *Guerrière* of sufficient size to capture the *Constitution* is seen in the following challenge:

Captain Dacres, commander of His Britannic Majesty's frigate *Guerrière*, presents his compliments to Comman-

der Rogers of the United States frigate *President* [sister ship to the *Constitution*], and will be very happy to meet him, or any other American frigate of equal force to the *President*, off Sandy Hook, for the purpose of having a social tête-à-tête.

British commanders were fully aware of the size of American 44-gun frigates at the time of this challenge. That up to the time of this action Captain Dacres had not changed this opinion is seen in the following: On the 10th of August, or nine days before the engagement, the *Guerrière* captured the American brig *Betsy* commanded by Mr. Orne. Mr. Orne was aboard the *Guerrière* when that frigate met the *Constitution*, and relates: "I soon saw from the peculiarity of her [*Constitution's*] sails and from her general appearance that she was, without doubt, an American frigate, and communicated the same to Captain Dacres. He immediately replied that he thought she came down too boldly for an American, but soon after added, 'The better he behaves, the more honor we shall gain by taking him.'" (See Coggeshall's "History of American Privateers.")

Even after the action, when Captain Dacres and his officers had been several days in the *Constitution*, thus having an excellent opportunity of comparing the two ships, he still entertained the same views, and immediately on landing wrote that "the loss of the ship is to be ascribed to the early fall of her mizen-mast." (See Official Report of Captain Dacres.)

This opinion is still more forcibly stated by Captain Dacres several months after the event. In his defense before his court-martial he says: "Notwithstanding the unlucky issue of this affair, such confidence have I in the exertions of the officers and men who belong to the *Guerrière*, and I am so well aware that the success of my opponent was owing to fortune, that it is my earnest wish, and would be the happiest moment of my life, to be once more opposed to the *Constitution* with them under my command, in a frigate of similar force to the *Guerrière*."

Such is the opinion of Captain Dacres in reference to the comparative size of the *Constitution* and *Guerrière*, expressed after having had unsurpassed opportunities for inspecting both ships, and uttered after mature deliberation. Neither he nor any of the frigate commanders of this war claimed that the American frigates they fought were "40 to 50 per cent." larger; such claims being the work of Mr. James, whom Mr. Powell seems to follow.

2. As to this point I do not see that any answer is needed. In my article I gave three or four authorities, both English and American, which were contemporaneous with the battles in which the ammunition was used. Mr. Powell refers to an authority in 1837, and to Sir Howard Douglas, who was later yet. What happened to the shot in 1837 or later I in no way discussed. I treated of shot in the war of 1812 only, so that Mr. Powell's two rather *post-bellum* authorities do not affect my argument in the least.

3. As to this point I dealt in facts and gave my authorities in the article. An officer *actually weighed* the *Guerrière's* shot, and that is better evidence than probabilities or improbabilities.

4. I showed in my article that the American crews were superior, both in numbers and quality. I do not see that I am mistaken in giving the *Chesapeake* 340 men. My authority is official, being none less than

Emmons's "Statistical History of the United States Navy," p. 66. This is the United States Government record of the navy. The same number is given by all recognized naval historians. Admiral Preble never pretended to be an authority on the war of 1812. What he wrote in some magazine article is liable to error, and, as regards the crew of the *Chesapeake*, is in disagreement with all the naval authorities of that period.

I have in no place said that Captain Broke's forged official report was not "abundantly correct." My point was to prove that at least one letter was an absolute forgery. This I did. This—taken in connection with the fact that there are other official letters which the Admiralty refused me the privilege of inspecting, and which are said even by British writers to be "garbled" so as to reduce the humiliation of British defeat—forms evidence amounting almost to proof that official reports of other British commanders have been so garbled as to detract from the American victory, and affords us ample ground for questioning some of their figures.

"Picked seamen" in my article referred to the earlier part of this war. It is a well-known fact that by June, 1813, many American privateers and seamen had been captured by the British, and as the Admiralty refused to exchange prisoners (thereby hoping to check American enterprise on the sea) seamen became very scarce. My authorities for saying so are Washington Irving, Cooper, and Niles's Register, besides others. On the 45th page, Volume II, "Spanish Papers," Washington Irving says: "It was only with great difficulty that any men could be induced to enlist in her [the *Chesapeake*]."

As to its being "unlikely" that the *Chesapeake's* crew should "dare to annoy Captain Lawrence with an ill-timed application for money," Washington Irving and the Rev. Dr. Brighton, the English biographer of Captain Broke of the *Shannon*, say that the crew mutinied, and "that a scoundrel Portuguese who was boatswain's mate demanded prize checks for the men" (Irving's "Spanish Papers," Vol. II, p. 47; also Brighton's "Memoirs of Admiral Broke," p. 165).

My authority for placing the *Shannon's* guns at 52 is none other than James (Vol. VI, p. 53), who says she carried "28 long 18-pounders, 4 long 9-pounders, 1 long 6-pounder, 16 short 32-pounders, and 3 short 12-pounders." And in this I will observe that James has departed from the figures in the official report of Captain Broke, which gives the *Shannon* only 49 guns. James says: "The *Shannon* certainly mounted 52 carriage guns," and "mounted" does not mean placed in a boat where they could not be used, had that side of the ship been engaged. As for the guns that were not "once fired" the *Chesapeake* had a whole broadside she did not fire; so did the *Shannon*, but that does not show that she did not carry those guns.

5. I do not see that Mr. Davidson, the artist, has taken any "poetical license." The only picture where two frigates are fully compared is that of the *United States* and *Macedonian*. Here the *Macedonian* is made higher out of the water because she, being relieved of the weight of masts and spars, and the consequent heeling over from pressure of sails, naturally would look higher. In this Mr. Davidson has discovered great skill.

The *Constitution* carried from ten to twelve guns on her quarter-deck, which required six ports at the most to a side; not "eight or nine," as Mr. Powell says.

6. I regret Mr. Powell refuses to believe that the *Constitution* was hulled only four times by the *Java*. Such, however, was the case. The best of the matter is, the British commanders at that time were so confident of capturing all American frigates that they took especial pains not to fire into the hull, but directed all their shot at the rigging so as to prevent the Americans from being able to make sail in escape. They did not wish to injure the hull as it would only be so much more damage for them to repair after the capture.

Professor John Frost wrote a "Book of the Navy," but I have never before known him to be quoted as an authority. I also must confess that I do not know why Captain Hull's second report was not published.

Edgar S. Maclay.

III. COMMENTS ON MR. MACLAY'S REJOINDER.

DISPLACEMENT is indeed a fair comparison between ships of the same general description, and is now adopted by naval architects, officers, and government officials in every nation. The American 44's exceeded the British 38's by more than 7 per cent., nearer 12 per cent. linear dimensions (or as 174 to 154 in length), in fact more in depth, and consequently at least 40 per cent. in cubical bulk.

The complements of men afford a test of size, 470 to 300 all told.

I consider my evidence is good that English shot were most generally underweight as well as American. I have a letter from the Manager of the Carson Co., which cast shot and cannon in the war time. Sir H. Douglas's authoritative work on "Naval Gunnery" gives the exact size of English shot in 1815, and we find that after being enlarged in 1837 they still weighed rather less than nominal weight.

About the *Guerrière's* guns I read Fenimore Cooper to mean that *perhaps* they were French, retained on board the six years. He often guardedly writes "it is said."

As the American navy consisted of so very few vessels in 1813 I see no reason to think there was the least difficulty in getting first-class seamen for the *Chesapeake*—James says boat-loads were refused. Truly the *Chesapeake* had a whole broadside that was never once fired in the engagement, but the same remark applies to the *Shannon*. Each vessel fired twenty-five guns of a side, the *Shannon* a trifle less weight of shot. The *Chesapeake* was pierced for fifty-four guns, besides chasers, according to a model, carefully made to scale, on view to this day at Greenwich (Hospital) College. There is a similar model of the *President*, also of the *Macedonian* class of frigate, etc.

I think (without referring) that Theodore Roosevelt allows the *Java* fought chiefly at rather close quarters, certainly well within range of musketry. I do not believe that she fired intentionally high, but inefficiently, from having a raw crew not trained in gunnery; most likely many shots went in the water as well as in the air. Still thirty-four men were killed or wounded on board the *Constitution*, and it is not likely many of them were aloft.

H. Y. Powell.

IV. "DON'T GIVE UP THE SHIP!"

In the article in the December *CENTURY* entitled "Laurels of the American Tar in 1812," in speaking of the engagement between the *Chesapeake* and the *Shannon*, the writer states that doubt has been cast upon the accuracy of the report of Captain Lawrence's last words. As bearing upon this matter I offer the following evidence.

My father, Dr. William Swift, was one of the surgeons on board the *Chesapeake*, in her engagement with the *Shannon*, and was in attendance on Captain Lawrence after he was wounded; and my mother has often heard him tell the story, and quote the last words of the dying commander: "Don't give up the ship!"

Before his death, Captain Lawrence gave his belt to Dr. Swift, who presented it to the Naval Lyceum at the Brooklyn Navy Yard, accompanied by the following memorandum:

Dr. Swift has the honor to present to the Naval Lyceum the belt worn by Captain Lawrence in the action between the United States Frigate *Chesapeake* and the British Frigate *Shannon*, on the 1st of June, 1813, and which was loosed from his waist the moment previous to his uttering the memorable words, "Don't give up the ship!"—*Naval Lyceum*, BROOKLYN, February, 4, 1834.

Dr. Swift was made a prisoner, and sent to Halifax, whence he returned home with the wounded.

In 1820 he was detached from the *Ontario* and sent as acting consul to Tunis, where he remained sixteen months. In 1836 he was on the *North Carolina* as fleet surgeon of the Pacific squadron, and on his return in 1839 was stationed at New York, Boston, and Newport for different periods. In 1862 he was at his own request placed on the retired list, having spent fifty-one years in the service of his country. He died in 1865 at the age of eighty-four.

William J. Swift, M.D.

Mr. Kennan's Reply to Certain Criticisms.

[WE presume upon the intense and continued interest in Mr. Kennan's Siberian papers which many of our readers have manifested, to make the following extracts from the preface of his forthcoming volume.—ED. C. M.]

Some of the criticisms that have been made upon the articles on Siberia and the exile system published in *THE CENTURY MAGAZINE* have been based apparently upon the assumption that a survey of any one particular department of national life must necessarily be incomplete and misleading, and that the fair-minded investigator should supplement it by taking into the field of vision a quantity of unrelated facts and phenomena from a dozen other departments.

"Your articles," certain critics have said, "give a false impression. Your statements with regard to Russian prisons, indiscriminate arrests, and the banishment of hundreds of people to Siberia without trial may all be true; but there are in Russia, nevertheless, thousands of peaceful, happy homes, where fathers and brothers are no more in danger of being arrested and exiled to

Siberia than they would be if they lived in the United States. Russia is not a vast prison inhabited only by suspects, convicts, and jailers; it is full of cultivated, refined, kind-hearted people; and its Emperor, who is the embodiment of all the domestic virtues, has no higher aim in life than to promote the happiness and prosperity of his beloved subjects."

The obvious reply to such criticism as this is that it wholly mistakes the aim and scope of the work criticized. I did not go to Russia to observe happy homes, nor to make the acquaintance of congenial, kind-hearted people, nor to admire the domestic virtues of the Tsar. I went to Russia to study the working of a penal system, to make the acquaintance of exiles, outcasts, and criminals, and to ascertain how the Government treats its enemies in the prisons and mines of Eastern Siberia. Granted, for the sake of argument, that there are thousands of happy homes in Russia; that the Empire *does* abound in cultivated and kind-hearted people, and that the Tsar *is* devotedly attached to his wife and children; what have these facts to do with the sanitary condition of a tumble-down *étape* in the province of Yakútsk, or with the flogging to death of a young and educated woman at the mines of Kará? The balancing of a happy and kind-hearted family in St. Petersburg against an epidemic of typhus fever in the exile forwarding-prison at Tomsk is not an evidence of fairness and impartiality, but rather an evidence of an illogical mind. All that fairness and impartiality require of the investigator in any particular field is that he shall set forth, conscientiously, in due relative proportion and without prejudice, all the significant facts that he has been able to gather in that selected field, and then that he shall draw from the collected facts such conclusions as they may seem to warrant. His work may not have the scope of an encyclopedia, but there is no reason, in the nature of things, why it should not be full, accurate, and trustworthy as far as it goes. An investigation of the Indian question in the United States would necessarily deal with a very small part of the varied and complex life of the nation; but it might, nevertheless, be made as fair and complete, within its limits, as Bryce's "American Commonwealth." It would, perhaps, present a dark picture; but to attempt to lighten it by showing that the President of the republic is a moral man and good to his children, or that there are thousands of happy families in New York that have not been driven from their homes by gold-seekers, or that the dwellers on Commonwealth Avenue in Boston are refined and cultivated people who have never made a practice of selling intoxicating liquor to minors, would be not only illogical but absurd. If the gloominess of the picture is to be relieved, the proper way to relieve it is to show what has been done to remedy the evils that make it gloomy, and not by any means to prove that in some other part of the country, under wholly different conditions, a picture might be drawn that would be cheerful and inspiring.

In the present work I have tried to present impartially both sides of every disputed question, and to deal as fairly as possible both with the Government and with the exiles. . . .

George Kennan.

BRIC-À-BRAC.

What My Clock Says.

HOLD fast, dreamer,— do not fret !
 Everything will come right yet.
 Life holds nothing worth regret —
 Let the sun rise — let it set.
 I have seen the young grow old ;
 Seen the fond turn stern and cold ;
 Seen the selfish, vain, and proud
 Feed the worm, and crease the shroud.
 Do not cry,
 Do not sigh ;
 All will come right by and by.

Pearls, and gems, and jewels fine,
 Fished from sea or dug from mine,
 Silken raiment, filmy lace,
 Vanish all, and leave no trace.
 Those who walk and those who ride
 Yet must lie down, side by side,
 When their cruel master, Death,
 Seals the eyes and steals the breath.
 Do not sigh,
 Do not cry ;
 All will come right by and by.

I have seen the high brought low,
 Seen the seasons come and go ;
 Fields of bloom and wastes of snow,
 Sunny skies and winds that blow —
 And I mark out all the hours
 Whether there are frosts or flowers —
 Night and day and day and night
 Feeling sorrow nor delight.
 Do not cry,
 Do not sigh ;
 All will come right by and by.

Some days come, and shadows bring ;
 Then come joys — but they take wing ;
 Nothing matters, here, to me ;
 Time drifts to eternity,
 And like streams that southward run,
 Mingling in the sea as one,
 So tend all things — every way —
 To oblivion and decay.
 Do not sigh,
 Do not cry ;
 All will come right by and by.

I have seen the pure and sweet
 Smirched with mire from the street ;
 Seen Sin and her daughter Vice
 Look as chaste and cold as ice ;
 Seen the hungry and the poor
 Beg for bread from door to door ;
 Yet — for all the rich man's load —
 God widens not the Narrow Road.
 Do not sigh,
 Do not cry ;
 All will come right by and by.

Nothing matters ! Nothing can
 In the destiny of man.
 Vain, alas ! all tears and sighs ;
 Vain, reproaches — vain, replies.
 Silence and decay must fall
 Like a shadow on you all ;
 And He who made your life a span

Will judge as never judges man.
 Do not sigh,
 Do not cry ;
 All will come right by and by.

Nelly Marshall McAfee.

The Poet Paradox.

YOUNG X is overcome with deep dejection ;
 This paradox hath filled his soul with gall :
 For him the public has no predilection,
 And though well-read he is not read at all.

John Kendrick Bangs.

"Deserving Poor."

DIVES and I on crowded street
 An aged beggar chanced to meet ;
 Dives passed by with sterile frown,
 And said, to argue conscience down :
 " I treat all such with rule unswerving.
 How can one know when they're deserving ? "
 " You're right," I cried, with nodding head
 (I toil for Dives for my bread) ;
 But since the mind is heaven-born,
 And earthly fetters holds in scorn,
 I thought, " That wretch and many more
 Starve through those words, ' Deserving poor. ' "

And then, because I haply knew
 How Dives rich and richer grew,
 I sneered (in thought), " Such careful alms,
 Such nice, discriminating qualms,
 Should be observed in rule unswerving
 But by the rich who are deserving. "

George Horton.

To the River St. Lawrence in Autumn.

THE fire that frosts engender
 (O happy, happy red !)
 Fills with their autumn splendor
 The groves about thy bed.
 No king with crownéd head
 Is royaller than thee,
 O mighty, mighty river,
 Impatient for the sea.

The maples are thy tiar —
 Great rubies framed in gold ;
 The cherry, oak, and briar
 In crimson robes infold
 The monarch blithe and bold ;
 And o'er thy dancing helm
 The sumach's purple feather
 Shines gaily through thy realm.

With laughter wild are panting
 The waves upon thy breast ;
 October gales are chanting
 The dead leaves to their rest ;
 The sun is flying west,
 O monarch, soon to lie
 In Winter's hard, white fetters
 Till Spring comes riding by.

Douglas Sladen.

Written October, 1890, at St. Anne's, P. Q., where Tom Moore wrote his " Canadian Boat-song. "

LOWELL.

FROM the shade of the elms that whispered above thy birth
 And the pines that sheltered thy life and shadowed the end,
 'Neath the white-blue skies thee to thy rest we bore,—
 'Neath the summer skies thou didst love, 'mid the songs of thy birds,
 By thy childhood's stream, 'neath the grass and the flowers thou knewest,
 Near the grave of the singer whose name with thine own is enlaureled,
 By the side of the brave who live in thy deathless song,—
 Here all that was mortal of thee we left, with our tears,
 With our love, and our grief that could not be quenched or abated :
 For even the part that was mortal, sweet friend and companion !
 That face, and that figure of beauty, and flashing eye
 Which in youth shone forth like a god's, 'mid lesser men,
 And in gray-haired, strenuous age still glowed and lustered,—
 These, too, were dear to us,—blame us not, flaming soul !
 Soaring above us now in fields Elysian,—
 These, too, were dear—and now we shall never behold them,
 No more shall we feel the quick clasp of thy welcoming hand.

But not for ourselves alone are we spent in grieving,—
 For the stricken Land we mourn whose light is darkened,
 Whose soul in sorrow went forth in the night-time with thine.
 Lover and laureate thou of the wide New World,
 Whose pines, and prairies, and people, and teeming soil
 Where was shaken of old the seed of the freedom of men,
 Thou didst love as a strong man loveth the maiden he woos,—
 Not the woman he toys with, and sings to, and, passing, forgets,—
 Whom he woos, whom he wins, whom he weds, his passion, his pride,
 Who no shadow of wrong shall suffer, who shall stand in his sight
 Pure as the sky of the evil her foeman may fling,
 Save by word or by thought of her own in her whiteness untouched.
 And wounded alone of the lightning her spirit engenders.

Take of thy grief new strength, new life, O Land !
 Weep no more he is lost, but rejoice and be glad forever
 That thy lover who died was born, for thy pleasure, thy glory,—
 While his love and his fame light ever thy climbing path.
